Fig. 109. Bamboo Arrow With Wooden Point, North Ruanda. (1/4 actual size. III E 13077. 35 centimeters long.)

411 In Ruanda arrows are not as a rule poisoned. However, Lieutenant Bischoff was able to collect specimens of poisoned arrows among the Urundi Batwa.

In shooting, the bow is held perpendicular. In the case of the ordinary stick bow [Stabbogen], the end which has the lapped bowstring is at the top.

The string is drawn with the second and third finger of the right hand. The left hand is extended and the string is drawn back to the right shoulder. The tension which I measured with a manometer amounts to 25 to 45 kilograms.

To protect the left hand from the recoil of the string special wooden arm rings (kigomero) are used. They have a small opening through which the hand is wedged. [192] In the huts

In the huts the bows stand in or are suspended from special racks on the uprights.

As for actual marksmanship, I observed that a banana stalk the height of a man which was used as a target at a distance of 40 meters was hit three-fourths of the time. The shot is very powerful. The arrow passed straight through the 15-centimeter stalk and protruded 10 centimeters on the other side. The maximum target distance was 170 meters. At this distance the arrows dug into the hard, dry ground up to 12 centimeters and stuck fast at a 30-degree angle. At this great distance the dispersion amounted to 40 meters. When the archers were making a tremendous effort they almost dropped on their right knee, but otherwise they simply thrust their left foot forward after the shot.

As may be seen from the above account, there is a great diversity of bows in the territory under discussion. Within the confines of the Kirundi language area, I saw stick bows, reinforced bows, and forehead bows side by side. Moreover, if we include the entire interlacustrine area as well as the neighboring countries, we must also note that we do not find the bow everywhere.

In the Kirundi language area which includes Ruanda, the bow is used almost everywhere. Dr. Kandt (1) confirmed this for

1. Kandt, R., Caput Nili (Berlin, 1904), p. 441.

41 Itambi and says that of the bows used in Buyungu 30 percent were Ruanda bows and 70 percent Batwa bows. On the other hand, with regard to the southern part of Bunyabungu, Dr. Kandt says (2):

2. Ibid., p. 378.

"I seldom saw bows and arrows and of the latter only a small number with iron heads. Most of them were very primitive and consisted of a reed shaft into which was set a spindle-shaped piece of wood, almost like a child's toy and yet meant for serious use."

In west Ussuwi no bows are used, whereas they are the principal weapon in Busindja. (3) The Banyoro [Nyoro] of the

north fight only with spear and shield. In Toro I could get only bows that had been captured on war expeditions against the Baamba [Amba]. The Baganda also do not have bows. The Bahima of Nkole are archers and have the same bows and arrows as the Basindja. In Kiziba I was constantly referred to Busindja when I asked about examples I saw there.

[193] We can easily explain the absence of bows in the northern part of the interlacustrine region as a consequence of Nilotic influence which must be regarded as historical fact. However, we cannot at present explain the absence of the bow

411 in west Ussuwi or its scarcity in southern Bunyabungu.

In Ruanda we see quivers much more rarely than bows. If a person of distinction is accompanied by a man who carries his bow, the latter holds in his right hand one to four arrows along with the bow.

[194] At home arrows are kept in cylindrical quivers carved of wood and painted, with lids at both ends. In the field, on the other hand, I saw only woven quivers and some made of gourds. The woven ones are either cylindrical or wider at the bottom. They are usually closed with a lid and slung over the shoulder by a strap or braided cord. The lid slides along this cord.

Cutting Weapons. Besides spears and bows. cutting weapons play a very important part in Ruanda, but they are not sharply differentiated from tools on the one hand and daggers on the other.

The bush knife, already mentioned as a tool, is the most important cutting weapon. It is used not only to cut dry branches for firewood, to clear brush, and to widen a path in the underbrush, but also as a dangerous weapon in hand-to-hand combat.

The second cutting weapon, the sword (ngota), cannot be sharply distinguished from the dagger. Both have the same shape and differ only in size. There are also intermediate shapes. They are carried in a wooden sheath on the back, suspended from a neckband of hide or string. The blade is usually 40 to 50 centimeters long and 2 to 3 centimeters wide. It has a median ridge, so that in cross section it is rhomboid. The sword blade, like the blade of the spear, is left black. Only the two edges and the ridge [195] in the middle are polished. The wooden haft is carved, and, like the haft of the West African sword, it often has three joined parts. Sometimes the center piece is lacking, and the haft consists of two truncated pyramids facing each other, the upper one being smaller than the lower. The scabbard consists of two thin pieces of wood rounded on the edges and fastened together with braided straw. On the upper edge of the front part of the scabbard is a small pyramid with a horizontal opening. The neckband that serves to carry the sword passes through this opening.

Fig. 122. Ruanda Club. (1/8 actual size. III E6879. 95 1/2 centimeters long.)

411 I was repeatedly told that the sword was a Batutsi weapon, but it is doubtful that the present form of the haft and the scabbard with all their details can be credited to the Bututsi. We must not forget that swords are also used by the Batwa and occur in the countries west of Ruanda, especially in the primeval forest.

[196] The sword plays an important part in religious ceremonies. It is used, for example, at birth festivities.

Clubs are found in Ruanda, but they are not very important. It seems that they are used more by the herdsmen than by the rest of the population. Simple smooth clubs are also said to be badges of distinction. Occasionally I saw a club, the end of which was decorated with four brass nails. The thick end is often faceted.

[197] Shields. Shields are very rare in Ruanda proper and in Kissaka. They consist of a slightly concave oval piece of wood with a protruding portion in the center. Behind the protruding part a braided strap-handle is tied to the shield. The
[531] shield is painted black, white, and red. It is carved out of one piece of wood and is 40 to 50 centimeters high, 20 to 30 centimeters wide, and 10 to 20 centimeters deep.

The shield is common in Mulera. Here it has the Ndorwa shape, although it is usually not so wide. These shields are covered in front with rattan and are not painted. Thus they are essentially similar to the Uganda shield.

Of the shields west of Lake Kivu Dr. Kandt (1) says: "...as

1. Kandt, R., Caput Nili (Berlin, 1904), pp. 442, 443.

in the east (Ruanda), they are oval or rectangular with rounded
[285] corners, made of wood which in front is covered with wicker running horizontally or diagonally. [198] It is very popular to put bits of mica between the wicker strands. In the center of the outside is the navel, that is to say, a bulge, which in Ruanda is pointed, in the west usually flat. The Wahunde also had other shields that were carried by the chiefs. They are very tall and
[285] wide, rectangular, painted red, bordered with strips of skin, and very skilfully woven of reeds, therefore very elastic. On the

411 underside is an ornamented oval piece of wood that also serves as the handle."

Near Lake Luhondo on the border of Ndorwa I once saw a very primitive shield. It consisted of a piece of thick tree bark, in the center of which was attached a handle consisting of two bound, crossed twigs.

[285]

The shield plays an important part in ritual.

Chapter 9

Settlements and the Household

361 Settlements. There is considerable difference in the types of settlements to be found in individual parts of Ruanda. The typical form of settlement is the compound in which the

41

Fig. 126. Shield of Bark, Mulera: (a) Outer Side; (b) Inner Side. (1/6 actual size. L 15034. 61 centimeters long.)

independent man lives with his women, children, and servants (bagaragu). The establishments of the well-to-do are quite large and often embrace a dozen or more huts. Poor people have only one or two huts. The large settlements of the Batutsi, with the exception of those in the northwestern provinces, are all widely scattered in the grasslands and are conspicuous by the tall euphorbia hedges and trees which surround them.

In eastern Mpororo scattered huts occur only in the cultivated areas; they occur somewhat more frequently near large Bahima kraals, as, for example, that of Kitaraya. South of Kitaraya, Batutsi settlements hidden behind their euphorbia hedges predominate. On Lake Mohasi the scattered Bahutu settlements and their banana groves again appear. Here Batutsi kraals are rarer.

In Kissaka and Nduga there are Bahutu settlements on the edges of the banana groves, but since bananas are confined to specific regions because of soil conditions, a certain concentration of settlements has come about.

Around Nyanza, the residence of Musinga [king of Ruanda], we find few and widely scattered settlements, because the land is reserved as pasture for the king's cows.

In Mulera where the entire country is under cultivation, there is again a regular distribution of farm settlements. However, we also note a tendency for relatives to move closer together for safety.

In Bugoye, which shows influences of the Forest Bantu, we find many compact groups of huts almost resembling villages, although these settlements vary a great deal in their structure. Here the hill dwellers, from whom their mugabo [clan elder] collects taxes which he hands over to the proper mutware (ku butaka, ku muheto, etc.), have all joined together in a single settlement. [200] In Bugoye we find settlements of over 100 inhabitants. The largest settlements are in Bgisha, north of the chain of volcanoes. They sometimes have over 100 huts.

The Banyabungu also live in large villages which are very well kept and have high fences. (1)

1. Kandt, R., Caput Nili (Berlin, 1904), p. 377.

447 On the subject of the fences of the settlements northwest of
712 Kivu, Dr. Kandt (2) says: "All villages have a very curious wall

2. Ibid., p. 460.

surrounding them. It consists of thousands of forked branches and split roots, 10 layers wide and 20 high. For natives this is an almost impenetrable obstacle. The villages can be reached only by way of narrow passes or very steep approaches, and on two sides there are gates that can be quickly and securely closed with trees."

I observed such fences among the Baamba on the Ruwenzori. In Ruanda one does not see them. Here the dwelling is, as a rule, situated on the edge of the courtyard and is, together with the courtyard, surrounded by a euphorbia hedge. The hedges of the individual homesteads intertwine and form a labyrinth that is impenetrable even with the aid of a bush knife, for if one cuts the branches an exceedingly caustic juice squirts out which is very dangerous for the eyes. On the inside these hedges are usually supported by a fence made of sticks bound together. At night the outer approaches, usually opposite the huts, are closed with tree trunks, the branches of which are turned toward the outside. This primitive closure cannot be removed from the outside and, along with the euphorbia hedge, makes a very effective though not at all conspicuous fortification.

On poor Bahutu farms there are sometimes no fences at all.

592 The Compound. The compound or homestead where one
351 family lives with all its relatives and servants usually consists of several huts that form a self-contained unit.

In front of the main entrance there is generally a cleared
351 place, free of grass. In the mountainous parts of Ruanda one often has a superb view from this spot, for the settlements are frequently located on mountain tops. This is especially true of the Batutsi settlements north of Lake Mohasi. On the edge of this cleared spot
[372] are kept large supplies of dried cow dung which is used for fuel in the parts of the country where wood is scarce.

In the well-built settlements the main entrance, which is closed at night, is flanked by two columns of tied bundles of

351 elephant grass. In the compounds of wealthy persons, consisting of at least three huts, this entrance leads into the front courtyard.

[201] In this courtyard, opposite the entrance, is the kambele, the house occupied by the head of the family. On the side, usually to the left of this house, is the entrance to the inner courts. The front court as well as the inner courts are kept clean and free of grass. Here the clients and subordinates of the head of the establishment assemble to learn his wishes, commands, and de-
[574] cisions. Here he receives his guests who are conducted no farther than into the kambele. Sacrifices also take place here. In Musinga's compound I saw two carefully tended sacrificial trees between the entrance gate and his house on both sides of and at a

Fig. 127. Compound, Nyanza on Lake Mohasi: (a) kambele, (b) kagondo, (c) mubahutu, (d) stalls for calves, (e) storehouses, (f) spirit hut.

certain distance from the line connecting the two. In the front court near the house one also sees small spirit huts.

In many compounds the front court also contains huts for small calves, and animals are kept here at night. In one single instance I saw a hut for larger calves outside the enclosure. It was explained to me that the whole herd was kept near this hut overnight.

592 In the inner court is the house for the women, known as kagondo. Here the master's wife spends the day with her women servants. It is only in the evening that she is brought to the
[644] kambele in a litter. The husband eats with his wife in the kagondo.

592 Usually there is only one wife living in the compound (lugo), and she has absolute authority within her sphere. Sometimes, however, as in the case of the king, many women live in one compound and are brought to the kambele in turn. In this case there are several inner courts with houses for the women.

Beyond the inner court is the rear court with the cookhouse, called mubahutu, where the servants live. Near it are the storehouses with supplies of grain. These, however, I also found in the inner court. In Nyanza on Lake Mohasi I asked why a strange Muhutu lived in the cookhouse of the compound, and the answer was: "It is his duty to fill the granaries." Since the man also had to take care of the kitchen, I think this reply must be taken literally; in other words, he had to store the produce brought as tribute by the Bahutu and not home-grown products.

The Bahutu compounds, as a rule, have one court in which we often find several huts.

341 [202] Buildings. In Ruanda there are four distinct types of buildings: dwellings, huts for calves, spirit huts, and storehouses.

The first three are constructed on the same principle and are distinguished from one another only by their size and the care with 346 which they are constructed. The spirit huts are the smallest and least carefully built. They consist of a simple framework of 343 branches stuck into the ground and covered with grass. The storehouses, on the other hand, differ quite radically in form, though not in the principle of construction.

342 The dwelling in Ruanda, as in other parts of the interlacustrine 171 area, has the shape of a beehive. This type has also penetrated the western edges of the great African trench [Rift Valley] and even seems to predominate in Butembo (1), although there club huts

1. Götzen, G.A., Count Von, Durch Afrika von Ost nach West [Through Africa From East to West] (Berlin, 1899), p. 261.

with four doors mark the center of the village, and the doors are made of boards. In that region the buildings seem to be identical with the ones I observed among the Baamba.

343 171 On the way from Nyanza to Mulera, at the southern foot of Mount Ndisa in the compound of Rwabakika, I saw a round hut with a cone-shaped roof. It was a small hut for calves with a roof that clearly projected beyond the cylindrical walls.

342 171 Moreover, in the southern part of Bugoye at an altitude of 2,000 meters, I saw huts that gave the impression of being round with conical roofs, but on closer observation they turned out to be ordinary beehive-shaped huts. They were simply surrounded by a layer of reeds on the outside, and above this rose the straw thatch, giving the impression of a projecting roof. The natives explained that the walls of the huts are reinforced in this way in order to protect the occupants from strong, cold winds. Dr. Kandt likewise mentions this precaution, saying (2) that the huts are "protected

2. Kandt, R., Caput Nili (Berlin, 1904), p. 298.

by a sort of rampart of grasses."

We must also mention the fact that Baumann (3) saw huts

3. Baumann, O., Durch Massailand zur Nilquelle [Through the Land of the Masai to the Source of the Nile] (Berlin, 1894), p. 218.

with a cylindrical base of bamboo near the source of the Kagera. Is it possible that these are remnants of the round huts which formerly extended farther east and which were superseded by the beehive huts of the Batutsi? At any rate the beehive hut is more suitable for the treeless areas, for in an emergency it can be constructed without timber, merely of elephant grass or millet straw.

342 [556] [203] The size of the Ruanda house fluctuates considerably according to the wealth of the owner. It is usually four to eight meters high, and one and a half times that in diameter.

The house of sticks is tied together with papyrus; nails are not used.

The house wall consists of three layers. The middle layer is constructed of vertical sticks supported on the inside by hoops

342 made of bundles of sticks solidly packed together and fastened horizontally. On the outside the vertical layer is likewise held together by horizontal hoops made of bundles of sticks. This close-meshed lattice is carefully thatched with straw. The walls rise to a truncated point, capped with straw, from which rises a pole more than a meter high.

The entrance to the hut is framed with thick bundles of sticks and protected by an arched projecting roof, an extension of the wall of the hut. In contrast to the building method in Kiziba, this projection and the wall are a single unit, and the horizontal hoops run through it, so that from the interior of the hut one sees the entire roof of the anteroom. In Kiziba one can see only the doorframe to which the anteroom is added from the outside.

Northwest of Lake Kivu the huts have two entrances, probably in order to facilitate flight in case of a surprise attack. In Kishari, according to Dr. Kandt (1), the entrances are opposite each other;

1. Kandt, R., Caput Nili (Berlin, 1904), p. 477.

in Mushari, at right angles to one another. This arrangement must have been borrowed from the Babira [Bira] (Barega), for among the Babira at the headwaters of the Ituri Ksaw entrances facing each other. However, this arrangement can also be seen in Uele among the Mangbele of Gumbari.

The roof of the Ruanda hut is supported in the center above the entrance by a short, thin pole which is driven into the middle of the threshold at the edge which is ω-shaped, ten centimeters high and equally wide.

On the inside the frame of the hut is supported by a number of tree trunks, about ten to fifteen centimeters thick, with forks cut into the top to grasp the horizontal hoops.

The interior supports are placed very irregularly, and there is no central upright that would serve as the axis of the building. The pole at the peak of the hut has no relation to the supporting posts. Almost in the center of the hut are the four posts that surround the hearth. If the hut is smaller, there are fewer supports. They are

342 the largest pieces of wood used for the hut. No larger timbers are needed for the entire construction, and in the case of smaller huts millet straw and elephant grass can be used.

[204] Here, as in Kiziba, the supporting posts seem to have a ritualistic significance, but I could not find out anything further about this. I only succeeded in observing again and again that one of the uprights had a white band painted on it with kaolin (runoni), which supposedly meant that the owner of the hut had performed a ceremony. I was not able to find out, however, whether this had something to do perhaps with initiation into a secret society.

A rectangular woven shield is used to close the door opening, which is supported by posts driven into the ground on either side of the entrance. Sometimes there are two posts on either side and the door shield is slid between them. The woven door shields are used throughout the interlacustrine region. In the west, however, for example, among the Baamba, they are replaced by door shields made of boards , three of which are usually tied together.

The Batwa huts do not differ in principle from those of the rest of the Banyaruanda. They are merely smaller and much more carelessly built. However, according to Lieutenant A. Couche, who told me this personally, the Batwa in the vicinity of Uvira live in trees. It seems to me, however, that my informant did not have an opportunity to observe this himself.

If a person wants to build a house, the site he chooses is tested with butter. The choice is a happy one only if the piece of butter placed there at night is still there the next morning (1), which

1. Classe, Father, Moeurs et Coutumes des Bagoye [Manners and Customs of the Bugoye] (Les Missions Catholiques, 1905), p. 425.

probably indicates that there are no termites. The king is said to make this test with a piece of intobotobo yi mivembe.

If the test is successful, the future owner of the house prepares beer and sees that food is on hand. When all the preparations have

342 been made, the neighbors are invited. They come and build the hut; the owner is solely concerned with serving the workmen. Some time later the door is built in the same manner.

In most cases the huts last only two or three years and must then be rebuilt.

[768] After the death of the owner, his widow occupies the hut unless she goes to live with the brother of the deceased. How-
125 ever, the hut is abandoned if an ibis or a crowned crane has
787 settled on it. If the bird of ill omen were a crane, it is pursued, and if at all possible, the house is built on the first spot where the bird settles after it has left the roof of the hut. [205] They do not pursue the ibis. In Mulera the Bahutu as well as the Batutsi are afraid of both birds.

343 Let us now turn to a brief discussion of the storehouses (kigega)
251 which are so characteristic of the Ruanda compounds.

In Kiziba where the basic diet consists of the omnipresent banana which cannot be stored, there are no supply houses. The small supplies of beans and millet are wrapped in banana leaves and hung in large bundles on the uprights of the huts. In Kissaka and the rest of Ruanda where the main diet consists of millet flour and peas and where the small supplies of bananas are used chiefly for beer, houses are necessary to store the abundant harvests.

343 The storehouses are large cylindrical baskets. They consist
285 of a layer of sticks running the length of the basket and held
251 together by a number of hoops made of bundles of sticks. This basket is supported from below by a number of wooden forks stuck into the ground, which grasp the outer hoops of the bottom of the basket.

The walls of the basket are sealed with a mixture of clay and cow dung. Under the basket is laid a pile of ashes as a protection against the eternal ravages of termites.

This large basket, two meters high and one to one and a half meters wide, is closed at the top by a straw lid sewed to a conical lattice of sticks. In Kissaka the storehouse has no door, so the roof lid must be removed when supplies are put in or taken out.

251 Millet is usually stored in the form of clipped ears. Once, however, I saw an unusual instance in Kissaka of unthreshed millet

251 being stored in an empty hut. This must have been a temporary arrangement to counter the danger of termites.

In Ruanda some of the supplies are kept in the hut. Here, however, they do not use banana leaves but baskets sealed with cow dung. The baskets hold up to 50 kilograms.

In northern and western Ruanda there are often pits in the immediate neighborhood of the huts, where bananas are kept to ripen and fresh beer is kept until it ferments. The pits are heated before the bananas are stored there. To do this the smoke from the adjacent fire is directed into the pit. Dr. Kandt (1) is

1. Kandt, R., Caput Nili (Berlin, 1904), p. 390.

undoubtedly referring to these pits when he says that the cellars of the Banyabungu are: "...caves in the shape of butter molds, the walls of which are supported by bent branches and hoops. The hoops starting at the bottom form diminishing concentric circles up to the opening which is wide enough for a man to enter."

[514] Privies seem to be completely unknown in Ruanda.

[206] Interior of the Hut. The interiors of the huts in Kissaka 342 differ from those in Kiziba in that there are no fixed, woven par- 352 titions. When you enter the hut, you seem to be confronted by a finely woven wall, but on closer observation this turns out to be a row of uprights. Stiff rectangular mats are wedged in between them and bent outward. The mats are woven somewhat like the baskets; they are 2 meters long and 40 centimeters wide and usually sealed with cow dung. This wall separates the anteroom (umuriango) from the hearth section. On the left side is an opening which forms a narrow entrance to the interior of the hut. The position of this opening seems to be reminiscent of the arrangement in the Bakondjo huts. However, this opening can also be directly opposite the entrance, as is generally the case among the Batutsi.

352 Along the wall of the hearth section, usually to one side of the entrance, is the bench for the milk vessels. This is about 40 centimeters wide, 40 centimeters high, and up to 2 meters long

352 and is covered on top and in front with mats. On this bench stand several simple vessels carved out of wood and covered with not very artistically woven straw lids. Above these vessels, on a beam placed across two uprights, large calabashes used in making butter hang in nets. In Kissaka these hanging nets are not as neatly and carefully made as in Kiziba. Small calabashes are used to close the openings of the butter calabashes.

[342]

Fig. 128. Floor Plan of Kissaka Hut: (a) anteroom, (b) hearth, (c) bedroom, (d) back room, (e) milk bench.

354

The hearth is situated somewhat to the left of center. It is shaped like a round clay slab with two concentric circles, one centimeter high and ten centimeters wide, to prevent fire and ashes from falling out. Well-to-do people who have a separate cookhouse do not keep a fire in the hut during the day. Their hearthstone is always [207] swept clean, and they light a fire only in the evening. Above the fire is a grill, that is, a slab set on four high posts. The bunches of bananas to be used for making beer are placed on this grill to ripen.

[415 285]

Fig. 129. Hanging Net with Basket. (1/6 actual size. III 13100.)

On the other side of the hearth, opposite the milk bench, is the spacious bed. This is surrounded by posts, and here again we find mats or plaited work wedged between them in order to close off the room. There is a separate approach to the bed, which can be clossed off with a rollable stick mat, like a blind.

342 In Mulera I had an opportunity to see a different arrangement of the hut. Here there was no partition between the anteroom and the hearth section, and the whole thing was called a cow stall (rubumbiro). The hearth (isiko) was in the middle of the hut. This is also said to be the usual arrangement in Bunyabungu (1).

1. Kandt, R., Caput Nili (Berlin, 1904), p. 390.

In Mulera, behind the hearth is the women's rooms (mbele) which leads to the niche dedicated to Biheko (ruhimbi). To the right of the entrance is the room for the calves (ruhongoro). The bedroom is between the Biheko niche and the calf stall.

352 In Ruanda the bed is made of wooden sticks. Four supports forked at the top, are driven into the ground, and on these rest two horizontal rods that support a platform made of wooden sticks. The frame is covered with several mats which make a relatively soft padding.

513 The sleeper wraps himself up in a mat, so that only the masunzu (2) and the toes stick out, which are not infrequently

2. Unshaven stripes of hair which ornament the heads of men, children, and young people.

gnawed by rats, the worst plague of the dwellings.

415 On the side of the bed facing the wall I saw tall round baskets with lids (ichibo) filled with grain for sowing.

352 Beds are found in all the huts of Mpororo, central and southern Ruanda, and Mulera, but in Bugoye I saw huts without them. There were very few in Nyundo, whereas in Ruagari which is only four hours north [208] on the Bgisha border, people commonly slept on mats without bedsteads in a special portion of the hut closed off by a partition. This was also the arrangement among the Batwa of Chuma. Among the Bakondjo and the inhabitants of Toro there are beds in all the huts. There are none in Kiziba.

The Batwa west of the Kagera do not use beds nor do the inhabitants of Bgisha and north Bugoye, who are obviously influenced

352 by the Batwa. The Pygmies also do not use beds. If we also remember that the people west of the Kagera make their bowstrings of rattan (bamboo) and use the wooden arrowhead, we may venture to surmise that the absence of the bed in north Ruanda is connected with the Batwa, that is, the Pygmies.

In the interior of the Batutsi huts I occasionally also saw a special room for children and guests. Usually the larger children and the guests sleep in the anteroom (umuriango).

The floor of the huts is covered with mats and not strewn with grass as in Kiziba and Mpororo. On the floor there is usually also a low wooden stool to sit on.

412 Household Utensils. In Ruanda household utensils are very crudely constructed, especially the mortar and pestle. The latter is a simple uncarved stick with a bulbous end. The gourd bottles, 415 too, are not as smooth and regular as those in Kiziba where we find all forms highly developed and perfected.

The most important household utensils are storage baskets, millstones, and various dishes for cooking and eating.

415
285

Fig. 133. Shield Basket for Flour from Ruanda. (1/6 actual size. III E10922. 27 x 23 centimeters.)

We have already briefly referred to baskets. We mentioned the conical storage baskets of bamboo (Fig. 54), the smaller straw baskets that are sewn together (ichibo, Fig. 131), the shield baskets for winnowing grain (Fig. 28), and the traveling baskets made of

415 sticks (Figs. 45, 55). The only ones we have not mentioned are
285 the shallow, wide baskets, sometimes made of sticks but usually woven, which are used in the household (Fig. 134).

[209] The millstones of Ruanda have the usual African shape
412 and consist of a flat stone on which another stone is moved back
252 and forth. A woman kneels and holds the second stone in her hand. In this manner the grain that has been dried near the fire is ground between the stones. The flour falls from the stone into a shallow shield basket (Fig. 133).

Clay vessels are used for cooking and to hold water and beer.
415 The cooking pots differ from the others in that they have a larger
323 opening. Like the rest of the clay vessels, the rims of these pots are flared, making them easier to grasp. In cooking they are set on three hearth stones. The water pots are often supported by special woven rings (ingata yo kubereka). If these are not available, a small depression is made in the ground and the vessel is placed in it to prevent it from tipping over. The bottom of the vessel is always round. The beer jugs of larger dimensions often have a braided wrapper that makes the clay vessel less likely to break.

[210] The fire for cooking is produced with a fire drill in
372 Ruanda. In the primeval forest between Kahama and Nyundo I met two Batutsi who were grazing their cows. They were scantily dressed and around their necks, on a string, they carried fire drills. In Mulera I saw a fire drill in the supply basket (isaho) which a herdsman was carrying. In Bgisha almost everyone carries a fire drill in his tobacco pouch, along with his pipe. On the other hand, in the villages of the more densely populated sections of Ruanda, as, for example, in Mulera, this art is scarcely practiced any more, and the people get fire from their neighbors, thereby showing their friendly feeling toward them. Fire is carefully preserved in the ashes, and the fuel is ignited from the small glowing coals that are fanned with a small woven shield (kakoko).

415 Crudely carved cooking paddles and spoons with long handles are used for stirring, especially in the preparation of the thick millet mush (umutsima).

Food is served in small, carved wooden bowls and in baskets.
415 The baskets are shallow and wide and have carefully worked
285 patterns in black only. In shape and construction they do not differ from the beautifully ornamented Nubian baskets, since they are also made of spirals of straw sewn together.

415

Fig. 143. Cooking Spoon from Mulera. (1/6 actual size. L15081. 65 centimeters long.)

445 [211] The wooden bowls are usually elliptical, but sometimes they are quite long and have a handle, so that they resemble a very short-handled spoon. Twin vessels are also not uncommon and I collected a number of them in Mulera. They hold less than other vessels. These twin vessels have a common longitudinal axis, are carved from one piece of wood, and used to serve different foods at one time. The part that joins them serves as a handle. On the outer rim there is often the suggestion of a handle in the form of a knob or a loop. Simple bowls sometimes also have loops.

[212] Gourds are used to hold beer and water. In Mulera, as in the Congo Basin, large bowls (ulukiza) made of calabashes cut in half lengthwise are used for drinking. Usually, however, in Ruanda, beer is sipped through straws from calabashes with narrow necks. The necks of these jugs are not as narrow as those in Kiziba. The straws are kept in the huts in small woven or carved wooden containers (ikitembo) resembling quivers.

Beer is poured into the small openings of the calabashes with funnels. [213] However, we also find vessels used for pouring. These were collected and illustrated by Dr. Kandt. (1)

1. Kandt, R., "Gewerbe in Ruanda [Industry in Ruanda]," Zeitscheift für Ethnologie, 1904, p. 346.

Milk is stored in the house in the wooden vessels (kianzi) we have already discussed. Large gourds (kisabo) are used for making butter. There are special small vessels for storing butter. They are made either of fired clay or carved out of wood. The latter are shaped like tiny dishes, but the edges are more convergent, and they usually have a loop handle.

352 Small, one-legged stools complete the furniture, but not every household has these.

462 The Household. The women do the housework which consists of fetching water and preparing food.

312 Fetching the water needed for the household is probably the most onerous task, particularly in the lava district south of the

312 volcanoes. There the rivers run underground and open water holes are sometimes a great distance away, even several hours. In these regions rain water and the bitter juice of the banana stalks are used primarily, but a certain amount of water has to be fetched even in these regions. The collected rain water is very impure, for [214] it is gathered in small depressions in the ground from which it is dipped with gourds into larger vessels for storage. In Buhumba, along the route from Nyundo to Rutshuru, I saw that after a heavy rain waste matter from the dirty courtyards was washed into the water holes.

312 578 In spite of these difficulties in obtaining water, the Bahutu filled in a spring on the Karisimbi in order to get rid of the Batutsi who watered their stock there and devastated the fields. This example shows how peacefully herdsmen and farmers live together.

412

515 That the women have to fetch the water may account for their greater cleanliness. It struck me in Nyundo that one always saw women washing themselves along the Ssebeya, but one seldom saw men bathing.

462 The entire process of preparing food also falls to the women, and this is not limited to cooking. They must also thresh the grain, grind it into flour, peel the produce of the fields, in most cases fetch firewood, and in Kissaka even make the pots.

412 In their work women use small, crudely constructed knives. Only in the west do we find large, double-edged, sword-like knives used by the women. They closely resemble the knife used by Babira women.

000 the knives used by Babira women.

251 Boiled food forms the basis of the diet; however, corn, sweet potatoes, and peanuts are also baked.

262 The Batutsi's favorite dish is beaten sour milk, kivuguto. The Batutsi maintain that they live exclusively on beer, milk, and meat, but sureptitiously they also eat peas (maharagi), beans, millet mush (umutsima), eleusine (buro), gourds, and bananas. On the other hand, they seem to scorn sweet potatoes. This may not be altogether true, however. The Batutsi repeatedly tried to convince me that their diet was entirely different from that of the Bahutu, but this does not seem to be the case.

The diet of the Bahutu, as one would expect among the poorer people, is more monotonous, with less milk and meat and more umutsima, peas, and sweet potatoes. Fish is a very important part of the diet of north Ruanda.

264 [215] The Batutsi eat solid food only once a day, in the evening. They eat with their women, whereas they drink only with men of their own social position.

The Bahutu eat twice a day, between one and two in the afternoon and between eight and nine in the evening. In Mulera people also eat in the morning. This applies only to the men, since women and children eat all day long. The Batwa, too, are constantly eating, whenever they have a chance. It is said of them: balandwa uk imga, "they hunt like dogs."

Chapter 10

Family Affairs

595 The Family. The number of persons in a family, in the narrower sense of the term, varies a great deal in Ruanda. It includes the father, his wives, and children.

Since the woman represents a worker primarily, the number of women in a man's household may be regarded as the measure of his wealth. The poor cannot keep a wife, those of limited means only one, and the wealthy minority two or even several wives. This is why the Batutsi have more wives than the Bahutu.

595 Although a wife feeds herself and the market price for a woman is trifling the Bahutu, nevertheless the man must build and maintain a house for each woman. The amount of work this entails, considering the perishability of the straw buildings, seems to be an important factor in curtailing polygamy. In some cases, it is true, several wives get along with each other in one house, but the lack of a separate hut is considered a great disadvantage and usually results in a woman's departure.

612 The family in the wider sense of the term includes the more distant relatives.

If the child is regarded as the center of the family, only the ancestors in the male line of the father as well as of the mother are considered. The ancestors in the female line are disregarded. Of the various branches of the family only uncles, aunts, cousins, nephews, and nieces are to be mentioned, as well as the corresponding relatives of the husband or wife.

601 In the Kinyaruanda language there is a word, basekuru, for the abstract concept "ancestor," but there is no word for the concept "father," and one must always say "my father," "your father," "his father." For "grandfather," too, there is no special designation; sekuru really means "his grandfather," and the concept "your grandfather" must be expressed by sokuru.

[217] In the following table we list the expressions for the closer relatives. (See following pages.)

Older close relatives are simply called uncle, data wachu. More distant relatives are referred to as mwene wachu.

The term wachu used so much in the table of relatives is really a possessive pronoun and means "our," just as wanyu means "your" and wabo, "their."

The stepfather is referred to simply as the husband of the mother or brother of the father. [218] The latter designation refers to the fact that a husband's brother falls heir to his widow.

It should be noted that in kinship terms the father's brothers and the mother's sister are treated as two parallel groups, the members of which can intermarry.

562 264 Position of Women. In Ruanda the woman is regarded, in principle, as a lower creature, and married couples never eat together in public. In private, I have repeatedly observed that they usually do eat together.

	Father's Side	Mother's Side
Ancestors	basekuru	
Great-grandfather, great-grandmother	sekuruza, nyinakuruza	sengeneza, nyinangeneza
Grandfather, grandmother	sekuru, nyinakuru	senge, nyinange
My (our) father, my (our) mother	data, mama	
Your (sing. and pl.) father, mother	so, nyoko	
His [or her] (their) father, mother	se, nyina	
My husband	mugabo wanye	
My wife	mugore wanye	
Son, daughter	umwana	
Grandchild	musukuru	
Great-grandchild	musukuruza	
Brother of my father, brother of my mother	data wachu	marumi
Brother of your father, brother of your mother	so wanyu	nyoko rumi
Brother of his [or her] father, brother of his mother	se wabo	nyina rumi
Sister of father, sister of my mother	nyina senge	mama wachu
Sister of your mother		nyoko wanya
Sister of his [or her] mother		nyina wabo

(continued)

	Father's Side	Mother's Side
A boy says, "my sister"	mushiki wanje	
A boy says, "my brother"	mwene data	mwene nyina
A girl says, "my sister"	mwene data	mwene nyina
A girl says, "my brother"	musaza wanje	

The children of two brothers call each other: mwene data wachu.
The children of the mother's brother are called: mwene marumi.
The children of the father's sister are called: babyara (singular: mubyara).
More distant cousins are also called: babyara.
The brother's son is called: umushungu wabo.
The brother's daughter is called: umugore wabo or umukobga wabo.
The uncle calls his sister's child: muishwa.
The grandfather calls his daughter's child: akamumuishwa.
The wife of my son is called: umukazana.
The father of my husband is called: sebukwe.
My wife's brother is called: umuramu.
My wife's sister is called: umuramukazi.

562 Despite this disadvantage, the position of the woman in Ruanda must be regarded as relatively good. True, she does bear the burden of the housework and field work, at least in the poorer households, but the husband helps her with the field work in emergencies and always does all the heavy work. It is his duty to clear brush, build huts and storehouses, and help with the hoeing.

The well-to-do women spend their time at handiwork, such as making small, artistic baskets. It is said that while doing this work they consume large quantities of beer. They spend the day in the kagondo, the women's house, and, therefore, one has little opportunity to see Batutsi women. If you arrive unexpectedly in a compound, you see nothing but a few figures in flight, whom you can recognize as women by the rings on their legs (butega).

While the expedition was in Nyanza, Dr. Schubotz tried in vain to get Musinga's permission to photograph his wives. Musinga made promises but did not keep them.

There were, in fact, no women to be seen in Nyanza. During the entire three weeks of my stay, I met only two not very young women on the last day.

In Ruanda one often hears complaints about the dominance of women. The farmers especially complain about the wives of their chiefs who are said to be very disagreeable, above all when their husbands are away. A couple of times I heard about Bahutu who were beaten with sticks and badly wounded by Batutsi women.

It is as a mother that the woman takes on an important and esteemed position. The best example of this is the influence enjoyed by the queen mother. A king's son who has lost his mother can not ascend the throne. Sterile women are despised, and the only attention paid to unmarried women is that they can be married off, that is to say, sold, so that connections with other families may be established.

581 [219] Marriage. Marriage does not have the same social significance in all parts of Ruanda, but throughout the country a man can improve his status through marriage and even more so through the marriage of his children.

In the northern part of Ruanda, however, where the Bahutu are still almost entirely free, marriage is a political act of

581 great importance because it unites two families and is a step in the direction of social integration. In Nduga where farmers have no political importance, marriages also have no significance.
[583] This probably also explains the difference in the purchase prices of brides. In the north these prices are very high; in Nduga they are very low. Hence, marriages in the north are much more stable.

583 The price paid for the bride, which must be returned in case
562 of a separation, is the economic guarantee of the permanence of a union. In the words of the natives, a marriage in Mulera is an act of exchange between two clans. One clan furnishes the horned cow, ntuku, which is the bride price, the other clan provides the unhorned cown, nkunge, that is, the bride. The woman, like the cow, is family property. After the death of her husband she is inherited, so her purchase price and her progeny do not have to be returned. This inheritance is called kutshura.

584 In Kissaka a bride is wooed when she is still a small child. The suitor sends banana beer to the parents of the bride. If the parents approve, they accept the gift. Then, when there is an opportunity, the bride price is agreed upon. The presents of beer are repeated from time to time until the girl comes of age. These presents are supposed to call attention to the suitor and further the marriage settlement. As many as 20 to 50 jugs of beer
585 are sent. When the girl is mature, that is, when she is about 15 years old and her breasts are the size of a fist, she is brought to the house of her husband on the appointed day by the sister of her father, her brothers, and her attendants (bagaragu). They stay the whole evening, drink banana beer, and converse. While the bride sits with her aunt in the inner part of the house, the rest of the party is in the section facing the door (mulìango). After the entire supply of beer has been drunk, they all return to their houses, and the newly married couple is left alone.

It often happens that the bride runs home to her parents and does not wish to return to her husband. In this case the husband must send more presents of beer to the parents-in-law. If he happens to be out of beer, he must send a man, who promises to send more beer, to fetch his wife.

583 [220] The sum paid by the bridegroom for his wife is pri-
556 marily an indication of his wealth and not the purchase price of the woman. That is why the rich pay proportionately much more than the poor. Thus, a great chief in Kissaka pays two cows and their calves for a wife; a lesser chief pays one cow and a calf; an ordinary Mututsi, only one cow. The bridegroom's payment is called inkwano. On the other hand, the woman gets a dowry, known as indongovanyo (wedding present). The woman's dowry is given by her father and his sister. Each of them gives one calf, and, in very rare cases, a cow.

[643] If the king wishes to marry, he sends forth one of his men with a forked wooden stick called isando. The king pays for a wife with many cows, but he does not accept a dowry because everything, of course, belongs to him anyway.

583 The payments and gifts among the Bahutu of Kissaka are not so large. The bridegroom, for example, pays six to eight hoes for his bride or very often a doti (four yards) of material and a sheep. The bride's father gives a dowry consisting of one hoe, and the father's sister gives a sheep. However, considerable quantities of beer are consumed on these occasions.

In Bugoye where a cow is often exchanged for a girl, the bride can also be paid for in services. The girls can thank this market value in terms of a cow for the compliments of the elegant cavaliers who compare them with cows. In Mulera where the Bahutu are wealthier and pay more for their wives, they cannot get a wife without a cow.

589 A young unmarried girl is called inkumi. It is said of old maids that they fell into the hearth, baguye kuziko, or akapfa nimulindo, "she died in virginity."

836 Marriages with girls who have had sexual intercourse occur, but a bad reputation, at least in Mulera, is said to complicate the otherwise simple procedure of finding a husband.

[581] If a Mulera wishes his son to marry, he looks around for a
584 girl who might guarantee him important allies among her relatives. When he has made his choice and the oracle has pronounced favorably on the choice, he sends a present of beer to the girl's parents. The present is accepted if they wish to express their satisfaction with the courtship. The father of the girl must accept

584 the first present of beer, even though he intends to withdraw his approval later. The refusal to accept the first gift is considered a bad insult and evokes bitter enmity. The visits accompanying the presents of beer are repeated from time to time. If the father of the girl does not discourage these visits, the price of the bride is discussed during the drinking bouts. In most cases it is a cow and two jugs of beer. The latter, however, can also be replaced by hoes. [221] The cow wears the vine around its neck known as mushishwa, and to it are fastened one of the two beer jugs or the hoe. The name for all these things is bukwe, "bride price." The mushishwa plant is added to make the agreement binding, to prevent the parents from changing their minds and giving the girl to another youth. Gifts are given to the nearest relatives of the girl as well as to the father. The father's brother gets three jugs of beer, and the mother's brother, two. The girl's mother gets three hoes, the maternal grandmother and the brothers, one hoe each. Payments are delivered a few days after the first negotiations. If the marriage does not take place, the bride price and, above all, the hoe with the mushishwa must be returned.

As the date of the marriage draws near, the visits with the obligatory presents of beer become more frequent. After a specified amount of beer has been drunk, the day of the ceremony is agreed upon.

585 The relatives of the bridegroom prepare a large amount of beer. The father of the girl or, if he is no longer living, her older brother invites relatives and women friends to bring the girl to the house of her future husband, along with a large retinue.

The girl is wrapped in a mat and either led or, if the roads are bad, carried. If during this journey anyone succeeds in catching a glimpse of the bride's face, the marriage will be of short duration. The retinue also carries an empty gourd, which is supposed to assure the girl of progeny, and the gifts from her relatives. In one of the baskets is the cowhide which she will wear after she is married; the other contains her jewelry. The procession sings along the entire way. The girl is received at the entrance to the courtyard of the bridegroom, who comes to meet her holding a gourd.

585 He hands it to her, lifts the skin in which he is dressed, and exposes his thigh with the words: "ndakuhaye omurundi, uzachukura inka yo kukuhaliki (I give you my leg, it will become a bull for you, that will mount you)."

The gourd which the man hands over is a symbol for the belly of a pregnant woman, and the ceremony symbolically expresses the wish of the man that she bear him children. The bride walks through the courtyard and enters the house where the marriage ceremony is to be continued. There she gives her future mother-in-law the gourd, kisabo, for safekeeping. She also leaves her the gourd she brought along and the two baskets of presents. The [182] second gourd is very carefully preserved, for in it the young wife [222], after the birth of her child, brings beer to the home of her parents to sacrifice to the manes. In this way she requests the manes not to harm her child. Little children are given liquids from the same gourd. It must be quite new and must not have been used previously, even for water.

Afterwards the guests separate within the house. The women go to their section of the house, the mbele, opposite the entrance; the men remain in the ikirambi, the middle of the house. The basangwa, guests of the bridegroom, sit on one side; the bahelekeza, members of the bridal procession, sit on the other. The uninvited guests remain in the courtyard outside the hut.

After everyone has drunk copiously of the beer, they ask for food. One of those present suggests that they begin with the marriage ceremony, since it is getting late. The bridegroom gets up, takes a container of milk, and goes to the women's section. The women resist and do not let him get near the bride. The bridegroom violently drives them away and strides toward the girl who is sitting on the ground with her legs spread apart. He kneels in front of her, spits milk on her breasts, and says as he rises: "mumpe impundu, ndalongoye (give me shouts of joy, I have married)."

This is the core of the entire marriage ceremony. Unmarried girls may not be present when this takes place. The parents of the girl and the brothers of her father are not present at the wedding. They celebrate the daughter's marriage with beer in their own home.

585 842 After this ceremony one of the young husband's sisters grinds flour, makes millet mush, and distributes it among the small children. This is done in order to guarantee the young couple numerous progeny. The same girl prepares food for the young wife on the following day.

585 782 The marriage ceremonies are concluded with the sacrifice of a goat. After the children have eaten their millet mush, the head of the family says: "We are going to eat." The guest reply that the women would like to wash their hands. The women do not agree with this and say: "We shall eat after the men have finished." Then the head of the family has a goat brought to him. After this is done, the guests look at the goat critically and say that it is not beautiful enough. Then another is fetched. This, also, does not satisfy the demands of those present. Then a third one is brought. This can be accepted if it is beautiful. After the goat has been accepted, it is beaten with a stick while being driven to the bridegroom's house. It is killed near his bed with kicks and blows, not with a knife in the usual way.

This ceremony supposedly indicates how the wife would have been treated if this sacrifice had not been made. According to another version [223], it means that the woman should be as soft and yielding as the goat that had all its bones broken. The meat must be divided among those present, otherwise the marriage would be childless. The men eat it on the same day; the women take it home for the children, because in Mulera they themselves may not eat goat's meat.

585 The men eat the meat along with millet mush. After everyone has eaten and drunk his fill, the guests disperse in the morning. The guests of the bridegroom accompany the guests of the bride for a short distance and honor them in this way.

The young husband soon returns, takes the firewood that has been prepared, and lights two fires at the places where the women and the men were seated. The bride goes out with the guests but immediately returns to her mother-in-law, where she remains. The mother-in-law prepares a meal, but the young bride refuses to eat it. The husband must persuade his hungry wife to do so by giving her presents.

In the evening the mother-in-law tries to prevail upon the wife to go to her husband's hut. The wife stubbornly resists yielding to

585 her husband, and there is a quarrel. It is proper for the man to show marks on his body which indicate to everyone that his wife bravely defended herself and did not yield like a hussy. However, the man may not be strong enough to break the wife's resistance with force, and he must then persuade her with presents to eat and to yield to him.

After the marriage, the woman must remain hidden for a time, that is, until her relatives come with gifts of beer, food, and bracelets. This visit usually takes place on the third day. On this occasion mats are brought along which the young wife made at home. She may chat with her relatives, the young girls who brought the mats. On this day there is dancing, singing, and much drinking.

Some time afterwards the parents again send their daughter presents. Among these, besides food, is a brand new hoe with a new handle. On this day the wife dances with her husband and the new hoe while the rest of the relatives sing an accompaniment. The wife then goes to the field for the first time and works a little. Until this day, called kushishura, the man has no sexual intercourse with his other wives. After the hoeing, grains of millet
[142] are brought to the young woman. A handful is scattered on a mat, and she must pick them up with one sweep of her hand. If she fails, the prospects of numerous progeny are poor. She and her husband together grind these grains and use the flour to make beer which they give to small children in order that they themselves will have children.

841 [224] During the first menstrual period after her marriage,
291 the woman is given the cowhide which constitutes the dress of
302 married women, and her head is shaved. However, since girls are
585 not infrequently married before they are mature, it often happens that the wife goes about with her masunzu (shaved pattern) for a long time, waiting for the cowhide. Father F. Dufays told me that he knows of a case where a wife waited eight months for her cowhide, but it is said that the wife sometimes waits as long as two years.

841 Thus, a superstitition has arisen about the shaved pattern on
302 the head. According to it, if a wife does not give up her maiden
585

841 adornment at the proper time (first menstrual period after mar-
302 riage), one of the partners will die young. After her head has
585 been shaved the wife receives gifts from her husband.

585 When the woman has put on her cowhide, she pays her
574 parents a visit. It sometimes happens that if the menstrual period is early this visit precedes the gift of the first hoe. On the way to her parents she has her head wrapped in the skin and is wearing her best jewelry. At her parents' house she grinds flour and fills a basket, piling it high. She removes as much as is piled over the edge of the basket and takes this to her husband. It is cooked
[142] to a stiff mush, and husband and wife eat it together. This ceremony is also supposed to guarantee numerous descendants.

593 Children are prominent in the family. The parents love them tenderly and treat them well. Although the intimate relationship between mother and child excludes the father somewhat, nevertheless the husband and wife show a certain attachment and tenderness toward one another. This is said to be true particularly of the Batutsi.

In Mulera, when a man goes on a journey, his wife pours off a little beer from each jug used and puts it aside. If the man returns and finds no beer, he concludes that his wife has not thought of him and has been unfaithful to him.

58[illegible] In Nduga, as we have mentioned before, marriages are of only moderate duration.

585 The Mulera wedding has been beautifully and completely described by Father Felix Dufays (1), and the marriage customs in
[113]

1. Dufays, Father F., "Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda [Song and Singing during Courtship and Marriage in Mulera-Ruanda]," Anthropos, 1909, pp. 847-878.

other parts of Ruanda were discussed by Father P. Schumacher. (2)

2. Schumacher, Father P., "Die Ehe in Ruanda [Marriage in Ruanda]," Anthropos, 1910, pp. 870-906.

585 Extramarital Relations. Not all women who share a house-
567 hold with a man are his regular wives (basumba kazi) with whom
578 he has entered into a formal purchase marriage. Concubines
588 and slaves (baja) are also kept in Ruanda. The concubines are [225] usually childless widows and abandoned or fugitive women. They settle wherever they find a relatively good refuge. The baja are sold by their parents when they are children, usually in exchange for food during a famine. They are simply women without ties, but who are otherwise very much like the other women and usually also have their own huts. Their children are likewise said to belong to the father's family, although they are not regarded as equal. Such children of Batutsi men, for example, are said not to be regarded as Batutsi although they have the same family name.

588 The chiefs grant baja to their clients, a practice which is
567 even more clearly defined among the Azande and Mangbetu, for example. The baja, along with the cow, are the means whereby the powerful one binds his clients to himself and thus strengthens his power.

567 Just as a man can grant a cow to a client and also demand it
574 back, so he can likewise put a muja at the temporary disposal of
837 a favorite. Under these circumstances the entertainment of guests with women "who are to warm his bed for him" is quite understandable. The less esteemed guests are given baja; the highly respected guests, on the other hand, are honored by being offered regular wives.

574 In general, a man on a journey has at his disposal the wives
837 of his blood brothers. Dr. Kandt (1) says that from certain social

1. Kandt, R., Caput Nili (Berlin, 1904), p. 177.

aspects this arrangement has its positive points: "Alternating connubium, that is, the interchangeable pairing of several male blood relatives with all their wives, as is permitted in Ruanda, prevents the loss of the female element in the preservation of the race, should the male element prove unfit."

574 This custom seems to be widespread particularly among the
837 Batutsi as well as among the Bahima. Father Achte sees in it the reason why polygamy is relatively undeveloped among the Bahima.

578 In spite of polygamy and the fact that it is easy to enter into marriage in Ruanda, there is a sort of prostitute. These are widows or older women, as well as girls who have not found a husband. They give themselves in exchange for presents, thereby earning their living. They are called inzorezi. Young men have sexual intercourse with them before marriage. The word is derived from the verb kuzerera, "to run about."

586 Prostitutes and concubines are distinguished from nyamuraza, roving girls who enter into a sort of trial marriage and have intercourse in this way. They hope [226] by this means to persuade a man who would otherwise not have given them any consideration to make the conventional payment and thus make a proper marriage. This attempt may be repeated several times.

586 Divorce. If a man is not satisfied with his wife he may, without further ado, send her back home. If the woman was at fault, if she was unfaithful or sterile, a demand may be made for the return of the payment given for her.

In Mulera the cow which was paid for the woman, as well as all the animal's young, are returned in this type of divorce if the woman has had no children. If the woman has lived for some time with her husband, the cows may be replaced by calves. While I was in Rusa the whole countryside was in a state of excitement over an unusual divorce suit. A man named Lwamakuba paid for his wife with a cow which in the course of time gave his father-in-law ten calves. When the wife grew old, her husband sent her back home indicating that she was sterile. He demanded the return of his payment which had meanwhile increased to a whole herd of cattle. After many negotiations the wife returned with an excellent cow which was supposed to make up for her beauty defects. The husband took his wife back, and the matter was settled. After a time, the wife was sent back again. Five times the woman returned, always with another cow. At the time of my visit the woman was being sent back for the sixth time.

586 However, since this time another cow was denied, the man entered a suit for the return of the illegally retained cow.

If a woman no longer wishes to live with her husband, she 586 first goes back to her parents. She does not have a comfortable 587 existence there, however, for she is regarded solely as a beast of burden and as something unclean besides. Her father, above all, has visions of having to return the payments which he cannot refuse the husband. For this reason the woman usually does not stay long in her parents' home. After a certain time she moves away and settles with a man who does not shy away because of the dispute with her husband and her father. Once the woman has left her proper husband, she does not usually stay long anywhere and travels about according to her moods and the advantages she may gain. Thus a woman may change husbands several times within a few years.

586 In Mulera disputes between man and wife are said to be tried before a specially selected tribunal of older women and men. If public opinion is in favor of the wife who has left, the husband loses his right to be paid and must persuade her to return by offering her gifts. In this case, as a rule, the bribed relatives of the wife become the man's most vehement antagonists, for they do not like to see her wandering about in any case.

[227] The divorced wife retains her personal possessions and the dowry she brought to her husband's house.

578 The vagabond existence of women causes much disorder in 857 the life of small communities. Most quarrels, in Kissaka, for example, arise on account of the children. Here the Muhutu woman does not have a high purchase price, and consequently the children are more important than the wife herself. The children belong to the father's clan. The clan regards the children as reciprocity for the payment received by the wife's parents. If a man has impregnated a woman for whom he has not paid, his right to the child is apparently lost. The woman stays with him, however, and the child, at least as long as it is small, cannot be taken away from the mother. This involves a legal question which the batware [officials] must decide. If the man is powerful and has many followers, the question becomes very complicated. In this

578 case the conventional decision is hardly feasible, although the
851 child of a woman who has not been paid for does not, it seems, in principle belong to the clan of its father.

586 The state cannot force women who have left their husbands to
562 be brought back, and thus a woman has some personal freedom. Also, although the woman does not have a high social standing, she can exercise considerable pressure by threatening to move away. There are many instances that prove these are not empty threats. In spite of the man's privileged position, the woman is mistress of the hut, even when she is occupying it only temporarily, for she nourishes the household with her work in field and garden.

845 Birth. Although all women have a strong desire for children, they are nevertheless very much afraid of childbirth. In Ruanda the number of difficult confinements is not small. They are supposed to occur particularly in the north, in Mulera and Bugoye. In Mulera mothers not infrequently die in childbirth. I was told of confinements that lasted a week. This fact is probably related to the recent mixture of very different anthropological elements, such as those like the Forest Bantu with those like the Batutsi, which may be observed there.

843 The pregnant woman wears the ibiheko amulet to ensure an easy birth. The amulet consists of two small pieces of wood tied together and is worn on the chest. Often a second one is worn on the back. The amulet is not taken off after the birth, but is worn until the child is two or four years old.

843 Pregnant women are given some consideration, even when
578 their husbands beat them in a fit of temper. The husband is careful not to hit the woman on the abdomen and usually boxes her ears. If he reaches for a stick in his rage, he beats her only on the shoulders.

[228] A birth usually takes place in the hut, in the section
844 occupied by the women (mbele yinzu), but this is not always the case. A soothsayer must decide the place for a favorable birth. If it is to be outside the hut, a place is chosen near the path. It is neatly covered with grass and the woman, accompanied by a midwife, goes there when her labor pains begin. The midwife is said to limit herself to extracting the child. Delivery takes place

844 in a kneeling position. Only women and girls may be present; men are not allowed.

845 If the mother dies during labor in Ussuwi and Bukumbi, a Caesarean operation is performed in order to save the child. It is said that in Kissaka and Mulera people do not dare to perform this operation.

844 After delivery the woman is nourished with a mixture of milk and cow's blood. Later, beer (nzoga) is added to this diet, as well as a mixture of peas and bananas of the nkamba variety.

The navel cord is cut with a reed splinter. On the fourth day, it is said, the navel is finally trimmed. After this the mother 846 sweeps out the hut and places the rubbish in two baskets (ntaro) which she carries out with the help of her neighbors. The women go in a row, one next to the other, and in this way they accompany the young mother to a previously chosen spot where the contents of the baskets are scattered. After the women return, the husband serves banana beer to the midwife, but before that he performs a libation.

846 On this day the neighbors call and bring presents in honor of the child's birth. The presents consist of food and drink, for ex- 431 ample, bananas, peas, sweet potatoes, beer, and, among the 852 Batutsi, milk. This ceremony is known as bihembo.

In Kissaka the guests kneel in honor of the father. He accepts 852 the honors standing, holding a wooden spear (muko) in his hand and with a sword (ngota) behind his back. He calls upon Binego and Mugasha and expresses his gratitude for the honor by spitting nzoga (banana beer) upon the visitors. If the newborn child is a boy, the father puts a small spear, a small bow, a nail upon which to hang the bow, and a small shield woven of grass into his hand. When he gives the bow to the child, the father spits and says: "akavuna muheto kandi ntaka uvune (if he breaks the bow, may he not break it again)." When he presents the spear, he says: "arakagua mukicho kandi ntaka kigwemo (if he is attacked in ambush, may it not happen again)." When the shield is presented: "kiliho arakagua mungabo kandi ntaka kigwemo (if he should fall upon his shield, may he [229] not fall again)." Finally, turning to the nail on which the bow is to be hung, he says: "arakavuna ingaugo kandi ntaka uvune (if the nail breaks, may it no longer do so later)."

852 If the child is a girl, the mother gives her: lugori, a head band of corn straw which is a symbol of motherhood; luhindu, a needle; and ntamyi, a papyrus thread.

In describing this ceremony, Father P. Schumacher (1) says

1. Schumacher, Father P., "Die Ehe in Ruanda [Marriage in Ruanda]," Anthropos, 1910, p. 901.

that the child, be it boy or girl, is also presented with hoes with which invited children cultivate a piece of land one square meter in size at the spot where the child's uncleanliness is buried. This ceremony is called kusohora and takes place on the eighth day after birth. Present at the ceremony are the child and the mother, shaved for the first time since her confinement.

553 The next day the child is given a name. In Kissaka it is said that children are not named until they are three or four months old. The grandfather names the son, and the grandmother names the daughter. At this ceremony the child is laid on the ground before sunrise and called by its name. If a child has not been born
551 within the house, it is given a special name. In that case a boy is called Maira, and a girl, Nanzira. Besides these names, children are given other names, even those of strangers. Some of these are nicknames and often replace the regular names.

We must also mention that everyone has not only his personal name and the name of his clan, but also the name of his umuzimu, that is, of the ancestral spirit which remains in contact with him. I could not find out any details about this. It seems that the name of the spirit to which the child must make offerings and build a spirit hut (ndaro) is used as the child's second name.

Besides these names people also have boastful names. Father Schumacher (2) says: "Every Munyaruanda, or at least every warrior,

2. Ibid., p. 895.

has a kivugo, that is, a nickname that extols his outstanding characteristics, especially the warlike ones. The byivugo (plural)

are often so long that they can barely be pronounced in one breath, and yet they are always spoken very fast, in one breath, with a singing intonation and with a dance gesture."

If a widow gives birth to a child, they say that the child has remained in her blood since the death of her husband and that it has only now come into the world. This belief is related to the idea that pregnancies can last several years, and that idea, in turn, probably comes from the diseases of the genital organs (tumors) that cause enlargement of the abdomen. If [230] a woman can be pregnant for several years, she also can carry the child in her blood for several years.

Children are ardently desired and loved. In the southeast, in Kissaka, twins are regarded as a blessing; the mother gets twice as many presents and is called nina babili. However, in the northwest, in the Forest Bantu sphere of influence, this is very different. Here infanticide is not uncommon and is practiced particularly on twins. During my visit in Mulera twins were born near the Ruasa Mission. The missionaries had a hard time preventing the people from killing the children. At first the natives replied to the missionaries' explanations that a woman could not possibly carry two children on her back.

Children are nursed for a long time, for three years it seems. One sees cases of children who come to their mothers to suck when they are old enough to run about and even to tend cattle.

Little attention is paid to children. This is evident in the high infant mortality. Even less care is given to the moral education of children. Although they are not thrashed like European children, they sometimes suffer severe punishment, especially for theft. A popular punishment is burning the fingers, which is supposed to bring about inhibitory associations when one reaches for other people's belongings. The hands of the little thieves are bound with blades of grass or scraps of matting, which are lighted, and the fingers are covered with burns (1).

1. Classe, Father, Moeurs et Coutumes des Bagoye [Manners and Customs of the Bagoye] (Les Missions Catholiques, 1905), p. 428.

842 It is obvious that if a large number of children brings the father influence and possessions and insures the existence of the whole group, there is no reason for the use of devices which limit the number of children. However, contraceptives are known. Father Schumacher (2) says: "The juice of the muhoko bush,

2. Schumacher, Father P., "Die Ehe in Ruanda," Anthropos, 1910, p. 894.

mixed with a small amount of water, is taken as a contraceptive; strong doses are taken to commit suicide. As a superstitious but 'infallible' remedy, the mother who wishes to prevent her daughter's disgrace uses the latter's first menstrual blood. She catches this and allows it to dry on any kind of material. She keeps it, or, for example, she may tie the rag on her foot (the numerous butega hide it). After this is done, conception is impossible, no matter what the girl manages to do."

847 If a nursing mother becomes pregnant, she has an abortion out of consideration for the child. The operation is performed by a smith and is said to be done mechanically and not with internal remedies.

[231] The same thing happens when an unmarried girl becomes pregnant. If the abortion is unsuccessful and the girl has the child, it is often killed by being allowed to starve.

844 Death. If a person dies in a house, the nearest relatives are assembled, and a pole is provided on which the body is tied when it is transported to the grave. The body must not be kept very long in the hut.

The women mourn the deceased, and all clothing, bracelets, and leg rings are removed from the corpse. The body is put in a crouching position with arms and legs bent, rubbed with butter, and wrapped in mats (virago) with no gifts added. Moreover, the Batutsi shave the head of the body, but the Bahutu do not do this.

In Kissaka the deceased is either buried in the banana grove or thrown into a papyrus swamp, according to his wishes. In Nduga bodies are usually thrown into the swamps. In places where there are no papyrus swamps, they are covered with a layer of earth. In Mulera it is a common custom to bury the Bahutu. The

764 grave is dug so deep that the gravedigger's head is not visible when he is standing in it. Only those who have been killed are laid to rest in caves. In Bugoye people who have died at home of an illness or of old age are buried near the house. People who have died suddenly or have been killed are simply abandoned or thrown into the bushes. People who have died in an epidemic or of starvation are also abandoned.

The corpses left in swamps are devoured by animals. In contrast to this, care is taken that buried corpses are not dug up, and to prevent this, the grave is covered with banana stalks and thorns.
765 The deceased is mourned for four days. On the fourth day the members of his family remove their bracelets and shave their heads for four moons. If a wife dies, only the girls remove their jewelry; the men merely shave their heads. After four months the masunzu, the shaved patterns, are allowed to grow again.

In Bugoye and Nduga, it is said that a stick (kasongera) is broken above the hut of a woman who has become a widow. This probably symbolizes the absent phallus.

764 The abandonment of the corpse which is customary in Nduga is probably related to the Batutsi element. The Bahutu of Mulera bury their dead, like the Bantu of the neighboring Congo Basin. There is an inexplicable contrast between the neglect of the dead and the death cult. Could this neglect perhaps facilitate the
[765] transformation into an animal? The members of royal families of Ruanda and Urundi are [232] said to turn into leopards after their death, just as the ruling family of Kiziba, like the Massai, turn into snakes.

766 643 According to Father Van der Burgt (1), the corpse of the king

1. Van der Burgt, Father J.M.M., Dictionnaire Français-Kirundi avec l'Indication succincte de la Signification Swahili et Allemande [French-Kirundi Dictionary with short definitions in Swahili and German.] (Boisle-Duc, Holland, 1903), p. 204.

766 of Urundi is dried and stretched out on a four-legged frame to be
643 worshipped. It is exposed until the frame is eaten by termites
and collapses. Only then is the corpse wrapped up and buried at
[782] the same spot while many human sacrifices are made. The bodies
of Ruanda kings, on the other hand, are dessicated by fire, whereupon the frame on which they lie and the entire hut are reduced to ashes. The death by fire of an entire family in its hut is said to be a favorite method of suicide among the Batutsi.

765 In conclusion we must mention an observation of Dr. Kandt (2):

2. Kandt, R., Caput Nili (Berlin, 1904), p. 476.

"The Wanjaruanda, a tribe living deep in the interior without any contact with Western ideas, say 'ukwirabura (to be black)' when they mean 'to be in mourning.' They say, 'ukwera (to be white)' when they mean 'the period of mourning is past.' This is all the more strange since the two colors in no way appear in dress, decoration, etc., to indicate mourning or the cessation of mourning."

Chapter 11

The Clan

614 Protection of the Individual. The basis of social organization in Ruanda as well as in the other parts of the interlacustrine region is the clan or blood relationship which is here known as umuryango.

The clan represents a society whose membership is replenished by natural increase, for every child belongs to its father's clan. As a result, every clan is actually a union of families closely or distantly related on the male side. Outsiders are admitted to the clan only in exceptional cases. This happens in Mulera, for example, when a family has only daughters and no sons. Since the
[597] lack of male descendants would weaken the fighting force of the clan, families adopt sons-in-law as a precaution. In such cases the children are said to belong to their mother's clan and not to that of their father who in this way relinquishes the interests of his relatives.

614 842 Since the groups involved in this arrangement are small and conditions simple and clear, no one can forget that the welfare of the individual is directly dependent on the welfare of the clan. Hence everyone is very much concerned that the clan appear powerful to the outside world. It must be as large as possible and always ready for war. No effort must be spared to achieve this; otherwise the members of the clan have no protection against plunder, impoverishment, and even complete extinction. The man as well as the woman must be considered from this point of view, and producing children is, therefore, the most important duty of the individual. This explains the completely unenviable position of the childless woman. For the same reason, sons whose descendants will augment the number of clan members are preferred to a daughter, even though one can always trade her for a cow.

614 563 The importance of the clan's strength and fighting fitness, even today in Bugoye, was convincingly demonstrated to me by the fate of my Muhutu informant's father. Several years ago their clan was scattered by advancing Batutsi. Only his father remained on the old clan property, along with the [234] children and his uncle. Since there were only a few men in both families and they were too weak to defend themselves, the Batutsi simply settled on the land and indulged in all kinds of suppressive measures against the weaker farmers. At the time of my visit, for example, they took away a whole hut and carried it to their settlement, instead of building a new one for themselves.

614 628 Every individual is under the protection of the clan. This makes it possible for a person to lead a more or less secure existence. Clan organization represents a sort of social guarantee which is directed primarily against the misdeeds of fellow tribesmen who do not belong to the clan.

614 627 Moreover, the clan exercises control over its members, and, if serious offenses are committed by individuals who endanger the interests of the clan, they can even be exiled.

614 627 428 The clan may also interfere in family matters and, above all, in disputes about inheritances. Although the father can dispose of his property as he sees fit, nevertheless his decisions presuppose the tacit approval of the clan. If the interests of the clan are

614 endangered by his plans for dividing his property, for instance,
627 if he impoverishes several of his sons, the clan often steps in,
428 overrides his decision, and apportions his estate in a way that seems to it more suitable. With the disintegration of the clan and the increased power of the chief, this power passes to him, and he has the final word.

614 The rights of the individual are always sacrificed to the interests of the clan. In Bugoye I even heard that all the clan
423 property is re-apportioned if the fields have become concentrated in the hands of a minority. This re-apportioning, I was told, is called kutshura hasi.

614 At present, under increased taxation and the Batutsi supremacy, it is said that sometimes clan members who cannot pay their
651 taxes are driven out and even replaced by outsiders. The latter then participate in the tax payments which are made in common. Such instances are possible, of course, only when clan organization disintegrates.

614 The clan also protects its women. If there are daughters in a household who have no guardian after the death of their father, they are taken into their brother's house as paternal aunts.

The protection of female clan members does not extend to
614 their husbands, however. If husbands settle with their wife's clan
591 without being adopted, they are not regarded as equals. This
760 happens primarily when a widow and her children remain with members of the husband's clan and she takes a man into the house. The latter can simply be driven out after the woman's death.

671 In Bahutu Ruanda, society does not protect the weak. The
614 [235] individual who is on his own, not protected by any group,
178 is without legal rights and can be oppressed and even slain by anyone. Such attacks are not punished here. In the oppression of the defenseless, they see nothing anti-social since actually it achieves better organization. This is the principal means by which the unyielding masses are united into well-organized groups. Here we cannot fail to recognize the connection between the development of the clan system and the absence of general legal norms. That is why the disintegration of clan organization caused by the Batutsi is accompanied by the establishment of universal norms, despite all the despotism that accompanies conquest. Now the individual

614 671 178 finds protection even outside the clan, which formerly was not possible.

614 Ruanda Clans. We have already listed the clans of Ruanda in Chapter 2 [not translated]. However, in view of the significance which the distribution of individual clans in the various provinces has for the history of Ruanda settlements, the list must be supplemented by further data. Here we shall also give the names of the provinces in which the individual clans were observed. (Chart on following pages)

It is said that the Baanzira clan is not represented in Kissaka, but the name is familiar, and strangely enough, it is used by the women in vows. When they wish to affirm something very positively, they say: "Aha Baanzira batshu."

Father Schumacher (1) uses the designation "Base" or "Abase" for the Bagessera and Bazigaba who play a special role in the Ryangombe cult.

1. Schumacher, Father P., "Die Ehe in Ruanda," Anthropos, 1910, p. 896.

628 614 [237] Blood Revenge. Clans practice blood vengeance (kuhora) for their members. If an outsider kills or wounds a clan member, his fellow members take revenge on the members of the criminal's clan.

The clan's revenge, however, is not always a simple settlement on the principle of an eye for an eye and a tooth for a tooth. In Kissaka, for example, the people are satisfied if they kill a member of the murderer's clan, whereas in Mulera the vengeance is always greater than the crime. The severity of the vengeance by the injured clan depends on the number of its able-bodied men. The powerful and spirited clan of the Barashi who are settled in Mulera on Muhawura is aware of its strength and takes bitter revenge. For a murdered clansman, the Barashi kill six to eight men from the murderer's clan. The other less powerful Mulera clans content themselves with three or four. The Batutsi, on the other hand, demand as many as ten to twelve heads. The same number is exacted by the greatly feared Batwa clans.

1) Bahutu-Clan 2) Batutsi-Clan 3) Batwa-Clan

In Mulera, in contrast to Kissaka, the female members of the clan are also avenged, but in Ruanda I heard nothing about women being killed in revenge.

The clan which has avenged its dead casts off mourning and celebrates the happy event with dancing and beer drinking. This announces to the others that they have nothing more to fear.

In exacting vengeance, the injured clan is primarily bent on laying its hands on members of the criminal's clan, but the murderer himself also receives special attention.

During my stay in Mulera a man with a pot of beer on his head went to a neighboring settlement. On the way he met a stranger who expressed the wish to taste his beer. When the man refused, the stranger retaliated by stabbing him in the back. The wounded man fell to the ground and began to scream. The stranger fled, but the injured man's clansmen pursued him, inflicted arm and head wounds with a bush knife, bound him, and brought him to their settlement. There he had to await the outcome of his victim's illness, and if the man had died, he would have had to pay with his life for his fit of temper.

Revenge is the factor that most strongly binds the clan together and contributes most to the development of a feeling of solidarity among clan members.

A clan that refused to take revenge would become extinct in a short time, since neighbors could plunder its members without punishment.

[238] The practice of blood revenge in Ruanda and, above all, in Nduga where clan members are scattered among outsiders takes the form of secret, occasional murders. In the northwest, for example, in Itambi where clans have settled in larger units, revenge is said to take on the nature of a regular war. This difference is decidedly an adjustment of the same institution to the particular conditions prevailing in the two regions.

Unsettled and pending cases of revenge constitute an ever-present danger for the clan members, and at the same time they involve many unexpected and unpleasant situations. The clans are settled in different places far apart from one another, and the individual member is not always informed about the relation of his clan to others in distant regions. For this reason the Munyaruanda

614 keeps his clan a secret and discloses it only when he has confi-
628 dence in his questioner. That is why it was so difficult at first to find out the names of the clans, especially before we learned the word for clan, namely, umuryangu or umuliangu.

For its own safety, the clan is forced to watch over its members and, in case of an emergency, oust certain individuals whose actions endanger the community. This applies chiefly to those who, through careless murder, burden their clan with the revenge of the injured. The banished member loses the right of protection and property and will not be avenged. This expulsion is called kilenga ngoma and seems to occur more frequently than adoption.

These imperfect security measures aimed at guaranteeing the safety of the individual cause eternal petty wars. The whole society is split up into a number of warring camps, which weakens its resistance against outside enemies. This applies primarily to the Bahutu, and this will be one of the chief reasons why the better organized herdsmen minority will be able to conquer them.

Clan feuds are by no means limited to the Bahutu. My anthropological studies among the Batwa in the region around Marangara were very much curtailed because a few days before, during an evening of beer drinking, a drunken man committed a murder. The murderer and his clansmen were obliged to leave the region of Marangara in great haste.

614 Abaziru. Although blood revenge unites the clan more con-
262 spicuously than any other factor, nevertheless in peaceful times one is only occasionally aware of the sharp demarcation of clans. [239] In quiet everyday life the clans are differentiated much more by their food taboos. The adult members of individual clans are forbidden to eat certain foods. For example, the Bagessera and Bashambo, like some Massai tribes, do not eat liver; the Bagahe and Bazigaba do not eat entrails, etc. Each clan may have more than one food taboo. Thus, the Bashambo, for example, eat neither liver nor the meat of foreign spotted cows.

The members of different clans may not eat together because of their dietary laws. Consequently, they also regard each other

614 as unclean and detest being in close contact with each other,
262 chiefly because it disgusts them.

Besides the food taboos of individual clans, referred to [in the table] on pages 149 through 154 as abaziru, there are also general food taboos practiced by larger groups of clans, which even separate different clements of the population from one another. These more universal taboos are added to those of individual clans.

563 The Bahutu cannot eat with the Batwa because the latter do
262 not respect any taboos and even eat chickens and eggs. The
178 Mututsi, in turn, may not eat with the Bahutu because the latter eat the meat of goats and sheep. This taboo, it seems, is on the decline. The taboo on goat's meat is no longer strictly adhered to. The following explanation is given. The present ruler, Juhi Musinga, was ousted by his father, Lwabugiri, when he was a child and was reared by a Muhutu. In the house of this man he became accustomed to eating goat's meat, and so he has revoked the restriction. The situation is a little different with regard to mutton. The Bahutu of Mulera eat it, whereas the Bahutu of the south do so only secretly, if at all, perhaps because they have been affected by the more influential Batutsi and deny themselves mutton so as not to be regarded as unclean.

262 The most disgusting food for the Batutsi and Bahutu, as well
609 as for all the other inhabitants of the interlacustrine region with the exception of the Batwa, is chicken and, above all, eggs. For this reason Europeans and their black personnel, who in this respect resemble Batwa, are despised. Our Banyaruanda porters refused not only to eat with the Wassukuma porters, but also to use the pots which were put at their disposal. Concerning this taboo, the
[71] Batutsi and Bahutu are similar to the Galla, Somal, Wakamba [Kamba], Wataita [Teita], Wakikuyu [Kikuyu], and Wadjagga, that is to say, the Hamites and the Bantu who were metamorphosed by them. (1)

1. Hildebrandt, J.M., "Ethnographische Notizen über Wakamba und ihre Nachbarn [Ethnographic Notes on the Wakamba and their

262
609

Neighbors]," Zeitschrift für Ethnologie, 1878, p. 378.

614 [240] The less universal food taboos involving only a few
262 clans can probably be regarded as traces of older, larger clan groups which later became differentiated and divided into subgroups that were not always aware of their connection. This process is still going on. The Mulera clans of Bangona, Besezera, Bagirima, Bayumbo, and Badahe are said to be subgroups of the Basinga clan. In view of this, we can expect that further research on food taboos will enable us to trace more closely the process of differentiation among the various clans.

262 Children are not affected by food taboos, but this is by no
858 means the case with women. They are also bound by special obligations in this respect. For example, the Bahutu women of
562 Kissaka and Mulera may not eat goat's meat, although the men are permitted to do so.

262 The food taboos which play such an important role in the
614 life of Ruanda are, however, only one form of the general taboos,
784 abaziru (singular, umuziru), imposed on individual clans.

The umuziru of the Basinga clan is a black cow striped with white. The members of this clan do not drink the milk from such cows, nor do they eat the meat. They are very much afraid of soiling themselves with cow dung because it might come from such a cow. They buy butter in the market, however, when they are not absolutely certain whether or not it comes from such cows. Since cows of this type have no economic value for them, they always try to sell them and to replace them with other kinds.

This example shows that it is not enough to refrain from eating the meat of an umuziru. They must avoid any kind of contact with it. They have a certain regard, however, for economic interests. The useless umuziru cow is sold, and they are more afraid of its excrement than of its butter, which they use when they are not altogether certain of its origin.

614 The concept umuziru embraces all the phenomena that are
784 taboo for a clan. They are not actually sacred, for the element of reverence is lacking. In the case of domestic animals, the natives try to sell the economically useless abaziru to outsiders.

614 Nevertheless, the individual's freedom of action with regard
784 to his umuziru is limited. For this reason one is closer to the actual meaning of the word when one translates it as "prohibition."

I was told that the following were abaziru: mammals, the various parts of their bodies, birds, fish, grasshoppers, the milk of particular cows, and inanimate objects, such as an empty basket, for example, but not plants, with the exception of a blade of straw.

784 [241] The meaning of abaziru involves the vague idea that
775 after death everyone takes the form of an umuziru. For example,
614 they believe that the clansmen of the ruler of Kiziba turn into snakes, the family of the kings of Ruanda into leopards, and various Azande clans into all kinds of animals.

I had no opportunity to find out the derivation of abaziru, not even in cases where the transformation into animals after death was positively maintained. Thus, we can hardly link the various prohibitions with remnants of these ideas.

On the other hand, I learned about traditions which make
784 it seem likely that the prohibitions arose from experiences of
614 clan members or their protoplasts. Thus, in Kifumbiro I was told that one of the clans there (the Abazirambogo) does not eat buffalo meat because one of its ancestors was killed on a buffalo hunt many, many years ago.

The prohibition on wearing the skin of the inganda, antelope, shows how the taboos of a single clan spread to larger groups, even to a whole country. Inganda is an umuziru of the Basindi clan. Its members were not permitted to hunt the animal, eat its meat, or use its skin for clothing. Two wives of a king of Ruanda once quarreled over this beautiful skin, and one stabbed the other with a knife. Thereupon the wise king, in order to eliminate discord from the world once and for all, declared the animal to be an umuziru for the entire country. This has also been the case with dogs, monkeys, and birds.

The Banyaruanda, who generally like to dismiss a questioner with the phrase, "our fathers did it this way," cite traditions about the origin of their taboos, and this we can regard as an argument in favor of the view that the taboos developed along with clan organization.

714 628 614 It is said that atonement for killing an umuziru is made by special ceremonies, and the willful slaying of an umuziru by an outsider can even call forth revenge on the part of the clan.

614 582 Marriage Prohibitions. Clan organization also affects the individual in the matter of marriage prohibitions. Members of the same clan may not marry each other. The clan is strictly exogamous. It seems, however, that among the Batutsi there are still traces of an earlier endogamy. For example, in their legend about Kigwa, the first ruler of Ruanda, they say that all Batutsi are descendants of a sister and brother, Nyina Batutsi and Kigwa.

614 581 [242] Exogamy in Ruanda is an important factor in social integration. In Mulera, where the old clan organization has been best preserved, the act of contracting marriage consists of the exchange of a woman for a cow. Thus, two different clans come to have a common interest. One clan is helped by a direct increase of its man power. The other, in turn, strives to increase its wealth and possessions. This union, furthermore, necessitates mutual consideration in other matters and thus promotes the social life of larger groups of people.

563 582 614 In contrast to the exogamy of individual clans, there is an absence of valid mixed marriages between Batutsi, Bahutu, and Batwa. The social and anthropological contrast between these elements of the population is much sharper and more striking than the contrast between Bahima and Bahiru in the Runyoro language area, and since there one can distinguish between Bahima and Bahiru clans, it is all the more surprising that there are Bahutu in most of the clans of Ruanda. Upon investigation we found that in many cases Batutsi and Bahutu had the same clan names, and in less than half the cases observed could we find special Batutsi clans which did not have Bahutu members.

The appearance of Batutsi clan names among the Bahutu can probably be traced to the following two reasons. First, the descendants of slaves, of baja, belong to their father's clan, but, in spite of Batutsi fathers, they are no longer counted among the Batutsi. Thus, there are Bahutu families that trace their origin to Ruanda rulers. Secondly, impoverished Batutsi marry Bahutu women, which rapidly adds to the number of impoverished Bahutu,

563 562 614 even though a child of a Mututsi by his legal Muhutu wife is de jure a Mututsi. Such children are, however, because of their mothers, robbed of all such connections, and this accelerates their absorption by the Bahutu.

Similarly, however, there are cases where prominent Bahutu, if they occupy the position of chief, are absorbed into the Batutsi through mixed marriages. This was the case, for example, with the Barashi chief, Lukara lwa Bishingwe, from the Muhawura volcano. This probably explains how "Batutsi" happen to belong to the clans of Bazigaba, Basinga, Bagessera, and Basita.

Mixed marriages between Batutsi men and Bahutu women are more common than those between Bahutu men and Batutsi women. There are said to be no mixed marriages with Batwa. This aversion [197] persists even in Christian communities, and I even heard that the only baptized Mutwa in a Christian congregation could not find a wife.

572 608 [243] Blood Brotherhood. In speaking of exogamy, we mentioned it as the primary factor in the social integration of a society that is split up by mutually warring clans. We shall now discuss the second factor, namely, the institution of blood brotherhood.

In Mulera, if you wish to show someone that you value his friendship, you go to him to replenish your fire. To make the friendship secure, however, you must join with him in the pact of blood brotherhood (kunywana).

Simple friendship is very sharply distinguished in Ruanda from the social institution of blood brotherhood. The word for friendship is kwuzulu which literally means "filled" or "full." People are regarded as friends who "are saturated with one another," and who must therefore be considerate of each other.

572 608 628 There are friends on all levels of the social system, but it seems that the institution of blood brotherhood in Ruanda is connected with the undifferentiated clan organization of the north. This is doubtless due to the fact that in regions like Nduga, for example, where the chief's power is well organized, the individual can count on a certain measure of protection from the representatives of the state, but in regions where the entire country

572 608 628 is divided into zones settled by different clans which are often hostile to each other, the individual can depend only on his clansmen. When he goes abroad, outside his clan's sphere of influence, he must look for personal friends and secure their pledge of protection, thus making possible his sojourn in strange parts of the land. This is the reason why traders enter into the greatest number of brotherhood pacts. People who never leave their hillsides do not make this pact, and pacts between the inhabitants of the same hillside also are not common.

572 608 Brotherhood is sealed by special ceremonies. On the day of the pact the one who wants to enter into brotherhood goes to the house of his future blood brother, accompanied by a witness. He is received there also in the presence of a witness. All four men sit down on a mat on the hut floor. The articles necessary for the ceremony are placed beside them: mutsima, stiff millet mush; a knife; and a hoe.

The witness of the guest takes the knife and makes a scratch to the right of the latter's navel. He catches the blood on a piece of mutsima and hands the knife to the witness of the houseowner, who repeats the same ceremony with his candidate. The two blood brothers then eat each other's blood along with the mutsima. Then the first witness takes the knife, begins to sharpen it on his skin, and says:

[244] Mwumwe! Ntuza yaniwanye na ntuza.
Harken! This one enters into blood brotherhood with that one.

Elmwa kanaka uramuka umutatiye iki kihanga kikakwicha.
Hear you (this one), if you dare betray him, this vow will kill you.

Akomerekera mw' itawalo wanga kumuheka, iki kihanga kikakwicha.
If he is wounded in battle, you refuse to carry (him), this vow will kill you.

Umushigisha amata iwawe, iki kihanga kikakwicha.
Refuse you him milk yours, this vow will kill you.

Wanga kumuheka, yarwaliye mw' itawalo, iki kihanga kikakwicha.
Refuse you to carry, when he falls in battle, this vow will kill you.

572 Umugore wawe amushigisha nzoga uta hali, iki kihanga utikikwiche.
608 (If) woman yours will refuse him banana beer (when) you are absent, this vow will not kill you.

After this curse he hands the knife to the second witness who rubs the iron against the palm of his hand and repeats the curse. Then the two witnesses rise, lift their bent arms to the level of their eyes, and then slap their knees with the words: "Ndateranya sinkiza (I unite, I protect not)." In reply the two blood brothers lie down on the floor and embrace. Then they are covered with a mat, whereupon one of the witnesses hits the mat twice with a stick and says: "Ndateranya, sinkiza, zubanda (I unite, I protect not, rabble)." The blood brothers reply to this by hitting each other. Later, assisting one another, they rise to a crouching position. This ceremony means that blood brothers also fight with one another, but this is their own affair which they must settle among themselves in secret (under the mat). In the outside world blood brothers may only support one another.

572 After this ceremony they exchange presents. One of the blood
608 brothers takes his present, usually a hoe, and hands it to his new
431 friend with the words: "End'isuka, nkukye ku kirago (accept the hoe, may it help you to rise from the mat)." The other takes his present, hands it to the first one, and repeats the same words. Then they both arise, and each one gives his witness an arm ring as a present.

572 Through this ceremony the blood brother (munywana) seems to
608 attain a sort of personal membership in the clan of the other blood
614 brother without resigning from his own clan. This is confirmed
628 by the fact that blood brotherhood is not entered into by members of the same clan. I occasionally heard that formerly, in the indeterminable "olden times," blood revenge was practiced for blood brothers as it was for clansmen.

572 It seems that blood brotherhood has lost a great deal of its
608 significance. This may be considered a result of state organiza-
614 tion which has caused a progressive deterioration of clan organiza-
178 tion. This process, however, has not just come about in very recent times, as may be gathered from a proverb in Ruanda which [245] says: "umwuzulu uluta umunywano (friendship is better than blood brotherhood)." In Ruanda we may mention two facts in favor

572 608 614 178 of the view that blood brotherhood is connected with the Bantu substratum or at least with clan organization: the use of banana beer and hoe-money in the ceremony; and the relationship between blood brotherhood and the system of marriage prohibitions.

572 608 In the cults associated solely with the Batutsi, only millet beer seems to be used. Here we have banana beer mentioned in the curse formula which is undoubtedly very old. It is very strange, however, that milk is also mentioned along with beer. The latter fact warns us to be cautious.

572 608 582 Much more important, on the other hand, is the marriage prohibition which even at the present time is scrupulously observed. The children of blood brothers regard themselves as related. This relationship is called bapfasoni. The statement that the marriage prohibition also applies to other relatives of the father's blood brother was not emphatically denied, but it seems to me most unlikely. I was also unable to find out whether a man may marry women from the clan of his blood brother.

572 608 837 According to several reports, sexual intercourse with the wife of a blood brother is regarded as a great insult, but other reports have it that the women are at the disposal of visiting blood brothers. (1) This point could not be fully cleared up because,

1. Kandt, R., Caput Nili (Berlin, 1904), p. 177.

among the Batutsi, friends are quite commonly in the habit of entertaining one another with their wives.

572 608 563 Batutsi and Bahutu enter into blood brotherhood with one another. Neither of them, however, enters such a pact with the Batwa.

614 621 The Clan Community. The political significance of the clan varies greatly in different parts of Ruanda. The clan is prominent in areas where the Batutsi state has not yet been firmly established, as, for instance, in Bugoye and above all in Mulera. In Nduga, on the other hand, clans have little political significance. This significance is in direct proportion to the degree of concentration of clan members in a territory.

614 621 In the north the members of individual clans have large areas wholly to themselves. In view of the not very strictly organized political situation, these autonomous territorial communities can sometimes play a very important role because of their solidarity and their often rather large numbers. In Nduga, on the other hand, the power of the state has broken up the clans, scattered them, and robbed them of any possibility of forming political or territorial clan unions. The representatives [246] of the various warring factions were incorporated into territorial groups and placed under chiefs appointed by the state. If you travel from Mulera to Nduga via Bugoye, you can observe the successive phases in this process of the formation of a state. You see how the independent, undifferentiated clans are first drawn into all kinds of dependent relationships and are then gradually absorbed.

In taking possession of Bugoye, members of the same clans have settled in various places. As a result, the whole country represents a mosaic of properties occupied by different members of the same clans who are physically separated from one another, yet still aware of their historical connection. This is most clearly evident in the institution of blood revenge, as well as in the prohibitions regarding food and marriage. This awareness, however, is not sufficient to bring about the formation of larger, independent, well-disciplined political unions. Every individual settlement is an entirely independent community with its own elder at the head.

614 622 In clan communities that have been unaffected by conquest, the head of the community has little authority. He represents the clan community in external affairs and settles internal disputes. The latter are one of the most important reasons why clan members emigrate. The headman is known as mugabo, and his position is hereditary, usually devolving upon the eldest son. In the list given below, the bagabo are given first place.

After the subjugation of clan communities by outside conquerors, the mugabo occupies a special place. His duty is to collect taxes and to deliver them to the official commissioned by the king. However, this official position gives him a certain

622 614 influence which can increase along with that of the outside conquerors, especially if he knows how to make himself useful to them. Since the privilege of collecting taxes is hereditary, it bears a seed that can grow to the level of a regular high chief, as was demonstrated in the case of the Muhutu, Lukara lwa Bishingwe, who became known even in Europe for the murder of the missionary, Father Paul Loupias.

The leadership of the Barashi under Lukara lwa Bishingwe is an example of a clan whose elder, through the influence of the Batutsi, was elevated to chief according to the concepts of the conquerors. This development has not, however, come to an end. The entire process is too new, too little strengthened by tradition.

The privileged position of the Barashi clan elder goes back only two generations. Lukara's father, Bishingwe, was a very skillful hunter and [247] knew how to use a Batwa group for his ends. He knew how to furnish Lwabugiri, the king of Ruanda and father of Musinga, with plenty of ivory, and the king rewarded him for it. The king treated him as his immediate vassal (mugaragu) and made him chief over his own clan, in which he is said to have formerly held the position of mugabo.

622 614 578 The promotion of the powerless clan elder to chief was not recognized by the clan members, and among them Lukara had little power, according to my observations at the time of my journey. He tried to remedy this disadvantage by attracting exiled riffraff and foreign elements from dispersed clans and settling them on free land. He selected his followers from among this unorganized group who, as strangers, were at the mercy of everyone and could expect protection only from Lukara. With them he held his fellow clansmen in check. The latter, however, in their hatred, drove the outsiders to Lukara, and in this way there arose that compact, strictly organized structure which made Lukara so dangerous to his opponents. The Mututsi, Luhanga, his chief opponent, did not have such a well-disciplined following.

I had an opportunity, on the basis of a minor incident, to observe how great the constant internal friction of this social structure must be. I requested Lukara to have water fetched for my men. After negotiations that lasted almost two hours, Lukara announced that he was willing to do this and told his men who were assembled

in the courtyard to fetch water. No one was in a hurry to make the half an hour trip to the water hole. Lukara grew angry at this delay, seized a few people by their hands, and pushed them aside to have them get the water. One of them rebuffed Lukara with the words, "I am no Murashi," and would not let himself be singled out. Lukara began to scold and asked the name of the man's father, but did not molest him further. The water had to be fetched by newcomers. Lukara has allowed these newcomers to settle, and therefore he can, of course, also drive them out again. He cannot treat his fellow tribesmen so arbitrarily.

In spite of the friction between the clan elder and the clan members, the Barashi support Lukara. They know that his downfall will mean their subjugation to outsiders. That is why Lukara is so strong in the face of his opponents, even though he has not as many men to put into the field. His Batutsi opponents must depend on Bahutu who have no such interest in Batutsi successes.

Lukara, whose father became a mugaragu only through the demagogic Lwabugiri, now passes himself off as a Mututsi. His men, too, say that he is a Mututsi. His fellow clansmen, however, merely say [248] that whenever he can, he tries to oppress his own people with newcomers, as an outsider, a Mututsi, would do.

In this manner the peasant aristocracy made up of clan elders merges with the Batutsi. We are, therefore, justified in asking outselves whether this gradual rise to nobility, sealed by the forgetting of ones origins is not the chief reason why Bahutu clan names occur among the Batutsi.

The size of the autonomous clan communities, which roughly correspond to our villages, varies a great deal. In many cases they have a population of about 100, while some have a few thousand inhabitants. In the Barashi territory, for example, there are 6,000 to 8,000 people. The fertile area is bounded on the north by primeval forests covering the volcanoes, on the east by Lake Bolero, and on the south by the lava steppes. The population was pushed out of the lava plain by the Barashi. The Batwa, however, remained on Muhawura.

As we have seen, the population of these communities does not consist entirely of clan members. There are also outsiders who

621 settle among the clan members as clients (bagaragu) who perform
614 services for them for which they get their food and from time to time a sheep or goat. They are poor devils who in this way must scrape together the means to buy a wife. There are others in the densely populated areas where there is no free land who rent acreage and even own houses on rented land. Others rent only as much land as is necessary for their hut and a small courtyard, and they make their living as day laborers.

We must point out that settling on the land of a strange clan presupposes a certain calm and stability and signalizes the impending deterioration of the clan community. Under more primitive conditions where clan organization is at its height, we seldom find cases of people settling on the land of a strange clan. Life among strangers would be too dangerous because feuds involving blood revenge might break out. There is no security against feuds between the clan of the host and that of the settler, and then the isolated person is the first victim because one can most easily get at him.

614 Property. The clans of Bugoye and Mulera occupy regions
423 which were taken over and cleared by their ancestors several generations ago.

In Ruanda the clearing of the primeval forest plays a very important role in the conception of ownership. In Bugoye, despite the recent Batutsi conquest, land is regarded as the property of those whose ancestors [249] took possession of and cleared the corresponding sections of primeval forest. This comes out in legal cases involving property, when they cite as a witness the stone on which the bush knife (muhoro) was sharpened when the land under dispute was cleared. The party claiming the land says: "I shall bring the whetstone (uzakuha ulutsiaga) that my ancestor used when he cleared this piece." In view of this, the clan members may also be regarded as the owners of the land occupied by them.

However, although the huts, the animals, and all the furnish-
[422] ings are absolutely private possessions which one can dispose of as he sees fit, the possession of land is not entirely free of restrictions. The clan members really have only the use of the common property given them. The land, like its possessor, is the property of

614 the clan and can be disposed of only after the common interest
623 has been considerable. These are the conditions that exist where the clans have not been subjugated and dispossessed by their conquerors.

As a result of conquest, the land falls into the possession
[643] of the king and is granted to the subjects in his name by the chief he has appointed. Under such conditions, there can be no question of voluntary disposal of this land.

556 The wealth of the individual is not measured by the size of
231 the fields he lays claim to, but solely by the number of cattle he owns. With a largely undifferentiated social organization and poor communication routes, the free sale of field products is slight. These products must serve almost exclusively to satisfy the needs of the producer. Moreover, in many parts of Ruanda there is still such a reserve of free land that its value is relatively low, and the monopolizing of this form of property by the privileged class becomes only a secondary means of social discipline.

Power can be much more easily exercised in Ruanda by a monopoly of cattle ownership. That is why the Batutsi are trying to get the ownership of cattle wholly in their hands and make individuals subservient to them by granting them cows and permitting them to share the milk.

Following this principle of rule which is most natural for herdsmen, the Batutsi, when they conquered Bugoye, punished the farmers only slightly; the clans were merely taxed. The Mugoye, however, must drive his cows into the woods and have them tended there when they no longer give milk and the household can do without them. Although the cow [250] could be pastured near his dwelling, he would rather take the risk of having the herder run off with his property than arouse the greed of the mighty, since this might lead to expropriation.

614 In conclusion we shall give some data about the property and
621 the members of the three clan communities of Baishaza, Bahoma,
592 and Bagwabiro, who live on the hills of Katebe and Kitebe near Nyundo. I obtained these figures by actual count in the field.
423 [251] This brief compilation gives us a good idea of how the
231 clan communities are constructed and what they own. In this list only heads of families were consecutively numbered; their

2) Among them 21 male clan members.

grown sons are listed below them, and this shows that the average size of a family with its servants is about six persons, three or four of which occupy one hut. The number of huts is almost identical with the number of women. It is very important to note that the head of the Baishaza clan community, the mugabo, Ndiramiye, is one of the poorest farmers on Katebe.

[252] Chapter 12

King and State

The King. The power of the king is the active factor in the formation of the state in Ruanda which has influenced the passive factor, clan organization. The entire state is nothing more than the overgrown household of the king, into which all the Batutsi clans were first drawn and then absorbed. As the imperial household grew, the Bahutu clans were likewise drawn into its sphere of influence. They underwent a process of disintegration and differentiation which is still going on. In fact, in the northern part of Ruanda the process is still in its beginning stages.

In speaking of the clan communities of Katebe and Kitebe in Bugoye, we mentioned the bagaragu (clients) who come from another district and attach themselves to the powerful in order to serve them and to get their living from them. Some among these hope to be granted a goat or even a cow. Among the clan elders, for example, Lukara, who enjoyed great influence in his clan, the number of these clients was large. He granted them parcels of land on which they could settle under his protection. The same thing goes on in the court of the king, with some modification and on a far greater scale. The king's bagaragu are not poor devils who have been exiled, but influential people with large retinues who in turn have dependents and subdependents. In this respect the Ruanda state is a pyramid with the king at the head and the free farm population without property at its base. In between are the high chiefs with their subchiefs as the organizing element that keeps the population in check.

Juhi Musinga, the ruler of Ruanda, was without doubt the most powerful of the native potentates whom I had an opportunity to see

during my journey. He controlled the largest country and boasted the largest number of subjects. At the beginning of our acquaintance he certainly did not give the impression of being the most intelligent ruler. Later, however, I was repeatedly convinced that he always made an effort to appear stupid [253] when the wishes of the Europeans were troublesome to him. He tried to gain time by toying with German words whose meaning he pretended to want to know. Thus, he would draw out a visit in order to tire the guest and in the end evade the whole matter under consideration.

On August 10, 1907, I had my first opportunity to see His Black Majesty. At noon I caught up with the main part of the expedition, and around three o'clock Musinga arrived in order to pay a return visit to His Highness the Duke. He was a slender, delicately built young man, 197 centimeters tall, with somewhat squinting, myopic eyes and protruding teeth. He wore a length of red cloth (bendera) over his shoulders and a white loincloth. The latter was held together with a belt to which was fastened the hunting knife which His Highness the Duke had given him the day before. The splendid figures of his retinue made a much more aristocratic and elegant impression than the king himself.

Musinga's ceremonious visit on the next day made an entirely different impression on me. He appeared wearing a diadem, his face veiled, and he was borne in a ngobi, surrounded by the members of his court who were formally dressed in their mukane. He was accompanied by the melodious, albeit wild singing of the Batwa. The entire picture was devoid of European influence and gave the impression of fantastic, indescribable beauty, everything was so perfect, aristocratic, and elegant. The ceremony had great style and was carried out with admirable exactness and distinction. It represented the complete negation of ordinary Negro style as I had observed it among my porters who paraded around in frock coats without pants.

It was not quite clear to me to what extent Musinga has adjusted himself to the new situation brought about by European conquest. He knows that his freedom of action has been somewhat curtailed, but he also knows that he can use government soldiers to suppress small, local revolts and to dun taxpayers who are in arrears. Best of all he knows that Mpumbika, the leader of the

643 followers of the Kissaka pretender, was exiled from the country
648 only with the help of government troops.

Moreover, he hopes that his powerful friend, Tiki-Tiki (Captain W. Von Grawert, the erstwhile imperial resident of Ruanda and Urundi), who has already presented him with cows from Mpororo, will also one day drive the Belgians out of Ufumbiro and Bunyabungu and that he himself, like his father, Lwabugiri, will have sovereign power there.

Musinga, like every Mututsi, hates the Belgians particularly, indeed, much more than all the other disgusting egg-eaters put together. They shot down a great many of Rudegambia's people who tried to thwart their efforts to settle on Lake Kivu. Furthermore, [254] the guiding policy of the Belgians was to exclude the unproductive aristocracy. They wanted to exploit the natives all by themselves, without letting the Batutsi take part. They were even obliged to grant the Bahutu a certain amount of protection as recompense for the heavy burden of provisioning the large occupation forces which were needed to prevent too great an emigration from the Ruzizi-Kivu border territory.

German policy pursues basically the same goals, but the preservation of the old forms of social and political organization and the gradual development of new conditions gave Musinga no opportunity to comprehend the whole nature of the approaching danger, against which he was, of course, completely helpless. Instinctively, however, he foresaw the perilous situation. He ignored the opportunity to enlarge his territorial possessions by unconditional and eager support of the Europeans, as Kahigi from Kyanja had done, nor did he know what to do with Mpororo which had been given to him.

Although government troops have always supported Musinga, it is said that he cannot sleep as long as there is even one Askari in Nyanza. This will suffice to characterize his mental attitude toward the new situation.

Musinga is very vain and susceptible to flattery. For instance, he insists that his court dancers perform better than the most skillful dancers of his chiefs. That is why, after the performances, his first question to His Highness the Duke was which troupe had danced the best. The Duke, who had been tipped off by Father

643 L. Classe, was able to give him the desired pleasure by telling
648 him that his dancers were the best, although the dances of Kanuma's people from Kissaka had made the greatest impression on His Highness as well as on the others present. Musinga, it seems, shared this general opinion, but in order to assure himself that he had correctly understood the Duke, he asked him to have small gifts of glass beads given to his ntore, so that everyone would believe they had actually done the best dancing. Only after this request was carried out, was he content and scornfully looked down on his bagaragu as defeated rivals. With His Majesty's height of two meters and his squinting, myopic eyes, this was a very funny spectacle.

643 This childish, petty vanity, however, is also linked with a considerable degree of mischief. For example, Musinga twice refused the request of Father L. Classe who wanted to take to Issawi the old, broken-down barrel organ that Father Brard had given to the king. In Nyanza it stood in the rain and had become a playground for rats. Musinga maintained that one does not give away something that has been given one as a gift. This was no
[431] excuse, for in Ruanda gifts are always passed on, and a watch that had been given to Musinga came back to the giver through a third person at one-twentieth of its market value.

[255] There was another reason why he refused to give back the organ. The instrument was broken, and the missionaries wanted to repair it. Musinga knew that. An object that refused to play for the king should serve the missionaries! Musinga did not care a fig for the organ itself. He did not even express the wish to have it repaired, although he usually plagued his visitors with all kinds of requests in order to tire them.

His attitude toward the phonograph was very interesting. Quite apart from the pleasure which this trick of modern technology gave him, he enjoyed hearing Ruanda songs, even though they were badly reproduced. The European pieces, which were technically much better, did not give him any pleasure and soon disappeared from the repertoire of phonograph concerts. There was only one piece with infantry commands, drums, and flutes which he asked for occasionally. The barrel organ ground out pieces which he did not understand, and that is probably why he paid so little attention to it.

643 The king has authority in matters pertaining to the cult. For
656 example, in 1906 he forbade old women to smoke tobacco. This command was scrupulously observed, for people were afraid that those who did not comply would die. The pipes were placed on the hilltops where they were still to be seen at the time of my journey (1907).

644 At the court of the king a fire is always kept burning by
372 Batwa. Eight or nine months before my arrival in Nyanza the fire
687 went out as a result of the carelessness of the watchmen, and they
778 had to forfeit their lives for it. The sacred fire is also said to be kept burning in Kiziba, but there it has to be brought anew each year from the Sese Islands.

766 The ordinary verb "to die" can not be applied to the king.
643 After his death the king is not buried but mummified over the fire. When the body is completely dessicated, it is burned along
[775] with his hut, so not a trace remains. The kings are said to live on as leopards after death.

A son of the deceased king is his successor. He need not be
643 the eldest, nor is he, as a rule. The uncertainty concerning the
578 successor to the throne causes internal strife in Ruanda, laying the country open to attacks from the outside in the interval between the death of the old king and the establishment of the new ruler.

There are, however, some regulations which eliminate cer-
643 tain categories of royal sons from the list of pretenders. Thus, a man dedicated to Ryangombe is said to be incapable of "eating the drum" (becoming king). This is said to have been the case with Ishirangabo, for example, the brother of Musinga who, in his day, guided Lieutenant Count Von Götzen. The princes whose mothers have died are also reputedly unable to "eat the drum."

[256] As a result of this situation, children are often appointed kings with an uncle or brother of the queen mother as regent. This happened to Musinga, for example, whose uncle Kabare for a time exercised the ruling power in his stead.

643 When he begins his reign, the new king and his mother as well
551 change their names. Thus, Musinga became Juhi Musinga, and his
644 mother, Kanzogera became Nyina Juhi. The queen mother and the regent are given all the honors of a king during the king's minority.

643 Another thing that reduces the number of pretenders -- this
644 weakest aspect of the African state -- is the limited number of sons

643 of the king who are recognized and fully qualified. The moment a
644 king has a son whom he recognizes, the queen mother is said to be sent away. For this reason she brings all her influence to bear (and this influence is, as a rule, very great) to prevent the king, as long as possible, from recognizing any of his children as fully qualified.

643 Bagaragu. The king is the owner of all the land and all the
423 cows in the country. He exercises his power by granting these lands and recalling them when he is displeased. In this manner the king appoints his officials who as such can be regarded as temporary large landowners. The king keeps them in office and on their land, but he can drive them out or increase their holdings at any time.

643 The king is omnipotent. The only thing that does not yield to him is the physically impossible. Thus, for example, he can find no one who is inclined to settle as chief in Ndorwa, for this would be too dangerous in spite of the eventual help of the king.

661 An individual's power and possessions depend chiefly on the
643 favor of the king. This is the case to such an extent that even the privileged must always remain in contact with the king or
558 even live at his court, otherwise they cannot hold on to their success or their possessions. No matter how wealthy a man is, he can lose everything if he has no allies and if someone more fortunate succeeds in getting the king to withdraw his favor.

643 Every fortune hunter is surrounded by a number of clients who
644 dog his footsteps in the hope of participating in the successes of their patron. One can judge the importance and the prospects of the master by the number of these second-class fortune hunters who often have to content themselves with nothing more than gifts of milk from the king.

644 When I lived in Nyanza, I had an opportunity at eleven o'clock every morning to see the mighty ones, with a following of 50 to 60 men, march up to the king to give him a morning greeting. Among these were also completely impoverished [257] devils who, although they were marching up to the king as his bagaragu, had only one Muhutu in their retinue.

The most intimate associates of the king are his high chiefs. They are his clients (bagaragu). At the time of my visit in Nyanza

644 the following high chiefs were mentioned:

1. Nshohozamigo (Luhanga is his mugaragu in Mulera);
2. Kanuma from Kissaka;
3. Niamutezi from Kissaka;
4. Lutangabo from Kissaka;
5. Rwamanwa from Niaruguru;
6. Rudegambia;
7. Kabare from Bugessera, Nduga, Kifumbiro, Bugansa, Kissaka, etc.;
8. Lukara lwa Bishingwe (Muhutu) from Mulera;
9. Ndazihiwe (Muhutu);
10. Ishirangabo;
11. Runiga (Muhutu of the Bahenyi clan);
12. Bushakwe (Lwakadygi is his mugaragu in Bugoye);
13. Niamuhanga from Bgisha;
14. Lwabilinda from Mukinjaga, brother of Lwabugiri Kigeri;
15. Ruenankiko from Bulembo south of Mount Ndisa;
16. Nigensi from Mukinjaga.

644 361 These clients live in the huts that surround the large kraal of the king. Their "villas" (bilaro) looked to me like an encampment that had been set up a few days before, probably because they may not have trees planted around them, as is customary, because this might detract from the beauty of the trees surrounding the royal kraal. The only ornamentations in the entire vicinity were the trees of an old abandoned settlement on a neighboring hill.

644 The bagaragu of the king do not have any definitely appointed periods of service at court, as do the musicians, for example. Their periods of uninterrupted sojourn fluctuate between weeks and years. If you ask a high chief when he expects to go home, you always get the same answer: "When the king permits it." Besides 644 the favored, it is especially the feared who are kept at court for 661 a long time so that, removed from their own people and surrounded by a lot of envious, covetous rivals, they become innocuous. If they are absent too long, they gradually lose all contact with their followers. Time and distance have their effect, here as everywhere. For example, a rebellious chief from Mukinjaga was retained at court for the length of time it would take him to fill a

644 traveling basket with small white beads. For two years his peo-
661 ple had to gather these beads, [258] a ransom which was designed not to increase the delight of the subjects with their master. When he saw that the basket was being filled too quickly, the king decided that the cure for the man's attitude was not sufficiently complete and made him fill a storehouse (kigega) with hoes. Only then did Musinga permit him to go home.

644 Thus, next to the splitting up of property, the sojourn at
662 court is the most important factor in the organization and stabilization of the Ruanda state. To a certain extent this ensures against all eventualities. As long as the chief, the most important person in his territory, remains at court, the king holds all the chief's lands in his own hands to a certain extent.

651 The local taxation system is also closely connected with the
644 sojourn of the bagaragu at court. The high chiefs must give the king gifts as large as possible in order not to lose favor. On the other hand, they must not demand too much of their people who might otherwise move away. This restricts them in two directions. It is left to them to strike a balance between these two factors, and the result is that the individual personality of the chief plays a much greater role than is the case in corresponding positions in our modern state.

644 The Royal Court. The court of the king consists of the representatives of the aristocracy, who make up a large majority of his bagaragu and hold various offices, and all kinds of minor officials who serve the ruler. The feudal lords and their retinues make up the bulk of the population of Nyanza, but they come and then go back again to their holdings when the king gives his permission. Thus, the size of the court fluctuates considerably. During the visit of His Highness the Duke of Mecklenburg there was great excitement at Musinga's court, and the whole courtyard in front of the house was always full of people. Taps were postponed accordingly, and one usually did not hear them until around two o'clock in the morning, sometimes even later.

This, however, was not the usual picture of life at court. Everyone was so worn out by all the festivities that after the departure of His Highness the courtyard was quite empty. When I came to call the day after the expedition had departed, I did not find a single chief paying court to the king.

644 Just as the high chiefs pay court to the king, so their women are said to keep the queen mother company and remain in her service. For instance, Kahama told Dr. Schubotz that his second wife was with Musinga (probably with his mother), and when she returned, another woman had to take her place.

The court of the queen mother has nothing to do with the king's harem. [259] Thus, the queen mother, Kanzogera, went on a journey when the news came that our expedition was arriving, but the wives of Musinga remained with him, although they were not visible the whole time. When Father Felix Dufays and I made recordings of their songs and played them back to Musinga, the wives of the king were gathered behind a wall of shield matting in the same hut. They listened to the sounds of the imperfect but nevertheless quite supernatural instrument and occasionally betrayed their presence with laughter that they could not suppress.

The court of the queen mother seems to be the center of the women's life in Ruanda.

Besides the high chiefs, the ntore also are among the privileged members of the king's court. The ntore form the bodyguard of the chiefs. They accompany them everywhere, in the capital and on the battlefield. They are recruited from the sons of the lesser chiefs. They are bodyguards, court dancers, and hostages at the same time, since they are responsible for the deeds of their fathers. The ntore of the king are the sons of the highest dignitaries and are known as danga baganisi.

644 535 When His Highness the Duke of Mecklenburg asked Musinga what danga baganisi meant, he answered, "askari wangu (my soldiers)." However, they perform no military duty and merely compete in the dances. Naturally, they occupy the highest position of all.

644 Besides these privileged members of the court there are others who perform special services, for example, the royal smiths, musicians, Batwa bodyguards, etc. The eldest of the royal smiths is said to enjoy great influence, but apparently the king has given him no lands. The eldest of the court Batwa, the Mutwa, Muhenehene, was pointed out to me as the royal executioner. He is also a very influential man.

644 The court orchestra is made up of Bahutu and Batwa. The
533 singers are Batwa; the drummers are Bahutu. The musicians are a closed corporation and relieve one another every month. After this interval they return home and are replaced by new ones. The arrival of the new musical guard is announced on the evening of the new moon with a particularly solemn drumbeat. The drummers are exempt from certain duties. Among them there was also a Christian from Issawi.

644 Etiquette. The king always eats alone, for it is proper to eat only with people of the same class.

The king's food and drink are prepared by Bahutu. He seems to have more confidence in the subjugated Bahutu than in the ruling Batutsi. Such elaborate precautions are taken to lessen the possibility of poisoning that the drinks are made in the king's compound from products brought there. The cookhouse in the king's kraal is called mubahutu.

[260] It is said that the king sleeps very late. During my three weeks' visit I never succeeded in seeing him before eleven o'clock in the morning, and only once did I have an opportunity to meet him between eleven and twelve o'clock. I had taken the measurements of a person and started to compare his blue eyes with my Martin color chart. When the people present saw the artificial glass eyes, they were so impressed that they immediately sent for Musinga. Musinga promptly dispatched a courier requesting that I send them to him to look at. I offered to bring him the eye chart in the afternoon when I was to pay him a visit, but the king's curiosity was too great; he couldn't wait until then, and that very morning he came into my camp, something he had never done before. On this occasion I observed that when his bagaragu came out of their huts to join the king's retinue, they greeted him by clapping their hands. In Ruanda this greeting is reserved for the king, whereas in Kiziba it is bestowed on important persons generally.

Musinga receives visitors toward four o'clock in the afternoon in the muliango (front part) of his main hut (kambele).

The kambele is on the edge of an enclosed elliptical court about 100 meters wide, at the focal points of which are two

444 ceremonial trees. These were fenced in with straw and encircled with clay. The inner circle was neatly covered with grass. In front of the kambele is a podium ten meters wide, four meters deep, and one-half meter high. On it, to the right of the entrance, were cattle horns and a plant on which libations were made.

When he receives Europeans, Musinga is acutely aware of his lofty position. The king sits on a stool that is somewhat larger than those one sees in the natives' huts. Count Von Götzen (1) says that Kigeri sat on a chair embroidered with pink

1. Götzen, Count G.A. Von, Durch Afrika von Ost nach West [Through Africa from East to West] (Berlin, 1899), p. 178.

and white beads. Musinga's chair was devoid of this decoration. The king does not offer his guests a chair, and if one did not carry along his own chair, he would have to squat on the floor, like the king's lords. In this connection we must point out that in Ruanda the right to use a stool in public is linked with the idea of privileged position. This explains the polite phrase, "urakagira intebe (may you have a stool)."

[354]

The king is said to pass his evenings drinking beer. On these occasions legends are told about his illustrious ancestors.

The musicians are obliged to keep watch throughout the night. Taps, which are actually a very heavy drum beat, were never heard before two o'clock, [261] sometimes even later. The king is said to stay awake until this late hour. That is why ndamutsu, the heavy drumbeat that greets the king in the morning, never occurs until between eleven and twelve. Early in the morning, between four and five, the drums are also sounded, but only to show the king that the watch is on duty and that he can sleep peacefully. In the hut where he sleeps the king is said to keep an elephant tusk which always lies near his bed.

493 It is said that on his journeys a troop of Batwa carry the king in a small hut. This hut, kitabashwa, is supposedly kept in a

493 [578] courtyard at the king's compound, guarded by Batwa. A consecrated elephant tusk is also supposed to be kept there.

During the visit in Nyanza by His Highness the Duke, Musinga climbed into a ngobi at the request of Captain W. Von Grawert. This is the conveyance in which the chiefs are carried on journeys. The king was reluctant to do this, perhaps because he was afraid or because this form of conveyance did not seem to him appropriate to his rank.

643 484 While the king is on a journey, his Batwa bearers may get food wherever they wish, for everything is the king's property. That is why Lwabugiri, who was always traveling about, became such a burden to the country. Only the Batwa speak longingly of those days. They accompanied his expeditions, and I often heard them say: "In those days there was a lot of meat. Now Batwa have no standing."

Dr. Hans Meyer says: (1) "...since a sacred tradition forbids

1. Travel reports of Prof. Hans Meyer on German East Africa, Mitteilungen aus den Deutschen Schutzgebieten 1911, p. 347.

him (Musinga) to travel beyond the borders of his central province, he is very limited in his outlook." This statement must be based on a misunderstanding, since the rulers of Ruanda formerly traveled a great deal, and this is spoken of in detail in the legends. In all probability a native told Professor Meyer how much he disliked the troublesome journeys of the king, hoping, perhaps, that by misleading an influential European he might make the king's journeys impossible in the future.

565 Social Organization. We can distinguish four classes among the population of Ruanda. The privileged class consists of the royal officials. It includes the feudal lords of the king (bagaragu) and their subchiefs with their retinues, as well as the rest of the dignitaries at court. Most of the court officials are also feudal lords; some, however, like the head of the royal smiths, are said to hold no lands.

Among the elect, the highest rank is, of course, held by the family of the king, the Banieginia, and that of the queen mother, the Bega.

565 [262] The privileged class consists almost entirely of Batutsi. Among the lower officials, represented by the community headmen, there are quite a number of Bahutu, especially in Bugoye. In Mulera and Bgisha there are Bahutu even among the lords of the king. The officials are commonly called batware (plural).

565 701 Next in rank are the warriors (ngabo). They are placed under particular chiefs and perform no work in the chiefs' fields. In other words, they occupy their own land which their ancestors took possession of and cleared generations ago. After the Batutsi conquest they were not driven from their land, and the king recog-
[657] nizes their privileges. They pay only the ordinary taxes, but they must always be ready for war. On them rests the burden of the blood tax, from which the ordinary farmers (biletwa) are, at least theoretically, exempt.

Membership in the corps of ngabo is herediitary, but a person can be ousted from this privileged class as a punishment. On the other hand, I do not know whether there are cases of an ordinary farmer being raised to the position of ngabo.

[714] The insignia of the ngabo is the kigomero, the wooden ring which protects the archer against the recoil of the bowstring.

In the interior, for example, in Nduga, the ngabo are less numerous and are scattered on the hilltops among the rest of the population. There are many more of them in the border districts, and in Mulera, for instance, they make up almost the entire population.

565 Free farmers without land of their own (biletwa) make up the third class. They cultivate the land belonging to the crown and give the chief two or three days' labor out of a five- or six-day week. Besides that they must also pay taxes.

The fourth class consists of the pariah tribe of Batwa. They are hunters, potters, and rain makers. They are the police
[693] and also hangmen. Chief Songore, whose principal occupation at court is torturing criminals and very skillfully thrashing them with two small sticks, is said to be a Mutwa.

567 There are also slaves in Ruanda. The institution of slavery, however, has no importance, although the number of slaves in Bugoye and among the Batutsi of Nduga is said to be very considerable. As far as I know, the slaves here are chiefly women,

567 baja who were sold by their parents when they were children in exchange for food during the not infrequent famines. I was unable to find out anything in detail about the social position of boys who are sold in this way. I believe that when they grow up they are absorbed into the bagaragu stratum.

Every district that has periodic famines, for example, Ufumbiro [263], furnishes slaves who, unprotected by their relatives in a strange region, remain in an inferior position, dependent on the protection of their master. In every mission one can see a number of little slaves who have settled there to get away from their masters. On the whole, however, the position of slaves is not at all bad. I never heard of maltreatment.

565 [482] Loads are carried chiefly by the biletwa.[1] The Bahutu of this category have personal freedom. They may abandon their house and fields and change masters, as long as they do not leave the state. The batware on the border must see to it that people do not leave the country.

661 565 Actually, however, the existence of the common man is of no consequence, and he is tolerated only on the condition that he satisfies all the demands of the rulers. Often a native cannot simply give up his field and his hut without further ado. He must put up with minor depredations, ostensibly as punishment for alleged crimes. He must pay his taxes and provide food for travelers if the king requests it, although the mutware himself pockets the amount given.

In this primitive, undifferentiated society, however, the possibilities of exploitation are extremely limited. As long as it is simply a question of furnishing food for the relatively small number of rulers, the latter can be satisfied, no matter how large their appetites. Thus, the slight possibility of exploitation lays the foundation of a social equilibrium without legally established norms. Also, if we take into consideration the constant internal struggle of an unsettled state which is very much dependent on the support of the subject masses, we discover the second factor which sharply curbs tyranny. The rulers must consider their subjects, otherwise they run the risk of being abandoned by their followers and subjects and defeated by their rival. Political

[1] [i.e. Free farmers without land of their own—Analyst]

661 wisdom consists in not letting oneself be governed too much by
565 caprice and not becoming relatively the worst tyrant.

Even now when there is peace in the land, petty wars among
669 Musinga's bagaragu and brawls among the bagaragu of the bagaragu
642 of the king are by no means rare, but they occur chiefly in the border regions where the power of the king is not so strongly felt. At the time of my visit, for example, Lukara was fighting with Luhanga in Mulera. In cases like this it often happens that the king is unable to find a man who would not be too afraid to manage and tax the warlike farmers if they were assigned to him. In this way the Bahutu gain their independence and can be subjugated anew only by a punitive expedition.

[264] Under these circumstances, petty internal strife is a natural function of the state and does not result merely in brutality and devastation. In this way, even though it is uneconomical, poor administrators are weeded out, and the power of the strong is curtailed. This principle may at first glance seem paradoxical, but it corresponds very well to the facts. When it comes to the formation of a state under unlimited rule which on principle admits no protest, limitations must arise spontaneously if large masses of people are to live together.

661 The situation changes, however, the moment there is pacifi-
642 cation and the country is opened up and organized by Europeans.
178 The old, natural, albeit uneconomical forms which, after all,
648 regulated conditions are now done away with by force of arms and the rulers, weakened by emigration, overcome. On the other hand, the opening up of export trade creates countless possibilities for exploiting subjects in a hitherto unknown way. The situation of the natives is getting worse, for the new judicial norms, despite their humane phraseology, are less protection to them than the old regulations upon which the organization of the state was built. In Kissaka one can see many natives from Ussuwi who have taken refuge there from the blessings of humane European civilization. Under these new conditions, the only weapon in the hands of the subjects is economic injury to the chief, and this can be achieved by the emigration of the labor force.

The situation of the natives is worst of all where Europeans have put a stop to freedom of movement in order to make police

661 control easier. The moment this happens the native no longer
642 has any protection against his chief. As a result, the need for
178 serious intervention by the European administration becomes an
648 urgent necessity. With increased possibilities of exploitation certain norms must now be set up which will protect the interests of the common man and permit him some freedom, in other words, give him back everything that was formerly guaranteed him by means of a less perfect, less compact and oppressive social organization and without any kind of pact. Under these conditions, further intervention by the European administration becomes a necessity, because there is as yet no guarantee that the new order will do more than contribute to a "more complete exploitation of the lazy Negro" and perhaps also to a decline in the population.

642 By comparing conditions in Ndorwa, Mulera, Bugoye, and
64 Nduga, we can easily determine the direction in which conditions
178 have developed in Ruanda.

In Ndorwa we find independent clans living apart from one another.

[265] In Mulera the clans have been subjugated by the king and pay taxes. The Batutsi have driven the natives from some of the hills and permit homeless members of disrupted clans to settle there. These dregs must support their masters and perform compulsory services for the protection they get. These are the new communities which really should be spoken of as analogous to large estates. Some of the clan elders, such as Bishingwe, father of Lukara, are joining the conquerors and are supported by them. With this support they settle immigrants on the uncultivated land, and the latter must perform compulsory services, just as they do for the Batutsi.

In Bugoye the distinction between conquerors and peasant aristocracy is gradually being effaced and along with it the difference between impoverished clan members and immigrants who are domiciled on the remaining free land by the clan elder and become his bondsmen. In Bugoye this process is not yet completed.

The Bambari clan have already put their buletwa to work in the field of the chief, who is also a Mumbari and who must be regarded as a former clan elder. Here the land is already regarded as his property, as land granted by the king.

642 However, the Bagwabiro, an impoverished Batutsi clan, main-
614 tain that the king gave them the bush knife (muhoro) for Bugoye.
178 They occupied large areas, defended them, in some parts successfully, against the encroaching self-contained clans, and settled them with exiles, refugees, and vagabonds, who make up the biletwa of the Bagwabiro. Here the community headmen are officials of the king, which is in contrast to the situation among the rest of their clansmen where bagabo only collect taxes for the Bagwabiro. However, there seems to be a tendency to blot out the difference between Bagwabiro and tax collectors (clan elders) and to make serfs of the clan members, as is already the case with the Bambari.

In Nduga the population on the various hills is very mixed. It belongs to different clans. Most of the land belongs to the chiefs (the large landowners), and only occasionally do we find ngabo (fighting farmers) who are exempt from compulsory service (buletwa), that is to say, who live on their own land (granted to them by the king).

In this way clan organization in Ruanda is broken up by the rule of the herdsmen and the resultant development of a peasant aristocracy. The factors that remain to uphold clan organization are the food taboos, exogamy, and blood revenge.

The effect of royal power on the homogeneous clans has resulted in the differentiation of the population.

In Urundi the tendency towards centralized state organization [266] does not seem to have made much progress as yet. Here there are still feudal masters who are unrestricted rulers of entire provinces, while in Ruanda the chiefs have nowhere near the same independence on their lands. Here too, however, the land is regarded as the king's property.

635 Political Organization. Ruanda consists of a number of provinces with geographic names but without administrative units. We have already mentioned Nduga, Mukinjaga, Bugessera, Bugoye, Bwischascha, Mulera, Bgisha, Ruweruka, Ndorwa, and Kissaka.

The individual provinces have no central administration and
634 no governor. The provinces are divided into a number of communities, most of which are assigned to clients staying at the

court of the king. The feudal lord, the manangwa, has the duty of keeping his subjects in check, straightening out their affairs, and supporting his master with arms and retainers. In payment he has the right to be cared for by the inhabitants of the holdings entrusted to him. They must perform compulsory services to recompense him for the land given them to cultivate. Besides that, chiefs also enjoy a profit from the other taxes collected for the king.

The clients of the king administer their holdings with the help of subchiefs, and in each province they have a greater or lesser number of scattered possessions.

The representative of the manangwa is called kissonga and usually belongs to his master's family. He is appointed by his master, just as the king appoints the manangwa. The sons of high chiefs often hold this office. Thus, Nigensi's son, Kassasi, is on the Kwischara Peninsula in northern Mukinjaga (1);

1. Kandt, R., "Ein Marsch am Ostufer des Kiwu [A March along the Eastern Shore of Lake Kivu]," Globus, Vol. 86 (1904), p. 249.

Bushakwe's son, Mulangira, lives in Kawagali (2) with his grand-

mother, Kiramato; Von Parisch also mentions the mutware, Sebitana, son of Bushakwe, in Bwischascha; and Dr. Kandt (3)

3. Kandt, R. Caput Nili (Berlin, 1904), p. 505.

speaks of Semirigamba in southern Lubengera. In the Bahutu chieftainships of Bgisha, ruled by Sebikoko, Mogalule, Kati, Mutweki, Sebingiri, Chunga Ngombe, and others, conditions are

634 somewhat different. The most important personality after the chief is his brother. He represents him in all matters. Both of them have their houses in the individual villages in which they live during their journeys. The son ranks just below the brother of his father and is granted a village after he has grown up. He is not entitled to gifts in the other villages of his father, and only if he has [267] no uncle does he get an uncle's rank. In spite of this preference, the brother of the chief is not his heir; all his possessions go to the son after the burial of the father.

622 563 Below the kissonga are the quite unimportant subchiefs who supervise the communities on the separate hills. Among them there are everywhere, especially in Bugoye, many Bahutu, whereas the higher positions are almost always held by Batutsi. It is only in Mulera and Bgisha that one sees Bahutu also occupying the highest positions.

The Bahutu officials are very much praised by their superiors, for no one can be more merciless and servile than an upstart who is hated by his clansmen. This characterization does not, of course, apply to the clan elders who occupy this position in the free farm communities. The subchiefs are the only cattle-owning Bahutu outside of Mulera, Bgisha, and Bugoye.

642 631 There is no doubt that with the extensive interweaving of property belonging to individual high chiefs (in this respect the whole country resembles a village with a community system of planting [Flurzwang]) an influential stratum is created which has vital interests in the most diverse parts of the country. This counteracts the centrifugal, particularistic tendencies of the individual provinces.

642 631 643 These conditions seem to be the result of a conscious aim on the part of the crown. In this direction much seems to have been accomplished by Lwabugiri Kigeri, the father of the present ruler, Musinga. Kigeri is reputed to have centralized the state and partitioned, scattered, and interwoven the holdings of the chiefs in order to destroy the centrifugal tendencies of the feudal lords. This involved him in bitter struggles with the lords, among them his brother-in-law, Kabare, but he managed to crown his efforts with success.

631 The modern European who is accustomed to sharply demar-
642 cated administrative districts and has no idea of social equilibrium based on the interweaving of economic interests finds this principle of administration absurd. That is how Captain Göring (1)

[13]

1. Captain Göring, "Zu den Unruhen in Urundi [On the Unrest in Urundi]," Deutsches Kolonialblatt, 1911, p. 552.

judged conditions in Urundi. He says: "The division of the country is entirely without system. One often finds watuale who own various lands widely separated from each other."

I was told that Lwabugiri's policy is being followed by Musinga. He is said to prefer appointing chiefs who are directly responsible to him and to give them lands. These unimportant, free persons, mindful of the king's protection, form an element [268] independent of and even hostile to the high chiefs. They guard their own interests and resist the particularistic tendencies of the powerful.

This policy tends to erase the boundaries of individual provinces, and one encounters great difficulties if he asks about the political division of the country.

After this brief discussion of the central organization of the state which is made up of the king and a dozen and a half powerful feudal lords, we shall now touch on the political conditions in the individual sections.

The organization of Kissaka has the following pattern. The largest part of the country is divided among three large feudal lords, Kanuma, Niamutezi, and Lutangabo. Their lands are interspersed in such a way that no separate provinces can be formed. This increases their opposition to each other. Hence the dignitaries check on one another and fight one another with accusations and intrigues. In this way mutual control, which is very useful to the state, is established, as well as a quite stable equilibrium.

These three high chiefs of Kissaka live almost constantly at the court of Musinga in Nyanza, and when they obtain permission to visit their holdings, their sons remain behind as valuable hostages, a guarantee against possible separatistic

631 642 tendencies of their fathers. Count Von Götzen (1) mentions

1. Götzen, Count Von, Durch Afrika von Ost nach West [Through Africa from East to West] (Berlin, 1899), pp. 156, 159.

only one governor of Kissaka, namely, Kavahigi, but he also speaks of Kaware (Kabare) in the northern part of the country.

621 631 The hill (kashozi) is the smallest political unit in Kissaka, as well as in all the rest of Ruanda. The inhabitants of a hill belong to different clans, and the factor uniting them is purely [622] political. It is primarily the chief, to whom compulsory service (buletwa) must be paid. This official is likewise appointed by the high chief. However, the very large hills are not infrequently divided into subgroups with different subchiefs. Thus, the hill known as Bare in Nsasa is divided into the communities of Bare, Ishua, Kibare, and some others.

621 614 In Mulera where there are very few Batutsi and these have no great power, much more primitive conditions have been preserved. Here too, however, political units are represented by hills, but each hill has a homogeneous population, consisting of the members of the clan. These communities are directly sub- [65] ordinate to the king and, through their elders, pay taxes to the king's deputies. Here the mutware, the integrating factor, is absent. On the few hills [269] in Mulera belonging to Batutsi, however, we find conditions similar to those in Kissaka. Here, [651] also, taxes are paid to the chiefs and not to the king's deputies. I believe that the Bahutu on these hills must also render compulsory service.

Ndorwa is a country that is only under nominal rule and does not pay taxes to Musinga. We find here the same clan communities, but they are completely independent, small political units.

Besides the two extreme forms, the community settled on alien land granted to the chief by the king, which the chief represents at court, and the free clan community settled on its own land and paying taxes to the king's deputy but having no

621 representative at court, we find clans that do have their repre-
614 sentatives at court. The Bahenyi represent such a Bahutu clan, and, in contrast to the Batutsi tribes, they have a headman. At the time of my visit it was Runiga.

Among the members of the clans, however, there are also high chiefs. Thus, Kakawandi is said to be a Muhenyi. He rules in the Nyawarongo Valley far into Mulera, but I do not know whether he rules in a part of the original clan territory.

The Barashi constitute another Bahutu clan represented at Musinga's court by its elder. We have discussed this clan in the previous chapter.

Bugoye is also in an intermediate position. Here we have areas of free farmers and others where the land has been granted to chiefs and is cultivated by biletwa. These lands are chiefly under the rule of Bushakwe, who is represented in the territory by Lwakadygi.

625 Police. The king supervises the entire country with the
202 help of a very strictly organized police force. Every important person, every European traveler, is scrupulously watched. Every minor detail is reported to the king. It is certainly not easy to understand how such accuracy can be achieved without the art of writing. Police duty is under the management of local chiefs, and they relay dispatches to the high chiefs residing at court. Actually, news is shouted from one hill-top to another. The chiefs report to the king and try to outdo each other in the accuracy and dispatch of their news service.

The population hates the police agents. I had an opportuni-
625 ty to observe this when the Mututsi, Lwakazina, wanted to
578 join my column in Mulera for protection. The people had become so enraged at him because of his dangerous service that his life and goods were no longer safe.

[270] Count Von Götzen (1) mentions that Batwa policemen

1. Götzen, Count Von, Durch Afrika von Ost nach West (Berlin, 1899), p. 161.

are said to wear special insignia, a forehead band with monkey hair.

659 There are no public services in Ruanda, with the exception of ferry service and police regulations, if we may use this term. Both of these, however, serve primarily to satisfy the needs

159 of the king and his favorites, upon whom state affairs and interests are centered.

151 Tax System. The interweaving of landed property is not the only means of paralyzing local, particularistic aims. The system of taxation accomplishes this too. The tax burden of the farmers is divided into several units which are usually collected by different chiefs. In this instance the chiefs are only intermediaries, but they retain part of the taxes.

The taxes of the farmers consist of food, hoes, beer, animals, and work in natura.

The tax to be paid to the king is determined by the king himself. Special conditions in individual communities sometimes exempt them from transporting their produce to the capital city. Thus, for example, Issawi Hill was exempt from food deliveries to the capital because Europeans were staying there.

The tax to be paid to the chief is determined by the chief himself, but he may not overburden his people; otherwise his work force may threaten to move away. Taxes in the form of food are collected during the harvest. There is considerable local variation in the amount of taxation in Ruanda. It varies also among individual high chiefs. Thus, in Marangara, for example, the people of Nshohozamigo work two days out of a five-day week in the fields of their chiefs. The people of Rudegambia and Kabare only perform services in the capital, for example, build huts and deliver food supplies. The fields of the subchiefs are cultivated by their clients who have become subject to compulsory labor through the granting of cows, as well as by wageworkers who are paid in milk and butter. In Issawi clients do not work in the fields of their patrons.

In Ruanda there are different categories of taxes, and the people are taxed very differently.

The greatest burden is buletwa, work that must be performed in natura on the fields of the chief, a primitive great landowner. The people work [271] two to three days out of a five- to six-day week on the land of the mutware. This work is the Muhutu's payment for the land on which he has settled and is not performed by the free farmers (ngabo) who have their own land which was cleared

651 by their ancestors and from which they were not driven away during the conquest.

The second ancient burden is butaka. It is paid primarily in food and tobacco and only to a minor extent in cash hoe-money. The king's capital does not have any fields of its own. The court is fed by supplies delivered by subjects from near and distant provinces. Only cattle are pastured in the environs of the capital; there are no farmers who till land.

644 651 All the potentates living at court are fed from home. Bringing food for the chief residing at court is called kugemurira mutware. Food supplies are brought almost daily. As a result, any stoppage of this traffic means a food scarcity among the dignitaries thus affected. There are no markets where provisions could be obtained. Because of this primitive arrangement, food in the capital is always rather scarce, and everyone to whom I spoke about this told me that no one lives in the lap of luxury at court during his stay which is usually involuntary. The Batwa bodyguards even maintain that they actually starve and would very much like to return to their poor settlements.

To these two ancient tax burdens Lwabugiri added the war tax (umuheto) and Musinga the food supply tax (ilali) for visiting Europeans.

651 661 Among the Bahutu the furnishing of food supplies for visiting Europeans is merely an additional tax for the benefit of their chief. He regards the presents of the European as his property and not infrequently takes for himself part of the supplies brought by his people for the Europeans. I saw an example of this in Kwa Rutagungira. The requisition for my presence brought the chief three goats and four pots of beer, but I received only two pots and two goats. The larger pots and the best goats were put aside by the chief, but this was done too close to my camp to escape the notice of the people who were excited by the approaching pots of beer.

651 635 The collection of butaka and muheto, which are paid, theoretically at least, throughout the country, is distributed among various chiefs, as has already been reported by Von

651 Parisch. (1) He mentions: [272]
635

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903 [Two Journeys through Ruanda 1902-1903]," Globus, Vol. 86 (1904), pp. 74, 78.

Province or Region	Chief (mutware)	
	Ku butaka	Ku muheto
Bugoye	Bushakwe	Bushakwe
Mukinoni	Bushakwe	Rudegambia
Bwischascha	Bushakwe	Rudegambia
Mukinjaga	Lubilinda	Rudegambia
Niantungu . . . . . (between Bwischascha and Nduga)	Bushakwe	Kabare
Munjaga . . . . . (belongs to Nduga)	Lujondo	Kanuma
Kawagali . . . . . (belongs to Nduga)	Bushakwe	Bushakwe

Von Parisch also mentions the mutware ku muheto Balahanda who led the attack on Count Von Götzen.

651 The butaka, it seems, is always collected by the chief to whom the land is granted. The muheto tax, on the other hand, goes to the chief who is entrusted with the king's cattle in the district. He has the right to pasture cows on the harvested fields of the farmers, which is a very considerable burden to the population. Thus, for example, the grass on many hills in Bugoye belongs to Rudegambia, although Bushakwe is the high chief of the region. On my way to Kisenyi I saw many uncultivated fields that had to lie fallow because the Batutsi removed their cattle too late for planting.

Dr. Kandt (1) also speaks of two chiefs in the provinces. He

[113] 1. Kandt, R., "Ein Marsch am Ostufer

651
[113]

des Kiwu [A March along the Eastern Shore of Lake Kivu]," Globus, Vol. 86 (1904), p. 213.

calls one the chief of the people and the other the chief of the cattle.

The ilali tax seems to be collected by special officials who at the same time are entrusted with the supervision of the Europeans who travel about the country. In some cases this office is carried out by batware ku muheto or batware ku butaka.

The amount accruing to the chiefs when they collect the taxes is called musogongero and is fixed for the butaka and muheto. For the ilali this does not seem to be the case. The amount varies from one situation to another, in proportion to the size of the caravan of Europeans that has to be provided for.

In order to describe the taxes somewhat more in detail, we herewith give the tax burden carried by the three communities on Katebe and Kitebe which we have discussed before.

[273] Taxes for the Communities on Katebe and Kitebe

	Baishaza	Balyolyo	Bagwabiro
Population (including bagaragu)	104	61	41
Male clan members among these	47 + 2[1)]	21	21
Butaka for Musinga	9 Kaniki = 27 hoes	10 hoes	6 hoes
Musogongero for Chief Bizira Kuzama	6 hoes	?	?
Muheto	3000 butega	1000 butega	1000 butega
Musogongero	3 hoes to Makobi	Goat for 5 hoes to Murahangubo	
Ilali (through Gamidji)	1 package of beans	Small pot of beer, basket of sweet potatoes, basket of beans	1 load of beans
Buletwa	none	none	none

1) Two sons-in-law.

651 The bagaragu of Chief Makobi do hoeing as recompense for rented fields, or this may be done by paid day laborers (mubizi). The clan communities under discussion, however, are free of this burden, since they live on their own land.

There are also taxes that are paid by particular families or communities. The furnishing of objects whose manufacture presupposes a certain skill falls in this category. Among these objects are salt that is made from swamp grass, grass rings for women's legs (butega), otter skins, wildcat skins, cowhides, barkcloth, weapons, etc. The people who furnish these items are exempt from part of the normal taxes that represent the share of the ordinary farmer. Thus, Mulera furnishes a rather large number of butega.

651 614 The duty of the Bahenyi, a privileged Bahutu clan, is to build royal houses. They also play a part in the cult, offering special sacrifices, and they may not eat with members of other clans.

Special taxation on individual clans seems to be a remnant of an older form of taxation, the clan tax. This has been very nicely preserved in Kiziba where individual clans have special duties toward the king. This is the nature of the taxes borne by free, landowning farmers (ngabo) in Mulera. Here the tax is the concern of the clan community. It is paid by the clan elder, and apportioning the tax is an internal matter for the community. All its members, however, have joint responsibility for paying the tax.

The ngabo pay their taxes in honey and also give the king annually every twentieth cow. If the number of cows owned is less than 20, a goat is given for each cow. In figuring taxes, one cow is equal to 20 goats.

651 661 [274] In Mulera the taxes of the ngabo are collected by special deputies of the king. We need not emphasize the self-evident fact that the officials entrusted with the collection of taxes increase the amount to their advantage and do not shrink from shameful plunder. If, as is generally the case, a high chief is not present when the taxes are collected, the Balera will not stand for this oppression. For their part, they seek every opportunity to get out of paying taxes altogether. That is why there are big rows

651 and not infrequently open battles whenever collection takes place.
661 On the way to Mulera, at Kwa Rutagungira, I saw several wounded Batutsi who had to pay for their zeal as officials with holes in their hides. The business efficiency of the tax collectors is well characterized if we note their habit of substituting some of their poorer stock for the better cows that are delivered as the king's taxes. In view of its chronic character, this misuse and plunder must be regarded as a form of official remuneration.

651 We must emphasize the fact that in Mulera the taxes of the ngabo are linked to the community, the people, and not to the land they cultivate. That is why the outsider who has settled on alien soil with the approval of the residents does not participate in community taxes. He continues to pay the taxes of his own clan, and only if he is adopted by the resident clan does he pay taxes where he has settled.

651 This principle of family tax becomes complicated the mo-
178 ment pacification makes possible the disruption of clans which under the most primitive conditions have been held together by blood revenge. I saw the consequences of this complication of social conditions in Mulera in the form of a punitive expedition which reduced to ashes the settlement on Mount Kisseke. A few outsiders had bought with gifts permission to settle on Kisseke from the established residents. A few weeks after they were settled, some Batutsi arrived who had the right to collect taxes from the community of new settlers but who were complete strangers to the old established population. The new settlers
[687] promised the old ones a bull, and the latter drove off the Batutsi with weapons, killing a few and wounding several. A punitive expedition of government troops, undertaken because of Musinga's complaint, was the sequel.

651 The ferry toll is a special tax that affects traders particularly.
491 It is collected by batware who are stationed at the ferries and whose people run the boats. The toll is very high. For a traveler with his pack, it is ten large beads, that is to say, a third of a day's wages. Twenty men with a herd of goats paid a piece of cloth (nguo).

[275] The batware who collect the ferry toll must also keep watch over the traffic. At the border ferries, for example, on

651 the Akanjaru which can be crossed at only a few places because
491 of the swampy condition of its channel, it is their duty to prevent the natives from leaving Ruanda without the king's consent. It is obvious that under these conditions the ferry tolls are sometimes increased very considerably.

651 A further burden affecting the trader is the market tax, indamu.
443 In Nyundo it was very high, 10 to 15 percent of the value of the article traded. Here Lwakadygi, Gamidji, and Makobi took turns collecting the tax.

The result of this high tax is that small auxiliary markets are set up along the paths near the markets. Here transactions are tax free. The chiefs who collect the indamu also settle disputes that arise in the markets.

651 Ivory from slain elephants and leopard skins are the property of the king and must be sent to Nyanza. The regulation requiring leopard skins to be delivered seems to be connected with the belief that after their deaths the members of the family of Ruanda rulers become leopards.

721 Military Affairs. The king makes all decisions concerning
643 war and peace. He wages war in order to punish rebellious vassals or to win over vassals of other kings.

701 The troops are made up of ngabo. They are divided into contingents, the names of which are independent of the names of the provinces or of the chiefs who happen to be in command. Lieutenant Von Parisch (1) mentions the Bangogo contingent under

1. Parisch, F. R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903 [Two Journeys through Ruanda 1902 to 1903]," Globus, Vol. 86 (1904), p. 77.

Ruenankiko (Ruidangigo) and the Lujango contingent under Kabare.

Usually only a few contingents are called out for military expeditions. This was the case, for example, with the last expedition against the Mutwa Bassebia in 1906, which ended in failure.

Generals are appointed separately by the king for each expedition. Ruhara Aramanzi was the commander-in-chief of the

701 expeditionary force against Bassebia, a subchief of Ngurube, the Mutwa from Ndorwa. As a rule, the general pays with his life [687] for a military failure.

Count Von Götzen (2) mentions that men set out for war

2. Götzen, G.A., Count Von, Durch Afrika von Ost nach West [Through Africa from East to West] (Berlin, 1899), p. 166.

accompanied by their wives, but the women do not take part in the fighting.

726 791 In case of war there must always be a Muhenyi among the troops. He himself is invulnerable, and it is his duty to vilify the enemy and render their weapons harmless. A division accompanied by a Muhenyi [276] must always be victorious. This belief, however, is far too often shattered by the facts. The expedition against Bassebia was defeated, and the Muhenyi who accompanied the column lost his life. This unexpected outcome was explained by the fact that the Mutwa chief, Bassebia, had even greater magicians at his command. The "invulnerable" Bahenyi are still very much feared by everyone and are permitted to commit acts of violence which would not be tolerated for other persons.

727 The trophies brought back to the king from campaigns consist of the heads and genitals of the slain enemies. On the last unsuccessful expedition against the Mutwa chief, Bassebia, no Batwa heads or genitals were captured. In order to cover up [661] their failure and not be ridiculed because they had no trophies, the returning warriors killed a few peaceful farmers who had to sacrifice their heads and genitals to glorify the entrance of the troops into the capital.

In view of the kind of trophies taken, the warriors try to kill their opponents and not take any prisoners. This is probably also tied in with the social organization which does not give rise to a need for slave labor.

721 Declarations of war are not made, at least not in Mulera. If a military expedition is to be undertaken, everyone knows about it long beforehand. It is hard to keep a secret. The actual declaration of war is the sound of the antelope horn calling the warriors together.

727 Baumann (1) mentions that spades wrapped with leaves are

1. Baumann, O., Durch Massailand zur Nilquelle [Through the Land of the Masai to the Source of the Nile] (Berlin, 1894), p. 84.

a sign of peace.

[277] Chapter 13

Administration of Justice

671 Law. Ruanda has no codified laws. The administration of justice is the business of the government which takes into consideration long-established customs. This is the only kind of law one can speak of in Ruanda.

Criminal law is not developed here to such an extent that the various types of crimes must be atoned for with specific punishments. We can only indicate approximately the severity of individual punishment, since uncodified law leaves so much to the personal opinion of the judge.

628 178 The basis of justice within the clan is the institution of blood revenge. With the development of the state, this is gradually being pushed into the background, but in Ruanda the process is still in its initial stages. In Kissaka, on the other hand, it is said that before revenge is taken, the chief is notified, and he can forbid taking vengeance for a man killed for robbery.

682 685 Aside from murder, which in Ruanda proper is still punished with blood revenge, the theft of cows is very severely punished, in accordance with the role the cow has in the life of Ruanda.

674 Since people are constantly passing goods received from
686 another person to their clients (bagaragu), affairs of indebtedness become so complicated that it is difficult to keep the whole matter straight. Since the Batutsi are primarily the ones who grant and collect, however, it is customary to speak of theft (kwiba) only in connection with the Bahutu. In the case of the Batutsi one speaks of plundering, of collecting (kuambura). Nevertheless, if a Mututsi steals from another Mututsi and cannot prove that he is merely collecting his own property, he is treated like a thief.

685 When a thief is caught, his arms are tied so that the elbows are as close together as possible, [278] which is very painful. He is kept waiting thus until his relatives ransom him. The amount they must pay for his release is, as a rule, double the value of the stolen article. Sometimes this is increased to five times the value. Half of this goes to the injured party, the other half to those who helped him catch the thief. This portion usually consists of beer (nzoga). Since the injured person frequently retrieves his goods with the help of the chief, the latter keeps the second half of the ransom. This always happens in the case of stolen cows, for example. These cases border on out-and-out brigandage and can only be tracked down with the help of the chiefs. If the ransom is not paid, the thief himself is punished. He can even be slain. If the thief belongs to a powerful clan, however, there is no rush to murder him, especially because of the fear blood revenge. If there is no fear of the thief's family, however, various punishments are given. Sometimes the criminal is tied to two posts and left to starve to death and to be consumed by birds of prey or even impaled. Ordinary thieves who have not stolen cows are not so severely punished. If the death penalty is to be administered, the criminal's arms are tied, and he is thrown into the water. Ordinarily it is enough to cut off the criminal's ears. This punishment is said to have been the favorite one of Musinga's father, the great Lwabugiri Kigeri. In former times this was not considered enough, and one hand was also cut off.

A captured Mututsi who is not ransomed by his family can allegedly be killed only with the consent of the mutware, who in this manner takes the responsibility upon himself. In fact, the Bahutu are reluctant to punish the Batutsi of southern Ruanda.

685 except through the mediation of the chiefs. They try to pay
[367] them back by thievery. Parents try to teach their children not to steal by burning their fingers.

684 Crimes against established morals are also severely punished in Ruanda, although it is commonly maintained that these punishments are being mitigated. Formerly seduced girls of Kissaka, as well as their seducers had to pay with their lives. They were either thrown into the water or hanged from the roof of the hut above the burning hearth. At the present time the severest punishment is to banish the girl.

681 The official death penalty in Ruanda is to break the criminal's neck (kuhotora) or to impale him. In Lwabugiri's day, when the death penalty was more frequently administered, it is said that criminals were also thrown into the swamp with their arms and legs cut off. However, among the skulls collected by my men in Nyanza, in the swamp into which executed criminals were thrown, [279] there were some that showed traces of blows from a bush knife.

In the kuhotora type of execution, the head is put between two pieces of wood and twisted back with this leverage device.

The royal executioner, the Mutwa Muhenehene, is said to kill the king's victims with a spear.

The bodies of those executed in Nyanza are allegedly given to the king's dogs to devour.

The impaled criminal whom Dr. A. Römer had an opportunity to observe was tied between two bamboo sticks running the length of the body, one in front, the other behind. His hands were tied together in front. A stake three or four centimeters thick ran through his body from the perineum to the cranium, without injuring the neck externally. The corpse had no lower leg bones. It was already so decomposed that one could not tell whether these bones had been picked off by hyenas or chopped off by the executioner. The natives who were questioned were not in agreement about this. Dr. Kandt (1) gives the word kuvamba for impaling.

[113] 1. Kandt, R., "an account of his travels and research in Ruanda in Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 120.

681 Punishment by whipping seems to be done less in Ruanda than in Bgisha where the chief ties people to trees and has them punished with up to 100 strokes of the whip on their backs. This [177] custom is said to have been borrowed from the English Askari who were stationed there.

On the subject of property rights we wish to make only a 423 few general remarks. The entire country is the private property 428 of the king and is regarded as either entrusted to the chiefs or granted to the clans. All the farmers and herdsmen are merely tenants or have the use of the land. As a consequence, the chief and clan community have the final word in matters dealing with the inheritance of usufruct of so-called crown property, that is, fields and cattle.

Only household goods, with the exception of cows, are private 422 property in our sense, and here the wish of the person disposing of 428 the property is decisive, although certain time-honored customs cannot be circumvented. In Bugoye, for example, the oldest son gets the spear and the stool of his father, whereas the shield belongs to the youngest son. (2) Lieutenant Spiltoire told me that in

2. Classe, Father, Moeurs et Coutumes des Bagoye [Manners and Customs of the Bugoye] (Les Missions Catholiques, 1905), p. 439.

Bunyabungu, the principal heir seems to be the son of the sister, but because of his brief visit, he could not verify this.

692 Administration of Justice. In Ruanda the administration of 695 justice is in the hands of the chiefs and the king.

Pronouncing judgment is only of secondary importance, but [280] the chiefs regard it as a sure means of gaining influence. The two parties regard the trial as an attempt to interest a powerful one -- a chief -- in their affairs, that is to say, to make their affairs the affairs of the mighty. The one who wins a case is simply the one who was more highly regarded by the chief and with whom, from now on, it is dangerous to quarrel. In Ruanda it is a long process from the pronouncement of justice to the execution of it.

692 The verdict means that the judge, not the state, has taken a cer-
695 tain stand. The state, even in principle, does not represent abstract justice. In order to carry out the verdict, one must have sufficient power, either in his own right or through his allies; otherwise it would be impossible to take any action that would be unpleasant for others.

692 In the communities the administration of justice is in the hands of the subchiefs. A person who is dissatisfied with their verdict may consult his high chief. I have heard that the common man may appeal to the king, but from other reports this seems to me quite improbable. This right can have no practical significance for the common man, if indeed it exists. He could not incur the displeasure of the nearest small potentates with whom he has primarily to deal. Going directly to the king means not only a demonstration of distrust toward one's nearest superior, but it also represents an attempt to free oneself from the hierarchy of subordination and make oneself directly subordinate to the king.

692 For the clients (bagaragu) of the king, the royal court is the first and also the final authority. There is no other recourse, ex-
431 cept to the force of arms, provided one dares to revolt. Hence higher authority always takes action, but it also takes into account general peace and order and is not guided by abstract principles of justice. Moreover, gifts to the judge play an important part and are not regarded as something punishable or even inappropriate. The parties regard these gifts as court fees, even though larger gifts are usually combined with greater hopes for the favorable outcome of the trial. The size of the gifts does not seem to be fixed. In important cases large presents are given. Not infrequently the judge is even presented with a cow.

692 Although trials before the king do not often occur, nevertheless all over Ruanda one hears that someone has gone to Musinga regarding judicial matters. This expression stems from the fact that people go to their high chiefs who are staying at the court of Musinga in Nyanza. The trials take place in Nyanza at the compound (bilaro) of the chief concerned. For example, I met a band of people from Njaruguru who were on their way "to Musinga." On more careful investigation [281] it turned out that

692 "to Musinga" simply meant the place of his residence. The judge to whom these people were going was Rwamanwa, high chief of Njaruguru.

If the two parties have different chiefs, the trial is conducted at the compound of the more powerful one, since otherwise, because of injured vanity, he could make it impossible to carry out the verdict. If the two chiefs cannot reach an agreement, they go to a third party or to the king, who usually appoints a judge. [643] The king personally handles only the most important affairs of his bagaragu, but even that he does unwillingly.

695 The Trial. Certain forms are observed at trials. The two parties squat on the ground in front of the judge and greet him by clapping their hands. Otherwise only the king is greeted in this way. Then each in turn tells about the matter under dispute.

After the verdict of the judge, the winner immediately rises, takes some grass, and lays it at the feet of the judge in gratitude and as a token of his subservience. He then sings a song of praise in which (in Mulera, for example) he boasts about the number of enemies he has killed.

People sometimes wait in Nyanza two or three months for a trial, and finally the hearing is postponed until the next year. The chiefs do this also. They are afraid of endangering themselves by a sentence of incalculable scope.

696 Executing a sentence is the weak side of primitive justice. There is no organ of the government that would attend to the execution of the decree. Even the decisions of the king are by no means always carried out.

Sometimes, to ensure the execution of the sentence, the guilty party is held prisoner by the winning party until he has fulfilled his obligations.

The sentence is said to be carried out at the place of residence of the two parties. For this purpose the king sends a special messenger. He must inform the population of the decision, in disputes about land he must mark out the sections, and in cases involving cattle, divide up the herds.

Because of the long duration of these cases, which gives all the court schemers an opportunity to fish in troubled waters, the winning party sometimes leaves the capital before the king's

696 messenger has been dispatched. In that case the other party travels with the messenger in order to bribe him. It is not uncommon for the messenger to accept large gifts from both parties and then not do anything. The high chiefs use this opportunity to visit their lands. The case is adjourned; new, important circumstances are discovered that have not yet been considered; and the proceedings begin all over again.

691 [282] At the time of my visit in Mulera the legal dispute between the Barashi chief, Lukara Iwa Bishingwe, and Luhanga, the client of Nshohozamigo, was in its fourth year. Each year sentence was pronounced; each year the court messenger was sent off; and each year the two parties returned. In the end Musinga grew tired of the whole affair and kept Lukara at court. After Lukara had obtained permission from Musinga to return home, on the pretense of conducting me to Mulera, he decided to resort to the final argument, to warfare. He attacked Luhanga's people and engaged in a skirmish with the column of my expedition colleague, the geologist E.F. Kirschstein, whose presence the Batutsi tried to use for their protection.

In the end, in its seventh year, the dispute was settled in Luhanga's favor when Lukara was obliged to flee from the German sphere of influence for his murder of the missionary, Father Paul Loupias. Later he was captured and hanged.

A considerable number of trials deal with the withdrawing of grants and the practice of blood revenge (kuhora enzigo) for slain clan members.

If A is granted a cow by B, B has a certain power over A. He can exert pressure on A by threatening to take back the cow. If A, however, also gets cows from C, who is more powerful than B, the latter's influence diminishes. In some cases A becomes so dependent on C that B loses his influence and moreover his cattle in favor of C. These property shifts give rise to vastly complicated suits over cattle that last for decades and become more and more complicated by small compromises, the legality of which is later challenged.

691 In civil cases we find the institution of kugombeka. If A is
426 indebted to B and does not pay him or refuses to return something
686 granted him and now demanded back, A can be distrained. If

691 debtor A owns something that is being used by C, a cow, for ex-
426 ample, then B can bring C a present and, with C's permission,
686 declare the object belonging to A as kugombeka. In this case A loses all rights to the object he has deposited with C until he has settled his debt, and the object is now regarded as B's property. If A is powerful, the kugombeka of his property is declared void. If he is not influential, this becomes a very profitable business. In view of the duration of the suits, C always has the prospect of being able to appropriate the thing that has been put in his charge or at least of using it without incurring obligation. But under the rules of kugombeka he is responsible to B for the object. If he gives it back to its original owner A, he must replace its value to B or [283] owe it to him, and this starts a second suit between B and C which is separate from that between A and B.

426 If the users of A's property refuse to accept kugombeka, the
686 creditor can only resort to kufatira.

Kufatira is the confiscation of part of the property of an individual whom one wishes to force to defray his debt or to meet his responsibilities. Kufatira is also used to force someone to appear at a trial. The use of force is conceded in the case of kufatira, but otherwise infringement of property rights and the use of violence are basically regarded as punishable offenses.

Kufatira can be used successfully only against weaker debtors. If the debtor is very weak, he can even be plundered and bound with a rope until his family takes mercy on him and ransoms him. If, however, the debtor is powerful, kufatira can have all the consequences of a lost war, and there is no recourse but to make one's concern the concern of stronger protectors.

685 In cases of theft, the procedure is considerably simpler, and the judge receives no presents.

695 Evidence. The testimony of witnesses is very important in court trials in Ruanda. The accused has the right to demand witnesses to prove his guilt, but he also has the right to eliminate the testimony of certain witnesses if he has convincing reasons. Such witnesses are, for example, relatives, blood brothers, and clients (bagaragu) of the accuser. The accuser is obliged to comply

695 with this and to secure witnesses who are not dependent on him.

695 A witness may refuse to testify. In order to dissuade him from
431 making use of this right, he is given presents by the one who wishes him to testify.

Gifts to witnesses are no secret. They are regarded as something quite natural, a sort of compensation for the unpleasantness that may result from testifying. That is why one often hears of a witness delaying his testimony for a few days in order to give people a chance to bring him presents or saying that he will testify after he has received his nzoga. In this case nzoga does not mean merely beer, but all kinds of presents, such as goats, hoes, or even cows, depending on the importance of the case.

695 In spite of the custom of giving presents to witnesses, false
687 testimony is punishable. Thus, it is said that Lwabugiri Kigeri, for example, who was strict but just, simply had false witnesses killed.

695 [284] Court procedure in Ruanda allows the accused and the witness to swear oaths. At trials the following form of oath is used. The person taking the oath sticks his spear into the ground and says: "May this spear kill me if I did this." This way of taking an oath is called kuchulika ichuma. This form of oath is feared.
[687] Perjury was punished with death in Lwabugiri's time.

In this connection we must also mention the forms of allegation which are used, for example, when witnesses testify. The one corresponding to the form of oath given above consists of pointing to one's spear and saying, "dakolitera Musinga." This brief statement means "if that is not true, I shall pierce the king with this spear." Connected to this is another form: "bandoga Musinga (I shall poison Musinga if this is not true)." This form is also used if one wishes to assure the king that what one has said is true. Thus, for example, Musinga asked a man whether he had seen Kabare, "wabonye Kabare?" The man answered in the affirmative, "yee." The king did not believe it and wanted to make sure, "nukuli." The man thereupon answered, "bandoga Musinga," and the matter was settled. If one doubts the truth of a person's statement, he may also say, "lahira (swear)." The person then answers, "bandoga Musinga."

695 The last two allegations imply that sad consequences could result if a person expresses intentions that are hostile to the king. The person making the statement publicly announces that if he told a lie he would willingly suffer persecution for threatening the sacred person of the king. Nevertheless, the Batutsi, who could probably set a record for lying, use this phrase constantly.

In doubtful cases where the testimony of witnesses is not at hand or is not sufficiently credible, as well as in cases where the use of sorcery is suspected, the poison test (kihango) is resorted to. The poison test is conducted by the babandwa [members of secret societies who conduct ceremonies].

In Kissaka the poison is dissolved in water and handed to both parties in two cow horns. This gives the mubandwa an opportunity to influence the outcome directly and to use his own judgment in determining the guilty one. Although this makes it very easy for a person to misuse the poison test, the people of Kissaka be-
[797] lieve in it. Even the Christians do, in spite of the otherwise very great influence of the mission. The poison test seldom results in death in Ruanda, for the person taking it can immediately spit and vomit. The poison is not always drunk, for not infrequently the mubandwa is satisfied to dip his thumb into the poison and stick it into the mouth of the person, who may immediately expectorate. In such cases the effect is purely a psychological one. [285] Father L. Classe, who lived in the country seven years, never heard of a death caused by the poison test.

Another very important form of evidence is testimony from the entrails of chickens killed for this purpose. We shall discuss this somewhat more fully below in connection with religious practices.

Quite independent of the chicken oracle, there is a chick oracle that is conducted in the following way. The accused takes a very small chick and carries it in his hand a whole day. If
[822] the chick dies, the man is guilty, yiera bura (he is black). If the chick does not die, the man is innocent, yeira [sic] bwera (he is white). A very strange color association for the Negro world (see page 145).

All forms of evidence and allegation, such as the poison test, the chicken oracle, the spear oath, and the Musinga oath, are

695 referred to simply as kushoko, "drinking." This fact indicates that the poison test was the oldest form. To give a person this test is called kushora which simply means "to give a drink." Thus they say: "Umututsi ashora inka ze (the Mututsi gives his cows a drink)," as well as "kushora ikihango (to drink poison)" and "kushora (literally, to drink a chicken)."

[286] Chapter 14

History and Chronology

173 Ruanda. I had great difficulty in obtaining data about the history of Ruanda. Oral tradition in the interlacustrine region is limited chiefly to the genealogy of the rulers. This basic skeleton is also generally supplemented by a few statements about the chief events of the corresponding epochs. My informants, however, knew little about the history of the dynasty, since most of them were Bahutu.

124 Musinga gave Captain W. Von Grawert, who introduced me to him, his royal promise that he would have reports made to me on the history of the country or even tell me about it himself. [187] The chicken oracle, however, said that the king would suffer harm if I were initiated in the history of the country. The next time I visited Musinga and tried to have certain contradictions in my notes on the Ruanda rulers cleared up by this authoritative source, I was kept dangling for two and a half hours and was unsuccessful. His Black Majesty was very pleasant, but during the whole time he kept practicing, in German, the meaningless sentence, "Little spear is pretty."

Musinga wanted to please me by demonstrating his zeal in learning the German language and in this way divert my attention from interviewing him.

173 It seems that in Ruanda as well as In Nkole one may not speak [715] about deceased kings with the uninitiated, for the spirits, disturbed in their rest, might avenge themselves. However, people [02] talk about olden times in the evening when the nobility gather with the king, pay court to him, and drink beer. They know

173 their history, but they regard it as a hallowed secret of the Batutsi which belongs to the category of ibanga [secrets].

Father F. Dufays and Father P. Loupias succeeded in learning 173 about one of the traditions of ancient times from a Mututsi whom 174 I personally know very well but whose name I must withhold out of consideration for his own safety. The man clashed with his fellow tribesmen [287] and told his story to the missionaries to express his gratitude for their protection.

According to this story, human beings in former times lived 173 in heaven as well as on the earth. The children of Nyina Kigwa, 173 Kigwa, Lututsi, and their sister, Nyina Batutsi, were cast out from heaven as a punishment for their mother's loquacity. They fell to earth in Bugansa, Ruanda, and discovered the following Bahutu families in the country: the Basinga, Bagessera, and Bazigaba. In the forest they found the Batwa. The Bahutu and Batwa had been expelled from heaven before them. The new immigrants brought fire, agriculture (hoe culture), cattle raising, and industry (iron technique). In this way they gained influence, and Kigwa became the ruler of Ruanda. Kigwa married his sister, Nyina Batutsi, and became the protoplast of the Banieginia who are descended from his three sons and still rule Ruanda. Lututsi emigrated to Karagwe and married one of Kigwa's three daughters. He became the protoplast of the Bega who supply the kings of Ruanda with wives and mothers who are their peers. Kigwa and his descendants kept in touch with heaven through Batabazi redeemers, who came to their aid in times of great need. There are three chief Batabazi mentioned. The first protected the children of Nyina Batutsi and brought animals to Ruanda; the second was Kihana, son of King Ndahiro; and the third, Kyamweru, was the son of King Luzugira Iwijuru.

[117] This tradition contains some details of Christian legends, which we shall not go into here. Its origin will probably be determined some day, but at present it is a mystery. However, the statement that the children of Nyina Kigwa (referring doubtless to the Batutsi) brought fire and hoe culture into the country can be written off as historically incorrect. In any case, it is certain that this story tells us about the settling of the Batutsi in Ruanda and the establishment of their rule in Bugansa, and that at this time Bagessera,

173 Basinga, and Bazigaba were already settled in the land and
173 Batwa were roaming the forests. In other words, conditions then were much the same as they are now in Mulera.

Dr. Kandt's report (1) about the ancient history of the country

1. Kandt, R., Caput Nili (Berlin, 1904), p. 302.

is somewhat different. "When the first human being lived in Ruanda with his five sons, Kitussi, Kitwa, Kinjabungu, etc., Kitwa killed one of his brothers out of jealousy. At first the father wanted to kill him for this, but hesitated because he was his own flesh and blood. So he sent him into the wilderness with the curse that all his descendants were to dwell among the descendants of the other sons as pariahs."

Here, in contrast to the tradition mentioned earlier, we find no references to the fact that the Batutsi immigrated at a later time. [288] Moreover, the representatives of all the tribes are referred to as descendants of the same ancestors. This is probably the best proof that the account has little historical significance.

173 Let us now turn to more accurate accounts about the Ruanda state. In my inquiries into the history of the state I succeeded in getting data that may be summarized in the following list of rulers. However, we must admit that the individual sources were sometimes very contradictory. For this reason further investigation is needed before a definite genealogy can be given. There is always the possibility that some of the succession of rulers listed here may be brothers, but usually collateral descendants of former times are forgotten.

The rulers of Ruanda are:

1. Kigwa.
2. Nyeranda.
3. Kadji.
4. Muntu.
5. Kihanga.
6. Ndoba.
7. Ndore I.
8. Ndahiro I or Dabarasa.
9. Ruganzu or Luzugira. (Kihana).

173

10. Lumazimpaka. (Kyamweru).
11. Mibambwe I.
12. Juhi I.
13. Lugazu, son of Nyina Bachuzi.
14. Mibambwe II.
15. Chilima I.
16. Ruganzurwa, son of Nyina Bunyana.
17. Kigeri I.
18. Mibambwe III.
19. Juhi II.
20. Chilima II or Rugwe.
21. Ndahiro II.
22. Ruganzu.
23. Chilima cha Kasseke.
24. Ndore II. Kahindiro Mibambwe IV.
25. Mutara Lwogera.
26. Lwabugiri Kigeri II.
27. Mibambwe V. Juhi III or Musinga.

174 [289] Aside from this list of rulers, I was able to find out little about the history, but if we consider the large number of rulers, as well as the fact that among the revered spirits of the country the kin group Ndaula plays a subordinate role, we come to the probable conclusion that Ruanda has no connection with the states in the southern half of the Runyoro territory. After all, only Kissaka (not Ruanda) is mentioned in connection with the expedition of Ruhinda. On the other hand, the fact that Kagoro, Mugasha, and Wamara are mentioned in the religion of Ruanda, leads us to conclude that there are connections with the old Bunyoro state and the Bachwezi dynasty. According to the number of rulers Ruanda has had, we may trace the founding of the dynasty back to the fifteenth century. We therefore ask ourselves whether the founding of the Ruanda state does not stand in the same relation to the immigration of the Baganda into the interlacustrine region as the founding of Busindja, Karagwe, and Buhaya stands to the immigration of the Babito into Bunyoro. For it is not impossible that the rulers in the northern part of the interlacustrine region, whose peace was disturbed by the Baganda, in turn founded new states in the south.

174 Ruanda, which originally covered the district of Bugansa south of Lake Mohasi, was later, in the course of a long period of time, limited to the province of Nduga. It must have been a long time ago, however, since Ruanda outgrew these circumscribed boundaries, for Mukinjaga and Mulera as well have traditions that go back to the rule of Ruganzu, and these provinces certainly did not belong to the original ones. The last Ruganzu is Musinga's fifth ancestor and probably ruled in the first years of the last century. This leads us to assume that the large kingdom of Ruanda is not a newly formed state of the last century, but has a long history.

The legend referring to this is somewhat as follows.

173 Once upon a time Ruganzu came to the Muhawura volcano to hunt elephants. Suddenly the news comes to him that the Barundi have crossed the southern border of his kingdom. He abandons the hunt and goes forth to meet the enemy. On the way he stops on a hill to rest. After a brief interval he continues the journey in his litter (ngobi). After the company had got under way, someone noticed that the king had left his spear on the hill. They shouted back to the hill, asking the people to return the spear that had been left behind. The Balera replied that the king had left them the spear, and if he wanted it back, he should come to get it himself. Whereupon the king answered: "If you had stolen food, I should have believed that you are hungry; if you had stolen cows, I should assume that you want to own them. But to steal a spear, [290] what can it bring you? Let it remain with you, multiply, and strike you dead." That is why there is always fighting in Mulera. The royal curse is upon the land.

In Mukinjaga they say about Ruganzu that he put the bimara tax on the region of Bukunzi as a punishment for the theft of his cows.

173 Ruganzu Iwa Ndahiro (Ruganzu, son of Ndahiro) is the king
443 about whom there are the most legends in Ruanda. He is said to have had supernatural power, and people believe that he might one day return. When, in the year 1904, the news spread that the imperial resident at Usumbura had been murdered, the natives said that Ruganzu had killed him.

175 Mutara Lwogera was also a successful warrior. He conquered
643 Bugoye and in 1876 added Kissaka to Ruanda by force of arms.

Lwabugiri Kigeri who was visited by Count Von Götzen, the first European to do so, was also a very belligerent ruler. He increased Ruanda's possessions in the Rutshuru Basin as far as Lake Edward.

175 In order to characterize the personality of Lwabugiri some-
643 what more exactly, we must mention that one of his chief delights
661 was stealing cows. If the owner of the cattle resisted, he was punished with confiscation for having the boldness to act against the muami [ruler]. If he did not resist, his cows, which he had learned to conceal, were simply taken away from him. These cow thefts with which Lwabugiri consciously promoted the splitting up of feudal possessions, as well as the constant wars, made him very troublesome to the Batutsi.

175 Without doubt the rule of Lwabugiri was a period of great
643 expansion and glory for Ruanda. The state enjoyed such a high reputation that neither the Arabs nor Stanley and Emin Pasha ventured to enter it. Lwabugiri undertook numerous campaigns, among them an unsuccessful one to Nkole (1891?). He wanted to get King Ntare's cows in order to supplement his own herds which had been very much decimated by disease. He waged war three times with Urundi, twice with Idjwi Island, three times against Bunyabungu, and twice with Kissaka. Moreover, he laid waste the country of Mulera three times in order to punish rebellious subjects, and he pillaged the Gana Mukari (1) three times in his

[113] 1. Brard, A., "Skizzen aus Ruanda [Ruanda Sketches]," Afrikabote, 1900-1901, p. 99.

ancestral province because of the revolt which was supposed to have taken place there. He was unsuccessful in his expeditions against Urundi. The two kings, Lwabugiri and Mwezi Kisabo (?), made peace with each other and built their settlements on the border between the two states, on the Akanjaru. The wars with the inhabitants of Idjwi Island were also only temporarily successful.

175
643

[291] Dr. Kandt (1) says that Idjwi belongs to the Ruanda

1. Kandt, R., Caput Nili (Berlin, 1904), pp. 517-518.

sphere of influence. Its inhabitants deny that they were former subjects of Ruanda, as the Banyaruanda maintain. Mihiggo's grandfather, Mwendo, had to pay tribute to Ruanda. His son, Kaweggo, tried to make himself independent, but Lwabugiri fought him (1886) and he had to flee to the island of Ugishushu. He was betrayed by his son, Nkudie, and fell into the hands of Kigeri who had him executed. After the king returned (1888), having been called back by unrest in Ruanda, the independent party formed around Mihiggo, another son, for Nkudie was executed by the king because he had betrayed his father. After a few years (1892 or 1893) Lwabugiri undertook a second expedition against Idjwi. The island was again conquered, and Mihiggo fled to Bunyabungu. In order to punish Bunyabungu for sheltering Mihiggo, Kigeri set out on an expedition against this country, but he became ill and died. With his death, the hour of liberation came for Idjwi, and Mihiggo returned as an independent ruler (1894).

The dying King Lwabugiri was brought back to Ruanda and died en route in Mukinjaga. It is said that he was poisoned by his courtiers who were tired of the endless wars. Not all of them were like the Batwa who were devoted to the king and regarded the wars as the best opportunity to consume a great deal of meat. Some accounts have it that the poison was prepared by his wife, Kanzogera, the mother of Musinga.

Lwabugiri pursued centralistic tendencies in his internal policy. It is said that he was credited with having broken up the large hereditary chieftainships and interspersed them territorially. This was probably the cause of the war with the later regent, Kabare, who allegedly was castrated, as well as the death of Kigeri. According to one version, Kabare was castrated by Lwabugiri in order to make it impossible for this ambitious man to try to become king. Another version has it that the young Kabare was caught with the favorite wife of the king and was punished for this. In revenge

175 Kabare is said to have killed all of Lwabugiri's sons except Musinga,
643 the son of his sister Kanzogera, after their mighty father died.
These accounts agree with a note by Von Beringe (2) referring to

[113]

2. Beringe, Captain Von, a report on his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 39.

Mumusa, the queen of Mururwa in Mpororo: "Mhumse claimed that she was a wife of the deceased Sultan Lwabugiri of Ruanda and that she was sent here by him to escape the persecution of Chief Kawalle who [292] killed four of his sons. However, there is no longer any connection between Mhumse and Ruanda."

Mibambwe who was temporarily proclaimed king after the death of Lwabugiri was burned to death in his hut along with his entire family (1). Most of his brothers died also. Only

1. Kandt, R., Caput Nili (Berlin, 1904), p. 263.

Ishirangabo, however, was not considered for the rulership because he was a man dedicated to the spirit Ryangombe. Bilegea, a son of Lwabugiri, was missing from the time of his youth and was always regarded as a possible, dangerous pretender to the throne. His return to the country was very much feared by the rulers. (2)

Ibid., p. 264.

Musinga, whose father had cast him out, was taken in by a Muhutu and reared by him. It was only because no other son of Lwabugiri came to be considered that the neglected son of Kanzogera was appointed king. He ascended the throne as Juhi Musinga. As a result of his plebeian upbringing, the king had learned to eat goat's meat. This custom is said to have been adopted by the court Batutsi out of courtesy.

175 This fact would probably have caused the young ruler great
643 difficulties if it had not happened that three years after the death
649

175 of Lwabugiri Captain Ramsay came to the country in 1897.
643 Musinga was recognized as the ruler. Captain Ramsay entered
648 into a special pact of blood brotherhood with him or at least with the man that was introduced to him as Musinga. (3) He reports:

[113] 3. Ramsay, Captain, an account of his expeditions to Ruanda and Lake Rikwa, Verhandlungen der Gesellschaft für Erdkunde zu Berlin, Vol. 25 (1898), p. 315.

"Thereupon I had to tie a string around Juhi, and he tied several strings around me; then we shook hands vigorously, and the king of Ruanda and I became blood brothers."

Since that time Musinga has been energetically supported by the government, which, through him, again has the entire country in hand. Musinga has at his disposal the Askari of the guard troops who in an emergency can teach his rebels a lesson. I had occasion to observe this in 1907 in Mulera. With the intervention of this new factor, the country has become orderly to an extent that formerly did not seem possible.

173 Kissaka. The history of Kissaka cannot be traced as far back as that of Ruanda.

Banyakissaka traditions about ancient times say that they, like the Banyoro and Baganda, came from the north, not from the south, like the Wasukuma.

[293] Kissaka has been a state since very ancient times. According to Busindja (1) tradition, the Kissaka rulers were Basinga.

[113] 1. Van Thiele, Father H., "Businza unter der Dynastie der Bahinda [Businza under the Bahinda Dynasty]," Anthropos, 1911, p. 499.

One of these rulers was married to Nyakachende, the daughter of Ruhinda, and she bore him a successor. From then on the rulers of Kissaka were referred to as Bayango of Ruhinda.

173 This family must have lost its possessions later on, since the last Kissaka rulers, I was told, were Bagessera, in other words, not true Batutsi either.

I was told that Kimeni Ruahasha was the first ruler of Kissaka. I was unable to find out who his immediate successors were and how many there were. Except for this gap, we have been able to determine the following list of successive rulers.

Kimeni Ruahasha
?
Vunengoma
|
Mutaga
|
Kwezi
|
Luregeya
|
Bazimye
|
Kimeni II
|
Lugeyyo } Pretenders
|
Lukura } Lukura lives with Kahigi

Kimeni II with his son, Msongole, was defeated and murdered by Musinga's grandfather, Lwogera, about the year 1876. Since that time Kissaka has been a part of Ruanda. Msongole's son, Wagazo, however, remained in the country as a subchief of the new king and was still in office 20 years later at the time of Ramsay's expedition (2).

Ramsay, Captain, an account of his expeditions to Ruanda and Lake Rikwa, Verhandlungen der Gesellschaft für Erdkunde zu Berlin, Vol. 25 (1898), p. 310.

173 The Banyakissaka would not yield to their fate, and the entire country, Batutsi as well as Bahutu, strove for independence. Lwabugiri Kigeri, Musinga's father, undertook two expeditions to Kissaka in order to strengthen Ruanda rule. In 1901 Kissaka made a final effort to win independence from Ruanda by force.

[294] Lukura, grandson of the defeated Kimeni II, son of Lugeyyo (according to Dr. Kandt, son of Wantschurra (1)),

1. Kandt, R., a report on his research in Ruanda, Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 122.

decided to take advantage of Kissaka's discontent with the Ruanda regime. He came to Kissaka from Kyanja where he had been the guest of Kahigi. The people and the Batutsi declared him their ruler, but he soon had to flee because Musinga undertook a military campaign, supported by the [military] station in Usumbura. The leader of Lukura's followers, Mpumbika, was exiled to Urundi where he was still living with Chief Muhini in 1907. Mpumbika, like Lukura, belongs to the Bagessera clan.

After this revolt, the old batware (subchiefs) were dismissed, and the country was put under the administration of three Ruanda chiefs, Kanuma, Niamutezi, and Lutangabo. The gradual replacement of the subchiefs by Banyaruanda (people from Ruanda) did not contribute to a lessening of discontent with the Ruanda regime.

Bugoye. Unlike Kissaka, Bugoye has no history. People only know that the country was conquered by Mutara Lwogera (2), who

2. Beringe, Captain Von, a report on his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 34.

drove the chief of the country, Mvunye, to Bunyabungu. It is also known that the country was settled only a few generations ago. The very old people maintain that it was their grandfathers who cleared the wooded country which was unpopulated except for

173 some Batwa living there. The Batwa were in part driven out, in part assimilated. The latter are known as Batwa bikyugu "Batwa of the inhabited land." Very many colonists came from Kishari and Kameronse, regions north of Lake Kivu. They were driven out of their homes by raids of the cannibalistic Balioko, probably Manyema, or perhaps also of the Babira who were driven out by the Manyema. To this emigration we can probably attribute latent traces of Bakondjo in Bugoye. Besides this wave, the Bambari clan from Ndorwa came to Bugoye, as well as the Bagwabiro from the region of Ischangi on the southern shore of Lake Kivu. The latter are impoverished Batutsi who till fields and own but few cows.

805 Chronology. Time in Ruanda is divided into years, seasons, months (moons), and weeks. The weeks have only five or six days. Thanks to the kindness of Father Buisson, I can herewith give the names of the months used in Kissaka and Ussuwi, opposite the Mulera calendar. The data on Nkole have been taken from Meldon (3). [295]

[113] 3. Meldon, "Notes on the Bahima of Nkole," Journal of the African Society, 1907, p. 137.

Mulera	Ussuwi	Kissaka	Nkole
VII. Nyakanga, begin millet harvest	Nyamatarugara	Itumba	Kichurasi
VIII. Itumba, main harvest	Nyairira	Nsenene	Kamena
IX. Katumba, begin hoeing for peas	Mumereze	Nkereza	Nyakanga
X. Nseri, hoeing peas	Kisua	Kushingwo	Kashua
XI. Kushingwo, weeding peas	Nsenene	Kwakira	Musenene
XII. Kaboza, planting gourds	Kibuika	Kuwoza	Itumba

The Mulera calendar is about two months behind the Kissaka calendar because the names of the months are bound up with the activities of the farmers and weather and pasture conditions. The various field chores are done two months later in the more northerly mountains of Mulera. Similarly, the Nkole calendar is two months behind Mulera because it is still farther north.

For the various proper and common names given the individual months, I succeeded in obtaining the following explanations.

Itumba nyakime: itumba of the possessor of dew.

Katumba kanama: kanama is derived from the verb kwanama, meaning "to stay in one place"; this month is very warm and one hates to move.

Nyakanga mabuguma: the one hating old cows (mabuguma); the pastures are dried up and old cows die in this month.

Kaboza kabozabihaza: gourds rot because of too much precipitation.

Mata: literally, "milk," or really, "milk month"; the pastures are lush, and there is a great abundance of milk.

During the months of ntumba, katumba, and nseri, huts are built. The millet straw is ripe, and the grass is at its tallest. At the end of nseri everything must be finished, for the rainy season begins.

805 In katumba the people begin burning off the grass on the
221 hills.

Most of the weddings take place in nseri, because much beer can be brewed in this month. For the same reason, most fights occur then.

132 There are three seasons in Kissaka.

805 [296] I. Itumba, the great rainy season extending from March to May.

II. Ichanda, the great dry season from June to October.

III. Ruhira, the secondary rainy season from November to January and sometimes February.

The secondary dry season in February does not seem to have a special name.

805 Father C. Lecoindre told me that he had the impression that there were 13 months in the Ruanda year and pointed out that on my list the month of kashantare between mutarama and werurwe was not shown.

The art of chronology is only slightly developed in Ruanda, and the Bahutu seem essentially to know only the periods for certain field chores, to which they give special names, for example:

Itumba ya massaka (in the autumn),
Itumba lyi bishimbo,

or solar time:

Rugaryi (little sun),
Itsi (big sun).

644 On the other hand, life in Musinga's royal residence, at
805 least the arrival of fresh drum guards with the new moon, is regulated by the lunar division of the year, and Father C. Lecoindre's observation seems to have many points in its favor. For example, it is said that at the court of the king there is mourning during the first half of the month kichurasi. During this time men allegedly
[834] have no sexual intercourse with women. The drums at the king's court are beaten only once around 11 o'clock to greet (ndamutsu) the king; they are said to be tied up (kuzirika). The Batwa do not entertain the king with their songs during the evening gatherings. The king pronounces no sentences and accepts no presents. At ordinary law proceedings the victorious party neither sings his song

644 of praise nor boasts about his deeds and the number of enemies
805 he has slain. During kichurasi they content themselves with simple clapping (kukoma mukono). People do not wear their better clothing or ornaments. Even the bulls are removed from the herds. All life that has its beginning during this period is re-
[783] garded as unclean and is killed.

The period of mourning ends with the kichurasi full moon.
[533] They begin to beat the drums, very softly and very little on the first day, somewhat more on the second, until on the third day the regular beating is resumed. On the eleventh day the chiefs bring the king presents, get drunk on beer, and sacrifice sterile cows.

The end of the month of kichurasi is celebrated with a great
771 feast for which the ntore gather at court. The feast is called
644 kukura kichurasi. [297] I could not determine whether this feast has any connection with the myth about the redeemer (mutabazi).

This is the time of the great ceremonies of the babandwa and of sacrifices (kuterekera).

805 The lunar month is divided up according to the phases of the moon. Thus they speak of: imboneko, "emerging moon"; kwezi, "waxing moon"; inzoro, "full moon"; mizima, "waning moon"; imfunda, "disappearing moon." These designations, however, do not correspond to the weeks. The weeks have five to six days and are determined by the relationship of free days to compulsory work days.

[298] Chapter 15

Religion and Related Matters

771 Ancestor Worship. The religious views of the Banyaruanda do not fit into a compact, harmonious system. This is probably due not only to the low level of development of their religion, but also to the dissimilarity of the Batutsi and Bahutu cultures which have influenced each other.

769 Ancestor worship is the basis of religious beliefs in Ruanda
17 as well as in the rest of the interlacustrine region.

769 The bazimu, the spirits of the dead, are feared. They are not good. They are responsible for the misfortunes and torments that plague one. In Mulera, at any rate, this may be related to the well-known unfortunate position of old men.

Every father of a family offers sacrifices to his ancestors and his deceased relatives in the ndaro, the small grass huts near his compound and the place where the spirits dwell. Ndaro means "sleeping place," "resting place," and, according to Father Buisson, is derived from the verb kurara "to sleep." I should like to point out, however, the similarity between this word and ndako which in the Bangala and Ababua [Babua] dialects simply means "house." Sacrifices are also made in the sacred niche of every hut.

782 769 For sacrifices to the manes, a fire is built in front of the huts and around it sticks are placed in the ground, to which are fastened small bits of meat, lumps of umutsima, etc. Small vessels (imperezo) of beer are also set out. These offerings are taken from the meat and umutsima (stiff millet mush) which the sacrificer brought with him. The rest he eats himself.

[299] Offerings are also placed inside the huts. Frequently the more valuable offerings are only temporarily exposed. Later they are eaten by the family of the sacrificer. This is said to be the case when, in accordance with custom, the foreleg of a slain animal is offered for a deceased girl. This is not always true, however, for I repeatedly saw rotting forelegs of goats hanging in the ndaro. "To offer to the spirits" is called kutonora bazimu. To the spirits of one's parents the ribs and entrails of slain animals are usually offered.

[415]

775 823 Fig. 162. Sacrificial Vessel for Beer, Mulera. (1/4 actual size. III E13096. 8 centimeters ~~high.~~)

Underworld. Not all the spirits of the dead remain in the vicinity of their ndaro to be taken care of by their families and to lead a peaceful existence. Many spirits, after death, live in the volcanoes, and the activity of these fire mountains is connected with them.

According to the Balera, Ryangombe is said to live in Muhawura with the souls of those who were dedicated to him in life. They constitute his court and his retinue.

At the court of Ryangombe there are not infrequently angry disputes among his retinue. Then they usually throw stones, and

775 823 sometimes large quantities of these reach the outside world. I repeatedly heard this explanation of volcanic activity. It sometimes happens, however, that Ryangombe drives spirits into the outer world as a punishment. Then they torment the living, who must make sacrifices so that Ryangombe will take the spirits back and thus free the living from molestation by these homeless.

[103] People from the region of Bobandana, whom I met on the way to Rutshuru, called Mount Nyiragongo Kilima ya Mungu, "Mountain of the Gods."

Lieutenant Von Parisch (1) also says that Ryangombe allegedly

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902-1903 [Two Journeys through Ruanda 1902-03]," Globus, Vol. 86 (1904), p. 78.

lived in Muhawura with his court which consists of the souls of the babandwa dedicated to him. Only the souls of the nsigo, that is, the profane and those initiated into other cults, go to Nyiragongo after death. However, he concedes that, according to other accounts, Ryangombe lives in Nyiragongo.

The volcanoes play a very important role in the supernatural world of Ruanda. Captain Von Beringe (2) mentions that the birunga

2. Beringe, Captain Von, a report on his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, pp. 36, 37.

(plural of kirunga, "volcano") are named after the spirits which are said to live in them, such as Sabinio, Karisimbi, Mikeno, Nyamlagira, and Gonga. The last is the oldest among them. Formerly Nyamlagira, who was later exiled, was said to have lived with him. The later event is perhaps an allusion to the recent origin of the youngest volcano in this group.

[532] [300] Memorial Trees. There are no pictorial representations of the dead in Ruanda. I saw no sculpture or wood carvings that referred to them.

775
778
824
211

There are trees, however, that are associated with remembrance of the dead. These trees were planted either by them or in connection with them, usually in the settlements. Thus, at the birth of a child a fig tree is planted, which is later associated with the person, even after his death. It seems that in these trees, as on the hedges of abandoned settlements, spirits of the dead abide.

778
824
211

Trees are also planted in memory of historical events. Thus, Dr. Kandt (1) says: "At the end of the bridge (cliff bridge of the

1. Kandt, R., Caput Nili (Berlin, 1904), p. 365.

Ruzizi) there is still standing a young fig tree, an immana, a soul tree, which was planted by Luabugiri, the former king of Ruanda, when he set out to fight against Bunjabungu which is on the right bank. There is a steep, almost perpendicular path of a few hundred meters, down which he and his warriors set out to their destruction. On the tree hang straw and metal rings, the offerings of pious wanderers, and on the bridge people point out the footprint of the king's favorite dog in the cliff and tell a legend similar to the one about the Rosstrappe [Tr., a rock in the Harz Mountains]."

With reference to another type of memorial tree which is only indirectly connected with historical personages, Dr. Kandt (2)

2. Ibid., p. 504.

says: "They (trees on the eastern point of the lake) are sacred because King Luabugiri camped on this spot when he set out on his campaign against Bunjabungu (1894), from which he returned to Ruanda a dying man.... The boat that carried the ruler into the war is still lying under the trees, half buried in the ground. It was hollowed out from a giant tree of the primeval forest, but now it is split down the middle, partly rotted, and disintegrating more and more each year. As I remember, it is about 18 meters long and one and a quarter meters wide."

The memorial trees looming up on the heights are very characteristic of the Ruanda landscape. They are conspicuous because they form such a contrast to the bare hilltops. Their

778 religious character was already known through Captain Hermann,
824 and they are referred to simply as Imana trees.
211 It seems to be chiefly the Batutsi who venerate the memorial trees. The fig trees on the heights are most numerous and most beautiful in places where the Batutsi have the greatest power. On the other hand, it is said that sometimes at night Bahutu secretly take wood from the sacred trees. The Batwa, who fear no one and who have also preserved their independence in spiritual matters, do [301] this quite openly in the daytime, but there are not enough of them to destroy the trees and change the landscape.

776 Imana and Batabazi. In our general discussion of the interlacustrine region [not translated], we pointed out that the spirits of dead kings and rulers have a special place among the manes. They are distinguished from the undifferentiated mass of bazimu by their greater power. They are known and feared in larger circles. This is the case, for example, with the spirit of Kimeni in Kissaka. It is not impossible that from this we shall be able to explain the contrast between the rule of Ryangombe in the underworld, which seems to be patterned after the organization of Batutsi states, and the familial anarchy of the ordinary manes. However, it is doubtful whether the central figure of the Ruanda pantheon, the creator of the world, Imana, can be associated with the spirits of the dead. He probably must be considered as derived from foreign influence. Perhaps this also explains the underworld residence of the court of Ryangombe, whereas the rest of the bazimu remain with their living relatives.

776 Imana is the lord of lightning, thunder, and rain. One ad-
782 dresses him with the words: "Nabone Imana yandemie ikalema tata, na sokururu, na sokuruza, na mukaka, na mukakuruzu, na mama. Ikankina, nkuko yabakidjidji! (Favor me, Imana, who created my father, and my grandfather, and the father of my grandfather, and my grandmother, and the mother of my grandmother, and my mother. He has healed me, how he has healed me!)"

No sacrifices are made to Imana. Thus, he plays no part in the cult and satisfies only, if we may so express it, a philosophical need.

776 Even though Imana is supposedly the creator, there are no
773 special tales about his relation to the other powerful spirits, for example, Ryangombe. The Banyaruanda seem to have an altogether vague and indefinite idea of him. The strangest thing is the story of his appearance on earth in the form of a child who was even whiter than kaolin (runoni). The child had supernatural power. Among other things, he changed water into milk. Imana created the first human beings. The first man married his sister, but neither of them had a father or a mother. Imana gave them fire.

Lieutenant Von Parisch (1) listed Lugira, Lulema, and

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903," Globus, Vol. 86 (1904), p. 78.

Kihanga as synonyms for Imana.

The myths about Imana seem to be less known or kept more secret, at least in Kissaka, than the stories about other spirits.

778 [302] Every Mututsi is said to revere a particularly sacred
825 bull in his herd, which has a secret connection with Imana. The sacred bull of Musinga was allegedly very fierce and attacked many people. It is maintained that those who were attacked by the bull were recognized by the animal as enemies of the king. If they came through alive, they were in former times punished with death. This custom has been given up in the last three or four years, probably as the result of greater contact with Europeans, but the unfortunate ones are still in very bad repute.

778 We must not forget that the vessels containing remnants of chickens and the fat of sacrificed sheep, which the Batutsi wear around their necks, are also called "Imana."

776 Even more puzzling than Imana are the batabazi in the
773 Ruanda pantheon. I have already mentioned them in the chapter on the history of Ruanda. Father L. Classe told me that the myth of the flood as well as the idea of the sacrifice of an individual life to save mankind appear in the batabazi legends. The people survive the flood in a hut made watertight with earth.

176 The batabazi are Batutsi because they are associated with
173 the reigning family.

Ryangombe and his Bagaragu. Ryangombe with his bagaragu (clients) and relatives plays the most important role in the Ruanda cult.

We have already expressed the opinion that in the traditions
176 about Ryangombe there is a memory of an historical hero. In
173 favor of this view we have the story (umugani) given below (which does not say much), and in addition, the fact that Kakuku, Mugasha, Kagoro, and Rubaga are mentioned among his retinue. The latter three are semihistorical personalities and, according to our research, belong to the family that ruled in Bunyoro before the Babito, whereas Kakuku is probably identical with Bukuku from the older Bunyoro dynasty.

Ryangombe's nearest relatives do not seem to play any special role and are mentioned only in reference to the hero. Hence we shall only list them. His father was Ndema, and his grandfather, Migongo. Babinga was his mother, and Nyundo, his grandmother. His wife, Nyakisha, presented him with a child called kachumu kato kato kavira imyuna mumbuga, "a small, small spear stained with blood up to the hilt." According to other accounts, his wife was Kadjumba, and their son, Binego.

In other accounts we find somewhat different statements. Lieutenant Von Parisch (1) calls Ryangombe's wife Njawirungu

1. Parisch, F.R. Von, "Zwei Reisen durch Ruanda 1902 bis 1903," Globus, Vol. 86 (1904), p. 10.

and his father Bawinda which [303] he has probably confused with the name of the mother, Babinga.

Captain Von Beringe (1), on the other hand, calls

1. Beringe, Captain Von, an account of his journeys in the region of the Kirunga volcanoes, Mitteilungen aus den Deutschen Schutzgebieten 1901, p. 37.

776 Ryangombe's grandfather Nyundo, his father Bavinga, and his wife
173 Nina Ryangombe. The last name, however, simply means "mother of Ryangombe."

The most important bagaragu (clients) of Ryangombe are Binego, Kavuna, Mugasha, Kakuku, Kagoro, Senyakazana, and Rubaga.

Their subordination to Ryangombe is always strongly emphasized. We can see this also in the fact that before sacrifices can be made to them sacrifices must be made to Ryangombe. Rubaga is the only exception. One can bring him gifts without first having made offerings to Ryangombe.

782 Special forms and ceremonies are observed in offerings
776 made to these individual spirits.

In sacrificing to Binego the person stands with lowered head and murmurs: "Binego bya Kadjumba nyamunega amafizi amabuguma akapfa numulindu. Lukaraba nkaba n'inkuba yadjandja. Ulwamba lw'impiri namaganya y'inkuba aseseka ntanyobwe umushaidja mukanya." I could not find out what this means.

[346] Small straw huts are built to Kavuna. He is offered banana beer with added honey in twin-necked pots. Formerly the sacrificer covered himself with a leopard skin. As he makes the sacrifice, he stretches out his hands and sings: "Kavuna ushime ntango yawe (Kavuna, accept my offering)."

If a person makes a sacrifice to Mugasha, he winds the bark of banana stalks around his legs, arms, and neck. He holds the thin end of a stick in his right hand, stamps his feet, beats the ground with the stick, and repeats: "Mugasha akatema katoke niribiriri, niribirimbo."

Kakuku was an old paralyzed slave. If a person wishes to address him, he first smears his arms with ashes, then he scratches his skin, weeps, and sighs. Peas which are sacrificed are held with the finger bent, because the paralytic could eat only in this manner.

Kagoro is offered small arrows of wood or iron with the words, "busenda bwa Kagoro."

Senyakazana is offered peas and lentils, called inkore.

Rubaga is the greatest after Ryangombe, and he is also offered cows.

782 [304] Umugani rwa Ryangombe. To Ryangombe is dedi-
716 cated the muku or mulinzi, a tree he once climbed to save himself from a buffalo that attacked him on the hunt. The Banyakissaka have the following story about it.

539 Umugani rwa Ryangombe
Story of Ryangombe

Ngoni Ryangombe lya Babinga, ba Nyundo, ngoni Nyamuniga,
That is Ryangombe the Babinga of Nyundo, who is Nyamuniga,

amafizi nayo awabuguma akapfan nimirindo.
? ? ? ? ?

Ryangombe yaliafite nyina, akanga kumumwira. Ryangombe
Ryangombe has mother refused to obey Ryangombe

ashaka kuja kuhiga mwishamba. Nyina nyiwa Ryangombe:
wants to go hunting on the plain. Mother says[to] Ryangombe:

ati mwana wanje leka kuja kuhiga; ati nalose
so child [of] mine let go hunting; so I dreamed

umugezi, utemba uja luguru; ati uzawambuka, ngenda,
a river, which flows upward; so you cross it, you go,

ntuzagaruka. Ati kandi nalose ulukwavu lutagira ishira,
do not come back. So later I dream a rabbit without tail,

uzalwicha, ntuzalubamba. Ati kandi nalose
you will kill it, without obeying. So later I dream

Nyakisha Chimepenebere au Nyakitindi, ati azakulemutsa,
Nyakisha Chimpenebere or Nyakitindi, so she will greet,

atazakulekula Ryangombe. Ati kandi nalose imbogo
she will not leave Ryangombe. So later I dream a buffalo

539 nyaki gumbu. Ati uzaivumbura. Utuzaikira
black very. So you will raise it. You will not protect yourself,

Ryangombe. Ryangombe, ngo hoshi alagenda, aja kuhiga,
Ryangombe. Ryangombe, who then goes away, goes hunting,

abanza kwambuka umugezi, utemba uja luguru. Abagaragu be
begins to cross river, which flows upward. Followers are

bati. Indagu ya Nyira Ryangombe ilasohohye. Bongera
two. The prophecy of mother Ryangombe comes true. They start

kugenda, bavumbura ulukwavu lutagiri ishira, baralwicha,
to go, raise a rabbit without tail, kill it,

baraluleka. Abagaragu be bati. Indagu ya Nyira Ryangombe
leave it. Followers are two. The prophecy of mother [of] Ryangombe

ilageze. Barongeye, barahiga, bavumbura Nyakisha
comes true. They continue, they hunt, they meet Nyakisha

Chimpenebere, kihetse umwana imbebe.
Chimpenebere, she carries a child naked (without a hide).

Baramufata Nyakisha. Ati mutangirira mabi, nimubanze kunshira
They seize Nyakisha. So does nothing bad, begins me to lead to

Ryangombe Barayanye Chimpenebere, ilamukidje Ryangombe.
Ryangombe. They bring Chimpenebere, she bewitched Ryangombe.

Ichara hasi. Ati mpe ingobi yokwihekeka umwana.
He sits on the ground. So give me a hide to carry the child.

Ryangombe icha inzobe. Alaiha au ilamuhati. Ati
Ryangombe kills a marsh buck. He gave him or he gave her. So

iyi ntikwiye, umwana wanje amuhe uluhu rwi
this one does not suffice, child mine it is larger than

539 impongo. Ati iyi ntikwiye umwana,
the antelope. Since this does not suffice for the child,

akokanya, batongera kuhiga. Avumbuka imbogo nyaki gumbu.
it is small, they begin to hunt. He meets a buffalo black very.

Nyakisha Chimpenebere ati: "ndashaka iyo." Ryangombe
Nyakisha Chimpenebere thus: "I want this one." Ryangombe

afata ichumu na ingota, aja kuyitera. Imbogo
seizes spear and sword, goes to throw (to spear). The buffalo

ilahinduka. [305] Imuchumito ihembe. Ryangombe alapfa.
turns around. Gores with horns. Ryangombe dies.

Nyakisha Chimpenebere alishima. Ryangombe agiye kupfa, atuma
Nyakisha Chimpenebere is glad. Ryangombe goes to die, he notifies

yuko apfuye. Babwira umwana we Binego. Alaza
that he will die. They tell child his Binego. He comes

n'impiri ye y'ichuma. Aikubita Nyakisha Chimpenebere.
with scepter of iron. He hits with it Nyakisha Chimpenebere.

Binego alaicha n'umwana wayo ni imbogo nyaki bumbu.
Binego kills with it and child her and the buffalo black very.

Binego amaze kubyicha, abwira abagaragu be, ko aka bamaze.
Binego he ends killing, he says followers his, that he has ended.

Binego achamba Ryangombe. Alataha, asanga nyina
Binego buries Ryangombe. He returns, he visits (his) mother

Nyira Kadjumba. Binego alima mubwani bwa Ryangombe.
Nyira Kadjumba. Binego inherits the kingdom of Ryangombe.

[115] I am indebted to Father Buisson for the translation of this manuscript which was written by a pupil of the mission in Nsasa.

794 575 Secret Societies. The cult of Ryangombe is practiced by the secret societies of babandwa. These societies unite men and women, Batutsi and Bahutu.

In Nduga, above all, the secret societies of babandwa embrace a considerable part of the population. There, as well as in the rest of Ruanda, they seem not only to represent well-organized religious groups, but also to play a role in politics.

This is said to be especially true of the Biheko cult, for example. It is blamed for many a disturbance in the northern part of Ruanda. Biheko was apparently a woman consecrated to Binego, the disciple of Ryangombe. She was killed by Lwabugiri who, it seems, in doing this fought the particularistic tendencies of the north. In order to escape the revenge of her spirit, Lwabugiri permitted his subjects to be initiated into the cult she represented. Since that time, the Biheko cult is said to have made great progress in Mulera and Bugoye.

According to Father L. Classe (1) Biheko was a man from

1. Classe, Father, Moeurs et Coutumes des Bagoye [Manners and Customs of the Bagoye] (Les Missions Catholiques, 1905), p. 440.

Ndorwa whose brothers were Lutindangezi, Gahaya, and Maloli.

[778] In Mulera the iron rods known as ikrosho are connected with the Biheko cult. They were already described in Mpororo by Stuhlmann (2) and associated with the Nyawingi cult.

2. Stuhlmann, F., Mit Emin Pascha ins Herz von Afrika [Into the Heart of Africa with Emin Pasha] (Berlin, 1894), p. 253.

794 575 782 753 The dogma is somewhat as follows. Only those consecrated to Ryangombe may contact him, but it is necessary to establish contact with him. It is only through sacrifices that one can persuade Ryangombe to let the spirits that have been driven out return to the birunga (volcanoes) [306] and free the living from

794 them. This is of very great importance, especially in cases of
575 illness, for illness is, of course, caused by the spirits. That is
782 why sick people are often initiated into the secret societies of
753 babandwa. Sometimes this is done when they are already so ill that they are not quite conscious during the ceremonies, but the hope is that through the initiation the sick person will gain such a powerful protector that the latter will make possible the recovery of the new member. Despite these expectations, people do not omit the sacrifices to the manes of the sick person in order to receive their favor.

794 The existence of the [secret] society divides the population
575 into two classes: the consecrated and the profane. The consecrated ones, in turn, are divided into two subgroups, the babandwa who conduct the ceremonies and the rusingo, ordinary initiates of the lower grade. This creates a hierarchy in which discipline is exercised through fear of the supernatural power of the chosen ones. Hence the secret societies are powerful factors in social integration.

The hierarchy of secret societies does not correspond to the territorial division into chieftainships and exogamous clans. It creates dependencies that bridge these divisions, and the social structure is strengthened by the addition of these "supernatural powers."

794 It would be futile to speculate whether the states of the
575 interlacustrine region could exist without secret societies. It is
563 very probable, however, that the rule of the Batutsi and Bahima minorities is contingent on the organization of these societies. The ruling element seems to be disproportionately stronger among the babandwa, whose sons inherit their rank, than among the rest of the population, probably because the Ryangombe cult was allegedly a Batutsi cult originally. This view was expressed to me repeatedly in one way or another by missionaries and natives. It is supported by Rehse (1) who says that Ryangombe is regarded

1. Rehse, H., Kiziba, Land und Leute [Kiziba, Land and People] (Stuttgart, 1910), p. 134.

794
575
563

in Kiziba as a Bahima spirit. This is confirmed by the fact that during the initiation ceremonies the female representative of Ryangombe [307] drinks only millet beer. This points to the steppes northeast of the Victoria-Nile from whence, according to tradition, the Batutsi-Bahima once immigrated.

The relationship of the secret cult with the Batutsi stratum is most vividly characterized by the fact that in Kissaka, as well as in the rest of Ruanda, there are many Christians who are Bahutu, but almost none who are Batutsi. The superior social organization of the country makes possible the spread of Christianity. This is also demonstrated by the many Bahutu converts. Among the Batutsi, however, Christianity collides with another well-organized cult which can nullify its progress.

Father Paul Loupias represents the view that the Ryangombe cult is a Bahutu cult. In support of this theory he mentions
[643] that a king's son consecrated to Ryangombe, for example, Ishirangabo, the brother of Musinga, loses the right to become king.

794
575
563
769
776

The conception of the kingdom of dead souls and the great power of Ryangombe, whose name one does not dare pronounce without trembling and to whom only the consecrated may offer sacrifices, is in sharp contrast to the idea of the spirits of dead ancestors who remain in intimate contact with the living Bahutu, who live with them, are fed and cared for by them. This contrast permits the assumption that we have here a mixture of very different ideas. Without doubt we are confronted here in the field of religion with the difference between two cultures which have affected each other, the Batutsi and the Bahutu.

[578] Fig. 163. Biheko Iron Rods from Mulera. (1/6 actual size. III E13770 and III E13727. Length, 130 and 111 centimeters.)

300 which have affected each other, the Batutsi and the Bahutu.

794 The importance of the dog among babandwa[3] merits special
575 attention. I was assured that the dog is the cow, that is, the
825 most important and sacred animal, of the babandwa. I was unable to find out anything more specific about its role in the cult. The adherents of the theory that the states of central
[177] Africa represent vestiges of Egyptian culture might see in the relationship of the dog to the cult of the "lord of departed souls" a reflection of Anubis who had the head of a dog.

794 The babandwa exert their power as medicine men, sacri-
575 ficers, and soothsayers. These three functions are very closely related to each other and can hardly be separated. Besides the babandwa and the worshippers of Biheko, the balozi [poisoners] are also said to constitute a secret society.

Initiation. Initiation into a secret society is bound up with long and complicated ceremonies. There are two categories of consecrated ones, those who are fully consecrated and those who have undergone only the preliminary tests.

[308] I should now like to try to give a picture of the babandwa initiation ceremonies in Ruanda, which are very strictly kept secret.

The picture, pieced together by means of painstaking questions, shows a resemblance in the main with the description by Father Van Thiele of Ussuwi, although the arrangement of the whole ceremony seems to bring out some differences.

If a person who is to be accepted into the secret society of babandwa, for example, a sick person, as generally happens, has been told by the chicken oracle that he can be cured by initiation, he must bring gifts to the consecrated to make them favorably disposed toward him.

First of all an influential member is visited, one who might agree to act as guardian (godfather). The guardian, who is also called "father," invites the rest of the initiated into the house of the candidate for initiation.

Certain preparations must be made and a number of objects assembled before the initiation ceremony can take place. The candidate provides a sword, a bell, a torch, a large quantity of beer, and food supplies.

3 [i.e. Secret society members—Analyst]

794 On the appointed evening the members assemble in large
575 numbers in the hut of the candidate and begin with the inevitable
293 beer drinking. The individual babandwa act as various bagaragu of Ryangombe, and this is shown by their insignia. Thus, the

Fig. 164. Crown of Mugasha, Mulera. (1/4 actual size. III E13033. 20 centimeters in diameter.)

representative of Mugasha is said to appear wearing a crown and carrying a scepter. The crown consists of a woven ring, similar to the ones placed under vessels, on which hang two rows of strings. On each string is a small reed cylinder [309] secured at the end with a seed of the wild banana. In Ruanda, as in the
794 other countries of the interlacustrine region, the banana is
575 associated with Mugasha. Similarly, Kagoro is here represented as a brave youth carrying a spear and a stick. In view of this, we expect that the cult of the lance (of Ikiranga), as described

6: Czekanowski--242 E-5 (1907-1909)1917 FO42 Rundi FO42

794
B15

by Father Van der Burgt (1), is connected with Binego.

1. Van der Burgt, Father J.M.M., Dictionnaire Français-Kirundi avec l'Indication succincte de la Signification Swahili et Allemande [French-Kirundi Dictionary with short definitions in Swahili and German] (Bois-le-Duc, Hollande, 1903), p. 516.

The uninitiated may not be present at the ceremony, and they are driven away from the vicinity of the hut with such brutal blows from a stick that they must often pay for their curiosity with severe injuries, sometimes even with their lives.

When the ceremony is about to begin, the "father" and his "child" sit down on stools facing each other, with their legs spread apart. The members ask them what they are doing here. Candidate and guardian answer that they would like to be initiated into the society. The members refuse, and sometimes they even try to drive out the candidate with blows. It sometimes happens that the candidate with blows. It sometimes happens that the candidate loses his nerve and runs away, which ends the ceremonies. If he does not run away and the others agree to accept him, he is subjected to various tests which are supposed to prove that he is worthy of joining the society. The first tests are purely playful. He is requested to fetch a star and is told that whoever fails to do this is unworthy of being taken into the secret society. Thereupon the members take glowing embers from the hearth, toss them into the air repeatedly, and catch them in their hands. After this ceremony they again try to drive away the candidate with blows.

He is then given consecrated beer to drink through a straw that is plugged, and the same words are spoken: "If you do not succeed, you are unworthy of joining the order of babandwa." The initiated ones thereupon show that this is easy for them, and they drink beer with perfectly good straws. The candidate again does not succeed. After this comes the last test. The candidate is given stones to eat. Again he fails. The members pretend it is easy to eat stones and partake of bananas.

194
575 The candidate then asks his guardian very timidly how one is to do all this. The guardian takes consecrated beer (buahoro) into his mouth and squirts it on the candidate. Later he rubs the candidate's face with kaolin (runoni) and utters unintelligible, mysterious words. This ceremony is known as kurawa ingwa. After this is done, the consecrator takes [310] a live coal from the hearth, tosses it into the air, and the candidate catches it. Later he gives him beer to drink through a good straw and hands him a banana which the "child" eats. Then it is announced that the candidate can be accepted. At this moment the songs begin. During the singing the candidate is sent by his "father" to steal bananas. If he succeeds in doing this without being seen, he is congratulated when he returns to the gathering. They praise his cunning and greet him with the name which henceforth is his in the society. After this interlude, the songs are resumed, and the "father" proceeds with the initiation, using unintelligible words.

With his guardian the candidate sets out for the muku or mulinzi, the tree consecrated to Ryangombe. Here the consecrating mubandwa's helper, known as muhiruka, joins him. No one else is allowed in the vicinity of the tree. After making certain of this, the candidate is stretched out on his back on the ground, and the consecrator and his helper perform a wild dance. They repeatedly threaten to stab the candidate's chest with a sword. This ceremony is supposed to make the candidate realize what would happen to him if he should decide to commit an indiscretion against the society. At the same time it represents the oath of the consecrator that he will carry out the punishment.

When the dance is over, all three of them return to the hut where the members are assembled; the muhiruka leads the procession, followed by the candidate, while the mubandwa brings up the rear. The other members (babandwa) come to meet them. Among these is one known as kishego. Kishego carries a burning torch (lumuri) and a small bell which he rings. All of them together return to the hut of the candidate.

After their return, the candidate and the consecrating mubandwa sit on stools facing each other. Between them stands a pot of marwa (millet beer), and beside the pot sits an old woman with a forehead ornament that has a rabbit tail. She holds a piece

794 of muku wood in her hand. (Muku wood is consecrated to
595 Ryangombe.) All those present squat with their hands stretched out in front of them and call upon Ryangombe.

After the marwa has been sacrificed in this manner to Ryangombe, the candidate lies down on the floor in front of the old woman who, with the muku wood in her hand, is supposed to represent Ryangombe. The candidate says to the woman: "Unkize, undinde, muli uyu muaka umbesheho (Let me be restored to health, protect me this year)." The woman moves her head as though she agreed, mutters unintelligibly — mmmmm — and says: [311] "Nzakubesho, ntanga yewe (I shall protect you, I shall let you live, my child)"; later she adds: "Chwaga, chwagura Ryangombe," which is said to mean "Goodness in abundance, thou Ryangombe." Thereupon she takes beer into her mouth and spits it on the candidate. This is the core of the ceremony. After this everyone takes a small torch and roams about the hut as though he were looking for something. After this hunt, the peas (maharagi) and stiff millet mush (mutsima) previously prepared especially for this ceremony are eaten. The Batutsi on this occasion also drink milk. This concludes the ceremony for this day.

After the common meal, the one newly initiated joins in the singing and is ostentatiously honored by those present. He wears a crown of grass, joins in the beer drinking, and eats the sacrificial meat. After he is through eating, he is told that Ryangombe and above all the spirit whose name he bears will protect him, that he will have many children, and that he may attend the secret meetings. He is also taught the sacrificial formulas.

After these ceremonies they drink beer until morning. Shortly before sunrise everyone present, except the one newly initiated, goes to visit the huts in the neighboring banana groves. This ceremony is called simply kusega. Everywhere the visitors are served marwa and nzoga, depending on what the host has on hand, and given bananas as presents. After the visits the members return to the hut where the ceremony has taken place to drink up the remaining beer. Then they go home. On the next evening or a few days later the mubandwa and the muhiruka go to the new

194 initiate, eat with him, and warm some water which is poured
515 into the pot that contained the beer sacrificed to Ryangombe during the initiation. The water is drunk by the family of the new initiate. Afterward the bananas collected on the early morn-
[25] ing visits (kusega) are put in the underground warming place in order to ripen. After a few days, when the beer made from these bananas is ready, acquaintances come for a visit, and they are all served this beer (nzoga).

In this manner the candidate achieves the lower stage of initiation. He has become rusingu. Many remain here and do not go any higher.

In Batutsi initiation ceremonies, a cow is killed on this occasion. When the cow has fallen, the mubandwa, the muhiruka, and the candidate --these are always the three active persons -- place themselves on the fallen cow, one after the other. This ceremony is known as kwitonda gira. Only after that is the animal cut up and the meat divided among those present.

If a person who has been initiated wishes to rise higher in the hierarchy, if he wants to be a mubandwa instead of a rusingu, he goes to the "father" who initiated him [312] and asks for further initiation. If the "father" approves, a meeting is called for this purpose. The candidate, as on the first occasion, provides beer and food. Again, of course, the profane are excluded. Similar ceremonies are carried out, and the candidate is squirted with beer. This time, however, the tests are hard, and since only reliable and chosen people are admitted to the higher initiation, these ceremonies are still more mysterious. The candidates are always refused several times and admitted only at the third or fourth meeting. The one newly initiated must swear that he will not betray the secrets of the association nor in any way misuse the confidence placed in him. In taking the oath, the candidate touches the objects consecrated to Ryangombe, such as the crown, the bell, and others. After the ceremony the newly initiated member is accompanied home by the older members. All participants in this festive procession carry branches of the fig tree in their hands. From then on the newly initiated member has the right to sacrifice to Ryangombe, to introduce candidates to the secret society, and to be present at all the ceremonies. Having

794 been born anew as a result of the initiation, he is above the law
515 of the profane and belongs to the ranks of the chosen. He must not forget, however, to offer sacrifices to his patron spirit and to Ryangombe from time to time.

A somewhat different and much more detailed description of an initiation into the society of babandwa is given by Father Van Thiele of Ussuwi. This description, it seems, refers to a higher grade of initiation, about which I could find out little in Ruanda. I give a summary of it here, obtained from data placed at my disposal by Father L. Classe.

For the initiation two babandwa are necessary, a man and a woman. The man is called mugogo saidja, and the woman, mugogo kazi. Another name for the man is musego, "the [male] consecrator," and for the woman, muchwezi, "the [female] consecrator." Both together are known as "parents," baishebuhemba. They also have helpers known as bihale. The candidate is regarded as their "child" in the ceremony. The "child" is usually ill. The ceremony is performed at the instigation of the soothsayer who has been previously consulted. A number of objects are necessary for the ceremony: a knife; an axe; fire; a stool; calabashes; two kinds of beer; a spoon; a stick; a large needle; a tobacco root; a small stick of musinge wood wound with hair from the tail of an animal (mbwisi) and sprinkled with white snuff (ntendere), the whole thing known as kimwanda; an arrow; a hoe; two small pieces of wood from the mulinzi tree, slightly hollowed out to make them look like boats and known as bilimbe; and finally the bisingo, that is, skins decorated with cowrie shells.

[313] After their arrival in the house of the candidate, the baishebuhemba, wearing their crowns, sit down on their stools. They represent the spirits taking part in the ceremony. The woman slides her hands alternately up and down the stick. The beer stands in front of them. The sick person lies at their feet and is given snuff. If he sneezes, it means that he qualifies for the initiation. If he does not sneeze, the initiation ceremony does not take place. A member of the family asks that the spirits have mercy on the person, heal him, accept him as one of them, and take possession of him. After that the mugogo puts the tobacco

794 575 root in the mouth of the sick man and keeps it there until the man collapses, unconscious. Then a fire is lighted, and the hoe, arrow, and kimwanda are deposited beside it. Two spirits are invoked, for example, Ryangombe and Mugasha. The woman who represents Ryangombe is addressed by the man with the words: [782] "Come, oh Ryangombe! Heal and receive your man!" This prayer is called kwentongeza, that is, to let oneself be received, to be consecrated, consecration. With her mouth closed, the woman who represents Ryangombe imitates the mooing of a cow. This is called kutangana and is supposed to mean that the spirit is present. Then one of the members says: "I was kutanganirwa through the spirit N.N.," and the man hands the woman a drinking straw. "Ryangombe" takes beer into her mouth and squirts it on the sick person. This millet beer is kept in an earthen jug; it is made from the variety called endimasi which is dedicated to Ryangombe. Then the woman repeats the same prayer as she turns to the man. He replies with a sigh which is supposed to indicate the presence of Mugasha. The spirit also drinks through a straw which is handed to him by the woman. He drinks banana beer (luhagwa) from a calabash and spits it out on the sick person. Then the mugogo takes some ntendere from his kimwanda, gives the sick person a second portion of the white snuff in order to make him return to consciousness, hits him on the head with the kimwanda, and the sick person wakes up. This concludes the ceremonies of the first day. The baishebuhemba remain overnight in the house of the sick person. They live there for the four days that the ceremony lasts.

On the next evening the assembly goes into the bush a considerable distance from the huts to a place known as kagondo kato. The spirits are invoked in the same way as on the previous evening. The members drink beer and spit it on the sick person who, if he recovers, belongs to the spirits. Then the mugogo takes the knife and the axe and says threateningly to the sick person: "I shall kill you if you tell others what I am doing with you." The woman takes the stick, places it on the neck of the sick man, and threatens him in the same way. Then a few dances are performed, and they go home. This ceremony is known as mutalongo or kumeramera.

794
575

[314] The major tests come on the third day. This time the ceremony lasts longer and breaks up around noon. Besides the above-mentioned articles, food and a bow with arrows are added. The party goes to kagondo kakuru, which is known as "big" because this place is not in the bush but at the foot of a large tree. The ceremony begins with laying the fire. The sick man lies stretched out on leaves at the foot of the tree. The mugogo climbs up on a little knoll and calls together the members in the neighborhood with the words: "Esaire, Esaire," that the consecrated ones. The babisi, the new ones or the non-consecrated, are not permitted and do not dare to come. Only those who were once initiated come. They approach as though they were going to a solemn festival. When all are assembled (sometimes 50 or more), amulets and medicines are burned so that the babisi, the profane or uninitiated, cannot harm their sacred wood.

Later the head of the sick person, who lies stretched out, is placed on the knee of someone present. He is told to put out his tongue, whereupon medicine is placed upon it. The mugogo takes a small flat piece of wood, shoves it under the man's tongue, and with his other hand takes a large needle smeared with medicine and sticks it into the tongue of the sick man so that the point of the needle penetrates the piece of wood. If blood flows, the ceremony is worthless, for it proves that the spirit rejects the person. The helpers hold the man by his arms and legs, his head still resting on the lap of another man who supports him. The needle is kept in the tongue for an indefinite period, depending on the age and strength of the person. Sometimes it is left for 20 to 30 minutes. During the entire time the people present are dancing. The women beat on the hides they are wearing, and the men shake the gourds containing beer. They sing two words alternately: wabo meaning "they [or she; Ger., sie]" and bagaburi meaning "they deny me." At the same time they place their arm rings in front of the mugogo to ransom the sick one. When there are enough arm rings, the mugogo pulls the needle out. The dancing ceases, and they eat. After the meal they call upon the spirit, and the sick person is threatened as on the two previous days.

794 515 Everything is repeated but much more madly. In the end all are invited to assemble early the next morning for the final ceremonies. The sick person is accompanied home, and there is dancing along the way. Sometimes for the rest of the night they stay out in the open, kulala alukome. The body of the sick person is rubbed with earth or sand so he will be all the more beautiful at the ablutions the next day.

On the fourth and last day the ceremony of mulwesero, "ablutions," takes place. Early in the morning all who have been invited go to a certain river, dressed in festive garb. A youth is held under water by the baishebuhemba; an adult dives [315] in after him. They hold their noses and ears shut with their fingers. The baishebuhemba pour water into the small boats made of mulinzi wood. After the diving, the trunk of the sick person is painted white with kaolin (runoni). Everyone present admires his beauty with the words: "You shine like a leopard; you are another person." There is celebrating and drinking on the shore of the rives. Then, as on the previous days, the spirits are invoked. In the evening all the participants return, singing and dancing like maniacs. When they arrive in the courtyard of the house, they are given a hoe and four seeds: millet, manioc, gourd, and pea. The initiate buries them in the presence of his baishebuhemba and the others attending. They are placed on the two boats of mulinzi wood. Then he is given the name of a spirit and a crown with two cowrie shells. Not until later may the number of shells be increased. Then the initiate begins to act like one possessed. He goes so far as to abuse his relatives with indecent words. The baishebuhemba order him to lie down on the ground, and after a while the mugogo calls him by his ordinary name in order to remind him of his everyday life. The initiate pretends to be waking from a deep sleep. He looks at everyone present and greets them all quietly in the usual way. This is called "to take away the luchwezi." Then the initiation fees are paid, and the ceremony is over.

794 515 184 The two descriptions of the initiation ceremonies are somewhat different, but this probably indicates local differences in the cult.[1]

1. [i.e. the Bahandwa cult—Analyst]

794 575 184 In general, the similarities are greater than the differences. We should like to mention only the rubbing with kaolin, the squirting of beer, the lighting of a fire at the ceremonies, the practice of making the candidate lie on the ground, the dances at the mulinzi tree, the tests, the threatening of the candidate, the female representative of Ryangombe, the connection between Ryangombe and millet beer which is used only in the northern steppes, and finally the secret cult language of the initiated.

Another very important fact is that the representative of Mugasha, the spirit of the waters and banana groves, unlike the female representative of Ryangombe, drinks banana beer from a gourd.

794 575 198 Secret Language. The babandwa use a special language in their rites, which is not known by the rest of the population and which belongs with the rest of the babandwa secrets, ibanga lyi bandwa. Father Van Thiele referred to this language in Ussuwi as luchwezi; I was told in Kissaka and Nduga (Marangara) that it is called lubandwa. I shall now make a list of the luchwezi words collected by Father Van Thiele and place them parallel to the lubandwa words collected by Father C. Lecoindre. I did not succeed in finding other data about the secret language. [317]

[601] In Kissaka the babandwa never mention the name of the father-in-law, and he is referred to as ikitari lwa hurawaa.

794 575 782 Sacrifice. The manes are the only spirits to whom everyone may sacrifice. The most important sacrifices are made to Ryangombe and his disciples and these, as we have already said, may be performed only by the initiated (babandwa).

Father Van Thiele has the following to say about these ceremonies.

The mubandwa who is requested to make the sacrifice goes to the house of the donor the evening before to make the necessary preparations.

The next morning before sunrise the entire family and their dependents accompany the mubandwa with his helpers to the place of sacrifice, which is located at a crossroads. The father takes his bow and arrow. At the place the bound sacrificial animal is held by the sorcerer's attendants. The mubandwa kills the animal. The previously prepared secret objects are dipped in the

blood of the animal and placed on the chests, the foreheads, and, last of all, the backs of those present. Then the mubandwa spreads out small bundles of green twigs, muyambo, on the animal. When he has given the order to disperse, everyone begins to move. One person after another walks over the sacrificial animal and goes home without looking back; otherwise the sacrifice would lose all its meaning. In this procession the father goes first, then the sons, then the chief wife, followed by the other wives and their daughters. The mubandwa and his attendants remain at the place of sacrifice. [318] If someone passes in the vicinity of the sacrificial remains, he takes care to pick up a leaf, spit on it, and throw it in the direction of the remains, saying: "Do not pursue me (spirit, umuzimu, misfortune, or illness)." This refers to the fact that the evil, the spirit, or whatever has been cast off through the sacrifice might attack a passer-by at the crossroads.

The Batutsi sacrifice cows, sheep, and chickens, whereas the sacrificial animal of the Bahutu is the goat and, more rarely, sheep.

As far as I could ascertain, the meat of sacrificed cows is distributed to all present if the prophecy is favorable. If the entrails prophesy unfavorably, the meat is given to the Batwa. The family of the donor does not eat the meat of sacrificed sheep, but gives it to the mubandwa and his helpers who have performed the sacrifice. The ceremony described by Father Van Thiele thus undoubtedly refers to the sacrifice of a sheep, which he forgot to mention. The meat of sacrificial goats is eaten by the Bahutu who

have made the sacrifice and by their friends.

The Batutsi wear the fat and bones of sacrificed sheep as amulets around their necks. The fat, like the chicken entrails, is worn on the chest in small containers fastened to a string of bast.

Fig. 165. Sacrificial Vessel for Beer, Mulera. (1/4 actual size. L15173. 21 centimeters high.)

Fig. 166. Tobacco Pipes with Twin Bowls, Ruanda. (1/2 actual size. III E6595. 9 centimeters long.)

Beer is offered to Ryangombe in jugs with two openings. The sacrificer drinks out of one opening, Ryangombe out of the other. The double-bowled tobacco pipes seem to serve the same purpose.

When they are making a sacrifice, the Batutsi may not wear cotton material. They must be dressed in the fringed cow-hide known as mukane.

791 Soothsayers, Sorcerers, and Medicine Men. Besides the
789 babandwa, there are several categories of people in Mulem who know how to exercise power over the living and over spirits in supernatural ways. We shall speak here of bapfumu, bahuzi, balozi, bachunyi, bahinza, and bawubyi.

[319] Bapfumu have the task of communicating with the spirits of the dead (bazimu). They are visited when a death has occurred in the family, and a present of food, sometimes even a goat, is brought to them. They then tell the family where it would be most suitable to build the spirit hut of the deceased (ndaro). Since the mupfumu remains in contact with the spirits of the dead and since these spirits cause illness, he is asked whether a sick person will recover. The mupfumu gives answers with the help of the little board oracle.

The special duty of the bahuzi is to discover poisoners who are known here as balozi and in the Runyoro territory was balogu. If many deaths occur, poisoning is immediately suspected. The muhuzi is summoned to handle this, and it is his task to determine
[682] who the poisoner is. If discovered, the criminal can be killed, and the evil can, at least for the future, be remedied. The muhuzi goes from one compound to another with his enchanted antelope horn. Everywhere he is most hospitably received by the head of the family who gives him gifts. All are afraid that if he were displeased he might point to them as poisoners, and this always means death. On his rounds the muhuzi is told by the horn where the poison is to be found and who the poisoner is.

Persons struck by lightning are also treated by the muhuzi.
791 If lightning strikes a herd of cattle, the owner utters a cry of joy
821 which consists of a long drawn-out "hoo..." as he strikes his lips
232 with his hand. This call is supplemented by the news that the king is taking back his cattle. This is done in order to save the animals that have been stunned. The maganga huzi is then fetched and tries to heal the animals with herbs. For his efforts he is presented with the jaws of the dead animals and the meat on them. The horns of the dead animals are buried at the spot where they
[789] were stricken. Another task of the bahuzi is to prophesy to the sick the outcome of their illness.

674 754 Balozi, poisoners, are said to kill their victims with a poison which they carry hidden under their fingernails. The poison is given to the victim on his own tobacco pipe which the poisoner treacherously borrows for a bit in order to take a few puffs. All sudden [761] deaths are regarded as poisonings. This idea is based on the fact that poisoning is a widespread crime. Father F. Dufays told me that he once succeeded in saving a person poisoned by a balozi by giving him milk and an emetic. It looks as though there actually had been a poisoning in that case. During my stay in Ruasa I had an opportunity to see an alleged attempt at poisoning. When Captain W. Von Grawert took a guide from Ruasa on his punitive expedition, [320] the wronged ones brought us a pot of honey that was said to be poisoned. The suspicious Mututsi, Lwakazina, who had always accompanied me when I was there in order to enhance his standing through friendship with a European, discovered a small piece of fat wrapped in banana fiber in the honeypot. He maintained that it was the flesh of a native killed by the soldiers, and this was generally believed by all present. The manner in which the donors of the honey retreated, in proud awareness of a duty accomplished and with much abuse, made me inclined to believe that Lwakazina was perhaps right.

Poisoning and bewitching are known by the same word, kuloga. For this reason it is very difficult to distinguish the two in the reports one hears. It is especially difficult to find out whether sorcerers or poisoners are sought.

I could not find out whether poisoners have a secret society here. I repeatedly heard, but always in a very vague and contradictory manner, that they have nocturnal sessions around a fire (in masks?) and that they devour human flesh, even corpses, and prepare poisons.

791 Bachunyi are manufacturers of amulets. A person who wants an amulet (mpigi) to protect himself from some evil or to aid him in some manner goes to see the muchunyi. The latter hides and prepares the remedy in secret with the help of incantations.

In Ussuwi, according to Father Van Thiele, the bakoni, who are probably identical with the bachunyi of Ruanda, have the task of combatting the poison of the greatly feared and mysterious balogu.

791 The bahinza have to do with matters relating to farming,
789 above all with crops and grasshoppers. A good harvest is due to their cooperation. That is why, after the harvest, bahinza go about collecting donations. People like to give them gifts. The curse of the muhinza can "dry up" human beings as well as animals, so that they lose their sexual powers.

The Balera fear the curse of the muhinza very much, for if he merely pronounces his curse and spits upon the ground, the effect is automatic.

Father F. Dufays told me that he saw a man die of fright
[152] soon after he had been cursed by a muhinza. The bahinza are always Bahutu.

791 Bawubyi are rainmakers. They appear in the transition period between the rainy season and the dry season and demand gifts for making rain or for making it stop. Bawubyi are always pariah Batwa.

Since there are very few Batutsi in Mulera and they have little influence, we may assume that [321] the various categories of soothsayers and sorcerers mentioned here and familiar to me from my stay in Mulera and the practice of poisoning are phenomena basic to Bahutu culture and not borrowed from the Batutsi.

588 In Ruanda, as in Kiziba and Mpororo, women are consecrated to the spirits. They must provide for the needs of the spirits, and their children are said to be regarded as the children of the spirit and to belong to his family, for these women are allegedly forbidden to have sexual intercourse with others. I was told quite frankly, however, about a case where a Mututsi chief consecrated Bahutu women to a spirit and had sexual intercourse with them.

Dreams and Soothsaying. In Ruanda various methods of
787 soothsaying are practiced. First we must speak of the chicken oracle because of its great importance.

In order to obtain information about a certain matter through the chicken oracle, it is necessary for the person to come to the soothsayer (mupfumu) with a chicken. When he arrives, he spits into the beak of the chicken and hands it to the soothsayer. The latter first places the chicken on the visitor's head and then calls his helper, a young boy. The boy grasps the chicken under its

787 wings and lays it on its back on the ground. The mupfumu slits open the chicken from the beak down, so the tongue remains attached to the lower jaw. He lifts out the entrails, which are placed in an improvised basin and washed. The basin is a depression in the ground lined with a banana leaf. The soothsayer spreads the washed entrails on his hand and looks for excrescences known as nkebe. If there are not more than two or three nkebe, 787 the prediction is favorable or in the affirmative. In this case, a 789 few bones are taken from the chicken and placed in a small vessel of barkcloth. Sometimes the entrails with the nkebe are added. This vessel is dried in the smoke from the hearth and worn around the neck as an amulet against the evil eye. If the number of nkebe is larger, the chicken is thrown away, and the operation is repeated on another chicken.

A few days after the soothsaying has taken place, the amulet 787 made of a bit of barkcloth and containing chicken bones and fat is handed over with a certain solemnity. It takes a few days for the contents to dry out. Early in the morning the mupfumu comes into the hut of the person fortunate enough to have a favorable prediction. The soothsayer is received by the man who sits on a stool and his wife who sits beside him on the ground. The soothsayer sits down opposite them and smears the man's forehead, back, and chest with some kaolin. [322] Later he hands the man a necklace of bast from which hang the vessels containing the bones of the chicken sacrificed for the soothsaying. In payment, the soothsayer gets a hoe and some beer if there is any to be had at the time.

The chicken oracle is a Batutsi (or Bahima) custom. This is evident from the fact that the soothsayers belong to the aristocracy of herdsmen and that the amulets containing chicken bones are worn primarily by Batutsi.

The entrails of cows and sheep are used in the same manner as chicken entrails for soothsaying. Because of their costliness, however, this is evidently done only by the king and the aristocracy. Goats are used for sacrifices, but never for soothsaying.

The fact that the goat, which is associated more with the lower-class Bahutu, is not used for soothsaying probably shows that in general soothsaying from the entrails of sacrificial animals is associated with the ruling Batutsi class.

Fig. 169. Container with Tokens for the Little Board Oracle, Mulera: (a) gourd token, (b) iron tokens, (c) bone tokens. (1/4 actual size. IIIE 13117. 22 centimeters long.)

181 In Kissaka soothsaying with calabashes is also said to be practiced. Father Van Thiele describes it as follows. The soothsayer has two calabashes filled with seed kernels. He sits on a small stool, dressed in the hide of a jackal in such a way that the head of the animal lies on the head of the soothsayer and the tail hangs down behind. He shakes the two gourds and makes the kernels rattle. After a while he stops, puts the gourds aside, takes off the skin, and lies down on the floor. After a period of concentration the soothsayer announces his oracle and is paid.

Another type of soothsaying is that of the speaking calabash and the speaking goatskin, nyabukobwa. This was supposed to have prophesied the arrival of Europeans from the east at the time of the last independent king of Kissaka (Kimeni II). Father Van Thiele reports that he found a reed flute in the nyabukobwa which played when the bag was squeezed and air escaped.

[323] In Mulera the little board oracle is common. The soothsayer grasps the handle of a small, hollowed out, trough-shaped board 40 centimeters long, 15 centimeters wide, and one to two centimeters deep. With his other hand he tosses into the air a few times several seeds, some little metal discs, small sheep bones, and a piece of gourd. The piece of gourd is called umwami (king). The iron discs represent the bazimu (spirits) of men, and the sheep bones, those of women. They are always skillfully caught. After they have been sufficiently mixed, they are thrown on the little board. The answer is found in the way they are spread out.

The natives of Ruanda tell about prophecies several years back that foretold the coming of the Europeans.

181 173

Thus, years ago the then mighty father of Kaizuka was said to have known that a conqueror, different from all men known up to that time and one having power over thunder, would come from the east and would change the internal conditions of Ruanda. This prophecy was generally known and induced Monseigneur Hirth to choose the route via Usumbura and Urundi for the mission to avoid possible difficulties that might result from this prophecy. In 1905 when the king became aware of changed conditions, it is said that Kaizuka, the son of the prophet of doom, was robbed of his possessions and had his eyes gouged out.

787 There is a story of a similar prophecy for Ruasa. Formerly
173 the hill on which the mission is now located had a quite unintelligible name, busakaza itaka, allegedly, "land where earth is used to cover." About 15 years ago a man prophesied that "red men" would come and that their house would be covered with earth. When the missionaries came and covered their buildings with bricks, the words made sense, and the prophecy was fulfilled. There is a similar story about Bugoye.

I could not understand the Banyaruanda views about dreams.
787 What one sees in a dream is a matter pertaining to the past
775 or the future if it is contrary to the present. If one has seen deceased persons in a dream, it is said that the spirits of the dead came visiting. Such a dream is usually followed by a sacrifice, for it is assumed that the spirits are suffering and that they appear in order to beg for help. If a person disregards this he might suffer evil consequences, for the neglected spirits would avenge themselves.

787 If a youth sees his bride in a dream, he does not marry her. The dream warns him against a marriage in which the partners would not get along.

Father F. Dufays once dreamed that one of his black friends burst because he drank too much beer. When he told this to the man in question on the next morning, [324] the man was frightened and began to cry. When he was asked the reason for his tears, he said that whatever one sees in a dream comes to pass.

755 The Practice of Medicine. A special form of medical treatment, cure through initiation into a secret society, has already been described. This is not all there is to medical practice, however, and it is not always employed. Not all sorcerers, soothsayers, and medicine men belong to the secret societies of babandwa. The act of appeasing the spirits with eleusine (buro) seems to be carried out by ordinary soothsayers (bapfumu) in order to free patients from afflictions caused by troublesome spirits.

In Kissaka where I was told a great deal about the "appeasement of spirits" with eleusine, the procedure is somewhat as follows.

The mupfumu takes a small calabash known as ntendere and fills it with eleusine. He adds nzuzi seeds, kaolin powder, and a bone from the forefoot of a cow. The soothsayer rubs the palm of

755 his hand with kaolin, places the nzuzi seeds and the bone on his hand, spits on them, and says: "ngira amagara (I am strong)." He shakes his hand and tosses the contents into a small basket, ntaro. Then he pours eleusine from the gourd into the basket. He spits on the eleusine and hands the basket to the person for whom he is performing the ceremony, who likewise spits into the basket. For the second time the mupfumu takes the bone and the nzuzi seeds out with the words, "ngira amagara." He shakes them in his hand as though mixing them. He tosses the contents of his hand into a round basket with the words, "ngira amagara," and puts the basket to one side. Then he hands the basket containing the eleusine to the man, who spits into it and says: "n'dapfa (I am dying)." Thereupon the soothsayer spits into it with the words, "ngira amagara." The tormented one says: "n'ziranyu muzimu (I am suffering at the hands of this spirit)," and gives its name. The individual spirits are named in this manner, the soothsayer and the man alternately going through the ritual of spitting. This performance is known as kushora umuzimu, "appeasing the spirits." When this is finished, the soothsayer takes the small basket that has been set aside with the cow bone, the nzuzi seeds, and a few eleusine seeds, and he hands it to the tormented one, who spits into it and says: "ngira ubuhoro (I am at peace)." The soothsayer moves the basket with the words: "agira ubuhoro (he is at peace)"; "atapfa (he will not die)"; "atafushe (he would not like to be killed)"; "azaturaho (he will remain)." After these words the sorcerer tosses everything into the calabash, and the ceremony is ended.

In payment for his services the mupfumu gets peas, sweet potatoes, etc.

[325] I was unable to find out anything about true medical
755 treatment and the methods of cure, since this involves a knowledge
757 of the local flora. The natives themselves know far less about this than about the impressive ceremonies of auto-suggestive cures. I should merely like to say that the remedies are taken internally and applied externally and are also worn on the body in small horns
757 and vessels as amulets. The amulets containing medicine are tied

755 to the afflicted parts of the body. Since the amulets are very specialized in their effects, every illness requires a different amulet, sometimes even a different medicine man. That is why one constantly sees individuals with a dozen amulets.

There are many different types of amulets. There are, first of all, small pieces of wood decorated with little glass beads. One or two of these are worn on the bast headband. Sometimes several thin wooden cylinders with glass beads are worn on a necklace. One also sees quite a number of larger pieces of wood on a necklace. Occasionally amulets have the shape of tiny clay vessels filled with long-distance medicine. Similarly shaped are
832 the little love pots (ingondo) which are [326] worn in large numbers by the women on their belts. They are said to guarantee the love of their husbands. The small gourds called bunuli serve the same purpose. Vessels of this kind are filled with the medicine known as isarazi.

752 Sometimes the sick person is branded with a hot iron. One often sees scars of burns on the forehead, which indicate headache treatments. In other cases incisions and bloodletting are performed.

Bloodletting (kurasha) is common in Ruanda medical practice. A vein in the forehead is chosen and blocked by means of pressure (bandaging the neck). The vein is then opened. This is done by placing an arrow or a knife on the vein and pushing it into the vein with the index finger.

When a sufficient amount of blood has been drawn off, the ligature is removed. The bleeding usually stops automatically. If it does not, the opening is stopped up with clay.

Cupping is also a favorite treatment. An antelope horn with a small opening at the point serves as a cupping glass. Air is sucked out through the opening, and the cup is sealed with fig leaves. The cupping horn is placed on the neck in the case of a headache. To increase its effectiveness, the skin is often lacerated with a knife. The cupping horn is kept on the spot until it falls off by itself. The cupping horns do not differ from those of the Dinka.

In fractures of arms or legs the bones are skillfully set and immobilized with splints (busenge).

Among medicine men Father Van Thiele distinguishes two different professional secret societies, the bakoni and the bageiye, who are initiated with the banga ceremony. Bageiye heal persons suffering from snake bite.

I had no opportunity to see a bageiye perform in Ruanda. When a man was bitten by a snake on the way to the Muhawura

Fig. 178. Splints for Immobilizing Broken Bones, Ruanda. (1/4 actual size. III E13742. 26 centimeters long, 20 centimeters wide.)

volcano, [327] the natives wanted to tie the head of the dead snake on the wound as an antidote.

The following account by Father Van Thiele about a preventive treatment for the greatly feared disease of smallpox (bushita) is very interesting.

The medicine man first provides everyone with amulets consisting of gourd seeds. Even the water jug gets its amulet. Then he gives a preventive medicine which he boils. After the boiling he blows air into it through a straw so as to make foam which is rubbed all over the body. The efficacy of the medicine is increased by making incisions in five different places: three incisions over the right eye and one incision each on the right shoulder, the back, the right hand, and above the right foot. The medicine man spits on his little finger and rubs the incisions with it.

Cannibalism and Human Sacrifice. The problem of cannibalism and human sacrifice in the interlacustrine region is the most obscure and difficult of all. For example, in Ruanda the bimara,

266 the blood tax, is said to have existed until just a few years ago.
782 The Bahutu of Bukunzi in Mukinjaga once stole the cows of King
651 Ruganzu and ate them. The next morning the herdsmen found pieces of meat hanging on spears; that was all there was left of the animals. The criminals were recognized by their spears. As a punishment their country was burdened with a special tax. Every year they were obliged to deliver a maiden and a youth. The youth was slain on the way, and his blood brought to the king; the young girl became a muia (slave) of the king. I heard that this sacrifice was last paid three years ago (1904) and then was discontinued by Musinga.

[643] Furthermore, when the king ascends the throne, a boy and a girl are reputedly sacrificed and a drum is beaten with a human thigh bone (1). We must not forget that in Buganda (2) human

[113] 2. Roscoe, J., The Baganda, Their Customs and Beliefs (London, 1911), p. 331.

beings were sacrificed in large numbers.

266 [328] Cannibalism is said to be practiced by the Batwa in
575 the north and by poisoners (balozi). Koch (1) confirms its occurence
794

1. Koch, R., "Anthropologische Beobachtungen gelegentlich einer Expedition an den Victoria Nyanza [Anthropological Observations on an Expedition to Lake Victoria Nyanza]," Zeitschrift für Ethnologie, 1908, p. 465.

among the balogu of the western shore of Lake Victoria: "It is a fact that at present there is still a secret order here which digs up corpses and eats them, and for this reason the families station

266 794 575 guards near corpses. They believe that if a person eats corpses he is imbued with weird, magical power and can turn into wild animals, as in our legend of the werewolf."

According to Johnston (2), the secret society of basezi in

[13] 2. Johnston, H., The Uganda Protectorate (London, 1902), p. 692.

Buddu and on the Sese Islands assembles at night and devours corpses. Johnston (3) characterizes the inhabitants of the Sese

3. Ibid., p. 693.

Islands as notorious cannibals who gave up this passion only when they were forced to by the Baganda.

Ruanda's western neighbors, the Bahunde, are likewise cannibals, as Dr. Kandt (4) has determined. He reports the

4. Kandt, R., Caput Nili (Berlin, 1904), p. 449.

following discovery: "Here lay the head of a human being that had been slaughtered not more than two days ago. The ears, the lips, and the flesh of cheeks, neck, and chin had been cut away, and the large hollow bones had been broken, apparently to suck out the marrow and the blood. The place where the fire had been, marked by ashes, was still visible; the blood-soaked apron of barkcloth and the straw and wire rings of the slaughtered person lay strewn about in the grass. I called the guides. They knew the man and said that if we wanted to look around we could find many other remnants of this kind, but I had no desire to do so."

From these facts we may conclude that formerly cannibalism was common in the entire interlacustrine region from the western lakes to the Sese Islands. Only recently suppressed, it has left definite traces in the cult and in secret societies.

[329] Chapter 16

Decoration and Play

63| Decoration. We have mentioned a few widespread patterns of ornamentation in our discussion of shaving and tattooing patterns. We illustrated a number of them on baskets, mats, quivers, spear holders, rings to be put under vessels, knife sheaths, and scabbards. The data will now be supplemented and summarized.

Ruanda ornamentation is purely geometrical and chiefly rectilinear, lines being used mainly to outline the larger, monochrome fields. Sometimes, however, entire fields are uniformly decorated with parallel lines, which may also form squares. Curved lines are used, but they are rare. They are sometimes found on knife sheaths. It is only in the painting of shields and in shaving and tattooing patterns that they are used exclusively.

In Kissaka I also saw partitions in the Bahutu huts painted in this manner.

Ruanda ornamentation is very simple, without variety in form or color. The forms are usually combinations of triangles and straight lines. Coloration is usually restricted to a contrast between black and white. Quite rarely red is added and then only on shields, room partitions, and small, woven luxury articles. Other colors are merely various shades of white. Pure white cannot be obtained because of the nature of the materials to be decorated (mats, wood); black decorations are painted on them.

In view of the simplicity of Ruanda ornamentation, we can easily classify it. The chief elements have already been described and named by Dr. Kandt (1). We shall list them herewith: amatana,

1. Kandt, R., "Gewerbe in Ruanda [Industry in Ruanda]," Zeitschrift für Ethnologie, 1904, p. 343.

"quiver"; ngabo, "shield"; masaka, "millet"; amakota, "knife, arrowhead"; [330] mushongole, "friendly person"; uduhuda, "spear ferrule," "swallow's wing," "large swallow's wing";

53| ikirizo, "large tail"; imiambi, "arrows." The last three may be regarded as composite forms. The pentagon is in a very special class. It is quite isolated. All these elements are rectilinear. Curved lines appear as segments, crescents, spirals, and circles. Large circles are called imikako, "upper arm ring," while small circles are called imirindi, "wrist ring."

The triangle is the principal element of Ruanda ornamentation. It is called "quiver" (amatana) and is most frequently found on the quivers where they are placed in rows forming wide bands. A band of tiny triangles on quivers is called imirindi, "arm ring."

Fig. 179. Elements of Ruanda Ornamentation: (a) amatana, quiver; (b) ngabo, shield; (c) masaka, millet; (d) amakota, knife; (e) arrowheads; (f) mushongolé, polite person; (g) uduhuda, spear ferrule; (h) swallow's wing; (i) large swallow's wing; (j) ikirizo, large tail; (k) imiambi, arrows' (l) pentagon; (m) imikako, upper arm ring; (n) imirindi, (o) spirals; (p) segment; (q) crescent.

Sometimes the amatana cover large areas.

Rhomboids, formed by placing the bases of two triangles together, are, as we have said, called ngabo, "shield." They are also seen on quivers and, like the amatana decoration, are usually in the form of bands and less often placed longitudinally.

The row of squares must be regarded as the next variation in this series. It occurs when rhomboids are flattened, becoming squares. This motif is called imikako, "string of beads," although the individual square is called masaka, "millet." A rare variation of the same motif is the longitudinal rhomboid. Horizontal

53| rhomboids produce the motif known as amasaro, "string."

When the triangles meet at their tips, forming hourglass figures, the knife pattern (amakota) is produced. [331] These figures are often used in columns on the soft shield mats, separated from one another at irregular intervals. Rarely, the hourglass figures are used in horizontal patterns.

The arrowhead motif is sometimes used in plant-like configurations, but these forms are relatively rare.

The mushongole motif is usually combined in perpendicular symmetrical or alternating columns, with the individual elements joined together or separate.

The uduhuda, the spear ferrule element, is usually arranged in free rows, one element above the other, forming unenclosed columns or sometimes step-like rows.

The swallow wing motif is arranged in oblique and horizontal bands. The former seem to be the original ones; the variations appearing in horizontal bands are far removed from the original pattern of homogeneous elements, for example, perpendicular elements have been introduced. However, even in the "large swallow wing ornament," besides the simple form there is a more complicated one with intermediate elements.

The ikirizo motif is combined for ornamentation in much the same way as the above-mentioned mushongole motif, but with the difference that the parts can be placed diagonally as well as perpendicularly.

The arrow motif (imiambi) is used in rows, one above the other, to cover large areas. Often there are only a few rows, placed horizontally or diagonally.

Besides the arrow motif, the quiver motif (amatana) is used to cover large surfaces, as are the shield motif (ngabo), the millet motif (masaka), and the spear ferrule motif (uduhuda). In the last motif, elements of various sizes are combined.

Pentagons are very seldom used in Ruanda ornamentation. I recall having seen them only once (III E 13644). In this case the longitudinal pentagons were placed next to each other.

However, more complicated forms are achieved in Ruanda ornamentation by a combination of two or three motifs.

531 The simplest composite forms occur when decorative elements, such as amatana or ikirizo, are arranged along a diagonal edge. Equally simple in its construction is the muhiga pattern made up of a combination of long and narrow elements with short and wide swallow wing motifs. The ornamentation combining uduhuda and mushongole motifs is not any more complicated, whereas that made of a combination of uduhuda and incomplete swallow wing motifs is somewhat strange

Fig. 180. Ruanda Ornamentation: (a), (b), (c), (d) patterns for knife sheaths; (e) pattern for shield mats; (f) pattern for little love pets; (g) amagwe, leopard, pattern for mats.

looking. [332] Not infrequently we also find swallow wing motifs enclosed in horizontal bands (imirindi) and a diagonal band of ngabo with several lines of imiambi running parallel to the sides of the triangles.

More complicated forms are usually obtained by repetitions of two motifs. On knife sheaths we often find a combination of uduhuda and imirariko.

531 Circles or spirals are used only on round objects and especially on the bottoms of baskets made by sewing together spirals of straw, on plates, and lids. This shows that the above-mentioned rectilinear forms are simply modified to conform to the material.

Large numbers of unjoined segments and crescents are placed in rows on knife sheaths. They are sometimes also combined with uduhudu or imiambi which separate the individual segments of the ornamentation from each other. On small clay vessels, however, they often flow together to make large units, and on the shield mats we can also see fragments of the three-strand weave.

We may regard the simplicity of Ruanda ornamentation as the result of an adjustment to the material, chiefly the basket sewn together in spiral coils, which is the principal article ornamented. It is not [333] impossible that we have here a secondary simplification dictated by the technique of ornamentation, which consists chiefly of black banana sheaths wound around the coils. The names of the decorative elements lead us to assume that in the past there were probably attempts at realistic portrayal. In support of this view we could point to the amagwe decoration which often appears on the mats. Amagwe means "leopard," and in the drawing we can see a stylization of a four-legged, spotted creature.

535 The Dance. During the festitivies which Musinga arranged in honor of His Highness Duke Adolf Friedrich of Mecklenburg, I had an opportunity to see several very different types of dances (kwamiriza). They were performed in such rapid succession that I was unable to grasp the fundamental differences, hence I must limit myself chiefly to listing them by name.

The first four dances were performed by the danga baganlsi, the chosen ones of the king. The first was called imbunduza, the second, rukatsa; the third, tubagendane; and the fourth, kuboko.

The second dance troupe was made up of inkwaya za Kabure. They danced the muganguza, each with an arrow in his hand. The dance is shown on Plate 18 of Volume III.

The third group of dancers were Kamuma's ntore from Kissaka. They danced kuhyereka rushara and a crane dance (1). The small

535
[13]

1. Adolf Friedrich, Duke of Mecklenburg, Ins imerste Afrika [Into the Interior of Africa] (Leipzig, 1909), p. 118.

boys of Kanuma performed another dance of the same type (2).

Ibid., p. 119.

The dances are divided into two distinct groups, the kwamiriza and the kuhyereka. In the first group the dancers hold a spear or an arrow in their hands and swing them rhythmically. The martial bearing of the dancers indicates that this is a war dance. In these dances the dancers wear iron bells on their ankles and move in a closed circle or in a line from left to right. This type seems to be representative of all true Batutsi dances.

The second group is the kuhyereka. This is danced by one or two dancers, very rarely by three. In this dance the dancer rocks back and forth with his arms outstretched and often bent backward. This position is called kutega amaboko. For the kuhyereka the bells, if they are used, are fastened under the knee. It is very characteristic that in these dances, which were probably originally Bahutu, the bells are worn in the place where the Bakondjo, who are not influenced by the Batutsi, wear their leg rings.

[334] The dances which I had an opportunity to observe in Mulera belonged altogether to the kuhyereka group. The dance was performed by two soloists, and the passive participants accompanied their movements with singing and hand clapping to maintain the rhythm. The dance was sometimes also accompanied by the playing of the inanga. That only the kuhyereka type of dance appears in Mulera shows very definitely that it belongs to the lower Bantu stratum.

Play. Rattles are the common toys for children. Bigger boys like to play with small bows. A discus game is played with bow and arrow. There are two teams, with seven boys on each side. One team throws soft discuses cut out of a banana stalk;

534 the other team shoots arrows at them to stop their course. When all the discuses have been thrown, the archers become pitchers and vice versa. This game can go on indefinitely. It usually stops when there are not enough arrows left, because not all the arrows that are shot can be recovered.

Adults are passionately fond of kishoro, but this seems to be less widespread than in the eastern regions of the Runyoro language area. The game is played on a board that has 32 hollows in four rows. There are 64 wild banana seeds and at the beginning of the game these are deposited in the hollows of two rows, taking the seeds of one hollow and distributing them, one each, in the four successive hollows. The contents of the hollows are again picked up and distributed in the next hollows. When one row has been filled, the game continues in the next row, and this process is repeated until the player has only one seed left and arrives at an empty hollow.

By a skillful selection of the initial hollow, the player aims to have the last seed, which he holds in his hand, be the fourth seed in the hollow into which it is placed. He has then won these. If the player arrives at an empty hollow with the last seed he holds in his hand, the opponent gets a turn.

535 Betting is known in Ruanda. I had occasion to confirm this when Musinga made a bet with one of the Askari (Tingi-Tingi) accompanying me, of whom he was very fond, as to whether he could drink two jugs of beer in one sitting.

Vorwort.

Die vorliegende Veröffentlichung bildet das Ergebnis der anthropologischen und ethnographischen Untersuchungen, die in den Jahren 1907—1909 am südwestlichen Rande des Nil-Beckens und in den anstoßenden Teilen des Uele-, Ituri- und Tanganjika-Beckens (Kiwu) ausgeführt wurden.

Die Beschaffenheit des Materials nötigte uns, den Text auf zwei Bände zu verteilen, einen anthropologischen und einen ethnographischen, und diesen noch zwei mit ausführlichen Erläuterungen versehene Atlasbände anzuschließen. Nachträglich mußte man aber noch den ethnographischen Textband in zwei getrennt paginierte Teile zergliedern und in der anthropologischen Publikation den Text von der Beobachtungsmaterialveröffentlichung trennen, so daß der Umfang der „Forschungen im Nil-Kongo-Zwischengebiet" auf sechs Bände angewachsen ist. Mit Rücksicht auf ihren allgemeineren Inhalt müssen die ethnographischen Teile als erste erscheinen, wenn man auch aus Gründen der Systematik die Anthropologie der Ethnographie voransetzen müßte. Der Index des ganzen Werkes wird am Schlusse getrennt erscheinen, falls er sich aus technischen Gründen dem letzten Textbande nicht anheften läßt.

Die Möglichkeit, das ethnographische und vor allem das anthropologische Material im vorliegenden Umfange zu sammeln und zu publizieren, verdanke ich Seiner Hoheit dem Herzog Adolf Friedrich zu Mecklenburg, der in seinem Interesse für diese Arbeiten so weit gegangen ist, daß er, um das Messen zu beschleunigen und die Beobachtungsserien zu vergrößern, persönlich einen bedeutenden Teil der langwierigen Zahlenregistration ausgeführt hat.

Für die Publikation des vierten Bandes, der über den vorausgesehenen Rahmen hinausgewachsen ist, bin ich dem Kuratorium der Baessler-Stiftung zu Dank verpflichtet.

Dem Vorsitzenden des Publikationskomitees, Herrn Geheimrat Prof. Dr. Hans Meyer, und Seiner Exzellenz Herrn Gouverneur Ebermaier verdanke ich die Möglichkeit, die Bände durch große Übersichtskarten, die ursprünglich nicht vorgesehen waren, ergänzen zu können.

Auch möchte ich bei dieser Gelegenheit nicht unterlassen, den Herren Prof. Dr. Felix von Luschan und Prof. Dr. Bernhard Ankermann meinen wärmsten Dank abzustatten. Durch Herrn Prof. von Luschan kam zunächst

meine Reise zustande; ihm habe ich auch die Vorbereitung zum wissenschaftlichen Beobachten auf Reisen zu verdanken. Herr Prof. ANKERMANN führte mich in die afrikanische Ethnographie ein und unterstützte mich später bei der Vorbereitung der Publikation.

Die Herren Prof. Dr. K. WEULE und Exzellenz W. W. v. RADLOW gestatteten mir in freundlicher Weise die Gegenstände aus den Museen in Leipzig und Petersburg abzubilden. Diese Abbildungen sind vor den unten angegebenen Katalognummern mit den Buchstaben „L" resp. „P" versehen. Die übrigen Signaturen beziehen sich auf die Gegenstände des königlichen Museums für Völkerkunde in Berlin.

Meinem Freunde, Herrn Dr. HANS SCHMIDT, Bibliothekar der Kaiserlichen Akademie der Wissenschaften in St. Petersburg, verdanke ich die Sorge für den redaktionellen Teil der Arbeit.

* * *

Beim Reisen und Ausführen meiner wissenschaftlichen Arbeiten habe ich im großen Umfange das freundliche Entgegenkommen der landeskundigen Europäer ausgenutzt und von ihnen viele wertvolle Beiträge erhalten. Deshalb möchte ich nicht unterlassen, auch an dieser Stelle meinen afrikanischen Freunden und Gönnern für die erwiesene Hilfe den gebührenden Dank auszusprechen.

Zum größten Danke bin ich Seiner Hochwürden dem Herrn Bischof HIRTH, Apostolischem Vikar von Süd-Nyanza, verpflichtet. Auf seine Empfehlung hin fand ich in allen bereisten Missionsstationen nicht nur die übliche gastfreundliche Aufnahme, sondern auch weitgehende Unterstützung, die mir gleich am Anfange, als ich noch im Reisen keine Erfahrung hatte, das Sammeln von Beobachtungen ermöglicht hat.

Herrn Hauptmann W. v. STUMER, dem Kaiserlichen Residenten des Bezirkes Bukoba, verdanke ich meinen ersten anthropologischen Erfolg. Durch seine Unterstützung konnte ich das Knochenmaterial der Toteninsel Busira für die Wissenschaft sichern und mit den später zu solchem Umfange gelangten anthropologischen Sammlungen beginnen, zu denen dann noch einige sehr wertvolle Batutsi-Schädel bestimmter Provenienz, ein Geschenk des Herrn Hauptmann W. v. GRAWERT, und mehrere durch meine Expeditionskollegen gesammelte Stücke hinzukamen.

Herrn Missionar R. P. BERNHARD HAUTMANN verdanke ich die ersten Ergebnisse auf ethnographischem Gebiete. Herrn Generalvikar von Ruanda R. P. LÉON CLASSE und den Herren Missionären R. P. PAUL BARTHELÉMY, R. P. LAUREANO EMBIL, R. P. WEKERLE, R. P. LÉON DELMAS, R. P. CHARLES LECOINDRE und meinem verunglückten Freunde R. P. PAUL LOUPIAS verdanke ich sowohl die Möglichkeit, mit den pygmoiden Batwa in näheren Kontakt getreten zu haben, wie auch eine Fülle von Informationen über Ruanda und

Hilfe bei der Zusammenstellung der ethnographischen und anthropologischen Sammlungen. Meinem Freunde R. P. FELIX DUFAYS verdanke ich außerdem noch die phonographische Liederregistration in Mulera und eine Anzahl Bilderaufnahmen. R. P. LÉON DELMAS hat mir viel Zeit bei der Zusammenstellung des Ruhunde-Vokabulars geopfert. Herrn ALFRED LEVENDECKER verdanke ich einige Bilderaufnahmen und wertvolle Informationen über Nord-Ruanda.

Für tatkräftige Unterstützung meiner Arbeiten, die während des zweiten Reisejahres ausgeführt wurden, muß ich mich vor allem bei den Herren Offizieren und Beamten der belgischen Congo-Kolonie[1]) bedanken. Die Hilfe der Herren Kommandanten Dr. ENGH und Leutnant BOYTON verschaffte mir wichtige Beiträge zur Ethnographie und Topographie des Ituri-Beckens. Die Herren Kommandanten VERSLUYS, GOEBEL, LANDEGHEM, Hauptleute LEMMENS und HUYGEN, Leutnant CORTET, die Herren SEGERS, COENS, ATHANASOFF, COUSMENT, BRUGGER, die Herren Verwaltungsoberbeamten MOOR und HINQIN und Directeur General VAN DEN PLAS haben meine Kenntnisse des Uele- und Ituri-Beckens wesentlich ergänzt. Sie haben mir die Möglichkeit gegeben die ethnographische Karte mit vielen Einzelheiten über die entlegeneren Gebiete versehen zu können.

R. P. CUSTERS aus Amadi-Uele verdanke ich eine Anzahl anthropologischer und ethnographischer Objekte.

Mein Expeditionskollege EGON FR. KIRSCHSTEIN lieferte mir wertvolle Angaben über die auf seiner Route Avakubi—Stanleyville angetroffenen Stämme.

Die Angaben über die ethnischen Verhältnisse in der englischen Nil-Provinz, in der ich mich nur kurze Zeit aufhalten konnte, verdanke ich den Herren Distriktkommissaren C. W. EDEN und E. B. HADDON, die mir in freundlicher Weise ihre Kartenskizzen zur Verfügung stellten.

---

[1]) Es wird hier geschrieben Congo-Kolonie und Congo-Staat im Gegensatz zu Kongo-Becken und Kongo-Strom.

Lemberg, Dezember 1913. JAN CZEKANOWSKI.

1. Kapitel.

Reisebericht.

Die Expedition. — Organisation der Expedition. — Zugangstraßen des zentralen Afrika. — Die Verkehrstraßen des Nil-Kongo-Zwischengebietes. — Reiseübersicht. — Reiseverhältnisse. — Ergänzung der Vorräte und Versendung der Sammlungen. — Die Tauschwaren. — Sicherheitsverhältnisse.

Die Expedition. Am 1. Mai 1907 verließ ich Berlin, um an der Deutschen Zentral-Afrika-Expedition unter Führung Seiner Hoheit des Herzogs ADOLF FRIEDRICH ZU MECKLENBURG teilzunehmen. Auf die Empfehlung meines Vorgesetzten Herrn Professors FELIX VON LUSCHAN, des Direktors am Königlichen Museum für Völkerkunde in Berlin, wurde ich mit der Stellung des Anthropologen und Ethnologen der Expedition betraut.

Außer Seiner Hoheit, dem Herzog ADOLF FRIEDRICH, der das ganze Unternehmen leitete, beteiligten sich an der Expedition: E. FR. KIRSCHSTEIN vom Geologischen Museum in Berlin als Geologe, Dr. J. MILDBRAED vom Botanischen Museum in Dahlem (Berlin) als Botaniker, Dr. H. SCHUBOTZ vom Zoologischen Institut der Universität Berlin als Zoologe, Hauptmann (damals Oberleutnant) des Eisenbahnregiments Dr. MAX WEISS als Topograph, Dr. W. VON RAVEN vom Institut für Infektionskrankheiten in Berlin als Arzt und Bakteriologe und Oberleutnant (damals Leutnant) WALTER VON WIESE UND KAISERSWALDAU von der Kompagnie 7 (Bukoba) der Deutsch-Ost-Afrikanischen Schutztruppe als Führer. Der Marschall Seiner Hoheit des Herzogs, FR. WEIDEMANN, der das Depot der Expedition führte, und Unteroffizier der Schutztruppe, CZECZATKA, der die Bedeckung von 35 Askari unter sich hatte, vervollständigten die Teilnehmerzahl.

Oberleutnant VON WIESE UND KAISERSWALDAU und der Unteroffizier CZECZATKA erwarteten die Expedition in Bukoba.

Die Aufgabe der Expedition bildete die Erforschung des Nil-Kongo-Zwischengebietes.

Wir folgten dem kürzesten Wege über Neapel, Suez, Aden nach Mombassa. Von Mombassa siedelten wir nach zweitägigem Aufenthalt, der freundlichen Einladung des Herrn Direktors R. F. P. HÜBNER folgend, nach Voi an der Uganda-Bahn über. Dieser Aufenthalt gab Gelegenheit, das Hinterland der Küstenzone etwas näher kennen zu lernen, die Wataita zu besuchen, eine Reihe anthropologischer Messungen vorzunehmen und überhaupt die Zeit des Wartens auf

[p. 1]

den Dampferanschluß fruchtbar auszunutzen. Von Voi fuhren wir nach Kisumu am Victoria-See um von dort, über Entebbe, Bukoba mit dem englischen Dampfer zu erreichen.

Hier in dem erst seit wenigen Jahren zugänglich gewordenen Inneren des Landes sollte die eigentliche Expedition beginnen. Bukoba war auf unserem Wege der letzte Punkt, den man mit vervollkommneten Verkehrsmitteln erreichen konnte, und mußte infolgedessen zum Ausgangspunkt der Karawanenreise erwählt werden.

Organisation der Expedition. In Bukoba wurden die Karawanen zusammengestellt. Jedes Expeditionsmitglied bekam 25—40 Träger, 3 Diener und 2 bis 4 Askari, die das ständige Personal seiner Kolonne bildeten. Die Organisierung kleiner Karawanen, die sich jederzeit voneinander trennen konnten, machte die einzelnen Expeditionsmitglieder voneinander unabhängig und erleichterte sowohl das Verfolgen spezieller wissenschaftlicher Interessen, wie auch die Verpflegung des Personals in den schwachbevölkerten, weglosen Gegenden.

Außer diesen kleinen Karawanen bewegte sich unter der Leitung des Unteroffiziers eine allgemeine Depotkolonne, von der aus die kleinen Karawanen versorgt wurden. Die auf dem Wege organisierten Magazine gestatteten die Stärke dieser Reservekolonne auf 150 beladene Träger zu reduzieren. Trotzdem erreichte die Gesamtzahl der für die Expedition benötigten ständigen Träger die Höhe von 500 Mann.

Die vor dem Eintreffen der Expedition aus Europa durch Oberleutnant von Wiese und Kaiserswaldau organisierten Magazine enthielten hauptsächlich den Proviant für das schwarze Expeditionspersonal. Es befanden sich in den Lagern:

Rufua	200	Lasten
am Mohasi-See	100	„
Kissenji	500	„
Kazindi	600	„
Beni	230	„
Irumu	600	„
In Summa	2230	Lasten

Diese Magazine dienten der Expedition als Operationsbasen, Feldpostämter und Etappenpunkte. Hier wurden die nach Europa bestimmten Sammlungen konzentriert und durch die zurückkehrenden Träger nach Bukoba und Entebbe befördert. Dank dieser Einrichtung konnte das gesammelte und erledigte Material von den kleinen Karawanen abgestoßen werden und vergrößerte nicht unnützerweise den Troß.

Zugangsstraßen des zentralen Afrika. Die Erfahrung hat zwar gelehrt, daß man im zentralen Afrika mit einer kleinen Karawane fast überall durchkommen

kann; die Schwierigkeiten aber, die mit dem Verpflegen zahlreicherer Menschenmassen verknüpft sind, zwingen doch größere Expeditionen sich an gewisse Verkehrsstraßen zu halten. In der afrikanischen Geschichte des letzten Jahrhunderts spielten die Hauptrolle die drei großen Verkehrsadern: Nil, Kongo-Strom und die Zanzibar-Straße, welche die Küste des Indischen Ozeans mit Kongo und Nil verbindet.

Die Zanzibar-Straße beginnt in Bagamoyo und teilt sich in Tabora, dem kontinentalen Handelszentrum der arabischen Einflußsphäre. Der wichtigere Zweig der Zanzibar-Straße geht von Tabora nach Udjidji am Tanganjika und verbindet, im Westen des Sees, Mtoa mit Kasongo und Nyangwe am Kongo-Fluß. Der nördliche Zweig verbindet Tabora mit dem Victoria-See resp. mit dem Nil-Becken. Unabhängig von dem Wasserwege führen noch auf dem Westufer des Sees weniger benutzte Landwege über Kafuro und Kiaka (Kifumbiro) nach Bunyoro und Buganda[1]).

Der Nil wird im Osten von der Nubischen Straße begleitet. Diese führt von Dar-Fur über Shakka zum Bahr-el-Ghazal und Bahr-el-Gebel (Lado). Der Westzweig dieser Straße reicht bis zum Uele und Kongo, während der Ostzweig sich in der Richtung des Victoria-Sees hinzieht. Der Verkehr auf dieser Straße hat sich aber erst nach der Eröffnung der Schiffahrt auf dem Oberen Nil bis Meshra-el-Rjek und Lado stärker entwickelt. Hiedurch wurde Dar-Fur ausgeschaltet und Chartum zum Mittelpunkte des Verkehrs gemacht.

Im Laufe der letzten Jahre wurde zu den hier besprochenen Verkehrsstraßen die Uganda-Bahn hinzugefügt. Sie verknüpft den Victoria-See mit der Küste des Indischen Ozeans und ist infolgedessen eine Erbin der Zanzibar-Straße, die in der nächsten Zukunft wiederum durch den Ausbau der Deutsch-Ost-Afrikanischen Zentralbahn den modernen Verhältnissen angepaßt werden soll.

Diesen historischen Verkehrswegen folgend, drangen die Eroberer im Laufe des XIX. Jahrhunderts ins Innere des Landes vor. Auf der Zanzibar-Straße die Maskat-Araber, auf der Nubischen Straße die Dongolaner, auf dem Nil die Ägypter und auf dem Kongo die Europäer. Jetzt, mit Hilfe der Uganda-Bahn, dringen vor allem die Inder ein.

Diesen Handelsstraßen folgten auch die Forscher ins Innere des unbekannten Kontinentes. Durch SCHWEINFURTH wurde die Nubische Straße erforscht. SPEKE bereiste die Zanzibar-Straße und kehrte auf dem Nil-Wege zurück. JUNKER ging nach der Bereisung der südlichen Strecken der Nubischen Straße auf dem Zanzibar-Wege zurück. Auch STANLEY hielt sich auf seinen Reisen in Ost-Afrika an die Straßen der Zanzibariten. Wie schwer das Reisen außerhalb der benutzten Handelsstraßen ist, illustriert am besten das Martyrium der

---

[1]) Die Aussprache Unyoro und Uganda wird nur von den Küstenleuten angewendet. Man pflegt in den neuen Arbeiten, im Gegensatze zum Königreich Buganda, mit Uganda das englische Uganda-Protektorat zu bezeichnen, das außer Buganda noch die Staaten Bunyoro, Toro und Nkole umfaßt.

Karawane STANLEYs auf dem Aruwimi-Ituri-Wege. Auch jetzt, auf meinen Reisen im Urwald, konnten noch einige Schädel der unterwegs verhungerten Eingeborenen gesammelt werden. Nur durch Mitführung einer Proviantreserve ist es mir gelungen, meine Leute vor diesem Lose zu bewahren.

Die Verkehrsstraßen des Nil-Kongo-Zwischengebietes. Das Nil-Kongo-Zwischengebiet wird nur durch die Nebenzweige des eben besprochenen Verkehrsnetzes berührt. Als die wichtigsten aus ihrer Zahl wären hier zu erwähnen:

1. Die Nil-Kongo-Straße. Sie beginnt in Bumba am Kongo und führt über Ibembo, Bondo, Bambili, Niangara, Dungu, Yei nach Redjaf. Dieser Verkehrsweg kommt zustande durch Ausnutzung des Flusses Itimbiri, der bis Ibembo mit einem kleinen Dampfer befahren wird, und ebenso des Flusses Uele, auf dem zwischen Djabir (Bondo) und Dungu ein Ruderbootdienst eingerichtet werden konnte. Die vorhandenen Stromschnellen lassen dort einen Dampferverkehr nicht zu. Die Länge des Weges beträgt 60 Reisetage. In der letzten Zeit wurde eine Automobilstraße zwischen Bambili und Buta eingerichtet, um den Weg zu verkürzen und den Rubi-Fluß auszunützen. Nominell bestand auch eine Automobilstraße zwischen Niangara und Redjaf, sie funktionierte aber nicht, und die beiden Automobile, die bis zum Nil heraufgeschleppt wurden, verunglückten.

Von Bambili läuft ein Nebenweg dem Bomokandi entlang und führt über Poko, Nala, Rungu, Duru nach Gumbari und Arebi. Der untere Teil dieses Weges kann durch den Bootverkehr auf dem Bomokandi und Poko entlastet werden.

2. Die Ituri-Straße zwischen dem Kongo und den Großen Seen. Sie beginnt in Stanleyville und führt über Bafwaboli, Bafwasende, Avakubi, Mawambi, Irumu nach Mahagi am Albert-See. Die vom Kongo in dieser Richtung beförderten Lasten können, wenn auch mit Mühe, auf dem Wasserwege von Basoko bis nach Avakubi gebracht werden. Der Weg zwischen Avakubi und Yambuya ist aber infolge der zahlreichen Stromschnellen für die Boote so unsicher, daß das Elfenbein vorschriftsmäßig durch Träger auf dem Wege Avakubi—Stanleyville fortgeschafft wird, und auf dem Wasserwege hauptsächlich Kautschuk und Proviant verfrachtet werden. Die Länge der Stanleyville-Irumu-Straße beträgt 55 Marschtage.

Von Irumu zweigt sich die Straße nach Entebbe ab. Die Strecke Toro—Entebbe sollte im Jahre 1910 für den Automobilverkehr fertiggestellt worden sein. Die Länge der ganzen Straße beträgt 21 Marschtage. Der Abschnitt Irumu-Toro macht annähernd ein Drittel aus.

3. Die Straße der Großen Seen. Sie verbindet Mtoa (Albertville) am Tanganjika mit Uvira, Nya-Lukemba, Bobandana, Rutshuru, Kazindi, Beni, Irumu und Mahagi. Diese Straße nutzt für den Lastenverkehr die Seen Tanganjika, Kiwu und den Edward-See aus. Auch auf den beiden letzten gibt es schon

große Stahlboote, die auf dem tiefen Kiwu mit Rudern und Segeln und auf dem seichten Edward-See dagegen hauptsächlich durch Stoßstangen fortbewegt werden. Die Länge der Straße beträgt ca. 50 Marschtage.

Von der Straße zweigen ab: von Kazindi — die Straße nach Toro und von Beni — der wenig begangene Pfad nach Mawambi. Die erste Strecke ist 7, die zweite 11 Tagemärsche lang.

4. Die Nil-Straße, zwischen Victoria-See und Gondokoro, dem Anfangspunkte der Nil-Schiffahrt nach Chartum. Die Alte Straße führt von Entebbe über Masindi, Fadjao, Wadelai, Nimule; die Neue Straße wurde gebaut von Entebbe über Hoima nach Butiaba und kann mit Wagen befahren werden. Die Strecke Butiaba—Nimule wird mit einem kleinen Dampfer oder mit einem Segelboot zurückgelegt. Die letzte Strecke Nimule—Gondokoro geht wieder auf dem Landwege, der für Wagenverkehr eingerichtet ist, aber im Jahre 1909 noch keine Brücken hatte. Der letzte Teil, Redjaf—Gondokoro, kann wieder im Boot zurückgelegt werden.

Ruanda ist bis in die letzten Jahre hinein ganz abgeschlossen geblieben und wird von den hier besprochenen Straßen beiseite gelassen. An ihrer Westgrenze wird seit der deutschen Besitzergreifung ein der belgischen Seenstraße parallel verlaufender Weg durch Regierungskarawanen und Händler benutzt. Er führt auf dem linken Russisi-Ufer und den Ostufern des Kiwu entlang und berührt Usumbura, Tschivitoke, Ischangi und Kissenji. In der allerletzten Zeit hat der Fußweg zwischen Kissenji, Kissaka und Bukoba resp. Tabora einige Bedeutung gewonnen. Die beiden letzten Wege können aber nicht mit den vorher besprochenen organisierten, mit Rasthäusern versehenen Fußwegen verglichen werden. Sie waren einfache Eingeborenenpfade, die manchmal, aber doch sehr selten, von Karawanen begangen wurden. Sie müssen aber trotzdem als Straßen bezeichnet werden, weil man auf ihnen immer Verpflegung für zwei Dutzend Leute und Boote an den Flußübergängen findet.

Zur allgemeinen Charakterisierung der hier besprochenen Wege muß erwähnt werden, daß die vom Kongo-Flusse führenden Verkehrsadern nur für die Beförderung von Kautschuk und Elfenbein zum Flußdampfer und die Versorgung der Militärstationen mit Lebensmitteln für Europäer, Handelsartikeln zu Zahlzwecken, Militäreffekten und Munition berechnet sind.

Die Straße der Großen Seen und die Nil-Straße sind ausschließlich Militärstraßen. Die erstere bewacht die Ostgrenze des Congo-Staates und hat zur Hauptaufgabe den Schmuggel von Kautschuk und Elfenbein zu verhindern. Die zweite eröffnet den Engländern den Zugang zum Sudan von Süden aus.

In den letzten Jahren, bereits nach meiner Reise, soll, im Zusammenhange mit den Reformen im Congo, die Kissenji-Tabora-Straße an Bedeutung gewonnen haben. Auf diesem Wege umgeht das aus dem nordöstlichen Congo kommende Elfenbein weiblicher Elefanten die englische Zollsperre. Durch englische Be-

sitzungen darf nämlich, um die Elefantenbestände zu schützen, nur das Elfenbein männlicher Elefanten geführt werden.

Zum Zwecke meiner Forschungen im Nil-Kongo-Zwischengebiet und bei der Bewegungsrichtung von Südost nach Nordwest konnten die hier besprochenen Wege nur teilweise ausgenutzt werden. Für den ersten Teil der Arbeiten kam in Frage das noch nicht organisierte Ruanda, für das zweite Jahr — der Hungerpfad zwischen Irumu und Gumbari. Auf diesem, durch ein kleines Verpflegungsdepot bei Kabunga gangbar gemachten Wege, mußten sowohl die Vorräte und die Post nachgeschickt, wie auch die Sammlungen nach Irumu befördert werden.

Reiseübersicht. Das Sammeln anthropologischer und ethnologischer Beobachtungen setzte einen Aufenthalt in den bevölkerten Landstrichen voraus, während die übrigen Expeditionsmitglieder durch den Charakter ihrer wissenschaftlichen Arbeiten häufig, wenn nicht vorwiegend, in den menschenärmeren Gebieten aufgehalten wurden. Aus diesem Grunde mußte meine Kolonne von Anfang an ganz selbständig arbeiten und sich nur von Zeit zu Zeit, um ihre Vorräte zu vervollständigen und das Personal zu wechseln, bei der Hauptkolonne für kurze Zeit einfinden.

Von Bukoba aus marschierte ich im Juni mit 28 Mann über die Missionen Kashozi und Bwanja und vereinigte mich mit der Hauptkolonne in Kifumbiro Von hier ging die Expedition geschlossen bis zum ersten Verpflegungsmagazin im verlassenen Militärposten Rufua in Mpororo. Nach einem kurzen Aufenthalt marschierte ich mit dem Botaniker und dem Unteroffizier, der die Depotkolonne nach dem Mohasi-See führte, in die Nähe des zweiten Verpflegungsmagazins. An der Westecke des Mohasi-Sees trennte ich mich von der Kolonne und ging über die Missionen Nsasa und Issawi nach Niansa, der Residenz Juhi Musinga's, des Königs von Ruanda. Hier holte ich die wieder vereinigte Hauptkolonne der Expedition ein, die bald darauf, in zwei Kolonnen getrennt, weiter marschierte. Nach einem längeren Aufenthalt in Niansa ging ich mit R. P. Felix Dupays nach Mulera, wo ich mich wieder länger aufgehalten habe. Von dort besuchte ich den durch Ermordung des R. P. P. Loupias bekannt gewordenen Häuptling Lukara und sammelte Beobachtungen an den Batwa vom Muhawura. Im Oktober reiste ich auf 10 Tage nach Kissenji, unserem dritten Magazin, und untersuchte dort die Expeditionsträger. Von hier kehrte ein Teil unserer alten Leute zurück und nahm die nach Europa bestimmten Sammlungen mit.

Nach der Zusammenstellung meiner kleinen, jetzt schon 36 Mann starken Kolonne, siedelte ich nach der Mission in Njundo über, um mich dort dem Studium der Besitzverhältnisse und der Gemeindeorganisation der Eingeborenen zu widmen; von dort schickte ich den Rest der Sammlungen durch die freundliche Vermittelung der Mission nach Bukoba und marschierte Anfang Dezember zum Edward-See. Im belgischen Posten Rutshuru begegnete ich Dr. Mildbraed und Oberleutnant Weiss und holte in Vichumbi Dr. Schubotz ein, mit dem

Abb. 1. Schematische Routenübersicht.
——— Karawanenstrecken - - - - - Bootstrecken.

[p. 7]

wir zusammen im Boot am Westufer des Edward-Sees nach Kazindi herüberfuhren. Die ganze Expedition, bis auf den Geologen, der bei den Vulkanen durch seine Arbeiten festgehalten wurde, versammelte sich für die Weihnachtszeit dort. Nach einer Woche Aufenthaltes trennte ich mich zum vorletztenmal von der Expedition und marschierte am Ostrande des Ruwenzori nach Toro, um nach 6 Wochen erst den belgischen Posten Beni zu erreichen. Dort fand ich die Reservekolonne, bei der sich auch der kranke Oberleutnant WEISS befand.

Mit ergänzten Vorräten marschierte ich auf dem wenig begangenen Pfade nach Mawambi und von dort auf der Stanleyville-Straße nach Avakubi. Von Avakubi ging ich durch die revoltierten Gebiete nach Nepoko. Von hier schon, auf sehr wenig begangenen Pfaden, setzte ich die Reise zum verlassenen Posten Adjamu fort, und von dort durch den ganz menschenarmen Wald nach Irumu, um von der nach Europa zurückkehrenden Expedition Abschied zu nehmen. In Irumu wurden die Vorräte für meine kleine Kolonne deponiert, und am 31. März marschierte ich mit 46 Leuten ab, um über das Quellengebiet des Ituri das Quellengebiet des Bomokandi zu erreichen. Nach einem mißlungenen Versuche kehrte ich aber von Salambongo auf dem früher begangenen Wege nach Adjamu zurück und erreichte von dort die Station Gumbari am Bomokandi.

In Gumbari wurden einige Lasten deponiert, die freigewordenen Träger entlassen und mit ihnen die geordneten Sammlungen nach Toro zurückgeschickt. Durch Entlassung der Träger vor Ablauf der ausgemachten Zeit konnten die Lasten über die sonst nicht begangene Strecke Gumbari—Irumu hinaus befördert werden. Die durch schwere Strapazen im Urwalde stark mitgenommenen Träger waren sehr erfreut über die Aussicht, ihre Heimat mit bedeutenden Ersparnissen früher zu erreichen, als sie es gedacht hatten, und nahmen die Lasten vergnügt mit. Sie mußten aber bis Irumu durch Askari eskortiert werden, mit Rücksicht auf die Unsicherheit des Weges. Die Askari legten den Weg zwischen Irumu und der Kolonne wiederholt, während meiner Reisen im Uele-Becken, zurück, um die Europa-Post, die von der letzten Poststation in Toro nach Irumu privat zugeschickt wurde, abzuholen und die Vorräte in Gumbari, aus den in Irumu deponierten, zu ergänzen.

Während der ganzen Reise im Uele-Becken diente Gumbari als Basis. Von hier wurde die Kolonne versorgt. Hier wurden auch die Sammlungen konzentriert, die über den Waldstreifen Gumbari—Irumu durch die zurückkehrenden Träger und die Begleiter der Postaskari nicht hinübergeschafft werden konnten. Am 1. Mai verließ ich Gumbari und reiste über Vankerckhovenville (Nzoro), Faradje, Aba nach Yei. Von hier kehrte ich nach Faradje zurück und reiste dann nach Dungu; von dort wurde die zweite Trägergruppe, darunter auch Schlafkranke, nach Hause entlassen. Denn hier traf meine Kolonne auf den ersten Arzt im Congo-Staate. Dieser hatte Sorge zu tragen, daß Schlafkranke in das noch nicht infizierte, wenn auch durch *Glossina palpalis* gefährdete Obere Uele-Gebiet

nicht hereinkämen. Auch diese Trägerkarawane nahm Sammlungen nach Toro mit. Von Dungu reiste ich über Niangara, Surango nach Amadi, dem am meisten nach Westen vorgeschobenen Punkte der ganzen Reise. Von Amadi kehrte ich über Poko, Nala, Rungu und Duru nach Gumbari zurück. Von Gumbari wurden die Sammlungen zu Kabunga in der Mitte der Strecke Gumbari—Irumu geschickt, damit man sie später von Irumu aus abholen konnte, und unter Aufsicht meines Vertrauensmannes Balima, eines alten congolesischen, aufständischen Askari, gelassen. Nach einem längeren Aufenthalt in Gumbari reiste ich nach Arebi, und von dort gelang es mir, mit sehr großen Schwierigkeiten durch das Quellengebiet des Ituri die Goldminen von Kilo und die Militärstation Irumu zu erreichen. In dieser Weise wurde der Mißerfolg, den ich beim vergeblichen Versuche, von Süden denselben Weg zurückzulegen, erlitten hatte, ausgeglichen.

In Irumu wurden die letzten Träger entlassen, und ich reiste weiter mit eingeborenen Trägern. Gleichzeitig wurde ein Askari mit eingeborenen Trägern geschickt, um die Lasten von Kabunga nach Irumu zu schaffen. Um die Wartezeit auszunützen, reiste ich durch das ewig unruhige Lendu-Plateau und Lur-Gebiet nach Mahagi und kehrte über Kilo nach Irumu zurück. Hier wurden unbelastet nach Entebbe zurückkehrende Baganda gemietet, und mit ihnen reiste ich nach Toro. Von hier wurden die Baganda-Träger mit den Sammlungen nach Entebbe geschickt, und ich kehrte mit den Askari und Dienern über Mbarara, Kifumbiro, Bwanja nach Bukoba zurück, das am 29. Januar 1909 erreicht wurde.

Von Bukoba aus besuchte ich noch die Mission in Rubia und Kahigi, den Herrscher von Kyanja, und fuhr mit dem Dampfer nach Entebbe. Von dort besuchte ich Kampala und reiste mit Trägern über Hoima nach Butiaba, um von dort mit einem Segelboot Nimule zu erreichen. Von Nimule ging es wieder mit den Trägern, die die Strecke Butiaba—Nimule zu Fuß gemacht hatten, nach Redjaf und von dort nach Gondokoro, wo ich am 1. April vom Chartum-Dampfer an Bord genommen wurde.

Die Länge des gesamten Weges, der seit der Abreise von Bukoba im Juni 1907 bis zur Abreise von Gondokoro am 1. April 1909 zurückgelegt wurde, beträgt gegen 7000 km. Beim schlechten Zustande der Wege und der Versumpfung der Flußtäler und des Urwaldes kostete die Zurücklegung dieser Strecken sehr große Anstrengungen. Wie auch aus der unten hinzugefügten Zusammenstellung ersichtlich ist, schwankte die durchschnittliche tägliche Marschlänge zwischen 20 und 30 km. Nur selten wurden diese Grenzen überschritten. Größere Anstrengungen hätten die Karawane desorganisiert und das wissenschaftliche Arbeiten unmöglich gemacht. Nur im Urwalde, unter dem Drucke des Nahrungsmangels, legten die Träger 35 km und sogar noch mehr täglich zurück.

Die Entfernungen zwischen den Hauptetappen der Reise betragen:

Reiseverhältnisse. Bezüglich der Reiseverhältnisse in meinem Forschungsgebiete, vor allem in seinem nördlichen Teile, ist recht wenig bekannt. Deshalb dürften auch die Angaben über die technische Durchführung der Reise selbst ein gewisses Interesse beanspruchen.

Als einziges Transportmittel dienten im ganzen Forschungsgebiete Träger. Diese für das Reisen unentbehrlichen Leute sind in der Hauptmasse Eingeborene, die ihre Heimat verlassen, um sich das zur Bezahlung der Hüttensteuer notwendige Geld zu verschaffen. Sonst müßten sie die Steuer auf den Militärstationen abarbeiten. Diese Naturalleistungen werden aber, mit Rücksicht auf die Notwendigkeit eines Aufenthaltes auf den Stationen, von den Leuten sehr ungern getragen. Mit den Stationen verknüpfen sich die noch frischen Erinnerungen an die Eroberungszeit. Deshalb gibt es auch immer in den besteuerten Gebieten arbeitswillige Leute.

Abgesehen von der in der ersten Woche passierten Bukoba-Residentur und dem, am Schluß der Expedition bereisten, Uganda-Protektorat, wo die Eingeborenen der Regierung 3 Rupien und dem Landesherrn 2 Rupien pro Hütte zahlen mußten, gab es im durchquerten Gebiete keine Geldsteuer. Die Einwohner der Residenturen Ruanda und Urundi hatten den deutschen Behörden überhaupt keine Steuern zu zahlen, und im Congo-Staate gab es nur Abgaben *in natura*. Im Prinzip mußten die Eingeborenen dem Staate für den gewährten Schutz und die hergestellte Sicherheit 40 Stunden Arbeit im Monate leisten. Diese Arbeit wurde in den Formen des Trägerdienstes, der Nahrungslieferung für Militärposten und durchreisende Beamte und des Kautschuk-

schneidens geleistet. Die letzteren Leistungen wurden aber auch in Arbeitszeit umgerechnet. So kam es, daß die Eingeborenen im reichen Urwalde bei Avakubi bis 6 kg Kautschuk monatlich schneiden mußten, während es im Uele-Becken stellenweise nur Bruchstücke eines Kilogramms waren. Es wurden im Jahre 1908, als entsprechend dem Sammeln eines Kilos Kautschuk, in Niangara 100 Arbeitsstunden, in Amadi 72 Arbeitsstunden und in Gumbari, in der Nähe des Urwaldes, 28 Arbeitsstunden bestimmt. Ein Tag Trägerdienst wurde, unabhängig von der Länge der zurückgelegten Strecke, als 5 Arbeitsstunden und die Rückkehr ohne Lasten als die Hälfte der Hinreise berechnet.

Es darf dabei nicht unerwähnt bleiben, daß im Prinzip alle Leistungen bezahlt wurden, wenn auch sehr billig. In dem Distrikt des Oberen Ituri wurde, wohl mit Rücksicht auf die Nähe von Uganda, die Stunde Trägerdienst mit 10 Centimes und im Uele-Becken nur mit 5 Centimes berechnet. Die letzte Zahl zerfiel dabei in Lohn 1,875 Centimes und in Geschenk 3,125 Centimes, die getrennt gebucht wurden. Die übrigen Leistungen wurden nach einer ganz anderen Taxe berechnet, und zwar 1 Stunde Arbeit = 1 Cent. So bekam man die für Uele bei der Steuerberechnung gültige Äquivalenztafel:

1 Ration vegetabiler Lebensmittel, ca. 5 kg schwer . .	5 Cent.	=	5	Stunden
1 Liter Palmenöl	10 „	=	10	„
1 Ration Fleisch, ca. 1 kg	5 „	=	5	„
1 kg Kautschuk	25 „	=	25	„
1 Stunde öffentlicher Arbeit (Wegebau, Regierungspflanzungen)	1 „	=	1	„
1 Tag Trägerdienst	25 „	=	5	„
Für den als Steuer abgegebenen einen Zahn des erlegten Elefanten pro Kilo	50 „			
Gesamtbesteuerung	6,60 Fr.	=	480	„

Die Belohnung wurde ausgeteilt in europäischen Artikeln, wie Stoffen, Kleidungsstücken, Messern, Glasperlen usw., wie auch in 12 cm langen Stücken Messingdraht, die als Münzen im Werte von 6 Centimes (mitako) im Umlauf waren.

Um die Häuptlinge an den Steuerleistungen ihrer Untertanen zu interessieren, wurden ihnen noch Geschenke im Verhältnisse zum Verdienste ihrer Leute gemacht. Außer diesen „Prozenten", die bei jeder Steuerleistung ausgehändigt werden mußten, bekamen sie noch als Extrageschenk ein oder zwei Vorderlader für jede Tonne gelieferten Kautschuks.

Wenn auch diese Zahlungen sehr niedrig waren, so deckten sie doch im großen Maße den damals vorhandenen Bedarf an europäischen Importwaren, und es gab wenig Leute, die bereit gewesen wären, auf Reisen zu gehen und den sich damit verknüpften Unbequemlichkeiten auszusetzen, um einen für sie unbrauch-

baren europäischen Gegenstand, ein Stück Stoff oder etwas Ähnliches zu erwerben, womit sie sich von der lästigen Steuerleistung nicht frei kaufen konnten.

Die Verwendung der im Lande gemieteten Träger, die hier kurz als Hilfsträger bezeichnet werden, war infolgedessen mit mancherlei Unbequemlichkeiten verknüpft. Die wichtigsten waren:

1. Auf die Träger mußte man oft tagelang warten. Sie betrachteten ihre Arbeit doch im Grunde genommen als einen Frondienst, trotzdem sie dafür bezahlt wurden. Die sonst sehr entgegenkommenden Behörden konnten in dieser Hinsicht wenig helfen. Sogar Regierungstransporte kamen immer mit mehreren Monaten Verspätung am Orte ihrer Benutzung an, und den Stationen fehlten nicht selten die allernotwendigsten Verpflegungsmittel, wie Salz, Zucker usw.

2. Die Hilfsträger gingen nicht über die Grenzen des ihnen bekannten Bezirkes hinaus. Sie gingen in keinem Falle weiter als bis zur nächsten Militärstation. So konnte ich zum Beispiel die Leute von Gumbari nicht bewegen, meine Lasten nach Irumu zu bringen. Sie gingen zwar mit meinen Leuten, an die sie sich schon gewöhnt hatten, in den Urwald hinein, aber doch nicht weiter als bis zu den Grenzen des beim Kautschuksuchen durchstreiften Teiles.

Aus diesem Grunde wurde es notwendig, um die Bewegungsfreiheit nicht einzubüßen, am Anfange ausschließlich mit den Kontraktträgern aus Deutsch-Ost-Afrika zu reisen. Erst später, beim tieferen Eindringen in die lokalen Verhältnisse, konnten diese Leute auf ein Minimum reduziert werden und durch die lokalen, billigeren und in ethnographischer Beziehung interessanteren, Arbeitskräfte ersetzt werden. Dieses hatte den Vorteil, daß man die Hilfsträger bei jedem Aufenthalt nach Hause entlassen konnte und nur die reduzierte Zahl des ständigen Personals zu verpflegen brauchte. Die Kontraktträger waren auf ein Jahr verpflichtet und bekamen monatlich 8—10 Rupien[1]) und die Verpflegung. In Kampala aber mieteten die Händler Träger etwas schlechterer Qualität für 6 Rupien monatlich und ohne die Verpflichtung, sie zu verpflegen.

Die Zusammensetzung der Karawane ist gegen den Schluß der Reise recht großen Schwankungen unterworfen gewesen, in dem Maße, als man die Sammlungen allmählich in der Richtung von Entebbe wegschaffen mußte. Nach dem Abmarsche der Expedition zum Kongo-Fluß wurde nämlich die Verbindung zwischen unserem Magazin in Irumu und dem Dampfer der Uganda-Bahn unterbrochen, und die Sammlungen konnten nicht mehr fortlaufend nach Europa transportiert werden.

---

[1]) 1 Rupie = $^1/_{15}$ £ = 1,33 M.

Meine Karawane zählte am Anfange der Expedition 28 Mann und erreichte am Schlusse der Congo-Reise die Stärke von 79 Mann. Diese, durch die Zahl der zu befördernden Sammlungen und Vorräte bedingten Schwankungen werden am besten aus der Zusammenstellung der mitgeführten Lasten verständlich.

Die umstehende Tabelle gewährt einen Einblick in die Bewegungen der Kolonne, die Versorgung mit Vorräten und das Abschieben der Lasten mit wissenschaftlichen Sammlungen.

Ergänzung der Vorräte und Versendung der Sammlungen. Während der Arbeiten im Uele-Becken wurden, wie ich schon oben erwähnte, bei jeder Gelegenheit Sammlungen nach Toro oder wenigstens nach Irumu abgeschoben. Das wurde zum größten Teil durch die zurückkehrenden, entlassenen Träger bewerkstelligt. Einige Lasten wurden herübergetragen durch die Begleiter der Postaskari, die, um Vorräte aus Irumu zu holen, mitgeschickt wurden. Während meines Aufenthaltes in Gumbari konnten die übriggebliebenen 21 Lasten mit Sammlungen auf den halben Weg in der Irumu-Richtung, nach Kabunga, geschickt werden. Da die eigenen Träger (damals 12) nicht ausreichten, mußten in Gumbari Hilfsträger gemietet werden, und diese wollten für keinen Preis

[1]) In Klammern ist die Zahl der begleitenden Regierungsaskari (deutschen, englischen oder congolesischen) angegeben.

weiter gehen. Sie fürchteten die Menschenfresser des Urwaldes so sehr, trotzdem auch bei ihnen selbst das Menschenfleisch nicht verschmäht wurde, und bei der mitgegebenen Eskorte von einer Gefahr des Gefressenwerdens kaum die Rede sein konnte.

Verzeichnis der mitgeführten Lasten.

Berücksichtigt man, daß die Entfernung des Postens Amadi von Irumu 42 Marschtage, und von der eigentlichen Basis Entebbe sogar 63 Marschtage beträgt, so muß das geringe Quantum der bei der Kolonne geführten Vorräte, und die dadurch bedingte geringe Anzahl von Trägern auffallen. Diese geringe Trägerzahl, die so viel Mühe und Sorgen gespart hat, reichte nur dank den eingerichteten Expeditionsmagazinen und der Gefälligkeit der Congo-Behörden

aus, die das Abheben der notwendigen Vorräte aus den Staatsmagazinen gegen Quittungen gestatteten. Wäre das Letztere nicht der Fall gewesen, so hätte meine Kolonne mit 25—30 Tauschlasten mehr nach dem Uele hineingehen, und für diese Reise die entsprechende Anzahl von Trägern mehr haben müssen, was die Verpflegungsschwierigkeiten noch wesentlich gesteigert hätte. Außerdem sind die in den verschiedenen Teilen des Landes herrschenden Moden und auch infolgedessen die begehrten Waren verschieden. In den Regierungsmagazinen fanden sich aber in den meisten Fällen die in den betreffenden Gebieten am stärksten begehrten Sachen. Mit unseren Sachen war das nicht immer der Fall, da die Congo-Moden oft erst, als sie dort schon vorüber waren, am Victoria-See bekannt wurden.

In dem ganzen bereisten Teile des Congo-Staates gab es keine Faktoreien, wo man für Geld etwas kaufen konnte. Handelsniederlassungen wurden nicht zugelassen. Nur die Eingeborenen konnten, wenn die Staatsmagazine gut versehen waren, die Sachen, mit denen sie nicht zufrieden waren, und vor allem die Messingdrahtstücke (mitako), gegen andere Sachen, mit Verlust von 15%, eintauschen. Diese Geschäftsgelegenheiten wurden aber, soweit mir bekannt ist, nicht ausgenutzt.

Im Uele arbeiteten zwar 17 wandernde Elfenbeinhandelsunternehmungen, die mit 27 Griechen, 9 Indern, 51 Belutschen, 17 Arabern und 12 Wanyamwezi als Handelstreibenden und mit 3220 Baganda-Trägern im Jahre 1908 ca. 50 Tonnen Elfenbein exportierten. Sie kauften die zweiten Zähne der Elefanten, die den Anteil der Häuptlinge bildeten, zahlten aber pro Kilo mit Sachen, die in Chartum einen Wert von 2 bis 3 Fr. haben konnten. Unter diesen Umständen war es selbstverständlich ganz unmöglich die eigenen Vorräte bei den Händlern zu vervollständigen. Sie nahmen dabei eine andere Zahlung als Elfenbein und Sachen, die sie gegen dieses austauschen konnten, sehr ungern an.

Im bereisten Teile von Deutsch-Ost-Afrika, abgesehen von Bukoba, gab es an der Grenze von Ruanda zwei Handelsdörfer, Kissenji und Ischangi, die hauptsächlich vom Schmuggel aus dem Congo-Staate lebten. Diese Händler aber durften nach Ruanda nicht hinein. Erst in Uganda hatte man Läden, in Toro und Mbarara, wo man sich mit dem Notwendigsten versehen konnte, wenn auch nicht zu billigem Preise.

Man war also ausschließlich auf die eigenen Vorräte und die Magazine des Congo-Staates angewiesen.

Um das vorige Verzeichnis zu vervollständigen, soll hier noch eine Tabelle (S. 17) über die Ergänzung der Vorräte und Versendung der Sammlungslasten hinzugefügt werden. Diese beiden Listen geben den besten Einblick in die Schwierigkeiten, die mit dem Reisen verknüpft waren.

Mit den wenigen Leuten mußten 481 Lasten in Bewegung gesetzt und viele über 1000 km auf dem Rücken geschleppt werden. Nur etwa ein Viertel, in der Hauptsache Lebensmittelvorräte, konnte man an Ort und Stelle erwerben und brauchte sie nicht weit zu schleppen. Diese Lasten wurden auf unserer Tafel in Klammern gesetzt.

Die eingeklammerten ( ) Lasten wurden an Ort und Stelle erworben.

Die Tauschwaren. Die Auswahl der für Zahlungszwecke notwendigen Waren bildet die wichtigste Frage bei der Organisierung der Reise. Aus diesem Grunde wird es angebracht sein, die in dieser Richtung gemachten Erfahrungen kurz zur Sprache zu bringen. Die besten Tauschwaren in unserem Gebiete sind Stoffe und Salz. Die blauen starken Baumwollstoffe, wie sie von den europäischen Arbeitern zu Blusen benutzt werden (Kaniki oder Indigo drill), werden am meisten

begehrt. Weiße Baumwollstoffe sind auch sehr beliebt, die roten, dünnen, wenig widerstandsfähigen dagegen weniger. Die Glasperlen sind ein sehr kapriziöser Tauschartikel, da sie am stärksten den Schwankungen der Mode unterworfen sind. So wurden z. B. die kleinen roten Glasperlen im Nepoko-Becken sehr gern angenommen. Sie lockten viele Leute an, die sich ihretwegen messen ließen. In der Erwartung, daß es in dem nicht weit entfernten Uele ähnlich sein würde, versah ich mich mit 100 kg dieses Artikels. Im Uele aber war diese Mode schon vorüber, und ich konnte während der 10 Monate meines Aufenthaltes nur 3 Lasten loswerden, so daß die letzten 20 kg Bukoba erreichten, wo sie von den Händlern, als eine in Urundi beliebte Ware, gekauft wurden.

Verzeichnis der zu Zahlzwecken verwendeten Waren. 1. IV. bis 1. XII. 1908.

Glasperlen und Salz sind infolge ihrer Teilbarkeit ein sehr bequemer Tauschartikel. Sie ersetzen hier die Scheidemünze. Die Stoffe können nämlich nicht in kleinere als Zweiyardstücke getrennt werden. Sie stellen infolgedessen den Wert von 1—2 Fr. vor und entsprechen unserer Silbermünze. Die von den Elfenbeinhändlern aus Chartum eingeführten Sachen werden, von den Stoffen abgesehen, durch die Eingeborenen mehr geschätzt und verdienen infolgedessen besondere Beachtung. Sie gehören teilweise zu den Prunk- und Luxussachen, die sich nur die Allervornehmsten im Lande leisten können.

Im Jahre 1908 wurden durch die Elfenbeinhändler eingeführt: Reittiere, Blechkoffer, Anzüge, Schuhe, lederne Gamaschen, Stühle, Tische, Grammophone, Zelte, Spieldosen, Uhren, Parfüms, Militäruniformen, Spiegel, Teller, Kochgeschirr, Becher, Gurte, Hüte, Seife, Trompeten, Trommeln, Hemden, Stoffe, Teppiche, Harmonikas, Mützen, Tropenhelme, Ketten, Bijouterien, Feldbetten, Moskitonetze.

Den größten Wert hatten selbstverständlich die Reittiere. Ihr Einführen war auch mit dem größten Risiko verknüpft, da sehr viele an Krankheiten und infolge der verständnislosen Behandlung eingingen. Die für das Jahr 1908 gültigen, bei den Händlern gesammelten Angaben über die eingeführten Tiere stelle ich in der folgenden Liste zusammen:

Zahl	Reittiere	Preis in Lado	Kaufkraft kg Elfenbein	Abgang durch Tod
20	Pferde	500 Fr.	120—150	3/4
50	Maultiere	400 „	100—120	1/2
60	Esel	100 „	40— 50	1/4

Während meiner Reise im Uele habe ich zu Zahlzwecken die in der Tabelle auf Seite 18 zusammengestellten Waren benutzt. Diese Liste ist mit Angaben versehen, wo die betreffenden Tauschlasten erworben wurden; das gestattet, die Ausgaben während der Reise zu überschauen, und gibt ein genaueres Bild des täglichen Bedarfes.

Um diese Tabelle zu ergänzen, soll hier noch die Zusammenstellung der Preise in Toro und in den Magazinen des Congo-Staates beigefügt werden:

Preise in Toro.

1 große Gora (30 Yard) Amerikani (weißer Baumwollstoff) .	12 Rp.
1 Paket (4 Yard) Kaniki (Indigo drill)	2 „
1 Sack (60 Pfd.) Salz aus Katwe am Edward-See	8 „
1 Decke	2 „
1 Khakey-Anzug	15 „

Preise in den Congo-Magazinen.

1 Stück (15 Yard) Kaniki (Indigo drill) oder Bangala	14,96	Fr.
1 „ (15 „) Bleu prints oder Croisette indigo	12—13	„
1 „ (15 „) Madapolam oder Amerikani . . .	12—13	„
1 „ (15 „) Flanell	9—10	„
1 Decke	8—12	„
1 Anzug	ca. 10	„
1 Hemd	3	„
1 Gurt	2,36—3,88	„
1 Hut oder Mütze	1,40—2,88	„

1 Paar Schuhe	13	Fr.
1 Messer in Scheide (Coutelas)	3,30—3,73	„
1 emaillierter Teller	1,40	„
1 kg Glasperlen	5—8	„
1 m Messingdraht	0,50	„
1 kg raffiniertes Salz	2,00	„
1 „ Tabak	5,60	„
1 Tabakspfeife	0,82	„
1 kg Seife	4,64	„
1 Rolle Nähfaden	0,52	„

Sicherheitsverhältnisse. Für die Sicherheit im Lande ist durch eine Anzahl zerstreuter Militärstationen gesorgt. Diese Stationen dienen zugleich als Verwaltungszentren, von denen aus, im Prinzip wenigstens, die Verhältnisse im Lande geordnet und die Steuern eingezogen werden.

Der Nordwesten von Deutsch-Ost-Afrika zerfällt in drei Residenturen: Bukoba, Urundi und Ruanda. Im Hauptorte der Residentur Bukoba, in der Stadt desselben Namens, ist der Resident mit der Kompagnie Nr. 7 stationiert, und von dort aus werden zwei Nebenposten in Ussuwi und Kifumbiro besetzt. Im Innern von Urundi befanden sich zur Zeit meiner Reise noch keine Garnisonen. Der Resident wohnte an der Grenze in Usumbura, und dort waren auch die Kompagnien Nr. 9 und Nr. 11 stationiert. Der kleine Posten Tschivitoke lag ebenfalls an der Grenze im Russisi-Tale. In Ruanda wurde die Residentur schon nach meiner Abreise organisiert. Damals wurden nur von Usumbura aus die Posten von Kissenji und Ischangi besetzt, mit je zwanzig Askari von der Kompagnie Nr. 11. Jetzt ist eine Station in Kigali eingerichtet. Dort wohnt der Resident mit Polizeiaskari.

Der bereiste Westen des Uganda-Protektorates war eingeteilt in: Uganda-Provinz, West-Provinz und Nil-Provinz. In der Uganda-Provinz, in Entebbe, wohnte der Gouverneur, und in der benachbarten Stadt Kampala, die eine Befestigung besaß, war auch die Hauptmasse der Truppen konzentriert. Die West-Provinz zerfällt in die Distrikte Nkole, Toro und Bunyoro mit den Stationen Mbarara, Fort Portal und Hoima. In allen diesen Stationen war je eine Kompagnie Polizeitruppen stationiert. Die von Fort Portal wurde durch einen Schwarzen, einem alten Sergeant-Major aus der Emins-Truppe, befehligt, der allein für ihre militärische Ausbildung sorgte, da schon seit längerer Zeit keine weißen Instruktoren hingeschickt worden waren. In Mbarara waren zur Zeit meiner Anwesenheit noch zwei Kompagnien des regulären Uganda-Schützenbataillons. Die Nil-Provinz zerfiel in drei Distrikte: Koba, Nimule und Gondokoro.

Der bereiste Teil des Congo-Staates war eingeteilt in: Territoire de la Russisi-Kiwu, Zône Haut-Ituri, Zône Bomokandi, Zône Gurba-Dungu und

Enclave de Lado. Schon nach meiner Reise wurde eine gleichmäßigere Einteilung in Distrikte durchgeführt, wobei die hier besprochenen Provinzen als Distrikte verblieben sind und nur Zône Bomokandi und Zône Gurba-Dungu zum Distrikt des Haut-Uele zusammengefaßt wurden. Enclave de Lado bildete den lebenslänglichen Besitz des Königs Leopold II. und wurde nach seinem Tode evakuiert und durch die Sudan-Truppen besetzt. Diese großen Zônes zerfielen in Secteurs und die Secteurs in Posten-Bezirke. So z. B. die Zône Bomokandi in die drei Secteurs: de l'Est, mit den Stationen Gumbari, Arebi, Duru, Vankerckhovenville; du Sud mit den Stationen Poko, Niapu, Nala, Rungu; du Nord mit den Stationen Niangara, Surango, Amadi. Der mir bekannte Norden des Territoire de la Russisi-Kiwu zerfiel in die drei Secteurs: Bobandana mit dem Nebenposten Goma, Rutshuru, und Beni mit dem Nebenposten Kazindi. In den kleinen Posten waren Abteilungen aus 25 Askari, mit wenigstens einem Europäer, stationiert, in den Zentralstellen der Secteurs kam noch das 50 Mann starke Pelleton des Chef de Secteur hinzu. In den Zentralstellen der Bezirke (Zône) lag das Depot der Kompagnie. So wurde die Truppenmacht des Bezirkes (Zône) bezeichnet, trotzdem sie meistens, ihrer Stärke nach, einem Bataillon gleichkam. Nur die Truppen im Territoire de la Russisi-Kiwu und in der Enclave de Lado waren in 2 oder 3 Kompagnien gegliedert und wurden in großen Massen zusammengehalten, um den Ansprüchen auf die strittigen Gebiete mehr Nachdruck zu verleihen. Die Stärke dieser Besatzungen war im Jahre 1906:

Kompagnien	Russisi-Kiwu	2000	Askari
Kompagnie	Haut-Ituri	500	„
„	Bomokandi	470	„
„	Gurba-Dungu	400	„
Kompagnien in Enclave de Lado		1800	„

Die Sicherheit der Wege war im bereisten Gebiete sehr verschieden und wohl in den englischen Besitzungen am größten und in den strittigen Gebieten am geringsten. Während meines Aufenthaltes beim König von Ruanda wurde unsere Postkarawane überfallen und die Lasten mit Stoffen geplündert. Die Absendung zweier Askari genügte aber um alles zurückzubekommen. Während meines Aufenthaltes in Mulera habe ich mit R. P. P. Loupias, nur von zwei Askari begleitet, den Häuptling Lukara am Muhawura-Vulkan besucht. Zwei Monate später griff Lukara unseren Geologen Herrn Egon Fr. Kirschstein an, und dieser konnte sich bei der Übermacht der Gegner nur mit großer Not zurückziehen, nachdem der Tod des Bruders von Lukara, der durch eine Kugel getroffen wurde, eine Panik hervorgerufen hatte. Zwei Jahre darauf wurde mein Reisegefährte R. P. Paul Loupias durch denselben Lukara ermordet.

Während der Forschungen im Aruwimi-Becken passierte ich wiederholt die revoltierenden Gegenden. Das Wesen der Revolte bestand darin, daß die

Eingeborenen in den Urwald flüchteten, um sich dem „Arbeiten für die Europäer" zu entziehen. Zu Feindseligkeiten kommt es gewöhnlich erst, wenn man versucht sie mit Gewalt zur Rückkehr in die alten Sitze in der Nähe der Stationen zu bewegen. Die Reputation eines Fremden und die in Khakey gekleideten Askari schützten mich vor Verwechslung mit den Congo-Beamten. Nur einmal, auf dem Wege von Nepoko nach Adjamu, beim Passieren der Gebiete revoltierender Momvu wurden die Askari der Nachhut mit Pfeilen angegriffen, worauf sie mit Schüssen antworteten. Auch auf dem Wege zwischen Gumbari und Irumu ließ die Sicherheit zu wünschen übrig. Die Sammlungen konnten aber, auch ohne meine Begleitung, diesen Weg passieren. Einmal kam es zwar in meiner Abwesenheit sogar zu einem „Kriege" bei Kabunga. Die Wangwana hatten die vor der Karawane eingetroffenen eingeborenen Träger angegriffen und wurden durch die Schüsse der Askari, die mit den langsamer marschierenden Kontraktträgern nachkamen, aus ihrem Dorfe verjagt. Später wurde aber zwischen den Parteien Friede geschlossen und die Lasten blieben ein paar Wochen im Dorfe liegen, durch meinen Vertrauensmann Balima beaufsichtigt. Sehr schlimm war es an den Ituri-Quellen. Die Leute aus dem Uele-Gebiete kamen hierher, um Kautschuk zu schneiden. Da aber die Gegend durch keine Militärstation beaufsichtigt wurde, so hatten die Besucher ganz freie Hand. Sie plünderten die Elfenbeinvorräte, raubten Weiber und sollen sogar von Zeit zu Zeit einen oder den anderen verspeist haben. Ich konnte dieses Land nur dank der Unterstützung des Herrn Substitut (Staatsanwalt) Smets besuchen. Er betraute mich mit der Rückbegleitung der, durch den Häuptling Alimasi geraubten, Weiber und Kinder und vor allem der Gewehre. Dadurch wurde ich gut empfohlen und konnte ungestört die Reise außerhalb der Einflußsphäre der Stationen fortsetzen.

Am schlimmsten waren die Verhältnisse auf dem Lendu-Plateau zwischen Irumu und Mahagi. Die kriegerischen Eingeborenen duldeten die Europäer nur auf der Verkehrsstraße. Ein Verlassen dieser betrachteten sie als eine Vergewaltigung der eingebürgerten Ordnung. Auf meiner Hinreise konnte ich die Gegend nicht nur friedlich passieren, sondern auch sehr viele Leute messen. Kommandant Dr. Engh wurde aber angegriffen und gezwungen, vor meinem Eintreffen in unser gemeinsames Nachtlager, auf die Einwohner der nächsten Nachbarschaft zu schießen. Trotzdem gelang es mir, am nächsten Tage, dort Träger zu bekommen und weiter zu ziehen.

---

2. Kapitel.

Das Zwischenseengebiet.

Allgemeine Übersicht. — Staaten. — Bevölkerungsdichte. — Sprachverhältnisse. — Clans.

Allgemeine Übersicht. Auf dem afrikanischen Kontinent, wo alles in einem so großen Maßstabe geboten wird, gibt es nicht viele Gebiete, die sich, bei geringer Ausdehnung, durch eine scharf ausgesprochene Physiognomie auszeichnen. Zur Zahl dieser wenig ausgedehnten und doch unleugbaren geographischen Einheiten gehört das Zwischenseengebiet.

Die Grenzen des Zwischenseengebietes werden durch natürliche Verkehrshemmnisse gebildet und können infolgedessen recht genau angegeben werden. Die Ostgrenze bespült der Victoria-See von der Muansa-Bucht im Süden bis zu den Ripon-Fällen im Norden und der Victoria-Nil. Der letztere bildet zugleich auch die Nordgrenze. Die Westgrenze folgt den Seen Albert-Nyanza, Edward-Nyanza, Kiwu und dem nördlichen Teile des Tanganjika. Die, im Gegensatze zu den übrigen, im Osten schwach markierte Südgrenze geht vom Mlagarassi auf dessen Zufluß Ulindi-Mutundu über und führt dann nach Osten, im Süden von den Wäldern und Steppen am Rande des Victoria-Seebeckens, zur Muansa-Bucht (Smith-Sund).

Das Zwischenseengebiet stellt ein Hochplateau dar, das im Osten vom Kiwu und im Norden vom Edward-See sich am stärksten erhebt und in allen vier Himmelsrichtungen abfällt. Die Ostabhänge entwässern die in den Victoria-See fließenden Ströme Katonga, Bukora, Kagera und Ost-Ruiga. Die Westabhänge des Zwischenseengebietes gehören nur teilweise zum Nil-System, da nur ihre nördliche Hälfte durch die Zuflüsse des Edward-Nyanza (Rutshuru, Ishasha, Ntungwe, Ruampuno usw.) und des Semliki entwässert wird. Der südliche Teil der Westabhänge, der durch die Zuflüsse des Kiwu, des Russisi-Stromes und des Tanganjika entwässert wird, gehört zum Kongo-Becken. Hierher gehört auch die südliche Böschung, die durch das Mlagarassi-System ihre Niederschläge ableitet. Der Nordabhang hat keine bedeutenderen Ströme, vom Kafu abgesehen. Sonst wären nur noch die unbedeutenden Zuflüsse des Albert-Sees zu erwähnen.

Es scheint, als ob in nicht sehr weit zurückliegenden Zeiten hochstämmige Urwälder das ganze Zwischenseengebiet bedeckt hätten. Die Wälder im Osten vom Albert-See (Bugoma und Budonga), der Buddu-Wald in der Nähe des

[p. 23]

Kagera-Unterlaufes, die Wälder im Südwesten vom Victoria-See, wie auch die Urwälder Ruanda's und Urundi's, des Ruwenzori-Massivs und des Semliki-Tales sind als ihre Überreste anzusehen. Diese Wälder werden aber mehr und mehr vernichtet, und das Land bedeckt sich, soweit es nicht bebaut wird, mit Grasweiden, Steppen und Busch. Das Zwischenseengebiet gehört nämlich zu den am dichtesten bevölkerten Teilen des afrikanischen Kontinentes, und die Zunahme der durch eine verhältnismäßig hohe soziale Organisation geschützten Bevölkerung bedeutet einen mächtigen Faktor bei der Umgestaltung der Landschaft und der Verdrängung des Urwaldes.

Die Bevölkerung des Zwischenseengebietes besteht aus drei kulturell und anthropologisch stark verschiedenen Elementen. Die Hauptmasse der Einwohner bilden Ackerbauer, die man mit den Namen Bahiru im Nordosten und Bahutu im Südwesten zu bezeichnen pflegt. Neben den Ackerbauern findet man fast überall zerstreute Teile der Hirtenstämme, welche Bahima bzw. Batutsi genannt werden. In den Wäldern im Südwesten haben sich noch die Überreste einer Jägerbevölkerung, die Batwa, erhalten. Diese werden aber immer mehr verdrängt.

Das Auftreten heterogener Elemente in einem von Nordosten her leicht zugänglichen Gebiete genügt schon, um hier Einwanderungen aus dem Norden zu vermuten. Diese Vermutung wurde auch von dem ersten Forscher[1]), der das Land bereist hat, ausgesprochen und durch die lokalen Überlieferungen bestätigt. Über die Zahl der Einwanderungen, ihre zeitliche Aufeinanderfolge, die kulturelle Ausstattung und ethnische Zugehörigkeit der einzelnen Wellen, ließ sich bis jetzt noch keine Klarheit gewinnen, und diese Fragen werden wohl noch lange den Mittelpunkt der Forschungen im Zwischenseengebiete bilden.

Staaten. Die Bevölkerung des Zwischenseengebietes ist in eine Anzahl Staaten organisiert, die man gewöhnlich, mit Rücksicht auf die Hirtenaristokratie des Runyoro-Sprachgebietes, als Bahima-Staaten zu bezeichnen pflegt.

Die Staaten des Zwischenseengebietes müssen, nach der Sprache ihrer Einwohner, in drei Hauptgruppen gegliedert werden:

1. Buganda[2]),
2. Banyoro-Staaten,
3. Barundi-Staaten.

BUGANDA[3]) umfaßt gegenwärtig (seit 1897) die Gebiete zwischen Victoria-See, Victoria-Nil, Kafu, Ngussi, Mizizi, Nabutari, Kachira-See und der Grenze

---

[1]) SPEKE, J. H., Die Entdeckung der Nilquellen. Leipzig 1864, S. 271.

[2]) Es ist üblich geworden, Buganda von Uganda zu unterscheiden. Den eingeborenen Namen Buganda bezieht man auf den Eingeborenenstaat der Baganda, während Uganda das englische „Uganda-Protectorate" bezeichnet und die Gebiete zwischen Deutsch-Ost-Afrika, Victoria-See, Rudolph-See, Nil und Congo-Staat umfaßt.

[3]) Vgl. die Karten in den Werken: JOHNSTON, H. H., The Uganda Protectorate. London 1902. ROSCOE, J., The Baganda. Their Customs and Beliefs. London 1911.

von Deutsch-Ost-Afrika. Dahin gehören auch die durch Schlafkrankheit entvölkerten Sese-Inseln.

Zur Zahl der Banyoro-Staaten gehören im englischen Teile des Zwischenseengebietes:

1. Bunyoro,
2. Toro,
3. Nkole (inkl. Bukanga) und
4. Koki,

und im deutschen Teile des Zwischenseengebietes die Staatenkomplexe:

1. Mpororo,
2. Karagwe,
3. Buhaya,
4. Busindja (inkl. Ussuwi) und
5. Buddu.

Die Staaten Koki und Buddu sind im Laufe des vorigen Jahrhunderts an Buganda gefallen, wobei der erste eine gewisse Autonomie und eigenen Fürsten behalten hat. Der Herrscher von Koki ist freilich dem eingeborenen Gouverneur der Buganda-Provinz Buddu, dem „pokino", untergestellt; die inneren Freiheiten von Koki sind aber so groß, daß mir Kassagama, der Herrscher von Toro, Koki als einen unabhängigen, durch Babito beherrschten Staat bezeichnen konnte, trotzdem er dort in jungen Jahren als Verbannter mehrere Jahre mit seiner Mutter gewohnt hatte. Seine Angabe über das in Koki herrschende Geschlecht scheint aber auch nicht zuzutreffen. RICHTER[1]) bezeichnet nämlich Koki als eine Bahinda-Herrschaft.

KOKI dehnt sich auf den Höhen zwischen Kachira-See und der Senkung des Namdigani-Beckens aus. Im Süden vom Shilala (Bukora) reicht es bis zum Rande des zum Kagera abfallenden Plateaus.

BUDDU. Aus dem Deutsch-Ost-Afrika zufallenden Teile von Buddu, zwischen Kagera, dem ersten Grade südlicher Breite und den Höhen im Osten vom Magarsi-Fluß, wurde die unabhängige Herrschaft Deutsch-Buddu gebildet und dem Häuptling Rukika als „Sultan" verliehen[2]).

BUNYORO umfaßt gegenwärtig die Gebiete zwischen Albert-Nyanza, Victoria-Nil, Kafu und Ngussi. Bis zur letzten anglo-belgischen Grenzregulierung gehörte nominell zu Bunyoro auch noch das Westufer des Albert-Sees im Norden von der Naabe-Bucht bis zu der Grenze des Congo-Staates.

TORO, das, neben Buganda, für seine Helfersdienste bei der englischen Besitzergreifung durch die Verwaltung stark favorisiert wird, ist von seinem Mutterlande Bunyoro durch die gegenwärtig zu Buganda gehörende Provinz Buyaga

---

[1]) RICHTER, Oberleutnant, Der Bezirk Bukoba. Mitteilungen aus den Deutschen Schutzgebieten 1899, S. 69.

[2]) Vgl. Großer Deutscher Kolonialatlas. Blatt Usumbura. Dietrich Reimer (Ernst Vohsen). Berlin 1908.

getrennt. Seine Ostgrenze bilden Mizizzi und Nabutari, während die Südgrenze sich vom Oberlaufe der Katonga zum Südufer des Georg-Sees hinstreckt. Sie erreicht den letzteren an der Dulindaji-Mündung. In dieser Weise kommt zu Toro, die, zwischen Katonga, Mpanga und Georg-See eingeschlossene, Provinz Kitakwenda, die, ihrer Bevölkerung nach, schon zu Nkole gehört. Die Westgrenze von Toro fällt mit der Grenze des Congo-Staates zusammen, die vom Edward-See, über die Gipfel des Ruwenzori, zum Semliki geht. Die Nordgrenze von Toro bildet der Semliki, von 30° östlicher Länge bis zu seiner Mündung, und von dieser Stelle an der Albert-See bis zur Mizizzi-Mündung.

Vor der letzten anglo-belgischen Grenzregulierung gehörte zu Toro noch die Provinz Mboga mit ihren Nachbargebieten. Dieser Besitz wurde begrenzt durch die Nil-Kongo-Wasserscheide, den Albert-See, den Semliki-Fluß und den Meridian 30° östlicher Länge.

NKOLE. Die Grenzen von Nkole fallen im Süden und Westen mit der Grenze des „Uganda Protectorate" zusammen, während der Norden von Toro, Buganda und Koki begrenzt wird. Nach der letzten Grenzregulierung wird die Westgrenze durch den Georg-See, westlich der Dulindaji-Mündung, den Kazinga-Kanal, den Edward-See und den Ishasha-Fluß gebildet, während die Südgrenze vorläufig durch den 1° südlicher Breite bestimmt bleibt. In dieser Weise werden hier zu Nkole die kleinen unabhängigen Herrschaften: Kazara, Ruzumburu und Butumbi (Ostteil), wie auch der Nordteil von Ruhama, Ubwera und Bukanga hinzugerechnet. Sieht man von ihnen ab und beschränkt man sich auf den Besitz Kahaya's, so wird die Südgrenze von Nkole durch den Kachira-Mazingo-See, das Ruampara-Gebirge und den Ntungwe-Fluß gebildet.

BUKANGA, die kleine, unabhängige, durch den Muganda-Mann Abdul Efendi regierte Herrschaft, wird durch Koki, Buddu, den Kagera-Fluß und den Bigasha-Bach begrenzt[1]).

MPORORO. Das sich im Süden an Nkole anschließende Mpororo bildet eine recht unbestimmte, politisch stark zerfahrene Einheit, die durch das Zusammentreffen der deutschen, englischen und belgischen Grenzen endgültig desorganisiert worden ist. Da wir uns mit diesem Gebiete später etwas eingehender beschäftigen werden, so sollen hier nur einige wenige Worte über die äußeren Grenzen dieses mehrere unabhängige Staaten umfassenden Komplexes gesagt werden. Im Norden wird Mpororo durch das eigentliche Nkole des Kahaya begrenzt, die Westgrenze bildet das Kagera-Knie, während die Südgrenze vom Kagera sich über die menschenleere Steppe zum Lulenge resp. Mwumba-Bach hinzieht und über die Südufer des großen Ngesi-Sees zum Ngesi ya Mutanda und dem Iwi fortläuft. Die Westgrenze von Mpororo bildet die unbewohnte Rutshuru-Ebene und der Edward-See.

---

[1]) MELDOS, J. A., Notes on the Bahima of Nkole. I. Journal of the African Society 1907, Bd. VI, S. 139.

KARAGWE wird im Norden und Westen durch den Kagera bespült. Seine Ostgrenze folgt dem Unterlaufe der West-Ruiga und geht von seiner Mündung über den Burigi-See und die Ngoma-Sümpfe bis zum Kamakara-See, springt von dort auf das Quellengebiet des Muissa-Flusses über und von dort unmittelbar auf dessen Unterlauf, so daß der ganze Mittellauf, westlich der Grenze, in Karagwe fließt. Die Südgrenze verlangt eine etwas eingehendere Besprechung. Nach den Angaben des Kolonialatlas[1]) gehören zu Karagwe noch die Gebiete im Süden vom Burigi-See (Luero lo Urigi), zwischen dem Unterlaufe der West-Ruiga und den Bergen am Ostrande ihres Beckens, sowie auch die tributpflichtige Herrschaft Buhimba, die zwischen Kagera, Kitembe, West-Ruiga und den Msumba-Bergen liegt und mit ihrem Südzipfel auf das linke Ufer des Lohungati, des Oberlaufes der Ost-Ruiga, herübergreift. Der Burigi-See liegt in dieser Weise zwischen Karagwe und Ihangiro. GRANT, der mit den Leuten von Karagwe viel zu tun hatte, erwähnt dagegen, daß Karagwe von Ussuwi durch den Burigi-See getrennt wird[2]), und SPEKE[3]) verzeichnet das, auf dem linken West-Ruiga-Ufer gelegene, Wigura als die zu Karagwe gehörende Grenzniederlassung. Prof. Dr. HANS MEYER geht noch weiter und rechnet die während der letzten Reise besuchten Gebiete im Süden und das menschenleere Plateau im WSW vom Burigi-See zu Ussuwi. Er sagt nämlich[4]): „Von dem SW des Burigi-Sees wanderten wir in zwei Tagen durch das unbewohnte, mit Baumsteppe bestandene, ziemlich stark zerschnittene, aber jetzt wasserlose Plateauland von Nord-Ussuwi westwärts nach der östlichen hohen Randstufe von Karagwe, die wir bei den Bananenschamben von Mpihi erreichten. Sehr mühsam ist der steile Aufstieg auf das Karagwe-Plateau." v. TROTHA spricht[5]) vom Sultan Matzika von Uhimba in der Nähe des Ruwuwu, dem auch das Dorf Ruakahanda gehören soll. Endlich berichtete man mir vom Muhima Karugiraki, welcher Kasussura, dem Herrscher von Ost-Ussuwi, unterstehen soll. Diese scheinbaren Widersprüche werden dadurch aufgelöst, daß es sich hier um ein durch Karagwe und Ussuwi bestrittenes Gebiet handelt. Es ist ganz verständlich, daß die mit Prof. Dr. HANS MEYER von Osten kommenden Träger die Grenze von Karagwe in die unmittelbare Nähe der ersten Karagwe-Siedelung verlegt und die menschenleeren Jagdgründe für sich beansprucht haben. Die Angaben des Kolonialatlas stammen wohl von Bukoba und konnten, in ähnlicher Weise, durch die Vertreter der Interessen von Karagwe, das früher mit der Station in Kontakt gekommen ist, beeinflußt werden. Die eigentliche Grenze scheint, mit den Angaben von GRANT und SPEKE übereinstimmend,

---

dem Ost-Ruiga-Fluß und dem Burigi-See zu folgen. Die tributäre Herrschaft Buhimba wurde in den ersten Jahren dieses Jahrhunderts von Karagwe abgetrennt und dem Herrscher von Ost-Ussuwi verliehen. Die Südgrenze von Karagwe rückte nach Norden hinauf und folgt jetzt, wie es scheint, dem Kitembe-Fluß.

BUHAYA[1]) ist die, bei den westlichen und südlichen Nachbarn übliche, zusammenfassende Bezeichnung für die Staaten, die in dem Gebiet zwischen Karagwe, Kagera, Victoria-See und Busindja verteilt sind. Wir wollen sie alle der Reihe nach aufzählen:

1. Kiziba,
2. Kyanja,
3. Ihangiro (inkl. Ngoti),
4. Kiamtwara und
5. Bugabo.

KIZIBA erstreckt sich von dem Kagera im Norden bis zum Fusso-Fluß und Uschungaisi-See im Süden, und vom Unterlaufe der Muissa im Westen bis zu den, in die Kibindi-Bucht mündenden, Sümpfen im Osten.

KYANJA stößt im Norden an Kiziba. Die Ostgrenze geht vom Ngono-Fluß, durch den Sumpf des Uschungaisi-Sees, auf den Ngogo-Bach, erreicht das Seeufer in der Kaschokero-Bucht und folgt diesem weiter nach Süden. Die konventionelle Südgrenze hält sich ungefähr auf 1° 43′ südlicher Breite und wendet sich später nach Norden, um die Berge im Osten vom Muissa-Oberlaufe zu erreichen. In dieser Weise wird der nördliche Teil der Westgrenze durch Karagwe gebildet.

IHANGIRO wird im Norden und Westen durch Kyanja und Karagwe begrenzt, während die Ostgrenze durch den Victoria-See und den Ost-Ruiga-Fluß gebildet wird. Die wenig ausgedehnte Südgrenze geht durch unbewohnte Wildnisse. Sie führt vom Ost-Ruiga-Fluß zunächst nach Ost, auf der Breite ca. 2° 17′, und biegt später zum Burigi-See nach Nordost um.

Den südlichen Teil von Ihangiro bildet die tributäre Bahinda-Herrschaft Ngoti[2]). Sie umfaßt die Gebiete zwischen Burigi-See und Ost-Ruiga.

KIAMTWARA und BUGABO, die winzigen, zwischen Kyanja, Kiziba und dem Victoria-See eingeschlossenen Herrschaften, werden voneinander getrennt durch die Linie, die von dem in die Kabindi-Bucht mündenden Sumpfe, über Marienberg (Kashozi), die Seeküste etwas nördlicher von Bukoba erreicht.

BUKARA. Im Zusammenhange mit Buhaya wäre noch die unabhängige Insel Bukara zu erwähnen, da ihre Einwohner von Auswanderern aus Buhaya abstammen sollen[3]).

[2]) Ebenda S. 69.

[3]) SCHLOBACH, Hauptmann, Die Völkerstämme der deutschen Ostküste des Victoria-Nyanza. Mitteilungen aus den Deutschen Schutzgebieten 1901, S. 187.

Busindja, das einst ein großes, einheitliches Königreich gebildet hat, zerfällt in eine größere Anzahl von Herrschaften, die sich in zwei Gruppen zusammenfassen lassen und als Ussuwi und eigentliches Busindja (Usindja), zu dem früher noch Usambiro[1]) hinzukam, bezeichnet werden können.

Busindja im engeren Sinne umfaßt das Küstengebiet des Victoria-Sees vom Ost-Ruiga-Fluß im Westen bis zum Smith-Sund im Osten und dehnt sich im Süden bis zur Wasserscheide des Nil-Beckens und den linksufrigen Zuflüssen der Ikunga aus.

Das Land zerfällt in die Herrschaften:

1. Kimoani,
2. Buina,
3. Bukome,
4. Butundwe,
5. Bugando,
6. Buhindi,
7. Bukura,
8. Kome,
9. Bukerewe,
10. Bwiro.

Kimoani erstreckt sich vom Ost-Ruiga-Fluß bis zum Hinterlande der Halbinsel Buina. Labunienge, der Herrscher von Kimoani, soll[2]) jetzt Kasussura, dem Herrscher von Ost-Ussuwi, untergestellt sein.

Buina. Das, durch den Sultan Magala beherrschte und vor wenigen Jahren durch die Regierung[3]) an Kasussura verliehene, Bwina oder Buina[4]) umfaßt die gleichnamige Halbinsel mit dem entsprechenden Hinterlande.

Bukome, Herrschaft des Sultans Rwoga, den im Jahre 1907 Kasussura ersetzte, wird durch die Landschaften im Westen vom Emin-Pascha-Golf und seinem Zufluß, dem Kafunso-Bach, gebildet.

Butundwe[5]), das durch Manangwa beherrscht wird, dehnt sich aus zwischen den beiden Kafunso-Bächen, die in den Emin-Pascha-Golf und den Bugando-Golf münden.

Bugando dehnt sich zwischen der Bugando-Bucht und dem Masandsandse-Fluß aus. Zu Bugando gehören[6]) noch die Inseln Lupwondo und Meissome. Die kleine Herrschaft Kagu an der Südwestecke der Bugando-Bucht ist dagegen autonom.

[6]) v. Trotha, L., Meine Bereisung von Deutsch-Ostafrika. Berlin 1897, S. 55.

Buhindi. Das Land, dessen politische Verhältnisse recht verwickelt sind, beschränkt sich auf die gleichnamige Halbinsel. Buhindi zerfällt in drei Herrschaften:

1. Buhindi im engeren Sinne,
2. Kadsudsu und
3. Nyangaramira (Jangalamira).

Die beiden letztgenannten beschränken sich auf die gleichnamigen Halbinseln.

Bukura, das man mit einem gewissen Recht als Busindja im engsten Sinne bezeichnen könnte, wird im Großen Kolonialatlas als Rwoma's Gebiet bezeichnet und umfaßt die Länder zwischen Victoria-See, Smith-Sund, Bugando und Buhindi, und dehnt sich im Süden von der Ikunga im Tanganjika-Becken aus. Dieses, jetzt durch Rugingiza beherrschte Land, bildet den Überrest des Königreichs Busindja, das, durch die Watuta desorganisiert, von den Europäern den letzten Schlag erhielt, als sein alter Herrscher Rwoma, im Kampfe gegen die Regierung (Leutnant v. Kalben), gefallen war, und der im Lande nicht anerkannte Ruotakwa eingesetzt wurde.

Zum Schlusse bleiben noch die beiden Inselherrschaften Kome und Bukerewe (Ukerewe) zu besprechen.

Kome bildet eine politische Einheit für sich, während das Sultanat

Bukerewe nicht die ganze Insel umfaßt, dafür aber auf das benachbarte Festland hinübergreift. Gabriel Mutahengerwa, so heißt der christliche Herrscher von Bukerewe, gehört nämlich die Halbinsel Kiruirui zwischen Baumann-Golf und Speke-Golf. Der Südwesten der Insel ist dagegen unabhängig und bildet zusammen mit der Insel

Bwiro, die gleichnamige Herrschaft.

Ussuwi wurde früher durch, die zu Karagwe gehörende, Herrschaft Buhimba (Uhimba) in zwei, territorial nicht zusammenhängende, Teile: West- und Ost-Ussuwi, getrennt. Das erste wird durch Kinanira, das zweite durch Kasussura beherrscht.

West-Ussuwi liegt im Ruwuwu-Bogen, erstreckt sich im Südwesten bis zum Kajongosi-Knie, umfaßt den oberen Teil des Luhungati-Beckens und wird im Nordosten durch Buhimba begrenzt.

Ost-Ussuwi, das noch unlängst im Westen und Norden nur von Karagwe begrenzt wurde und im Osten nur bis zu den schwach bevölkerten Terrassen über den Uferlandschaften des Victoria-Sees reichte, wurde seit dem Anfange unseres Jahrhunderts durch die Regierung wesentlich vergrößert. Nach der Verleihung der Herrschaften Buhimba, Kimoani, Buina und Bukome an Kasussura dehnt sich dessen Reich aus: vom Victoria-See und dem Kafunso-Fluß im Osten bis zum Ruwuwu und den Grenzen von West-Ussuwi im Westen, und von den Flüssen Kitembe und West-Ruiga, dem Burigi-See und der Ihan-

giro-Grenze im Norden bis zum Südabhange der Wasserscheide zwischen Tanganjika und Victoria-See.

Im Gegensatze zu den Banyoro-Staaten der deutschen Einflußsphäre, sind die Barundi-Staaten sehr groß. Das wesentlich größere Barundi-Gebiet ist eigentlich nur in drei Staaten organisiert:

1. Ruanda,
2. Urundi und
3. Uha.

Es darf aber nicht übersehen werden, daß der Zusammenhang der einzelnen Teile von Urundi ein sehr lockerer ist, so daß dieses nur nominell eine „politische Einheit" vorstellt, während Uha aus mehreren Fürstentümern besteht, die sich nur historisch zusammenfassen lassen.

RUANDA umfaßt gegenwärtig die Gebiete zwischen der Grenze des belgischen Congo, Mpororo, den Strömen Kagera und Akanjaru, der Nil-Kongo-Wasserscheide und dem Luha-Fluß. Dazu gehört noch das Gebiet im Akanjaru-Kagera-Knie bis zu den Seen Tschohoha und Rugwero. Früher gehörte zu Ruanda noch die durch die Congo-Grenze abgeschnittene Nordwestecke, die durch die Lavaebene des Namlagira, die Flüsse Mlindi und Iwi und die Vulkankette begrenzt wird.

URUNDI erstreckt sich von der Ruanda-Grenze im Norden bis zum Mlagarassi-Fluß, Musenga-Plateau, Kanjamansa-Bergen, Kajongosi-Knie, Njakarugwa-Bach und dem Ruwuwu-Fluß, im Süden und Osten. Die Westgrenze bilden Tanganjika und Russisi. Über das Verhältnis der einzelnen Teile von Urundi zum nominellen König Mutaga, dem unmündigen Sohn des verstorbenen Mwezi Kisabo, kann, mit Rücksicht auf die dort gegenwärtig herrschende politische Krise, nicht viel Exaktes gesagt werden. Schon zu Lebzeiten des Kisabo hatte der König von Urundi keine bedeutende politische Macht gegenüber den einzelnen Teilen seines Reiches. Dr. KANDT[1]) sagt nämlich: „Der noch bestehende Rest von Zusammenhängen scheint allein dadurch sich zu erhalten, daß dem Mnesi irgendeine Art religiöser Bedeutung innewohnt." Über den gegenwärtigen Zustand berichtet aber Prof. Dr. HANS MEYER[2]), daß die Herrschaft des Mutaga über ganz Zentral-Urundi reicht. Wir finden im Reisebericht die Angaben, daß, „während im Süd-Urundi zwar auch lauter Watualen[3]) aus der Waganua-Sippe[4]) sitzen, diese aber in ihren Provinzen tun können, was sie wollen, wenn sie nur regelmäßig ihre Abgaben an Mutaga entrichten. Auch die Watualen an der Tanganjikaküste und im Russisigebiet erkennen den Mutaga als ihr Oberhaupt, als ‚Mami', an. Ganz selb-

---

[2]) Reiseberichte von Prof. Dr. HANS MEYER aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 355.

[3]) Häuptlinge.

[4]) Sippe des Mutaga.

ständig hingegen sind in Nordwest-Urundi der Häuptling Kilima, der, wie im früheren Bericht erwähnt, kein Mtussi[1]) ist, und in Nordost-Urundi die Watussi-Häuptlinge Lusokosa[2]), Bansabugabo, Kisliwami und Lusengo, in Ujogoma und in Bujansi die Häuptlinge Kiraranganja und Senjawarungu. Auch sie entrichten dem Mutagu Tribut, halten sich aber unabhängig von der Waganua-Sippe und unterstehen direkt der Residentur in Usumbura". Der von Prof. Dr. HANS MEYER erwähnte Lusengo aus Ujogoma ist wohl mit dem Herrscher von Bugufi identisch[3]), da dieses Land, zusammen mit West-Ussuwi, zu Ujogoma gezählt werden kann. Das Land Bugufi ist zwischen Kagera und Ruwuwu eingeschlossen und wird im Westen durch die Bäche Kissango und Niabugugu begrenzt. Seine Einwohner werden Bahangasi genannt. R. P. CAPUS[4]) erwähnt noch aus früherer Zeit den Emporkömmling Rumonge als den Großhäuptling von Ujogoma, und Hauptmann RAMSAY[5]) spricht vom Sultan Lussabiko, dem Schwiegersohn des Kisabo, aus Ujensi (Bujansi); ob einer der hier zitierten Häuptlinge als Nachfolger der zuletzt genannten zu bezeichnen ist, läßt sich nicht feststellen. Über den am meisten nach Nordwesten vorgeschobenen Teil von Urundi berichtet Dr. KANDT[6]): „In politischer Beziehung zerfällt das Gebiet zwischen dem Ostrande des zentralafrikanischen Grabens und dem Russisi in zehn bis zwölf kleinere Sultanate, von denen die meisten ca. 150 bis 200 Geviertkilometer bedecken mögen. Nominell sind sie unselbständig, und ihre Herrscher, die alle dem semitischen, aus den Gallaländern südlich von Abessinien stammenden Geschlecht der Watussi angehören, sind ursprünglich Vasallen des Fürsten von Urundi, des ‚Muesi', wie sein Titel lautet, gewesen." Es werden hier erwähnt die Herrschaften Ramata, zwischen Russisi und Kadscheke, Uwjuko mit seiner Provinz Kundamwa, Wehenusa, das im Nordwesten davon gelegene Gebiet des Ssekissanga und das Gebiet des Wasasa an der Grenze von Ruanda, dessen Hauptteil zwischen den Flüssen Luha und Njakagunda gelegen ist, zu dem aber auch die Landschaften auf dem linken Ufer des letzteren gehören. Die Gebiete auf dem rechten Russisi-Ufer von der Felsenbrücke im Norden bis zum Tanganjika im Süden und dem Grabenrande im Westen wurden durch Kinoni beherrscht. Nach der belgischen Besitzergreifung bekam Kinoni noch die Gebiete im Osten vom Russisi, zwischen Muhira und Njakagunda-Fluß, wurde aber von dort durch die deutschen Behörden vertrieben. Kinoni hat seinerzeit den belgischen Leutnant

DUBOIS den Rebellen ausgeliefert, als dieser bei ihm, nach einem verlorenen Gefecht mit den Meuterern, Zuflucht suchte[1]). Zum Schlusse wäre noch hervorzuheben die Feststellung Dr. KANDTs über den Häuptling von Kundamwa in Uwjuko[2]): „Muhambasi war merkwürdigerweise kein Landeskind, sondern ein aus Uganda stammender Mohammedáner, der zu Rumalisa's Zeiten auf irgendeine dunkle Weise Chef des Distrikts Kundamwa in Uwjuko geworden war."

UHA breitet sich im Süden und Osten von Urundi aus und reicht bis zu den Flüssen Utindi und Mlagarassi. Das Land zerfällt in die Herrschaften:

1. Heru,
2. Luguru,
3. Uschingo,
4. Udjidji,
5. Ukaranga,
6. Ujungu und
7. Muhambwe.

HERU[3]), die Herrschaft des Luassa, den RAMSAY[4]) als den mächtigsten Sultan von Uha bezeichnet, wird im Norden durch Mlagarassi, seine Zuflüsse Mugogo und Makäre[5]) oder Mgera, im Westen durch die Flüsse Mtungurusi und Luitsche und im Süden durch Lubundugi, Mkute und Masungwe begrenzt. Die Ostgrenze geht durch die Berge im Osten vom Mlagarassi.

LUGURU, die Herrschaft des Tale, die zwischen Heru, dem Mlagarassi und dessen Zuflusse Makäre eingeschlossen ist, wird im Süden durch die Buschsteppe des rechten Mlagarassi-Ufers (ca. 4° 57′ südlicher Breite) und die Höhen im Osten vom Mittellauf des Rutschugi begrenzt.

USCHINGO dehnt sich im Mlagarassi-Bogen aus und wird im Süden durch seine Zuflüsse Mugogo und Makäre begrenzt. Nach RAMSAY[5]) soll Uschingo ebenfalls durch Tale beherrscht werden.

UDJIDJI, die Herrschaft des Lussimbi[6]), dehnt sich zwischen den Grenzen von Heru und dem Tanganjika-See aus und hat den Luitsche-Fluß zur Südgrenze.

UKARANGA wird im Süden, Westen und Norden durch Mlagarassi, Tanganjika-See und die Heru-Herrschaft begrenzt. Die Ostgrenze folgt dem Luguwu-Oberlauf, und geht durch die Berge, im Westen von seinem Unterlaufe, zum Mlagarassi.

[6]) Ebenda S. 305.

UJUNGU, das durch Kihumbi, den Sohn Kanza's, beherrscht wird[1]), erstreckt sich von der Ussuwi-Grenze im Norden bis zum Musenga-Plateau, den Ugongo-Bergen und den Sümpfen im Westen vom Utindi-Mittellauf, und von der Urundi- und Ussuwi-Grenze im Westen bis zum Lukoke-Utindi im Osten. Das linke Lukoke-Ufer gehört ebenfalls zu Ujungu.

MUHAMBWE ist bis jetzt noch ganz unerforscht und wird durch die Flüsse Utindi und Mlagarassi begrenzt. Im Norden stößt es an Ujungu.

Bevölkerungsdichte. Das Zwischenseengebiet gehört, wie schon erwähnt wurde, zu den am dichtesten bevölkerten Teilen des afrikanischen Kontinentes, wenn man auch die Bevölkerungszahl von Ruanda, und wohl auch von Urundi, etwas überschätzt hat.

Die Hauptmasse der Bevölkerung ist zu beiden Seiten der Nil-Kongo-Wasserscheide zusammengedrängt; außerdem befindet sich noch eine sehr dichte Bevölkerung auf den Terrassen über dem Victoria-See, auf der Ost- und Westseite des Ruwenzori und auf dem flachen Rücken von Bunyoro. In dieser Weise bilden die dicht bevölkerten Teile zwei lange und breite Säume, die am West- und Ostrande des Zwischenseengebietes hinlaufen. Der östliche Saum ist zusammenhängend und biegt sich an beiden Enden nach Osten um. Der westliche schrumpft im Osten vom Edward-See stark zusammen, reicht aber sehr weit nach dem Süden hinunter und wird zwischen Edward-See und Tanganjika sehr breit. Zwischen diesen beiden Säumen liegt eine schwach bevölkerte Zone, die in der Kagera-Steppe ganz menschenleer ist und dann, wie es scheint, etwas besser bevölkert, sich bis Buhimba fortsetzt. Deshalb finden wir auch bei Prof. Dr. HANS MEYER[2]) die Beobachtung: „Durch ganz Urundi und Uha nimmt die Bevölkerung von Westen nach Osten ab. Am dichtesten bewohnt und am besten bebaut sind die Täler und Kuppen des Randgebirges, wo deshalb vom ursprünglichen Wald fast nichts mehr zu finden ist, sehr gering dagegen viele Quarzitgebiete der östlichen Landstriche."

Man sollte meinen, daß die Einführung der Hüttensteuer in den nordöstlichen Teilen des Zwischenseengebietes die Möglichkeit gegeben hat, die Bevölkerungsverhältnisse genauer zu beurteilen. Die Angaben sind aber noch immer voll von Widersprüchen.

Auf Grund englischer Daten wurde für das Uganda-Protektorat eine Karte der Bevölkerungsdichte durch JOHNSTON[3]) entworfen. Diese Skizze bezieht sich freilich auf die letzten Jahre des vorigen Jahrhunderts, aber seit dieser Zeit wird kaum eine bedeutende Veränderung stattgefunden haben. Man muß

---

[2]) Reiseberichte von Prof. Dr. HANS MEYER aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 354.

[3]) JOHNSTON, H., The Uganda-Protectorate. Kartenbeilage. London 1904, S. 248.

natürlich von den Schlafkrankheitsherden Busoga und den Sesse-Inseln absehen. In Busoga ist die Bevölkerung stark zurückgegangen. Auf den Sesse-Inseln ging sogar der größere Teil der Einwohner zugrunde, und die übrigen zerstreuten sich.

Wir können aber dieser Karte noch die folgenden, auf amtlichen Schätzungen basierten Einwohnerzahlen und, auf Grund vorhandener Karten, approximativ gemessene Flächengrößen einzelner Staaten beifügen:

Staaten	Einwohnerzahl	Fläche qkm	Bevölkerungsdichte
Buganda	1 000 000[1])	28 700	35
Koki	80 000 ?	2 000	40 ?
Bunyoro	110 000[2])	13 800	8
Toro	180 000	12 000	15
Bukanga	10 000[3])	1 100	9
Nkole (ohne Mpororo)	400 000[3])	9 200	45 ?

Die Angaben der Karte und der Tabelle widersprechen sich sehr stark bezüglich Bunyoro und Nkole. JOHNSTON erwähnt für Bunyoro die Zahl von 110 000 Einwohnern und verzeichnet auf der Karte eine Bevölkerungsdichte von 45—60 Einwohnern pro Quadratmeile (2,6 qkm), die, für 13 800 qkm berechnet, mehr als das Doppelte der obigen Schätzung von JOHNSTON ausmacht. Die Zahlen von MELDON geben für Nkole eine Bevölkerungsdichte von 45 Einwohnern pro qkm, während JOHNSTON eine fünfmal kleinere Dichte auf seiner Karte angibt.

Auf Grund eigener Beobachtungen habe ich den Eindruck gewonnen, daß Bunyoro wesentlich schwächer bevölkert ist als Toro, und die von JOHNSTON angegebene Zahl wird daher eher als die Angaben seiner Karte dem faktischen Verhältnisse entsprechen. Die Zahlen von MELDON sind ganz unwahrscheinlich hoch, und die Angaben von JOHNSTON werden für Nkole ganz sicher der Wahrheit näher kommen.

Für den Bezirk Bukoba, im deutschen Teile des Zwischenseengebietes, können wir viel genauere Zahlen angeben. Diese wurden im Jahre 1906 durch den kaiserlichen Residenten, Hauptmann W. VON STUEMER, gesammelt. Ich stelle sie zusammen mit den, auf Grund des Kolonialatlas geschätzten Flächengrößen der entsprechenden Gebiete:

Bezirk Bukoba .	473 000	3,13	?	0,94	?	1,23	?	0,97	?	24 500	19

Aber auch diese Zahlen sind bei weitem nicht exakt. Die Angaben über Ihangiro und Ischango sind ganz gewiß unrichtig, denn eine so große Anzahl von Hütten ohne erwachsene Frauen ist ganz undenkbar. Auch die Bestimmung der Hüttenzahl, die man am einfachsten gewinnen kann, konnte nicht genau gemacht werden, da die Eingeborenen, um der Steuer zu entgehen, eine Anzahl ihrer Hütten verheimlicht hatten. REHSE[1]) stellte für Kiziba 8413 Hütten fest. Die verheimlichten machen also nach dieser Angabe 10% aus. Trotzdem bleibt diese Zusammenstellung das Beste, was wir über die Bevölkerungsverhältnisse im Zwischenseengebiete besitzen.

Der auffällige Frauenüberschuß ist rechnerisch dadurch entstanden, daß die Kinder getrennt und ohne Geschlechtsangabe gezählt wurden. Die schneller wachsenden Mädchen scheiden früher aus der Kinderkategorie aus und vergrößern die Anzahl der Frauen, während die Knaben in diesem Alter immer noch zu den Kindern gezählt werden. Die Abwanderung der Saisonarbeiter nach Uganda und die größere Männersterblichkeit sind erst in zweiter Linie für den großen Frauenüberschuß in Rechnung zu setzen.

Auf Grund der vorhandenen Daten ist es sehr schwer zu sagen, ob man es im Bukoba-Bezirk mit einer Bevölkerungszunahme zu tun hat. Auf einen Mann kommt 1,3 Frau und ein Kind. Würde die Lebensdauer einer Frau viermal so lang wie die Dauer des Kindesalters sein, so müßte man auf eine Frau zum mindesten 3—4 Geburten rechnen. Über die Sterblichkeit fehlen aber Anhaltspunkte.

Sprachverhältnisse. Die Bevölkerung des Zwischenseengebietes ist in sprachlicher Beziehung eng miteinander verwandt, wenn man vom kleinen Gebiet der Shifalu, die einen Teil des linken Victoria-Nil-Ufers im Norden besiedeln,

[1]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 1.

absieht. Shifalu sind Sudan-Neger der Acholi-Gruppe, während die übrige Bevölkerung die Gruppe der Zwischenseen-Bantu bildet.

Die Zwischenseen-Bantu gehören sprachlich zu drei Gruppen:

Luganda,
Runyoro,
Kirundi,

zu denen man noch das von jenseits der Seenlinie auf den Ruwenzori herübergreifende Lukondjo hinzurechnen muß.

Das Luganda wurde am Anfange des vorigen Jahrhunderts vom Oberlaufe des Victoria-Nils bis zum Unterlaufe des Katonga gesprochen. Die Ostgrenze dieses Sprachgebietes bildete der Victoria-See, während die Westgrenze durch die menschenleere neutrale Zone ca. 100 km landeinwärts vom Seeufer hinlief. Im Laufe des XIX. Jahrhunderts hat sich das Luganda-Sprachgebiet wesentlich vergrößert. Zunächst wurde der Runyoro-Dialekt, der in Buddu noch vor 40—50 Jahren gesprochen wurde, verdrängt. In dieser Weise erreichte das Luganda den Bukara-Fluß. Jetzt wird Luganda auch in Deutsch-Buddu gesprochen, und die Südgrenze seiner Ausdehnung bildet der Kagera. Auch die Westgrenze verschiebt sich zuungunsten des Runyoro in der Richtung der seit 1897 durch die Engländer stark nach Westen vorgeschobenen Grenze des Buganda-Staates. Die Sprachgrenze ist aber mit dieser noch nicht identisch, wenn man auch auf dem ganzen Gebiete Baganda findet, und entspricht, wie es scheint, ungefähr der politischen Grenze vom Jahre 1893. In dieser Weise umfaßt der Buganda-Staat, in seiner neuen Ausdehnung, an der Westgrenze, Runyoro-Sprachgebiete. Gegenwärtig werden in Buganda Runyoro-Dialekte in folgenden Gegenden gesprochen: in den Provinzen Koki, Kabula, Mowogola, Buyaga, Bugangezi, Buruli, im Nordteile von Usingo und auf den Inseln Sesse. Das Runyoro wird hier aber wohl bald verschwinden, ebenso wie es im Buddu verschwunden ist. So haben zum Beispiel die Baganda den SO von Buruli besiedelt, den Choga-See erreicht und das Runyoro-Sprachgebiet von dem auf dem Ostufer des Victoria-Nil gelegenen Busoga getrennt.

Das Runyoro, das jetzt mit soviel Erfolg durch das Luganda verdrängt wird, dehnt sich über sehr große Gebiete aus. Seine zahlreichen, wie es scheint, nur wenig verschiedenen Dialekte nehmen für sich fast die Hälfte des Zwischenseengebietes in Anspruch. Die Nordgrenze dieses Sprachgebietes bildet der Victoria-Nil vom Choga-See bis zum Albert-See, mit Ausnahme des durch Shifalu besetzten Teiles seines linken Ufers, zwischen dem Foweira-Knie und dem Oberlaufe der Waiga-Kiswata. Die Ostgrenze des Runyoro-Sprachgebietes bildet im Norden — die oben besprochene Westgrenze des Luganda-Sprachgebietes, und im Süden vom Kagera — der Victoria-See bis zum Smith-Sund. Die Südgrenze machen die Wälder und Höhen, auf der Wasserscheide zwischen den Becken des Victoria-Sees und des Tanganjika, aus. Von der Wasserscheide springt die Sprachgrenze auf den Kagera über, folgt ihm nach Norden und geht

dann von ihm, noch etwas oberhalb des großen Knies, auf das Südufer des Ngesi-Sees (Buyondo) und von dort auf den Ngesi ya Mutanda (Mutscha-See) über; folgt dann dem Iwi-Flusse (Nyievu) und dem Rutshuru; von da geht die Grenze auf den Terrassenrand über dem Edward-See, dem Kazinga-Kanal und dem Georg-See hinüber. In den Dörfern am Seeufer, wie Katana, Katanda und Kazinga, an der Mündung des Kazinga-Kanals in den Edward-See, wird schon Lukondjo gesprochen. Vom Georg-See geht die Sprachgrenze die Sümpfe des Wimi-Flusses hinauf, läuft dann am Fuße des Westabhanges des Ruwenzori nach Norden, geht auf den Sipaya-Bach hinüber, kreuzt den Semliki, erreicht die Höhen der Kongo-Wasserscheide, folgt ihr nach Norden, greift, etwa in der Mitte des Westufers des Albert-Sees, etwas in das Kongo-Becken hinüber und kehrt dann zum Ufer des Albert-Sees zurück.

Außerhalb der hier angegebenen Grenzen findet man im Westen in größerer Zahl runyorosprechende Bahima in den Steppen im Süden vom Ruwenzori zwischen Kazinga und dem Ausflusse des Semliki, also vor allem in Katwe und Kazindi, wie auch in der Steppe zwischen dem linken Ufer des Semliki, dem Edward-See und dem Abhange der Kongo-Wasserscheide.

Im Osten, vom Runyoro-Gebiet durch die Baganda getrennt, haben wir noch Busoga mit den Grenzen Victoria-Nil, Choga-See, Mpologoma-See, Mündung des Siyo-Flusses und Victoria-See[1]).

Von den Runyoro-Dialekten, die ihre Namen in der Hauptsache den Staaten verdanken, in denen sie gesprochen werden, sollen hier nur die wichtigsten erwähnt werden:

a) Eigentliches Runyoro, das in Bunyoro und Toro gesprochen wird[2]),

b) Runyankole, die Sprache von Nkole[3]),

c) Runyambo, das in Karagwe und Mpororo gesprochen wird,

d) Ruhaya oder Ruziba, die Sprache von Buhaya, die Kiziba, Kiamtwara, Kyanja, Bugabo und Ihangiro umfaßt,

e) Rusindja, das in Busindja, mit Ost-Ussuwi und der östlichen Hälfte von West-Ussuwi, gesprochen wird[4]),

f) Lusoga, die Sprache von Busoga.

Das Kirundi-Sprachgebiet wird im Westen durch das Runyoro-Gebiet und weiter im Süden etwa durch die Flüsse Lukoki, Utindi und das Sumpfgebiet des letzteren begrenzt. Die Südgrenze soll ungefähr durch den Mlagarassi

---

[3]) GORJU, P. J., Essai de Grammaire Comparée du Ruganda au Runyoro et au Runyankole. Imprimerie des Missionnaires d'Afrique. Maison-Carrée (Alger) 1906.

[4]) In der Arbeit: „STRUCK, B., Begleitworte zur Dialektkarte von Unjamwesi. Mitteilungen aus den Deutschen Schutzgebieten 1910, S. 101—110." werden die Bezeichnungen „Kinambu" und „Tjizindza" benutzt.

gebildet werden. Die Westgrenze des Kirundi-Sprachgebietes läuft ungefähr auf dem Westrande des Großen Afrikanischen Grabens, greift aber an mehreren Stellen tiefer nach Westen hinein.

Als Hauptdialekte sind hier zu erwähnen:

a) Kiha, das in Uha gesprochen wird,

b) Eigentliches Kirundi, die Sprache von Urundi,

c) Kinyaruanda, die Sprache von Ruanda,

d) Kitwa. Nach R. P. VAN DER BURGT sollen nämlich die Batwa einen besonderen archaistischen Dialekt — das Kitwa — sprechen.

Am Westrande des Großen Afrikanischen Grabens unterscheidet man die Dialekte:

e) Ruhunde, das vom Edward-See, dem Ruende (Mombo-Fluß) und seinem Zufluß Lula im Norden bis zum Tshigasi-Bach, einem kleinen Zufluß des Kiwu, im Süden, und von der Rutshuru-Steppe, der Lavaebene des Namlagira und dem Kiwu-See im Osten bis jenseits der Kongo-Wasserscheide reicht.

f) Kinyabungu, das auf der Westhälfte der Insel Kwidschwi (Idshwi), auf dem Westufer des Russisi-Oberlaufes und dem südlichen Teile des westlichen Kiwu-Ufers gesprochen wird und ebenfalls über den Westrand des Großen Afrikanischen Grabens hinübergreift.

Den vierten Bantu-Stamm der Zwischenseengruppe bilden die Bakondjo. Die Ostgrenze ihres Sprachgebietes wurde schon bei der Besprechung der Westgrenze des Runyoro-Gebietes erwähnt. Die Westgrenze folgt dem Fuße der Abhänge des Ruwenzori, geht dann auf den Semliki hinüber, folgt ihm ein wenig in nördlicher Richtung und springt dann auf die Höhen des Grabenrandes hinüber, denen sie bis zur geographischen Breite des Südufers des Edward-Sees folgt, und steigt dann bis zum See hinunter. Infolgedessen ist dieser See von allen Seiten durch Bakondjo umgeben. Nur im Süden ist der Sprachsaum sehr schmal; er beschränkt sich auf die Fischerdörfer am Ufer.

Clans. Die Bevölkerung des Zwischenseengebietes zerfällt in eine Anzahl exogamer, totemistischer, patriarchaler Clans, die durch „abaziru"[1]), meistens Eßverbote, welche sich direkt oder indirekt auf die Totemtiere beziehen, voneinander geschieden sind.

Man findet die Angehörigen derselben Clans an verschiedenen Stellen und in verschiedenen Staaten des Zwischenseengebietes verstreut. In dieser Weise besteht die ganze Bevölkerung aus den miteinander räumlich durchflochtenen Clans. Diese Durchflechtung läßt auf wiederholte Wanderungen im Zwischenseengebiete schließen, denen wohl die so weit vorgeschrittene territoriale Homogenisierung zu verdanken ist.

Als ein sehr auffallendes wissenschaftliches Ergebnis muß die Tatsache betrachtet werden, daß viele Clans dasselbe „umuziru" haben. Auf sechs „abaziru":

---

[1]) Im Singular „umuziru".

Ngabi — Zwergantilope,
Umutima resp. Muganya — Herz,
Itimba — schwarze, weißgefleckte Kuh,
Obrusito — Milch frisch gedeckter Kuh,
Rutoni — Wiesel,
Mbazi — ?

entfallen zwei Fünftel der mir mit „umuziru"-Angaben bekannten Clans. Diese Tatsache hängt wohl mit der Differenzierung der Clans in Untergruppen zusammen. Infolge der Tatsache, daß die Clans sich an verschiedenen Stellen in Unterclans differenziert haben und unter neuen Namen uns entgegentreten, wobei die Ermittlung der eigentlichen Clannamen oft mit großen Schwierigkeiten verbunden ist, wird die Systematisierung der Clanverteilung noch längere Arbeit erfordern. Mit Rücksicht auf das schon Bekannte kann man aber erwarten, daß noch viele der jetzt unter verschiedenen Namen in den einzelnen Teilen des Zwischenseengebiets vorkommenden Clans sich als Teile derselben Verbände erweisen werden. Dann wird die, schon jetzt wahrnehmbare, Durchflechtung der Clanbesitze noch viel auffälliger werden.

Abgesehen von den unmittelbaren Angaben über Clandifferenzierung, finden sich noch Spuren dieses Prozesses in den sozialen Einrichtungen und Sitten des Zwischenseengebietes. Das von R. P. H. VAN THIELE [1]) erwähnte „bugurwe" Busindja's gehört, wie es scheint, zu dieser Kategorie. Nach der Überlieferung von Busindja zur Zeit Karakaza's, fallen alle unverheirateten Männer im Kampfe gegen Uha. Es wird beschlossen, daß die wenigen, die im Lande zum Schutz zurückgeblieben, das Land durchwandern und für Nachkommenschaft sorgen sollen. „Daher soll auch der Brauch des sog. *bugurwe* stammen, d. h. das Verhältnis der Zusammengehörigkeit zwischen mehreren Familien, das auch ein Ehehindernis darstellt. Das bugurwe besteht indes nicht in allen Familien. Es gehören zusammen z. B. die Basita und Bafunda, ferner die Batongere und Batundu: diese heiraten untereinander, jene dagegen nicht. Von den zusammengehörigen Familien bezeichnet die eine die andere als *ekigurwe kyeitu*."

Die Differenzierung bildet, wie es scheint, aber nicht die einzige Ursache des Vorkommens verschiedener Clans mit gleichen „abaziru". Kassagama, der Herrscher von Toro, vertritt den Standpunkt, daß nicht alle Clans, die in Bunyoro und Toro „ngabi" zum „umuziru" haben, Babito sind. Diese dunkle und doch sehr wichtige Frage aufzuklären, ist mir, trotz aller Bemühungen, nicht gelungen.

Mit Rücksicht auf die große Bedeutung der Angaben über die Verbreitung der einzelnen Clans für die Kolonisationsgeschichte des Zwischenseengebietes, stelle ich in der folgenden Tabelle die mir in Bunyoro, Toro, Nkole, Mpororo,

---

[1]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 506.

Kiamtwara, Kiziba und Ruanda bekannten Clans zusammen. Die hier verzeichneten Toro-Clans entnehme ich zum größten Teil dem Notizbuch des Toro-Königs Kassagama, der mir diese Daten in freundlicher Weise zur Verfügung gestellt hat, und die ich mit denjenigen ergänzt habe, auf die ich, hauptsächlich bei den Messungen (vgl. Anthropologischer Band, Meßtabellen), von selbst gestoßen bin.

Die weiter unten besonders verzeichneten Babito-Clans wurden in die allgemeine Tabelle nur in den wenigen Fällen (3) eingetragen, wo sich diese auch außerhalb von Bunyoro und Toro feststellen ließen.

Umuiru	Bunyoro	Toro	Nkole Mpororo	Kiamtwara	Kiziba	Ruanda	Bemerkung (von wo eingewandert: ohne Zeichen nach Kiziba, + nach Kiamtwara, für die autochthone Bevölkerung das ursprüngliche Ansiedlungszentrum)

Die Angaben über die Kiziba-Clans verdanke ich R. P. B. HAUTMANN und diejenigen über die Kiamtwara-Clans R. P. L. EMBIL.

Dem Herrscher Kassagama verdanke ich die folgende Liste:

Clans der Babito. „umuziru" — Ngabi-Zwergantilope.

1. Batwara
2. Bagumba
3. Bachaki
4. Bagamwoyo
5. Bategwa
6. Batorogo
7. Bahaguzi
8. Bakomezi
9. Babedi
10. Basweramahinda
11. Bapanyarwa
12. Baposhisha
13. Babombara
14. Balyantama
15. Bajuka
16. Bataganyo
17. Basoko (Bashoka)
18. Bagaiya
19. Batagatina
20. Bagweri
21. Bachwamba
22. Bachwabugingo
23. Banyaihangwe
24. Bajogora
25. Baswera
26. Banyemera
27. Bagimbá
28. Bagundura

[1] In Kiziba (Rehse S. 6) „umuziru" ist „kukama este" — Melken der Rinder, in Toro „burango" — Zwillinge.

[2] Bei Emin Pascha (Zur Ethnologie der Gebiete um den Albert-See. Ausland 1891, S. 353.) finden wir die Angabe: „An der Nordostecke des Albert-Sees wohnt aus noch heute im Distrikt Magungo Missa ein jetzt kleiner Stamm reiner Wanyoro, die Wahinda, die behaupteten aus Nordosten eingewandert zu sein; sie sprachen eine eigene Sprache, die von der in der Nachbarschaft gesprochenen abwich, waren aber auch des Kinyoro mächtig geworden und erwarben bald großes Ansehen". Es unterliegt keinem Zweifel, daß hier nicht die Bahinda sondern die Bayango gemeint sind.

29. Batahigwa
30. Bapina
31. Baharambingo
32. Bayogara
33. Batehimbwa
34. Bakoko
35. Bakangara
36. Bayenjo
37. Bamanya
38. Babyabutore
39. Basobyo
40. Bagodya
41. Barasa
42. Bandikosa

Unsere unvollständige Zusammenstellung zeigt schon, daß fast die Hälfte, der hier erwähnten Clans, wenigstens in zwei Staaten bereits beobachtet werden konnten.

In einem scharfen Gegensatze dazu steht die Tatsache, daß kaum drei der 42 Geschlechter, die zusammen die Babito bilden, sich außerhalb von Bunyoro und Toro beobachten ließen. Diese Feststellung befindet sich in Übereinstimmung mit der Tatsache, daß die Babito, ihrer Überlieferung gemäß, zuletzt (im XVI. Jahrhundert) ins Zwischenseengebiet eingewandert sind und noch nicht Zeit und Gelegenheit hatten, sich außerhalb von Bunyoro und Toro zu verbreiten.

Diese Tatsache zeigt uns, daß es unter Umständen auch möglich ist, aus der Zerstreuung der einzelnen Clans, resp. der Clangruppen, in einem Gebiet auf die Zeit ihrer Einwanderung oder Entstehung durch Differenzierung zu schließen.

Es verdient Beachtung, daß man unter den Clannamen auch Namen der Stämme, die entferntere Gebiete besiedeln, findet. So sehen wir in Toro, Mpororo, Kiamtwara, Kiziba und Ruanda den Clan der Batwa, in Toro und Kiziba die Clans der Bamiro und Banyaidshwi, die mit ihren Namen auf das Land in NO vom Victoria-Nil und auf die Insel des Kiwu-Sees Bezug nehmen, und in Ruanda die Banda, Banyambo und Butembe. Diese Koinzidenzen werden wohl nicht immer reine Zufälligkeit sein. Mitunter wird darum auf kleinere, eingewanderte, abgesprengte Teile fremder Stämme geschlossen werden können.

3. Kapitel.

Zur Geschichte des Zwischenseengebietes.

Geschichtsprobleme. — Die Urbevölkerung. — Einwanderungen aus dem Norden. — Groß-Bunyoro. — Das Babito-Reich. — Der Buganda-Staat. — Alte Staaten des Süd-Runyoro-Gebietes. — Bahinda-Genealogie. — Das Bahinda-Reich. — Bukerewe. — Bakango-Herrschaften. — Buddu. — Urundi und Uha. — Heroenkultus im Zwischenseengebiete.

Geschichtsprobleme. Obgleich schon mehrere Eingeborene und Europäer über die Staaten des Zwischenseengebietes geschrieben haben, sind unsere Kenntnisse über ihre ältere Geschichte immer noch sehr ungenügend, da in diesen Schriften meistens nur über die Genealogie der Herrscher, die inneren Streitigkeiten und die Raubzüge gegen die Nachbargebiete gehandelt wird. Die Namen der Herrscher der benachbarten Staaten werden dabei nur für die späteren Zeiten erwähnt, so daß eine Zusammenfassung der lückenhaften Berichte über die einzelnen Gebiete zu einer Gesamtdarstellung sehr schwierig ist.

In allen Überlieferungen des Zwischenseengebietes wird stets auf Einwanderungen fremder Eroberer aus dem Norden hingewiesen, die dem Lande die herrschenden Stände gebracht haben. Von diesen Einwanderungen wird wiederholt berichtet, so daß es sich ohne Zweifel um aufeinander folgende Wellen handelt. Auch ist die Übereinstimmung der einzelnen Berichte für das ganze Überlieferungsmaterial sehr charakteristisch und bürgt für die Richtigkeit der mitgeteilten historischen Tatsachen.

Unter diesen Umständen müssen sich die historischen Untersuchungen im Zwischenseengebiete als erste Hauptaufgabe die Bestimmung der ethnischen Zugehörigkeit der Urbevölkerung und der auf sie einwirkenden Invasionen fremder Stämme stellen. Die Überlieferung gibt aber dafür recht ungenügende Anhaltspunkte, die nur kritisch gesichtet und durch die Ergebnisse der anthropologischen und ethnologischen Forschung kontrolliert, benutzt werden können.

Die Urbevölkerung. EMIN PASCHA[1]) bezeichnet als Urbevölkerung von Bunyoro die sagenhaften Witschwesi. Über ihre ethnische Zugehörigkeit äußert er sich, daß „die am Südwest-Ufer des Albert-Sees mit den umliegenden Eingeborenen stets im Streite liegenden Walegga oder Bulegga mit den Witschwesi identisch sind und in historischer Zeit — ich meine afrikanisch-historische — über den See getrieben wurden."

[1]) EMIN PASCHA, Zur Ethnologie der Gebiete um den Albert-See. Ausland 1891, Bd. 64, S. 352, 353.

[p. 47]

Nach dieser Ansicht wären also die Ureinwohner von Bunyoro — Lendu, ein Madi-Stamm. Die Madi-Stämme sind jedoch im Besitze großer Gebiete im Norden von Bunyoro und haben eine südliche Wanderungsrichtung. Aus diesem Grunde ist es viel wahrscheinlicher, daß sie bei ihrer großen Kriegstüchtigkeit eher als Eroberer, in der Art der Bayango-Bahinda, aufgetreten sind und nicht als die Urbevölkerung von Bunyoro in Frage kommen können. Der Name Witschwesi allein gibt schon viel zu denken. Mit dem Namen „bachwezi" pflegt man die Geister der Verstorbenen, die Manen, zu bezeichnen. Der Name „bachwezi" wird aber in Bunyoro auch als Synonym zur Bezeichnung der Bahima- oder Bahinda-Dynasten, die nach dem Süden verdrängt wurden, benutzt. Diese alten Herrscher leben bis jetzt im Gedächtnis des Volkes, und ihre Geister (bachwezi) werden verehrt.

In Kiziba bezeichnet man als das älteste, durch die späteren Einwanderer zuerst im Lande vorgefundene, Geschlecht die Bakuma. Dieser Name macht uns auf die etwas westlicher im Kongo-Becken sitzenden Stämme aufmerksam, wenn man auch auf die Namenkoinzidenz allein nicht viel bauen darf. Diese Überlieferung wird aber durch anthropologische Tatsachen gestützt. Die im Verschwinden begriffene Urbevölkerung von Ruanda und Urundi, die Pygmoiden Batwa, werden in der Hauptmasse durch Elemente gebildet, die erst bei den Wald-Bantu verhältnismäßig rein zum Vorschein kommen. Läßt man dabei nicht außer acht, daß in früherer Zeit das Zwischenseengebiet, wie es scheint, bewaldet war und einen Teil des Kongo-Waldes gebildet hat, so wird es auch durchaus wahrscheinlich, daß seine Bevölkerung mit den mittelgroßen Negern des östlichen Kongo-Waldes identisch gewesen sein konnte, und dieser ganze Wald, auch in anthropologischer und ethnographischer Hinsicht, eine einheitliche Provinz gebildet hat.

Bei den Batwa haben sich aber noch Pygmäen-Spuren erhalten. Dieser Umstand macht uns auf die Möglichkeit einer noch älteren Bevölkerungsschicht im Zwischenseengebiete aufmerksam. Das Vorkommen einer primären Pygmäen-Schicht im Zwischenseengebiete wurde bekanntlich durch JOHNSTON verteidigt[1]).

Die Spuren der beiden hier besprochenen alten Bevölkerungsschichten sind im Norden und Osten des Zwischenseengebietes schon verschwunden. Dort pflegt man auch als Urbevölkerung, im Gegensatze zu den später eingewanderten Hirten, die Ackerbauer zu bezeichnen. Diese sind, wie es schon durch STUHLMANN[2]) erkannt wurde, mit den Bakondjo enge verwandt. Er machte dabei darauf aufmerksam, daß die vorhandenen Unterschiede auf die differenzierende Wirkung der Einwanderungen aus dem Norden zurückzuführen seien.

---

[2]) STUHLMANN, F., Mit Emin Pascha ins Herz von Afrika. Berlin 1894, S. 842.

Einwanderungen aus dem Norden. Gehen wir nunmehr zu den Einwanderungen aus dem Norden über, die hier eine so große Rolle gespielt haben, da alle Staatenbildungen, die über das Niveau einer patriarchalischen Sippe hinausragen, mit ihnen in Zusammenhang gebracht werden müssen.

Eine der ältesten Einwanderungen brachte dem Zwischenseengebiet die Bahima-Batutsi. Diese können, wohl mit Recht, mit den hamitischen Galla in Zusammenhang gebracht werden, wenn auch diese Ansicht bis jetzt immer noch nicht definitiv begründet werden konnte. Man darf nämlich dabei nicht außer Acht lassen, daß die Tatsache der Batutsi-Einwanderung selbst nur auf Vermutungen anthropologischen und ethnologischen Charakters beruht, historisch aber nicht fest begründet ist. Über diese Einwanderung sind bis jetzt noch keine unmittelbaren Überlieferungen bekannt. LANGHELD[1]) bemerkt nur kurz, daß die Bahima für ihre Heimat ein Land im Nordosten angeben, „wo große Berge seien und wo der Mond aus deren Spitzen neue Kraft und sein schönes weißes Licht schöpft." Die meisten Bahima-Überlieferungen nehmen Bezug auf die Gründung der gegenwärtigen Staaten, die vor 15 bis 18 Generationen stattgefunden hat. Man kann jedoch auf Grund des vorhandenen Materials ohne Mühe nachweisen, daß die Bahima schon seit viel längerer Zeit ihre Rinder im Zwischenseengebiet weiden.

Als die Baganda vor 23 Generationen, unter der Führung von Kintu, aus dem Norden in ihre gegenwärtigen Sitze eingewandert waren, traten sie in ein Nachbarschaftsverhältnis zu den Banyoro, die in Bunyoro den Boden bebauten, und zu den Bahima, die in Nkole ihre Rinder weideten[2]). Kintu's Enkel Kalemera, der zu Lebzeiten seines Vaters Chwa in Bunyoro starb, war mit der Muhima-Frau Wanyana verheiratet. Diese schenkte ihm den Sohn Kimera, der nach dem Tode seines Großvaters in Buganda regierte. Diese Tatsachen beweisen, daß die Einwanderung der Bahima aus dem Norden weiter zurückliegt als die Baganda-Einwanderung. Infolgedessen kann sie auch nicht mit dem Anfange der gegenwärtigen, in den Staaten des Runyoro-Sprachgebietes seit 15 bis 18 Generationen herrschenden Dynastien in Zusammenhang gebracht werden.

Die Zeit der Baganda-Einwanderung kann annähernd bestimmt werden. Das Ableben von 22 Herrschergenerationen erlaubt diesen Zeitpunkt in den Anfang des XV. Jahrhunderts zu verlegen. Die Bahima-Einwanderung konnte infolgedessen nicht später als in den ersten Jahrhunderten unseres Milleniums stattgefunden haben. MORIÉ[3]) spricht in seinem unkritischen Buche sogar vom VII. Jahrhundert. Diese chronologische Angabe stimmt sehr gut mit unseren übrigen Kenntnissen überein. Leider konnte ich ihre Quelle nicht ermitteln. MORIÉ zitiert die benutzte Quelle nicht.

---

[1]) LANGHELD, W., Über einen Zug nach Ruhanda. Deutsches Kolonialblatt 1895, S. 73.
[2]) Aus dem Manuskript des R. P. ACHTE.
[3]) MORIÉ, L. J., Histoire de l'Éthiopie. Paris 1904, S. 247.

Das weitere Vordringen der Batutsi nach dem Süden dauerte bis zur Gegenwart fort. Sie gingen über die Grenzen des Zwischenseengebietes hinaus, und man findet Batutsi als Hirten, wenn auch nicht in herrschender Stellung, in Urambo, Unyanyembe und in anderen Teilen von Unyamwezi[1]). Über die Batutsi von Urambo ist überdies noch bekannt, daß sie durch Yavigimba von West-Ussuwi vertrieben wurden. Das Hirtenvolk von Ussukuma stammt aus dem Runyoro-Sprachgebiete und ist zu den Bahima zu zählen.

Als letzte Invasion aus dem Norden wäre die Babito-Einwanderung zu bezeichnen. Sie kamen in der Mitte des XVI. Jahrhunderts (vor 18 Generationen) von Bukedi nach Bunyoro.

Die Baganda- und Babito-Invasionen vernichteten die Bahima-Herrschaft im Norden des Zwischenseengebietes. Dies erklärt uns auch den Umstand, weshalb dort die Bahima keine privilegierte Stellung einnehmen. Sie sind dort bloß Kuhhirten. In den übrigen südlicheren Staaten bilden sie den Adelstand.

Faßt man das Ergebnis unserer Betrachtungen über die Reihenfolge der, im Zwischenseengebiet aufeinander liegenden, ethnischen und anthropologischen Schichten zusammen, so erhält man die folgende schematische Tabelle:

Babito,
Baganda,
Bahima-Batutsi,
Bahutu-Bahiru (Bakondjo),
Batwa (Pygmoide),
Pygmäen (?).

Groß-Bunyoro. Die älteste Staatenbildung des Zwischenseengebietes ist, wie es scheint, Bunyoro. Dieser Staat allein wird in den ältesten Überlieferungen erwähnt.

In den Überlieferungen von Busoga[2]) wird schon über Könige von Bunyoro aus alter Zeit, vor der Baganda-Einwanderung, berichtet. Nach diesen Angaben soll Busoga, auf Veranlassung des Mukama (König) von Bunyoro, von der Metropole aus besiedelt worden sein und blieb seine Provinz. Erst später, nach der Einwanderung Kintu's, am Anfange des XV. Jahrhunderts, ist Busoga in die Einflußsphäre von Buganda gefallen.

Bunyoro wurde ursprünglich durch das Geschlecht der Basita bevölkert und beherrscht. Die erste bekannte Königin ist nach JOHNSTON[3]) Nyamwengi, die aus Mwengi (Muenge) in Toro stammen und über Bunyoro, Toro, Nord-Nkole und Nord-Buganda geherrscht haben soll. Mit Saza, dem Sohne Nyamwengi's, der ohne Nachkommen starb, endigte die Basita-Herrschaft. Ihr folgte die Dynastie der Barantsi (Baranzi), die durch Saza's Koch, namens Mukondo, gegründet wurde. JOHNSTON verzeichnet hier vier Herrscher:

[1]) BAUMANN, O., Durch Massailand zur Nilquelle. Berlin 1894, S. 204, 209.

[2]) CONDON, F. M. A., Contribution to the Ethnography of the Basoga-Batamba. Uganda Protectorate. Br. E. Africa. Anthropos 1910, SS. 934—956.

[3]) JOHNSTON, H., The Uganda Protectorate. London 1902, S. 594.

Mukondo,
Hangi,
Ira,
Bukuku.

Der letzte Herrscher dieser Dynastie wurde von seinem Enkel Ndaula, dem Sohn seiner Tochter Nyinamiru und ihres Verführers Isimbwa, totgeschlagen.

Mit Ndaula beginnt die Bachwezi-Herrschaft in Bunyoro. Nach WILSON, dem JOHNSTON in der Hauptsache folgt, soll sie von sehr kurzer Dauer gewesen sein, da nur eine Herrschergeneration erwähnt wird. Das sind die Brüder Ndaula's, unter die das Reich aufgeteilt wurde.

Bei der Teilung kam:

das Land Bwera an Wamara,
das Land Buruli an Lubanga,
das Land Mwengi an Mugeni,
das Land Kiaka an Ibona,
das Land Bunyara in Nord-Uganda an Mugarra,
ein Teil von Buganda an Chumya,
das Land Bugoma an Nsinga,
das Land Burega an Mulindwa, der im Kampfe mit Basinga und Bagahe, die kein Fleisch weißgefleckter Kühe essen durften, gefallen ist[1]),
das Land Toro an Kahauka,
die Länder Bugaya, Bugungu (Magungu) und Chiope an Kilo.

Abgesehen von den Brüdern bekam noch Ndaula's weiterer Verwandter Mugasha (Mukasa) die Inseln Sese. Nur Kagoro, ein Bruder Ndaula's, bekam keinen Anteil, da er nach ersten großen Kriegserfolgen im Kampfe gegen die Bakedi, im Nordosten des Landes, unterlag.

Nach der mir in Kiziba erzählten Überlieferung soll aber Kagoro ein Sohn Kyomya's und Enkel Wamara's gewesen sein. In Kiziba jedoch, wie das durch REHSE bestätigt wurde, wird Kagoro als tapferer Mann bezeichnet, was wohl mit seinen Kämpfen gegen die Bakedi in Beziehung steht.

Nach ihrem Tode wurden die Brüder und Mugasha zu großen Geistern, den größten des Landes. Man verehrt sie jetzt in den entlegensten Ecken des Zwischenseegebietes, und sie sind ein Gegenstand des religiösen Kultes. Diese Tatsachen könnten für eine längere Dauer der Bachwezi-Herrschaft sprechen. Dafür spricht auch die ältere Geschichte Kiziba's. REHSE[2]) berichtet nämlich: „Unter Wamara's Oberhoheit standen auch alle kleineren Geister, die bei Lebzeiten regierende Fürsten waren. Der eine von diesen hieß Kiziba. Er hatte seine Festung im Dorfe Bukuari. Als er starb, benannte man nach ihm das Land, das bis heute den Namen Kiziba führt." Etwas weiter sagt REHSE: „Die Untertanen des Königs nannten sich Baziba, Leute des Kiziba. Kiziba's

[1]) MELDON, Notes on the Bahima of Kiole. Journal of the African Society 1907, S. 144.
[2]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 153.

Nachkommen regierten lange das Land. Der letzte dieses Stammes war Ntumua, sein Bruder hieß Kanyamuishna." Dieser alliiert sich verräterisch mit Kibi, der mit seiner Hilfe die Trommel (den Thron von Kiziba) an sich reißt, und nach dem jetzt die sechzehnte Generation seiner Nachkommen herrscht. Diese Angabe rückt den Anfang der Bachwezi-Herrschaft in sehr ferne Zeiten, die wesentlich weiter als eine siebzehnte Ahnengeneration zurückliegen.

Es wird übereinstimmend überliefert, daß die Bachwezi durch die Babito verdrängt wurden. Jenen ausweichend gingen sie zunächst über Bugoma auf das andere Ufer des Albert-Sees und kehrten dann nach Bwera zurück[1]). Als Zeitpunkt dieser Verschiebung kann annähernd die Mitte des XVI. Jahrhunderts bestimmt werden.

Anderthalb Jahrhundert nach der Einwanderung der Baganda, vor sechzehn Generationen, also in der Mitte des XVI. Jahrhunderts, drangen die Babito aus Bukedi, im Nordosten vom Victoria-Nil und Choga-See, nach Bunyoro ein. In derselben Zeit werden in Karagwe, Busindja und Nkole Dynastien gegründet, die sich von den Söhnen des Bunyoro-Königs Nyamugira oder Rugaba herleiten. Rugaba Nyamugira ist aber kein Mubito. Er soll zum Geschlecht der Bayango gehört haben, aber seine Nachkommen werden nach dem Namen seines Sohnes, des Helden Ruhinda, ganz allgemein Bahinda genannt. Berücksichtigt man das zeitliche Zusammenfallen der Babito-Invasion, des Exodus der Bunyoro-Fürsten und der Gründung der Bahinda-Dynastien durch Bunyoro-Prinzen, so darf man den wohl begründeten Schluß ziehen, daß die durch Babito aus Bunyoro verdrängten Bachwezi mit den Gründern der Bahinda-Dynastien identisch sind.

Diese Feststellung gestattet uns, die indirekten Angaben über die längere Dauer der Bachwezi-Dynastie noch durch ein weiteres Argument zu vermehren. Emin Pascha[2]) berichtet nämlich, daß Ruhinda II. Runjunaki (Sohn der Njunaki) nach dem Süden zog und Kiamtwara, Ihangiro und Busindja erobert hat. Der Vermerk über Ruhinda II. macht uns darauf aufmerksam, daß es noch einen anderen Ruhinda vor ihm gegeben hat, der zur Bachwezi-Dynastie gehörte. Auch diese Angabe veranlaßt uns, den Zeitraum zwischen Anfang und Ende der Bachwezi-Dynastie über die Lebezeit einer Generation auseinanderzuschieben.

Roscoe[3]) erwähnt, wohl aus dieser Dynastie, auf Grund der Überlieferungen der Baganda den König Wunyi von Bunyoro. Dieser war ein Zeitgenosse des Kalemera von Buganda, dem sein Sohn Kimera gefolgt ist. Nach derselben Überlieferung war Kimera's Mutter Wanyana ursprünglich eine Frau von Wunyi und wurde von Kalemera verführt. Sie hatte zum „umuziru" die Heuschrecke (nsenene).

Im scheinbaren Gegensatze zu diesen Angaben steht die von Meldon[4]) übermittelte Nachricht von Wamara. Dieser sollte von Bwera aus Nkole für

---

[1]) Johnston, H., The Uganda Protectorate. London 1902, S. 596.
[2]) Emin Pascha, Zur Ethnologie der Gebiete um den Albert-See. Ausland 1891, S. 353.
[3]) Roscoe, J., The Baganda. Their Customs and Beliefs. London 1911, S. 215.
[4]) Meldon, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 241.

seinen Sohn Ruhinda erobert haben, wobei die Bachwezi bis auf den Letztgenannten das Land verlassen haben. Diese Nachricht würde den Exodus der Bunyoro-Fürsten in die Zeit Wamara's setzen. Nun wird aber andrerseits von MELDON[1]) außer Rugaba noch dessen Vater Ruhanga erwähnt. Diese beiden müssen wieder sicher zwischen Wamara, Ndaula's Bruder, und Ruhinda placiert werden. Dieser Widerspruch läßt sich aufklären durch die Annahme, daß mit der Bezeichnung „Sohn Wamara's" nur ein Hinweis auf den berühmten Ahnen Wamara gemeint ist.

Wir finden also auch hier eine Angabe, die zugunsten einer längeren Dauer der Bachwezi-Dynastie spricht. Die scheinbaren Widersprüche sind ohne weiteres erklärlich, wenn man berücksichtigt, daß die geschichtlichen Überlieferungen in Nkole als Staatsgeheimnis betrachtet und meistens nur durch schlechte Gewährsmänner an Europäer verraten werden.

Nur die Überlieferung von Busindja[2]) enthält wesentlich abweichende Angaben. Dort wird als Ruhinda's Vater ein gewisser Kayango bezeichnet. Das widerspricht noch nicht direkt den anderen Überlieferungen, da dort Ruhinda's Vater zum Bayango-Clan gerechnet wird[3]). Nach obiger Überlieferung soll aber Kayango ein aus Busindja stammender und in Buganda tätiger Schmied gewesen sein. Mit Rücksicht darauf wird berichtet, daß Ruhinda seinen Zug von Buganda, mit Einwilligung des dortigen Herrschers, unternommen und von ihm auch seine Begleiter bekommen hat.

Das waren zunächst drei Bahima:

1. Rubanda ya Nsoke aus der Familie der Basenge,
2. Katambi wa Kanuki aus der Familie der Bahira,
3. Kikondama aus der Familie der Bahira.

Dazu zwei Regenmacher: Karangara aus der Familie der Bakyamba (später in Ikuza wohnhaft) und ein zweiter aus der Familie der Barungu. Die übrigen waren gewöhnliche Leute aus dem Volke:

1. Rutale nyeikumbagaza aus der Familie der Bagara und
2. Kisaho aus der Familie der Baligi.

Auch hier also, trotzdem Ruhinda von Buganda kommt, ist sein Zug ein Zug der Banyoro. Die Bahima von Buganda sollen auch jetzt noch das Runyoro unter sich sprechen. Vielleicht sind diese Abweichungen nur spätere Veränderungen der Überlieferung, die dadurch entstanden sind, daß alle letzten Invasionen vom Norden nach Busindja aus Buganda gekommen sind, und daß man, im Wetteifer mit Karagwe und Nkole, das Geschlecht des großen Helden für Busindja allein beanspruchen wollte. Bekanntlich wurde um die Leiche Ruhinda's gekämpft und man mußte sie aufteilen, um Frieden zu stiften.

[1]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 144.

[2]) VAN THIELE, H., R. P., Busiaza unter der Dynastie der Bahinda. Anthropos 1911, S. 498.

[3]) Oberleutnant RICHTER (Bezirk Bukoba, Mitteilungen aus den Deutschen Schutzgebieten 1899, S. 69) stellte fest, daß Bayango und Bahinda untereinander nicht heiraten dürfen, und daß sie infolgedessen demselben Clan bilden.

Den vorhandenen Widersprüchen kommt keine große Bedeutung zu, und wir dürfen mit einer starken Wahrscheinlichkeit den Schluß ziehen, daß die Bachwezi mit den Ahnen der Bahinda identisch sind, und daß sie früher einen bedeutenden Zeitraum in Bunyoro geherrscht haben, wenn wir auch darüber keine direkten Angaben besitzen. Dafür spricht wenigstens die Tatsache, daß die Herrschaft Bwera, der Anteil Wamara's, nicht in der Zahl der durch Ruhinda eroberten Fürstentümer erwähnt wird. Nach der Auswanderung der Bachwezi von Bunyoro bleibt Bwera im Besitze der Letzteren und wird durch Buganda den Bahinda entrissen. Es bleibt noch die Frage der Beziehung zwischen Bahima und Bachwezi übrig.

In den durch MELDON[1]) ermittelten Angaben über die Geschichte von Nkole wird ausdrücklich gesagt, daß die Bahima schon in Bwera waren, als die Bachwezi, durch Wamara geführt, ins Land kamen. EMIN PASCHA[2]) betrachtet die Bahinda als einen besonderen Stamm, also eine besondere Invasionswelle, die jedenfalls vor den Babito im Zwischenseengebiet eingebrochen ist. Ich konnte überdies wiederholt beobachten, daß man zwischen den Bahinda und Bahima eine scharfe Grenze zieht. Nach einigen Angaben sollen die Bahinda zusammen mit Babito vom sagenhaften Bukedi-Mann Isimbwa abstammen. Diese Angabe scheint mir doch ganz unwahrscheinlich zu sein, da Bahinda und Babito verschiedene Totemtiere haben. Nach der Busindja-Überlieferung[3]) war Ruhinda's Mutter Nzunaki (Njunaki) eine Muhima-Sklavin aus Koki und gehörte zum Babogo-Clan. Sein Vater, Kayango, ist kein Muhima und gehörte, wie es schon erwähnt wurde, zum Bayango-Clan. Ein Zusammenhang zwischen Bahima und Bahinda läßt sich jetzt freilich nicht leugnen. Ob er aber nur durch die Mutter Ruhinda's und die späteren Heiraten mit Bahima-Frauen angeknüpft worden ist, läßt sich einstweilen nicht sagen.

Mit Rücksicht auf die hohe soziale Stellung, die von den Bahima in den Bahinda-Staaten eingenommen wird, wäre es aber auch möglich, daß die Bahinda ein bevorzugtes Bahima-Geschlecht sind. Eine ähnliche Erscheinung können wir in Mpororo beobachten, wo die Bashambo einen privilegierten Bahima-Clan darstellen. Zugunsten dieser Ansicht läßt sich der folgende indirekte Hinweis anführen. Die Herrscher von Nkole werden im Orte Isanji beerdigt. Dieser liegt aber auf einer Halbinsel des Kachira-Sees in der Provinz Bukanga, die als alter Sitz der Bahima von Nkole angesehen wird.

Das Babito-Reich. Mpuga Lukedi Nyabongo, der Gründer der Babito-Dynastie, ist nach Bunyoro von Bukedi, im Nordosten vom Choga-See, eingewandert. Dieses historische Ereignis fällt also zusammen mit dem Vorwärtsdringen der Bakedi nach dem Südwesten.

Überschaut man die Sprachenkarte des Zwischenseengebietes, so sieht man, daß die Shuli in ihrem Vorstoße nach dem Süden über die Linie Albert-See

---

[1]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 241.
[2]) EMIN PASCHA, Zur Ethnologie der Gebiete um den Albert-See. Ausland 1891, S. 353.
[3]) VAN THIELE, H., R. P., Busiuza unter der Dynastie der Bahinda. Anthropos 1911, S. 498.

—Victoria-See mit kleinen Vorsprüngen hinausgekommen sind. Auf dem Westufer des Albert-Sees sind es die Lur, im Osten vom Victoria-See die Wagaya und Kavirondo-Jaluo, und zwischen den beiden Seen, im Bereiche des Bunyoro-Staates, die Shifalu und in Bukedi die ihnen verwandten Lango.

Berücksichtigen wir dann noch das für die Shuli-Stämme so charakteristische Ausbrechen der 4—6 unteren Vorderzähne, so können zum Shuli-Gebiet noch die durch Babito beherrschten Länder Bunyoro und Toro hinzugefügt werden. Es verdient besonderer Beachtung, daß diese Verunstaltung nicht im ganzen Runyoro-Sprachgebiete verbreitet und nur auf die Babito-Einflußsphäre beschränkt ist. Sämtlichen Nachbarn, die Shuli-Neger ausgenommen, fehlt sie. So auch dem Madi-Stamm der Lendu im Westen. Die angeblichen „Witschwesi" von EMIN-PASCHA können also für die Sitte des Zähneausbrechens nicht verantwortlich gemacht werden, und diese Verunstaltung muß mit den Babito in Zusammenhang gebracht werden. Deshalb dürfen wir auch den Schluß wagen, daß die Gründung der Babito-Dynastie durch Lukedi mit einem Vorstoß der Shuli in das Gebiet zwischen Albert-Nyanza und Victoria-See zusammenfällt.

Die letzten Völkerbewegungen (also nicht die Einwanderung der Bahima, die viel früher stattgefunden haben mußte) wird man wohl mit den ungefähr gleichzeitigen, abessinischen Eroberungen des Mohammed Achmed Grandj (1525—1544), und den darauffolgenden Galla-Bewegungen in Zusammenhang bringen können. Diese konnten Anlaß zu Völkerverschiebungen geben, die bis zum Albert-See gereicht haben. Insofern scheint es mir notwendig, den von R. P. VAN DER BURGT[1]) ausgesprochenen Gedanken zu vervollständigen.

Während meines Aufenthaltes in Toro stellte mir der gegenwärtige Toro-Herrscher Dawdi Kassagama seine Notizen zur Geschichte von Bunyoro zur Verfügung. Ich entnehme ihnen in der Hauptsache die Genealogie der Babito-Herrscher, die 17 Generationen verzeichnet. Diese Liste wurde ergänzt durch den Namen Luwaga's, des Bruders von Winyi Kyebambi und des Vaters von Olimi Sansa. Dieser Fürst herrschte, wie es scheint, nicht und wurde, wohl aus diesem Grunde, durch Kassagama vernachlässigt.

Zur allgemeinen Charakterisierung der Geschichte von Bunyoro, die wohl bald den Gegenstand einer ausführlichen Behandlung bilden wird, möchte ich nur erwähnen, daß nach dem Eindringen der Babito in Bunyoro daselbst eine Glanzperiode eintrat, die bis zum XVIII. Jahrhundert gedauert hat. Bis zu dieser Zeit behielt Bunyoro seine Hegemonie im Zwischenseengebiet, trotz des Dynastiewechsels im XVI. Jahrhundert, der alle alten Bande stark aufrütteln mußte. Erst im XVIII. Jahrhundert wurde Bunyoro durch das heranwachsende Buganda überholt und in der Vorherrschaft abgelöst.

16. Chwa Kabarega (verbannt 1899[1]). Dawdi Chwa Kamagama (seit 1892[2]).
17. Andrea Lahaga.

Ursprünglich erkannte aber auch Buganda die Oberhoheit von Bunyoro an. Das kommt in dem Umstande zum Ausdruck, daß die Buganda-Prinzen am Hofe des Königs von Bunyoro geweilt haben. So ist z. B. der Enkel von Kintu, der Erbprinz Kelemera, zu Lebzeiten seines Vaters, Königs Chwa I., in Bunyoro gestorben, und auf Chwa folgte Kalemera's Sohn Kimera.

Die südlichen Staaten des Runyoro-Sprachgebietes blieben auch im Abhängigkeitsverhältnis von Bunyoro. Kiziba z. B. hat die Oberhoheit der neuen Bunyoro-Herrscher, der Babito, ebenfalls bis zum XVIII. Jahrhundert anerkannt. Die Prinzen Kiziba's wurden an den Hof von Bunyoro geschickt. So weilten dort Ishamula bis zum Tode seines Vaters Kibi, und Mwigala bis zum Tode von Musinga. Sie setzten sich später in Kiziba, mit Hilfe von Bunyoro, durch.

Nkole bleibt in diesem Abhängigkeitsverhältnis bis zur Zeit Kyebambi's. Die Unbotmäßigkeit von Nkole hatte, wie es scheint, den Kriegszug des Luwaga, eines Bruders des Königs Winyi Kyebambi (Tshevambe) von Bunyoro zur Folge, der aber durch Ntare Kitabanyoro von Nkole zurückgeschlagen wurde[3]).

[3]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 242. — RICHTER, Oblt., Der Bezirk Bukoba. Mitteilungen aus den Deutschen Schutzgebieten 1899, S. 78.

Im Laufe des XIX. Jahrhunderts wird Bunyoro durch das Schicksal buchstäblich verfolgt. Ein Unglück folgt dem anderen. In der ersten Hälfte des Jahrhunderts revoltierte Kaboyo, Sohn des Bunyoro-Herrschers Winyi Nyamutukura Kyebambi. Der Vater hatte ihm in Mwenge den Besitz Myeri zugewiesen. Der unzufriedene Sohn zog mit seinen Anhängern nach Toro und machte sich dort unabhängig. Sein Vater versuchte ihn mit Waffengewalt zur Botmäßigkeit zu bringen, wurde aber vertrieben. Mit dieser mißlungenen Kriegsexpedition beginnen die Kämpfe zwischen Bunyoro und Toro, in denen Kaboyo's Sohn nur wenig Erfolge zu verzeichnen hat. Kyebambi's Enkel Kabarega verdrängt ihn endlich. Nach der englischen Okkupation nahmen die Engländer die Partei der Toro-Herrscher, um das ihnen feindliche Bunyoro zu schwächen. Captain LUGARD führte den in Koki mit seiner Mutter wohnenden Dawdi Chwa Kassagama, einen Enkel Kaboyo's, im Jahre 1892 in Toro ein und sicherte dem Lande damit seine Unabhängigkeit.

Zu dieser neuen politischen Gründung wurden dann noch hinzugefügt:
die von Bunyoro abgetrennte Provinz Mwenge,
die von Nkole abgerissene Provinz Kitakwenda und
Ost-Busongora mit dem Salzsee Katwe.

Diese Teile sind mit Toro immer noch nicht ganz verschmolzen. Die Leute von Kitakwenda bezeichnen sich auch jetzt noch als Banyankole und die von Mwenge als Banyamwenge oder Banyoro, und lehnen es ab, Batoro zu sein. Es darf jedoch nicht unerwähnt bleiben, daß die Batoro selbst von ihren Nachbarn stets als Banyoro, und ihre Sprache als Runyoro, bezeichnet werden.

Bunyoro wurde durch die Engländer für seine islamfreundliche und europäerfeindliche, ungeschickte Politik schwer bestraft. Abgesehen vom Verlust des unabhängig gewordenen Toro, kamen noch die südöstlichen Provinzen Buruli, Bugangazi und Buyaga zu Buganda. In den so eingeengten Grenzen muß sich der alte Staat, die bête noire der englischen Administration, dem neuen schweren Schicksale fügen.

Die Gliederung der Babito-Herrschaft in Bunyoro und Toro kommt am besten in der auf S. 56 stehenden genealogischen Liste der Herrscher zum Ausdruck.

JOHNSTON führt in seinem Werke[1]) zwei verschiedene Listen der Bunyoro-Herrscher an, die durch Rev. A. B. FISHER und Mr. WILSON ermittelt wurden. Diese Daten sind S. 58 oben, mit Angabe unserer Ordnungsnummer der Herrschergenerationen (in Klammern) versehen, wiedergegeben. Dadurch wird das Vergleichen der drei widerspruchsvollen Angaben erleichtert.

Der erste Blick schon verrät, daß diese beiden sich gegenseitig widersprechenden Listen unvollständig sind. Die Liste von Rev. A. B. FISHER stimmt aber bei weitem besser mit der Kassagama's überein, als die von WILSON. Nimmt

		12. (16.) Kabarega.

man an, daß FISHERs Luwanga mit Kasoma Olimi Kassagama's identisch ist, so decken sich die beiden Quellen gänzlich bezüglich der letzten 9 Herrschergenerationen. Die Liste Kassagama's wird dabei durch Rev. A. B. FISHER ergänzt. Er sagt nämlich, daß der verstorbene Kyebambi durch Luwaga ersetzt wurde und diesem sein Sohn Sansa gefolgt ist. Aus diesen Worten kann man schließen, daß, der durch Kassagama vernachlässigte, Luwaga ein Bruder Kyebambi's war und, nach dieser Quelle, als Herrscher oder wenigstens Regent angesehen wurde. Luwaga wird auch in der Nkole-Überlieferung[1]) als ein Zeitgenosse des Ntare Kitabanyoro erwähnt. Der Letztere gehört zur achten Ahnengeneration des gegenwärtig in Nkole herrschenden Kahaya. Luwaga würde, als Bruder des Kyebambi, ebenfalls zur achten Ahnengeneration des gegenwärtigen Bunyoro-Herrschers gehören.

Die ersten acht Generationen sind bei Rev. A. B. FISHER zu kurz gekommen. Er erwähnt nur den Gründer der Dynastie und dessen Sohn Lukedi Lwagamaki, der zugleich der Vater des Kyebambi gewesen sein soll. Bei Kassagama werden dagegen zwischen Lukedi und Winyi Kyebambi sieben Generationen eingeschaltet. Welchem von diesen Herrschern Lukedi Lwagamaki entsprechen kann, läßt sich nicht ermitteln. Ferner wird in der von Rev. A. B. FISHER ermittelten Überlieferung erwähnt, daß Sansa mit dem Buganda-König Semakokiro gekämpft hat, daß der Letztere im Kampfe gefallen ist, Sansa aber bald darauf durch seinen Diener getötet wurde. Die Buganda-Überlieferung sagt dagegen[2]), daß Semakokiro im späten Alter gestorben ist: „So *Kinyoro* drowned the medicine-man, but soon afterwards the ghost tormented the murderer; his legs swelled, and he died. The King too died within a short time from the same disease." An einer anderen Stelle wird gesagt: „Semakokiro lived to an advanced age."[3]) Dieser Widerspruch läßt sich nicht dadurch erklären, daß die Baganda einen Mißerfolg vertuschen wollten. Die Angabe von Rev. A. B. FISHER ist viel eher unrichtig, und zwar aus dem Grunde, weil es unwahrscheinlich ist, daß Sema-

[1]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, Bd. VI. S. 242.

[2]) ROSCOE, J., The Baganda. Their Customs and Beliefs. London 1911, S. 226.

[3]) Ebenda S. 225.

kokiro und Sansa Zeitgenossen sein konnten. Bis zum Anfange der sechziger Jahre, d. h. bis zur Zeit der Reise SPEKEs, die in den ersten Jahren der Herrschaft Mutesa's stattgefunden hat, herrschten und starben in Buganda, seit dem Tode von Semakokiro, zwei Herrscher, Kamanya und sein Sohn Suna II., die zusammen gegen 50 Jahre regierten. Sollten denn in Bunyoro in einer kürzeren Zeit vier Herrschergenerationen vorübergezogen sein? Der Tod Sansa's ist doch nach dieser Angabe in eine spätere Zeit als das Ableben von Semakokiro zu verlegen, und Kamurasi trat seine Herrschaft wesentlich früher als Mutesa von Buganda an. Außerdem ist es noch bekannt, daß Sansa's Vater Luwaga[1]) in Nkole den Ntare Kitabanyoro überfallen hat. Der Ururenkel des Letzteren aber, Lwabusengi, war ein Zeitgenosse des Semakokiro von Buganda. Es handelt sich hier also offenbar um einen Fehler bei Rev. A. B. FISHER.

Während die Liste des Rev. A. B. FISHER der Liste Kassagama's gegenüber nur unvollständig ist, enthält die von WILSON überdies noch gewisse Widersprüche. Hier stimmen, den gegenwärtigen Herrscher Andrea Luhaga eingerechnet, nur die letzten sieben Herrscher überein. Kassagama erwähnt zwischen Lukedi und Chwa Luhaga neun Herrscher, bei WILSON sind es nur fünf. Gleich nach Lukedi kommen dort, der Reihe nach, Olimi und Sansa, während bei Kassagama in der VIII. Generation Olimi Sansa Mutakiaro und in der X. Olimi Sansa erwähnt werden. Wem Luhaga I. der WILSONschen Liste entspricht, läßt sich nicht bestimmt ermitteln. Es wird sich hier wohl um Luwaga aus der IX. Generation handeln. Diesem folgen aber, wieder der Reihe nach, Chwa und Winyi, die bei Kassagama als VI. resp. VII. Generation verzeichnet werden.

Diese Liste enthält aber noch einen anderen Widerspruch. In der vierten Zeile unter der Liste sagt JOHNSTON nämlich: „In the case of Kyebambi, otherwise called Nyamutukuru, son of Sansa, he lived etc." Nun ist aber Kyebambi Nyamutukuru der Sohn Kasoma's und nicht Sansa's. Kyebambi, Sohn des Sansa (Olimi Sansa Mutakiaro), wird bei Kassagama erwähnt. Er fehlt aber bei WILSON. Die Angaben von JOHNSTON weisen also auf die Liste Kassagama's, als die vollständigere, hin.

Diese kritischen Betrachtungen gestatten uns also, die Angaben des Kassagama als die beste und zuverlässigste Herrscherliste von Bunyoro anzusehen. Die anderen Quellen erlauben uns aber, in diese Liste nach Kyebambi noch seinen Bruder Luwaga, als Vater des Olimi Sansa, einzuschalten.

Der Baganda-Staat. Die Baganda wanderten in das Zwischenseengebiet von Norden aus vor 23 Generationen ein. Die ethnische Identifizierung der Eroberer, die gegenwärtig ein Bantu-Idiom der Zwischenseengruppe sprechen, das sie, wie es scheint, den Autochthonen entlehnt haben, ist bis jetzt noch nicht gelungen. Man darf aber aus der Verbreitung der Sudan-Stämme im Norden vom Zwischenseengebiete schließen, daß dem Vorstoße der Shuli (Acholi) nach dem

[1]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, Bd. VI, S. 242.

Süden die Wanderungen der Madi-Stämme vorangegangen sind. Im Gegensatze zur Gründung der Babito-Dynastie und dem Vorstoß der Bakedi, die mit den Wanderungen der Shuli direkt in Zusammenhang gebracht oder gar identifiziert werden können, darf die Frage des Zusammenhanges der Baganda-Einwanderung mit den Bewegungen der südlichen Madi-Stämme, der Lendu-Balega, zunächst nur als eine noch unbegründete Vermutung, ausgesprochen werden. Man muß dabei auch die Möglichkeit eines Zusammenhanges mit den Bewegungen der Dinka, deren östliche Zweige, wie es scheint, bei den Massai-Migrationen stark in Mitleidenschaft gezogen wurden, im Auge behalten. Darauf deuten wenigstens die anthropologischen Tatsachen hin. Es ist jedenfalls ganz sicher, daß die Baganda und ihre Dynastie durchaus keine Bahima sind. Die schon durch STUHLMANN[1]) angezweifelte Ansicht von STANLEY[2]) und JOHNSTON[3]) darf jetzt als ganz unzutreffend bezeichnet werden.

Könige von Buganda.

[4]) Die Namen der Prinzen, die nicht geherrscht haben, trotzdem aber für die Geschichte von Bedeutung sind, wurden eingeklammert.

Über die ältere Geschichte von Buganda ist nichts bekannt. Die Einwanderung der Baganda soll im Lande den Herrscher Ntege beseitigt haben. Über dessen Reich und seine Zugehörigkeit ist aber bis jetzt nichts bekannt.

Die Ahnentafel der Buganda-Könige beginnt mit Kintu, der ebenso wie Kigwa, der Protoplast der Ruanda-Herrscher, vom Himmel gefallen sein soll und infolgedessen keine Ahnen besitze.

Ich habe hier (S. 60) die genealogische Tafel der herrschenden Linie seiner Nachkommen beigefügt. Diese Liste bildet das Untersuchungsergebnis des R. P. ACHTE, der im Jahre 1903 in Toro gestorben ist, und dessen Notizen mir durch R. P. VAN DAILLE zur Verfügung gestellt wurden, wofür ich ihnen meinen Dank an dieser Stelle aussprechen möchte.[1])

Mit Rücksicht auf das Buch von Rev. ROSCOE[2]) sollen zu der obigen Herrscherliste nur wenige Bemerkungen gemacht werden.

Der durch Kintu gegründete Buganda-Staat beschränkte sich ursprünglich auf ein kleines Gebiet zwischen Victoria-Nil im Osten und dem Victoria-Nyanza im Süden, und entsprach, wie es scheint, der gegenwärtigen Busiro-Provinz; dort werden auch die Buganda-Herrscher beigesetzt.

Kalemera stirbt zu Lebzeiten seines Vaters am Hofe in Bunyoro.

Lumansi stirbt zu Lebzeiten seines Vaters während einer Expedition in Busoga.

Kaima fällt beim erfolglosen Einfall nach Buddu.

Kimbugwe herrscht nach Sekamanga und vor Katarega.

Mawanda erobert den größten Teil von Busoga und herrscht über Bulemezi.

Kyabagu setzt die Kämpfe in Busoga fort. Während seiner Herrschaft kommen die ersten Glaswaren nach Buganda.

In der zweiten Hälfte des XVIII. Jahrhunderts wird Buganda zum mächtigsten Staate im nördlichen Teile des Zwischenseengebietes.

Junju erobert Buddu und macht es zu einer Buganda-Provinz.

Semakokiro führt einen bedeutenden Handel mit den Südufern des Victoria-Sees und importiert von dort Kauri-Muscheln (*Cypraea moneta*) und Baumwollstoffe in Buganda, die mit Elfenbein bezahlt werden. Das Tragen der Baumwollstoffe wird aber als ein Privilegium der Prinzen erklärt.

Suna II. gestattet den Arabern, sich im Lande zu Handelszwecken niederzulassen.

Mutesa erobert definitiv die Länder Busoga und Koki und dehnt seinen

---

[1]) Diese Herrscherliste wurde vor dem Erscheinen des Buches: „ROSCOE, J., The Baganda Their Customs and Beliefs. London 1911." veröffentlicht im Reisebericht: „CZEKANOWSKI, J., Badania w Międzyrzeczu Nilu i Kongo. Rozprawy Wydziału Matematyczno-przyrodniczego Akademii Umiejętności w Krakowie 1910, Ser. B, Band L, S. 665".

[2]) ROSCOE, J., The Baganda. Their Customs and Beliefs. London 1911.

Einfluß in ganz Buhaya[1]), in Busindja und sogar in Ussuwi aus, das zum ersten Male im Jahre 1875 überfallen wird[2]). Es ist aus der Nkole-Überlieferung[3]) bekannt, daß nach dem erfolgreichen Einfall des Nkole-Herrschers, Mutambuka, nach Koki, der bei dieser Gelegenheit den Koki-Herrscher, Sansa, den Vater Kamswaga's, ermordete, Nkole einen Racherzug der Baganda zurückschlagen mußte. Diese Notiz stellt fest, daß sich Koki schon am Anfange der Regierung Mutesa's in der Einflußsphäre von Buganda befunden hat. Auch Rumanika, der Herrscher von Karagwe, zahlte Buganda Tribut.

Die sämtlichen, durch Mutesa eroberten, Länder behalten ihre legitimen Herrscher. Das Verbot der allgemeinen Benutzung der Baumwollstoffe wird aufgehoben, und die Missionäre werden ins Land zugelassen.

Zur Zeit Mwanga's wird das Zwischenseengebiet zwischen England und Deutschland aufgeteilt. Durch Fixierung der deutsch-englischen Grenze geht für Buganda das Gebiet im Süden vom 1° südlicher Breite verloren. Busoga wird zu einem besonderen Verwaltungsbezirk, und Mwang aselbst muß, durch die Engländer abgesetzt, aus dem Lande gehen. Buganda wird aber zur Basis des englischen Einflusses im Zwischenseengebiet und hat einen bedeutenden territoriellen Erwerb im Norden und Westen zu verzeichnen. Die Kämpfe der Engländer mit Kabarega, König von Bunyoro, der sich mit der europäischen Eroberung nicht versöhnen konnte, brachten Buganda die Provinzen: Buruli, Bugangezi und Buyaga ein. Die Unbotmäßigkeit des Königs von Nkole führte Buganda die Provinz Kabula zu. Auch der kleine Vasallenstaat Koki wurde als Provinz einverleibt.

Die Geschichte der gegenwärtigen Buganda-Dynastie ist jetzt also schon in ihren Hauptzügen bekannt. Die Übereinstimmung der vorhandenen Angaben darüber gestattet diesen Vertrauen zu schenken. Von den mir bekannten sechs Herrscherlisten stimmen die von STANLEY[4]), WILSON[7]), ACHTE[5]) und ROSCOE[6]) fast ganz überein. Nur die von STUHLMANN[7]) und JOHNSTON[8]) weichen beträchtlich ab und stimmen nur für das letzte Herrscherdrittel überein. Ich stelle hier die Listen von STUHLMANN und JOHNSTON, mit Angabe der Herrschergeneration zusammen, ebenso wie die Listen der Bunyoro-Herrscher, nach den Angaben von Rev. A. B. FISCHER und WILSON auf S. 58 zusammengestellt wurden.

---

[1]) ROSCOE spricht, auf der S. 229 seines Buches, nur von Kiziba, das erklärt sich aber dadurch, daß man in Uganda ganz Buhaya mit dem Namen Kiziba zu bezeichnen pflegt.

[2]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 509.

[3]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 242.

[4]) STANLEY, Durch den dunklen Erdteil. Leipzig 1878, S. 414.

[8]) JOHNSTON, H., The Uganda Protectorate. London 1902, S. 681—682.

Nach STUHLMANN:

1. (1.) Kintu.
2. (8?) Buganda.
3. (2.) Tshua.
4. (4.) Kimera.
5. (6.) Tembo.
6. (7.) Kigalla.
7. (8?) Nikibingo.
8. (14.) Matebbi.
9. (12.) Ssekamanya.
10. (11.) Ssunna I.
11. (11.) Yemba.
12. (12.) Kimbugwe.
13. (9.) Kaima.
14. (10.) Nakiwinge.
15. (11.) Mlondo.
16. (15.) Tewandeke.
17. (14.) Djuko.
18. (14.) Kahemba.
19. (3.) Kalemera.
20. (15.) Daula.
21. (16.) Kagula.
22. (16.) Mahanda.
23. (17.) Mwanga.
24. (13.) Katerega.
25. (17.) Mugala.
26. (17.) Tshawagu.
27. (18.) Junya.
28. (18.) Ssemakokiro.
29. (19.) Kamanya.
30. (20.) Ssunna II.
31. (21.) Mtessa.
32. (22.) Kiwewa.
33. (22.) Karema.
34. (22.) Mwanga.

Nach JOHNSTON:

1. (4.) Kimera.
2. (6.) Tembo.
3. (7.) Kigala.
4. (8?) Nikibingo I.
5. (8—14) Wampamba oder Matebe.
6. (12.) Kamanya I.
7. (11.) Suna I.
8. (11.) Zemba.
9. (12.) Kimbugwe.
10. (9.) Kaima.
11. (10.) Nikibingo II.
12. (11.) Mulondo.
13. (15.) Tewandike.
14. (14.) Juko.
15. (14.) Kaemba.
16. (3.) Kalemera.
17. (15.) Ndaula.
18. (16.) Kagala.
19. (16.) Mawanda.
20. (17.) Mwanga.
21. (13.) Katerega.
22. (17.) Namugara.
23. (17.) Kiawago.
24. (18.) Junju.
25. (18.) Semakokiro.
26. (19.) Kamanya II.
27. (20.) Suna II.
28. (21.) Mutesa.
29. (22.) Mwanga II.
30. (22.) Kiwewa.
31. (22.) Karema.
32. (22.) Mwanga II.
33. (23.) Dawdi Chwa.

Am exaktesten sind die Listen der beiden Missionäre R. P. ACHTE und Rev. ROSCOE. Sie stimmen auch miteinander gut überein. Es sind hier nur die folgenden Unterschiede festzustellen:

1. R. P. ACHTE bezeichnet Tembe (Yemba) als Vater des Sekamanga. Bei Rev. ROSCOE ist es nicht Tembe (Yemba), sondern sein Bruder Mulondo.

2. Nach R. P. ACHTE herrschten die Söhne des Nboura (Ndaula) in der

Ordnung Kaguru, Mawanda, Kikurwe. Bei Rev. ROSCOE wird angegeben, daß Kikurwe vor Mawanda geherrscht hat.

3. R. P. ACHTE erwähnt, daß Juko und Kayemba nicht geherrscht haben, während Rev. ROSCOE Angaben über ihre Regierungszeiten liefert.

4. Rev. ROSCOE spricht von einer langen Regierung des Semakokiro und R. P. ACHTE nur von 10 Jahren dieser Regierung.

Am besten ist die Übereinstimmung der Listen von STANLEY und WILSON. Sie weichen nur in ihrer Orthographie recht stark voneinander ab. Lumansi z. B. wird bei WILSON Rumaanssi und bei STANLEY Almass genannt. Von der Liste des Rev. ROSCOE weichen sie in den folgenden Punkten ab:

1. R. P. ACHTE und Rev. ROSCOE geben an, daß nach Nikibinge zunächst der Reihe nach seine drei Söhne und später zwei Enkel geherrscht haben. Bei STANLEY und WILSON wird der erste Enkel nach dem ersten Sohn und vor seinem Vater, und der dritte Enkel nach der Regierungszeit des dritten Sohnes erwähnt.

2. STANLEY und WILSON erwähnen in der Herrscherliste Musanja (Mssanyi, Mssangi) und sprechen nicht von Mwanga I. Nach R. P. ACHTE und Rev. ROSCOE herrschte Musanja überhaupt nicht. Sein Sohn Mwanga I. folgte unmittelbar einem Oheim. (Nach Rev. ROSCOE war es Mawanda, nach R. P ACHTE — Kikurwe.)

3. STANLEY und WILSON sprechen statt von Semakokiro von Wasaya resp. Wassedshe.

4. STANLEY und WILSON erwähnen statt Kimba seinen Bruder Wanpamba (Wapamba). Dieser sollte, nach R. P. ACHTE und Rev. ROSCOE nicht herrschen, da, ihren Angaben gemäß, Kimba Wapamba's Sohn Kaima gefolgt ist.

Die Listen von STANLEY und WILSON stimmen besser mit der Liste von Rev. ROSCOE, als mit der des R. P. ACHTE, überein. So wird dort erstens Sekamanga nach Mulondo und vor Tembe (Yemba) erwähnt. Das spricht zugunsten der Ansicht des Rev. ROSCOE, nach welchem Sekamanga ein Sohn von Mulondo ist. Zweitens werden die Söhne des Ndaula in der, durch Rev. ROSCOE angegebenen, Ordnung durchgezählt.

Die Listen von STUHLMANN und JOHNSTON sind ebenfalls identisch und weisen nur orthographische Unterschiede auf. Sie weichen von den vorher besprochenen ganz beträchtlich ab. Identifiziert man Kimba mit Nikibingo I. und Wapamba mit STUHLMANNs Buganda, so finden wir hier alle Namen unserer Liste, bis auf Lumansi und Musanja, die nicht geherrscht haben, in unserer Liste aber, als Väter der Könige, mitverzeichnet werden. Man darf also annehmen, daß STUHLMANN, bei seinen Nachforschungen der Buganda-Geschichte, auf Gewährsmänner gestoßen ist, welche die Namen der Herrscher, aber nicht ihre Reihenfolge, angaben. JOHNSTON wiederholt die Liste STUHLMANNs nur in verbesserter Orthographie und unter Weglassen der Vorgänger Kimera's.

Trotz aller Abweichungen finden wir auch in der Liste von STUHLMANN einen Hinweis zugunsten der Listen von Rev. ROSCOE und R. P. ACHTE. Es wird hier als Herrscher nicht Musanja, sondern sein Sohn Mwanga erwähnt.

Der Vergleich des ganzen Materials gestattet also die Liste von Rev. ROSCOE als die beste und seine Angaben als die zuverlässigsten anzusehen.

Alte Staaten des Süd-Runyoro-Gebietes. Wie schon oben erwähnt wurde, werden die Staaten des Runyoro-Sprachgebietes, außerhalb von Bunyoro und Toro, vom königlichen Geschlecht der Bahinda beherrscht, welches, ursprünglich aus Bunyoro stammend, über die benachbarten Gebiete seine Macht ausdehnte und den einzelnen Staaten die, gegenwärtig herrschenden, Dynastien gegeben hat. Diese Dynastien, die der Überlieferung gemäß ältere eingeborene Herrscherfamilien abgelöst haben, verzeichnen für die Dauer ihrer Herrschaft 15—18 Generationen.

Die Nachrichten über die eingeborenen Dynastien, welche von den, nach dem Süden durch die Babito verdrängten, Nachfolgern Nyamugira's oder Rubaga's abgelöst wurden, sind äußerst spärlich. Es werden nur die Namen der letzten Herrscher und, in den besten Fällen, die Umstände, unter denen sie verdrängt wurden, berichtet. Über die Form der, dort vor der Festsetzung der gegenwärtigen Dynastien herrschenden, politischen Organisation können wir uns keine genauere Vorstellung machen. Der Umstand aber, daß Herrschernamen genannt werden, gibt Anlaß zur Vermutung, daß diese sozialen Gebilde schon etwas über den Zustand der patriarchalen Clananarchie, wie wir sie in Mulera und bei den Bakondjo sehen werden, hinausgewachsen waren.

In Kiamtwara erwähnt REHSE[1]), als den ältesten namentlich bekannten König, Kashare, der in Gashani wohnte und zum Geschlecht der Baango gehörte. In der Busindja-Überlieferung[2]) wird er Kashare Kanyango genannt. Der Gewährsmann von REHSE erwähnt noch, daß nach Kashare Rusembo, aus dem Geschlechte der Batundu, geherrscht und in Maruku gewohnt hätte. Die Tatsachen aber, daß die Könige zu verschiedenen Clans gehören, und daß nach der Busindja-Überlieferung Kashare Kanyango durch Ruhinda abgelöst wurde, gestatten anzunehmen, daß es sich hier eher um Clanälteste handelt, die sich im Lande gleichzeitig eines Einflusses erfreut haben.

In Ihangiro herrschte zur gleichen Zeit Nkombya und in Bugabo Kiteite.

In Busindja erwähnt EMIN PASCHA[3]) den, durch Ruhinda's Sohn Katovaha vom Throne verdrängten Samsama, den mein Gewährsmann als Nshanohamye bezeichnet hat. Nach R. P. VAN THIELE[2]) soll Samsama zur Familie

[1]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 285.

[2]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 499.

[3]) EMIN PASCHA, Zur Ethnologie der Gebiete um den Albert-See. Ausland 1891, Bd. 64, S. 353.

der Baheta gehört haben. Katovaha wird in dieser Überlieferung nicht erwähnt; an seiner Stelle finden wir hier Ntare, ebenfalls einen Sohn Ruhinda's. Vielleicht handelt es sich hier um zwei verschiedene Namen desselben Individuums.

Auch in Karagwe gab es eine alte Dynastie[1]). Zu ihr gehörte, der durch Ruhinda abgelöste, Nono.

Nkole soll[2]) zu dieser Zeit aus den folgenden Fürstentümern bestanden haben:

Sema	unter	Katuku,
Kasari	„	Lwanzigami,
Nabusosi	„	Kalala,
Kabula	„	Mutenzi,
Nsongi	„	Semulinda,
Bukanga	„	Nyawela,
Mitoma	„	Lukukwe,
Buzimba	„	Maliza.

Katuku hatte dabei, bezüglich der anderen, eine Art Oberhoheit, und nachdem er durch Ruhinda bezwungen war, kam auch Nkole unter die Bahinda-Herrschaft.

Die Geschichte von Kiziba geht bis in die ersten Zeiten der Bachwezi-Herrschaft in Bunyoro zurück. Bekanntlich bekam damals Wamara, von seinem Bruder Ndaula, die Provinz Bwera im Süden vom Katonga-Fluß. Wamara ist aber für Kiziba sowohl ein allmächtiger Geist, wie auch der Herr seines Landesfürsten Kiziba, nach welchem das Land benannt wurde und dessen Leute den Namen Baziba bekamen. Damals gehörte also Kiziba schon zu Bunyoro.

Es bleibt unaufgeklärt, weshalb das gegenwärtige Herrschergeschlecht von Kiziba zum Clan der Baziba gehört, da sein Protoplast Kibi I. aus Bunyoro eingewandert ist, den alten Herrscher Ntumua ermordet und die Staatsgewalt an sich gerissen hat. Sollte denn Kibi[3]) ein am Hofe von Bunyoro weilender Kiziba-Prinz gewesen sein? Diese Erklärung hat die meisten Gründe für sich. Sie entspricht auch den Angaben, auf die ich stets im Lande gestoßen bin. Diese stimmen nämlich in der Behauptung überein, daß Kiziba, im Gegensatze zu allen anderen Staaten, die alte Dynastie behalten hat.

REHSE[4]) sagt zwar ausdrücklich: „Das Herrscherhaus leitet seine Abstammung von Muhinda, dem ersten Bunyoro-Herrscher in Karagwe, her." Diese Angabe kann aber nur auf die weibliche Linie Bezug haben, wie das schon durch RICHTER[5]) festgestellt wurde.

[1]) SPEKE, J. H., Die Entdeckung der Nilquellen. Leipzig 1864, Band I, S. 275.

[2]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 241.

[3]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 154.

[4]) Ebenda S. 110.

[5]) RICHTER, Oblt., Der Bezirk Bukoba. Mitteilungen aus den Deutschen Schutzgebieten 1899, S. 69.

Es ist sehr bezeichnend, daß, in dem, von REHSE übersetzten, Texte des eingeborenen Geschichtschreibers Ruamagira nur vom Zuge des Kibi von Bunyoro berichtet wird. Von einer Verwandtschaft des Kibi mit den Bahinda oder mit den Bunyoro-Herrschern überhaupt wird dort gar nicht gesprochen. Die unzutreffende Ansicht von REHSE findet ihre Erklärung in dem, bis zur letzten Zeit sehr verbreiteten, Zusammenwerfen aller Züge aus dem Norden mit dem Eroberungszug der Bahinda.

In Kiziba ragt, wie es scheint, ein Überrest der alten Prä-Bahinda-Zeit des südlichen Runyoro-Gebietes in die Gegenwart hinein.

Zum Schlusse soll hier noch die Liste der Kiziba-Herrscher nach den Angaben des R. P. B. HAUTMANN, die mit denen von REHSE übereinstimmen, hinzugefügt werden.

Herrscher von Kiziba.

Mutahangarua (1903—19..).

Zur allgemeinen Charakterisierung der Kiziba-Geschichte, muß erwähnt werden, daß die älteren Zeiten in Abhängigkeit von Bunyoro verflossen sind. Das letzte Jahrhundert zieht Kiziba in die Einflußsphäre von Buganda hinein, die sich um die Mitte des Jahrhunderts in eine direkte Abhängigkeit umwandelte. Die gegenwärtige scheinbare Unabhängigkeit, wodurch das Land in den gleichen Rang mit Karagwe und Ruanda, wenigstens nominell, gestellt wurde, beginnt erst mit der deutschen Besitzergreifung.

Bahinda-Genealogie. Die Geschichte der Staaten des südlichen Runyoro-Gebietes läßt sich am besten an der Hand der genealogischen Listen ihrer, mit-

einander verwandten, Herrscher verfolgen. Wir haben es hier nämlich in der Hauptsache mit dem Zersetzungsprozeß des, durch Ruhinda gegründeten, Reiches zu tun.

Die Liste der Karagwe-Herrscher mußte in erster Linie auf die unbefriedigenden Angaben von SPEKE[1]) gestützt werden. Sie ist im Verhältnis zu den Stammbäumen anderer Bahinda-Linien zu lang, als daß in ihr nur Väter und Söhne verzeichnet sein könnten. Sie ist zu lang auch für den Fall, daß man annimmt, daß die abwechselnde Reihenfolge von Ruhinda und Ntare mit Ruhinda V. aufhört. Dazu aber wird man gezwungen, wenn man berücksichtigt, daß der Vater Ndagara's Ruhinda VI. war. Es gab hier sicherlich auch Brüder, die geherrscht haben und in der allgemeinen Herrscherreihe ohne Angabe mitverzeichnet wurden.

Rubaga Nyamugira, König von Bunyoro.

Ntare von Nkole.	Ruhinda rwa Nyunaki, König von Karagwe.			
Kasasira.	Ntare I.		Bwogi von Kiamtwara.	Warusimbi.

Kadruma, (1865—1899).
Rwabunywengo, (1899 — ?).
Nach dem Tode Kyandika's kam Bwisa an Ruhimbura von Butundwe. Später wurde es verloren an Kasusura.
Herrschaft Butundwe.
Herrschaft Kimosai.
Bwisa.

Die Namen der Nkole-Herrscher wurden der Liste von MELDON[1]) entnommen und durch das Einbuchen von Ntare, des Bruders Ruhinda's, ergänzt[2]). Die unvollständige Liste von Rev. ROSCOE[3]), der in Nkole nur kurz geweilt hat, blieb unberücksichtigt. Sie unterscheidet sich von den Angaben MELDONS nur dadurch, daß zwischen Kasasira und Machuwa nur zwei Herrscher, Mirimai und Lumongi angeführt werden,

Die Genealogie der Herrscher von Ihangiro, Kiamtwara und Kyanja ist nach REHSE[4]) angegeben.

Die dynastischen Verhältnisse von Busindja und Ost-Ussuwi sind nach R. P. VAN THIELE[5]) geschildert. Die Angaben KOLLMANNS[6]) widersprechen diesen in einigen Details. KOLLMANN sagt z. B., daß Rusamukano Vater von Ruhasuka war. Als Mtikisi's Vater wird auf derselben Seite einmal Rutana, einmal Dujange bezeichnet. Diese Unstimmigkeiten müssen, mit Rücksicht auf die Schwierigkeit und Kompliziertheit der Geschichte Busindja's, durch die ungenügenden Angaben der Eingeborenen, die zur Zeit KOLLMANNS weniger zutraulich und mitteilsam waren, erklärt werden. Auf unserer genealogischen Tafel, die R. P. VAN THIELE[5]) entnommen ist, sind Rusamukano und Ruhasuka Vettern. KOLLMANNS Angabe, daß Rusamukano 1893 gestorben ist, verdient dagegen Beachtung. Nach R. P. VAN THIELE soll das im Jahre 1889 geschehen sein.

Das Bahinda-Reich. Das Bahinda-Reich umfaßte Nkole, Karagwe, Busindja mit Ost-Ussuwi und Buhaya, im Süden von Kiziba.

---

[1]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 242.

[2]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 285.

[3]) ROSCOE, J., The Bahima: A Cow Tribe of Enkole in the Uganda Protectorate. Journal of the Royal Anthropological Institute 1907, S. 97.

[4]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 290.

[5]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911.

[6]) KOLLMANN, P., Der Nordwesten unserer Ostafrikanischen Kolonie. Berlin 1898, S. 77.

EMIN PASCHA [1]) erwähnt, daß Ruhinda II. Runyunaki, auf seinem Zuge nach Süden, Kiamtwara, Ihangiro und Busindja erobert, und in dem Letzteren seinen Sohn Katovaha eingesetzt hat, selber aber im Kampfe getötet wurde. Seinen Kopf beerdigte man in Karagwe, seine Beine in Ihangiro und seine Brust in Busindja. So ist er zum Symbol der Einheit dieser Staaten geworden.

REHSE [2]) berichtet übereinstimmend, den Angaben Kishebuka's, des abgesetzten Herrschers von Kiamtwara, folgend: „Der Vater des Königs Ruhinda war Rugaba, König von Bunyoro. Als dieser im Begriffe war zu sterben, sprach er zu Ruhinda: ‚Gehe und erobere Kiamutuara, Kiziba, Karagwe und Buzinja'. Und er gab ihm drei Trommeln; die eine hieß Nyabatamba, eine andere Muigazigu.

Als Ruhinda auf dem Wege nach Karagwe war, gab er seinem Bruder Ntare eine Trommel, daß er in das Reich Nkore (Nkole) gehen und sich zum Herrscher machen möge. —"

Im Gegensatz dazu bezeichnet MELDON [3]), als den ersten Herrscher von Nkole, den Ruhinda, Sohn Wamara's. Sollte hier Wamara ein Synonym Rubaga's sein oder ist es eine Anspielung auf den Muchwezi Wamara, den Herrscher von Bwera? Dann wäre dies ein direkter Beweis, daß Ruhinda zum Geschlecht der Bachwezi gehörte. Das Letztere ist am wahrscheinlichsten.

Alle Nachrichten stimmen darin überein, daß Ruhinda über Nkole, Karagwe, Buhaya und Busindja Macht ausgeübt hat.

In der nächsten Generation trennte sich das Reich Ruhinda's in seine ursprünglichen Bestandteile auf. Karagwe behielt aber, mit Rücksicht auf den Hauptanteil an der Leiche Ruhinda's, die höchste Stelle in den Bahinda-Staaten.

Die Angaben über die Namen der Söhne Ruhinda's, welche die einzelnen Teile seines Reiches erhielten, enthalten mehrere Widersprüche. Das wird sich wohl als Folge der Bezeichnung derselben Individuen mit verschiedenen Namen, wie auch der, nach seinem Tode eingetretenen, Wirren erklären lassen Den besten Hinweis auf die Letzteren enthält die Überlieferung von der Aufteilung der Leiche Ruhinda's nach einem Kampfe.

R. P. VAN THIELE berichtet [4]) z. B.: „Nach dem Hinscheiden Ruhinda's ergriffen dreizehn von seinen Kindern mit Ndagara an der Spitze von Karagwe Besitz." Bei SPEKE [5]) finden wir dagegen die Angabe, daß Ruhinda in Karagwe Ntare I. gefolgt ist.

In Busindja soll nach R. P. H. VAN THIELE [6]) nach Ruhinda Ntare geherrscht haben, während EMIN PASCHA von Katovaha spricht.

---

[2]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 285.
[3]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 242.
[4]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 500.
[5]) SPEKE, J. H., Die Entdeckung der Nilquellen. Leipzig 1864, Band I, S. 275.
[6]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 500.

In derselben Busindja-Überlieferung wird Ihangiro als eine besondere Herrschaft unter Ntare, dem Sohn Ruhinda's, erwähnt. Nach der von REHSE[1]) übermittelten Überlieferung soll sich dagegen in Buhaya das Kiamtwara-Reich unter Ruhinda's Sohn Bwogi gebildet haben. Erst Bwogi's Großenkel Kayango, Sohn des Kiamtwara-Herrschers Kikuba, reißt in der zweiten Hälfte des XVII. Jahrhunderts Ihangiro an sich und macht sich dort gänzlich unabhängig. In der ersten Hälfte des vorigen Jahrhunderts trennt sich Kyanja unter Ausnützung der inneren Wirren von Kiamtwara.

Nach dieser kurzen Besprechung der Nachrichten über die Gliederung des Ruhinda-Reiches sollen hier noch einige Angaben zur späteren Geschichte dieser Teile gemacht werden.

NKOLE. Fassen wir zunächst die Berichte MELDONs[2]) für Nkole zusammen. In der Zeit von Ntare Kitabanyoro fallen die Banyoro, unter Luwaga und Kabwobwe, in Nkole ein. Luwaga ist, nach der Liste des Rev. A. B. FISHER[3]) der Vater Sansa's und der achte Ahne des gegenwärtigen Herrschers von Bunyoro. Ebenso ist Ntare Kitabanyoro der achte Ahne des gegenwärtigen Herrschers von Nkole. Diese Angaben stimmen also gut überein. Wie es scheint, bleibt Nkole bis zu dieser Zeit in einer gewissen Abhängigkeit von Bunyoro.

Zur Zeit von Lwabusengi, der 40 Jahre regiert hat, kommen die Baganda vom Banyampaka-Geschlecht[4]), die Parteigänger der Bakunta, welche den Buganda-König Junju ermordet hatten, nach Nkole. Sie siedeln sich dort in Bunyaruguru an, um der Strafe zu entgehen. Sie fürchteten nämlich, daß ihr Anstifter und Führer, der von ihnen eingesetzte König Semakokiro, sie für die große Sünde der Befleckung mit dem heiligen Königsblute verfolgen würde. In Toro wurden mir ihre Niederlassungen als in der Provinz Buyango am Edward-See liegend bezeichnet. Dieses Ereignis hat um das Jahr 1800 stattgefunden. Die Baganda sollen aber trotz des ganzen inzwischen verflossenen Jahrhunderts dort ihre Eigenart nicht eingebüßt haben.

Zur Zeit Gasonga's, des Zeitgenossen Suna's II. von Buganda, fanden vier Einfälle der Baganda statt. Dieser Fürst herrschte nur zwölf Jahre. In Karagwe regierte zu dieser Zeit Ndagara.

BUSINDJA, der am stärksten zersplitterte Teil des Ruhinda-Reiches, bildete im Laufe der ersten acht Generationen nach Ruhinda ein einheitliches Reich, wenn auch nach dem Tode des Kabura II. Mugereza Zwistigkeiten entstanden sind, und die „Balaturu", welche Kikabuzi, einen Enkel Kabura's, unterstützten, im Lande wüteten.

Diese Angabe gestattet uns, den Zeitpunkt des Vorstoßes der Wataturu

---

[1]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1910, S. 290.
[2]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1897, S. 242.
[3]) JOHNSTON, H., The Uganda Protectorate. London 1902, S. 596—598.
[4]) MELDON, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 140

nach Busindja (mit diesen sind ohne Zweifel die Balaturu identisch) in die Mitte des XVIII. Jahrhunderts zu verlegen.

Nach dem Tode des Kyamani Muyahabbi trennte sich von Busindja Ost-Ussuwi, das von da ab seine Staatseinheit bewahrt hat. Busindja zersplitterte sich dagegen, wie das durch die genealogische Liste seiner Fürsten näher beleuchtet wird. Seit dem Kriegszuge der Baganda unter Kitunzi im Jahre 1875 geriet Busindja in Abhängigkeit von Buganda, die bis zu der deutschen Besitzergreifung gedauert hat. Die Einfälle der Watuta fingen noch früher an. Über die neueste Geschichte von Busindja soll nur wiederholt werden, daß, am Anfange dieses Jahrhunderts schon, Bukome, Bwina und Kimoani, ebenso wie der Südzipfel von Karagwe, das Land Buhimba, zu Ost-Ussuwi gekommen sind[1]).

Der historische Zusammenhang von West-Ussuwi mit Ost-Ussuwi und Busindja ist noch ganz unerforscht. Zur Geschichte dieses Landes soll nur erwähnt werden, daß in der Hälfte des vorigen Jahrhunderts sein Herrscher Kibogora durch Rweswarura (Suworora) von Ost-Ussuwi angegriffen wurde[2]). In den achtziger Jahren herrschte dort Yavigimba, der die Batutsi aus dem Lande nach Uramba vertrieben haben soll[3]). Gegenwärtig wird West-Ussuwi durch Kinanira beherrscht.

Bukerewe. Im Zusammenhange mit Busindja ist noch die Herrschaft Bukerewe zu erwähnen. Bukerewe wird durch das Geschlecht der Basiranga beherrscht, das sich von der Bahinda-Dynastie in weiblicher Linie herleitet. Am Anfange der überlieferten Geschichte bestanden hier drei kleine Herrschaften oder wohl vielmehr drei Clangemeinden. Im Nordwesten der Insel, in Massonga, saßen die Bazigu, im Nordosten das Geschlecht der Bahira und auf der Insel Bwiro die dort bis jetzt herrschenden Bakura.

Nach der Überlieferung der Bakerewe[4]), die ihrem Charakter nach der von Busindja ganz analog ist, wurde Bukerewe durch Kyanbombya erobert. Dieser war der Sohn Musanga's, eines Emigranten von der Insel, welcher in Ihangiro, mit einer Musiranga-Muhinda verheiratet, wohnte und dort auch gestorben ist.

Kyanbombya folgte sein Sohn Katobaha. Dieser siedelte vom Festlande auf die Insel über, wie es scheint, dem Andrange der Massai weichend. Sein Vater soll im Kampfe gegen sie gefallen sein.

Die Busindja-Überlieferung berichtet dagegen über diese Vorgänge[5]):

Kabambo I. von Busindja „zog ferner gegen Bukerewe in den Krieg und setzte seinen Sklaven Katobaha daselbst als Häuptling ein. Er war es auch, der zuerst Sklaven aus Bukerewe importierte."

[2]) Ebenda S. 508.
[3]) BAUMANN, O., Durch Massailand zur Nilquelle. Berlin 1894, S. 209.
[4]) HURZI, E., R. P., Religion et vie domestique des Bakerewe. Anthropos 1911, S. 65—68.
[5]) VAN THIELE, H., R. P., Businza unter der Dynastie der Bahinda. Anthropos 1911, S. 503.

Die letzte Angabe findet ihre Bestätigung durch die Zeremonie, die auch jetzt bei der Einsetzung des Königs stattfindet. Vor dem König setzt sich der Clanälteste der Bayango hin und schweigt. Um ihn zum Sprechen zu bewegen, schenkt ihm der neue König Kühe, Sklaven und Rinder. Der Clanälteste der Bayango spricht dann den Namen des Königs aus und begrüßt kniend als erster den neuen Herrscher. Der König antwortet mit dem üblichen: „mmm". Darauf setzt er sich, gibt dem König Ratschläge hinsichtlich seiner künftigen Stellung und entfernt sich dann. Der König wird erst darauf von den Untertanen begrüßt.

Da aber Ruhinda, der Gründer der Dynastie von Busindja, zum Bayango-Clan gehörte, so bildet diese Zeremonie eine symbolische Erinnerung an das Einsetzen Katobaha's durch Kabambo I. von Busindja, was in der Bukerewe-Überlieferung verschwiegen wird.

Gegenwärtig herrscht, aus der mit Katobaha beginnenden Dynastie, der siebzehnte König Gabriel Mutahengerwa[1]). Seine am häufigsten erwähnten Vorgänger sind Mihigo, Nago, Machunda, Lukonge, der im Jahre 1895 durch die Regierung abgesetzt wurde, und Mukaka (1895—1907).

Die von STANLEY[2]) angeführte Herrscherliste stimmt mit den obigen Daten nur bezüglich der Fürstenzahl überein. Es werden die folgenden Herrscher verzeichnet:

1. Ruhinda,
2. Kasessa,
3. Kytawa,
4. Kahana,
5. Gurta I.,
6. Nagu,
7. Mehigo I.,
8. Mehigo II.,
9. Kahana II.,
10. Gurta II.,
11. Ruhinda II.,
12. Kahana III.,
13. Iwanda,
14. Machunda,
15. Lukonge.

Wir besitzen also über den Ursprung der Dynastie von Bukerewe drei verschiedene Angaben. Die Ableitung des herrschenden Geschlechtes in männlicher Linie von Ruhinda findet aber in den späteren Untersuchungen nicht nur keine Bestätigung; sie erweist sich sogar als ganz unmöglich mit Rücksicht auf die Zugehörigkeit der Bukerewe-Herrscher zum Basiranga-Clan. Die vorhandenen Angaben lassen aber die Annahme zu, daß Kytawa von STANLEY mit dem Katobaha von R. P. HUREL und R. P. VAN THIELE identisch ist, während Kasessa von STANLEY vielleicht die Tochter Ruhinda's ist, mit Rücksicht worauf wohl Katobaha, ihr Sohn, von Kabambo I. Bukerewe bekommen hat. Der letztere wird wohl in Frage kommen, wenn R. P. HUREL von Kyanbombya, dem Vater (resp. dem Herrn) Katobaha's spricht.

Lukonge war der erste Herrscher von Bukerewe, der mit Europäern in

Kontakt gekommen ist. Zu seiner Zeit fand ein Angriff der Massai auf die Insel statt. Das geschah im Jahre 1888[1]).

Bakango-Herrschaften. Die Bakango-Herrschaften von Bugabo und Kiamtwara reichen mit ihrer Geschichte nicht weit zurück. Die Bakango wanderten zur Zeit des Kiamtwara-Herrschers Kasita-Kahigi von Busindja ein. Sie wurden durch die Brüder Karamagi und Mutashaba geführt und ließen sich mit der Einwilligung des Kiamtwara-Herrschers im Lande nieder. Ihre Nachfolger gewannen bald einen großen Einfluß auf die Geschichte des Landes, und Ruamugira[2]), der Geschichtsschreiber Kiziba's, bezeichnet Kitekere und Kaitaba aus der Linie des Mutashaba als Könige von Kiamtwara, wenn auch dort nominell bis zum Ende des vorigen Jahrhunderts die Bahinda (Linie des Bwogi) geherrscht haben und erst durch ungeschickte Europäer-Politik um ihren Besitz kamen.

Die Linie des Karamagi machte sich in der Person Kayoza's durch geschickte Ausnützung der europäischen Besitzergreifung des Landes in Bugabo unabhängig. Die Linie des Mutashaba erreichte in der Person Muntu's die Herrschaft im übrigen Kiamtwara, als der legitime Herrscher Kishebuka durch die Europäer abgesetzt wurde.

Die Anhänger der alten Dynastie erzählen über dieses Ereignis folgende Einzelheiten: Als Emin Pascha nach Bukoba kam, fürchtete sich Bwogi, der Herrscher von Kiamtwara, beim Europäer zu erscheinen. An seiner Stelle wurde ein Muhima, namens Mukotani, geschickt, und dieser trat als der Herrscher auf. Dasselbe wurde später auch in Ruanda gemacht, wo der Herrscher Juhi Musinga durch den Priester Pambarugamba vertreten wurde. Diese Ängstlichkeit von Bwogi hatte aber traurige Folgen für seine Nachfolger. Nach seinem Tode 1894 wurde Kiamtwara zwischen seinem Sohn Kishebuka und Mukotani geteilt. Mukotani wollte jedoch die Autorität von Kishebuka nicht mehr anerkennen. Im nächsten Jahre aber wurde er zur Strafe abgesetzt, angeblich weil er gestohlene Gewehre nicht ausliefern wollte. Das ganze Land kam an Kishebuka. Im Jahre 1901 wurde aber auch dieser abgesetzt infolge einer gegen ihn angezettelten Intrige, in der wieder Gewehre die Hauptrolle spielten. Kiamtwara kam dann an Muntu, einen Bruder Mukotani's.

Der abgesetzte Kishebuka wird von den Eingeborenen bis jetzt als Herrscher von Kiamtwara angesehen, wenn er auch in der, ihm durch die Regierung zugewiesenen Besitzung Maruku am Seeufer im Süden von Bukoba zurückgezogen lebt.

Zum Schlusse soll hier noch die Genealogie der Herrscher dieser beiden Länder nach REHSE[3]) angeführt werden.

Buddu. Die älteste Geschichte von Buddu verknüpft sich mit der Geschichte von Nkole. Bis zur Zeit des Kyebambi von Bunyoro, der die Unabhängigkeitsbestrebungen von Nkole nicht anerkennen wollte, bildete Buddu einen Bestandteil des letzteren Staates. Wenn auch Nkole in diesem Kampfe gesiegt zu haben scheint, so kam doch damals Deutsch-Buddu oder eigentlich Kivumbiro an den Muhima Kakoko, der von dem gegenwärtigen Buddu-Herrscher Rukika als ein unabhängiger Herr angesehen wird. Oberleutnant RICHTER erwähnt aber[1]), daß ein anderer Teil von Buddu, das Minsiro, zur gleichen Zeit an einen Muhiru verliehen wurde. Diese Angaben gestatten den Schluß zu ziehen, daß es sich hier eigentlich um kleine Häuptlingschaften und nicht um Staaten handeln kann. Damit wird auch bewiesen, daß die Ahnenliste des Rukika:

Kakoko.
|
Araki.
|
Mtutura.
|
Wonye.
|
Rukika I.
|
Kagoro.
|
Nyamtura.
|
Tshamkuma.
|
Rukika II.

nur auf die Häuptlingschaft Kivumbiro und nicht die ganze große Buddu-Provinz bezogen werden kann.

Über die Geschichte des ganzen Buddu wissen wir nur, daß es in den letzten Jahren des vorletzten Jahrhunderts, als in Kivumbiro Nyamtura regierte, durch

[1]) RICHTER, Oblt., Der Bezirk Bukoba. Mitteilungen aus den Deutschen Schutzgebieten 1899, S. 78.

den König Junju von Buganda erobert wurde. Auch Kivumbiro kam damals in Abhängigkeit von Buganda.

Erst nach der Fixierung der deutsch-englischen Grenze wurde aus dem Deutschland zugefallenen Teile von Buddu eine unabhängige Herrschaft unter dem alten Rukika gebildet.

Urundi und Uha. Über die Geschichte der Südhälfte des Zwischenseengebietes ist ganz wenig bekannt.

R. P. VAN DER BURGT[1]) gibt für Urundi eine Liste von 13 Herrschern, die hier wiederholt wird:

Ruhinda.	(1500—1570).
Mwambutsa I.	(1570—1595).
Mudaga I.	(1595—1615).
Ntare I.	(1615—1640).
Mwezi I.	(1640—1670).
Mwambutsa II.	(1670—1690).
Mudaga II.	(1690—1710).
Ntare II.	(1710—1735).
Mwezi II.	(1735—1760).
Mwambutsa III.	(1760—1790).
Mudaga III.	(1790—1820).
Ntare III.	(1820—1860).
Mwezi Kisabo III.	(1860—1908).[2])

Im Widerspruch zu diesen Angaben steht die Mitteilung des Hauptmanns FONCK, daß der Nachfolger von Mwezi Kisabo, der vierzehnjährige Mwikidzje, den Namen Mutago (Mudaga) III. angenommen hat. In Übereinstimmung mit der obigen Liste müßte er den Namen Mutago IV. annehmen. Den Angaben des R. P. VAN DER BURGT widerspricht noch Hauptmann GÖRING. R. P. VAN DER BURGT erklärte die Dynastie von Urundi als das Geschlecht der Bahinda. Hauptmann GÖRING[3]) bezeichnet dagegen das Geschlecht des Kisabo als die Waganua-Sippe. Die letzte Angabe wurde durch Prof. Dr. HANS MEYER bestätigt[4]).

Es ist aber nicht ausgeschlossen, daß hier nicht der Name des herrschenden Clans, sondern das verstümmelte Wort „Manangwa" (Statthalter) angeführt wird. Lusokosa und Bansabugabo aus Nordost-Urundi sind Enkel und Urenkel des Ndabyerye, der von seinem jüngeren Bruder Mwezi Kisabo bei der Thronbesteigung ermordet wurde[5]).

---

[1]) VAN DER BURGT, J. M. M., R. P., Dictionnaire Français-Kirundi avec l'Indication Succincte de la Signification Swahili et Allemande. Bois-Le-Duc (Hollande) 1903, S. 180.

[2]) Notiz von Hptm. FONCK im Deutschen Kolonialblatt 1909, S. 25.

[3]) GÖRING, Hptm., Zu den Unruhen in Urundi. Deutsches Kolonialblatt 1911, S. 552.

[4]) Reise-Berichte von Prof. Dr. HANS MEYER. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 355.

[5]) VAN DER BURGT, J. M. M., R. P., Land und Leute von Nordurundi (Deutsch-Ostafrika). Petermanns Mitteilungen 1912, S. 326.

Nach den Angaben des R. P. CAPUS[1]) soll Urundi oder wenigstens sein Osten früher einen Bestandteil von Uha gebildet haben. Er berichtet nämlich für Ujungu, das von ihm, wie es scheint, für das Stammland des Uha-Reiches angesehen wird: „Einstmals hatte das Reich Uha eine weit größere Ausdehnung (als Ujungu); es grenzte im Westen an den Ruvuvu, im Norden an den Usubi, im Osten an den Msalala, im Süden an den Tanganika. Erst unter Luhaga, dem Urgroßvater des jetzigen Herrschers (Kihumbi), war das Reich in seinem Bestande gelockert worden durch den Abfall der Barundi, welche unter Ntare ein eigenes Reich errichteten. Gegen Lunkengeresa, den Sohn desselben, zog Kihumbi's Vater Nkansu zu Felde, um die alten Grenzen von Uha wiederherzustellen; aber trotz des Beistandes von Mirambo, welcher mit seinen mit Feuerwaffen ausgerüsteten Ruga-Ruga herbeieilte, erlitt er eine schwere Niederlage. Später haben sich noch mehrere Basumbwa-Staaten unabhängig gemacht, und alle Versuche Kihumbi's, die Macht seiner Vorfahren wiederzuerlangen, sind vergeblich gewesen."

Der hier genannte Lukengeresa wird wohl mit Mwezi Kisabo oder mit einem seiner Brüder identisch sein. Die Ansprüche der Uha-Herrscher auf die Gebiete im Südwesten vom Victoria-See sind uns schon aus der Busindja-Überlieferung bekannt, ob aber Busindja und Urundi dauernde Bestandteile des Uha-Reiches gebildet haben, ist fraglich. Andererseits ist es aber auch nicht ausgeschlossen, daß das in Einzelherrschaften ganz aufgelöste Uha ein älteres politisches Gebilde als Urundi darstellt.

Heroen-Kultus im Zwischenseegebiete. Im Zusammenhange mit diesen historischen Betrachtungen muß noch die Religion des Zwischenseengebietes kurz besprochen werden.

Die Grundlage der religiösen Anschauungen des Zwischenseengebietes bildet bekanntlich die Verehrung der Geister der Verstorbenen. Da aber die Geister der Verstorbenen ihren Zusammenhang mit den Lebenden nicht aufgeben, so überragen auch die Geister der einstigen Machthaber die große Masse der Geister gewöhnlicher Leute. Sie erfreuen sich eines größeren Ansehens, man erinnert sich ihrer besser, und die Zahl ihrer Verehrer geht über den Kreis der Familienangehörigen hinaus. Sie bleiben in der Geschichte und werden mit dem Namen „bachwezi" bezeichnet.

So finden wir unter ihnen zwei Kinder des Königs Kalemera von Kiamtwara, der vor zehn Generationen geherrscht hat; nämlich seinen Sohn Kimuli und die durch ihre Boshaftigkeit in Erinnerung gebliebene Tochter Nyabuleza. Außerdem finden wir dort noch den König Bwogi und den Vater Ruhinda's, Rubaga rwa Mwiru.

Das Bestreben, die Unzufriedenheit dieser Geister zu vermeiden, hat zur

[1]) CAPUS, R. P., Eine Missionsreise nach Uha und Urundi. Petermanns Mitteilungen 1898, S. 124.

Folge, daß den hervorragenderen sogar Leute angewiesen werden, die für ihre Bedürfnisse zu sorgen haben. Infolgedessen lebt auch die Erinnerung an die hervorragenden Persönlichkeiten, durch viele Generationen weiter.

Mit Rücksicht darauf, daß es sich hier um historische Persönlichkeiten handelt, die bei der Erforschung der Landesgeschichte Anhaltspunkte abgeben können, erscheint es mir wichtig, die, in der Hauptsache durch R. P. L. Embil und R. P. B. Hautmann, mir bekanntgewordenen „bachwezi" in extenso anzugeben.

„Bachwezi" von Kiziba.

1. Kiziba kya Ntumwa.
2. Bwera bwa Butema.
3. Buyango bwa Jubwai.
4. Mbare mwa Kashure.
5. Kamango ka Burungu.
6. Bugandika bwa Mukobe.
7. Ketandaguro ka Nshaka.
8. Bukabuye bwa Kiyonzai.
9. Kigarama kya Ntai.
10. Rushasha rwa Marwaire.
11. Rusinga rwa Nyamunai.
12. Bwanja bwa Nshenyirai.
13. Kitobo kya Nyamuhinda.
14. Lubumbu lwa Mwenda.
15. Kibumbiro kya Mulinda.
16. Rukurungu rwa Bona.
17. Ishozi lya Nsharazi.
18. Ishozi lya Rubungu.
19. Bukuli bwa Nyamanya.

„Bachwezi" von Kiamtwara.

1. Kashozi ka Lukoina.
2. Kasinga ka Lubota.
3. Kangoma ka Kabairi.
4. Igombe lya Byina.
5. Muyaba mwa Kibanda.
6. Bwanja bwa Nkulo.
7. Buembe bwa Mbeho.
8. Kyasha kya Bagambi.
9. Nahambya ya Kahanya.
10. Kissindi kya Nyarubwa.
11. Mafumbo mwa Kawe.
12. Kitendagura kya Nyalwera.
13. Kibeta kya Nyamutenge.
14. Bussimbe bwa Mwema.
15. Bukoba bwa Kamanyire.
16. Kibuye kya Ikobe.
17. Idjuganyondo lya Nyakanta.
18. Kabare ka Munyigi.
19. Kagondo ka Ilemba.
20. Kitwe kya Igambe.
21. Katoma ka Mirego.
22. Nyanga ya Hinda.
23. Maruku mwa Kibuye (Kibungo).
24. Itawa lya Balinda.
25. Kiniga kya Igoba.
26. Ibarazisibu lya Katamba.
27. Kilerire kya Nkora.
28. Kimuli kya Kalemera.
29. Nyabuleza ya Kalemera.
30. Rubaga rwa Mwira.
31. Bwogi.
32. Lukungu rwa Nshare.
33. Nyakashana ya Byoto.
34. Kashassira.
35. Mujubu.
36. Gayoire wa Muzelandai.
37. Mulissa mwa Igongora.
38. Kahigi ka Mkwanoi.
39. Igara lya Kabure.
40. Lwebembera lwa Kayango.

„Bachwezi" von Bugabo.

1. Bugabo bwa Kateite.
2. Lubafu lwa Kahenge.
3. Lwina lya Bulondo.
4. Butakanjana bwa Nyanshenye.

5. Itongo lya Kabengwa.
6. Katare ka Nkomera.
7. Lushasha lwa Mulisa.
8. Buma bwa Nkazi.
9. Lwangono lwa Mishango.
10. Bushasha bwa Katenge.
11. Kishanye kya Karasha.
12. Bweza bwa Muongo.
13. Bishaka bya Mugarura.
14. Kaggya ka Mwagiro.
15. Kilimirire kya Butenga
16. Katangarara ka Nyana
17. Bwende bwa Katereko
18. Byonga bya Kibaruka
19. Kato ka Kijubi
20. Mishozi mwa Ngombe

Kaguya

21. Kibare kya Katwenge.
22. Buzi bwa Kyango.
23. Kayongwe ka Mussinja.
24. Banyonya bwa Lwangwe.
25. Kigarika kya Bitwiha.
26. Lushaka lwa Ishekabone.
27. Irangara lya Magambo.
28. Kamulebi.
29. Kaija ka Nyenye
30. Kyato kya Nyakitungo
31. Karema ka Nkone
32. Mwemage mwa Nyakitungo
33. Mulongo mwa Kissimbasi
34. Katembe ka Myogo
35. Bweigiro bwa Kakungu
36. Butungiro bwa Eyamansi

Bushagara

37. Mwizi mwa Kabanda.
38. Itare lya Kibungu.
39. Ibossa lya Maisho.
40. Kashangati ka Mugombwai.
41. Ihanda lya Katyamo.
42. Burogo bwa Marwa.
43. Kahororo ka Ndorage.
44. Makongo mwa Rubugu (oder Kilema).
45. Kyaya kya Ileba.
46. Kilema kya Babusha.
47. Bukalanga bwa Ndai.

„Bachwezi" von Kyanja.

1. Kashondo ka Lugoye.
2. Mahiga mwa Mbale.
3. Kiiwa kya Mitwire.
4. Kishogo kya Bugingo.
5. Bugengere bwa Nyaweya.
6. Bwara bwa Lureya.
7. Kanasi ka Buita.
8. Kyanguye kya Mashaija.
9. Ngisha mwa Kibanda.
10. Lurongo lwa Karimbe.
11. Ibwera lya Kahigi.
12. Nyanga ya Ihere.
13. Ntobora mwa Mabi.
14. Kashere ka Matinde.
15. Kitundu kya Bakaikai.
16. Ngarama ya Kabi.
17. Kayoro ka Lugonse.
18. Kibona kya Kayango.
19. Kasharu ka Mabare.
20. Kagabiro ka Balehora.
21. Rwongu rwa Mukinda.
22. Butainamwa bwa Mubebi.
23. Bikiga bwa Michuma.
24. Nyanga ya Mushasha.
25. Lukaka lwa Balika.
26. Kanyoni ka Mugwa.
27. Kihirya kya Biretwa.
28. Matembwe mwa Igufa.
29. Minasi mwa Kataira.
30. Bituntu bwa Munyika.
31. Kirere kya Ngora.
32. Burira bwa Mubenge.
33. Bugawantora bwa Lugira.
34. Kigarama kya Ntai.
35. Rwageti rwa Mukama.
36. Mubembe mwa Meti.
37. Nyakibanga ya Shagama.
38. Kirima kya Barakulira.

39. Kanyangireko ka Kituntu.
40. Mishenye mwa Kabaruka.
41. Kirimi kya Myeshi.
42. Rwasi rwa Maimba.
43. Katembe ka Byogo.
44. Katwe ka Jochenda.
45. Kigusha kya Mpambo.

Über den Wirkungskreis der hier aufgezählten Geister, die vorwiegend in beschränkten Bezirken verehrt werden, wachsen einige weit hinaus und werden zum Gegenstande des Kultes großer Landkomplexe. Zu diesen großen Geistern, die auch mit dem Namen „bachwezi" bezeichnet werden, sind, wie schon oben erwähnt wurde, die Angehörigen von Ndaula, des Gründers der vorletzten Bunyoro-Dynastie, zu zählen. In Bunyoro und Toro stehen trotz des stattgefundenen Dynastiewechsels im Mittelpunkte der Verehrung Ndaula, seine Brüder: Wamara, Lubanga, Mugeni, Ibona, Mugarra, Chumya (Kyomya), Nsinga, Mulindwa, Kahauka und Kilo, sein Verwandter Mugasha, Kagoro, über den die Berichte auseinandergehen, ob er ein Bruder Ndaula's oder Enkel Wamara's und Sohn Chumya's gewesen ist, und die Tochter der Mutter Wamara's, Kaigana wa Nyante.

Rev. A. B. Fisher[1]) nennt die „Toro-Teufel" Nyabuzana, Kyomya, Kagolo, Mulindwa, Ndaura, Ebona, Mugenye, Mukasa, Lubanga und Namutali.

Mir wurde dort noch außerdem Kaikara genannt.

Meldon[2]) erwähnt für Nkole: Ndahura, Wamara, Simbua (Nsinga ?), Mugasha, Kagoro, Nyakaruru und Ryangombe. Er führt auch die für die Priester der einzelnen Geister charakteristischen Insignien[3]) an:

Der Priester des Ndahura trägt zwei Speere.

Der Priester des Wamara hat einen mit Kauri geschmückten Kuhschweif.

Der Priester des Simbua (Nsinga?) schmückt sich mit Kaurischnüren.

Der Priester des Mugasha trägt Perlenschnüre aus Körnern der wilden Banane.

Der Priester des Kagoro bewaffnet sich mit einem hölzernen Köcher.

Der Priester des Ryangombe bedeckt sich mit einem Leopardenfell.

Der Priester des Rubaga, gegenwärtig ein Mann namens Babisibiremu, trägt den Titel Omusasaza und schmückt sein Haupt mit einem Kolobusfell. Das letztere wohl mit Rücksicht auf die Zugehörigkeit des Rubaga zum Bayango-Clan, da dieser den Kolobus zum „umuziru" hat. Der Omusasaza soll im Zölibat leben. In Insigiro in der Nähe des Ruwezi-Flusses und der Kagarama-Berge ist die mittlere der dortigen drei Höhlen Rubaga geweiht.

In den Staaten der Südhälfte des Runyoro-Sprachgebietes, die seinerzeit durch den Fürsten Wamara von Bwera beherrscht wurden, treten alle Geister vor Wamara zurück. So z. B. erwähnt Rehse[4]): Wamara, seine Frau Rutabono

[1]) Fisher, A. B., Western Uganda. Geographical Journal 1904, Band 24, S. 258.
[2]) Meldon, Notes on the Bahima of Nkole. Journal of the African Society 1907, S. 142.
[3]) Ebenda S. 144, 145.
[4]) Rehse, H., Kiziba. Land und Leute. Stuttgart 1910, S. 133, 134.

deren Söhne Kyomya, Rukungu, Rutona und Ruzini, ferner Wamara's Mutter Nyante und Wamara's Schwester Neibungu. Wamara sind unterstellt Mugasha, Sohn der Nyambubi, Kazoba, Sohn der Nyaindiri, Irungu, Sohn der Nyakabari, und Ishuanga, Sohn der Mpabuka. Kashare Kaniango murimiakondo war Wamara ebenbürtig. Dessen Reich fiel aber nach seinem Tode, nachdem seine Tochter Kirungi Kibi abgesetzt worden war, Wamara zu. Wamara herrschte aber zu dieser Zeit schon als Geist. Er lebte nicht mehr. Es handet sich in diesem Falle wohl um Kashare Kanyango, den ältesten im Kiamtwara namentlich bekannten Herrscher, der durch Ruhinda bezwungen wurde. Wir finden hier also noch einen weiteren Beweis, daß die Bahinda identisch sind mit den Nachfolgern Wamara's.

REHSE erwähnt noch aus der Verwandtschaft Mugasha's: seine Frau Nyakarembe, die Göttin des Ackerbaues; die Söhne: Kaiura enkuba, den Geist des Gewitters, Rukajangai, Mushoke, den Geist des Windes, Rwebembera, den Geist des Regens, und Nyatende, die Schwester seiner Mutter. Aus der Verwandtschaft Irungu's werden dort genannt, dessen Söhne Karisa und Nosherenguzi, und aus der Verwandtschaft Kazoba's sein Sohn Hangi, der Geist der Sterne. Außerdem erwähnt REHSE noch den von den Bahima in Kiziba verehrten Ryangombe. Dieser wird von ihm als Geist der Rinder bezeichnet. Kazoba wird von REHSE als Sonnen- und Irungu als Erdgeist angeführt.

Über die Art und Weise, in welcher die Verknüpfung der Geister der Verstorbenen mit den Naturerscheinungen zustandegekommen ist, finden wir dort keine Angaben. Vielleicht liegt hier das Ergebnis einer Assimilation von Anschauungen einer anderen Kulturschicht vor.

In Kiamtwara werden dieselben Geister wie in Kiziba verehrt. Man bezeichnet dort aber Mugasha als Sohn des Nyampongo, Kazoba als Sohn des Nyamuhanga, Irungu als Sohn des Bwekera und Ishuanga als Sohn des Mpabuka. In Kiziba nannte sie REHSE mit Angabe der Namen ihrer Mütter. Es wird hier auch die Frau Mugasha's, als Nyakarembe ya Baudami, bezeichnet. Außer den Durchgezählten bleibt hier noch zu erwähnen: der Freund Wamara's, Luboa lwa Kabongombo, sein Diener Itwara lya Bugingo, der ihm die Geister der Verstorbenen zuführen soll, und Irimamabuye, die Frau des Kitekere.

Die Tatsache, daß die Götterwelt der Banyoro sich aus historischen Helden nicht zu weit zurückliegender Zeiten gebildet hat, hat zur Folge, daß man bei den benachbarten und nahe verwandten Barundi, deren Geschichte unabhängig von Bunyoro abgelaufen ist, nur wenige in Bunyoro bekannte „Götter" wiederfindet. In der von R. P. VAN DER BURGT[1]) angegebenen Liste der Urundi-Geister sind es nur Mugasha, Kagoro, Rugaba (Rubaga), Wamara und Ryangombe.

Die höchste Entwickelungsstufe der Geister des Zwischenseengebietes bildet der „Schöpfer". Man nennt ihn im Runyoro-Gebiete Rugaba und Nyamuhanga

[1]) VAN DER BURGT, J. M. M., R. P., Dictionnaire Français-Kirundi avec l'Indication succinte de la Signification Swahili et Allemande. Bois-Le-Duc (Hollande) 1903, S. 214.

und bei den Barundi Imana. Er nimmt eine besondere Stellung ein, da ihm nicht geopfert wird. Seine Persönlichkeit ist nicht scharf ausgeprägt und er berührt den Forscher in dieser Umgebung fremdartig. Die Tatsache aber, daß er in den Schöpfungsmythen, in Kiziba z. B., hinter Wamara, einer halbhistorischen Persönlichkeit, zurücktritt, läßt die Möglichkeit einer analogen Entwickelung nicht ausschalten. Es verdient Beachtung, daß der Vater Ruhinda's, des Organisators des südlichen Runyoro-Gebietes, denselben Namen getragen hat.

Zum Schlusse wäre noch die Endogamie des herrschenden Geschlechtes im Zwischenseengebiet zu erwähnen. Schon durch SPEKE[1]) wurde es bekannt, daß der König von Buganda seine Schwester heiratet. R. P. H. VAN THIELE erwähnt über Busindja[2]): Nachdem Kabambo II. durch Gahohirro, die ihr blinder Bruder Rwanyanseri beschlief, geboren wurde, „wurde es bei den Bahinda Brauch, ihre Frauen ausschließlich innerhalb der eigenen Sippe zu wählen. Kabambo's Geburt erschien als so unehrenhaft, daß man das Kind auf einen Düngerhaufen *(orubangu)* warf. Allein ein Vogel, wie man bis dahin noch nie einen gesehen, erschien plötzlich bei dem Kinde. Man eilte hinzu, hob das Kind auf, und sieh, riesige Ameisen, wie man sie bis jetzt noch nie gekannt, zeigten sich an der Stelle, wo das Kind gelegen hatte. Der Vogel heißt *kanyamunya* (Bachstelze), die Ameise war eine *enyango* (eine große schwarze Art, deren Biß sehr schmerzhaft ist). Beide Tiere gelten den Bahinda als unverletzlich, der Muhinda tötet niemals eines."

Die endogamen Ehen werden hier ausdrücklich als eine spätere Einrichtung bezeichnet. Ob man aber der Überlieferung in diesem Punkte vollen Glauben schenken kann, erscheint mir sehr zweifelhaft. Die endogamen Ehen der Herrscher sind im zentralen Afrika eine nicht seltene Erscheinung. Wir haben sie auch bei den Azande.

4. Kapitel.

Mpororo.

Herrschaften. — Bevölkerung. — Clans. — Politische Organisation. — Bevölkerungsdichte. — Familienverhältnisse. — Kleidung. — Siedelungen und Gebäude. — Hausgerät. — Waffen. — Kultus.

Herrschaften. Mit dem Namen Mpororo pflegt man, wie es schon oben erwähnt wurde, den Saum zwischen Ruanda und Nkole zu bezeichnen. STUHLMANN[1]) faßt z. B. unter Mpororo die vorwiegend durch Bashambo beherrschten Landschaften zusammen. Diese erstrecken sich vom Kagera-Knie bis zu den Südufern des Edward-Sees im Nordwesten und der Vulkankette im Südwesten. Prof. Dr. HANS MEYER[2]) beschränkt den Begriff von Mpororo auf das Banyambo-Gebiet außerhalb von Karagwe. Diese ethnographische Provinz bekommt infolgedessen als Grenze im Südwesten eine Linie, die über die Südufer des Großen Ngesi-Sees zum Ngesi ya Mutanda geht, und später dem Iwi-Flusse folgt. In diesem Sinne wurde auch hier Mpororo bei der allgemeinen Besprechung des Zwischenseengebietes begrenzt.

Mpororo bildet keine politische Einheit. Das Land besteht aus einer Anzahl kleiner Bahima-Herrschaften im Norden und Osten und aus freien Bauerngemeinden im Südwesten.

Aus der Zahl der unabhängigen Mpororo-Herrschaften sollen hier erwähnt werden:

1. Ubwera,
2. Ruhama,
3. Butaya,
4. Mururwa,
5. Buischingato oder Buischigatta oder auch Luizigatu,
6. Ruzumburu oder Lusumbura,
7. Mutara.

UBWERA, die Herrschaft des Ruengumia, dehnt sich im Norden vom Kagera und im Osten vom Kabobo-Fluß aus und bildet den am stärksten in dieser Richtung vorgeschobenen Teil von Mpororo.

---

[p. 84]

RUHAMA. Häuptling Kislivombo von Ruhama beherrscht die Hügel im Norden von den Flüssen Kakura und Kakitumba, im Westen vom Kassanda, und im Osten vom Rubirisu. Kislivombo ist Enkel des Kagurgunju, und Sohn von Rutwe, dem STUHLMANN[1]) dort auf seinem Rückmarsche vom Edward-See in der Nähe vom Kagera begegnet ist.

Rutwe's jüngerer Sohn, Kiselirobo, herrscht in Ost-Ruhama. Ihm gehören die Gebiete zwischen den Bächen Kassanda und Kabobo, deren Bevölkerung nur 200—300 Köpfe betragen soll.

BUTAYA, das Land des Kitaraya, dehnt sich vom Kakura-Fluß im Norden bis zum Lulenge-Fluß im Süden, dem Mugarma-Kakitumba im Osten und deren Wasserscheide im Westen. Hauptmann v. BERINGE[2]) bezeichnet die Besitzungen Kitaraya's mit dem Namen Nyetindo.

MURURWA. Der weibliche Häuptling Mumusa aus Mururwa beherrscht die Gebiete im Westen von Butaya, und ihr Gebiet reicht nach Westen etwas über den Birambira und den Oberlauf des Karusha hinaus. v. BERINGE[2]) benützt zur Bezeichnung dieser Herrschaft den Namen Nyavugando, der wohl von der Landschaft Nyakahanga in Mururwa hergenommen und für das ganze Land verallgemeinert ist.

BUISCHINGATO, die Herrschaft des Rugarama, umfaßt die Nordabhänge der Mpororo-Berge bis zum Karenge-See und dem Rufua. Im Norden von dieser Grenze bis zu den Abhängen der Ruampara-Berge dehnt sich das ebenfalls zu Rugarama gehörende Kazara[3]) aus.

RUZUMBURU, die Osthälfte des durch Makovore, angeblich einen Sohn oder Enkel Kiteimbua's, beherrschten Landes dehnt sich auf dem Westabhange des Nkole-Plateau's aus und wird durch den Kahenji-Berarara im Süden und Westen begrenzt. Seine Nordgrenze erreicht den Rusaiya nicht. Die Westhälfte seines Landes — das BUTUMBI — dehnt sich von den Flüssen Berarara und Ntungwe im Osten bis zur Rutshuru-Ebene im Westen und vom Edward-See im Norden bis zur Linie, die vom Iwi-Fluß über den Nkabwe-Berg zum Biruruma und Ishasha geht, diesen Fluß eine Strecke nach oben verfolgt, und ca. 1° südl. Br., zunächst einem Zuflusse folgend, später über die Berge nach Nordosten zum Zusammenflusse des Lulindi (Kangabo) mit dem Kahenji, dem westlichen Abflusse der Sümpfe am Karenge-See, führt. Früher wurde die Herrschaft des Makovore kurzweg als Butumbi bezeichnet[4]), jetzt, nachdem die Gebiete im Westen von der Ishasha dem Congo-Staate zugefallen sind und von der Herrschaft getrennt wurden, pflegt man nur von Ruzumburu zu sprechen.

---

[4]) STUHLMANN, F., Mit Emin Pascha ins Herz von Afrika. Berlin 1904, S. 250.

Im Süden von Butumbi, zwischen den Oberläufen von Iwi und Ishasha, erwähnt STUHLMANN[1]) die Landschaften Kayonsa und Mpimbi. Kayonsa, die nördlichere, war zur Zeit seiner Reise von Nyakavass, der wohl mit dem Kalassi LANGHELDs[2]) identisch ist, beherrscht. Mpimbi, die südlichere, beherrschten Rugadjo und Ihango. Diese drei Häuptlinge sollten damals noch die Oberhoheit der berühmten Nyawingi anerkennen. Während meines Aufenthaltes in Rutshuru konnte ich aber dort von ihnen nichts erfahren. Die Postenkarten verzeichneten ihr Gebiet als das der Bakiga, woraus man schließen darf, daß hier aller Wahrscheinlichkeit nach die Bahima ihren Bakiga-Untertanen unterlagen.

NDORWA, das Land am Oberlaufe der Ishasha, die hier Kitumbi genannt wird, dehnt sich aus vom Ngesi-See im Westen bis zur Mururwa-Grenze und dem Nimparu-Bach im Osten. Das Land zerfällt in freie, sich gegenseitig befehdende Bauerngemeinden. So erwähnt z. B. v. BERINGE[3]) die Landschaft Luvanda, die zur Zeit seines Besuches mit allen Nachbarn im Kriege lag. Ähnliche Verhältnisse werden wohl auch im Gebiete zwischen dem Lulindi-Fluß und den Grenzen von Buischingato herrschen. Im Gebiete zwischen Lulindi und Nimparu erwähnt v. BERINGE die Herrschaft Mbogo[4]) des Katogua.

Das Gebiet zwischen dem Großen Ngesi-See und dem Ngesi ya Mutanda zerfällt ebenfalls in Bauernherrschaften. Es werden hier erwähnt Mikamiro[5]) und Kasebya. Das durch Kanyaihamba beherrschte Mikamiro bilden die Landschaften im Südwesten vom Nordzipfel des Großen Ngesi-Sees. Es darf nicht unerwähnt bleiben, daß LANGHELD[6]) vom „Sultan Mulamila" spricht. Dieser Name ist vielleicht durch eine Verwechslung mit der Landschaft Mikamiro hervorgerufen.

Das zusammen mit der Landschaft Kishanye durch den Muhutu Luhara[7]) beherrschte Kasebya liegt südlicher zwischen dem Großen Ngesi-See und dem kleinen Ngesi ya Mugisha.

Außer diesen Gebieten gehört zu Mpororo noch der nördliche Teil der Steppe zwischen Kakitumba und Kagera. Hauptmann v. BERINGE[7]) erwähnt dort den Sultan Tschaka aus MUTARA. Über die dortigen politischen Verhältnisse wissen wir durch Dr. M. WEISS, daß das schwachbevölkerte Gebiet durch die Leute von Ruanda geplündert wird. WEISS[8]) berichtet nämlich, daß zur Zeit seiner Reise Sultan Rutangaboa dort 2000 Rinder rauben sollte. Der angebliche

Sultan ist der Unterhäuptling Lutangabo aus Kissaka, der dort durch den König von Ruanda eingesetzt wurde und in dieser aggressiven Weise die Nordmarken schützt.

Diese kurze Aufzählung der Mpororo-Herrschaften genügt schon allein, um die politische Desorganisation des Landes zu charakterisieren. Im Laufe der letzten zwanzig Jahre haben sich infolge der Grenzstreitigkeiten zwischen Deutschland, England und dem Congo-Staate die Verhältnisse noch mehr verschlimmert.

In der zweiten Hälfte des letzten Jahrhunderts war es in Mpororo anders. Rokay oder Rokari[1]) verfügte damals über eine große Macht und unterwarf die Stämme bis zum Albert-See und den Vulkanen. Ihm folgte aber nicht sein Sohn Ruembusi, sondern eine Tochter, die dem Landesgeiste Nyawingi geweiht war. Die Hand der Priester war nicht stark genug, um die Vasallen in Zucht halten zu können, und das Reich zerfiel in mehrere Herrschaften, von denen nur einige ganz kleine, wie Mpimbi, Kayonsa und Kasebya z. B., die Oberhoheit der Tochter Rokari's nominell wenigstens zur Zeit der Reise von STUHLMANN anerkannten. WEISS[2]) erwähnt noch, daß Rugarama von Buischingato ihr einen Tribut zahlen sollte. Über die ältere Geschichte von Mpororo ist so gut wie nichts bekannt. Es lassen sich darüber nur gewisse indirekte Schlüsse folgern.

Das ganze Land verehrt den Geist Nyawingi und seine Priesterinnen haben einen großen politischen Einfluß. Die Vorherrschaft eines einzelnen Kultes darf aber als Beweis einer früheren, jetzt schon zersetzten politischen Organisation aufgefaßt werden. Die Tatsache wieder, daß im Mittelpunkte der Geist Nyawingi steht, und daß die ihm Geweihten Frauen sind, läßt annehmen, daß hier die erste bekannte Bunyoro-Königin Nyamwengi verehrt wird. Diese Tatsache gestattet weiter zu vermuten, daß Mpororo ein Überrest des alten Bunyoro-Reiches ist, das zum Mittelpunkte Mwenge im gegenwärtigen Toro hatte. Dafür spricht auch die Notiz KLINGHARDTs[3]). Nach seinen Worten soll der Nyawingi-Kultus vom Edward-See stammen, und in dieser Gegend sollte eine einflußreiche Priesterin ihren Hof haben.

Bevölkerung. Die Bevölkerung von Mpororó besteht, wie im ganzen Nordosten des Zwischenseengebietes, aus den beiden schon besprochenen Elementen: den ackerbautreibenden Banyambo und den Bahima-Hirten. Die Bahima bilden in den besprochenen Herrschaften die Adelschicht. Nur im Südwesten, im Gebiete der freien Bauerngemeinden, fehlen sie gänzlich. Dort sollen nur noch vereinzelt Batwa-Jäger wohnen. Banyambo bilden den Kern der Bevölkerung. Sie bezeichnen sich, wie alle Ackerbauer des Runyoro-Gebietes, als Bahiru und sind mit den Banyambo von Karagwe am engsten verwandt.

---

[2]) WEISS, M., Die Völkerstämme im Norden Deutsch-Ostafrikas. Berlin 1910, S. 60.

[3]) KLINGHARDT, Ltn., Beobachtungen aus Deutsch-Mpororo. Deutsches Kolonialblatt 1905, S. 207.

Die Sprache der Banyambo, das Runyambo, ist ein Runyoro- (Kinyoro-) Dialekt. Es verdient hervorgehoben zu werden, daß die übrigen Runyoro-Dialekte vom Kirundi durch den Bogen der Runyambo-Zone getrennt werden. Die Bahima von Mpororo sprechen ebenfalls das Runyambo. Ihre Aussprache weicht aber von der der Bahiru ab. Trotzdem darf man doch von einem besonderen Bahima-Idiom nicht sprechen. Die Behauptung von WEISS[1]), die auf seine Existenz Bezug nimmt, ist ohne Zweifel durch ein Mißverständnis verursacht. Daß ein Mututsi aus Ruanda sich mit einem Muhima aus Mpororo unterhalten kann, ohne von den Banyambo verstanden zu werden, beweist die Existenz einer besonderen Bahima-Sprache noch nicht. Beide konnten das in Mpororo nicht allgemein bekannte Kinyaruanda (Kirundi) sprechen.

Clans. Sowohl Bahima wie auch Banyambo zerfallen, wie es schon früher erwähnt wurde, in eine Anzahl, durch Blutrache zusammengehaltener und durch Eßverbote voneinander geschiedener exogamer Clans. Den höchsten Rang nimmt der Clan der Bashambo ein. Zu ihm gehören die Häuptlinge der oben besprochenen Bahima-Herrschaften mit Ausnahme von Kayonsa und Butaja. Nyakavass war ein Mugaya-Muhima[2]) und Kitaraya ist ein Mugina.

In Ruhama, bei Kislivombo, habe ich bei den Bahima begegnet die Angehörigen der folgenden Clans:

Bagai,
Baitera,
Bashambo und
Basioba.

STUHLMANN[3]) nennt noch die Bahiana, welche außer Kayonsa noch in Busongora, der Semliki-Ebene und Butuku wohnen sollen, und die Bairuntu von Butumbi. KLINGHARDT[4]) erwähnt Badjena und Bahinda.

Bei den Bahiru von Ruhama konnte ich feststellen die Clans:

Baanzira,
Bagai,
Baitera,
Bakimbiri,
Bakigoma,
Basinga,
Batorogo,
Batsiaba,
Bavinika,
Bayango,
Bazigaba.

[2]) STUHLMANN, F., Mit Emin Pascha ins Herz von Afrika. Berlin 1904, S. 658.
[3]) Ebenda S. 262 u. 658.
[4]) KLINGHARDT, Ltn., Beobachtungen aus Deutsch-Mpororo. Deutsch. Kolonialbl. 1905, S. 208.

KLINGHARDT erwähnt noch in Rukiga:

Balindi (Walindi), und
Basigi (Wassigi).

STUHLMANN[1]) spricht von den Clans der „Ureinwohner":

Bagahe (Wagahe) in Butumbi,
Bahumbo (Wahumbo) in Butumbi,
Bazigaba (Wasigaba) in Uwinsa,
Balindi (Walende) in Mpimbi und Kiruwe,
Balenge (Walenge) in Kayonsa,
Badjerra (Wadjerra) in Nyakavungo,
Basigi (Wasigi) in Rukiga.

Die letzten vier Clans darf man aber kaum zu den eigentlichen Banyambo zählen. Sie sitzen nämlich an der Sprachgrenze und ihre Namen weisen viel mehr auf die durch Bakondjo stark beeinflußten Barundi (Barondo) des Nordabhanges der Vulkankette hin.

Politische Organisation. Die Angehörigen der einzelnen Clans besiedeln in Mpororo zusammenhängende Landparzellen und bilden autonome Gemeinden. Deshalb bekommt man auch bei der Frage nach irgendeinem Clan die Antwort mit dem Hinweis auf die Richtung, in der sich seine Sitze befinden. So sagte man mir z. B. in Ruhama, daß die Basinga jenseits der neuen deutsch-englischen Grenze sitzen. Es darf nicht unerwähnt bleiben, daß jeder Clan mehrere räumlich getrennte und durch Kolonisation entstandene Gemeinden bildet. So findet man z. B. die Bazigaba nicht nur in Mpororo, sondern auch an verschiedenen Stellen in Ruanda.

Die Bahima-Herrschaften bestehen aus einer Anzahl Bahiru-Gemeinden, die durch eine Bahima-Minorität in Abhängigkeit gehalten werden. Der Muhima-Häuptling ist ein reicher Mann, der viele Kühe hat und sie den Ärmeren in Lehen geben kann. Durch das Verleihen der Kühe an Ergebene, und durch das Wegnehmen derselben den Unbotmäßigen, werden Abhängigkeitsverhältnisse geschaffen, durch welche die wenig zahlreichen Bahima in eine wohldisziplinierte und infolgedessen starke Gruppe organisiert werden. Deshalb ist auch in Mpororo der Kampf um die Kuh der Kampf um die Vorherrschaft. Kislivombo erzählt von seinem Vater Rutwe, daß er viele Kühe hatte und sie in seiner Güte anderen zum Weiden gab. Diese Erzählung gibt nur an, daß Rutwe durch Küheverleihungen andere sich botmäßig machte. Die Kunst zu regieren besteht unter diesen Umständen in einem so geschickten Ausspielen der einen gegen die anderen, daß man immer eine genügende Anzahl Menschen bei der Hand hat, die mit Rücksicht auf die künftigen Verleihungen das Einziehen alter Lehen zu unterstützen bereit sind. Ist das nicht der Fall, läßt sich der Besitz

[1]) STUHLMANN, F., Mit Emin Pascha ins Herz von Afrika. Berlin 1894, S. 262, 657, 658.

eines Vasallen nicht mehr einziehen, so schwindet auch das Hoheitsrecht und der politische Verband lockert und zersetzt sich. An die Bahiru wurden dort, soweit ich das feststellen konnte, keine Kühe verliehen, und man hielt sie durch Verleihen anbaufähiger Landparzellen und durch physische Gewalt im Gehorsam. Gegen übermäßige Strenge schützte sie aber ihre Freizügigkeit. Man konnte sie kaum hindern, unter Verzicht auf ihre Hütte und Habe, wegzuziehen und in den Bergen des Westens eine neue Heimat oder unter den Nebenbuhlern ihres alten Herrn einen neuen Herrn zu suchen. Der Wegzug der Bauern ist aber eine schwere Schädigung des Häuptlings. Er verliert nicht nur die Arbeitskräfte und Steuerzahler, sondern auch Kombattanten, die unter Umständen zu Gegnern werden. In dieser Weise ist seiner Machtvollkommenheit von selbst eine Schranke geboten.

Zur Zeit meines Besuches herrschte in Mpororo eine Krise. Die alte Ordnung, welche trotz aller ihrer Mängel doch das Leben zu regeln vermochte, wurde ganz wesentlich gestört. Die europäische Besetzung und vor allem das Zerschneiden von Mpororo in organisch nicht gegliederte Teile hat eine Anarchie verursacht.

Wenn auch einzelne Häuptlinge Züge unternahmen, um die unbotmäßigen Hörigen zum Gehorsam zu bringen, so konnte das doch nicht in der alten wirksamen Weise durchgeführt werden.

Die europäischen Machthaber waren stets geneigt, diese mit Einziehen des Lehens verbundenen Züge als einfache Räubereien anzusehen. Die Nutznießer der eingezogenen Lehen kannten schon den Weg zu den europäischen Stationen zu gut, um zu versäumen ihre Sache im günstigen Lichte darzustellen.

Andererseits waren die europäischen Stationen zu weit, um den Gang der Dinge genau zu verfolgen und die Eingeborenen zur Botmäßigkeit ihren Häuptlingen gegenüber zu zwingen. Das Land zersetzte sich so in undifferenzierte Bauerngemeinden.

Die alte, auf dem Kuhlehen und der Hörigkeit der Bauern aufgebaute Ordnung war im Verfall. Die neuen, durch die europäische Besatzung vertretenen, ökonomischen Abhängigkeiten hatten aber noch keine Zeit, um das Leben auf einer anderen Basis zu ordnen. Deshalb hörte man auch von allen Seiten das Gejammer über die Untertanen, die nicht mehr gehorchen wollen.

Bevölkerungsdichte. Das Bahima-Regime bietet keine günstigen Bedingungen für das Zusammenleben größerer Menschenmassen. Die Viehzucht nimmt große Flächen in Anspruch und nutzt sie äußerst extensiv aus. Infolgedessen kann die Hirtenbevölkerung wenig zahlreich sein. Andererseits müssen bei der privilegierten Stellung der Hirten die Bauern den Kühen stets weichen, und die Zahl der Felder und der sie bebauenden Familien bleibt immer auf ein Minimum beschränkt. Eine schöne Illustration dieser Tatsache bildet der Gegensatz zwischen den dicht bevölkerten Bergen des Westens und den menschenarmen

Hügeln des östlichen Mpororo. Im Westen haben wir unabhängige Bauerngemeinden, im Osten die Bahima-Herrschaften.

Die Beurteilung der Bevölkerungsdichte von Mpororo bietet sehr große Schwierigkeiten, da man keine befriedigenden Anhaltspunkte für diese Berechnungen hat und sich mit dem Schätzen, auf Grund gesehener Hütten, befriedigen muß. Auf dem Wege Bukoba-Rufua erreicht man die Mpororo-Grenze 2 Stunden westlich von der Mrongo-Fähre. An der Fähre gab es keine Siedelungen, da die Bootsleute von dem Häuptling Kislivombo (aus Ruhama) verjagt und die Boote vernichtet wurden. Eine Stunde weiter auf dem Wege nach Rufua befand sich die erste kleine Siedelung aus 5 Hütten. 3 Stunden weiter lag die, zur Landschaft Ubwera gehörende, Siedelung Ishenye. Hier gab es 30—40 Hütten. 3 Stunden weiter, als der Weg das Kagera-Tal verließ, kamen mehrere Siedelungskomplexe in Sicht. Sie lagen aber vereinzelt auf den Hügeln und schienen nur kleine Oasen auf dem Fond ausgedörrter Gräser zu bilden. Zur gleichen Zeit sah man nicht mehr als 12—15 Hütten. Erst in der nächsten Umgebung des verlassenen Postens Rufua schlossen sich die bebauten Felder zusammen. Im Süden von Rufua erreichte man, abgesehen vom Viehkral Kislivombo's, die ersten Siedelungen nach $2^1/_2$ Stunden im Kakura-Tale. Die Gesamtzahl der Hütten machte hier ein Dutzend aus. 2 Stunden weiter liegt Ruoshamba mit 16 Hütten. Von Ruoshamba erreicht man in einer halben Stunde Nyakahanda mit seinem gut bebauten Talboden. Hier sieht man zum erstenmal zusammenhängende Felder ohne unbebaute Zwischenstreifen. Nach der Durchquerung des Tales, wobei in der Nähe ca. 50 Hütten passiert werden, sieht man noch ein halbes Dutzend zerstreuter Gehöfte mit meistens 2 Wohnhütten und erreicht die aus 20 Hütten bestehende Siedelung von Kitaraya. Nimmt man an, daß bei der Reise durch ein offenes Land nur die Hütten auf einem kilometerbreiten Streifen berücksichtigt werden, so würde man, für den ca. 25 km langen Wegstreifen Rufua-Kitaraya mit ca. 100 Hütten, bei einem Durchschnitt von 4 Einwohnern pro Hütte, eine Bevölkerungsdichte von 16 Einwohnern pro 1 Quadratkilometer bekommen. Der Durchschnitt von 4 Einwohnern pro Hütte stammt aus den Zählungen in der Umgebung des Postens Rufua, und man hat keinen Grund anzunehmen, daß er zu klein wäre. Andererseits sieht man im offenen Lande einen über 1 km breiten Wegstreifen. Aus diesem Grunde wird man die Bewohner unserer 100 Hütten für die Bewohner von mehr als 25 qkm ansehen müssen. Unsere Bestimmung der Bevölkerungsdichte gibt infolgedessen eher zu hohe als zu niedrige Resultate.

Die Landschaften im Süden vom Dorfe Kitaraya's bis Bushara, sind kaum dichter bevölkert als das Gebiet zwischen Rufua und dem Kral von Kitaraya.

JOHNSTON[1]) gibt auf Grund englischer Berechnungen und Schätzungen für das nördliche Mpororo eine Bevölkerungsdichte von 20—30 Einwohnern

[1]) JOHNSTON, H., The Uganda Protectorate. London 1904, S. 248.

pro englische Quadratmeile an. Das entspricht einer Bevölkerungsdichte von 8—12 Einwohnern pro 1 qkm. Die englischen Ergebnisse kommen unserer Zahl sehr nahe, sie sind aber noch etwas niedriger. Auf Grund dieser Tatsachen kann man annehmen, daß die Bevölkerungsdichte der Bahima-Herrschaften mit 16 Einwohnern pro 1 Quadratkilometer nicht zu niedrig eingeschätzt ist.

Würde man für das stark zerklüftete Gebirgsland von Ndorwa dieselbe Bevölkerungsdichte wie für Mulera, also 100 Einwohner pro 1 Quadratkilometer, annehmen, und berücksichtigt man noch, daß die sehr menschenarme Steppe zwischen Kakitumba und Kagera ganz sicher weniger als 4 Einwohner pro 1 Quadratkilometer hat, wie das in Karagwe der Fall ist, so bekommt man einige Anhaltspunkte für die Abschätzung der Bevölkerungszahl. Bestimmt man auf Grund der vorhandenen Karten die Oberfläche von Mpororo, so erhält man:

Bahima-Herrschaften . .	2500 qkm	16 Einw.	pro 1 qkm	40 000	Köpfe.
Ndorwa	1000 „	100 „	„ 1 „	100 000	„
Steppe zwischen Kagera und Kakitumba . . .	500 „	4 „	„ 1 „	2 000	„
	4000 qkm	35 Einw.	pro 1 qkm	142 000	Köpfe.

Diese Zahlen dürften der Wahrheit recht nahe kommen und sind eher zu hoch als zu niedrig. Auf Grund dieser Zahlen kann man für den 2000 qkm großen, durch 1° südlicher Breite und 30° östlicher Länge abgegrenzten, deutschen Teil von Mpororo eine Bevölkerungszahl von 60 000—70 000 Köpfen erwarten. Die Bevölkerung von Mpororo wurde sehr stark überschätzt. So geben Hauptmann v. BERINGE[1]) und Prof. Dr. HANS MEYER[2]), für Deutsch-Mpororo allein, eine Bevölkerung von 250 000 Köpfen an, was eine Bevölkerungsdichte von 125 Einwohnern pro 1 Quadratkilometer bedeutet. Solche Bevölkerungsdichte kann man zwar auf einzelnen Hügeln in Ruanda, und wohl auch in Ndorwa, feststellen, doch darf man nicht vergessen, daß so dicht bevölkerte Striche kaum $^1/_4$—$^1/_3$ der Gesamtoberfläche Ruanda's ausmachen.

Familienverhältnisse. Trotz der recht ungünstigen Verhältnisse von Ost-Mpororo hat man, wie es scheint, überall mit einer Bevölkerungszunahme zu tun, die im Westen sehr bedeutend sein und angeblich der von Ruanda nicht nachstehen soll.

Die Bahima haben 2—3 Frauen, die verhältnismäßig teuer bezahlt werden. Der Kaufpreis beträgt nämlich zwei Rinder, ein Schaf und eine Hacke[3]). Ein Rind bekommt die Frau aber als Mitgift, und mit diesem zieht sie in das neue Heim. WEISS spricht von einem Brautpreis von 3—10 Rindern, einigen Ziegen

[1]) v. BERINGE, Hptm., Berichte über seine Reisen im Gebiet der Kirungavulkane. Mitteilungen aus den Deutschen Schutzgebieten 1901, S. 39.

[2]) MEYER, H., Das Deutsche Kolonialreich. Leipzig 1909, Band I, S. 309.

[3]) KLINGHARDT, Ltn., Beobachtungen aus Deutsch-Mpororo. Deutsches Kolonialblatt 1905, S. 208.

und Schafen und mehreren Hacken. Er berichtet auch, daß in Fällen, wo es sich herausstellt, daß die junge Gattin keine Jungfrau war, ein Teil der Zahlung dem Manne zurückerstattet wird. Der Ehebrecher soll das Vergehen mit seinem Leben und dem Einzuge seines Vermögens büßen[1]). Bei der Scheidung wird die Zahlung zurückerstattet.

Die Bahiru leben aus Not meistens in Monogamie und zahlen für ihre Frauen geringere Sätze, die gegen 20 Ziegen betragen.

Bei der Geburt, die in einer Hockestellung stattfinden soll, sind nur Frauen zugegen. Nachdem die Nabelschnur mit einem Rohrsplitter durchschnitten ist, wird erst der Vater gerufen. „Er muß[2]) vor der Hütte einiges Gras (eine harte, langstielige Art) ausraufen und die Stielenden dicht über der Wurzel zerkauen. Dann führt ihn eine Frau, indem sie ihm die Augen zuhält, in die Hütte und an das Lager des Kindes, über das er die Grashalme ausspuckt. Ohne zu reden verläßt er dann die Hütte und darf erst draußen die Augen öffnen. Nun bringt eine der Frauen das Kind an die Tür und zeigt es dem Vater, der hat pflichtschuldigst sehr erfreut zu sein und zu rufen: ‚E, e, da hat sie mir ja aber ein ganz besonders prächtiges Kind geboren.'" Der Vater kann die Mutter erst 5 Tage nach Geburt des Kindes sehen.

Das Leben eines Mannes wird wesentlich höher als der Kaufpreis einer Frau eingeschätzt. Nach KLINGHARDT wird ein Mord mit 8 Rindern gebüßt. Sonst übt der Clan des Ermordeten Blutrache.

Bahima werden nach dem Tode in ihren Hütten beerdigt, die man dann zu verlassen pflegt. WEISS[3]) erwähnt, daß diese Hütten dann angezündet werden. Ich hatte aber Gelegenheit das Grab eines erwachsenen Mannes in einem bewohnten Gehöfte zu sehen.

Kleidung. Wie schon hervorgehoben wurde, gehört Mporo zur Übergangszone, die zwischen dem Runyoro- und dem Kirundi-Gebiete liegt, wenn seine Sprache auch ein Runyoro-Dialekt ist. Der Übergangscharakter des Gebietes kommt wohl am schärfsten in der materiellen Kultur zum Vorschein. Während viele Gegenstände mit denen von Nkole und Bunyoro identisch sind, zeigen die anderen eine Annäherung an die in Ruanda vorkommenden Formen.

Die Kleidung (vgl. Bd. III, Taf. 42, 43 und 44) der Männer wird durch zwei Stoffstücke gebildet. Das eine umhüllt den ganzen Körper und wird über der rechten Schulter verknotet. Den linken Arm pflegt man dabei bald über, bald unter dem Stoff zu tragen. Das zweite Stück umhüllt die Lenden. In Mpororo fehlt das Lendentuch, ebenso wie in Nkole recht häufig. In Ruanda dagegen fehlt das Lendentuch nie, die Brust bleibt dagegen häufig unbedeckt. Die Füße werden manchmal durch Sandalen geschützt.

---

[1]) WEISS, M., Die Völkerstämme im Norden Deutsch-Ostafrikas. Berlin 1910, S. 70, 72.

[2]) KLINGHARDT, Lin., Beobachtungen aus Deutsch-Mpororo. Deutsches Kolonialblatt 1905, S. 229.

[3]) WEISS, M., Die Völkerstämme im Norden Deutsch-Ostafrikas. Berlin 1910, S. 74.

Die wohlhabenden Frauen kleiden sich auch in Baumwollstoffe, die ärmeren ausschließlich in Felle. Die Fellkleidung besteht aus einem großen Lendenfell und einem kleinen Brustfell, das auf der rechten Schulter verknotet wird. Bei der Baumwollkleidung wird das Brustfell durch ein großes Laken ersetzt, das den ganzen Oberkörper und den Kopf umhüllt (vgl. Bd. III, Taf. 43 und 45).

Der Schmuck wird in der Hauptsache durch zahlreiche Arm- und Beinringe (nierere) gebildet. Die Armringe bestehen gewöhnlich aus einem dicken Stück Draht. Man kann aber auch die Kiziba-Formen recht oft sehen. Die letzteren bestehen aus einem Grasring, der durch Umwicklung mit Kupferdraht ganz verdeckt ist. Diese Armringe werden von den Baziba auf ihren Reisen zum Salzmarkte am Edward-See ins Land gebracht. Die Beinringe werden von den Frauen in ähnlicher Weise wie in Ruanda in sehr großen Mengen getragen. Im Gegensatze zu Ruanda sind die Beinringe aus Draht und nicht aus Gras allein. Die Männer tragen im Westen noch manchmal massive Eisenringe am Halse.

Abb. 2. Armring aus Eisen. Ruhama. (III E 13363.)

Das Haupthaar wird von Zeit zu Zeit rasiert und kurz gehalten. Man läßt aber auch sehr häufig gewisse Teile unrasiert, so daß Muster entstehen. Diese hatte ich nur sehr selten Gelegenheit bei verheirateten Frauen zu beobachten. Bei jungen Mädchen sieht man recht oft kleine, mit Kaurimuscheln geschmückte Locken.

Siedelungen und Gebäude. Die Bewohner von Ost-Mpororo wohnen in zerstreuten Gehöften. Man sieht nicht selten, daß den zu zwei und drei zusammengeschlossenen Hütten jede Spur von Umzäunung fehlt. Das ist aber nur bei sehr armen Bahiru der Fall. Bei wohlhabenderen werden die Niederlassungen mit Hecken umgeben.

Die Krals der Bahima vereinigen eine bedeutendere Anzahl von Hütten, in denen sie mit ihren Frauen und Gesinde wohnen. Der geräumige Innenhof ist dabei so groß, daß dort die ganze Herde, die bei Kisivombo einige hundert Köpfe zählt, untergebracht werden kann.

Abb. 3. Grundriß des Gehöftes der Nyawingi-Priesterin von Rufua in Ruhama.
a Hütte der Priesterin. *b* Hütte des Torwächters. *c* Hütte des Hauptdieners. *d* Hütte des Gesindes. *e* Grabhütte eines Mannes namens Kahuti. *f* Geisterhütten.

In der Umzäunung der Siedelung hat man stets einige Geisterhütten, in denen den Verstorbenen geopfert wird. Ihre Zahl ist in den einzelnen Gehöften sehr verschieden.

Im westlichen Mpororo und in Butaya findet man dort auch Vorratshütten, die in ihrer Form denen von Ruanda gleich sind. Man könnte bezüglich der Vor-

ratshäuser den folgenden Satz formulieren: sie fehlen dort, wo die Hauptnahrung durch allmählich reifende und ständig auf den Stauden aufbewahrte Bananen gebildet wird. Mit dem Vorherrschen von Hirse und Erbsen wird die Hütte durch die unentbehrlichen Vorratshäuser begleitet. Der bedeutende Vorrat an Hirse und Erbsen läßt sich eben nicht mehr in der Hütte in Körben und Paketen aus Bananenblättern aufbewahren.

Die Hütten von Mpororo unterscheiden sich im Prinzip von den übrigen Hütten des Zwischenseengebietes nicht. Sie gehören nämlich zum Typus der dreischichtig gebauten Bienenkorbhütten. WEISS[1]) berichtet noch über längliche Hütten mit seitlichem Eingang, die in ihrer Bauart der Massai-Hütte ähnlich sein sollen. Diese Hüttenform hatte ich keine Gelegenheit zu beobachten. Ich habe von ihrem Vorkommen auch nichts gehört. Die einzigen mir bekannten Abweichungen von der Bienenkorbform bildeten die unter dem Einfluß der Küstenleute entstandenen Giebeldachhütten des Postens Rufua. Vielleicht wurde die Angabe über längliche Hütten durch die eigentümlichen Doppelhütten, die man gelegentlich in Mpororo sehen kann, verursacht. Sie bestehen aus zwei nebeneinander gebauten Bienenkorbhütten, bei denen die aneinander stoßenden Wandteile ausgeschnitten werden und den Verbindungsgang bilden. Die so entstandene Doppelhütte hat einen Ausgang, der sich gewöhnlich gegenüber dem Zugang zur zweiten und nicht an der Seite befindet.

Abb. 4. Grundriß der Doppelhütte der Nyawingi-Priesterin aus Rufua in Ruhama.
a Herdraum. *b* Bettraum. *c* Milchgestell. *d* Hinterraum. * Stützpfosten.

Die aus Sorgostroh gebauten Hütten sind sehr klein und unbequem. Die Höhe erreicht in der Mitte kaum 3 Meter, und der Durchmesser schwankt zwischen 3 und 4 Meter.

Die Hütten werden sehr nachlässig mit trockenem Grase bedeckt, so daß das Ganze den Eindruck eines Grashaufens macht. Manchmal wird das Gras auf der Hütte durch horizontal verlaufende Strohseile festgehalten. Das Prinzip, das Deckstroh durch äußere Befestigung festzuhalten, erinnert an das Netz der Bambuba und Momvu, mit dem das Dachstroh überdeckt wird. Das Anbringen von horizontalen Strohseilen habe ich nirgends außerhalb von Mpororo im Zwischenseengebiete beobachten können.

Das gewölbte, bis zum Boden reichende Hüttendach heißt „rukange", und die es stützenden horizontalen Reifen werden „mbazi" genannt. Gegen diese stemmt man die Stützpfosten (nyomyo).

Das Hütteninnere wird durch 1,50 m hohe, geflochtene, mit Kuhmist gedichtete Wände (bitero) in getrennte Räume eingeteilt. Durch die Tür tritt man in den Herdraum „muliangu". Die Feuerstelle liegt exzentrisch, nach links

[1]) WEISS, M., Die Völkerstämme im Norden Deutsch-Ostafrikas. Berlin 1910, S. 52.

verschoben, und wird durch vier Stützpfeiler umgeben. In ihrer Mitte liegen die zum Aufstellen der Töpfe notwendigen drei Herdsteine (mahega). In der steinarmen Kagera-Ebene werden sie nicht selten durch Erde von Termitenhügeln ersetzt. An der dem Eingange gegenüberliegenden Wand werden Milchgefäße aufbewahrt. Ein Teil derselben wird auf einem niedrigen Podium (rudjedji) aufgestellt, die anderen hängen über diesem in Netzen (kiteko). Etwas rechts vom Eingange befindet sich das 30—40 cm hohe Pfahlbett (butande). Das Bett ist ebenfalls mit Wandschilden abgegrenzt, und sein Zugang liegt hinter der Wand mit Milchgefäßen. Zwischen dem Betttraum und dem Eingange befindet sich ein Raum, in dem kleine Kälber gehalten werden.

Abb. 5. Grundriß einer Hütte aus Ubwera.
a Herdraum. *b* Herd. *c* Bettraum. *d* Bett. *e* Stützpfosten.

Abb. 6. Grundriß der Gesindehütte aus dem Gehöft der Nyawingi-Priesterin von Rufua.
a Herdraum. *b* Herd. *c* Milchgestell. *d* Schlafstelle eines Dieners. *e* Schlafstelle der Dienstmägde. *f* Schlafstelle der Kinder. *g* Kälberstall.

In ärmeren Hütten wird das Innere durch eine dem Eingange gegenüberstehende Wand nur in zwei Teile, den Herdraum und den Bettraum, getrennt. Der Zugang zum Bettraum liegt dann ebenfalls links vom Eingange

Im Gehöft der Nyawingi-Priesterin, die in der Nähe von Rufua wohnte, befand sich eine ganz abweichend eingeteilte Hütte, in der ihr Gesinde wohnte. Die Wand mit Milchgestellen war hier nicht mehr gerade, und im Herdraum befanden sich zwei, von Wandschirmen umgebene, Betten.

Hausgerät. Das Hausgerät der Mpororo-Hütten ist sehr roh gearbeitet. Es sollen hier genannt werden: große, irdene Kochtöpfe, in denen der steife Hirsebrei bereitet wird, Kochpaddeln (muhiko) zum Mischen des Breies beim

Abb. 7. Kochpaddel aus Ubwera. ($^1/_{12}$ d. w. Gr. III E 13377. 128 cm lang.)

Kochen, ca. 40 cm lange und 10 cm breite, flache, trogartige Holzschalen (rubehi) zum Servieren des Essens, flache, demselben Zwecke dienende, aus einer Strohspirale zusammengenähte Körbe (ruhungo), kleine irdene Schüsseln (kabia) für Milch, geschnitzte Holzgefäße zum Milchaufbewahren (kianzi), große Vorratskörbe (kitente), sehr roh geschnitzte Mörser (nsekuro), die auch zum Dreschen der Hirse verwendet werden, Steine zum Zerreiben des Hirsemehls, Trinkkürbisse, Kürbisse zum Wasserschleppen, Vorratskörbe (kibo),

Kürbisse zum Buttermachen (kisabo) und Holzgefäße zum Rindertränken (chuba).

Abb. 8. Hölzernes Milchgefäß. (1/6 d. w. Gr. III E 13148. 24½ cm hoch.)

Als einzige Möbel sollen nur kleine, einbeinige Schemel und Pfahlbetten erwähnt werden. Die letzteren stellen Platten aus Stäben dar, die auf den, in den Boden eingetriebenen, Stützpfeilern ruhen und infolgedessen kaum zum Mobiliar gerechnet werden können. Mit demselben Rechte kann man hier noch das Gestell für Milchgefäße anführen. Das Bett ist mit Matten (kirago) und der Boden mit trockenem Gras bedeckt.

Abb. 9. Mörser aus Ubwera. (1/6 d. w. Gr. III E 13373. 37 cm hoch.)

Die allgemein verbreiteten Toilettengegenstände bestehen aus kleinen Kürbissen und Gefäßen aus Ton und Holz, die zum Aufbewahren der ranzigen Butter, die zum Einsalben der Haut benutzt wird,

Abb. 10. Schemel aus Ubwera. (1/6 d. w. Gr. III E 13374. 22 cm hoch.)

Abb. 11. Tongefäß zum Wasserwärmen. (III E 13372.)

Abb. 12. Räucherbecken aus Ubwera. (1/6 d. w. Gr. III E 13370. 10 cm hoch.)

dienen. Kleine Töpfe (ngemeku) zum Wärmen des Wassers, das von den Frauen bei ihren Abwaschungen gebraucht wird, und kleine Becken aus Ton (kiswa), die beim Einräuchern (Parfümieren) der weiblichen Genitalien benutzt werden. Bei der letzteren Operation sollen die Frauen hocken und das „kiswa" mit glühenden Kohlen unter ihre Kleider stellen.

In den Bahiru-Hütten findet man außerdem noch Hacken (mfuka) zum Bestellen der Felder.

Kürbisse zum Aufbewahren von Schnupftabak werden „nohasi" genannt, und Schröpfköpfe aus kleinen Kürbissen pflegt man als „kirum iko" zu bezeichnen.

Waffen. Die Waffen der Banyambo und Bahima von Mpororo sind identisch, wenn man auch gewisse Unterschiede zwischen dem Osten und Westen nicht verkennen kann. Im Osten herrscht bekanntlich der Bahima-Einfluß, im Gegensatze zu den Bahiru-Gebieten des Westens, vor. Die Waffen bestehen hier und dort aus Speeren, Bogen und Pfeilen, Buschmessern und Schilden.

Abb. 13. Bogen aus Rufua in Ruhama. ($^1/_{12}$ d. w. Gr. III E 13386. 151 cm lang.)

Der Bogen ist gewöhnlich etwas über 150 cm lang, im Querschnitte rund, gegen die Enden verjüngt und mit einer, aus Bast gedrehten, Schnur bespannt. Das Bogenholz wird „mata" und die Bogensehne „nke" genannt. Der befiederte Pfeil hat eine eingelassene Eisenspitze. Das, durch Einlassen der Eisenspitze geschwächte, vordere Pfeilende wird durch Umwicklung mit Bast verstärkt. Der Baststrang wird zu diesem Zwecke mit klebrigem Ficussaft getränkt.

Die Speere haben, mit Hilfe von Tüllen aufgesetzte eiserne Spitzen. Diese sind im Osten durchweg mit Blutrinnen versehen. Im Westen dagegen fehlen die Blutrinnen häufig. Das untere Ende des Speerschaftes steckt gewöhnlich in einem eisernen Schuh. Die etwas kürzeren, ca. 120 cm langen Wurfspeere unterscheiden sich nur durch die Länge ihres Schaftes, lassen aber die Blutrinnen nur sehr selten vermissen. Bei freundschaftlichen Besuchen wird der Speer meistens durch einen sehr langen Stock ersetzt.

Abb. 15. Speerschuh aus Ruhama. ($^1/_4$ d. w. Gr. III E 13384. 7 cm lang.)

Abb. 14. Speerspitzen aus Ost-Mpororo, die mittlere aus Ubwera, die anderen aus Ruhama. ($^1/_4$ d. w. Gr. III E 13384, 13363, 13383. Mit Schaft 120, 146, 131 cm lang.)

Die Köcher bestehen entweder aus langen Kalebassen mit geringem Durchmesser oder aus geschnitzten Holzzylindern. Die letzteren dienen ausschließlich zur Aufbewahrung der Pfeile in der Hütte.

Der Schild wird im Osten aus einem gebogenen Stück Brett geschnitzt und mit einem schwarz-weiß-roten Muster bemalt. Er unterscheidet sich vom

Ruanda-Schilde nicht. Im Westen treten in den Vordergrund nach der Nkole-Art mit Rotang überflochtene Schilde. Die letzteren sind etwas breiter. Beide Formen haben in der Mitte einen, an die Faustschilde der Bari erinnernden, aus Holz geschnitzten, vorspringenden Höcker. Der geflochtene Griff wird in seiner Nähe angebunden, und seine durchgreifenden Endteile sind auch von vorne sichtbar.

Abb. 16. Schild aus West-Mpororo. (1/9 d. w. Gr. III E 9880. 60 cm hoch.)

Abb. 17. Buschmesser aus Mpororo. (1/9 d. w. Gr. III E 4540. 56 cm lang.)

Das Buschmesser (ngondo) von Mpororo hat auch im Osten die Ruanda-Form und unterscheidet sich nur durch einen längeren, mit Leder benähten, hölzernen Griff. Kiziba-Formen kommen vereinzelt nur in der Nähe der Kagera vor. Übergangsformen sind dagegen häufig; die eiserne Klinge ist aber stets gekrümmt und wird mit einem wesentlich kürzeren Holzstiel als in Kiziba versehen.

Auf der Jagd pflegt man außer den hier besprochenen Waffen noch große Netze (mukuha) zu gebrauchen. Man benutzt auch Fallgruben und Fallen.

Kultus. Eine Eigentümlichkeit von Mpororo bildet die Verbreitung des Nyawingi-Kultes und die einflußreiche Stellung seiner Priesterinnen.

Wenn auch in Kiziba und den übrigen Teilen des Runyoro-Gebietes Frauen den Geistern geweiht werden, so kommen doch diese Priesterinnen nicht zur politischen Macht. Ihre Pflichten bestehen dort im Bedienen des Geistes, dem die Betreffende geweiht ist. Sie opfern Nahrungsmittel und haben dafür Sorge zu tragen, daß der Vergessene und Vernachlässigte an seine Bedürfnisse nicht in einer den Lebenden unliebsamen Weise erinnern braucht. Das Wahrsagen, d. h. das Ausfragen des mächtigen Geistes, bildet dabei eine sehr wichtige und einflußverschaffende Betätigung.

Die dem Geiste Nyawingi geweihten Priesterinnen, wie Mumusa (Muhumusa), Kiakatuma u. a., die man kurzweg Nyawingi zu bezeichnen pflegt,

scheinen in ihrem Wesen mit den oben besprochenen Priesterinnen Kiziba's identisch zu sein. Trotzdem darf man hier gewisse Unterschiede nicht übersehen. Die am stärksten auffallenden sind: die Vorherrschaft eines einzelnen Kultes in Mpororo und die politische Macht der Priesterinnen.

Die verehrten Geister Kiziba's sind Seelen verstorbener Fürsten, deren Macht auf das Gemüt des Volkes auch nach ihrem Tode nicht aufhörte einzuwirken. Bezüglich des Geistes Nyawingi konnte ich von den Eingeborenen, bei der Abneigung auf diese Probleme einzugehen, nur wenig Positives erfahren. Trotzdem scheint hier dasselbe, wie es schon oben erwähnt wurde, der Fall zu sein.

Daß sich der Nyawingi-Kult auf der Basis des Ahnenkultes entwickelt hat, darf als eine feste Tatsache angesehen werden. Dafür sprechen auch die unverhältnismäßig zahlreichen Geisterhütten, die ich im Gehöfte seiner Priesterin, in Rufua, beobachten konnte. Dafür spricht auch die allgemeine Verbreitung des Ahnenkultes in Mpororo. Der Munyambo befindet sich in einem ständigen Verkehr mit den Seelen seiner Ahnen, die er in einer geheimnisvollen Weise, mit Hilfe von Antilopenhörnern (mahembe), zu beeinflussen versteht.

Abb. 19. Amulett gegen Fieber. Ruhama. (½ d. w. Gr. III E 13381 a.)

Abb. 18. Netzknoten aus Ubwera. (III E 13375. Länge des Netzes 460 cm.)

Der Nyawingi- oder Nyabingi-Kult von Mpororo scheint aber auch mit dem Kult des Binego, des Jüngers Ryangombe's, von Mulera identisch zu sein, und die, dort bei den Kultushandlungen als Ryangombe auftretende Frau wird wohl der Nyawingi-Priesterin entsprechen.

Nyawingi ist sehr mächtig. Er ist der mächtigste unter den Geistern. Wenn er jemandem in den Kopf steigt, so wird der Betreffende besessen. „Hat ein Mensch viel Vieh, so sagt man: er ist Nyawingi. Hat er nicht so viel, so sagt man: er wäre nur ‚mukama' (Herrscher)". So erzählte mir Kislivombo und erklärte damit die gegenwärtigen Mpororo-Herrscher, die für sich den Titel „mukama" beanspruchen, für schwächer als Nyawingi. Dieser Vergleich ist ohne Zweifel eine Anspielung auf das einstige Herrschen von Nyawingi in Mpororo.

Abb. 20. Amulett gegen Leibschmerzen. Ruhama. (½ d. w. Gr. III E 13380.)

Nyawingi wird an vielen Stätten geopfert. Abgesehen von den bedeutendsten Priesterinnen, wie Kiakatuma aus Ruboko in Buischingato, die seinerzeit von STUHLMANN besucht wurde, und Mumusa, die Herrscherin von Mururwa, gibt es noch eine bedeutende Anzahl weniger einflußreichen Priesterinnen. Die Eingeborenen gaben mir an, daß in Ruhama drei und in Butaya zwei Priesterinnen des Geistes Nyawingi wohnen.

Zum Schlusse sollen hier noch fünf Amulette kurz besprochen werden:

1. Amulett (ngisha) gegen Fieber, aus 2 kleinen, 1 cm hohen, transversal

durchbohrten, Holzzylindern vom „msekera"-Baum zum Tragen auf einer Bastschnur (Abb. 19).

2. Amulett (ngisha) gegen Leibschmerzen, aus einem 1,3 cm hohen, transversal durchbohrtem, Holzzylinder, ebenfalls an einer Bastschnur zum Tragen. (Abb. 20). Beide sollen auf keinen bestimmten Geist (umuzimu) Bezug nehmen.

3. Amulett (ngisha) zum Beeinflussen des „umuzimu" Biashoba (Abb. 21). Aus einem 4 cm langen, an beiden Enden geschnitzten, transversal durchbohrten Holzzylinder vom „mhungo"-Baume.

4. Amulett (ngisha) zum Schutze vor verschiedenen Krankheiten

Abb. 21. Amulett des „umuzimu" Biashoba. Ruhama. (½ d. w. Gr. III E 13380.)

Abb. 22. Amulett gegen verschiedene Krankheiten. Ruhama. (½ d. w. Gr. III E 13379.)

Abb. 23. Amulett mit Zauberhörnern. Ubwera. (½ d. w. Gr. III E 13366).

(Abb. 22). Besteht aus einer Frucht und einem transversal durchbohrten, 2 cm langen Holzzylinder vom „mkoni"-Baum, die auf einer Bastschnur getragen werden.

5. Amulett (mahembe) aus 7 Hörnern mit Fernmedizin und 4 Holzzylindern (Abb. 23). Die Hörner sind 10—22 cm und die Holzzylinder 4—7 cm lang. Das Amulett scheint den Besitz eines Eingeweihten in den Nyawingi-Kult darzustellen und soll eine große Zauberkraft besitzen.

Besondere Amulette (rugisha) werden kleinen Kälbern an den Hals gebunden.

5. Kapitel.

Ruanda.

Allgemeine Übersicht. — Politische Gliederung. — Westliche Nachbarländer. — Bevölkerungsdichte. — Bevölkerungsbewegung. — Gesundheitsverhältnisse.

Allgemeine Übersicht. Das Reich Ruanda umfaßt den nördlichen Teil der im Zwischenseengebiet gelegenen Kirundi-Sprachenzone.

Ruanda erstreckt sich von 28° 50′ bis 30° 55′ östlicher Länge, und von 1° 20′ bis 2° 50′ südlicher Breite, und hat die Form eines Trapezes mit der gegen NNW. gerichteten kürzeren Parallelseite. Im Süden grenzt Ruanda an Urundi; im Osten an Karagwe; im Norden an Nkole, wenn man Mpororo, das keine einheitliche Staatsorganisation hat, für ein Übergangsgebiet zwischen Ruanda und Nkole ansieht. Im Westen hat Ruanda keinen wohlorganisierten Staat zum Nachbarn, sondern kleine Häuptlingschaften mit einer sprachlich nahe verwandten Bevölkerung.

Ruanda stellt ein stark abgeschlossenes Gebiet dar. Die Süd- und Ostgrenze des Staates bilden die Flüsse Akanjaru und Kagera; zu Ruanda gehört aber auch die zwischen den beiden Strömen, auf ihren rechten Ufern, gelegene Landschaft Bugessera, die im Südosten bis zum Rugwero-See reicht. Die Westgrenze bildet der große afrikanische Graben mit der Lavaebene des tätigen Vulkans Namlagira, dem Kiwu-See und dem Russisi-Strom.

Im Norden fehlt es Ruanda an einer scharf ausgesprochenen, durchgehenden natürlichen Grenze. Die Nordabhänge der Vulkankette gehören zu Ruanda, und die neue politische Grenze zwischen Deutsch-Ost-Afrika und dem belgischen Congo schneidet vom Lande seine früheren Nordmarken ab, die bis zum Iwi-Fluß reichten. Im Osten von den Mulera- und Ndorwa-Seen wird als Nordgrenze der Lulenge-Bach angesehen. Von seiner Mündung springt die Grenze in der menschenleeren Steppe auf den Kagera herüber.

In diesen Grenzen umfaßt Ruanda ein Areal von ca. 29 000 qkm.

Die Einflußsphäre der Ruanda-Herrscher hat aber die soeben angegebenen Grenzen zu verschiedenen Zeiten im Norden und vor allem im Westen wesentlich überschritten.

Lwabugiri Kigeri herrschte bis zum Edward-See. Das Buhunde oder Butundwe bildete einen temporären Bestandteil seines Reiches. Zu Ruanda gehörten auch die Gebiete der den Banyaruanda nahe verwandten Einwohner der westlichen Kiwu-Ufer.

[p. 102]

Ruanda stellt ein stark zerklüftetes Gebirgsland dar, das von Osten nach Westen, von den Steppen der Kagera-Ebene bis zum Rande des Ostafrikanischen Grabens, in Terrassen ansteigt und dann steil zur Grabensohle abstürzt. Infolgedessen liegt die Nil-Kongo-Wasserscheide ganz im Westen von Ruanda. Das Gebirgsland von Ruanda steigt aber auch noch nach Norden und nach Süden von seiner zentralen Achse — dem Njawarongo-Kagera-System — an. Während aber die nördliche, gegen Süden gerichtete und durch die Vulkane abgeschlossene Böschung zu Ruanda gehört, fällt die südliche, gegen Norden gerichtete Böschung bis auf den nordwestlichen, zu Ruanda gehörenden Teil den Staaten Urundi und West-Ussuwi zu. Infolgedessen hat man in Ruanda die höchsten Erhebungen auf der Westseite und vor allem auf der Vulkanlinie des Nordrückens der Wasserscheide.

Über vier Fünftel des Landes werden durch den Kagera mit seinen Zuflüssen entwässert und gehören zum Becken des Victoria-Sees. Unter den Zuflüssen des Njawarongo-Kagera-Stromes verdienen eine besondere Beachtung die Mkunga oder Mukungwa, die die Südostabhänge der Vulkane entwässert, und der südöstliche Grenzfluß Ruanda's, der Akanjaru. Der Hauptzufluß des Kagera — der Ruwuwu — berührt Ruanda nicht. Der Ruwuwu ist der Hauptstrom von Urundi. Die Nordabhänge der Vulkane werden durch den Rutshuru entwässert und gehören infolgedessen zum Becken des Edward-Sees. Der schmale Saum dem Kiwu-See und dem Russisi entlang gehört schon zum Kongo-Becken. Die Ruanda-Flüsse des Kiwu- und des Edward-Seebeckens sind kleine, kurze Gebirgsbäche, die für den Verkehr keine Bedeutung haben. Sie haben ein zu starkes Gefälle um den Verkehr zu fördern, sie sind zu klein um ihn zu hindern.

Die Flüsse des Kagera-Beckens, der Mukungwa ausgenommen, haben ein geringes Gefälle und fließen in breiten, versumpften, mit Papyrus bewachsenen, Tälern dahin. Somit bilden die bedeutenderen Ströme, wie z. B. der Akanjaru und der Kagera, sehr große Verkehrshindernisse. Sie sind nur an gewissen, sehr vereinzelten, Punkten passierbar. Die große Bedeutung dieses Umstandes kommt eben darin zum Ausdruck, daß die Hälfte der Grenzen von Ruanda durch den Akanjaru und den Kagera gebildet wird. Die Flüsse des Kagera-Beckens werden ebensowenig, wie die des Kiwu-Systems, als Verkehrswege benutzt, trotzdem sie auf großen Strecken schiffbar sind und nur durch wenige Stromschnellen unterbrochen werden. Die Vernachlässigung der Flüsse ist aber wohl nicht durch die Stromschnellen verursacht, da der durch seine Stürme viel gefährlichere Kiwu stark befahren wird. Sie hat viel eher dieselbe Ursache, wie die Ausschaltung der Flußtäler durch die auf den Bergrücken geführten Wege. Die Täler sind versumpft und die Flüsse haben zu wenig bequeme Anlegepunkte, wo man aus dem Boot auf festen Boden steigen könnte, ohne ganze Kilometer im Sumpfe waten zu müssen.

Die Versumpfung der Flußtäler und die Steilheit ihrer Abhänge bilden einen sehr wichtigen geographischen Faktor in der Entwicklung von Ruanda. Sie

drängen die Bevölkerung auf die Hügel und schließen sie in territoriale politische Gruppen ab. Dieser Umstand spielt in der Organisation des Staates eine sehr große Rolle, indem er die Abgrenzung des Besitzes und der Verpflichtungen vereinfacht und viele Reibungen erspart. Für Ruanda ist infolgedessen in seiner geographischen Konfiguration die höhere, auf der territorialen Gliederung aufgebaute Staatsorganisation gegeben, die in der Entwicklung nur mit Mühe die Clanorganisation ablöst. Dieser rein geographische Faktor hat sicherlich in bedeutendem Umfange zur Entwickelung eines so ungewöhnlich großen und stabilen Reiches des schriftlosen, schwarzen Afrika beigetragen.

Nicht alle Flußtäler sind aber versumpft und unbewohnt. Das Njawarongo-Tal z. B. ist, oberhalb der Mkunga- (Mukungwa-) Mündung, bis zum Flusse bewohnt. Ebenso sind auch die Berge nicht überall bewohnt. Die Berge der Kagera-Kiwu-Wasserscheide sind mit hochstämmigem Urwald bewachsen, in dem es keine ackerbautreibende Bevölkerung gibt. Ebenso sind die Vulkankegel unbewohnt. Die Gebirgswälder zwischen Akanjaru und Kagera, welche die Südgrenzen von Bugessera bilden, sind sehr menschenarm. Schwach bevölkert ist auch die bewaldete Anhöhe von Bugessera selbst.

Politische Gliederung. In ähnlicher Weise wie Ruanda, durch das unbewohnte Akanjaru-Tal im Süden von Urundi und durch die menschenleere Kagera-Steppe im Osten von Karagwe, abgeschlossen ist, wird das ganze Land, durch die unbewohnten und verkehrstörenden Zonen, in eine Anzahl natürlicher Provinzen zergliedert.

Man spricht in Ruanda von den folgenden Hauptprovinzen:

1. Mukinjaga,
2. Bwischascha,
3. Bugoye (Bugoie),
4. Nduga,
5. Bugessera,
6. Mulera,
7. Ruweruka,
8. Kissaka,
9. Buischa oder Bgisha.

Die Provinzen Mukinjaga, Bwischascha und Bugoye liegen im Kiwu-Becken und bilden seine Küstenzone. Sie werden vom übrigen Ruanda durch die Gebirgsurwälder der Nil-Kongo-Wasserscheide getrennt. Das im Norden durch die Vulkanlinie und die Berge des südwestlichen Abhanges des Karissimbi begrenzte Bugoye wurde, wie es scheint, erst im letzten Jahrhundert durch Zuzügler aus Ruanda und vom Westufer des Kiwu-Sees (Kameronse), welche die Urwälder rodeten, stärker besiedelt.

Das Zentrum von Ruanda liegt im Kagera-Becken. Hier haben wir die Hauptprovinz Nduga mit der Königsresidenz. Dort werden an seinem Hofe

die Vertreter der ganzen herrschenden Schicht vereinigt. Nduga umfaßt die Gebiete vom Akanjaru bis zu den bewaldeten Bergen der Nil-Kongo-Wasserscheide und dem Njawarongo. Zu Nduga scheint man auch die Tschingogo-Unterprovinz auf dem westlichen Ufer des Njawarongo-Mittellaufes zu zählen.

Bugessera umfaßt das zwischen Akanjaru, Kagera und der Urundi-Grenze eingeschlossene Gebiet. Es verdient Beachtung, daß in Busongora die Einwohner von Nkole mit dem Namen Bagessera bezeichnet werden.

Als Mulera bezeichnet man den, durch den Mkunga (oder Mukungwa) entwässerten Teil des Südabhanges der Vulkankette. Nach der Ansicht der Leute aus Nduga soll Mulera im Süden bis zum Njawarongo-Knie reichen und sowohl die Landschaft Bugarula wie auch Ukonja umfassen. Zu Mulera wird gewöhnlich noch die auf den Nordabhängen des Muhawura und Mgahinga gelegene Landschaft Ufumbiro gezählt.

Das stark versumpfte Plateau, welches im Nordosten von dem Mukungwa und dem Njawarongo bis zu den Seen von Mulera und dem Mohasi-See, reicht, wird als Ruweruka bezeichnet.

Die Provinz Kissaka, noch unlängst ein unabhängiger Staat, bildet die am stärksten nach Osten vorgeschobene Provinz Ruanda's. Die Grenzen von Kissaka werden im Süden, Osten und Südwesten durch den Kagera, im Westen und Nordwesten durch den Mugessera-See, den die Eingeborenen mit dem Namen Lugazu bezeichnen, gebildet. Die Nordgrenze des Landes führt durch das Tal am Nordabhange des Kabirizi-Berges. Im Großen Deutschen Kolonialatlas[1]) liegt der erste Buchstabe der Aufschrift „Kissaka" schon außerhalb des Landes, und der Buchstabe I befindet sich genau auf seiner Grenze.

Das zum Edward-Seebecken gehörende Gebiet auf dem Nordabhange der Vulkankette wird durch die Lavaebene des Namlagira und das Tal des Ihondo im Westen und Nordwesten und den Rutshuru im Norden begrenzt und bildet die Provinz Buischa oder Bgisha. Zu Bgisha müssen aber noch die mit Banyaruanda bevölkerten Landschaften Bukoma, zwischen Rutshuru und Nkendua und Butaka, zwischen Nkendua und Iwi, gerechnet werden. Von Bugoye wird Bgisha durch einen Waldstreifen auf der Wasserscheide getrennt. Auf der von mir zurückgelegten Route Njundo—Rutshuru ist dieser $^3/_4$ Stunden breit, und trennt die Bugoye-Landschaft Buhumba von der Bgisha-Landschaft Kivumba.

Dr. KANDT[2]) verlegt Buischa, auf seiner Karte, nach dem Südwesten des Edward-Sees, außerhalb seines Reiseweges. Diese unerklärliche Angabe muß auf irgendeinem Mißverständnis beruhen. Der Zusammenhang zwischen Ruanda und Buischa wurde durch die belgische Besitzergreifung sehr stark gelockert; so spricht v. BERINGE[3]) z. B. von einem Muhutu-Sultan Mtamuhanga von

[1]) Großer Deutscher Kolonialatlas. Blatt Usumbura. Dietrich Reimer (Ernst Vohsen). Berlin 1908.

[2]) KANDT, R., Caput Nili. Berlin 1904.

[3]) v. BERINGE, Hptm., Berichte über seine Reisen im Gebiet der Kirungavulkane. Mitteilungen aus den Deutschen Schutzgebieten 1901, S. 27.

Bgisha. Ich konnte nur von Namuhanga, einem Klienten Musinga's, der zur Zeit meiner Reise in Niansa weilte, erfahren. Die Eingeborenen betrachten also Bgisha immer noch für einen Teil Ruanda's.

Den Namen der Provinz, die zwischen dem Mohasi-See, dem Kagera und dem Bugessera-See (Lugazu) liegt, hatte ich keine Gelegenheit zu ermitteln. Die von mir bereiste Landschaft wird vom Südufer des Mohasi-Sees im Norden bis zum Kishaya-Tal im Süden als Bugansa, das heilige Land des Hirtenadels, bezeichnet. Das Land vom Kishaya-Tal bis zum Bugessera-See (Lugazu) wurde als eigentliches Ruanda bezeichnet. Ob das aber die Landschaft oder die Provinz ist, welcher das ganze Land seinen Namen verdankt, konnte ich nicht erfahren. Es ist mir ebenfalls nicht gelungen zu ermitteln, ob das Gebiet im Norden vom Mohasi-See einen zusammenfassenden Namen hat.

Die Ermittelung der Namen der Provinzen ist immer mit bedeutenden Schwierigkeiten verbunden. Der Eingeborene kennt in Ruanda zunächst das natürliche geographische Element — den „Hügel" (kashozi) und belegt ihn mit einem bestimmten Namen. Er kennt auch die Zusammenfassung einer Anzahl von Hügeln zu einer Einheit höherer Ordnung, zur Landschaft. Hier beginnt aber schon die Schwierigkeit mit der Namengebung. Es wird, soweit ich das beobachten konnte, der Name eines gewissen Hügels, der für die Bevölkerung von besonderer Bedeutung ist, auf die ganze Landschaft übertragen. Diesen allgemeinen Namen verdankt aber gewöhnlich die Bevölkerung der Landschaft ihren Nachbarn. Einen ähnlichen Prozeß macht die Zusammenfassung der Landschaften zu einer Provinz durch. Deshalb ist es auch schwer den Gültigkeitsbereich eines allgemeinen Namens, z. B. Nduga, festzustellen, wenn auch eine Provinz mit recht scharf ausgesprochenen natürlichen Grenzen gegeben ist. Die Provinz Nduga verdankt, wie es scheint, ihren Namen der kleinen Landschaft Induga am Njawarongo. Von der letzteren wurde der Name über die benachbarten Landschaften verbreitet. Dieser Prozeß ist aber noch nicht abgeschlossen. Der Name hat, wie es scheint, noch nicht ganz die natürlichen Grenzen der Provinz erreicht, und ich konnte bezüglich der Zugehörigkeit von Tschingogo zu Nduga keine bestimmte Antwort bekommen. Daß die Zusammenfassung der einzelnen Hügel zu Landschaften und der Landschaften zu Provinzen durch die Nachbarn besorgt wird, konnte ich am Namen Mulera beobachten. In Nduga sprach man von Mulera als vom Lande, das vom Njawarongo bis zu den Vulkanen reicht. Die Bootsleute auf der Njawarongo-Fähre unterhalb der Mukungwa-Mündung erklärten, daß Mulera, jenseits des Mukungwa die Südabhänge der Vulkane umfaßt. In Ruasa an den Mukungwa-Fällen schrumpfte Mulera auf eine kleine Landschaft am Südabhange des Muhawura zusammen.

Westliche Nachbarländer. Bei der Besprechung der Provinzen von Ruanda muß man mit einigen Worten auch auf die Häuptlingschaften jenseits der West- und Nordwestgrenze von Ruanda eingehen. Sie haben eine verwandte

Bevölkerung, befinden sich in der Einflußsphäre von Ruanda und bildeten auch vorübergehend das Besitztum der Ruanda-Herrscher, die dorthin Expeditionen unternahmen, um sich diese Länder dienstbar zu machen. Mit anderen Worten, ihre Verhältnisse drängten sie dahin, mit der Zeit gewöhnliche Provinzen von Ruanda zu werden. Betrachtet man den Abhängigkeitsgrad der einzelnen Ruanda-Provinzen und vergleicht sie mit den Beziehungen der Ruanda-Herrscher zu diesen westlichen Ländern, so findet man, daß hier keine prinzipiellen, sondern nur quantitative und dazu noch nicht allzugroße Unterschiede des Abhängigkeitsgrades vorliegen.

In der Zahl der Nachbarländer der westlichen Einflußsphäre Ruanda's werden am häufigsten genannt:

1. Kwidschwi,
2. Bunyabungu,
3. Itambi,
4. Buyungu,
5. Kishari,
6. Buitwa,
7. Butundwe,
8. Butembo.

Die Insel Kwidschwi, oder eigentlich Idshwi, bildete wiederholt einen Bestandteil von Ruanda. Lwabugiri Kigeri, der Vater des gegenwärtigen Herrschers von Ruanda, unternahm zwei Kriegszüge auf die Insel, um dort seinen Einfluß zu sichern. Er erkrankte aber während des Feldzuges und starb auf dem Rückmarsche. Nach seinem Tode erlangte die Insel ihre Unabhängigkeit wieder. Sie bildet jetzt einen kleinen Staat, der durch den Häuptling Mihigo, der kein Mututsi ist, regiert wird.

Die Insel zerfällt[1]) von Süden nach Norden in drei große Provinzen: Agatongo, Nyamushishe und Amarambo. Zu dieser Herrschaft gehören noch die Inseln im Norden (Kitanga, Mkondo u. a.), im Osten (Wau), im Süden (Nyamisi, Muhembe u. a.) und Westen (Igitenda, Ugishushu u. a.) und die Halbinsel Kwishungwe.

Bunyabungu ist das Land im Südwesten vom Kiwu. Zu Bunyabungu gehört ein Drittel des Westufers des Kiwu-Sees und das rechte Ufer des Russisi-Oberlaufes bis zu der natürlichen Felsenbrücke über dem Strome. Der südliche, zwischen Russisi und der Wasserscheide im Westen eingeschlossene Teil des Landes steht unter Gweshe[2]). Der nördliche, zwischen der Wasserscheide und dem Kiwu im Osten, wird durch Kaware, der mit Kaware von Ruanda nicht zu verwechseln ist, beherrscht. Die dritte Banyabungu-Herrschaft ist das eben besprochene Kwidschwi.

---

[1]) Kandt, R., Caput Nili. Berlin 1904, S. 517.
[2]) Ebenda S. 448.

Zu Itambi gehört der mittlere Teil des westlichen Kiwu-Ufers von der künstlichen Wildnis in der Nähe des Tshigasi-Baches im Süden bis zur Wildnis auf dem linken Ufer des Muwimbi-Flusses, der im Süden von der Halbinsel Peni-Mbusi in den See mündet. Der Herrscher von Itambi wird von KANDT[1]) als Sultan Kilimimwumba bezeichnet.

Die nordwestliche Ecke des Kiwu bespült die Landschaft Buyungu. Sie reicht im Osten bis zum Gihirä (Kalimssomba) und dehnt sich weiter nach Norden und, wie es scheint, auch über die Berge des westlichen Grabenrandes aus. Sie wird durch Mwunye beherrscht.

Im Zusammenhange mit Buyungu soll noch Kameronse, der Besitz Lohunga's, erwähnt werden, der im Osten vom Gihirä-Bach lag und im Westen bis zur Lavaebene reichte. Diese Herrschaft wurde am Ende des vorigen Jahrhunderts aufgerieben und von ihren Einwohnern, die vorwiegend nach Bugoye auswanderten, verlassen[2]). Lohunga soll sich damals mit den ihm treu gebliebenen Leuten im großen Busch am Fuße des Niragongo aufgehalten haben.

Zwischen der Lavaebene und dem westlichen Grabenrande liegt das kleine Land Kishari. Sein Häuptling Mulisi ist unabhängig, pflegt aber alte Beziehungen zu Ruanda. Vor zehn Jahren ungefähr, während der großen Revolte im Congo, als Kishari durch die Barega stark bedrängt wurde, flüchtete sich Mulisi nach Ruanda, und der König gab ihm als Ersatz für den verlorenen Besitz die Landschaft Kanage. Dort starb seine Mutter. Später nach der Zurückdrängung der Barega durch die Belgier kehrte Mulisi nach Kishari heim. Die Leute von Kanage blieben aber in einem Abhängigkeitsverhältnis zum Kishari-Herrscher, und sie tragen ihm bis jetzt ihre Steuern nach Kishari. Mulisi flüchtete nach Ruanda mit Rücksicht auf die alten Beziehungen, die Kishari mit Ruanda verbunden hatten. Seit altersher soll der Herrscher von Kishari dem Herrscher von Ruanda eine Frau aus seiner Familie liefern.

Dr. KANDT[3]) unterscheidet von Kishari die Landschaft Mushari auf dem Nordabhange des Namlagira, die von der ersteren durch einen Wald getrennt wird.

Die Landschaften Buitwa und Butundwe liegen auf den Bergrücken, die im Norden vom Vulkan Namlagira sich vom Westrande des Grabens abtrennen und in das Rutshuru-Tal hineinragen. Der südliche Rücken gehört, wie es scheint, zur Landschaft Buitwa, der nördliche zu Butundwe. Manchmal tritt aber der Name Buitwa hinter Butundwe zurück, und das an Mushari angrenzende Mitongo wird als Südbezirk von Butundwe bezeichnet.

STUHLMANN[4]) spricht von Buitwa als einem Lande im Süden vom Edward-See, das durch den Häuptling Nsungu beherrscht und durch das Bagessera-Geschlecht (Mukessere) bewohnt wird. Außerdem sollen dort noch Babinga, Bayaga

und Babito (Wanyawito) wohnen. Die Eingeborenen sollen seinen Erkundigungen nach eine fremde (für die Banyoro) Sprache sprechen und viele Rinder besitzen. Nach meinen Erkundigungen wird dort ein Kirundi-Dialekt gesprochen.

Butembo liegt schon ganz unmittelbar im Kongo-Becken. In dieser Weise reicht der Einfluß der Ruanda-Herrscher tief ins Kongo-Becken hinein.

Bevölkerungsdichte. Ruanda gehört zu den am dichtesten bevölkerten Ländern des afrikanischen Kontinentes. Trotzdem steht seine durchschnittliche Bevölkerungsdichte derjenigen des westlichen Europa bei weitem nach. Bei der Beurteilung der Bevölkerungszahl von Ruanda muß man nämlich stets im Auge behalten, daß die bevölkerten Gebiete, wie z. B. die Umgebung der Mission Ruasa, mit einer Bevölkerungsdichte von 120 Einwohnern pro 1 Quadratkilometer nur kleine Bruchstücke des ganzen Landes ausmachen, und daß man, auf so dicht bevölkerte Gebiete stoßend, zu Überschätzungen geneigt war.

Die Bevölkerung von Ruanda beträgt kaum über $1^1/_2$ Millionen Einwohner. Sie ist dabei eher niedriger als höher einzuschätzen.

Hauptmann Bethe[1]) spricht zwar von 2000000 Menschen. Diese Zahl ist jedoch zu hoch; auch dann, wenn man die dem Congo-Staate zugefallenen Nordgebiete hinzurechnet.

Um meine niedrigeren Schätzungen zu rechtfertigen, werde ich hier kurz die in dieser Richtung gemachten Beobachtungen zusammenstellen.

Die Bevölkerungszahl des ca. 2300 qkm großen Kissaka beträgt wohl 160 000—170 000 Köpfe. Kissaka hat zwar im großen und ganzen eine sehr dichte Bevölkerung; es kommen aber auch ganz schwach bevölkerte Striche mit Viehweiden vor, und vor allem sind die Grenzmarken ganz menschenleer. Die durchschnittliche Bevölkerungsdichte kann man, ohne einen großen Fehler zu begehen, auf 70—80 Köpfe pro 1 Quadratkilometer schätzen. Auf meinem Marsche durch Kissaka, abgesehen von den kleinen Exkursionen, legte ich zwei Wegstrecken im Westen des Landes zurück, zwischen der Fähre auf dem Mugessera-See (Kinio) und der Mission Nsasa, wie auch zwischen der Mission und der Kagera-Fähre in der Richtung von Niansa.

Der erste dieser beiden Märsche führte auf der ganzen $2^1/_2$ Wegstunden langen Strecke durch ein sehr dicht bevölkertes Land. Die Bananenhaine bildeten einen zusammenhängenden Komplex, was nur in sehr dicht bevölkerten Gegenden vorkommt. Auf dem zweiten Marsche kam man nach einer Stunde aus dem Bereiche der Siedelungen heraus und marschierte dann auf den Hügelzügen zwischen den Seen und dem Kagera durch ganz menschenleere Wildnis. Erst in der Nähe der Fähre begegneten wir 5 Hütten. Das Vorkommen solcher Gegensätze spricht gegen eine sehr hohe durchschnittliche Bevölkerungsdichte.

Bugessera, angeblich der alte Stammsitz des Bagessera-Geschlechts, das jetzt im ganzen Lande zerstreut ist und auch einen bedeutenden Teil der Jäger-

[1]) Bethe, Hptm., Bericht über einen Zug nach Ruanda. Deutsches Kolonialblatt 1899, S. 11.

bevölkerung ausmacht, ist äußerst spärlich bevölkert. Das besiedelte Areal bildet einen schmalen Streifen um das menschenleere Massiv, von dem das Innere des Landes eingenommen wird.

Auf dem zweitägigen Marsche durch Bugessera fand ich nur an der Kagera-Fähre im trockenen Teile der Flußebene eine dichte Bevölkerung. Diese bildet dort zwei Gemeinden, die verschiedenen Gemeindevorstehern (batware) unterstellt waren. Diese Niederlassungen zählten zusammen gegen 100 Hütten. Weiter sah ich noch 5 Hütten auf dem Ufer des Mitei-Sees. Auf diese folgte eine drei Wegstunden lange unbewohnte Strecke, welche durch eine Siedelung aus 20—30 Hütten an dem auf der Karte nicht verzeichneten langen, schmalen oberen Tschohoha-See unterbrochen wurde. Am Nordwestende des Sees war eine zweite ebenso große Siedelung mit ganz kleinen Bananenhainen. Am nächsten Morgen passierte die Karawane das versumpfte Ende des Obersees und stieg auf den Abhang des Kihinga-Berges. Der Hügelrücken war ganz menschenleer. Auf dem Abhange, während des Steigens, kamen wir aber in der Nähe von 25 vereinzelten Gehöften vorbei. Der zweite, dem Akanjaru zugewandte Abhang war dichter bevölkert. Es saß hier ein Mutware, der wohl über 40 Hütten unter sich hatte und die Fähre bewachte. Berücksichtigt man, daß der Weg durch Bugessera eine weite Schleife nach dem Süden in der Richtung der Urundi-Grenze macht, um den menschenleeren Urwald des Zentralmassivs zu umgehen, so darf angenommen werden, daß die Strecke von 50 km mit 220 Hütten bezüglich ihrer Bevölkerungsdichte bei weitem die Durchschnittsdichte des ganzen Landes übertrifft. Nimmt man an, daß der beobachtete Wegstreifen nur 1 km breit ist, und daß pro Hütte 4 Köpfe zu zählen sind, so wird man für diesen Weg eine Bevölkerungsdichte von ca. 17 Einwohnern pro Quadratkilometer annehmen können. Für das ganze Land kann man mit Rücksicht darauf von einer Bevölkerungsdichte von höchstens 15—20 Einwohnern pro Quadratkilometer sprechen. Aus diesem Grunde muß die Bevölkerungszahl des ca. 1300 qkm großen Bugessera auf 20 000—25 000 Köpfe geschätzt werden.

Die Provinz Nduga ist wesentlich schwächer bevölkert als Kissaka. Der Unterschied wird besonders groß, wenn man zu Nduga die menschenleeren Urwälder des Südwestens zuzählt, die ein Drittel der Oberfläche der ganzen Provinz ausmachen. Prof. Dr. HANS MEYER[1]) sagt zwar: „Das Gebirge (Muwissi, südwestlich von Issawi) ist nicht, wie die Karte sagt, unbewohnt, sondern größtenteils gut besiedelt und bebaut." Er sagt aber auch auf der nächsten Seite, daß der Wald um den Gaharo-Gipfel ganz unbewohnt ist und daß es dort sogar keine Batwa gibt.

Dr. KANDT schätzt die Bevölkerung, einer der am dichtesten bevölkerten Gegenden Nduga's, der Umgebung der Mission Issawi, im Radius von 2 Stunden,

[1]) Reiseberichte von Prof. Dr. HANS MEYER aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 348.

mit mehr als 200 Berggemeinden auf 80 000—100 000 Menschen. Bei einer Oberfläche des Kreises von ca. 300 qkm würde man auf eine Bevölkerungsdichte von 300 Einwohnern pro Quadratkilometer kommen. Diese Zahl scheint mir sogar für den Issawi-Hügel selbst recht unwahrscheinlich zu sein. In Kissaka befinden sich auf dem ganz besiedelten, über 200 Hektar großen Missionsbesitz 80 Hütten. Rechnet man pro Hütte 4 Köpfe, so kommt man auf eine Bevölkerungsdichte von weniger als 160 Köpfen pro Quadratkilometer. Mit Rücksicht darauf glaube ich, daß man für die ganze Umgebung von Issawi kaum auf eine Bevölkerungsdichte von 150 Köpfen schließen kann.

Bei der Beurteilung der Bevölkerungszahl der ganzen Provinz darf man nicht vergessen, daß die Issawi-Gegend durch ihre zusammengedrängte Bevölkerung so auffiel, daß hier unmittelbar nach der Gründung der Mission in Kissaka die zweite Mission gegründet wurde. Von diesem Zentrum aus nimmt aber die Bevölkerungsdichte sowohl in der Akanjaru-Richtung, wie auch in der Richtung von Niansa, der Residenz Musinga's, recht rasch ab. Die Umgebung von Niansa hat im Umkreis von drei bis vier Marschstunden nur sehr wenige Siedelungen, da das ganze Land für die Kühe des Königs reserviert ist. Entfernt man sich von Niansa in der Nordrichtung, so wird die Bevölkerung wieder dichter. Sie erreicht aber in Kabgaye (Marangara), dem sieben Stunden entfernten, am dichtesten bevölkerten Punkt in der Nordrichtung noch nicht die Dichte von Issawi. Erst am Njawarongo im Flußbogen etwas oberhalb des Zusammenflusses mit dem Akanjaru soll die Bevölkerung wieder sehr dicht werden. Auch im Westen des Ndisa-Berges sind die Anhöhen über dem Njawarongo-Tal gut bevölkert, während das Tal selbst als Viehweide dient. Tschingogo soll ebenfalls einige stark besiedelte Landschaften aufweisen.

Nimmt man in der ca. 7600 qkm großen Nduga für das bewaldete Drittel dieselbe Bevölkerungsdichte wie für Bugessera, für das am stärksten besiedelte Drittel dieselbe Bevölkerungsdichte wie für Kissaka und für das mitteldicht bevölkerte Weidengebiet eine Bevölkerungsdichte von 30—50 Einwohnern pro Quadratkilometer an, die aller Wahrscheinlichkeit nach eher zu hoch als zu niedrig sein wird, so kommt man auf eine Bevölkerungszahl von 325 000 Köpfen.

Mulera gehört zu den am dichtesten bevölkerten Provinzen Ruanda's. Die Hauptmasse ihrer Bevölkerung ist auf den bebauten Höhen im Süden von der Lavaebene konzentriert. So haben wir z. B. im Südwesten vom Bolero-See eine Bevölkerungsdichte von 120 Einwohnern pro Quadratkilometer. Die unteren Teile der Vulkanböschungen haben aber auch eine sehr dichte Bevölkerung. So finden wir z. B. am Fuße des Muhawura auf dem südlichen und südöstlichen Abhange zwischen dem bewaldeten Vulkankegel im Norden, dem Bolero-See im Osten und der Lavasteppe im Süden eine Bevölkerung von 6000—8000 Köpfen.

Der Weg, von der Mission Ruasa nach dem Militärposten Kissenji am Kiwu-See führt die ersten 2½ Stunden durch ein dicht bevölkertes Gebiet, das ein zusammenhängendes, mit Hirse und Erbsen bebautes Ackerland darstellt. Dann

geht man eine Stunde lang durch ein noch nicht unter Kultur genommenes mit Busch bewachsenes Lavafeld, um später in ein reich bebautes Tal zu kommen, das wieder durch eine Weide mit zahlreichen Rindern abgelöst wird. Die Anhöhen über der Weide sind jedoch unter Kultur.

Bei der recht gleichmäßigen Verteilung der Bevölkerung auf dem bebauten Lande und bei der geringen Ausdehnung der unbewohnten Vulkankegel und der zum größten Teile als Weide benutzten Lavaebene ist die durchschnittliche Bevölkerungsdichte, verglichen mit der ganzen Provinz, relativ hoch und wird wohl gegen hundert Einwohner pro Quadratkilometer betragen. Bei einer Oberfläche von ca. 1700 qkm gestattet diese Zahl auf eine Bevölkerung von 170 000 Köpfen zu schließen. Durch die letzte Grenzregulierung hat Mulera ca. 300 qkm mit ungefähr 30 000 Einwohnern eingebüßt, die als Ufumbiro dem Congo-Staate zugefallen sind.

Die stark versumpfte Ruweruka-Provinz soll auch beinahe ebenso dicht wie Mulera bevölkert sein. Das würde für die 2700 qkm große Provinz 270000 Köpfe geben.

Bugoye ist nicht schwächer bevölkert als Mulera. Der bevölkerte Teil ist im Süden durch den Urwald der Wasserscheide auf einen schmalen Saum zusammengedrängt; im Norden in der Vulkanebene dehnt er sich aber fächerförmig weit aus.

Auf dem Wege zum Häuptling Chuma, den ich mit R. P. L. Delmas von Njundo aus besucht habe, konnte ich feststellen, daß die ersten anderthalb Stunden des Weges durch ein Gebiet führten, das ebenso dicht wie die Vulkanebene besiedelt war. Überall lagen die dorfartig zusammengeschlossenen Siedelungen der Clans Bahombo, Bahindi, Bahuma usw. Später aber begannen die Anzeichen sich zu mehren, daß wir uns auf frischen Rodungen befanden. Zuerst vereinzelte große Bäume, später Gebüsch, das durch immer seltenere Bohnenfelder unterbrochen wurde. Am Schlusse der dritten Stunde erreichten wird das Dorf Chuma's, das nur 15 Minuten vom geschlossenen Urwalde entfernt war.

Auf dem Wege von Njundo nach Rutshuru erreichte die Karawane in vier Stunden, bei ständigem, aber ganz allmählichem Anstieg auf der verwitterten Lavaebene den Ort Rugari, eine Siedelung, die durch zwei Komplexe aus 6 und 8 Hütten gebildet wurde. Die ersten 2 Stunden des Weges ging man durch zusammenhängende Bananenhaine und Erbsenfelder. Die dritte Stunde führte schon durch ein schwächer bevölkertes Gebiet. Die Felder wurden allmählich seltener und waren durch immer größere Zwischenräume getrennt. Die vierte Stunde ging es schon durch eine sehr reiche Weide bis zur Niederlassung.

Am nächsten Tage erreichte ich, nach einer Stunde Marsch, die Landschaft Buzizi, in der ohne Mühe 57 Hütten in 9 Komplexen gezählt werden konnten, und eine Viertelstunde später erblickte ich die Landschaft Buhumba mit 40 Hütten in 3 Komplexen. Das waren die letzten Bugoye-Niederlassungen an der Grenze von Bgisha.

Nach Dr. Kandt soll die Einwohnerzahl von Bugoye über 100000 Köpfe

betragen[1]), und wird durch Einwanderung aus Bgisha noch immer vergrößert. Diese Zahl entspricht den Tatsachen, soweit ich das kontrollieren konnte, und gibt für die ca. 1000 qkm große Provinz eine Bevölkerungsdichte von 100 Einwohnern pro Quadratkilometer, die derjenigen von Mulera gleich ist. Hauptmann v. BERINGE[2]) schätzt die Bevölkerung von Bugoye auf 150 000—200 000 Köpfe.

Nach den Aussagen der Missionäre ist das Land sehr stark übervölkert, und den Einwohnern soll es an Ackerland fehlen. Es ist daher auch unverständlich, weshalb der Urwald nicht energischer gerodet wird.

Nimmt man auch für die zwei anderen Provinzen des Kiwu-Beckens dieselbe Bevölkerungsdichte wie für Mulera und Bugoye an, so kommt man für Bwischascha mit einer Oberfläche von ca. 1000 qkm und Mukinjaga mit ca. 1500 qkm, auf die Bevölkerungszahlen von 100 000 und 150 000 Köpfen. Es darf aber nicht unerwähnt bleiben, daß Dr. KANDT[3]) den durchreisten Teil von Bwischascha als „nicht sehr menschenreich" bezeichnet, und daß in Mukinjaga viele Batutsi sitzen. Mit Rücksicht darauf müssen unsere Schätzungen zu groß sein.

Das Gebiet zwischen Mohasi-See, Njawarongo und Kagera wird wohl in seiner durchschnittlichen Bevölkerungsdichte die Grasländer der Nduga etwas übertreffen und gegen 50 Einwohner pro Quadratkilometer haben. Unter dieser Voraussetzung kann man dort mit einer Bevölkerung von 70 000 Köpfen, bei einem Areale von 1400 qkm, rechnen.

Die Grasländer im Norden und Osten vom Mohasi-See haben eine sehr spärliche Bevölkerung bis auf die Gebiete am Nordrande des Mohasi-Sees, die eine bedeutende Zusammendrängung der Ackerbauer aufweisen. Man kann sagen, daß, während der südwestliche Teil der Nduga an Bevölkerungsdichte nicht nachsteht, sich die nördlichen Teile bezüglich ihrer Bevölkerungsdichte nicht von den Mpororo-Steppen unterscheiden. Nimmt man für das ca. 1000 qkm große, dichter bevölkerte Gebiet im Norden des Mohasi-Sees die Bevölkerungsdichte der Nduga und für den übrigen Teil, wie auch für die Steppen im Nordosten von Kissaka, die Bevölkerungsdichte der Mpororo-Steppe an, so kommt man, bei einer Oberfläche von ca. 5800 qkm auf eine Bevölkerungszahl von 120 000 Köpfen.

Bgisha hat in den letzten Jahrzehnten am stärksten von allen Provinzen Ruanda's gelitten und bildet ein Auswanderungsgebiet. Seine mehr geschützten, gebirgigen Teile, welche die Hauptmasse des Landes bilden, haben aber bis jetzt noch eine sehr dichte Bevölkerung und stehen in dieser Beziehung Mulera nur wenig nach.

Auf dem Wege von Bugoye nach Rutshuru passierte ich in Bgisha zunächst die Landschaften Kivumba und Rulenge. In der ersten konnten, in der Nähe des Weges, 150, in der zweiten 300 Hütten gezählt werden. Berücksichtigt

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 482.

[2]) v. BERINGE, Hptm., Bericht über eine Expedition nach Ruanda. Deutsches Kolonialblatt 1903, S. 295.

[3]) KANDT, R., Ein Marsch am Ostufer des Kiwu. Globus 1904, Bd. 86, S. 213.

man, daß beim ersten Marsch durch das Bgisha-Gebiet nur $2^1/_2$ Wegstunden zurückgelegt wurden, daß bei der hohen Lage des Weges wohl ein 2 km breiter Streifen beobachtet werden konnte, und ferner, daß man 4 Köpfe pro Hütte zählen kann, so bekommt man annähernd 1800 Köpfe auf 24 qkm. Das ergibt eine Bevölkerungsdichte von 75 Einwohnern pro Quadratkilometer.

Am nächsten Tage ging man noch anderthalb Stunden durch den nicht schwächer bevölkerten nördlichen Teil von Rulenge. Später zeigte sich das Land immer schwächer bevölkert. Die letzten bedeutenderen Agglomerationen waren Kamuhanga und Busingizi, etwas mehr als 2 Stunden vom Rulenge-Lager entfernt. Weiter lagen die Siedelungen schon ganz zerstreut. In der Entfernung von $4^3/_4$ Stunden vom Rulenge-Lager trat man für 10 Minuten, und in der Entfernung von 5 Stunden für 15 Minuten, in zusammengeschlossene Bananenhaine ein. Die letzte Marschstunde ging man wieder durch eine Wildnis.

Auf dem Wege von Rutshuru nach Vichumbi konnte man während der ersten Stunde stets 40—50 Hütten im Umkreise zählen. Berücksichtigt man, daß in der Ebene bei recht niedrigem Grase der Radius des Gesehenen nicht kleiner als 2 km war, so bekommt man 150—200 Einwohner auf $12^1/_2$ qkm und dementsprechend eine Bevölkerungsdichte von 12—16 Einwohnern pro Quadratkilometer. Während der nächsten Wegstunde wurden die Siedelungen seltener und die Bananenhaine krochen immer mehr in die Talmulden herunter, was wohl durch den Mangel an Feuchtigkeit verursacht war. Weiter gab es, von den Wächtern der Rasthäuser Mainakwenda und Mainamoto abgesehen, schon keine Siedelungen bis zum See. Nur auf den fernen Bergen im Osten konnte man eine sehr dichte Bevölkerung konstatieren. Aus diesem Grunde wird man für die ganze Provinz Bgisha eine Bevölkerungsdichte von höchstens 70—80 Einwohnern pro Quadratkilometer annehmen können. In dieser Weise bekommt man bei 2600 qkm 200 000 Einwohner.

Stellt man die hier besprochenen Zahlen zusammen, so bekommt man für ganz Ruanda die folgende Tabelle:

1. Kissaka	2300	qkm	mit	180000	Einwohnern.
2. Bugessera	1300	„	„	25000	„
3. Nduga	7600	„	„	325000	„
4. Mulera	1700	„	„	170000	„
(davon Ufumbiro	300	„	„	30000	„)
5. Bugoye	1000	„	„	100000	„
6. Bwischasha	1000	„	„	100000	„
7. Mukinjaga	1500	„	„	150000	„
8. Ruweruka	2700	„	„	270000	„
9. Gebiet zwischen Mohasi und Kagera	1400	„	„	70000	„
10. Steppengebiete im Nordosten	5800	„	„	120000	„
11. Bgisha	2600	„	„	200000	„
	28900	qkm	mit	1710000	Einwohnern.

Davon entfallen auf das gegenwärtige (deutsche) Sultanat Ruanda 26 000 qkm mit 1 480 000 Einwohnern.

Die Bevölkerung von Kwidschwi, die in der Hauptmasse durch Banyabungu gebildet wird, schätzt Dr. KANDT[1]) auf 20 000 Köpfe. Bei einer Oberfläche von ca. 300 qkm ist das, mit Rücksicht auf das mit Urwald bewachsene und nur durch eine spärliche Jägerbevölkerung bewohnte Innere der Insel, eine respektable und wohl nicht zu niedrig geschätzte Bevölkerungsdichte. 10 Jahre später schätzte Prof. Dr. HANS MEYER[2]) die Bevölkerung auf 40 000 Köpfe. Dieser Unterschied wird sich sicher durch Bevölkerungszunahme nicht erklären lassen. Ein Schätzungsfehler ist hier viel wahrscheinlicher.

Bevölkerungsbewegung. Die Bevölkerungsbewegung läßt sich noch schwerer als die Bevölkerungsdichte beurteilen.

Die Geburtenzahl ist recht bedeutend. Auf eine erwachsene Frau kann man 3—4 lebende Kinder rechnen. Es darf nicht unerwähnt bleiben, daß die Zahl steriler Frauen in Ruanda geringer als in den benachbarten Banyoro-Gebieten ist. Es ist mir in dieser Beziehung ein Unterschied zwischen Kissaka und Kiziba direkt aufgefallen. Ich hatte in dieser Ostprovinz Ruanda's wiederholt Gelegenheit gehabt Frauen mit 6 und 7 lebenden Kindern zu konstatieren.

In Nduga scheint die Kinderzahl beinahe noch größer als in Kissaka zu sein. Es kommen dort Fälle vor, daß eine Mutter 8 und sogar 10 Kinder hat. Die große Kinderzahl hat zur Folge, daß man diese weniger schätzt. Dieser Umstand erklärt die geringere Fürsorge und das Vorkommen nicht allzuseltener Fälle von Kindermord. In Mulera, wo diese Erscheinung häufiger ist, werden, besonders während der Hungersnot die kleinen Kinder einfach weggeworfen. Das letztere geht zusammen mit dem Verkaufen größerer Kinder an Fremde. Es darf nicht unerwähnt bleiben, daß der Kindermord in Mulera mit der schlechteren Behandlung der Greise zusammengeht. Die letzteren werden nicht selten aus den Hütten ihrer Kinder verjagt.

Der großen Geburtenzahl steht in Ruanda eine starke Kindersterblichkeit gegenüber, die in der Hauptsache durch mangelhafte Pflege verursacht wird. Über die Größe dieser Sterblichkeit äußert sich Dr. KANDT[3]) folgendermaßen: „Hier in Ruanda ist das zum Teil leicht nachzuprüfen. Um die Hütten der Eingeborenen erheben sich nämlich andere en miniature, entweder ganz kleine oder mittelgroße, gleichsam die Denksteine gestorbener Verwandter. Die größeren für Erwachsene, die kleineren für Kinder. Und da ist kaum ein Gehöft, in dem nicht eine, zwei, drei solcher Kinderhütten wären, bestimmt, die dem Geist des Toten dargebrachten Opfer aufzunehmen. Aber ich habe deren auch schon 8 und 9, in der Provinz Mganamukari sogar einmal 11 gezählt."

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 518.

[2]) Reiseberichte von Prof. Dr. HANS MEYER aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 346.

[3]) KANDT, R., Caput Nili. Berlin 1904, S. 177.

Auf Grund der Beobachtungen von R. P. BUISSON darf man bezüglich der christlichen Kissaka-Gemeinde von einem sehr bedeutenden Geburtenüberschuß sprechen.

Zu identischen Ergebnissen kam ich bei der Durchsicht der sorgfältig geführten mätrischen Bücher der Njundo-Mission, die mir in freundlicher Weise der R. P. Superior P. BARTHÉLEMY zur Verfügung stellte.

Es ließen sich dort die folgenden Zahlen gewinnen:

Jahr	Christenzahl	Einschleusungen	Geburten	Todesfälle
1903	15	—	—	—
1904	162	11	4	—
1905	430	69	17	8
1906	717	68	43	14
1907[1])	959	52	71	17
Zusammen	998[2])	200	135	39

Das gegenseitige Verhältnis der einzelnen Altersklassen wird aus der folgenden Zusammenstellung[3]) ersichtlich:

Alter in vollendeten Jahren	Absolute Christenzahl	in ‰	Alter in vollendeten Jahren	Absolute Christenzahl	in ‰
0	63	65,69	24	37	38,58
1	34	35,45	25	35	36,50
2	21	21,90	26	30	31,28
3	27	28,15	27	14	14,60
4	25	26,07	28	21	21,90
5	12	12,51	29	13	13,56
6	10	10,43	30	16	16,68
7	3	3,13	31	10	10,43
8	3	3,13	32	9	9,38
9	1	1,04	33	5	5,21
10	2	2,09	34	2	2,09

Auf Grund der obigen Zahlen ist ein bedeutender Bevölkerungszuwachs während der epidemiefreien Jahre gar nicht zu bezweifeln. Über den Koeffizient des Bevölkerungszuwachses im Lande dürfen aber aus unseren Zahlen keine Schlüsse gezogen werden. Sie beziehen sich auf soziale Neubildungen, in welchen die Altersklassen zwischen 15 und 30 Jahren unverhältnismäßig stark vertreten sind. Diese Kategorien weisen aber eine geringe Sterblichkeit und sehr große Geburtenzahlen auf.

Während der Epidemiejahre geht die Bevölkerung sehr stark zurück, so daß man es, wie es scheint, in der Hauptsache nur mit großen Schwankungen zu tun hat. In Kissaka z. B. erinnert man sich, daß manche gegenwärtig öden Landstriche vor der letzten Pockenepidemie dicht bevölkert gewesen waren.

Außer dem natürlichen Bevölkerungszuwachs kommt für den Nordwesten Ruanda's noch ein mächtiger Faktor — die Zuwanderung aus dem Congo-Staate — hinzu. Die geordneten Verhältnisse Ruanda's besaßen in den letzten uns bekannten Dezennien eine große Anziehungskraft, und die Hauptmasse der Bevölkerung von Kameronse wanderte nach Bugoye hinüber. Diese Bewegung

[1] Bis zum 13. November 1907

bildete aber nur eine Episode eines größeren historischen Prozesses, den das Drängen aus dem Kongo-Becken nach dem Nordosten darstellt. „Ich glaube", sagt Dr. R. KANDT[1]), „daß hier die Wellen einer größeren Völkerwanderung schlagen, die, aus den Waldgebieten des oberen Congo kommend, nach Osten hin flutet. Es sind hauptsächlich Waregga, mit ihrem Schmähnamen ‚abariabantu' oder ‚buljoko', d. h. Menschenfresser genannt, die immer mehr Terrain diesseits des Grabenrandes zu gewinnen suchen und die dort ansässigen Stämme ostwärts drängen. Westlicher Einfluß zeigt sich infolgedessen auch sehr stark in Sitte und Sprache, in Ackerbau und Gewerbe, in Charakter und Erscheinung — kurz, in jeder Beziehung bei den Wagoie und daher der Gegensatz zu dem übrigen Ruanda."

Gesundheitsverhältnisse. Das Klima des Landes muß im allgemeinen als gesund bezeichnet werden. Das kommt auch in dem Umstande zum Ausdruck, daß die Einwohner Ruanda's beim Abstiege zu den Seen Victoria, Edward-Nyanza und Tanganjika sehr großen Gesundheitsgefahren ausgesetzt sind und nicht selten dort sterben. Die Missionen sahen sich gezwungen ihre Träger nur bis zur nächsten niedriger gelegenen Mission zu schicken. So gehen die Leute von Muyaga nur bis Issawi, die Banyaissawi nur bis Kissaka, und erst die Banyakissaka zum See.

Die gefährlichste Krankheit Ruanda's sind die Pocken, „bushita". Während der letzten großen Epidemie, die angeblich um das Jahr 1897 gewütet hat, wurden viele Hügel menschenleer. Das Tal zwischen Bare und Karemba in der Nähe von Kissaka war nach den Angaben der Eingeborenen vor dieser Epidemie dicht bevölkert. Jetzt gibt es dort keine Siedelungen. Die vorletzte große Pockenepidemie soll nur wenige Jahre vor der Rinderpest[2]) im Lande gewütet haben. Sie wird wohl mit der Epidemie des Jahres 1889, die in Karagwe die Einwohner dezimiert hat, identisch sein. Die Leute von Kissaka wußten insgesamt von drei sehr großen Pockenepidemien zu erzählen. Über die Zeit der ersten konnte ich nichts Näheres erfahren.

Als die zweite für Ruanda verhängnisvolle Krankheit wäre die „masseke"-Pest zu verzeichnen. Sie ist in Nduga recht häufig, und ihr fallen vor allem die in Staats- und Geschäftsangelegenheiten aus ihren Bergen absteigenden Balera anheim. Die „masseke"-Krankheit ist von einem Schwellen und Verhärten der Drüsen in der Achsel- und Inguinalgegend begleitet (Bubonen). Der Tod soll meistens am 2. oder 3. Tage eintreten. Die 2 Fälle, die ich bei meinen Wassukuma-Trägern in Niansa beobachten konnte, verliefen ganz milde, trotzdem sich die ganze medizinische Behandlung auf Anwendung von Abführungsmitteln beschränken mußte. Die „masseke"-Krankheit soll der „kaumpuli" von Buganda

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 483.

[2]) Sie wütete in Ruanda in den Jahren 1890—1892 und wird „muliama" genannt.

und der „lisimba" von Kiziba ähnlich sein. Die letzteren würden als endemische Bubonenpest identifiziert.

In Mulera und am Edward-See ist eine andere Krankheit — die „impfura" — stark verbreitet. Sie stellt eine Anginaform dar, die von starken Verschwellungen und Geschwüren des Rachens begleitet wird. Diese Krankheit behandeln die Eingeborenen durch Ausschaben des Rachens, durch den Finger eines geschickten Operateurs. In dieser Weise werden die eintretenden Atembeschwerden beseitigt. Zu diesem Zwecke wird ein Stück Rohrrinde dünn geschabt, so daß eine elastische Platte, 7 cm lang und 4 mm breit, entsteht. Diese wird dann um die Spitze des Zeigefingers der rechten Hand gebogen, an seine beiden Seiten, die laterale und mediale, angelegt und mit einem Bastfaden angebunden, so daß ein Schaber entsteht. Der so bewaffnete Finger wird in den Rachen des Kranken eingeführt. Mit der an seinem Ende angebrachten senkrechten schneidenden Fläche aus Rohrrinde wird die Schleimhaut bis zum starken Bluten geschabt. Am nächsten Tage soll gewöhnlich eine Besserung eintreten. Die Kur darf aber nicht zu spät angewendet werden.

Abb. 24. Rachenschaber.

Die hier beschriebene Operation soll früher im Zwischenseengebiete unbekannt gewesen sein. Die Wassukuma brachten sie angeblich nach Buhaya, und von dort kam sie mit den Missionären nach Ruanda. Am Edward-See war sie, wie ich mich überzeugen konnte, unbekannt. Leutnant BULATOWICZ[1]), der spätere Mönch und Urheber der Unruhen in den russischen Klöstern des Berges Athos im Jahre 1913, berichtet, daß ein etwas abweichendes Verfahren in der Abessinischen Armee, die im Jahre 1898 zum Rudolph-See geschickt wurde, der Krieger Lydj-Ababa mit Erfolg angewendet hat. Diese, den Abessyniern unbekannte Behandlungsmethode bestand im Ausdrücken des Eiters durch einen in den Rachen eingeführten Finger. Die Kranken mußten nach dieser Operation den Rachen spülen und ausgedörrtes Brot mit rotem Pfeffer essen. Lydj-Ababa lernte diese Kunst von den Kassala-Arabern. Mit Rücksicht darauf ist es nicht unwahrscheinlich, daß unsere Behandlungsmethode in den Küstenländern des Victoria-See durch die Araber bekannt wurde.

Der Verlauf der Krankheit ist sehr schnell. Am vierten Tage meiner Bootsfahrt auf dem Edward-See erlag einer der Bakondjo-Bootsleute der Krankheit. Vier Tage vorher, beim Verlassen von Vichumbi, waren alle gesund. Da sich die Krankheit auf den einzigen Mann beschränkt hatte, und alle auf dem Boote stark zusammengedrängt waren, so muß die Ansteckungskraft nicht sehr groß sein.

Diese Krankheit hat manchmal lokale Lähmungen, z. B. der Zunge oder der Extremitäten einer Körperseite, zur Folge. Sie soll auch ein Ausfallen des Haupthaares verursachen. Der letzteren Folgeerscheinung verdankt sie angeblich ihren Namen, der von „kupfure" (ausrupfen) abgeleitet wird.

---

[1]) Булатовичъ, А. К., Съ войсками Менелика II. St. Petersburg 1900, S. 358.

Wenn auch die beiden zuletzt besprochenen Krankheiten stark verbreitet sind und viele Opfer heischen, bleiben die Pocken doch die am stärksten gefürchtete Krankheit. Keine verursacht so große, schnell um sich greifende Verheerungen wie die Pocken. Deshalb hört man auch beim Schimpfen und Verwünschen des lieben Nächsten, wenn die Sache ernst wird, ihren schrecklichen Namen „bushita".

Im Laufe der allerletzten Jahre soll die „*Glossina palpalis*" am Kiwu erschienen sein. In der Zeit meiner Anwesenheit gab es noch keine Schlafkrankheit in Ruanda.

Lepra ist in Ruanda selten. Ich hatte keine Gelegenheit, dort auffällige vorgeschrittene Stadien des Leidens zu beobachten. In Mulera sah ich nur einige Leute, darunter den Mutwa-Regenmacher aus Ruasa, mit den charakteristischen rötlichen Flecken auf dem Körper, die das Anfangsstadium der Krankheit kennzeichnen. In Issawi sollten auf dem Missionshügel zwei Kranke in vorgeschritteneren Stadien wohnen, und auf dem Hügel Umuriri, nicht weit davon, soll es noch mehrere Kranke geben. Dr. KANDT[1]) erwähnt zwei Leprafälle in Itambi.

Lepra wird in Ruanda sehr gefürchtet, und man isoliert die Kranken in besonderen Hütten, die nicht selten den durchreisenden Europäern zur Verfügung gestellt werden sollen.

Ein stark verbreitetes und vor allem für die Kinder sehr lästiges Leiden ist „binioro", das, wie es scheint, mit Framboesie identisch ist[2]). Der Körper bedeckt sich mit kleinen, warzenförmigen Verdickungen, deren Spitzen später zerfallen und kleine, seltener zu größeren Komplexen zusammenfließende flache Wunden bilden. Diese Krankheit war in meinem ganzen Reisegebiete stark verbreitet. Die schlimmsten Fälle sah ich bei den Lendu im Nordwesten vom Albert-See. Meine Manyema-Träger vom Westen des Tanganjika behaupteten, sie alle in ihrer Jugend durchgemacht zu haben. Sie brachten damit das oft vorkommende Platzen der Haut auf der Fußsohle in Zusammenhang und betrachteten es als eine Folge der in der Jugend durchgemachten Krankheit. Im Kiswaheli wird dieses Leiden „mbuba" genannt. Die Missionäre bezeichneten es als „unechte Syphilis", da die Wunden auf Quecksilber günstig reagieren sollen. Die Waswaheli haben für Syphilis das Wort „kaswente" und unterscheiden „mbuba" und „kaswente" scharf. Die „mbuba"-Wunden lassen sich mit Erfolg mit „*Cuprum sulfuricum*" behandeln. Dieses Mittel ist den Eingeborenen bekannt und bildet infolgedessen einen sehr begehrten Gegenstand, der auch als ein guter Tauschartikel dienen kann.

Einen nicht so harmlosen Fall hat man vor sich, wenn es zur Wundenbildung im Rachen und in der Nase kommt. Man spricht dann von „binura mu muhogo".

Elephantiasis ist in Ruanda selten. Während des ersten Monats meines Aufenthaltes in Ruanda habe ich nur drei auffallende Kranke beobachten können.

[2]) KANDT, R., Ein Marsch am Ostufer des Kiwu. Globus 1904, Bd. 86, S. 213.

Ebenso spielen dort auch die Dysenterie und Malaria keine Rolle. Es ist mir kein Fall von Schwarzwasserfieber bekannt geworden.

Eine große Plage des Landes bilden dagegen die an sich ungefährlichen Sandflöhe, die hier sehr häufig sind. Nach den Erzählungen der Eingeborenen sollen sie bei ihrem Einzuge ins Land am Anfange der neunziger Jahre (1892 bis 1893), als man die Ursache der Krankheit noch nicht kannte, auch mehrere Menschenleben vernichtet haben. Dr. KANDT bezweifelt sehr stark diese Möglichkeit. Die Eingeborenen stimmen aber in ihren Erzählungen überein. Die Eingeborenen der Kiwu-Ufer behaupten auch, daß man durch stundenlanges Stehen im Seewasser die Sandflöhe zum Absterben bringt[1]).

6. Kapitel.

Bevölkerungselemente.

Batutsi. — Bahutu. — Batwa.

Die Bevölkerung von Ruanda wird durch drei anthropologisch und kulturell sehr stark verschiedene Elemente gebildet, die sich aber derselben Sprache bedienen.

Die herrschende Schicht besteht aus den Batutsi-Hirten, die den Bahima von Mpororo anthropologisch sehr nahe kommen und von ihren Untertanen durch eine große Kluft geschieden sind.

Die Hauptmasse der Bevölkerung bilden die Bahutu-Ackerbauer.

Das dritte Element bildet der Pariajägerstamm der Batwa, die sich außerdem noch mit der Töpferei und dem Regenmachen beschäftigen.

Batutsi. Trotz der mit ihren Bahutu-Untertanen identischen Sprache, welche nur gewisse, unerforschte, phonetische Dialektunterschiede aufweist, müssen die Batutsi, ebenso wie die Bahima, mit den niloto-hamitischen Hirtenstämmen am Ostrande des Nil-Beckens, wie auch auf dem linken Nil-Ufer im Süden von den großen Nil-Sümpfen in Zusammenhang gebracht werden. Die Batutsi bilden den zentralen Teil einer zwischen dem Victoria-See und den Wäldern des Kongo-Beckens eingekeilten, älteren Völkerwelle. Die Bari und ihre Verwandten sind wohl später im Nordwesten in der Richtung des Uele-Beckens vorgedrungen, während die Massai-Welle, wie es scheint, zuletzt sich über die Gebiete im Osten vom Victoria-See ergossen hat.

Betrachtet man das Wort „Hamite" als die Bezeichnung eines rein linguistischen Begriffes, so sind die Batutsi durchaus keine Hamiten, und noch weniger Semiten, wie das durch REHSE[1]) und Dr. KANDT[2]) behauptet wurde. Sie gehören dann einfach zur Zwischenseengruppe der Bantu-Sprachenfamilie.

Das Wort Hamite wird aber auch in einem anderen Sinne benutzt. Man pflegt nämlich noch von einem „hamitischen anthropologischen Typus" zu sprechen. Dann wird darunter das anthropologische Element verstanden, welches für die relativ weniger vermischten Stämme mit hamitischen Sprachen, wie Somal und Galla z. B., so charakteristisch ist. Im letzteren Sinne können die

[1]) REHSE, H., Kiziba. Land und Leute. Stuttgart 1900, S. 110.
[2]) KANDT, R, Caput Nili. Berlin 1904, S. 339.

[p. 122]

Batutsi zu den Hamiten gezählt werden. Der hamitische anthropologische Typus tritt bei ihnen besser hervor, als bei den Massai im Osten und den Bari und Kakwa im Nordwesten. Sie sind weniger „vernegert".

Die Überlieferungen der Batutsi weisen auf den Norden hin. Das sind aber in der Hauptsache nicht mehr die fernen Länder jenseits des Victoria-Nil, das Bukedi, wie bei den Babito z. B., sondern die Landschaft Bugansa im Süden vom Mohasi-See. Diese Tatsache könnte man vielleicht so deuten, daß ihr Aufenthalt im Lande ein sehr langer ist und die Überlieferung über die Gründung des Ruanda-Staates die anderen älteren Überlieferungen überwuchert hat.

In diesen Überlieferungen wird aber auch Karagwe erwähnt. Vielleicht befindet sich das im Zusammenhange mit der älteren Wanderung der Ruanda-Batutsi. Diese ist wohl entlang der Achse vor sich gegangen, welche von den Steppen im Nordosten, an der Karagwe-Grenze, über den Mohasi-See nach der Nduga und Mukinjaga sich erstreckt. Entlang dieser Achse findet man die stärkste Anhäufung von Batutsi.

Dr. KANDT bezeichnet als das Stammland der Batutsi das Mhogo-Becken (Gebiete des oberen Njawarongo). Kissaka hat ebenfalls einen starken Prozentsatz der Batutsi-Bevölkerung. BAUMANN[1]) erwähnt geschlossene Massen von Batutsi im Gebirge, im Nordosten vom Tanganjika. Nur im Muwissi-Gebirge, im Südwesten von Issawi, soll es wenige Batutsi geben[2]).

Im Nordwesten von der oben besprochenen Achse, sind die Batutsi wenig zahlreich. Nur in Bwischascha und vor allem in der Landschaft Lubengera treten sie in größerer Zahl auf[3]). Die Batutsi von Bugoye siedelten sich dort erst vor einigen Generationen an. Sie kamen ins Land von Mukinjaga. Die wenigen Batutsi Mulera's kamen dagegen noch unlängst aus der Nduga.

Die Batutsi sind aber nach dem Westen auch über den Ostrand des Grabens vorgedrungen. Dr. KANDT[4]) erwähnt über die Batutsi von Kishari:

„Hier (Tshove, Kishari) besuchten uns viele Watussi, freundliche einfache Menschen, aber weder so schön noch so vornehm, wie die von Urundi und Ruanda; das macht, sie müssen arbeiten. Denn hier sind sie nicht die Herrscher des Landes, sondern leben in isolierten Dörfern als Viehzüchter neben den ackerbauenden Ureinwohnern. (Es ist überhaupt merkwürdig, eine wie scharfe Grenze der Russisi und Kiwu in dieser Beziehung bilden; östlich leben die Watussi in Mengen als Könige und Häuptlinge der unterworfenen Völker, westlich — nur vereinzelt oder wie in Kishari in größerer Zahl, aber so oder so nicht als Herrscher.)" „Später hörte ich, daß Kischari das Asyl aller Watussi sei, die aus ihrer Heimat aus irgend einem Grunde fliehen mußten."

[4]) Ebenda S. 456.

Trotz der für den Ackerbau sehr günstigen Bedingungen sind die Batutsi Hirten geblieben, und nur sehr selten kann man sehen, daß verarmte Batutsi zum Ackerbau übergehen. Das ist z. B. mit dem Geschlecht der Bagwabiro in Bugoye der Fall. Die aus bitterster Not den Boden bebauenden Batutsi werden von ihren Stammesgenossen verachtet, und sie gehen auch infolgedessen in der Masse der andersstämmigen Bauern auf.

Im Mittelpunkt der Batutsi-Interessen steht die Kuh. Sie beherrscht ihr ganzes inneres und äußeres Leben, ihre Gefühle und ihr Denken. Sie bildet den Impuls überlegter und unbesonnener Handlungen. Die Kuh ist bei ihnen der kostbarste, schönste und am meisten geliebte Gegenstand. Deshalb kommt sie auch bei allen Komplimenten und Höflichkeitsphrasen in Erwähnung.

Wenn man eines Mannes Kraft und Schönheit rühmen will, so sagt man ihm: „uli mfizi" — du bist ein Stier. Mit dieser Bezeichnung wurde z. B. S. H. der Herzog Adolf Friedrich zu Mecklenburg durch den Hof Musinga's geehrt. Die übrigen Expeditionsmitglieder kamen, ihrem Rang entsprechend, mit dem nach unseren europäischen Begriffen weniger schmeichelhaften Titel der Kinder des großen Stieres weg. Von einem jungen Mann sagt man sehr oft, um seiner Schönheit zu schmeicheln: „ufite amaso nki yi nyana" — du hast Augen wie ein Kalb. Den Europäern sagt man nicht selten in derselben Absicht, daß ihr Bart wie ein Kuhschweif, ihr Haupthaar wie ein Kuhfell usw. seien.

Ebenso wie die Höflichkeitsphrasen ist auch der Gruß des Mututsi mit der Kuh verknüpft. Er grüßt mit dem Worte „amasho", das Herde bedeutet und, wie es scheint, eine Abkürzung der Phrase „Herde dir" darstellt. Man antwortet ihm „amasho ngore" — „Weibliche Herde dir"; mit anderen Worten: „Du sollst Kühe haben, die dir Kälber bringen werden." Dieser Gruß ist in ganz Ruanda üblich. Als Nordgrenze seiner Verbreitung konnte ich den Rutshuru feststellen. Jenseits dieses Flusses, als ich ihn auf dem Wege von Bugoye nach dem Posten Rutshuru passierte, antworteten die Leute auf „amasho" nicht mehr.

Nur der Abschied bildet eine Ausnahme. Zum Abschied sagt der Mututsi: „Kumana" — Mit Gott.

In ähnlicher Weise sagt man, um sich für ein Geschenk zu bedanken: „ulakarama, ulakahora n'Imana" — lebe, begegne Imana.

In Mulera hat sich, wie es scheint, eine ältere Abschiedsform erhalten, welche in der Nduga nur in Liedern vorkommen soll. Der Mulera sagt nämlich: „Mahoro" — Pax tibi. In ähnlicher Weise wird ein, nach Hause zurückkehrender Reisender begrüßt. Man sagt ihm: „Waje mahoro" — Du kommst mit Frieden.

Es bleibt noch zu erwähnen, daß der höher Situierte immer den niedriger Stehenden grüßt, um ihm zu zeigen, daß er ihn bemerkt hat und ihm diese Aufmerksamkeit schenkt. In demselben Gegensatze zu unseren Höflichkeitsbegriffen steht auch der Brauch, daß der Einschenker eines Getränkes, sei es Milch, Bier oder sogar Wasser, immer zuerst selber trinkt, trotzdem er gewöhnlich eine

niedrigere soziale Stellung als der Beschenkte einnimmt. Dieser Brauch läßt sich leicht erklären: Der Einschenkende muß beweisen, daß das Getränk gut, d. h. nicht vergiftet, ist.

Auch in der Einteilung des Tages und in der Bezeichnung des Standes der Sonne, nimmt der Mututsi auf die Kuh die größte Rücksicht. Den frühen Morgen bezeichnet er mit den Worten: „inka zili munama" — Die Kühe sind heraus aus dem Kral. Um ca. „8 Uhr früh" zu bezeichnen, sagt man: „inka zahahutse" — die Kühe sind weiden gegangen. In ähnlicher Weise bedeutet „inka zishooka" „die Kühe sind trinken gegangen", daß es gegen Mittag ist. „Inka zitaha" — die Kühe kehren zurück, bezeichnet die Zeit gegen 6 Uhr nachmittags. „Inka zikamwa" — die Kühe werden gemolken, bedeutet endlich, daß es zwischen 7 und 8 Uhr abends ist.

Die Batutsi benutzen besondere konventionelle Bezeichnungen, um die Größe ihres Viehbesitzes anzugeben.

„Mfite kanyana" — habe eine Kalbe — bedeutet, daß der Betreffende eine kleine Herde hat, die nicht über 10 Stück zählt.

„Mfite akaka" — habe eine kleine Kuh — bedeutet den Besitz einer Herde von 30—60 Stück.

„Mfite inka imwe" oder „mfite inka" — habe eine Kuh — bedeutet, daß der Betreffende mehrere Herden hat.

Wenn man von jemandem sagt, er hat viel Kühe, so bedeutet das ganz allgemein, daß er sehr mächtig und reich an Einfluß und Besitz ist.

Alle Interessen des Mututsi verknüpfen sich mit der Kuh. Ishirangabo, der Bruder des gegenwärtigen Königs, der seinerzeit den Grafen v. Götzen durch Ruanda geführt hat, sagte bei Gelegenheit eines Besuches, den er R. P. L. Classe und mir machte: „Kireka umwami, inka zihuta byose" — Mit Ausnahme des Königs, überragen die Kühe alles.

Die Hoffnung, eine Kuh vom König, vom Häuptling oder von einem wohlhabenden Manne überhaupt zu bekommen, macht den Mututsi zum willigen Klienten, der alle Wünsche des persönlich gewählten Herrn ablauscht.

Der kleinste Mann, der sich in die Dienste eines ein wenig einflußreicheren stellt, hofft, daß sein Herr ihn nicht vergessen wird, wenn man diesem einmal eine Kuh verleihen wird.

In der Hoffnung ihre Herden zu vergrößern, machen auch die Großhäuptlinge dem König den Hof. Sie wiederholen bei jeder Gelegenheit die sakramentale Phrase: „Wenn es sich um Kühe handelt, so kann man nie genug haben", der in unserer kapitalistischen Gesellschaft ganz exakt der recht gebräuchliche Satz: „Geld hat man nie genug" entspricht.

Wenn ein Mann zu einem anderen kommt, um sich in dessen Dienste zu stellen, so benutzt er als Einführungsformel die einfache Erklärung: „naje kukusaba amata" — komme Milch holen, oder auch: „umpe amata, unkize" — gib mir Milch, heile mich.

In den Höflichkeitsphrasen ist es üblich den Angesprochenen als den Viehschenker zu bezeichnen oder ihn als dankbarer Mensch an die früher geschenkten Kühe zu erinnern.

Wenn ein Mann in höherer sozialer Position unterwegs stolpert, so sagt ihm sein Gefolge: „humura, wampaye inka" — beruhige dich, du, der mir eine Kuh geschenkt hat. Der Betreffende braucht dabei durchaus nicht der Schenker zu sein. Nur seine höhere Stellung wird in dieser Weise hervorgehoben.

Die Batutsi nennen die Europäer unter sich „gituku" — die Roten. Es dürfte von einigem Interesse sein, daß die Abessinier, im Gegensatze zu den nicht allzuhochgeschätzten weißen Europäern und den schwarzen Negern, sich als die Roten zu bezeichnen pflegen[1]).

Das Wort „bazungu" wird in Ruanda vielmehr auf das farbige Gefolge der Europäer, auf die Diener und Soldaten, bezogen. So sagte man einst zu mir, als mein Eselboy auf einem unterhalb führenden Wege den Hügel mit unserem Lager umging: „muzungu aise epfo", d. h. „muzungu" ist unten passiert.

Die Batutsi haben durchaus keinen Grund die Europäer mit Sympathie und Begeisterung aufzunehmen. Sie werden durch die Eindringlinge zum mindesten in ihrer Gemütlichkeit gestört. Deshalb kann man auch von ihnen gelegentlich durchaus nicht schmeichelhafte, auf die Europäer bezugnehmende Äußerungen hören. Den größten Anstoß erregen die Europäer durch ihre nach den Landesbegriffen nicht wählerische Kost. Sie essen alles; sie verschmähen, ebenso wie die verachteten Batwa, sogar die für den Mututsi so ekelhaften Eier und Hühner nicht. Man nennt auch mit Rücksicht darauf die Europäer und ihr Gefolge mit den verächtlichen Namen „mpyesi" — Hyäne — und „bikoko" oder „bisumba" — wilde Tiere.

Wenn sich ein Mututsi einem Europäer nähert, so verdeckt er Mund und Nase mit der Hand. Durch diese Haltung kann man die Batutsi ohne weiteres von ihren Untertanen unterscheiden. Die Bahutu und Batwa tun das nicht. Es ist schwer zu sagen, was den Grund dieser Haltung bildet. Das Hauptmotiv dabei wird wohl Angst vor dem Vergiften sein. Ich hatte wiederholt Gelegenheit zu beobachten, daß die Pfeifen, die ich in die Hand nahm, um die Ornamentierung genauer anzusehen, nicht weiter geraucht wurden. Einen anderen Grund des Verdeckens des Mundes bildet die Eitelkeit. Die Batutsi scheinen ihre starke Prognathie als einen Schönheitsfehler zu betrachten. So war es z. B. sehr schwer, Musinga zu bewegen, sich ohne verdeckten Mund photographieren zu lassen. Einen weiteren Grund des Verdeckens des Mundes bildet vielleicht auch der ihnen unangenehme Europäergeruch. Den, mit ranziger Butter pomadisierten und parfümierten, Batutsi sollen die mit Seife gewaschenen Europäer nach Leichen riechen.

Während meines Aufenthaltes in Niansa, nach dem Abmarsch unserer

[1]) Nach einer mündlichen Mitteilung des russischen Gesandtschaftsarztes in Addis-Abeba Dr. A. Kochanowski.

Expedition, welche die Zahl der anwesenden Europäer auf zehn Köpfe gebracht hatte, war Musinga der Fremden recht müde. Dies äußerte sich unter anderem auch durch einen komischen Zwischenfall. Er stellte fest, daß der widrige Europäergeruch auch in sein Haus eingedrungen war und ließ die ihm früher geschenkte und in seiner königlichen Schatzkammer aufbewahrte Schachtel mit Toilettenseife in den Sumpf werfen.

Es ist klar, daß die Europäer mit ihren eckigen, nervösen Bewegungen und mit ihrem plumpen, kurzen, breiten Körperbau, der der Gestalt der verachteten Bahutu viel näher kommt, als den vornehmen Batutsi, den Gegenstand heimlichen Spottes bilden. Ich hörte auch z. B. die Äußerung, daß Europäer Schuhe tragen, um die Hufe, welche sie mit ihren Eseln gemein haben, zu verdecken.

Ein Munyaruanda, der sich den Europäern anschließt, bekommt den Namen „inyanga Ruanda", Apostat, Renegat. Wörtlich bedeutet das Wort: Ruandahasser, und ist vom Worte „kuhanga" — hassen — abgeleitet. Diese Bezeichnung gilt für eine sehr schwere Beleidigung.

Die Batutsi sind sehr exklusiv. In ihrer Verachtung der anderen gehen sie so weit, daß sogar von dem Aneignen der Frauen und Kinder der unterjochten Bahutu Abstand genommen wird. Sie beschränken sich auf die Frauen des eigenen Stammes, die sehr frei und für die Männer ihrer Rasse leicht zugänglich sind.

Die Batutsi werden von allen Europäern, die mit ihnen zu tun hatten, für feig erklärt. Im Gegensatze dazu hebt man die kriegerischen Tugenden der Bahutu hervor, welche die Masse des Ruanda-Aufgebotes bilden. Unter diesen Verhältnissen ist das Herrschen der Batutsi-Minorität ein Rätsel. Man wird zur Annahme gezwungen, daß entweder die Hirtenaristokratie nach der Bildung der großen Staaten eine lange Friedensperiode genossen hat, und diese genügte zur so weit gehenden psychischen Umgestaltung, oder auch, daß die privilegierte Stellung der Batutsi als das Resultat einer geistigen Superiorität anzusehen ist.

Die Batutsi verdanken ihre gegenwärtige Macht dem geschickten Ausspielen der Bahutu gegeneinander. Diese sind, infolge ihrer inneren Fehden, ganz machtlos nach außen. Die Batutsi treten dagegen stets solidarisch auf und schlagen sie durch diese ihre innere Organisation. Die Bahutu halten sie infolgedessen für große Zauberer und fürchten sie sehr.

Über die Verhältnisse der südlicheren Gebiete finden wir bei Prof. Dr. Hans Meyer die folgende Angabe:

„In der Öffentlichkeit und im Verkehr mit den Europäern treten im Urundireich und in Uha die Watussi sehr viel weniger hervor, als in Ruanda. Man sieht ihrer immer nur wenige in den Dörfern, oft nur einen einzigen in jeder Dorfschaft, und zwar den Mtualen des abseits der Verkehrswege wohnenden Häuptlings, und ihre Herrschaft über die Wahutu erscheint lange nicht so absolut wie in Ruanda."[1])

[1]) Reiseberichte von Prof. Dr. Hans Meyer aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 355.

Die Batutsi machen kaum ein Zehntel der Ruanda-Bevölkerung aus. Und wenn sie in Kissaka und Nduga stärker vertreten sind, so ist dagegen ihre Anzahl im Nordwesten sehr gering und ihre Zahl wird wohl 120 000 kaum erreichen. Die Batutsi sollen weniger fruchtbar sein als die Bahutu. Ob das aber vielleicht durch die geringere Kindersterblichkeit kompensiert wird, ist mir nicht bekannt.

Der Mututsi unterscheidet sich in seinem ganzen Wesen vom Muhutu, auch wenn man von den in die Augen springenden anthropologischen Unterschieden absieht. Er bewegt sich anders und trägt seinen Speer ganz anders, indem er ihn am Ende des unteren Achtels hält und auf die Schulter stützt. Er akzentuiert beim Sprechen auch ganz anders, so daß man, bei einer gewissen Übung, die Angehörigen des Hirtenadels an der Art der Aussprache erkennen kann. Dieser Umstand läßt vermuten, daß die Batutsi-Aussprache sich durch besondere phonetische Eigenschaften auszeichnet, die vielleicht Aufschlüsse über ihr früheres Idiom geben werden.

Bahutu. Der Unterschied zwischen den Batutsi und ihren Untertanen ist so groß, daß demgegenüber alle lokalen Unterschiede der einzelnen Provinzen verschwinden, und das Land als ein homogenes Ganzes erscheint. Die Hirtenminorität, die infolge ihrer privilegierten Stellung am meisten auffällt, erscheint sehr einheitlich und sie verleiht dem Lande sein einheitliches Gepräge.

Die Batwa sind numerisch zu schwach, sie sind auch zu wenig sichtbar, als daß ihr häufigeres Auftreten im Westen und noch weniger ihre lokalen Unterschiede auffallen könnten. Die territorielle Differenzierung des Landes kommt infolgedessen in der Hauptsache nur im zweiten Bevölkerungselement, in den Bahutu-Ackerbauern, zum Vorschein.

Sie bilden das konservative Element, das das ganze Staatsgebäude auf seinen Schultern trägt und die Stabilität der einmal geschaffenen Ordnung, sichert, wenn sie auch zum selbständigen Organisieren größerer Staaten wenig befähigt sind. Sie beharren aber bei den einmal geschaffenen Formen und wahren auch die Traditionen der bereits überwundenen politischen Organisation. Und wenn die einzelnen Provinzen schon aufgehört haben ihr unabhängiges politisches Leben zu führen und in einem stark zentralisierten Staate aufgegangen sind, — in ihnen haben sich noch Spuren der alten Verhältnisse erhalten. Die Bahutu der einzelnen Provinzen weisen bedeutende Unterschiede auf und sind sich dessen bewußt. Deshalb werden auch immer die Bahutu gemeint, wenn man von den Bagoye, Balera, Banyanduga spricht. Nur in Kissaka, wo die Erinnerungen an den Staat, der sowohl Bahutu wie auch Batutsi vereinigte, noch zu lebendig sind, versteht man unter Banyakissaka überhaupt die Einwohner von Kissaka. Es darf nicht unerwähnt bleiben, daß die Bahutu von Bgisha, im Süden von Rutshuru, sich als Barundu oder Barondo zu bezeichnen pflegen. Deshalb scheint es mir auch, daß die Namen der Länder Urundi und Ruanda mit der dort wohnenden Bahutu-Unterschicht in Zusammenhang zu bringen sind.

Die Bahutu sind wesentlich heterogener als die Batutsi, trotzdem sie im ganzen Lande auch viele gemeinsame Züge haben. Ihr niedrigerer Wuchs, gedrungenerer Körperbau, die kürzeren unteren Extremitäten unterscheiden sie in einer auffallenden Weise von der Hirtenaristokratie. Der Unterschied wird am stärksten in Mulera und in Bugoye, wo die Bahutu allmählich Übergänge zu den Bantu des Kongo-Waldes aufweisen. Im zentralen Ruanda zeigen die Bahutu, trotz allem, eine, nicht unbedeutende, Beeinflussung durch die Batutsi. Ihre Gesichtszüge sind dort regelmäßiger und feiner geschnitten, ihr Körperbau ist nicht so untersetzt, und ihre Köpfe sind länger. Infolgedessen ist es auch wahrscheinlich, daß der Muhutu seine Eigenart, die ihn von den Bantu des Kongo-Waldes trennt, in der Hauptsache der „hamitischen" Beeinflussung durch die Batutsi verdankt. Die Möglichkeit einer mit dieser zusammengehenden nilotischen Beeinflussung, die bei den Massai und Bari so scharf zum Ausdruck kommt, darf dabei nicht aus dem Auge gelassen werden.

An der Besiedelung von Mulera und Bugoye haben sich die Auswanderer aus dem Congo-Staate in bedeutendem Umfange beteiligt. Dr. KANDT[1]) beansprucht für die Eingewanderten den Namen Bakiga (Wakiga). Er übersetzt den Namen mit den Worten „Bewohner des Pori". Nach meinen Erkundigungen ist „Bakiga" die allgemeine Bezeichnung für die Bewohner des Gebirges, im Gegensatze zu den „Banyamuyaga" — den Einwohnern der Ebene. Leutnant SCHWARZ bezeichnet, auf seinem Meßtischblatt der Mpororo-Karte, als „Rukiga" das Land im Südwesten von Buischingato (Luizigatu), das man sonst als Gebirgsland Ndorwa zu bezeichnen pflegt. Rukiga nennt man auch das Land im Südwesten von Njundo. Der landes- und sprachkundige R. P. P. BARTHELÈMY ist der Ansicht, daß der Name des Rugege-Waldes im Südosten vom Kiwu eine Ableitung von Rukiga ist.

Die Imigranten aus dem Congo sind den Banyaruanda sehr nahe verwandt. Die belgische Karte[2]) bezeichnet die Einwohner des westlichen Grabenrandes einfach als Barundi. Die Bagoye bezeichnen die Leute aus Bunyabungu, Itambi, Buyungu, Kishari, Butundwe und sogar Bgisha, mit denen sie sich gut verständigen können, mit dem Namen Bashi oder Bahunde. Die erste Bezeichnung soll eine Anspielung auf das stärkere Hervortreten der Zischlaute in ihrem Dialekt sein. Die Bashi zeigen in ihrer Kultur auch mannigfache Annäherungen an die Kongo-Bantu. In dieser Weise vollzieht sich der Übergang zu den Wald-Bantu in anthropologischer und kultureller Beziehung innerhalb des Kirundi-Sprachgebietes. Die Annäherung der durch die Batutsi nicht beeinflußten Bahutu an die Wald-Bantu bildet ein Argument zugunsten der Ansicht, daß die Bevölkerung von Ruanda das Resultat einer durch die Batutsi verursachten Kontaktmetamorphose darstellt.

Batwa. Das dritte Bevölkerungselement von Ruanda — die Batwa — fallen durch ihre relativ geringe Körpergröße auf. Ihr Gegensatz zu den sehr hochgewachsenen Batutsi ist so auffallend, daß die durchaus unzutreffende Identifizierung der Batwa mit Pygmäen sogar bei so hervorragenden Kennern des Landes, wie Dr. KANDT[1]) Glauben gefunden hat. Meine, im großen Maßstabe durchgeführten, Messungen zwingen mich, diese Ansicht als unstichhaltig zurückzuweisen und die Beobachtung des Leutnants v. PARISCH[2]), welcher die Batwa nur ein wenig kleiner als die Bahutu gefunden hat, zu bestätigen.

Dasselbe beobachtete Prof. Dr. HANS MEYER[3]). Er sagt nämlich: „Wie die Batua beim Musinga und in der Gegend von Issawi, unterscheiden sich auch die in Nordwest-Urundi nur wenig von den Wahutu, haben wohl auch viel Blut von diesen:"

BAUMANN[4]) geht noch weiter und vertritt sogar die Ansicht, daß die Batwa nicht kleiner als die Barundi sind.

Die letztere Ansicht ist auch nicht zutreffend. Bei anthropologischer Analyse[5]) kann man nämlich bei den Batwa das Pygmäen-Element als eines ihrer Bestandteile nachweisen. Dieses Element wurde zwar durch andere, wohl spätere Infusionen in den Hintergrund gedrängt, trotzdem verleiht es den Batwa manchen charakteristischen Zug.

Die Batwa nähern sich in einer sehr auffallenden Weise den Wald-Bantu und nehmen eine Mittelstellung zwischen diesen und den Bahutu ein. Dieses im ersten Augenblick unerwartete Ergebnis findet eine einfache Interpretation bei der einfachen Annahme, daß die stärker abgeschlossenen und den fremden Beeinflussungen weniger zugänglichen Batwa auch in anthropologischer Beziehung Relikte älterer Verhältnisse Ruanda's darstellen. Nimmt man an, daß Ruanda früher eine den Wald-Bantu näherstehende Bevölkerung gehabt hat, so müssen auch die Batwa, die über die älteren Verhältnisse Aufschluß geben, den Wald-Bantu näherkommen, was auch tatsächlich der Fall ist. Abgesehen von der anthropologischen Verwandtschaft, sollen die Batwa den Wald-Bantu noch in einer sehr charakteristischen Sitte nahekommen. Sie sind, wenigstens im Nordwesten von Ruanda, in den Vulkanen der Westgruppe, Anthropophagen. In dieser Beziehung übereinstimmende Gerüchte sind schon durch Graf v. GÖTZEN[6]) und v. PARISCH[7]) bekannt geworden.

[7]) PARISCH, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 77.

Meine Erkundigungen haben ebenfalls dasselbe Resultat ergeben. Die Pygmäen des Ituri-Waldes sind bekanntlich keine Anthropophagen und unterscheiden sich in dieser Beziehung prinzipiell von allen ihren Nachbarn.

Die Batwa sollen ebenso wie die Wald-Bantu ihre Pfade mit Fallen und giftigen Dornen versehen und mit vergifteten Pfeilen in der Hand bewachen. Sie haben auch einen Bogen mit Rotangsehne. Sonst unterscheiden sich die Batwa von den Banyaruanda in ihrer materiellen Kultur nur wenig. Darauf werden wir noch später genauer eingehen.

Die Frage, ob die Batwa eine besondere Sprache besitzen, muß ganz offen gelassen werden. Die von R. P. J. v. d. Burgt[1]) gesammelten Kitwa-Wörter sollen einem archaischen Lokaldialekt des Kirundi angehören und sind in Ruanda bekannt.

R. P. L. Classe[2]) hebt hervor, daß den Batwa die Aussprache des Lautes s Schwierigkeiten macht, und daß ihr Gespräch stärker aspiriert wird. Dieses aber ist mir nicht nur bei den Batwa, sondern auch bei den echten Pygmäen am Ituri aufgefallen. R. P. L. Classe erwähnt aber, daß ihre Sprache eine Mittelstellung zwischen Kigwe (Kissukuma), Runyambo, Ruziba und Luganda einzunehmen scheint; mit anderen Worten, daß es sich hier jedenfalls um einen Dialekt der Zwischenseengruppe handelt.

R. P. P. Barthelèmy sagte mir aber, daß die Batwa, die ihn bei seiner Vulkanbesteigung begleiteten, unter sich ein ihm unverständliches Idiom sprachen. Ob das aber ein Norddialekt in der Art des Ruhunde oder eine besondere Sprache war, konnte er nicht ermitteln.

Wenn sich auch jedermann ekelt mit dem Mutwa zusammen zu essen, verachtet dieser seinerseits den Muhutu, welcher mit gebücktem Rücken sein Feld bebauen und den Alltagssorgen nachgehen muß. Der freie Mutwa-Jäger aus dem Walde verachtet aber auch seinerseits die in den Dörfern vorwiegend als Töpfer ansässigen Batwa und nennt sie verächtlich „banyamikenke" — Söhne des Grases[3]).

Der Wald-Mutwa ist auf sein ungebundenes Dasein und auf seine Unabhängigkeit sehr stolz. Er betrachtet den Wald als seinen Besitz, in dem er ganz unbeschränkt walten kann, und sieht das Ausplündern der Eindringlinge, welche die Waldgrenzen überschreiten, für sein heiliges Recht an. Er verteidigt den Wald ebenso, wie sich der Muhutu gegen das Betreten seiner Felder wehrt.

Dieses Recht der Batwa wird sogar von den Bahutu in einer gewissen Beziehung anerkannt. Sie lassen sich im Urwalde ausplündern, ohne den geringsten Widerstand zu leisten. Sie behaupten nämlich, daß man ohne Ein-

willigung der Batwa aus dem Urwald überhaupt nicht herauskommen könne. Das ist durchaus möglich, da die im Walde sehr gut orientierten Jäger genügende Gelegenheiten finden können, die Verfolgten aus einem Hinterhalt zu erschießen.

Trotz dieser Vorteile ist der Kampf gegen die vorwärtsdringenden Bahutu für die Batwa ganz aussichtslos. Die gefürchteten Jäger werden überall durch die Ackerbauer verdrängt. Mit der Vernichtung des Waldes hört ihre Unabhängigkeit auf, und sie werden zu Parias.

Mit dem Augenblick, als der Kleinkrieg die Flutwelle der durch Bodenmangel dem Walde zugetriebenen Ackerbauer nicht mehr aufhalten kann, bleibt den Batwa nichts anderes übrig, als über die neuen Verhältnisse zu klagen. Damit begrüßte mich auch Kahima, als ich ihn mit R. P. L. DELMAS besuchte. Die Batwa des Kahima saßen ursprünglich im Urwalde; das ständige Roden hatte aber die Waldgrenze so stark verschoben, daß sich etwa 8 Hütten schon außerhalb des Waldes befanden, während die übrigen noch im Urwald zerstreut waren. Die Batwa bebauen aber auch dort bis jetzt noch keine eigenen Felder. Ihre Frauen leisten höchstens den Bahutu in ihren Feldarbeiten Hilfe, um sich als Belohnung Nahrungsmittel zu verschaffen.

Man hat doch in Ruanda Gelegenheit, Fälle zu beobachten, wo Batwa, durch Not gezwungen, zum Ackerbau übergehen. So sitzt z. B. in der Nähe von Ruasa ein leproser Mutwa-Regenmacher. Als das Regenmachen mit der Entwicklung des Einflusses der Missionäre weniger einträglich geworden ist, fing er an, ein Feld zu bestellen. In einer Beziehung war er aber ein richtiger Mutwa geblieben — er konnte kein Kleinvieh halten, alles wurde in kürzester Zeit geschlachtet und aufgegessen.

Die Urwald-Batwa bleiben in demselben Verhältnis zu den Banyaruanda, wie die Pygmäen zu den großwüchsigen Negern. Jede Batwa-Gruppe erkennt einen Ruanda-Häuptling als Oberhaupt an, bei dem sie die Erzeugnisse der Jagd gegen Ackerbauprodukte eintauscht. In diesem Vasallenverhältnis stand Kahima zu Chuma.

Es muß aber auch ein Unterschied hervorgehoben werden. Die Batwa erkennen die Hoheit des Herrschers von Ruanda an. Sie tragen dem König von Zeit zu Zeit Geschenke zu, die durch Vermittelung ihres Muhutu-Patrons Chuma, der ein Klient (mugaragu) des Königs sein soll, diesem überreicht werden.

Wenn auch der anthropologische Gegensatz zwischen Batutsi und Batwa noch schärfer, als der zwischen den Ackerbauern und dem Hirtenadel, ist, so kann man doch eine stärkere politische Solidarität der Privilegierten und der Parias auch hier nicht übersehen. Wenn ein Mututsi Schafe opfert, so ißt der Mutwa das Fleisch. Schlachtet er etwas, so vergißt er den Mutwa auch nicht. Zwischen den beiden in Minderzahl auftretenden Elementen herrscht stets ein gutes Einvernehmen. Sie wohnen auch oft nebeneinander. Sie müssen, trotz

aller Vorurteile, zusammenhalten, um sich neben der starken Majorität der Ackerbauer im Lande zu behaupten.

Die Zahl der Batwa ist unvergleichlich geringer als die der Batutsi. Ihre extensive Erwerbsweise läßt die Existenz einer dichteren Batwa-Bevölkerung nicht zu. Geschlossene, größere Batwa-Niederlassungen gibt es nur im Urwalde und in Niansa bei Musinga. Sonst leben die Batwa ganz zerstreut inmitten der Bahutu-Bevölkerung.

Es sind mir die folgenden Batwa-Gruppen bekannt geworden:

1. Batwa des Kahima aus Kazu. Kahima ist dem Muhutu Chuma, der drei Stunden südlich von Njundo wohnt, unterstellt. Zusammen mit seinem kleinen Unterhäuptling Sebuleza, beträgt die Zahl seiner Batwa inkl. Frauen und Kinder bis 150 Köpfe.

2. Batwa des Ngunzu. Ngunzu ist dem Muhutu-Häuptling Mutubula unterstellt. Sein Dorf befindet sich auf einem Berge in der Nähe von Kahama, und kann, auf dem Wege von Ruasa nach Kissenji von der dritten Urwaldlichtung aus, gesehen werden. Diese Gruppe soll zum mindesten ebenso stark sein, wenn man auch vom Wege aus nur sieben Hütten sehen kann.

3. Batwa des Lukara sitzen auf dem Paß zwischen Muhawura und Mgahinga. Sie sind wohl nicht viel schwächer an Zahl. Man konnte von Lukara's Kral aus nur 2—3 Batwa-Hütten sehen, und Lukara brachte mir nur ein Dutzend Erwachsener zum Messen, aber der Umstand, daß man sie mit Militärgewalt aus dem belgischen Gebiet vertreiben mußte, spricht für eine größere Zahl. Ihnen verdankt der Mgahinga den Namen „Kirunga ya Batwa".

4. Batwa vom Mikeno. Diese Gruppe wurde seinerzeit durch Dr. KANDT[1]) besucht. Der Forscher erwähnt zwei Hüttenkomplexe. Der erste wird durch 2, der andere, in einer Entfernung von 4 Stunden, durch 6—8 Hütten gebildet. Die letzten stehen um eine Lichtung herum. Die Zahl der Batwa beträgt hier 15—20 Mann.

Dr. KANDT[2]) erwähnt aber, daß es auch in den Wäldern des Ssabinjo Batwa gibt.

In Ndorwa spricht man von den einflußreichen Batwa-Häuptlingen:

5. Ngurube und 6. Katulenge. Die Batwa des Ngurube werden Puniu genannt[3]).

7. Batwa der Insel Kwidschwi wurden durch Dr. J. MILDBRAED und Dr. H. SCHUBOTZ besucht und sollen den Pygmäen näher, von den übrigen Batwa kommen.

8. Batwa von Süd-Ruanda. Große Batwa-Kolonien findet man im Rugege-Wald und in den Wäldern im Südwesten der Provinz Nduga. Diese

[3]) PARISCH, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 76.

Gruppe wird Mashami oder Machaba genannt. Ihr Wald gehört zur Landschaft Njaruguru, die früher unter dem Häuptling Kaizuka gestanden hat[1]).

9. Batwa aus Kabgaye. Abgesehen von diesen größeren Gruppen begegnete mir eine 20—25 Köpfe starke Batwa-Kolonie, die als Töpfer in der Nachbarschaft der Mission Kabgaye (Marangara) saßen.

Zum Schlusse sind noch

10. Batwa aus Niansa zu erwähnen, die sich dort aufhalten, um dem König Dienste zu leisten, und von Zeit zu Zeit durch andere Stammesgenossen abgelöst werden.

Da ich mich stets nach den Batwa erkundigt habe und keine weiteren Nachrichten bekam, so glaube ich annehmen zu dürfen, daß die wichtigsten Gruppen hier aufgezählt sind, und die Zahl der Batwa in Ruanda 3000 nicht übersteigt, wenn auch vereinzelte an vielen Orten sitzen. So waren zwei oder drei in Issawi und ein Regenmacher in Ruasa.

Batwa gehören zu denselben Clans, wie die übrigen Banyaruanda. So gehören z. B. die Batwa des Kahima zum Mugessera-Clan, und Kahima scheint ihr Clanältester mit geringer Autorität zu sein. Die Batwa aus Kabgaye, wie auch die vom Muhawura, bildeten ein Gemisch verschiedener Clans und sind vielleicht als Überreste zersprengter Clangruppen anzusehen.

7. Kapitel.

Beschäftigung der Bevölkerung.

Ackerbau. — Forstwirtschaft. — Viehzucht. — Jagd. — Bienenzucht. — Fischerei. — Gewerbe. — Bierbereitung. — Tabakbereitung. — Flechtarbeiten. — Töpferei. — Holzgewerbe. — Metallgewerbe. — Rindenstoffbearbeitung. — Fellbearbeitung. — Güteraustausch. — Preise. — Handel. — Märkte. — Verkehrsverhältnisse. — Verkehrsarterien.

Ackerbau. Die Hauptbeschäftigung der Bahutu bildet der Ackerbau. Er wird in einer recht intensiven Weise und mit Sorgfalt betrieben, die ihren höchsten Grad in der Nähe des Kiwu-Sees erreicht. Die wichtigsten angebauten Pflanzen sind: Hirse (masaka), Bataten (bidjumba), Erbsen (bishimbo) und Bananen (bitoke). Außerdem baut man noch in großen Mengen Mais (kigori), Erdnüsse (ichiema), Eleusine (buro), Kürbisse (mungu), Tabak (itabi) und ein wenig Maniok (mukembe) an.

In Mulera und Bugoye bilden die Erbsen die Grundlage der Ernährung, in Kissaka, Nduga, in dem Nordostgebiet und vor allem in Bgisha steht dagegen die Hirse im Vordergrunde.

Das hohe Niveau des Ruanda-Ackerbaues charakterisieren am besten: die Anwendung der im europäischen Osten unbekannten Düngung, die künstliche Bewässerung und die Terrassenanlagen auf den steilen Bergabhängen.

Die Sorgfalt des Bauern äußert sich zunächst darin, daß er den Boden der Bananenhaine mit den faulenden Bananenstämmen und mit Laub bedeckt, um so den Pflanzen die notwendige Feuchtigkeit zu sichern. Man soll aber auch dort, ebenso wie auf den Feldern und vor allem in den Kürbisplantagen gewisser Teile Ruanda's noch Kuhmist als Dünger verwenden. In Bugoye jedoch, wo der Boden sehr reich ist, wird die Düngung nicht angewendet. Dort soll oft die Gefahr vorhanden sein, daß die zu üppig wachsende Hirse sich legt, und man sucht dieser Gefahr durch das Zusammenbinden der Halme während des Wachstums in winzige Bündel zuvorzukommen.

Viele Bewässerungsanlagen sieht man im Norden vom Mohasi-See. In Mulera dagegen, wo es, wie es scheint, mehr Regen gibt, hatte ich keine Gelegenheit eine solche zu finden. Das Wasser wird nicht selten durch sehr lange, aber enge Kanäle aus gestauten Bächen zugeführt. Auf dem Nordabhange des Ndiza-Berges in der Nähe des Njawarungo-Flusses sah ich z. B. eine zwei km lange Wasser-

[p. 135]

leitung, die mit einem leichten Gefälle zu den Pflanzungen auf den Vorbergen herabsteigt und ihre Anwesenheit durch das Rauschen verrät. Die Hauptleitung hatte eine Anzahl von Seitenöffnungen, mit Rasen verstopft, die das mangelnde Wasser auf die Weiden der Bergabhänge ergießen konnten. Das Wasser wird durch tiefe Furchen, welche die rechteckigen Beete voneinander trennen, zugeleitet. Nur in Bgisha in der Nähe von Rutshuru sah ich eine sumpfige Niederung, in der die Erde in fast meterhohe Haufen zusammengeworfen war. Diese eigenartigen Beete waren mit Erbsen bewachsen.

Abb 83. Feldhacke aus Mulera. (1/10 d. w. Gr. III E 13108. Stielfänge 113 cm, Hackenblattlänge 31 cm, Breite 19,5 cm.)

Die Terrassenanlagen hatte ich zum ersten Male Gelegenheit in den Landschaften im Norden vom Mohasi-See zu beobachten, sie sind aber auch in dem übrigen nordwestlichen Ruanda vorhanden und scheinen, in vielen Fällen nicht beabsichtigt, durch das Behacken des Abhanges verursacht zu sein. Die Höhe der Terrassen beträgt zwei bis drei Meter.

Die Benutzung des Bodens wird in Ruanda, wie es scheint, durch einen gewissen Fruchtwechsel geregelt. In Itambi werden auf den frischen Roden zunächst Bohnen und Erbsen und erst dann Hirse gesät. In Mulera erzählte man mir, daß man dieselbe Reihenfolge auch in den seit längerer Zeit bebauten Feldern wahrt, nach der Hirse aber das Feld brach liegen läßt. An dieser Reihenfolge der Feldfrüchte wird jedoch nicht immer festgehalten: man sieht nämlich oft, daß die Hirse zusammen mit den Bohnen angepflanzt wird. Dies kommt auch in denjenigen Fällen vor, wo man den Bodenmangel dafür nicht verantwortlich machen kann. Man sagte mir, daß die Bohnen früher weggeerntet würden, und daß so die Hirse dadurch keinen Schaden erleide.

Das Brachliegenlassen des Ackers ist ebenfalls, wie es scheint, keine regelmäßig angewendete Maßnahme. Ich konnte in einigen Fällen feststellen, daß sie durch die Unmöglichkeit, das Feld zur richtigen Zeit zu bestellen, verursacht worden ist. In der Nähe des Gehöftes von Lwakadygi erzählten mir z. B. die Bahutu, daß einige Felder unbestellt bleiben mußten, weil die Batutsi mit ihren Rindern zu spät in den Wald gezogen seien.

Der Boden wird mit einer plumpen, eisernen Hacke (isuka) bestellt. Die Hacke hat einen langen, schweren, am Ende verdickten Stiel. Das Hackeneisen wird am Stiele mittels seiner hinteren Spitze befestigt. Man treibt nämlich

diese in das am Stielende ausgebrannte Loch ein. Diese Befestigungsweise wird in den Bahinda-Staaten und in ganz Buhaya benutzt. In Toro, in Bunyoro, in Buganda und in Nkole, wenigstens in seinem Norden, wo ich dies zu beobachten Gelegenheit hatte, wird das Problem der Hackenbefestigung in einer etwas abweichenden Form gelöst. Der Stiel besteht dort aus einem verzweigten Aste, der ein wenig unterhalb seiner Gabelung vom Stamme abgetrennt wird, und die beiden divergierenden Teile werden ungleich lang zugeschnitten. Der wesentlich längere Teil dient als Stiel und der kürzere, schräg zugeschnittene, als Hackenträger. An diesem wird das Hackeneisen befestigt und zwar mittels seines oberen Vorsprunges, der angebunden wird. Die hier besprochene Hackenform ist sehr unbequem, da der kurze Stiel die Arbeitenden beim Hacken zu sehr tiefem Bücken zwingt und sie deshalb sehr anstrengt.

Diese kurze Hacke stellt, wie es scheint, die ältere, im Rückgange begriffene Form dar. Meine Wassukuma-Träger erzählten mir, daß bei ihnen früher, in weit zurückliegenden Zeiten, die kurzstielige, angebundene Hackenform allgemein verbreitet gewesen wäre, später aber hätte sie der langstieligen, mit durchbohrtem Holze, weichen müssen. Sie unterscheide sich gegenwärtig von der Ruanda-Hacke nur durch ihr geringeres Gewicht.

Eine gewisse Annäherung an die ältere Hackenform stellt die in Ruanda schon seltener gebrauchte, ganz primitive Holzhacke dar. Sie besteht ebenfalls aus einer ungleich lang zugeschnittenen Astengabel. Das kürzere Ende wird jedoch zugespitzt und zur Hackarbeit benutzt. Die wenigen Stücke, welche ich im Lande sehen konnte, waren am spitzen Ende mit einem Beschlag versehen; die befragten Leute erzählten aber, daß dies früher nicht der Fall gewesen wäre. Ganz gleiche Hacken sah ich später bei den niloto-hamitischen Kakwa; der Eisenbeschlag fehlte dort. Diese Hacken werden nach den Aussagen der Leute ausschließlich beim Roden verwendet.

Abb. 26. Beschlagene Holzhacke aus Mulera. ($^1/_{12}$ d. w. Gr. L. 15061.)

Mit der Hacke arbeiten in Ruanda sowohl die Männer wie auch die Frauen. In dieser Beziehung unterscheidet sich Ruanda sehr scharf von den anderen Hackbauländern im Nordwesten.

Die bebauten Felder schließen sich zu großen Komplexen nur im Norden, und im Westen des Landes und am Nordufer des Mohasi-Sees zusammen; sonst bilden sie nur Oasen in den weiten Weide- und Buschgebieten.

Die Bananenhaine kommen meistens auf den Hügelrücken vor; so ist es wenigstens in Kissaka, in Nduga und in Mulera der Fall. In Bugoye und im südlichen Bgisha, wo die Siedelungen sehr hoch liegen, befinden sich die Haine etwas tiefer. In Bugoye, wo die Lava schon stark verwittert ist, hat man große

Bananenplantagen in der Lavaebene selbst und in Bgisha etwas höher an ihrem Rande. Die Bananen tragen Früchte fast das ganze Jahr, mit Ausnahme der trockensten Zeit. Die Pflanzen werden behackt, verlangen aber sonst wenig Pflege. Die Bananenfrucht wird hauptsächlich zur Bierbereitung (nzoga) verwendet.

Abb. 27. Mörser aus Mulera. (1/4 d. w. Gr. III E 13095. 44 cm hoch.)

Die Hirsefelder liegen vorwiegend auf den Hügelabhängen. Sie werden nach dem Eintritte des ersten Regens gehackt und besät. Einige Zeit später jätet man das Unkraut aus. Die Haupternte findet in der Mitte der Trockenzeit statt. Ich habe Gelegenheit gehabt, sie in der zweiten Julihälfte in Kissaka zu sehen. In Nduga war sie schon im August vorbei. In Mulera soll Ende Februar und in Bgisha Ende November und Anfang Dezember geerntet werden.

Die Batatenplantagen werden in den sumpfigen Niederungen und auf den bewässerten Feldern angelegt. Bataten bilden die Grundlage der Ernährung während der Trockenzeit, wenn es keine Vorräte mehr gibt, und die Hirse noch nicht reif geworden ist.

Die höchstgelegenen Äcker werden zum Erbsenbau benutzt, wenn man auch

Abb. 28. Schildkorb zum Hirseputzen aus Mulera. (1/4 d. w. Gr. III E 13678. 73 × 61 cm.)

sehr viele Erbsenfelder tiefer gelagert als die Bananenhaine antreffen kann. Die höchstgelegenen Äcker sah ich auf dem Ndiza-Berge hoch über den Siedlungen, die dort wohl bis zu 2000 m hinauf reichen. Was die Ursache des An-

baues der so hochgelegenen Felder bildet, konnte ich nicht ermitteln. Die Umgebung machte jedenfalls nicht den Eindruck einer so dicht bevölkerten Landschaft, daß man annehmen könnte, man sei zur Ausnützung der so unbequem gelegenen Felder gezwungen worden. Die Erbsen und Bohnen werden am Ende der Regenzeit geerntet.

Mit Ausnahme von Bananen und Bataten, werden die Feldfrüchte in Speichern (kigega) aufbewahrt. Die Hirse schneidet man kurz ab und läßt sie ungedroschen liegen bis zum Bedarfsfalle. Dann erst wird sie in kleinen Mengen im Mörser gedroschen und auf großen, geflochtenen Schilden durch den Wind gereinigt. Bananen und Bataten werden nach Bedarf aus der Plantage geholt. Die für die Bierbereitung bestimmten Trauben pflegt man zum Nachreifen in der Hütte aufzubewahren; dort werden auch bedeutende Vorräte von anderen Feldfrüchten, vor allem von Bohnen und Erbsen, in größeren, durch Kuhmist gedichteten, Körben (umuhiri) deponiert.

Forstwirtschaft. Trotz des intensiven Ackerbaues und der großen Ausdehnung des bebauten Bodens in den dichtbevölkerten Landesteilen, wo die Waldungen auf ein Minimum zusammengeschrumpft sind, kann man in Ruanda von einer Forstwirtschaft kaum sprechen. Der Muhutu ist der schlimmste Feind des Waldes; er braucht ihn, um seine Hütten und Speicher zu bauen, seine Boote und Geräte herzustellen und sein Essen zu kochen; er schont ihn aber nicht und steht in dieser Beziehung dem osteuropäischen Bauern nicht nach.

Nach den übereinstimmenden Aussagen der Eingeborenen ist die Ruanda-Landschaft im raschen Wandel begriffen, und die Abforstung macht sehr große Fortschritte. Das Land soll früher überall ausgedehnte Wälder, welche durch die Ackerbauer vernichtet wurden, gehabt haben, so daß man jetzt in der nördlichen Nduga z. B. keine Wälder mehr antreffen kann. Ein ganz junges, durch die Kolonisation hervorgerufenes Zurückweichen der Waldgrenze kann man jetzt im Mulera und in Bugoye konstatieren. Als ich die Batwa des Häuptlings Chuma besuchte, konnte ich feststellen, daß die Hälfte ihrer Hütten schon von den Bahutu-Äckern umgeben waren, nur eine Hälfte war noch im Urwald verborgen; so weit sind die Ackerbauer seit wenigen Jahren vorgedrungen. Alle erinnerten sich noch der Zeiten, als das Dorf tief im Urwalde versteckt lag.

Die größeren Bäume werden mit Äxten gefällt, das Gebüsch und die kleineren Stämme mit sichelförmigen Buschmessern gejätet. Die Äxte (intolezo) haben eine meißelartige, am schneidenden Ende verbreiterte, scharf zugeschliffene Klinge (igembe), die mit ihrem hinteren verdünnten Teile (intereri) in das Loch (intoboro) am verdickten Ende (impumo) des Stieles (omuhini) eingestellt wird. Das Buschmesser ist in seiner ganzen Länge aus Eisen geschmiedet. Das oberste Drittel ist breit und einschneidig scharf zugeschliffen (lulimi), in der oberen Hälfte (isatuliro) sichelförmig gebogen und läuft in eine Spitze aus; die übrigen zwei Drittel sind rund. Das unterste Drittel ist in einen hölzernen, durch Um-

wickelung mit Draht oder plattgeschmiedetem Eisen verstärkten und am unteren Ende etwas verdickten, Griff (kilindi) eingetrieben.

Infolge der starken Abholzung des Landes bildet der Holzmangel eine sehr wichtige Frage des wirtschaftlichen Lebens, da das Holz stellenweise aus sehr weiten Entfernungen hergeholt werden muß. Im Nordosten, wo das Holz

Abb. 29. Axt aus Mukera (1/6 d. w. Gr. III E 13111. Stiel 68 cm lang.)

Abb. 30. Axt aus Mukera. (1/6 d. w. Gr. EIII 13060. Stiel 60 cm lang.)

Abb. 31. Buschmesser aus Mukera. (1/6 d. w. Gr. L 15036.)

am schwersten zu beschaffen ist, wird getrockneter Kuhmist zu Feuerungszwecken verwendet.

Unter dem Einflusse der katholischen Missionen haben die Eingeborenen angefangen Bäume zu pflanzen. Ich hatte übrigens auch Gelegenheit, außerhalb des unmittelbaren Wirkungskreises der Mission in der Entfernung von 4½ Marschstunden von Ruasa in Ruangeri auf dem Wege nach Kissenji eine Anpflanzung der „mussavi"-Bäume zu sehen.

Viehzucht. In Ruanda werden Rinder, Ziegen, Schafe, Hühner und Hunde gehalten. Die Viehzucht spielt dort im wirtschaftlichen und politischen Leben eine sehr wichtige Rolle. Die Zucht des Rindes bildet die fast ausschließliche

Beschäftigung der herrschenden Batutsi-Schicht. Die Schafe und vor allem die Ziegen werden dagegen hauptsächlich von den, den Ackerbau treibenden Bahutu gezüchtet. Nur in Mulera und Bugoye besitzen die Bahutu ganz allgemein Kühe. Die Tiere werden vom Manne gepflegt. Gelegentlich kann man aber auf der Weide auch ein Mädchen, mit der Bewachung einer Kuh oder einer kleinen Ziegenherde betraut, erblicken.

Die Rinderzucht wird für die vornehmste Beschäftigung eines Mannes gehalten. Diese Erscheinung ist durch die hohe soziale Stellung der Batutsi bedingt. „Infolgedessen ist es in Uganda, wo man sie verachtet, fast unmöglich, einen Waganda zur Rindviehzucht zu bewegen.“ [1])

Abb. 32. Holzgefäße zum Milchaufbewahren aus Mulera. ($^1/_6$ d. w. Gr. L 15167. $33^1/_2$ cm hoch. L 15165. 45 cm hoch.)

Das großhörnige Batutsi-Rind eignet sich nur wenig zur Milchproduktion, wenn auch der Nutzen des Tieres fast ausschließlich in der gelieferten Milch besteht. Die jährliche Milchproduktion einer mittleren Kuh soll, nach den Mitteilungen der Missionäre, 400—500 l nicht überschreiten. Dr. Kandt [2]) erwähnt, daß eine ausgezeichnete Kuh drei Liter Milch täglich liefere.

Die Kuh wird nur in der Gegenwart des Kalbes gemolken. Die Banyakissaka erzählten mir, daß nur dann von der Kuh die Milch gegeben werde. Verunglückt das Kalb, so wird die Kuh während der ersten Tage mit dem Kalbsfell getäuscht. Man gibt es ihr beim Melken zu lecken, um sie vom Zurückhalten der Milch abzubringen. Nur später kann sie ohne die Anwendung des Kalbsfelles gemolken werden. Die Kälber pflegt man vor dem Austreiben des Viehes am Morgen und nach seiner Rückkehr am Abend zuzuführen; nachdem das Kalb einige Zeit gesogen hat, wird es abgesetzt und nebenbei gehalten. Während dieser Zeit wird die Kuh durch den Hirten gemolken. Ist das Melken beendigt, so wird das Kalb wieder angesetzt, und man läßt es so lange saugen bis es von selbst aufhört.

---

[1]) Wilson, C. T., und Felkin, R. W., Uganda und der Ägyptische Sudan. Stuttgart 1883, Bd. I, S. 67.

[2]) Kandt, R., Caput Nili. Berlin 1904, S. 183.

Während des Melkens pflegt man neben der Kuh ein Feuer zu brennen, und zwar ist es Kuhmist, der als Brennmaterial verwendet wird. Der Rauch verscheucht die lästigen Stechfliegen, und die Tiere können so ruhig stehen bleiben.

Junge Kälber werden in besonderen kleinen Hütten oder auch in den abgeschlossenen Teilen des Wohnhüttenvorraumes (umuliango) gehalten.

Die Milch bewahrt man in zylindrischen, roh aus Holz geschnitzten Gefäßen (kianzi) auf. Die Gefäße werden mit Kuhurin gewaschen, von Zeit zu Zeit eingeräuchert und durch einen konischen Deckel, aus einem spiralig zusammengenähten Strohbündel, verschlossen.

Die Milch pflegt man hauptsächlich im geronnenen Zustande (kivugutu) zu genießen; zu diesem Zwecke verändert man ihre Konsistenz durch Schlagen mit einem Stäbchen. Es wird aber auch frische Milch (amata) und Buttermilch (amachunde) getrunken.

Außer der Milch wird noch das Blut des Rindes genossen. Man zapft dieses von Zeit zu Zeit den Stieren ab. Zu diesem Zwecke bedient man sich eines besonderen Pfeiles, welcher dem Tiere aus der nächsten Nähe in eine Halsvene eingeschossen wird; die kurze, eiserne Pfeilspitze ist in einen hölzernen Schaft eingestellt. Dieser ist im oberen Teile mit einer Umwickelung versehen, die sowohl das Spalten des Holzes, wie auch das zu tiefe Eindringen des Pfeiles beim Öffnen des Blutgefäßes verhindert. Das untere Ende des Pfeiles besitzt eine Kerbe zum Aufnehmen der Bogensehne. Beim Abziehen des Blutes wird die Vene gestaut, zu welchem Zwecke man den Hals unterhalb der Wunde mit einem Strick zusammenpressen muß.

Abb. 33. Pfeil zum Aderlaß. Ruanda. (1/6 d. w. Gr. III E 13744. 58½ cm lang.)

Das Blut pflegt man entweder frisch zu trinken oder im gekochten Zustande zu genießen. Manchmal vermengt man es auch mit Milch. In der letzteren Form reicht man es den Wöchnerinnen nach der Niederkunft, um der Mutter „das verlorene Blut zu ersetzen".

Abgesehen vom Abzapfen des Blutes bei gesunden Tieren wird der Aderlaß auch zu Heilzwecken bei kranken Tieren durch besondere Fachleute ausgeführt. Diese sollen dann das abgezapfte Blut für sich als Belohnung behalten dürfen.

Das Fleisch wird nur ausnahmsweise bei besonderen Gelegenheiten gegessen; die Rinder stellen einen sehr großen Wert dar, und das Rinderfleisch gilt infolgedessen auch für den größten Leckerbissen.

Die Butter wird nicht gegessen; man benutzt sie nur zum Einsalben des Körpers und zum Schmieren der Kleider. Zum Buttermachen werden große Kürbisse (kisabo) verwendet, die, am Halse mit der Hand gehalten, auf dem Boden geschaukelt werden. Die Butter pflegt man in kleinen Gefäßen aus Ton

und Holz (akachendo) aufzubewahren. Die letzteren haben oft Ösengriffe und werden dann „uchende yo mukondo" genannt.

Die hiesige Form des intensiven Ackerbaues auf sehr fruchtbarem Boden läßt sich mit der äußerst extensiven Form der Rinderzucht nicht gut vereinigen. Die Stallfütterung ist unbekannt. Das Vieh weidet den ganzen Tag im Freien, nur nachts wird es im Kral (lugo) eingesperrt. Infolgedessen kann man auch in den dicht bevölkerten und stark angebauten Gegenden nur die Milchkühe mit Not in der Nähe der Siedelungen halten; das übrige Vieh wird auf die entfernteren Weiden hinausgeschickt. Die Bagoye schicken z. B. ihre Kühe in den Urwald im Osten, auf der Wasserscheide. Die Rinder werden besonderen Batutsi-Unternehmern anvertraut. Diese pflegen sie und werden dafür entschädigt. Der Hirt bekommt als Entgelt für seine Arbeit die Milch der ersten zwei Monate, da die Kuh erst mit dem zwei Monate alten Kalbe in das Gehöft ihres Besitzers zurückkehrt. Außerdem bekommt er noch einen Topf Bier im Werte einer Hacke. Der Hirt ist aber für die anvertraute Kuh haftbar und muß die verunglückten und die gestohlenen Stücke durch andere ersetzen.

Die Weiden werden nicht besonders gepflegt. Auf dem Nordabhange des Ndisa-Berges sah ich jedoch eine Bewässerungsanlage, die das Wasser über die Bergwiesen sich ergießen ließ. Sonst beschränkt man sich auf das Abbrennen der Steppe am Ende der Trockenzeit, wodurch das ausgedörrte Gras entfernt wird, und das junge Grün wächst nach dem ersten Regen auf dem mit der Asche gedüngten Boden desto üppiger. Es braucht nicht besonders hervorgehoben werden, daß die Steppenbrände zur Abholzung von Ruanda, vor allem in den weniger dichtbevölkerten Gebieten, sehr stark beigetragen haben. Und wenn auch der Wald durch den Ackerbauer vernichtet wurde, so sind es doch die Hirten, die sein Nachwachsen unmöglich machen. Die Grasbrände wüten im ganzen Lande umher. In Mulera und Bugoye, wo alles kultiviert ist, kann man sie nur in der Vulkanebene sehen.

Da keine Futtervorräte angelegt werden, so magert das Vieh während der Trockenzeit sehr stark ab. Die Herden der Batutsi-Häuptlinge werden dann nicht selten in die Batatenpflanzungen ihrer Bauern eingetrieben und richten dort großen Schaden an. Die Bahutu dürfen, wenn der Schaden noch so groß ist, die Kühe nicht wegjagen oder irgendwelchen Widerstand leisten.

In der Hirtenaristokratie von Ruanda muß der Muhutu dem Rinde stets weichen. Die Kühe haben die Bahutu aus gewissen Teilen von Ufumbiro verdrängt, sie rotteten auch definitiv die Bauern aus der Lavaebene in Mulera aus. Sie verödeten die Umgebung von Niansa. Man kann infolgedessen sagen, daß die Kühe einen mächtigen Faktor in der Gestaltung der Ruanda-Landschaft darstellen.

Die **Kuhtransaktionen** spielen eine sehr große Rolle im ökonomischen Leben und in der Gerichtspraxis von Ruanda. Diese Abschlüsse haben mannigfaltige Formen.

Neben dem einfachen Kaufe, wo der Preis auf einmal oder ratenweise (in Ziegen) geleistet wird, ist mir noch eine andere Kaufform bekannt geworden. Der Besitzer zweier jungen Stiere tauscht sie für ein noch nicht geborenes Kalb einer bestimmten Kuh ein. Ist das Kalb männlich, so wird bis zum nächsten gewartet. Solche Transaktion wird „kwatiriza" genannt. Bei dieser „kwatiriza" wird die Milch nach dem Ablaufe der ersten zwei Monate, die dem Hirten gehören, zwischen dem Käufer des Kalbes und dem Besitzer der Kuh geteilt. Es kommen jedoch häufig auch Abschlüsse vor, wo die halbe oder sogar die ganze Milch von irgendjemand einfach abgekauft wird.

Kühe sind nur in Mulera käuflich. Sie gehören dort den Bahutu. Batutsi verkaufen nur junge Stiere. Kalbende Kühe werden unter keinen Umständen veräußert, man gibt sie nur in Lehen. Auch große Stiere (mfizi) werden nicht verkauft. Ich hörte wiederholt, daß sie sogar nicht verliehen werden können.

Die Ziegen werden überall von den Bahutu gezüchtet. Schafe treten in größeren Mengen im Nordwesten auf. Das erste Schaf wurde mir auf der Route Niansa—Mulera, an der Njawarongo-Fähre geschenkt. Vereinzelte kann man überall sehen. Sie werden zum Opfer verwendet.

Im Zusammenhange mit der Viehzucht müssen einige Worte der Kastration gewidmet werden. Dieser operative Eingriff ist in Ruanda bekannt und kommt in erster Linie bei Böcken in Anwendung. Das Kastrieren der Rinder soll durch den König verboten sein, man erzählt aber, daß es im Geheimen aus Rache an Kühen, die man zurückzugeben gezwungen wird, durch Anbrennen ausgeführt wird. Die Jagdhunde werden ebenfalls kastriert. Die Kastration soll man auch an den Feinden des Königs ausüben.

Jagd. Nur bei den Batwa bildet die Jagd die Hauptbeschäftigung, durch welche die zum Leben notwendigen Mittel beschafft werden. Diese leben von den Erträgen der Jagd, ebenso wie die Bahutu durch den Ackerbau und die Batutsi durch die Viehzucht ernährt werden. Die notwendigen Ackerbauprodukte werden nur durch Tausch gegen Jagdergebnisse oder durch Diebstahl erhalten.

Batwa sind die geschicktesten Jäger. Sie gehen dem Wilde nach, von ihren Hunden begleitet, mit Bogen und Speer in der Hand. Sie sind die geschicktesten Schützen, die auch auf Vögel mit Erfolg zu schießen verstehen. Ihnen verdankt der König von Ruanda in der Hauptsache sein Elfenbein. Dieses sollte früher, als die Elefanten noch nicht so selten im Lande waren, in großen Mengen erbeutet worden sein. Den Jagdgrund der Batwa bilden die Wälder der Kongo-Wasserscheide im Osten vom Kiwu-See und Russisi und die Wälder der Vulkanlinie.

Auch bei den anderen Banyaruanda wird viel gejagt, vor allem in Kissaka, infolge des großen Wildreichtums der Steppe. Im Nordosten dieser Provinz spielt die Jagd auch wirtschaftlich eine bedeutende Rolle; es gibt hier Berufsjäger (abahigi) und sogar Elefantenjäger (abayovu).

6: Czekanowski FO 42 Rundi

Die Jäger arbeiten gewöhnlich gruppenweise. Bei den Treibjagden pflegt die Zahl der Teilnehmer, die durch die Bezirksvorsteher organisiert werden, sehr groß zu sein. Die Bezirksvorsteher versammeln nämlich ihre, mit Speer, Pfeil und Bogen bewaffneten und von zahlreichen Hunden begleiteten Bauern. Wegen der großen Entfernungen, zwischen den Grenzen der belegten Gründe werden die Signale mit einem Kuhhorn übermittelt. Zum Absperren gewisser Teile werden auch Netze verwendet. Der Jäger, welcher dem Wild den ersten Schlag versetzt, bekommt das Fell und ein Stück Fleisch, die übrigen bekommen nur Fleischanteile. Bei wertvolleren Fellen wird dieses jedoch dem Mutware überlassen, und die Jäger nehmen nur am Fleische teil. Die Treibjagden finden vorwiegend in der Trockenzeit statt, manchmal werden sie aber noch am Anfange der Regenzeit veranstaltet.

Die Elefantenjäger arbeiten in kleinen Gruppen und bedienen sich dabei des Speeres. Ist eine Elefantenherde oder ein einsamer alter Bulle gefunden worden, so soll folgendermaßen verfahren werden. Auf einem sorgfältig gewählten Platze werden die Speere schräg in den Boden, die Spitzen gegen die Elefanten gerichtet, eingepflanzt. Die Jäger verbergen sich bis auf einen, der auf einen bestimmten Elefanten losgehen muß. Nimmt das gereizte Tier den Jäger an, so flieht dieser in der Richtung nach den Speeren, damit sich der angreifende Elefant einen von diesen in den Leib einrenne. Das verwundete Tier wird dann durch die versteckten Genossen von hinten angegriffen. Das Elefantenfleisch soll in Kissaka gegessen werden. Ein Zahn wird dem Mutware abgegeben. Die Elefanten halten sich hauptsächlich im Norden von Kissaka in Bugansa auf.

Abgesehen von den Treib- und Lockjagden wird der Wildreichtum noch mit Hilfe von Fallen und Fallgruben ausgebeutet. Die Fallen bestehen aus einer Schlinge, die auf dem Boden liegt und deren Ende an einen jungen, zum Boden gebogenen Baum befestigt wird. Läuft ein Tier die Schlingen an, so hebt sich der Baum, zieht die Schlinge zu und hebt das Tier am Halse oder am Beine in die Höhe. Die Fallgruben werden sorgfältig mit dem Laube verdeckt. Die eingefangenen Tiere werden gespeert und dann verteilt.

Abb. 34. Harpunenspeer aus Mulera. (1/10 d. w. Gr. III E 13769. 190 cm lang.)

Die Vögel werden mit Schlingen gefangen, man schießt auf sie auch mit stumpfen oder vierspitzigen Vogelpfeilen. Die Rebhühner soll man aber auch zu Fuße verfolgen und nach der Ermüdung mit Stöcken totschlagen.

In Mulera, wo man, wohl infolge des Batwa-Einflusses, sehr geschickt jagt,

werden auch viele Ottern gestochen. Man benutzt dazu besondere, mit einem Widerhaken versehene Harpunspeere mit verdicktem Griffende. Diese Harpunen sollen auch bei der Flußpferdjagd benutzt werden. Die Flußpferdjäger suchen an ihr Wild in kleinen Booten heranzuschleichen, was einen sehr gefährlichen, aber sehr hoch angesehenen Sport bildet.

Die für die Jagd so wichtigen Hunde werden in Ruanda sehr geliebt und in großen Mengen gehalten. Jeder Häuptling hat davon eine größere Anzahl. Die Hunde haben besondere Namen, bei denen sie gerufen werden. Wie sehr man an den Hunden hängt, konnte ich bei der Gelegenheit eines Hundediebstahles beobachten. Die Träger unserer zurückkehrenden Verpflegungskarawane hatten einen kleinen Hund gestohlen. Der geschädigte Hundebesitzer scheute sich nicht, drei oder vier Stunden der Kolonne nachzulaufen und übersetzte zwei Seen, hoffend, daß die Träger auf meine nach Westen marschierende Kolonne stoßen würden, und daß er mit Hilfe des Europäers sein Eigentum zurückbekommen würde, was auch tatsächlich geschah. Es wurde mir erzählt, daß der Tod eines Hundes durch ein eintägiges Aufgeben der Arbeit betrauert wird. Es soll jedoch auch vorkommen, daß man für das Totschlagen eines Hundes Blutrache übt. Banyaruanda behaupten nämlich, daß man den Hund dann totschlägt, wenn man dies seinem Besitzer antun will, es jedoch nicht auszuführen wagt.

Die Zahl der in Ruanda gehaltenen Hunde ist sehr groß, deshalb nahmen auch die nach dem Victoria-See zurückkehrenden Träger eine Anzahl Hunde mit. Bei der von mir in Kissaka getroffenen zurückkehrenden Trägerkarawane aus 200 Mann habe ich wenigstens sechzig Stück gesehen. Mehrere waren noch ganz klein und mußten während der zwei bis drei Wochen dauernden Reise auf dem Rücken getragen werden. Einen größeren Beweis der Hundeliebe kann man kaum erbringen.

Abb. 35. Hundeschelle aus Mulera. (1/1 d. w. Gr. III E 13704. 6 cm im Durchm.)

Da die Hunde gewöhnlich nicht bellen, so kommen sie infolgedessen als Wächter weniger in Betracht. Am Halse tragen sie gewöhnlich hölzerne und eiserne Schellen, die Ryangombe geweiht sind (insogera ya Ryangombe). Gleiche Schellen werden auch dem Kleinvieh um den Hals gebunden.

Abb. 36. Hundeschelle aus Ufumbiro. Batwa. (1/1 d. w. Gr. III E 6897. 10 1/2 cm lang.)

Die eisernen Schellen bestehen ganz allgemein aus zwei aneinandergebogenen Metallblättchen, zwischen denen ein schmaler, an seinen beiden Enden abgerundeter Schlitz offen bleibt. Zwischen den beiden Blättern befindet sich ein Hohlraum, in welchem eine kleine Kugel liegt. Ihr Durchmesser ist groß genug, um durch den Schlitz nicht hindurchfallen zu können. Die Schellen werden

mit Hilfe von zwei kleinen Löchern am Halsbande befestigt. Eine Schelle von ganz abweichender Form wurde durch Hauptmann W. v. GRAWERT in Ufumbiro bei den Batwa gefunden. Sie besteht aus einem schmalen, dreieckigen Stücke Eisenblech, dessen untere Enden zueinander zylindrisch gebogen sind. Die Spitze ist dünn geschmiedet und nach unten gebogen, an ihr hängt der Stöckel.

Bienenzucht. Die Bienenzucht spielt in Ruanda eine recht bedeutende Rolle, da viel Honig zur Bereitung von Getränken als Zusatz zum Bier benutzt und in der Form von Honigwasser getrunken wird.

Die Bienen werden in fast zylindrischen, mit Lehm beworfenen Körben (imbutiba) gehalten. Die Bienenkörbe haben am Boden zwei kleine Ausgangsöffnungen für die Bienen. Das breitere Ende des Korbes bildet die, beim Ausheben des Honigs benutzte, Zugangsöffnung und bleibt sonst abgeschlossen. Beim Ausschneiden des Honigs werden besondere langgestielte Messer (ulukezo), mit kurzen, breiten Klingen, benutzt. Die Bienenkörbe werden meistens auf trockenen hohen Bäumen in größeren Mengen angebracht; man stellt sie aber auch auf dem Boden in der Nähe der Hütten auf besonderen kreuzbeinigen Gestellen immer horizontal auf. Es gibt im Lande auch viel wilde Bienen.

Abb. 37. Bienenkorb aus Mulera. (1/4 d. w. Gr. III E 13680. 80 cm lang.)

Abb. 38. Honigmesser aus Mulera. (1/4 d. w. Gr. III E 13738. 28 cm lang.)

Die bienenreichste Provinz ist Mulera. In Bgisha wird viel Honig auch zum Verkauf angeboten. Der Preis betrug zwei Yard Stoff für zwei Töpfe zu ca. drei Liter jeder.

Fischerei. An den Seen von Ruanda kommt auch eine Fischerbevölkerung vor. Das Arbeiten mit dem Netz wird „kuteguza ifi" genannt. Die Netze werden je nach ihrer Sorte mit den Namen „ujegwi", „chera" und „amahinda" belegt. Die Reusen nennt man „birumbi". Sie bestehen aus einem längeren Konus, in dem ein zweiter stumpferer mit abgeschnittener Spitze eingelegt ist. Beide werden mit ihren verdickten basalen Rändern anein-

Abb. 39. Fischreusen aus Mulera. (1/4 d. w. Gr. III E 13743. 65 cm lang.)

ander befestigt. Das Angeln wird weniger ausgeübt; der Angelhaken ist jedoch bekannt, wenn man ihn auch nicht sehr häufig sehen kann.

Abb. 40. Angelhaken aus Mukinjaga. (1/1 d. w. Gr. III E 6896. 17 cm lang.)

Die Boote sind einfache Einbäume. Sie haben eine Länge von ca. fünf Metern bei einer Breite von ca. fünfzig Zentimetern und besitzen sehr unregelmäßige Formen, da man die natürlichen Krümmungen des Baumstammes nicht zu beseitigen pflegt. Der Kiwu-See wird mit wesentlich größeren Einbäumen befahren. Die Seiten des Bootes werden in Ruanda nicht durch das Aufsetzen von Planken, wie in Kiziba und Buganda z. B., erhöht. Der durch die Ränder des ausgehöhlten Stammes gebildete Bord ist höher oder niedriger, je nachdem, ob der Schlitz breiter oder enger ist.

Abb. 41. Ruder aus Mulera. (1/11 d. w. Gr. III E 13731. 181 cm lang.)

Die Ruder (ngashi) werden oft sorgfältig geschnitzt und mit einer Verstärkungsrippe (mugongo) auf dem Blatte (ulubega) versehen. Man hält sie frei in der Hand beim Stiele (ulati).

Die Ruderer sitzen bei der Arbeit auf den Bordkanten. Nur auf den großen Kiwu-Einbäumen gab es hängende Bänke, die an ihren beiden Enden mit Stricken in den Löchern des Bootrandes befestigt waren. Die letzteren werden mit dem Schlagbohrer (umutwero) hergestellt.

Gewerbe. Das Gewerbe hat in Ruanda, wie das durch die Untersuchungen von Dr. R. KANDT[1]) schon festgestellt worden ist, den Charakter des Handwerkes oder des Lohnwerkes. Nur wenige Zweige des Gewerbes bleiben auf der Stufe des Hausfleißes stecken, wo nur gelegentlich der im Haushalte erzeugte Überschuß veräußert wird. Das letztere trifft z. B. für die Flechterzeugnisse, die vorwiegend von den Frauen überall hergestellt werden, zu.

Das Bier, das in jedem Haushalte gebraut wird, kommt nur in den seltenen Fällen an befreundete Konsumenten, wo es als Belohnung für das Pflegen der Kühe und für die gepachteten Felder figuriert, zur Verausgabung.

Die Töpferei und die Holzindustrie haben den Charakter eines Handwerkes, das für den Marktbedarf arbeitet, wogegen die Metalltechnik den Charakter eines Lohnwerkes hat, das auf bestimmte Besteller berechnet ist. Die Draht-

[1]) Vgl. die Monographie: Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, S. 329—372.

zieher sollen dabei manchmal, ebenso wie die Rindenstoffschlaps ihre Arbeit auch bei den Auftraggebern verrichten.

Bierbereitung. Die Herstellung des Bieres spielt in dem wirtschaftlichen Leben von Ruanda eine nicht unbedeutende Rolle, ja die Hauptmasse der Bananen wird nur zu diesem Zwecke angebaut. Trinken tut jedermann, ja jeder, der für sein Ansehen sorgt, muß sich von Zeit zu Zeit betrinken und in dieser Weise seinen Wohlstand zur Schau bringen. Den Biergenuß im größeren Maßstabe können sich jedoch nur die sehr Wohlhabenden leisten, deshalb knüpft sich an den Biergenuß die Vorstellung einer privilegierten sozialen Stellung.

Vom Säuferdelirium habe ich keine Gelegenheit zu hören gehabt, wenn auch die Häuptlinge immer betrunken schlafen gehen und nicht vor 10 Uhr früh auf den Beinen sind.

Die Banyaruanda bezeichnen das Bier poetisch als den Segen des Gottes (Imana's). Ohne Bier kann man weder geboren noch beerdigt werden. Ohne Bier bekommt man keine Frau, und man wird ohne Bier den Geistern nicht geweiht.

Die Saufereien dauern manchmal sehr lange und beschränken sich nicht auf die Abende. Ich hatte wiederholt Gelegenheit, während der Morgenmärsche, lärmende Siedelungen zu passieren, wo Ausdauernde immer noch beim rühmlichen Werke waren.

Die Folgen des Bierübergenusses haben in Mulera eine sehr große soziale Bedeutung, sie verursachen Totschläge, die wieder Akte der Blutrache nach sich ziehen. Deshalb hört man dort auch ständig vom Totschlagen, mit dem sich die Leute sehr rühmen. Auch die im Rausche Erschlagenen werden zur Zahl der erlegten Feinde gerechnet und durch eiserne konusförmige, am Kopfbande hinten getragene Anhängsel versinnbildlicht (vgl. Abb. 62).

Die Batwa-Töpferkolonie in Kabgaye wurde zur Zeit meiner Anwesenheit daselbst zersprengt, weil zwei Besoffene einen dritten totgeschlagen hatten und später mit sämtlichen Angehörigen vor der Blutrache flüchten mußten.

Es sind nicht die Männer allein, die sich betrinken, auch die Frauen der Wohlhabenden, vor allem die der Batutsi, sollen nicht selten dem Trunke huldigen. Da sie jedoch mit der körperlichen Schönheit auch eine ziemliche Rohheit vereinigen, so hört man nicht selten, daß dieser oder jener Hörige von einer Häuptlingsfrau im unnüchternen Zustande stark verprügelt worden sei.

Man unterscheidet in Ruanda mehrere, recht stark verschiedene Biersorten. Das Bananenbier wird allgemein „nzoga" und das Hirsebier „marwa" genannt. Die einzelnen Sorten werden mit folgenden Namen bezeichnet:

1. „Nzoga" (gewöhnliches Bananenbier).
2. „Marwa ya massaka" (Hirsebier).
3. „Marwa ya buro" (Eleusinbier).
4. „Rwagwa" (Bananenbier mit Hirsemalz gegoren).

5. „Nkangaza" (Bananenbier mit Honigzusatz gegoren).

6. „Uruki" (gekochtes, gegorenes Honigwasser).

Um „nzoga" zu bereiten, werden die noch nicht ganz ausgereiften, grünen, Bananen gepflückt und in der Hütte über den Herd gelegt, oder in einer besonderen Grube zum Nachreifen gebracht. Wenn man eine Grube zum Nachreifen verwendet, so wird neben ihr ein Feuer angezündet, und die Hitze durch geschicktes Hantieren mit einem Deckel in das Loch eingeführt. Nach vier oder fünf Tagen werden die Bananen ganz gelb. Man holt sie dann heraus, schält sie ab und wirft sie in einen hölzernen Trog. Dort werden sie in eine dünnflüssige Lösung aufgearbeitet (vgl. die eingehende Beschreibung dieses Prozesses in der Erklärung zur Tafel 15 im III. Bande, S. 11). In dieser Weise wird die süße, „ndamu" genannte, Sorte der „nzoga" hergestellt. Um eine schärfere Sorte zu erhalten, wird Hirsemalz oder Honig hinzugefügt. In Bugansa und Bgisha sollen die Bananen im kalten, ungekochten Wasser aufgerieben werden.

Um die „nzoga" zur Gärung zu bringen, pflegt man sie entweder in eine durch Feuer erwärmte Grube zu stellen und mit Stroh zu verdecken, oder auch in der Hütte in der Nähe des Herdes oder in einem Winkel, in Bananenblätter eingewickelt, unterzubringen.

Um das Hirsebier zu bereiten, wird das Korn mit einem Aschezusatz vermischt, in Gras eingewickelt, in einen Korb gelegt und in diesem für eine gewisse Zeit ins Wasser eingetaucht und darauf beiseite gestellt. Das Korn keimt auf. Nachdem die Keime genügend entwickelt sind, trocknet man das, zu Malz gewordene, Korn auf der Sonne. Das trockene Malz muß zum Mehle zerrieben werden und ist dann so zur Verwendung bereit. Das Mehl wird im kochenden Wasser aufgemacht und kann, nach der Abkühlung, durch einen Zusatz von Bananenbier, zur schnellen Gärung gebracht werden. Hat man kein Bananenbier, so wird das dünnflüssige Mehlbrei einigemal erhitzt und abgekühlt. Um den Gärstoff herzustellen, wird ein Quantum Mehl in abgekühltem Wasser aufgemacht und beiseite gestellt. Nach fünf bis sechs Tagen ist der Gärstoff fertig und wird dem Bierbrei beigefügt. Nach zwei, drei Tagen kann man anfangen die Marwa zu trinken. Die ungegorene Marwa wird „nsururu" genannt.

Altes Bananenbier ist stärker als das Hirsebier.

Das Bier wird in Ruanda und Bgisha mit Hilfe des Saugrohres (muheha) getrunken. Diese werden in besonderen köcherähnlichen, nur wesentlich kleineren Behältern aufbewahrt

Tabakbereitung. Im Zusammenhange mit dem Bier muß noch das andere Genußmittel, der Tabak, erwähnt werden, wenn er auch keiner anderen Bearbeitung außer dem Trocknen unterzogen wird. Der getrocknete Tabak bildet ein wichtiges Erzeugnis von Bugoye, wo sehr hochgeschätzte Tabaksorten gedeihen, und wo er besonders sorgfältig gepflegt wird.

Der Tabak wird in Tonpfeifen (inkono yi tabi) geraucht. Die alten Frauen sollen aber in Nduga den Tabak auch im flüssigen Zustande genießen. Es wird ein Aufguß hergestellt, und diesen zieht man in die Nase ein. Um das Herausfließen des Genußmittels zu verhüten, wird die Nase in einen gespalteten Zweig eingeklemmt und in dieser Weise verstopft.

Diese Form des Tabakgenusses soll auch im Südwesten des Victoria-Sees bekannt sein und „kirangi" genannt werden. Da man die mit der Flüssigkeit gefüllte Nase in die Höhe gerichtet zu tragen pflegt, so bekommen manchmal die sich stramm haltenden Europäer den Beinamen „Kirangi".

Haschisch ist in Ruanda, wie auch in den übrigen Teilen des Zwischenseengebietes, abgesehen von Buganda, unbekannt. Die Haschischraucher von Bukoba rekrutieren sich hauptsächlich aus der dort ansässigen Baganda-Kolonie.

Flechtarbeiten. Die Flechttechnik erreicht in Ruanda bei weitem nicht das Niveau der Kiziba-Arbeiten. Sie unterscheidet sich nicht von der letzteren im Prinzip; die Ruanda-Erzeugnisse fallen aber durch die weniger geschickte Ausführung auf.

Abb. 42. Schildmattengeflechtmuster aus Ruanda.

Da dieser Gegenstand schon einer eingehenden Behandlung[1]) unterzogen worden ist, sollen hier nur die Typen der Geflechte ganz kurz besprochen werden.

Im Mattenflechten, das die einfachsten Probleme zu lösen hat, — die Geflechte und die Muster brauchen sich an keine Raumformen anzupassen — wird auch hier Vorzügliches geleistet, und die Matten gehören zu den am reichsten ornamentierten Gegenständen.

Es müssen vier verschiedene Typen unterschieden werden:

Die steifen Schildmatten, welche zwischen die Stützbalken des Daches eingeklemmt und zur Herstellung der inneren Scheidewände benutzt werden, gehören zwei verschiedenen Typen an. Der erste besteht aus miteinander durchflochtenen Bambusstreifen, die sich gegenseitig unter geradem Winkel durchkreuzen. Es entstehen dabei Varianten, je nachdem die Horizontalstreifen jeden einzelnen senkrechten Streifen oder jede zwei Streifen voneinander trennen. Beim zweiten Typus wird an die senkrechten Streifen eine Vorderschicht angebunden. Die Streifen der letzteren können die senkrechten Streifen unter verschiedenen Winkeln schneiden, was die Ornamente vermannigfacht.

Die Stäbchenmatten bestehen aus nebeneinander gelegten, aneinander gebundenen steifen Stäbchen. Wenn aber die zum Servieren der gekochten Eleusine in Toro verwendete Matte durch 4 schmale Nähte zusammengehalten wird, hat die Stäbchenmatte in Ruanda nur an den Rändern ganz schmale Nähte. Der

[1]) Kandt, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, SS. 349—359.

innere Teil zwischen den Nähten ist meistens bis auf einen schmalen Saum, der auf beiden Seiten frei bleibt, mit Fasern in Muster durchflochten. Diese Matten werden als aufrollbare Vorhänge der Betteingänge verwendet. Die gewöhnlichen Schilfmatten werden in ähnlicher Weise, wie die eben besprochenen, hergestellt, mit dem Unterschiede jedoch, daß die steifen Stäbchen durch Schilf- und Papyrusbündel ersetzt werden. Die Bündel halten längsläufige Nähte zusammen. Die Schilfbündel pflegt man an einzelnen Stellen mit schwarzen Bananenblattscheiden zu umwickeln, wodurch einfache Ornamente entstehen.

Abb. 43. Stäbchenmattengeflechtmuster aus Ruanda.

Abb. 44. Schilfmattengeflechtmuster aus Ruanda.

Abb. 45. Stäbchenkorb aus Ruanda. (1/4 d. w. Gr. III E 13683. Höhe 33 cm.)

Bei den Körben wiederholen sich dieselben Geflechtstypen. Die größeren Körbe, die im Haushalte zum Aufbewahren und zum Transporte der Lebensmittel dienen, wie auch die Schilde zum Putzen der Hirse und zur Aufnahme des Mehles vom Mahlsteine, die Bienenkörbe, die Umflechtungen der Biertöpfe, ein Teil der geflochtenen Köcher und die Untersatzungen der Gefäße, werden aus dem Geflechte des Typus I hergestellt (vgl. Abb. 42). Den Typus II, wo die senkrechten Streifen durch eine außen verlaufende, angebundene Spirale zusammengefaßt werden, erinnere ich mich nur bei Köchern beobachtet zu haben (vgl. Abb. 153).

Abb. 46. Flechtnadel. (1/3 d. w. Gr. 18 1/2 cm lang.)

Die Reisekörbe zum Aufbewahren der Toilettegegenstände und der Kleinigkeiten werden hergestellt aus zwei Stäbchenmatten, die senkrecht aufeinander

gelegt, zylindrisch zusammengebogen und durch mehrere (gewöhnlich vier), horizontal angebundene, Reifen zusammengehalten werden (vgl. Abb. 45).

Die genähten Körbe bestehen aus aneinandergefügten Windungen eines dünnen Bündels aus feinem Stroh. Das Strohbündel wird mit Bastfäden umwickelt. Diese Umwickelung wird durch die nächste, schon befestigte Windung durchgezogen und in dieser Weise angenäht. Durch das Anfügen einer Windung an die andere entsteht der Korb. Das Loch zum Durchstecken des Fadens durch das Bündel der Windung wird mit einer eisernen Nadel (mhindu), die auch zum Entfernen von Sandflöhen dient, hergestellt. Die Nadel ist am anderen Ende mit einer Platte versehen. Die Platte der Nadel dient zum Anschmiegen und Ausglätten der Umwickelung. Die Muster werden auf dem Korbe, durch Umwickelung gewisser Teile der Windungen mit schwarzen Bananenblattscheiden, hergestellt.

Die feinsten Flechtereien dieser Art findet man auch in Ruanda auf den Deckeln der Milchgefäße. Sie können aber mit denen von Kiziba und Kyanja doch nicht verglichen werden. Etwas gröber werden die kleinen Vorratskörbe (chibo) geflochten.

Wie schon aus den obigen Zusammenstellungen zu ersehen ist, bilden die geflochtenen Gegenstände den Hauptbestandteil der Hausgeräte, und ihre Herstellung nimmt die Frauen sehr stark in Anspruch. Sie werden nämlich hauptsächlich durch Frauen verfertigt, die sich damit in jedem Haushalte beschäftigen. Die feinsten Arbeiten werden durch die Batutsi-Frauen ausgeführt; bei ihnen ersetzen sie unsere Handarbeiten.

Töpferei. Die Töpferwaren stehen ihrer Zahl nach im Mobiliar erst an zweiter Stelle. Sie werden handwerksmäßig durch besondere Fachleute erzeugt, die ausschließlich für fremde Konsumenten arbeiten. Die Hauptmasse der Töpfer im eigentlichen Ruanda bilden die Batwa-Männer. Es gibt dort aber auch Bahutu-Töpfer und -Töpferinnen. In Kissaka habe ich nur Töpferinnen gesehen.

Der Topf wird ohne Drehscheibe gemacht. Die Spuren dieses Hilfswerkzeuges lassen sich jedoch nicht verkennen, da man den Topf auf einer Tonscherbe formt und sie je nach dem Bedürfnis dreht.

Der mit Wasser angemachte Ton ist sehr wenig durchfeuchtet. Die Arbeiterin nimmt von dem Vorrat einen Klumpen und formt mit der Hand aus ihm einen 30 cm langen und zwei bis drei cm dicken Zylinder. Dieser Zylinder wird spiralig nach der Art der, aus Strohbündeln zusammengenähten, Körbe zusammengerollt, und man erhält so den unteren Teil des herzustellenden Gefäßes. Die anschließenden Wülste werden durch das Zusammendrücken von der Innen- und von der Außenseite zusammengeschweißt. Auf die auf diese Weise hergestellten unteren Teile werden weitere Spiralen aufgelegt und festgemacht. So fährt man bis zum Oberrande oder dem Gefäßhalse weiter fort. Wenn der, aus aneinandergefügten und noch gut erkennbaren Spiralen gemachte Topf bis zu Ende fertig-

gestellt ist, wird er in Wasser eingetaucht und mit einem Kürbisstück so lange geglättet, bis die Spuren der Wülste verschwinden. Mit besonderer Sorgfalt werden die oberen Ränder gearbeitet. Man schleift sie mit einem nassen Blatt (von *Acanthus arboreus*) sorgfältig zu, wobei der Topf auf der Scherbe rotiert wird. Auch bei Rotation, diesmal aber ganz langsamer, werden die Verzierungen aufgetragen. Ein aus Gras geflochtener Zylinder wird auf der Gefäßwand abgerollt. In dieser Weise entstehen die primitiven Ausschmückungen. Es werden aber auch geometrische Muster aufgetragen.

Die, in dieser Weise hergestellten, Töpfe werden einige Tage getrocknet und dann erst gebrannt. Zum Brennen sollen die zum Wärmen des unreifen, ungegorenen Bieres verwendeten Löcher benutzt werden. Man brennt die Töpfe jedoch auch im Freien. Die rohen Tonwaren werden dann zu Pyramiden zusammengelegt, mit Brennholz und Gras von Seiten und mit Bananenstämmen von oben belegt und so gebrannt. Die stark wasserhaltigen Bananenstämme behindern das Holz am Brennen, verlangsamen den ganzen Prozeß und sollen infolgedessen dem Springen der Wände der Tonwaren entgegenwirken. Trotzdem hat man stets einen bedeutenden Satz unbrauchbarer Gefäße.

Um die Qualität der Ware zu heben, werden angeblich zum Ton zerstampfte Tonscherben hinzugefügt.

Die Töpfer findet man auf jedem Hügel. In Kissaka, wo es keine Märkte gibt, arbeiten sie nur, um die Bedürfnisse der allernächsten Umgebung zu decken.

Einen Nebenzweig der Töpferei bildet die Herstellung der Pfeifen und der „Liebestöpfchen", winziger Gefäße, in denen die Frauen ihre Amulette, welche ihnen die Liebe ihrer Gatten sichern sollen, tragen. Diese Gegenstände werden aus geknetetem Lehm, durch Aushöhlen mit besonderen kleinen Spaten, hergestellt. Diese beiden Kategorien von Gegenständen tragen, wenn sie verziert werden, vorwiegend nur geradlinige geometrische Ornamente.

Holzgewerbe. Das Holz wird in Ruanda durch stark spezialisierte Handwerker bearbeitet. Am zahlreichsten sind die Gefäßschnitzer vertreten. Sie werden „babazi" in der Nähe des Ndisa-Berges, wo sie in großer Zahl vorkommen, genannt. Die ebenfalls dort ansässigen Pfeil- und Bogenmacher werden „batanazi" geheißen. Dr. KANDT[1]), der in seiner oben zitierten Monographie die Holzindustrie Ruanda's sehr eingehend behandelt, sagt bezüglich ihrer Differenzierung: „So pflegen die Pfeilarbeiter auch Bogen zu machen, andere Arbeiter auch Salztröge für Vieh und Trommeln, andere wieder haben als Spezialität Getreidemörser, Stühle und Bienenkörbe. Ferner bilden oft Speiseschalen, Rührlöffel, Schöpflöffel und Keulen zusammen das Arbeitsgebiet besonderer Spezialisten. Spezialisten für nur einen Gegenstand sind diejenigen, die Milchgefäße, Köcher und Zierbüchsen für Pomberöhrchen herstellen. Die Arbeiter von Milchgefäßen machen bisweilen auch Pombetröge[2]).“

[1]) KANDT, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, S. 335—348.
[2]) Ebenda S. 342.

Trotz der so weitgehenden Spezialisierung sind die Erzeugnisse im großen und ganzen recht roh und unterscheiden sich sehr ungünstig von den am Victoria-See hergestellten Gegenständen. Am zierlichsten und sorgfältigsten werden noch die kleineren Gefäße und vor allem die Dosen für Butter geschnitzt.

Beim Ausführen der Arbeiten werden außer der Axt (Abb. 29, 30), dem Buschmesser (Abb. 31) und dem Schlagbohrer, auch Hohlbeile von verschiedener Größe, mit quergestellten Schneiden, und Raspelmesser, zum Ausschaben des Innern und der Außenseite der Gegenstände, angewendet.

Abb. 47. Schlagbohrer aus Ruanda. (1/4 d. w. Gr. III E 9884 34 cm lang.)

Metallgewerbe. Das Metallgewerbe hat sich in Ruanda in die gewöhnliche Schmiedekunst und in die Drahtzieherei differenziert. Die Eisengewinnung spielt keine Rolle. Man ist fast ausschließlich auf importiertes Metall angewiesen. Es wird vor allem Eisen aus Busindja und aus dem Congo-Staate, das in der Form von Hacken eingeführt wird, bearbeitet. Ein paar verlassene Erzgruben habe ich auf dem Ndisa-Berge gesehen. Etwas Eisen wird in Kissaka gewonnen. Dr. KANDT[1]) berichtet sogar von einem Schmelzofen mit 16 Blasebälgen. Wesentlich reicher am Eisen soll Bgisha sein. Doch scheint sie mir in der Hauptsache den Import des Congo-Eisens zu vermitteln.

Die Schmiede bilden in Nduga eine Art Korporation. Sie sind durchwegs Bahutu, gehören aber zu verschiedenen Clans, wenn auch ihre Beschäftigung im allgemeinen erblich ist.

Die Schmiede werden im Lande sehr gefürchtet, wenn man auch eine gewisse Verachtung ihres Handwerks nicht verleugnen kann. Unter den Bahutu erfreuen sich die Schmiede ihres Reichtums wegen eines unleugbaren Einflusses. Die Frauen z. B. halten die Schmiede, wie es scheint, für große Kavaliere und Lebemänner, die stets im Bier schwelgen. Im allgemeinen werden sie jedoch für Geister des Unfriedens und für ewige Rebellen gehalten. Auch ihre Ehrlichkeit wird nicht besonders gerühmt. Man überwacht sie daher mit größter Sorgfalt während der ganzen Arbeit, wenn man ihnen, wie das meistens der Fall ist, mitgebrachte eigene Rohstoffe zum Bearbeiten überläßt. Bei jeder Gelegenheit sollen sie Eisen stehlen. In dieser Beziehung erfreuen sie sich eines sehr schlechten Rufes.

Abgesehen von ihrem eigentlichen Gewerbe betätigen sich die Schmiede noch anderweitig, so z. B. in der gynäkologischen Praxis, und sind durch ihre Fertigkeit im Fruchtabtreiben bekannt. Sie spielen auch im Kultus eine hervorragende Rolle. Der Vorgesetzte der königlichen Leibschmiede soll eine hohe Stellung einnehmen und im Hofzeremonial eine wichtige Rolle spielen.

---

[1]) Ebenda S. 360.

Das Schmiedewerkzeug bilden die Blasebälge, die eisernen Hämmer und ein Amboß aus Stein, von solchen Kleinigkeiten, wie einer Scherbe mit Wasser, einen Pinsel zum Bespritzen der Kohlen, wenn die Oberfläche zu glühen anfängt, und endlich Holzstücken zum Einklemmen des bearbeiteten glühenden Eisenstückes abgesehen.

Der Blasebalg (vgl. Taf. 12, Band III) besteht in Kissaka aus einem Tongefäß, dessen Becken unten in eine längere horizontale Röhre ausläuft. Die obere Öffnung des Beckens wird mit einem Ziegenfell zugebunden. Dieses kann mittels eines, in ihrem Zentrum befestigten Stockes, nach oben gehoben, wie auch in das Becken hineingestoßen werden. Die schwankende Größe des mit dem Ziegenfell abgeschlossenen Raumes erzeugt einen wechselnden Luftstrom in der horizontalen Ausgangsröhre des Blasebalgbeckens. Zwei Blasebälge bilden ein Ganzes, das von einem Manne bedient wird und zur gewöhnlichen Schmiedearbeit ausreicht. Dr. KANDT[1]) bildet einen doppelten hölzernen Blasebalg, wie ich ihn nur in Nord-Ruanda und bei den Bakondjo wiederholt gesehen habe, ab. Vor die zwei Blasebalgöffnungen wird ein, im Herde vertiefter Tontrichter hingelegt. In ihn schlagen abwechselnd aus den beiden Öffnungen Luftstöße, die durch das schnelle Hineinpressen der Fellmembranen erzeugt werden. Diese erreichen infolge ihrer Wucht mit Hilfe des Trichters die Mitte des Herdes. Die durch den Blasebalg eingesogene Luft kommt dagegen aus dem Spalt zwischen dem Blasebalg und dem Trichter. Auf diese Weise wird die Luft mit den primitiven Blasebälgen ohne Klappen in einer Richtung durch den Trichter in die Mitte des Herdes eingeführt.

Abb. 48. Schema der Luftbewegung zwischen Blasebalg und Trichter.

Die Hämmer bestehen samt dem Stiel aus einem Stück Eisen. Der Stiel ist im Querschnitte rund, während der Hammer selbst mit vier zum Schlagen bestimmten Rippen ausgestattet ist und infolgedessen einen x-förmigen Querschnitt aufweist.

Der Amboß wird durch einen flachen Stein gebildet. Auf ähnlich geformten Steinen sitzen die Schmiede neben dem Amboß während der Arbeit.

Zangen sind nicht vorhanden. Das glühende Eisen wird in ein sehr wasserreiches Bananenstammstück eingefaßt und in dieser Weise beim Schmieden in der Hand gehalten. Wenn der bearbeitete Gegenstand eine Spitze hat, so wird diese in ein Holzstück eingetrieben, und er kann mit Hilfe des improvisierten Griffes ganz bequem in der Hand gehalten werden.

Um ein Stück Eisen abzuschneiden, biegt man es so lange nach beiden Richtungen hin, bis es bricht und entzwei fällt. Zum Schmieden werden auch die Kanten und die Unebenheiten des Amboßsteines benutzt. So wird z. B. das Eisen auf der zu schneidenden Stelle dünner geschmiedet, dann wiederholt in

[1]) KANDT, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, S. 362.

beiden Richtungen gebogen und zum Schlusse über eine Vertiefung des Ambosses gelegt und durch einige schwache Stöße getrennt.

Die recht hoch entwickelte Schmuckindustrie ruft eine bedeutende Produktion des sehr dünnen Eisen- und Kupferdrahtes hervor. Mit diesen werden die Arm- und Beinringe umwickelt.

Das bearbeitete Metallstück wird zunächst zu einem recht dicken, unebenen Drahtstück geschmiedet, und dieses wird später durch Ziehen beliebig dünn gemacht.

Das eigentliche Drahtziehen wird in kaltem Zustande besorgt. Den geschmiedeten Draht zieht man wiederholt durch ein konisches Loch in einem eisernen Bolzen. Die schmälere Ausgangsöffnung des Bolzens wird allmählich durch Zuklopfen des weichen Metalls verengt. Da beim Durchziehen des Drahtes durch den Bolzen seine Ränder immer mehr nachgeben, so ist der Draht am hinteren Ende dicker als am vorderen. Um diesen Fehler auszubessern, wird der Draht abwechselnd mit einem und dem anderen Ende in die Öffnung des Bolzens eingesteckt und durchgezogen.

Hat man die Öffnung im Bolzen durch kaltes Klopfen verengt, so muß man zunächst ihre unebenen Ränder in Ordnung bringen. Zu diesem Zwecke dient eine scharf zugeschliffene, in einen hölzernen Griff gefaßte Nadel. Die Nadel wird von beiden Seiten in die Öffnung eingesteckt und gedreht. Dann wird das Ende des Drahtes zugeschliffen, damit es durch die Öffnung im Bolzen durchgesteckt werden kann. Ist dies geschehen, so kann man das herausragende Ende mit Hilfe einer besonderen Vorrichtung festklemmen. Der Draht wird nämlich ohne Zange gezogen.

Der Klemmer, durch welchen die Zange ersetzt wird, besteht aus einem V-förmigen Stück Eisen. Das vorstehende Drahtstück wird zwischen seine beiden Äste gesteckt und eingeklemmt. Zu diesem Zwecke wird auf diese ein Eisenring aufgetrieben. Der Klemmer muß dann vom Bolzen ein wenig abgezogen werden. Ist das geschehen, so wird der Bolzen, solange der Draht noch genügend dick und stark ist, gegen einen vergabelten, in den Boden eingegrabenen Baumstamm gestützt. Deshalb hat auch der Bolzen zugeschnittene hintere Ränder an den beiden Enden. Diese Vorrichtung verhindert das Gleiten, da sich diese Teile genauer den Einschnitten auf der Holzgabel anpassen können.

Den Klemmer greift man, der Bequemlichkeit halber, mit einer Schlinge aus Bananenblattscheiden fest und zieht einen Meter weit ab. Nachher wird um den Draht selbst eine Schlinge gewickelt. Diese Umwickelung ist so angelegt, daß sie ungehindert in der Richtung des Bolzens gleiten kann, beim Zurückziehen, in zugedrückter Hand, aber den Draht faßt und ihn lang zieht. Das Abziehen des Drahtes dicht am Bolzen schützt gegen Riß. Beim feinen, schwachen, dünnen Draht wird der Klemmer gegen die Holzgabel gestützt, und der Bolzen mit der Hand auf dem Drahte abgezogen. Dabei läßt man den Draht hin und her gleiten, wenn irgendeine Stelle einen größeren Widerstand leistet.

Dicker Draht wird beim Ziehen erwärmt. Doch die Temperatur ist hier eine ganz niedrige, da die Hauptoperationen, wie das Zuschleifen der Spitze und das Klemmen, mit der Hand besorgt werden. Dicker Draht wird beim Ziehen mit Steinen abgerieben, und der Arbeiter läßt auf ihm wiederholt die, mit Steinen gefüllte, Hand gleiten. Das geschieht angeblich deswegen, um ein stärkeres Steckenbleiben des Drahtes, also ein stärkeres Ausziehen des Drahtes, herbeizuführen. Dünner Draht wird mit Fett eingerieben, um das Steckenbleiben, welches ein Reißen des Drahtes zur Folge haben könnte, zu vermindern.

Der fertige Draht wird in größere Rollen zusammengewunden.

Rindenstoffbereitung. Die Herstellung des Rindenstoffes (mpuzu) ist in Ruanda, wie es scheint, im Rückgange begriffen. In Ruasa z. B. hatte ich nur einmal Gelegenheit, ein Stück Rindenstoff zu sehen, und zwar zu einem Sack verarbeitet. Wegen der großen Zahl der mir dort zum Kaufe angebotenen Rindenstoffschläger, bin ich eben gezwungen anzunehmen, daß dieser Zweig der einheimischen Industrie, wenigstens in Mulera, stark zurückgeht.

Abb. 49. Rindenstoffschläger aus Ruanda. (1/4 d. w. Gr. III E 9964. 30 1/4 cm lang.)

Abb. 50. Rindenstoffschläger aus Mulera. (1/4 d. w. Gr. III 13105. 34,5 cm lang.)

In der Nduga, wo die Bevölkerung wesentlich ärmer ist, sieht man viel Rindenstoff. Da aber der Rindenstoff nach der Art der teueren Fellkleidung getragen wird, so könnte man annehmen, daß er hier gegenwärtig nur ein Surrogat des Felles darstellt. Andere Gründe sprechen doch zugunsten der Ansicht, daß die ursprüngliche Bekleidung durch Rindenstoffe gebildet wurde. In Mulera hat man mit dem Steigen des Wohlstandes, welchen man im Wirkungskreise der Mission Ruasa beobachten konnte, auf Rindenstoffe verzichtet und die Fellkleidung angelegt.

Die im Wasser aufgeweichte Rinde besonderer Fikusarten wird auf einem, als Unterlage dienenden Stamme dünn und breit mit einem Hammer geschlagen. Die Hämmer (imango) haben zwei Formen. Der Hammer der einen Sorte sieht wie ein Zylinder mit Kreisfurchen am schlagenden Ende aus und weist einen verdünnten Griff auf. Bei der anderen Art ist der Schläger konisch und wird, wie bei den Äxten und Hacken, in einem Stiele befestigt. Die Schlagfläche ist hier ebenfalls gefurcht, die Furchen kreuzen sich aber.

Die Rindenstoffe werden in Ruanda sehr roh gearbeitet und unterscheiden sich sehr ungünstig von den Erzeugnissen Kiziba's.

Fellbearbeitung. Um eine Kuhhaut als Kleidungsstück verwenden zu können, muß man sie einer mühsamen Bearbeitung unterziehen. Sie muß weich und geschmeidig gemacht werden, sonst ist sie unverwendbar.

Das dem Tiere abgeschundene Fell wird zunächst an der Sonne getrocknet und darauf im Wasser aufgeweicht. Ist das Fell weich geworden, so muß es aufgehängt werden, damit es abtropfen kann; nachher wird es auf dem Boden ausgespannt, und zwar mit den Haaren nach unten. Die Haut pflegt man mittels kleiner Holzpflöcke zu befestigen, die durch den Fellrand durchgesteckt und, nachdem das Fell gespannt worden ist, in den Boden mit einem Stein eingetrieben werden. Dann wird das Fell mit einem Schaber (mbaro) gesäubert. Dieser Prozeß wird als „kuhara" bezeichnet. Die erste Schicht, die sich ablöst, wird „imishishwa" genannt. Das beim zweiten Schaben Abgehende heißt „imiharamuro", das beim dritten abgelöste — „inkuru". Daraufhin wird der durchlöcherte Rand abgeschnitten, das Fell mit Kuhmist eingerieben und so zwei bis drei Tage liegen gelassen. Später wird das Fell mit „minyonza" gekämmt und geglättet, um die Haare in Ordnung zu bringen. Diese Operation heißt „kubiutsa inshundo zinganda". Das so vorbereitete Fell wird mit Butter eingeschmiert und mit, im Wasser aufgeweichter, roter Erde (kitaka ch'inkanda) begossen. Die nach der Austrocknung haften gebliebenen Partikeln werden mit Butter vermischt. Auf dem so fertiggestellten Fell werden noch Muster mit Rindersehnen mittels einer Eisennadel aufgenäht. Diese Arbeit wird „kukana nganda" genannt. Die dazu verwendete eiserne Nadel besaß ursprünglich kein Nadelloch. Sie bildete infolgedessen eine Art Pfriem, der auch zum Entfernen der Sandflöhe (mafunza) verwendet wird und mit einem Messer zum Schneiden der Felle am anderen Ende versehen ist. Das Fell muß noch parfümiert werden. Dazu verwendet man das wohlriechende Holz „imibavu ihumura". Das Holz pflegt man auf glühenden Kohlen in einer Scherbe (luggio) zu brennen. Über dem Feuer wird ein weitmaschig geflochtener Korb (lutete) wie eine Kuppel, den Boden nach oben, gelegt. Auf dem Korbe breitet man das bearbeitete Fell, das in dieser Weise eingeräuchert wird, aus. Damit ist die Bearbeitung zu Ende gebracht. Ziegen- und Schaffelle werden weniger sorgfältig bearbeitet, doch nach demselben Prinzip.

Abb. 51. Pfriem aus Mulera. (1/2 d. w. Gr. III E 13732. 24 1/2 cm lang.)

Güteraustausch. Die Arbeitsteilung befindet sich in Ruanda auf einer verhältnismäßig hohen Stufe. Schon die sozialpolitischen Momente erzeugen eine Verschiedenheit der Beschäftigungen bei den unterjochten Bahutu und den herrschenden Batutsi. Man darf aber nicht vergessen, daß der Ackerbau der Bahutu und die Rinderzucht der Batutsi hier als innerlich unabhängige und wirtschaftlich nur wenig miteinander verknüpfte Erscheinungen auftreten.

Die Arbeitsteilung ist hier nicht genügend weit vorgeschritten, daß in Ruanda die ökonomische Abhängigkeit eine Rolle spielen könnte, von der Konzentration des Vieh- und Bodenbesitzes in den Händen des Königs abgesehen. Das meiste wird für den eigenen Gebrauch zu Hause verfertigt. Der Güteraustausch ist, absolut genommen, nicht besonders bedeutend, und man ist in der Ausbildung des Geldwesens, das die gegenseitigen Verhältnisse der einzelnen Güter zueinander zum Vorschein bringt, nicht weit gekommen.

Die Gegenstände des Austausches bilden, abgesehen von den Nahrungsmitteln, Eisenhacken, Tabak, Baumwollstoffe, Felle, Salz, Messing- und Kupferdraht, Glasperlen, diverses Hausgerät, Waffen und mit gewissen Einschränkungen auch Frauen und Vieh.

Von diesen Gütern haben sich vor allem die Eisenhacken, Perlen und Vieh als Wertmesser entwickelt. Die einzelnen Wertmesser werden aber je nach dem einzuschätzenden Gute angewendet, und man ist zur Bestimmung und Fixierung des relativen Verhältnisses der verschiedenen Werteinheiten noch nicht gekommen.

Für größere Gegenstände gilt als allgemeine Werteinheit die Hacke. So spricht man von einer guten Ziege für zwei bis vier Hacken, von einem Feld, dessen Pachtpreis für zwei Kulturen eine Hacke beträgt usw.

Als kleinere Werteinheiten dienten zur Zeit meiner Anwesenheit erbsengroße, vergoldete Glasperlen. Diese ersetzten die am Victoria-See verbreiteten Kauri-Muscheln und hatten ungefähr denselben Wert. Man nahm aber bei Zahlungen auch andere Perlensorten an. Die kleinen roten, in Urundi sehr beliebten „sam-sam" pflegt man dagegen in Ruanda nicht anzunehmen. Von Kissenji aus werden noch etwas größere, blaue und ebensogroße, aber zweimal längere, weiße Perlen vertrieben. Ihr Wert ist wesentlich (zweimal ca.) niedriger, als der der vergoldeten Erbsenperlen. In Kissaka und Nduga konnte ich zu Kaufzwecken kleine weiße Perlen (mit einem Durchmesser von zwei bis drei mm) verwenden. Die blaugrünlichen runden Perlen (mit einem Durchmesser von acht mm) wurden dagegen nirgends angenommen. Früher sollten sie sich im Land hoher Schätzung erfreut haben.

Die vergoldeten, erbsengroßen Perlen werden, ebenso wie die Kauri-Muscheln, denen sie im Werte nahe kommen, zu 50 oder 100 auf eine Schnur angereiht. Diese Schnüre gelten als Zähleinheiten. Die großen werden als „runigi rulerule", großes Halsband, die kleinen als „runigi rugwisi", kleines Halsband, bezeichnet.

Gelegentlich benutzt man noch als Wertmesser Stücke von Messing- und Kupferdraht. Als Maßeinheit für Kupferdraht dient „ntamba", die maximale Entfernung zwischen den Spitzen des ersten und dritten Fingers.

Mit dem Fellhandel dringt in das Land eine neue Werteinheit, das ist die Rupie ($^1/_{15}$ £), die hier die Form des weißen Baumwollstoffes (Amerikani) im Ausmaß von zwei Klaftern hat, von den Küstenhändlern „doti" genannt wird

und nur in zwei Stücke zu einem Klafter (upande) getrennt werden kann. 1000—1200 vergoldeter erbsengroßer Glasperlen kommen dem „doti" ungefähr gleich.

Bei den Frauenkäufen der Batutsi dienen Kühe und Biertöpfe als Zähleinheiten. Bei den Frauenkäufen der Bahutu Süd-Ruanda's werden als Wertmesser Eisenhacken (Spatengeld) benutzt, während die Bahutu des Nordens, vor allem die von Mulera, den Wert der Frauen nach Kühen messen.

Preise. Die Preise zeigen im Lande bedeutende Unterschiede und sind großen Schwankungen unterworfen. Der Wert der europäischen Gegenstände ist im starken Sinken begriffen. Um der relativen Wert der einzelnen Gegenstände kurz zu charakterisieren, werde ich einige Preise, in den entsprechenden Einheiten ausgedrückt, zusammenstellen:

Kleine Hütte	1 große Ziege.
Großer Topf Bier	1 Hacke.
Schwert (ngota)	1 kleine Hacke.
Wasser- oder Kochtopf	$^1/_8$—$^1/_{12}$ einer Hacke.
Hacke	150—250 vergoldete Perlen im Jahre 1907. Die letzteren schwanken im Preise sehr, je nach der Mode.
Matte	$^1/_3$—$^1/_4$ einer Hacke.
Tagelohn eines Mannes	$^1/_8$ einer Hacke.
Blatt Tabak	$^1/_{250}$ einer Hacke.
Klafter Stoff (upande amerikani)	2 Hacken.
Last Tabak aus 400—600 Blättern.	1 „upande".

Der Tabak von Bugoye und Bushiru kommt in den Handel in Paketen zu 50 Blatt. Gegen 10 Pakete werden zu einer Last vereinigt. Gewöhnliche Tabaksorten, die man überall anbaut, spielen im Handel keine Rolle.

Elefantenzahn	bis 100 Ziegen.
Ziege	2—4 Hacken.
Schaf	2—3 Hacken.
Junger Stier	8—11 Hacken.
Kalb	2—5 Hacken.
Junge Kuh	15—20 Ziegen oder 2 Stiere. Einer von derselben Größe, der andere etwas größer.

Handel. Bei der Betrachtung des Handels von Ruanda muß man scharf zwischen dem Fellhandel und den übrigen Formen des Güteraustausches unterscheiden.

Der Fellhandel hat in den viehreichen Ländern von Innerafrika den Charakter eines reinen Exportes, ja eines Raubhandels. Mit Fellen werden die eingeführten

europäischen und indischen Baumwollstoffe, Glasperlen, Messing- und Kupferdraht und die anderen fast durchwegs unproduktiven Dinge bezahlt.

Besorgt, daß die Viehbestände den verhältnismäßig hohen Fellpreisen zum Opfer fallen könnten, hat die Regierung den Händlern verboten die Grenzen von Ruanda und Urundi zu überschreiten. Trotz dem großen Risiko, da gefaßte Schmuggler mit der Konfiskation ihrer Waren und mit dem temporären Freiheitsverlust ihr Vergehen büßen müssen, kamen doch, durch die großen Gewinne angelockt, aus Karagwe nach Kissaka eingeborene Händler, um Felle einzukaufen. Diese wurden den indischen Ladenbesitzern in Kafuro weiter verkauft.

Ich begegnete im Süden vom Mohasi-See einer Händlerkarawane aus 10 Mann. Sie trieben einige Rinder und Ziegen und schleppten auf den Köpfen Ballen zusammengerollter Felle. Die Leute waren mit einem Paß von Bukoba nach Kafuro ausgerüstet und setzten die weitere Reise auf eigenes Risiko fort. Um sich vom Verdacht, Vieh gestohlen zu haben, zu reinigen, erzählten sie viel von den hohen gezahlten Viehpreisen. Diese betrugen 10 „doti" Amerikani für einen Stier und 1 „doti" für eine Ziege.

In der Nähe von der Mission Nsasa hält sich auch ein Muganda-Händler sogar ständig auf. Er hat sich durch seinen langen Aufenthalt daselbst eingebürgert.

Der Umfang dieses Schmuggelhandels muß recht bedeutend sein, da alle Batutsi mit Baumwollstoffen bekleidet waren. Daß diese Stoffe in der Hauptsache aus den Militär- und Handelsstationen am Kiwu-See (Kissenji und Ischangi) stammen könnten, ist unwahrscheinlich.

Abgesehen von dem Fellhandel gibt es noch einen alten, bodenständigen, auswärtigen Handel. Es werden Eisenhacken aus dem Congo-Staate und Salz vom Edward-See bezogen; dafür wird vorwiegend mit Ziegen gezahlt. Mit Ziegen zahlt man auch für das aus dem Congo-Staate geschmuggelte Elfenbein und Kautschuk.

Der innere Handel besteht vor allem im Austausche der Landeserzeugnisse zwischen den Produzenten und Konsumenten. Man treibt Tauschhandel mit Nahrungsmitteln, Eisen, Tonwaren, Kleinvieh, Salz u. a.

Die Leute von Issawi beziehen ihr Salz aus Njaruguru, wohin es aus Urundi gebracht wird. Ihre Hacken werden in Mukinjaga gekauft. Diese Provinz bildet eine Zwischenhandelsstelle, da die Ware aus Bunyabungu importiert wird. Die Nordprovinzen beziehen das Eisen aus Bgisha und das Salz aus Katana am Edward-See, wo große Märkte mit Salz von Katwe abgehalten werden. Es wird aber auch im Lande Salz gebrannt und zwar in Mulera und nach Dr. KANDT[1]) in einer Südbucht des Kiwu. Ob Busindja-Salz[2]), das in Kigoma im Westen

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 513.

[2]) CAPUS, J. P., Eine Missionsreise nach Uha und Urundi. Petermanns Mitteilungen 1898, S. 285.

von Mumurumba an der Südgrenze von Ujungu gewonnen wird, nach Ruanda kommt, ist mir unbekannt.

Kupfer wird in geringen Mengen aus Urundi und in größeren aus Busindja als Zahlung für Elfenbein eingeführt. Ziegen werden aus Mulera, Kissaka und Njaruguru exportiert. Die letzteren stammen aus Urundi. Die besten Tabaksorten exportiert lastenweise Bugoye. Schafe werden aus Mulera ausgeführt. Die schönsten Matten liefert Mukinjaga. Die farbigen Matten der Batutsi werden in Nduga gemacht. Die Bambuskörbe erzeugt man in Bwischascha, Bugoye und Mulera. Die Otterfelle exportiert Ndorwa. Die schönsten Speere und die besten Pfeile werden am Ndisa-Berge verfertigt. Alle diese Waren bilden den Gegenstand des inneren Handelsverkehrs.

Diesen Handel besorgen die einheimischen Zwischenhändler, die im Gegensatze zu den fremden Händlern (bachuruzi) mit dem Worte „bagenza" bezeichnet werden. Sie unternehmen oft mehrtägige Reisen, um ihre Kunden und weit entfernte Märkte zu besuchen. Sie vermitteln den Austausch zwischen Mulera, Nduga und Katana am Edward-See und tauschen hauptsächlich Kleinvieh, Eisen, Salz und Tabak aus. Die Bagoye vermitteln den Handel zwischen Bugoye und Bunyabungu und tauschen im großen Umfange Hacken gegen Mulera-Ziegen ein.

Die Bagoye sind vorurteilsfreie Kaufleute. Sie brachten mir z. B. zum Verkauf Schädel, als sie mich dort mit Schädelsammeln beschäftigt gesehen haben. Es traute sich allerdings niemand den Schädel anzufassen. Man trug ihn entweder auf einem Stocke oder in einem Bananenblatte. Auf den Gedanken, für Schädel Bezahlung zu verlangen, kam zwar zuerst ein elfjähriger Junge. Diesem folgten andere, auch Erwachsene waren darunter, als sie sahen, daß der Junge gut bezahlt wurde. In kurzer Zeit wurden über 200 Schädel eingeliefert.

Es muß aber hervorgehoben werden, daß es durchaus nicht alle waren, die sich für diesen Handel begeistert haben. Nach genauerer Untersuchung stellte es sich heraus, daß sämtliche Schädelsammler Leute sehr niedriger Schichten waren. Es waren „bagaragu"[1]) der anderen und Weisen, die als Halbeklaven in den einzelnen Haushalten eine Unterkunft fanden. Nach einigen wenigen Tagen hörte jedoch das Schädelsammeln ganz auf. Die Jungen der Mission wollten nämlich mit einem, der Schädel gesammelt hatte, nicht zusammen essen. Als sich diese Nachricht verbreitet hatte, konnte ich bald keine Schädel mehr bekommen, und der letzte Sammler wurde verprügelt.

Die Leute interessierten sich sehr zu erfahren, wie teuer die Schädel in Europa bezahlt werden.

Noch jetzt sollen aus Ruanda Menschen exportiert werden, und zwar nicht als freiwillige Emigranten und vorübergehende Arbeiter, sondern als Sklaven. Über diese dunkle Frage konnte ich nur weniges erfahren. Bei der Institution

[1]) Klienten.

der Kaufehe ist es sehr schwer, die Grenze zwischen einer gekauften Sklavin und einer gekauften Frau zu ziehen. Es wird in Kissaka erzählt, daß die Bassuwi in größerer Zahl Frauen zu kaufen kommen und sich in der Landschaft Lukira aufhalten. Die Frauen sollen von ihnen weiter nach Tabora verkauft werden.

Dr. KANDT erwähnt [1]), daß es im Nordwesten des Landes einen regelrechten Sklavenimport gibt. „Alljährlich verkaufen die Wahunde, weil ihr Land zu klein für ihre großen Familien ist, aus Nahrungsmangel Hunderte ihrer Kinder als Sklaven nach Ruanda".

Märkte. Die Märkte, wo sich die Leute zu gewissen Tagesstunden versammeln, um ihre Güter auszutauschen, bilden eine nur im Norden und Westen stark verbreitete Einrichtung. Im Osten dagegen scheinen sie ganz zu fehlen. Dr. KANDT will in der Märkteinstitution einen Effekt des westlichen Einflusses sehen [2]). Das scheint mir nicht ganz zuzutreffen. Erstens ist sie auch in Nduga vorhanden, wie ich das persönlich feststellen konnte, zweitens haben wir genügend ausreichende Gründe, um annehmen zu können, daß das ursprüngliche, durch Batutsi noch nicht beeinflußte Bahutu-Ruanda den Gebieten jenseits des Großen Afrikanischen Grabens ganz ähnlich war. Die Märkte können eine sehr alte Einrichtung darstellen, die sich nur im Norden und Westen erhalten hat. In den Batutsi-Provinzen konnten die Märkte mit der Eroberung verschwinden, ebenso wie sie in der Umgebung der belgischen Stationen und vor allem im Uele verschwunden sind oder wenigstens vor den Augen der Eroberer verborgen werden. Diese haben nicht selten die Marktwaren mit Rücksicht auf die unbezahlten Steuern beschlagnahmt.

In Nduga habe ich zwei Märkte mit Eisenhacken (iguliro lyi byuma) gesehen. Der eine fand eine halbe Stunde von Kwa Rutagungira in Bulamba statt, der andere Marktplatz lag zwischen Niansa und Kabgaye auf einem Hügel, drei Stunden von dem letzteren Orte entfernt. Der Markt in der Nähe von Kwa Rutagungira war zur Zeit meines Durchmarsches von den Schmieden vom Ndisa-Berge stark besucht. Unterhalb von Marangara, am Njawarongo, in Bukonya befindet sich ein Kohlenmarkt. Die Kohlen werden im Tschingogo-Wald gebrannt und durch die Leute des Häuptlings Niamakwa aus Bushiru gegen Hirse und alte Hacken eingetauscht.

In Njundo, zwischen dem Hügel Katebe und der Ssebeja, an der Missionsbrücke findet alltäglich seit alten Zeiten ein Nahrungsmittelmarkt statt. Die Leute kommen früh zusammen und gehen zwischen 11 und 12 Uhr auseinander. Ein anderer Marktflecken liegt im Nordwesten von Kissenji.

In Mulera ist ein Marktplatz einige Stunden von Ruasa entfernt. Luhanga, der Stellvertreter von Nshohozamigo, versuchte den Markt in die Nähe der Mission Ruasa zu verlegen. Er dachte, er werde sich dadurch einerseits die Missionäre

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 435.
[2]) KANDT, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, S. 332.

verpflichten und andererseits seine Einkünfte durch den Markt steigern. Es war nämlich zu erwarten, daß der große Weg, der über die Missionsbrücke führt und von allen nach Ruweruka und Bugoye Reisenden begangen wird, noch zahlreichere Marktbesucher als der alte Fleck versammeln würde. Die Erwartung hat sich aber nicht erfüllt. Die Leute kamen zwar ein paarmal aus Neugierde, zogen sich aber bald auf die alte Stelle zurück. Dieses Beispiel beweist, daß wir es hier mit alten, durch Tradition gefestigten Erscheinungen zu tun haben.

Die Märkte sind im Westen 3—4 Stunden voneinander entfernt, wie das schon durch Dr. KANDT[1]) bekannt geworden ist.

Der Markt in Njundo versammelte alltäglich zwischen 8 und 10 Uhr früh einige hundert Menschen. Beim Austausche waren auch mehrere Vermittler, die Kommissionen bezogen, beschäftigt. Um die Marktabgaben zu ersparen, wurden in der Nähe des Marktes auf den Wegen Abmachungen getroffen, so daß man auf den Scheidewegen kleine Nebenmärkte beobachten konnte.

Verkehrsverhältnisse. Der Munyaruanda reist zu Fuß. Wenn mehrere Menschen zusammen reisen, so bewegen sie sich im Gänsemarsch auf den jahrhunderte-

Abb. 52. Sänfte aus Mulera. ($^1/_{12}$ d. w. Gr. III 13685. 128 cm lang.)

lang benutzten, festgetrampelten Pfaden. Die Pfade meiden gerade Linien. Sie umgehen sorgfältig jedes Hindernis, jeden Stein, jeden gefallenen Baumstamm. Trotz dieser kleinen Schwankungen ist der Verlauf der Wege doch ganz genau festgelegt und durch die Fähren bestimmt. Nichts ist unrichtiger, als die nicht selten zu findende Behauptung, daß man auf den Märschen die beliebigen Pfade benutzen kann, wenn nur die Marschrichtung aufrecht erhalten bleibt. Man muß nicht selten bedeutende Umwege machen, um sich auf den stärker begangenen, bequemen Arterien bewegen zu können. Das fiel mir besonders auf, als ich in Njakagungu, auf dem Marsch vom Mohasi-See nach Nsasa, den Weg, der von Ruanda nach Karagwe führt, kreuzte. Die Wege halten sich an die Hügelrücken, da das Reisen in den Tälern wegen der zahlreichen Sümpfe in den Niederungen mit großen Schwierigkeiten verbunden ist. Das ständige Auf- und Absteigen, um von einem Hügelrücken auf den andern zu kommen, macht das Reisen recht beschwerlich.

Die Großen des Landes werden auf ihren Reisen in Sänften (ngobi) getragen. Die Sänfte stellt einen geflochtenen Trog dar. Dieser wird gebildet

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 294.

durch die, in der Längsrichtung verlaufenden, Bambusstäbe (migano), die miteinander durch Rotangstreifen verbunden werden. Der Trog hat an jeder Seite wenigstens drei Henkel, durch die zwei starke Bambusstäbe durchgeschoben werden. Diese Stäbe pflegen die Träger auf dem Kopfe mit Hilfe von runden Tragkissen zu halten. Die Träger bewegen sich im leichten Laufschritt. Der Getragene befindet sich in halb liegender Stellung.

Abb. 53. Tragkissen aus Mulera. (1/6 d. w. Gr. III 13093. 21 1/2 cm. Dm.)

Die Häuptlinge reisen mit dem ganzen einheimischen Komfort; so werden sie z. B. durch zwei Milchkühe (nzishwa), die unterwegs gemolken werden, begleitet.

Reittiere benutzen nur die Europäer.

Brücken waren in Ruanda bis unlängst ganz unbekannt. Jetzt hat man eine auf dem Gelände der Mission Ruasa über die schwer passierbaren Stromschnellen der Mukungwa angelegt. Eine andere verbindet die Mission Issawi mit den benachbarten Hügeln. Sie ist über einen Sumpf geworfen.

Die Flußübergänge sind seit altersher mit Einbäumen, die zum Übersetzen der Reisenden dienen, versehen. Auf der Akanjaru-Fähre, in der Nähe von Kihinga, hatte ich Gelegenheit ein aus Schilf und Papyrus zusammengebundenes Floß zu sehen. Das Floß wurde von einem Ufer zum anderen mit Hilfe eines aus Papyrus geflochtenen Strickes gezogen. Das 3 × 3 m große, quadratische Floß war stark genug um sieben Träger mit ihren Lasten zu tragen.

Der über einen km breite Akanjaru hatte nicht einmal eine zwanzig Meter breite freie Wasserfläche, auf der man sich mit dem Floß bewegen konnte. Das übrige war ein dicht bewachsener Papyrussumpf, in dem man, wohl bis über die Hüften eingesunken, waten müßte, wenn der Weg zu dieser Zeit nicht durch die nebeneinander gelegten Schilf- und Papyrusmassen bequem gangbar gemacht worden wäre. Kleinere Dämme werden vielfach in den Sümpfen mit Rücksicht auf die Kühe angelegt. Wenn der Sumpf ein bedeutendes Gefälle hat, so wird oberhalb des Dammes eine freie, tiefere Wasserfläche hergestellt, die als Viehtränke dient.

Der ganze Güterverkehr wird in Ruanda durch Träger besorgt. Die einzige benutzte Wasserstraße ist der Kiwu. Er wird mit großen, primitiven, seeuntüchtigen Einbäumen befahren, die recht bedeutende Lasten tragen können. Sonst dienen die Boote nur zum Übersetzen der Reisenden über die Flüsse auf den Verkehrsstraßen.

Die Flüsse Ruanda's haben aber bedeutende schiffbare Strecken, die in der Zukunft mit der Entwickelung des Verkehrs sicher ausgenutzt werden.

So ist z. B., wie ich mich überzeugen konnte, der Njawarongo schiffbar vom Ndisa-Berge bis zum Zusammenflusse mit der Mukungwa, und weiter darüber hinaus. Auch an der Kissaka-Grenze konnte ich die Schiffbarkeit des Kagera feststellen. Ebenfalls soll der Kagera von der Ruwuwu-Mündung bis zum Mpororo-Knie für die Schiffe zugänglich sein.

Lasttiere benutzt man in Ruanda bis jetzt noch nicht, wenn auch die im Lande lebenden 20—25 Reitesel vortrefflich gedeihen und den dort weilenden Europäern gute Dienste leisten.

Das Ausnützen der Wasserwege und der Lasttiere setzt jedoch ein Steigen der Trägerlöhne und eine Entwickelung des Handels, für den die vorhandenen Träger nicht mehr ausreichen werden, voraus.

Die Lasten werden in Ruanda, im Gegensatze zu den nordwestlichen Congo-Gebieten, auf dem Kopfe getragen. Erst bei den Bahunde, im Westen, beginnt das Tragen auf dem Rücken. Die Ostgrenze dieser Art des Tragens geht, wie es scheint, vom Kiwu zum Rutshuru-Fluß herüber und folgt weiter nach Norden, im Osten des Edward-Sees, der Ostgrenze des Bakondjo-Gebietes entlang.

Zum Lebensmittel- und Kohlentransport dienen im Norden hohe konische Bambuskörbe, die in ihrer Mitte durch ein Tragkissen gestützt, auf dem Kopfe balancieren. Nicht selten werden auch kleine Pakete aus Bananenblättern gemacht. Die Pakete pflegt man in der Regel zwischen drei Ästen, Bambusstämmen oder auch zwischen kleineren Bündeln von Hirsestroh einzuklemmen. Mit Hilfe dieser Vorrichtung können sie beim Tragen mit der Hand gehalten werden. Die Pakete herrschen im Süden vor. Für Kleinigkeiten und für Toilettegegenstände werden dort auf Reisen vorwiegend breite, niedrige Stäbchenkörbe mit konischen Deckeln verwendet. Man setzt sie einfach auf den Kopf.

Abb. 54. Lastkorb für Transport u. zum Aufbewahren der Lebensmittel. ($^1/_{10}$ d. w. Gr. III E 13688. 140 cm hoch.)

Bier und Wasser werden in irdenen, mit Bananenblättern zugebundenen und mit Umflechtungen versehenen, Töpfen getragen.

Bei der Betrachtung der Verkehrsmittel darf in Ruanda der einheimische Telegraph nicht vergessen werden. Trommelsignalisation wird hier im bescheidenen Umfange angewendet. Der König trommelt die Krieger bei der herannahenden Gefahr zusammen. Die Nachrichten aber werden von Hügel zu Hügel auf eine besondere Weise herübergerufen, so daß man in Niansa stets darüber wohl unterrichtet ist, was im Lande vorgeht. Man hat Kunde von

jedem reisenden Europäer, von jedem Küheraub an der Grenze und von jeder Unruhe im Lande. Die Nachricht wandert rasch von Hügel zu Hügel nach der Hauptstadt. Der Nachrichtendienst ist so gut, daß man annehmen könnte, daß besondere Signalisten ihren Dienst pünktlich ausführen müssen.

Abb. 55. Reisekorb aus Ruanda. (1/8 d. w. Gr. III E 6986. 84 cm hoch.)

Abb. 56. Umflochtener Topf aus Mulera. (1/8 d. w. Gr. III 13746. 50 cm hoch.)

Verkehrsarterien. Zum Schlusse sollen noch die Hauptverkehrs- und Handelsrouten von Ruanda kurz zusammengestellt werden.

1. Der Pfad Bukoba—Kafuro—Kissaka—Bugessera—Nduga ist der Weg, auf dem Felle von Ruanda zu der Uganda-Bahn befördert werden. Ihn benutzt, wie es scheint, auch die Hauptmasse der Baumwollstoffe und Perlen, die man in Ruanda sieht. Der Handel auf dieser Route wird hauptsächlich von den Indern aus Kafuro mit Hilfe der Leute von Kahigi getrieben. Ich erreichte diese Route auf dem Marsche von Njansa am Mohasi-See nach Nsasa in Njakagungu, einen Tag südlicher vom See. Auf dem Wege begegnete ich einer Händlerkarawane, die Vieh gegen ihre 10 Lasten billigen Baumwollstoffes eintauschte. Diese neue, durch die Uganda-Bahn veranlaßte Verkehrsader hat

2. die alte Route Tabora—Ussuwi—Kissaka—Nduga abgeschnitten und ihrer früheren Bedeutung beraubt. Jetzt soll die letztere noch einen Weg, auf dem der Frauenhandel der Bassuwi gedeiht, abgeben. Auf diesem Wege drang Graf v. Götzen als erster Europäer in das Land ein.

3. Die Route Nduga—Mukinjaga—Bunyabungu ist der Exportweg für das Kleinvieh, womit der Eisenimport gedeckt wird. Auf diesem Wege kommen die in ganz Ruanda bekannten Mukinjaga-Matten in den Verkehr.

4. Die Route Nduga—Mulera—Ufumbiro—Katana ist der Salzweg, auf dem Salz nach Süden und Kleinvieh nach Norden befördert wird. Von der Siedelung Lukara's am Muhawura erreichen die Händler Katana ohne Lasten in vier Tagen und kehren mit Salz beladen in sechs Tagen zurück. Eine Nebenlinie in dieser Arterie bildet die Route

5. Nduga—Bugoye—Kishari—Edward-See, auf der Salz vom Edward-See und Eisen aus dem Congo-Staate eingeführt werden.

6. Eine weitere, für Eisenhacken recht wichtige Linie ist der Weg Kishari—Bugoye—Mulera—Ruweruka, von der sich der Weg Bugoye—Kissaka abzweigt. Die Brücke der Mission Ruasa bildet eine sehr bequeme Stelle zum Beobachten des Verkehrs mit Ruweruka.

7. Für den Schmuggel aus dem Congo-Staate hat die größte Bedeutung die Rusisi-Route, die Kissenji und Ischangi mit dem Tanganjika (Usumbura) verbindet. Auf diesem Umwege erreicht das Elfenbein und der Kautschuk Tabora und die Eisenbahn.

---

8. Kapitel.

Kleidung, Schmuck und Waffen.

Kleidung. — Schmuck. — Rauchgerät. — Körperbehandlung. — Speer. — Bogen, Pfeil und Köcher. — Hiebwaffen. — Schild.

Kleidung. In Kleidung, Schmuck und Waffen läßt sich in Ruanda eine Vermischung der den Wald-Bantu eigenen Formen mit den für die östlichen Steppengebiete charakteristischen Elementen nicht verkennen. So trifft hier der Rindenstoff mit der Fellkleidung zusammen. Beinringe aus Gras sieht man neben

Abb. 57. Festtracht der Batutsi aus Ruanda. ($^1/_{12}$ d. w. Gr. III 16911. 125 cm breit.)

Drahtspiralen. Ostafrikanische runde Bogen mit Schnursehne erblickt man neben zusammengesetzten Bogen mit einer Sehne aus Bambusstreifen. Die ostafrikanischen Elemente stehen dabei im Vordergrunde und fallen zunächst auf, die westlichen Elemente sind dagegen mehr oder weniger zurückgedrängt. In der materiellen Kultur spiegeln sich die historischen Ereignisse, deren Tatsächlichkeit auch durch anthropologische Beweise belegt werden kann, ganz treu ab.

Mit Rücksicht auf das eben Erwähnte ist es auch leicht verständlich, warum in der Kleidung der Banyaruanda Felle die erste Rolle spielen. Rindenstoffe, die man nicht so gut wie in Kiziba oder in Buganda z. B. herzustellen versteht, kommen erst in zweiter Linie in Betracht. Der Mututsi kennt in seiner Festtracht keinen Rindenstoff. Dieses veranlaßt uns den Rindenstoff mit der

[p. 170]

Bahutu-Unterschicht in Zusammenhang zu bringen. Ein Argument zugunsten dieser Auffassung ist auch in der Tatsache zu erblicken, daß die Höhe der Rindenstofftechnik in Buganda erreicht wird. Dort ist aber der Einfluß des Hirtenadels auch am geringsten.

Die Festtracht der Batutsi bildet ein schmales Stück Kuhfell (mukane), mit ca. 20 langen, schmalen, herunterhängenden Streifen (ndengera). Die Streifen bestehen meistens aus Kuhfell, sie können aber auch, wie die Streifen an den Tabaksbeuteln, aus Otterfell hergestellt sein. Das Schneiden dieser Streifen wird „kutera indengera" genannt. Das Fell ist hellgrau, wird mit dem Haar nach außen getragen und durch Umkrämpung des Randes an den Lenden befestigt.

Abb. 58. Geflochtener Schurz für Jungfrauen und Kinder. Ruanda. (1/4 d. w. Gr. III 9923. 33 cm breit.)

Mit dem „mukane" darf nicht das „nshavure" verwechselt werden. Dieses ist ein gewöhnliches, schmales Fell ohne Fransen, das von den Kindern, jungen Mädchen und sogar von erwachsenen Hirten, wenn sie am frühen Morgen zum Vieh hinausgehen, getragen wird.

Kinder und Jungfrauen tragen noch aus Bananenfasern geflochtene Schurze (nduyongo), in der Art der Graskleider der Baziba.

Im Alltagsleben kleiden sich die Batutsi ganz allgemein in Baumwollstoffe. Diese Kleidung besteht aus zwei Stücken Stoff, jedes zwei Yard lang und ein Yard breit. Das eine Stück wird um die Lenden geschlagen (kukenyara), das andere auf die Schulter geworfen (kuitera). Als Schulterstücke sind dabei rotgedruckte, aber doch nicht grelle Tücher besonders beliebt. Die Baumwollstoffe werden ebenso wie die Felle mit Butter eingeschmiert.

Abb. 59. Unterleibschnur mit aufgereihten Stücken von Stachelschweinborsten. Ruanda. (1/8 d. w. Gr. III E 3954. 161 cm lang.)

Bahutu kleiden sich überwiegend in Ziegen- und Schaffelle. Sie tragen jedoch noch viel Rindenstoff und in der Nähe von Missionen auch Baumwollzeug. Die Felle und Stoffe werden von den Bahutu in derselben Weise, wie das Baumwollzeug von den Batutsi getragen.

Die den Bahutu körperlich und sprachlich nahe verwandten Bahunde ziehen ein Stück Rindenstoff zwischen den Beinen, wie ihre westlichen Nachbarn aus dem Kongo-Becken, durch, statt es, wie die Banyaruanda das „kukenyara", um die Lenden zu schlagen. Man darf vermuten, daß das westafrikanische Durchziehen zwischen den Beinen das Ursprüngliche auch bei den Bahutu sei. Dafür spricht auch die Tatsache, daß bei den Banyaruanda auch unter der Stoffkleidung Unterleibschnüre, oft mit Glasperlen geschmückt, getragen werden. Diese dienten seinerzeit wohl zur Befestigung des zwischen den Beinen durchgezogenen Rindenstoffes. Die umgeschlagenen Kleidungsstücke bedürfen ihrer nicht. Die letzteren bilden, wie es scheint, das Ergebnis

einer späteren ostafrikanischen Beeinflussung, die auch durch die Batutsi verursacht sein kann. An diesem Bekleidungsprinzip wird nämlich bei ihrer alten, jetzt nur bei festlichen Gelegenheiten und kultuellen Handlungen benutzten Tracht festgehalten.

Die verheirateten Frauen umwickeln ihre Hüften mit einem weichen, bis zu den Knöcheln herunterreichenden Kuhfell (inkanda), das mit Hilfe einer Schnur oder eines Riemens geschlossen und befestigt wird. Dieser Riemen

Abb. 60. Weibergurt aus Mulera. (1/6 d. w. Gr. III E 13701. 145 cm lang.)

ist gewöhnlich am freien Ende in einige Stränge zerschnitten, die durch mehrere aufgereihte Glas- oder Eisenperlen (ngimbi) geschmückt sind. Die geflochtene Bastschnur wird „indjishi" genannt.

Das bearbeitete Kuhfell stellt einen relativ sehr hohen Wert dar und wird mehrere Jahre hindurch getragen. Bei der Abnutzung flickt man es und näht es sorgfältig zusammen. Nicht alle Frauen jedoch können sich diese kostspielige, wenn auch dauerhafte Kleidung verschaffen und müssen, wie erwachsene Mädchen, Ziegenfelle und Rindenstoffe (mpuzu) tragen. In der Nähe von Missionen, wo für Arbeitsleistungen mit Stoffen gezahlt wird, tragen sie als Ersatz für das Kuhfell auch Baumwollstoffe.

Die Frauenkleidung ergänzt ein Ziegenfell, das über die Schultern geworfen wird. Dieses Kleidungsstück kann jedoch auch fehlen, ohne daß die Kleidung deswegen für unvollständig angesehen wird.

Das Kind wird immer in einem Schaffell auf dem Rücken mitgetragen. Das Fell pflegt man mittels zweier Streifen Rindenstoff oder zweier Stücke Bananenstammrinde über und unter den Brüsten der Mutter zusammenzubinden. Diese Stücke werden an die Beinvorsprünge des Felles angebunden.

Die kindertragenden Frauen halten gewöhnlich in der linken Hand sorgfältig zusammengelegte Blätter, um im Notfalle ihren Rücken und das Kind abzuwischen.

Batwa benutzen dieselbe Kleidung wie die Bahutu, mit dem Unterschiede nur, daß bei ihnen Baumwollstoffe sehr selten sind. Dr. KANDT jedoch hat Unterschiede in der Frauenkleidung beobachten können. Er sagt nämlich[1]) über die Batwa-Weiber: „Ein Schurz aus zerschlissenen Bananenblättern deckte ihre Scham; als Schmuck trugen die welken Körper nur ein paar Ketten von eng aneinandergereihten bläulichen Milchglasscheibchen, die aus einem Schneckengehäuse angefertigt waren." Ich hatte Gelegenheit, am Muhawura und in Kabgaye Batwa-Frauen aus der Nähe zu sehen und zu messen. Diese trugen die in Ruanda übliche Kleidung und den allgemein benutzten Schmuck. Die Batwa-Frauen aus dem Dorfe Ngunzu's sah ich nur im Urwald, nachdem sie, durch die Karawane überrascht, die Flucht ergriffen hatten.

Das Herrschen der Mode konnte ich in Ruanda nur an den Mustern der europäischen bedruckten Stoffe und den Sorten der Glasperlen konstatieren. Im Nordwesten von Ruanda erregten besondere Freude die belgischen Stoffe, die aber auch von besserer Qualität als die von der Ostküste aus vertriebenen Sorten waren.

Als zeitweilige Kleidung während des Regens werden Bananenblätter um die Lenden geschlagen. Die im Wasser watenden Fischer bedienen sich derselben Kleidung.

Der Munyaruanda kennt aber den Gebrauch des heimischen Regenschirmes. Im einfachsten Falle besteht dieser improvisierte Regenschirm aus einem großen Bananenblatt, das man über dem Kopfe trägt. Der eigentliche Regenschirm ist aus Bananenstammrinde gemacht, die auf einem Rahmen muldenförmig gespannt wird. Man trägt ihn auf dem Kopfe und stützt mit dem Rücken (vgl. Bd. III, Taf. 23).

Abb. 61. Sandalen aus Bgisha.
(1/8 d. w. Gr. III 10947. 25 cm lang.)

Sandalen konnte ich nur in der Nähe der Lavaebene in Rulenge (Bgisha) beobachten. Sie werden aus Bananenblättern angefertigt und haben, wie es bei den europäischen Kletterschuhen der Fall ist, eine Sohle aus platt zusammengefügtem Geflecht; sie nutzen sich aber sehr schnell auf dem scharfen Boden ab, so daß auf eine Wanderung mehrere Paare mitgenommen werden müssen.

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 302.

Die Leute benutzen sie nur auf den für die Füße direkt gefährlichen Strecken und laufen sonst, wo es nur einigermaßen möglich ist, barfuß. Dr. KANDT[1]) erwähnt das Vorkommen der Sandalen bei den Batündwe, die, wie es scheint, ein Nordzweig der Bahunde bilden und in der Nähe des Südufers des Albert-Sees sitzen.

Schmuck. Eine Kopfbedeckung wird in Ruanda nur vom König getragen, der bei festlichen Angelegenheiten eine Mütze benutzt. Diese Mütze besteht aus einem 20 cm hohen, mit Glasperlen gestickten Zylinder, von dem Perlenschnüre, die in bestickte Stäbchen enden, herunterhängen. Die Schnüre haben zwei verschiedene Längen, so daß die Stäbchen in zwei Schichten übereinander hängen und einen Perlenschleier bilden. Die Schnüre fehlen hinten und über der Nase. Dort fällt ein besticktes Band, das bis unterhalb der Nasenwurzel reicht, herunter. An ihm hängen drei bestickte Stäbchen, die auf der Nase liegen und bis zum Munde reichen. Am Perlenbande ist ein Colobusfell befestigt. Diese Beigabe verdient besondere Beachtung, da der Priester des Wamara in Nkole seinen Kopf mit einem Colobusfell schmückt, und das Tier den „umuziru" der Bahinda bildet, die im Osten und Norden von Ruanda herrschen.

Abb. 62. Tapferkeitsabzeichen aus Mulera. (Ungefähr in natürlicher Gr.)

Es läßt sich nicht feststellen, ob das Tragen der Mütze durch den Herrscher in irgendeinem Zusammenhange mit den Sitten des Uele-Beckens steht, wo die Mütze das Vorrecht des Freien bildet. Sonst wird der Kopfschmuck in Ruanda nur durch einen Fellstreifen oder eine Perlschnur gebildet.

Im Kopfschmuck läßt sich zwischen den Bahutu und Batutsi ein, wie es scheint, wichtiger, wenn auch nicht stets durchgehender Unterschied feststellen. Die Batutsi schieben den Kopfschmuck auf die Stirn bis zu den Augenbrauen herunter, während ihn die Bahutu vorn bis zum Haarrande heben und hinten auf dem Hinterhaupt tief herunterlassen.

Abb. 63. Mütterkopfschmuck aus Mulera. (1/3 d. w. Gr. L 14044. Dm. 18 cm)

Den Kopfschmuck ergänzen die zahlreichen Amulettbehälter aus Antilopenhörnern, Wildschweinzähnen u. a. In Mulera sieht man außer diesen noch häufig dünne, lange, konische Anhängsel aus Eisen, die auf ihren Spitzen in Ösen endigen und mittels dieser auf dem Hinterhaupte am Kopfbande hängen. Man soll das Recht, je eines dieser Schmuckstücke anlegen zu dürfen, durch je einen erlegten Feind erwerben.

Die säugenden Mütter tragen den „lugori" genannten Kopfschmuck. Er besteht aus einem drei bis vier cm breiten Streifen aus Maisstroh. Der Streifen

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 478.

wird zu einem geschlossenen Bande, zu einer Krone, zusammengenäht. Der „lugori" ist am Rande mit ausgenähten Verzierungen versehen. In Marangara sah ich auch bei einer Mutwa-Frau ein „lugori" aus Maisstroh.

Im Zusammenhange mit dem Schmucke muß noch der Kamm (rusokozo) erwähnt werden, wenn man ihn auch in Ruanda im Gegensatze zu den Gebieten im Westen nicht in den Haaren zu tragen pflegt und nur zum Kämmen benutzt.

Die Kämme werden in Ruanda aus einem Stück Holz geschnitzt und haben drei bis acht Zinken. Die Zinken ragen in der Regel aus der Basis eines Dreieckes hervor, der an seiner Spitze eine durchbohrte Verdickung trägt. Manchmal ist die Einfassung rechteckig und mit einem längeren Griff versehen. Die Kämme sind, wie ich beobach-

Abb. 64. Kamm aus Mulera. (3/4 d. w. Gr. III E 13035. 27 1/2 cm lang.)

Abb. 65. Vorder- und Hinterseite eines Mulera-Kammes. (3/4 d. w. Gr. III E 13700. 14 1/2 cm lang.)

Abb. 66. Kamm aus Ndúga. (1/2 d. w. Gr. III E 13036. 21 1/2 cm lang.)

Abb. 67. Kamm aus Mulera. (1/4 d. w. Gr. III E 13697. 15 1/2 cm lang.)

ten konnte, fast immer sehr roh geschnitzt und ornamentiert. Über die Kämme des Bahunde-Gebietes dagegen sagt Dr. KANDT[1]): „Vielfach sah ich Kämme, die an einer Schnur getragen werden, mit drei bis sechs Zinken, zum Teil sehr hübsche Holzschnitzereien, und Nadeln zum Schlichten des Haares aus Holz, Horn, Knochen und anderem Material; diese meist zwischen das krause Gelock gesteckt."

Die, von Dr. KANDT im Westen von Kiwu gesammelten, Haarnadeln verdienen besondere Beachtung, da sie nicht nur ihrer Form nach mit den Haarnadeln der Momvu identisch sind. Der für sie durch Dr. KANDT ermittelte Namen „kassokodso" klingt auch an das Momvu sehr stark an. Im Momvu bedeutet „kasso" oder „kosse" das Haupthaar. Es ist nicht ausgeschlossen, daß wir hier eine Spur der nach dem Süden versprengten Momvu vor uns haben. Da die Momvu durch die Mangbetu im Uele-Becken nach dem Süden getrieben

[1]) KANDT, R., Caput XIII. Berlin 1904, S. 444.

werden, und der Mangbetu-Stamm der Barumbi bis in die Nähe des Edward-Sees vorgedrungen ist, so ist es auch nicht ganz unwahrscheinlich, daß eine Anzahl Momvu von ihnen bis in die Nähe des Kiwu gedrängt worden ist.

Abb. 68. Haarnadeln aus dem westlichen Kiwu-Ländern. (1/2 d. w. Gr. III E 10263, III E 10263 und III E 10266. 14, 16 und 15 1/2 cm lang.)

Ferner sagt über diese Gebiete Dr. KANDT[1]): „Auch Wildschweinzähne dienen als Zierden, meist für den Kopf. Sie werden entweder flach auf den vorderen Teil des Schädeldachs gelegt oder sagittal, so daß der dünne, spitze Teil nach vorn und oben ragt. In Ujungu trug man auch Halbmonde à la Diana; sie bestanden aus zwei Eberzähnen, deren dicke Enden aneinandergelegt und mit einem Lederscharnier verbunden waren." Schmuckstücke dieser Art, wenn auch auf der Brust getragen, habe ich bei den Balondjo zu beobachten Gelegenheit gehabt.

Der Körperschmuck der Banyaruanda ist im allgemeinen weder reich noch mannigfaltig. Er ist nicht differenziert nach der sozialen Stellung der Geschmückten. Man hat hier bei den Vornehmen solche Prachtstücke, wie die Königsmütze, nicht. Außerhalb von Mulera unterscheidet er nicht den Tapferen vom Feigen und wirkt nur durch Anhäufung großer Mengen von Schmuckstücken, z. B. auf den Extremitäten der Privilegierten und Frauen.

Abb. 69. Kopfschmuck aus Itambi. (1/2 d. w. Gr. III 10182. Dm. 7 1/2 cm.)

Der eigentliche Körperschmuck besteht aus Hals- und Leibschnüren.

Den gewöhnlichen, am stärksten verbreiteten Halsschmuck bilden, auf Bastfäden aufgereihte, Glasperlen und Ketten, von den zahlreichen Amuletten, die vor allem von den Batutsi getragen werden, abgesehen. Manchmal wird vorn zwischen den Glasperlen eine oder seltener mehrere Kaurimuscheln getragen. Man sieht aber auch Halsbänder aus Ziegen- und Schafknochen, die auf Bastschnüren aufgereiht und nur mit wenigen Glasperlen geschmückt sind. Halsbänder aus zugeschliffenen Muschelscheiben (kissanga) sind dagegen selten. Manchmal besteht das Halsband aus einem Lederstreifen, an dem ein Stück Elfenbein hängt.

Über die Gebiete im Westen vom Kiwu sagt Dr. KANDT[2]): „Häufig ist

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 443.
[2]) Ebenda S. 443.

ferner ein Hals- und Brustschmuck aus kurzen Elefantenbabyzähnen, die wie Dominosteine mit schwarzen Kreisen ornamentiert werden." Im eigentlichen Ruanda hatte ich keine Gelegenheit, dieselben zu beobachten.

Abb. 71. Halsschmuck aus geschliffenen Muschelschalen aus Ruanda. (1/8 d. w. Gr. III E 32310. 44 cm lang.)

Hüftenschnüre werden ebenfalls mit Perlen geschmückt. Es ist sehr auffällig, daß die Batutsi eine Perlenschnur oder mehrere mit vereinzelten Glasperlen geschmückte, fein geflochtene Strohringe eine Handbreit über der Lendenumhüllung (mukane) bei ihrer Fest- und Kultustracht anlegen. Die Unabhängigkeit der Leibschnüre von der Umhüllung zeigt, daß die ersteren mit dem Lendenumschlag nichts zu tun haben. Es ist daher wahrscheinlich, daß man hier wohl mit einer Entlehnung von den Bahutu zu tun hat, bei denen sie noch im Westen vom Kiwu zur Befestigung des zwischen den Beinen durchgezogenen Kleidungsstückes (Rindenstoffes) benutzt wird.

Abb. 70. Halsschmuck aus Schafknochen. Ndugu. (1/4 d. w. Gr. III E 13038. 2 × 41 cm lang.)

Abb. 72. Halsschmuck aus Ruanda. (1/8 d. w. Gr. III E 3958. 14 cm lang.)

Die Extremitäten werden durch zahlreiche Arm- und Fußbänder geschmückt, die am Handgelenk und am Knöchel der beiden Körperseiten getragen werden. Es ist doch sehr wahrscheinlich, daß früher, wie bei den Bakondjo, Schmuckstücke über den Waden und über dem Biceps getragen wurden. Die Männer tragen oft jetzt noch Armringe über dem Biceps, an welchen ganz kleine Dolche in hölzernen Scheiden befestigt sind. Bei Tinnea werden über den Waden Schellen angelegt, und im Westen vom Kiwu trägt man „Wadenringe aus Eisendraht mit Messingröhrchen verziert"[1]).

Abb. 73. Hüftenringe aus Stroh. Ruanda. (1/4 d. w. Gr. III E 9909.)

[1]) J. Kandt, R., Caput Nilli. Berlin 1904, S. 444.

Die am meisten verbreitete Armringform besteht aus einem feinen Faserbündel, das mit einer Spirale von dünnem Draht so dicht umwickelt ist, daß man die Fasern gar nicht mehr sehen kann. Dieses Armband wird gewöhnlich mit einer großen, weißen oder blauen Glasperle geschmückt. Die Perle gleitet frei auf der Spirale und wird gewöhnlich auf dem Handrücken getragen. Als Material dienen Messing, Kupfer und Eisen. Die beiden ersten spielen hier die Rolle der Edelmetalle.

Abb. 74. Armringdolch aus Ruanda. (1/3 d. w. Gr. III E 9896.)

Abb. 75. Armring aus Ruanda. (1/3 d. w. Gr. III E 6881.)

Einfache Armringe (ibimiamasuru) aus einem zusammengebogenen Stück Draht, das das Handgelenk umfaßt, werden ebenfalls getragen und, wie es scheint, in Mulera mehr als im Südosten benutzt. Manchmal wird der relativ dicke Draht plattgeschmiedet, so daß das Armband die Form eines niedrigen Zylinders annimmt.

Die Armringe pflegt man in größerer Zahl zu tragen. Manchmal kann man auch zusammengesetzte Armringe finden; sie bestehen aus mehreren dünneren Drähten, die an ihren Enden stark eingefaßt sind und ein breites Armband bilden.

Abb. 76. Frauenarmring aus Mulera. (1/3 d. w. Gr. III 13708. Dm. 6 cm.)

Abb. 77. Zusammengesetztes Armband aus Ruanda. (1/3 d. w. Gr. L 14964. 7 cm Durchmesser.)

Abb. 78. Armring aus Mukinjaga. (1/3 d. w. Gr. III E 6895. Dm. 7 cm.)

Hauptmann W. v. Grawert schenkte dem Berliner Museum für Völkerkunde einen Armring, wo die Ränder des ursprünglich plattgeschmiedeten Drahtstückes nach außen gebogen sind, und die dadurch entstandene Rinne mit einer Harzmasse gefüllt ist. In dieser sind kleine Knochenstücke eingebettet. Ich hatte Gelegenheit, ein ganz ähnliches Armband aus Leder zu sehen. In der Rinne waren kleine Glasperlen. Diese Formen wurden schon von Dr. Kandt beschrieben[1]).

Elfenbeinarmringe — hatte ich keine Gelegenheit, im eigentlichen Ruanda, zu beobachten. Sie sind mir wenigstens nicht aufgefallen. Dr. Kandt sagt[2]) diesbezüglich: „Im Norden von Bunyabungu beginnen Ringe aus Elfenbein

[1]) Kandt, R., Caput Nili. Berlin 1894. S. 444.

[2]) Ebenda S. 445.

für Handgelenk und Oberarm häufig zu werden; in Itambi treten sie noch vermehrter auf, und in Ujungu trägt sie jeder dritte Mann".

Die Beinringe werden, wie schon gesagt, über den Knöcheln getragen und unterscheiden sich von den aus Drahtspiralen hergestellten Armringen bei den Männern nur durch ihre Größe. Bei den alltäglich benutzten Beinringen wiegt als Herstellungsmaterial Kupfer vor. Bei feierlichen Anlässen legen aber die Batutsi nur Beinringe aus feinen eisernen Drahtspiralen an. Man belastet dabei die Füße mit einer so großen Zahl von aufeinanderliegenden Schmuckstücken, daß die ganze Belastung mehrere Kilo beträgt.

Die Frauen von Ost- und Zentral-Ruanda tragen über den Knöcheln eine sehr große Anzahl aus Gras geflochtener Ringe (butega). Die Ringe liegen auf-

Abb. 79. Frauenbeinring aus Gras. Ruanda. (1/3 d. w. Gr. III E 5233. Dm. 10 cm.)

Abb. 80. Beinringbündel aus Ruanda. (1/3 d. w. Gr. III E 13709. Dm. 9 cm.)

einander und bilden einen fast bis zum Knie reichenden Zylinder, der die Füße stark belastet und den charakteristischen schleppenden Gang der Banyaruanda-Frauen nach sich zieht.

In Mulera tragen die Frauen noch sieben bis acht mm dicke eiserne Beinringe, was ich weder in Nduga noch in Kissaka beobachten konnte. Dafür war aber die Zahl der von ihnen getragenen „butega" wesentlich kleiner.

In Bugoye werden von den Frauen dieselben Beinringe wie von den Männern getragen.

Rauchgerät. Im Zusammenhange mit dem Schmucke müssen auch die Tabaksbeutel und die Tabakspfeifen besprochen werden.

Die am häufigsten benutzten Tabaksbeutel unterscheiden sich von den Tabaksbeuteln der Bakondjo nicht. Sie sind bei den Vornehmen durch Fransen aus Otterfell geschmückt, die bei billigen Stücken durch Schnüre ersetzt werden. Man flechtet die Beutel aus Bast und trägt sie auf der Brust. Man kann sie aber auch gelegentlich auf dem Kopfe zusammengelegt sehen (vgl. bd. III, Taf. 4 und 22).

Ein kleiner Tabakvorrat und eine Pfeife bilden ihren Inhalt. Manchmal werden in den Tabaksbeuteln auch ein Feuerbohrer und andere Kleinigkeiten getragen. Tabaksbeutel aus Ziegenfell, in der Art der in Kiziba benutzten, hatte ich keine Gelegenheit zu beobachten. Man kann aber hie und da einen Tabaksbeutel aus Rinderblase sehen. Diese werden gewöhnlich um den Kopf gebunden und auf der Stirn getragen.

Abb. 81. Tabaksbeutel aus Rinderblase. Ruanda. (1/4 d. w. Gr. III E 6998. 31 cm lang.)

Die Ruanda-Pfeife unterscheidet sich scharf von den Bahima-Pfeifen aus dem Norden des Zwischenseengebietes. Während die letzteren kugelförmige

Abb. 82. Pfeifenkopf d. Batutsi, aus schwarzem Ton. Ruanda. (1/2 d. w. Gr. III E 13081. 12 cm lang.)

Abb. 84. Pfeifenköpfe der Bahutu aus Ruanda. (1/2 d. w. Gr.)

Abb. 87. Pfeife aus Mulera. (1/2 d. w. Gr. III 13715. 5 1/2 cm lang.)

Behälter haben, stellt die Ruanda-Pfeife einen langen, spitzen Konus dar, in dem unter einem sehr scharfen Winkel die zylindrische Einfassung des Pfeifenrohres (muheha) mündet. Die divergierenden Ränder des Behälters (inkono) sind manchmal verdickt. Die von den Bahutu benutzten Pfeifen sind gewöhnlich weniger schlank und zierlich, und man kann auch nicht selten Formen antreffen, bei welchen die Behälter ein wenig nach oben konvergieren, so daß sich in ihnen die etwas bäuchige Kiziba-Form andeutet. Diese Abweichung wird ebenfalls gewöhnlich von einer Verlängerung des Pfeifenstieles begleitet.

Körperbehandlung. Den eigentlichen Kopfschmuck der Banyaruanda bilden die „masunzu", das in Mustern ausrasierte Haar. Die „masunzu" bilden den Stolz des Mannes und sind manchmal mehrere Zentimeter lang, wodurch selbstverständlich eine Kopfbedeckung unmöglich gemacht wird. Und wenn die Rasiermuster auch bei den Batutsi die schönsten und sehr wohlgepflegten Formen erreichen, so muß man sie doch mit großer Wahrscheinlichkeit mit der Bahutu-Unterschicht in Zusammenhang bringen. Sie dehnen sich nämlich

Abb. 88. Rasiermuster aus Kissaka.

ununterbrochen über die Batutsi-Einflußzone hinweg im Westen aus und scheinen dort bodenständig zu sein, während sie dagegen im Osten bei den Bahima allmählich verkümmern und verschwinden.

Die „masunzu" habe ich zum ersten Male in Ishenye, auf der östlichen Grenze von Mpororo, gesehen.

In Buhaya sieht man Rasiermuster nur bei den Kindern. Bei Erwachsenen sind sie schon nicht mehr Sitte. In Rufua waren sie noch bei weniger als einer Hälfte der Männer vorhanden. Erst im Süden von Bushara sind sie ganz allgemein geworden. Sie traten auf unserem Marsche zusammen mit dem Bogen auf. Im Süden scheint ihre Grenze mit der Süd- und Ostgrenze von Uha (Ujungu) zusammenzufallen[1]).

Da die Rasiermuster durch Lt. FONCK sehr vollständig publiziert und durch R. P. VAN DER BURGT[2]) reproduziert worden sind, so kann ich mich nur auf eine kurze Besprechung, der am stärksten verbreiteten Formen, beschränken.

---

[1]) CAPUS, R. P., Eine Missionsreise nach Uha und Urundi. Petermanns Mitteilungen 1898, S. 124.

[2]) VAN DER BURGT, J. M. M., R. P., Dictionnaire Français-Kirundi avec l'Indication succincte de la Signification Swahili et Allemande. Bois-le-Duc (Hollande) 1903, S. 256.

In Kissaka werden am häufigsten die hier abgebildeten Muster benutzt. Jedes Rasiermuster hat seinen Namen. So werden dort die Muster (vgl. Abb. 88)

a), b) und c) „mabangure" oder „maagaleka",

d) „amakike" oder „bihome",

e) „amazingure" oder „amakube" und

f) „mikake" genannt.

Die kleinen Haartupfen pflegt man „induba" zu bezeichnen.

Die ersten sind einfache Varianten derselben Grundform. Die Form (e) wird dabei vorwiegend von den Mädchen getragen, wenn ich auch Gelegenheit hatte, sie auf Männerköpfen zu sehen. In Mulera wird das Muster (e) ganz allgemein von den Männern und von den Mädchen getragen. In Bugoye ist dieses Muster seltener, war aber auch bei alten Männern üblich, wogegen es in Kissaka den Schmuck junger Mädchen bildete. In Bugoye nennt man es „kiziguzo".

Die schrägen Haarstreifen werden „imirara" genannt, die Querstreifen — „intambiki". Sie können in der Zahl von zwei oder drei vorkommen. Wenn das Haar des „imirara" sehr lang ist, wie man das bei den Batutsi beobachten kann, nennt man es — „inkanguralugo". Die doppelte Spirale wird „injerenge" genannt. Ich habe sie außer in Bugoye einmal auch in Bugessera zu beobachten Gelegenheit gehabt. Ein Haarring auf dem Schädeldache wird „imikako" genannt. Verheiratete Frauen rasieren ihre Köpfe glatt. Der ganz rasierte Frauenkopf wird „imbalanguze" genannt. Nur in Bugoye lassen sie einen Haarkranz um den Kopf herum stehen. Diese Form wird „ikikingo" geheißen. Die jungverheirateten Frauen behalten ihre „masunzu" bis zur ersten Menstruation nach der Heirat bei. Sie tragen, um sich von den Mädchen zu unterscheiden, auf dem Kopfe zwei gekreuzte kleine Ketten weißer Perlen.

Das Ausrasieren der Muster besorgen sowohl Frauen wie Männer. Dazu dient ein kleines Rasiermesser, das auf der eigenen Haut und vor allem auf der Fußsohle nach Bedürfnis gewetzt wird. Das Haar wird beim Rasieren mit Wasser angefeuchtet und mit einem Messer abgeschabt.

Bärte werden in Kissaka sehr selten getragen. Im übrigen Ruanda rasiert man die spärlich wachsenden Bärte und Schnurrbärte in der Regel, ebenso wie die Achselhaare, nicht. Den Bart schätzt man dabei wesentlich mehr als den Schnurrbart. Auf die auf dem Bauche um den Nabel herum wachsenden Haare ist man besonders stolz, da sie für ein sehr geschätztes Schönheitszeichen gelten.

Der Körper wird in Ruanda in keiner Weise absichtlich deformiert. Man nimmt hier Abstand vor dem Durchbohren der Ohren und dem Verunstalten des Gebisses. Als die einzige, wenn auch nicht absichtlich verursachte Verunstaltung des Körpers könnte man die Folgen des Tragens von Grasringen an den Beinen (bei den Frauen) betrachten. Es entstehen nicht selten schlimme Wunden, welche die Unterschenkel stark schädigen.

Die Tätowierungsmuster sieht man bei den Batutsi sehr häufig auf Brüsten

und Armen. Bei den Bahutu ist das Anbringen dieser Verzierungen ebenfalls üblich. Die Zahl der Tätowierten war in Kissaka nicht bedeutend. In Mulera bekam ich den Eindruck, daß es dort wesentlich mehr Tätowierte gebe.

Da die Tätowierungsmuster ebenfalls schon durch Lt. FONCK publiziert und durch R. P. VAN DER BURGT[1]) reproduziert worden sind, soll hier nur erwähnt werden, daß das häufigste Tätowierungsmuster aus zwei Reihen von Bogenlinien besteht. Diese wenden sich die konkaven Teilen gegenseitig zu, und zwar so, daß die Verkuppelung von zwei Bogenlinien sich in der Konkavität eines Bogens der gegenüberliegenden Linie befindet. Man sieht aber auch kleine Quadrate, die zu 9, 12 und 16 in Rechtecken angeordnet werden.

Die Operation wird mit einem gewöhnlichen Messer oder mit einem Rasiermesser ausgeführt. Zunächst trägt man die zu tätowierende Zeichnung mit der Messerspitze durch Ritzen leicht auf. Erst nachher, da die Zeichnung infolge der Beschädigung der Epidermis hell absticht, werden kurze tiefere Einschnitte mit einem Rasiermesser ausgeführt. Die Einschnitte oder eigentlich die Einstiche macht man in der mit zwei Fingern zusammengepreßten und gehobenen Haut. Der geschickte Künstler ruft dabei kein Bluten hervor und die Einstiche verschließen sich durch heraustretende Lymphe. Nach einigen Tagen werden die Schörfe abgekratzt und mit Butter und Kuhmist (kishesho), ohne Anwendung von Pigment, eingerieben. Nach der Heilung bildet sich an der Stelle eines jeden Einschnittes eine kleine Hautverdickung, so daß man ein vorspringendes Muster bekommt.

Abb. 89. Tätowierungsmuster aus Ruanda.

Bei ungeschickter Tätowierung bilden sich an den Stellen der blutenden Einschnitte Keloide. In Mulera, wo das Tätowieren hauptsächlich durch Batwa ausgeführt wird, sind diese Bildungen recht häufig. Die Nähe des Edward-Sees kommt in dieser Weise zum Ausdrucke. Bei den dort wohnenden Bakondjo werden sehr große Keloide absichtlich, vor allem auf dem Rücken erzeugt. In Nduga, dem Lande der Tätowierkünstler, und bei den Batutsi, sind die Muster von großer Feinheit. Den Preis der Operation bildet eine Ziege. Die Muster sammeln sich allmählich im Laufe des Lebens an.

Das Tätowieren scheint, in Kissaka wenigstens, keine kultuelle Bedeutung zu haben und wird ohne irgendwelche Zeremonien vorgenommen.

Beschneidung übt man in Ruanda nicht, man kennt sie jedoch. Das beweist das Sprichwort: „Im Gehöft, durch welches viele passieren, werden beschnittene Kinder geboren."

Die Bemalung mit Kaolin (runoni) wird im Zusammenhange mit der Einweihung in den Geheimbund und nach R. P. SCHUMACHER[2]) auch bei der

[2]) SCHUMACHER, P., R. P. Die Ehe in Ruanda. Anthropos 1910, S 878.

Abb. 90. Batutsi-Speer aus Ruanda. (1/9 d. w. Gr. III E 13776. 209 cm lang.)

Abb. 91. Bahutu-Speer aus Ruanda. (1/9 d. w. Gr. III E 13772. 241 cm lang.)

Abb. 92. Bahima-Speer aus Mulera. (1/9 d. w. Gr. III 13778. 215 cm lang.)

Hochzeit vorgenommen. Die Bemalung scheint sich jedoch nicht auf diese Gelegenheiten allein zu beschränken. Ich hatte nämlich zweimal Gelegenheit bemalte Kinder zu sehen. Ein Kind war durch und durch mit einer Mischung von Lehm und Ocker bestrichen. Das andere war nur mit einem Striche durch die Stirn, quer über den Augen, versehen. Wegen des niedrigen Alters der Kinder (fünf und sieben Jahre) war hier eine Einweihung ganz ausgeschlossen.

Es muß erwähnt werden, daß sich die Kinder bei jeder Gelegenheit mit Vergnügen bemalen oder, besser gesagt, mit weißer Farbe beschmutzen. Es fiel mir auf, daß beim Gipsen z. B. die anwesenden Kinder sich gegenseitig bemalten. Ebenso waren die Kinder, die in Issawi Ziegel aus dem Sumpfe trugen, absichtlich mit hellem Ton bemalt.

Im Kriege sollen sich die beiden Parteien zu Unterscheidungszwecken mit verschiedenen Mustern bemalen. Dr. KANDT[1]) notiert jedoch ein anderes Unterscheidungszeichen: „Alle (Bahunde) hatten sich ein welkes Bananenblatt um die Stirn gebunden, damit wir sie später als Freunde unterscheiden könnten, für den von ihnen erhofften Fall, daß wir mit den Wanjaitambi handgemein werden sollten."

Der Munyaruanda salbt sich den Körper mit Butter ein. In Bugoye aber, wo man schon unter dem kulturellen Einflusse der Wald-Bantu steht, salbt man sich mit dem billigeren Ricinusöl (mbarika, wono) ein, wie dies im Kongo-Walde der Fall ist. Dieselbe Sitte herrscht im ganzen Grabengebiet bis zum Tanganjika herunter.

Speer. Die Hauptwaffen der Banyaruanda sind Speere (ichumu), Bogen (muheto), Pfeile (muhambi) und Buschmesser (muhoro). Außerdem benutzt man noch Schwerter (ngota), Schilde (ngabo) und Keulen.

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 427.

Der Speer ist die verbreitetste und gebräuchlichste Waffe. Im Norden, wo die Verhältnisse weniger sicher sind, verläßt niemand sein Gehöft, ohne einen Speer mitzunehmen, so daß man dort diese Waffe für einen wesentlichen Bestandteil der Bekleidung und Ausschmückung eines Mannes ansehen muß. In den zentralen Teilen von Ruanda, wo geordnete Verhältnisse herrschen, sieht man dagegen oft, vor allem bei den Batutsi, daß Speere durch lange Hirtenstöcke ersetzt werden.

Der Speer hat eine Länge von $1^1/_2$—$2^1/_2$ m, und sein Schaft wird an beiden Enden von Eisen eingefaßt. Das sind die Tüllen der Spitze und des Schuhes. Die Speerspitzen sind gewöhnlich mit einer Blutrinne versehen, variieren aber recht stark in ihrer Form, je nachdem die breiteste Stelle des Blattes mehr nach vorne oder nach hinten verlegt ist und sich mit einer größeren oder geringeren Längenausdehnung verknüpft.

Der typische Batutsi-Speer ist über zwei Meter lang und besitzt ein sehr charakteristisches, lanzettförmiges Speereisen. Dieses divergiert an seiner Basis, verjüngt sich im ersten Drittel, verbreitet sich allmählich, aber doch äußerst wenig bis zum letzten Viertel und läuft dann in eine abgerundete Spitze aus.

Die Bahutu-Speere unterscheiden sich in erster Linie durch weniger sorgfältige Ausführung. Es kommen aber unter ihnen auch einfach gesenkt geschmiedete, ohne die Blutrinne, und ganz einfache Formen vor. Bei den Bahutu konnte ich außerdem viele Speere beobachten, die eine auffallende Übereinstimmung mit den in den Nachbargebieten benutzten Formen zeigten und entweder von dort verschleppt oder auch an Ort und Stelle nach den dortigen Vorbildern gearbeitet worden sind. Man war sich dabei ihres Ursprunges meistens bewußt. So wurde z. B. der, auf Abb. 92 wiedergegebene, Speer als „ichumu ryo Rutshuga lwa Ruhima" bezeichnet. Das bedeutet ein Bahima-Speer aus Rutshuga. Bekanntlich werden diese Formen ganz allgemein von den Bahima in Nkole und Karagwe benutzt.

Die auf den Abb. 93 und 94 dargestellten Formen weisen entweder auf die Bahima-Länder oder vielleicht auf Toro hin. Dort hatte ich Gelegenheit dieselben in größerer Zahl zu beobachten. Es ist mir aber nicht gelungen mich zu überzeugen, daß diese bodenständig und nicht aus Nkole verschleppt wären. Dort sah ich sowohl Speere mit Widerhaken, wie auch Speere mit zwei übereinanderliegenden Schneiden, die sich entweder in einer Ebene befanden oder im rechten Winkel zueinander gestellt waren. Die Speere wurden mir bezeichnet: Abb. 93 — „ichimu lyo Lugobe", Abb. 94 — „ichumu lya Mugaanne". Die auf der Abb. 95 dargestellte Form erinnert stark an Buganda-Speere. Das vorliegende Stück ist aber in Kihinga geschmiedet worden und wurde mir nur als „ichumu lyi Kihinga" bezeichnet. Die Formen Abb. 96 und 97 weisen auf das benachbarte Kongo-Becken hin. Der erste Speer wurde als „ichumu lyi Nyunga", der letztere als „ichumu lyi Lilera" bezeichnet. In Bugoye und Mulera sind außerdem noch Barega-Speere nicht selten; sie werden dort mit

Vorliebe von den Elefantenjägern benutzt. Sie haben dicke Schäfte, starke Spitzen und erinnern in ihrer Form an den auf Abb. 96 dargestellten Speer.

Abb. 93. Speer mit Widerhaken aus Mulera. (1/6 d. w. Gr. III E 13783. 153 cm lang.)

Abb. 94. Zweischneidige Speere aus Mulera. (1/6 d. w. Gr. III E 13795 und 13787. 166 und 126 cm lang.)

Abb. 95. Speer aus Mulera. (1/6 d. w. Gr. III E 13785. 175 cm lang.)

Abb. 96. Speer aus Mulera. (1/6 d. w. Gr. III E 13782. 177 cm lang.)

Abb. 97. Speer aus Mulera. (1/6 d. w. Gr. III E 13796. 192 cm lang.)

Abb. 98. Speer ohne Schuh aus Mulera. (1/6 d. w. Gr. III E 13793. 214 cm lang.)

Bei den mit Blutrinnen versehenen und gesenkt geschmiedeten Speeren werden die tiefer gelegenen Teile des Blattes schwarz gelassen, und nur die mediane Rippe und die drei bis fünf mm breiten Ränder der Schneide, resp. die vorstehende Hälfte blank zugeschliffen. Die Schärfe der Kontraste zwischen Schwarz und Weiß wird als Maß der Schönheit und Eleganz aufgefaßt.

Der Schuh fehlt den Speeren nur sehr selten. Er stellt einen scharf zugespitzten Konus dar, in den das zugeschnittene Ende des Speerschaftes eingezwängt wird.

Schon oben wurde erwähnt, daß der Speer zum Schmucke des Mannes zu zählen ist; trotzdem bleibt er doch eine sehr gefährliche Waffe, da man ihn bis zur Entfernung von zwanzig Meter sicher zu handhaben versteht. Auf diese Entfernung wurde, wie ich das beobachten konnte, ein mannesgroßer Bananenstamm mit einem Durchmesser von fünfzehn cm in zwei Drittel der Fälle getroffen. Die Wucht des Schlages war dabei so groß, daß die Speere den Stamm durchschlugen und man die zwanzig cm herausragende Speerspitze auf der anderen Seite messen konnte. Die vorbeigeschleuderten Speere schlugen in den festgetrampelten Boden des Steges zehn cm tief ein und blieben, trotz des Einschlagwinkels von weniger als 45°, stecken.

Wenn auch der Speer in Ruanda als Wurfwaffe benutzt wird, so führt man doch nur einen Speer mit. Die Banyabungu im Süden sollen nach Dr. KANDT[1]) aber meistens zwei Speere mit breiten Blättern führen.

Holzspeere werden in Ruanda nur von den Kindern als Spielzeug benutzt.

Im Zusammenhang mit den Speeren müssen noch die Frauenstöcke (muterere) besprochen werden, da sie nicht selten ebenfalls als Waffe benutzt werden. Den Speerschuh ersetzt hier ein bis vierzig cm langer Eisenbeschlag, dessen untere drei Viertel eine im Querschnitt quadratische Spitze bilden. Das obere Viertel bildet eine Tülle, in die das Ende des Stockes eingetrieben wird. Der Beschlag des oberen Stockendes ist dagegen dem Speerschuh sehr ähnlich und endigt in einen Knopf.

Abb. 100. Speerhalter aus Ruanda. (1/6 d. w. Gr. III E 10070. Dm. 23 cm.)

Abb. 99. Frauenstöcke aus Mulera. (1/6 d. w. Gr. III E 13779 und III E 13789. 143 u. 150 cm lang.)

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 378.

Zum Schluß soll noch darauf hingewiesen werden, daß die Ruanda-Speere in mancher Beziehung mit den abessinischen übereinstimmen, während der Frauenstock im Sudan, in ganz identischer Form z. B. bei den Maka, vorkommt.

Abb. 101. Speerhalter aus Ruanda. (1/8 d. w. Gr. III E 10072. Dm. 20 cm.)

Um die Speere in der Hütte aufzustellen, werden geflochtene Grasringe an die Stützpfeiler der Hütten angebunden. Die Speere pflegt man, wie bei uns die Regenschirme, durchzustecken und in senkrechter Stellung aufzubewahren. Die Speerhalter (rutagara) unterscheiden sich von den Gefäßuntersatzringen nicht.

Bogen, Pfeil und Köcher. Den Bogen sieht man in Ruanda nicht so oft wie den Speer. Das hängt aber wohl damit zusammen, daß man ihn nur auf Reisen, bei Jagd, Opfern, Zeremonien und Kriegszügen mitzuführen pflegt. Der Bogen bildet eine sehr wichtige und viel benutzte Waffe, die auch dem Charakter der Bevölkerung entspricht. Der Munyaruanda begeistert sich nicht für den Nahkampf in geschlossenen Reihen mit Speer und Schild in der Hand, nach Art der Niloten, wenn er ihn auch nicht direkt meidet.

In Ruanda kann man das Zusammentreffen zweier ganz verschiedener Bogenformen beobachten. Die Batwa führen eine ganz andere Bogenform, als die übrige Bevölkerung.

Der im ganzen Lande, bei den Batutsi und Bahutu, verbreitete Bogen ist ein typischer Vertreter der sogenannten ostafrikanischen Form, und ich werde ihn hier in Übereinstimmung mit Dr. KANDT kurzweg als Ruanda-Bogen bezeichnen. Der Ruanda-Bogen ist über anderthalb Meter lang, hat einen runden Querschnitt, besitzt lange Spitzen, verjüngt sich aber an beiden Enden allmählich, ohne Einkerbungen aufzuweisen, und wird

Abb. 102. Batwa-Bogen aus Ruanda. (1/8 d. w. Gr. P. 1850 bis 68. 141 cm lang.)

Abb. 103. Kinderbogen aus Malera. (1/8 d. w. Gr.)

mit einer Schnur aus Tiersehnen oder aus Fasern der „nimisse"-Pflanze bespannt. Der Bogen ist dabei so stark gekrümmt, daß man ihn ohne Schutzvorrichtung gegen die zurückschnellende Sehne benutzen kann. Er unterscheidet sich vom Mpororo-Bogen nicht.

Abb. 104. Sehnenbefestigung des Batwa-Bogens vom Kiwu. (1/8 d. w. Gr. P. 1850—68.)

Batwa führen einen verstärkten Bambusbogen. Der Bogen besteht aus einem der Länge nach halbierten Bambusstabe, der durch das Einlegen eines Holzstabes, der die Mulde im Bambusrohr ausfüllt, verstärkt wird. Der Bogen ist über anderthalb Meter hoch und die Verstärkung erstreckt sich fast auf die Hälfte seiner Länge; bei einem fertigen Bogen ist sie durch die Grasumwickelung, von der der ganze Stab umgeben ist, verdeckt. Die Art und Weise dieser Verstärkung ist an dem hier abgebildeten Kinderbogen, den ich in Mulera beobachten konnte, gut zu übersehen. Dieser Bogen ist zwar nicht aus Bambus, und infolgedessen konnte hier die Verstärkung auch nicht in der natürlichen Mulde untergebracht werden, doch befindet sie sich an der richtigen vorderen, dem Schützen beim Spannen abgewendeten Stelle.

Abb. 105. Stirnbogen der Urundi-Batwa. (1/6 d. w. Gr. III E 8982. 68½ cm lang.)

Die Sehne des Batwa-Bogens wird in Ruanda aus einem Streifen Bambus hergestellt, und man hängt sie mit Hilfe zweier Zöpfe, mit denen ihre beiden Enden eingefaßt werden, ein[1]). Die Rotangsehne wird gegen die Abnutzung durch eine Umwickelung aus Gras geschützt.

Lt. BISCHOFF konnte bei den Urundi-Batwa einen Stirnbogen feststellen. Diese Formen sind mir aus Ruanda nicht bekannt, sie sollen jedoch in Butembo vorkommen.

Abb. 106. Sehnenbefestigung des Stirnbogens. (1/8 d. w. Gr. III E 8982.)

Die Pfeile müssen den Bogen entsprechend in zwei Gruppen eingeteilt werden. Die erste umfaßt die Pfeile der Bogen vom Ruanda-Typus: sie sind mit einer

[1]) LUSCHAN, F. v., Bogen und Pfeile der Watwa vom Kiwu-See. Zeitschrift für Ethnologie. Verhandlungen 1899, S. 634—640.

Kerbe versehen, die zur Aufnahme der gedrehten Bogensehne bestimmt ist; zur zweiten gehören die Pfeile der Batwa-Bogen und sind durch glatte, oft trommelschlägelartig verdickte Endteile charakterisiert.

Die Pfeile der ersten Kategorie sind mit eingelassenen Eisenspitzen und mit radiärer Befiederung aus drei kurzbeschnittenen Federhälften versehen.

Abb. 107. Pfeile aus Ruanda. (1/4 d. w. Gr. III E 13763 und III E 13077. Ca. 70 cm lang.)

Die gespaltenen Federkeile sind an den Pfeilstamm angelegt und durch Umwickelung befestigt. Die beiden Enden des Schaftes sind durch Umwickelung gegen das Spalten gesichert. Die Umwickelung des Kerbenendes ist dabei schmal und die der Spitzeneinfassung ungefähr fünf cm breit. Die Pfeile werden

Abb. 108. Pfeil mit Widerhaken aus Ruanda. (1/6 d. w. Gr. L. 15348c.)

aus Holz hergestellt. Die Pfeilspitzen haben gewöhnlich die Form scharf auslaufender, langer, im Querschnitte quadratischer Pyramiden. Ich konnte aber nicht selten sowohl Spitzen mit zwei weit abstehenden Widerhaken, wie auch blattförmige, gesenkt geschmiedete Spitzen sehen. Ob die Spitzen mit Widerhaken an Ort und Stelle hergestellt werden und keine Nachahmungen der Busindja-Muster darstellen, konnte ich nicht ermitteln. In Busindja sollen nämlich diese Formen vorherrschen.

Ich habe in Ruanda aber auch Rohrpfeile gesehen. Diese hatten runde, in den Schaft eingelassene, Holzspitzen und waren mit Kerben am hinteren Ende versehen. Die Befiederung fehlte ihnen. Ich konnte über ihre Herkunft nichts Näheres erfahren. Es ist nicht ausgeschlossen, daß es aus Bunyabungu verschlagene Stücke waren[1]).

Abb. 109. Rohrpfeil mit Holzspitze aus Nord-Ruandá. (1/4 d. w. Gr. III E 13077. 35 cm lang.)

Für die Batwa-Pfeile paßt gänzlich die von Dr. KANDT[2]) gegebene Charakteristik der Pfeile aus Buyungu. Sie sind „ganz aus Holz, 80 cm bis 1 m, also enorm lang und bestehen aus zwei ineinandersteckenden Teilen. Der obere trägt unter

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 378.
[2]) Ebenda S. 442.

der Spitze einen oder zwei oder drei seitliche Widerhaken — alles aus einem Stücke Holz notabene. — Merkwürdig ist ferner, daß sie nicht befiedert sind, sondern am unteren Ende einen Spalt haben, durch den der Kämpfer vor dem

Abb. 110. Hölzerne Pfeilspitze mit Widerhaken. Kiwu-Batwa. (1/4 d. w. Gr. P. 1850—70b. Pfeillänge 97 cm.)

Kriege frische Feigenblätter hindurchschiebt, so daß je eine Hälfte nach beiden Seiten herausschaut".

Neben der hier besprochenen, für den benachbarten Kongo-Wald und die Pygmäen so charakteristischen Flugsicherung sieht man an den Batwa-Pfeilen häufig die tangentiale Befiederung, bei der die kurz beschnittenen, aber nicht gespaltenen drei Federn an den Schaft an ihren beiden Enden angebunden werden. Radiär befiederte Pfeile sind bei ihnen selten; unbefiederte hatte ich dagegen wiederholt Gelegenheit zu sehen. Ich konnte aber nicht mit Sicherheit feststellen, ob das nicht für Spaltflugsicherung bestimmte Exemplare waren, bei denen der zum Einklemmen des Blattes oder der Feder dienende Schlitz noch fehlte.

Abb. 111. Spaltflugsicherung mit eingeklemmter Feder. Kiwu-Batwa. (1/4 d. w. Gr. P. 1850—70.)

Die hölzernen Pfeilspitzen sollen nicht schlechter als die Eisenspitzen wirken und sich oft in den Wunden zersplittern, was schlimme Entzündungen verursacht. Die Vögelpfeile haben vier oder drei leicht divergierende Spitzen, die an den Schaft sorgfältig angebunden werden. Eiserne Pfeilspitzen werden von den Batwa viel benutzt.

Die Pfeile pflegt man in Ruanda nicht zu vergiften, l.t. BISCHOFF hat aber bei den Urundi-Batwa vergiftete Pfeile sammeln können.

Abb. 112. Vogelpfeilspitze der Kiwu-Batwa. (1/4 d. w. Gr. L 15026c. 84 cm lang.)

Der Bogen wird beim Schießen senkrecht gehalten. Beim gewöhnlichen Stabbogen pflegt man dabei das mit gedrehter Sehne umwickelte Ende nach oben zu nehmen.

Abb. 113. Vergiftete Pfeile der Urundi-Batwa. (1/4 d. w. Gr. III E 8982. Ca. 49 cm lang.)

Die Sehne wird mit dem zweiten und dritten Finger der rechten Hand gespannt. Man zieht sie bei vorgestreckter linker Hand bis an die nach hinten zurückgeschobene rechte Schulter. Die Spannkraft beträgt dabei, wie ich das mit einem Manometer messen konnte, 25—45 kg.

Um die linke Hand vor der zurückschnellenden Sehne zu schützen, werden besondere Armringe (kigomero) aus Holz benutzt. Diese Armringe weisen eine kleine Öffnung auf, so daß die Hand nur durch einen seitlichen Ausschnitt durchgezwängt werden kann.

In den Hütten werden die Bogen mit Hilfe besonderer Bogenhalter an den Stützpfeilern aufgestellt oder aufgehängt.

Was die Schußleistung anbetrifft, soll hier nur so viel erwähnt werden, daß ich bei einer Entfernung von vierzig Meter und einem mannesgroßen Bananenstamm drei Viertel Treffer beobachtet habe. Die Wirkung des Schusses ist sehr groß. Der fünfzehn cm dicke Bananenstamm wurde ganz durchbohrt, und es kam noch zehn cm des Pfeiles auf der anderen Seite heraus. Die maximale Entfernung, auf die geschossen wurde, betrug hundertsiebzig Meter. Die Pfeile bohrten sich bei dieser Entfernung in den harten, trockenen Boden bis zwölf cm tief ein und blieben mit der Neigung von 30° stecken. Bei dieser großen Entfernung betrug die Streuung vierzig Meter. Bei sehr anstrengendem Schießen warfen sich die Schützen beinahe auf das rechte Knie, während sie sich sonst mit dem Vorschieben des linken Fußes nach dem Schuße begnügten.

Wie wir das schon aus den obigen Zeilen entnehmen können, ist im besprochenen Gebiete eine große Heterogenie bezüglich der Schußwaffen zu konstatieren. Wir sahen im beschränkten Kirundi-Sprachgebiete Stabbogen, verstärkte Bogen und Stirnbogen nebeneinander. Faßt man das ganze Zwischenseengebiet und die nächsten Nachbarländer ins Auge, so muß man überdies noch feststellen, daß die Verbreitung des Bogens nicht lückenlos ist.

Abb. 114. Schutzring eines Bogenschützen aus Ruanda. (1/4 d. w. Gr. III E 13043. Dm. 10 cm.)

Abb. 115. Schutzring eines Bogenschützen aus Ruanda. (1/4 d. w. Gr. III E 9906. Dm. 11 cm.)

Im Kirundi-Sprachgebiete inklusive Ruanda ist der Bogen fast überall verbreitet. Dr. KANDT[1]) bestätigt dasselbe für Itambi und sagt, daß in Buyungu die Ruanda-Bogen 30% und die Batwa-Bogen 70% ausmachten. Über das südliche Bunyabungu sagt Dr. KANDT[2]) dagegen: „Bogen und Pfeile sah ich nur selten; letztere nur zum kleinen Teil mit Eisenspitzen, die meisten waren sehr primitiv und bestanden aus einem Rohrschaft, in den ein spindelförmig gewalztes Holz eingelassen war, fast wie Kinderspielzeug wirkend, aber doch für den ernsthaften Gebrauch bestimmt."

In West-Ussuwi werden dagegen keine Bogen benutzt, während sie in Busindja die Hauptwaffe bilden[3]). Die Banyoro des Nordens kämpfen nur mit Speer und Schild. Ich konnte in Toro nur die in den Kriegszügen gegen die Baamba erbeutete Bogen bekommen. Die Baganda handhaben ebenfalls keine Bogen. Bahima von Nkole sind Bogenschützen und haben dieselben Bogen und Pfeile wie die Basindja. In Kiziba hat man mich wiederholt beim Ausfragen über die dort gesehenen Exemplare auf Busindja hingewiesen.

Das Fehlen des Bogens im Norden des Zwischenseengebietes kann als Folge nilotischer Beeinflussungen, die als historische Tatsache angesehen werden müssen, leicht erklärt werden. Das Fehlen des Bogens in West-Ussuwi und seine Seltenheit im südlichen Bunyabungu läßt sich dagegen einstweilen nicht deuten.

Abb. 116. Köcher zum Aufbewahren der Pfeile. Ruanda. (1/6 d. w. Gr. III E 13074. 84½ cm lang.)

Abb. 117. Kalebassenköcher aus Ruanda. (1/6 d. w. Gr. L 17270a. 39 cm lang.)

Abb. 118. Ausgesackter, geflochtener Köcher aus Mulera. (1/6 d. w. Gr. III E 13764. 70 cm lang.)

Köcher sieht man in Ruanda wesentlich seltener als Bogen. Wenn ein Vornehmer auf der Reise von einem Bogenträger begleitet wird, so hält dieser in der rechten Hand zugleich mit dem Bogen auch einen bis vier Pfeile.

Zu Hause werden zur Aufbewahrung der Pfeile aus Holz geschnitzte, zylindrische, bemalte, an beiden Enden mit Deckeln verschlossene Köcher benützt. Im Felde habe ich dagegen nur geflochtene und aus Kalebassen hergestellte Stücke gesehen. Die geflochtenen Köcher sind entweder zylindrisch, oder sie verdicken sich unten. Sie werden gewöhnlich mit einem Deckel verschlossen und, mit Hilfe eines Riemens oder einer geflochtenen Tragschnur, auf die Schulter gehängt. Auf dieser Tragschnur gleitet bei den geflochtenen Köchern der Deckel.

Abb. 119. Zylindrischer, geflochtener Köcher aus Mulera. (1/6 d. w. Gr. I. 17270b. 76 cm lang.)

Hiebwaffen. Die Hiebwaffen spielen in Ruanda neben Speer und Bogen eine sehr wichtige Rolle. Sie sind aber nicht scharf differenziert und lassen sich einerseits von den Werkzeugen, andererseits von den Dolchen nicht scharf abgrenzen.

Das Buschmesser, das wir schon als Werkzeug kennen gelernt haben, spielt als Hiebwaffe die wichtigste Rolle. Man benützt es nicht allein beim Sammeln des Brennmaterials zum Abhauen trockener Äste, zum Roden von Gebüsch und zum Erweitern des Pfades im Dickicht, man führt es auch im Nahkampf als gefährliche Waffe mit.

Die zweite Hiebwaffe ist das Schwert (ngota), das man vom Dolch nicht scharf unterscheiden kann. Beide haben dieselbe Form und unterscheiden sich nur in ihrer Größe. Es gibt dabei Zwischenformen. Sie werden in einer hölzernen Scheide an einem Halsbande aus Fell oder Schnur auf dem Rücken getragen. Die Klinge ist gewöhnlich 40 bis 50 cm lang und 2—3 cm breit. Sie hat einen medianen Grat, so daß der Querschnitt rhombisch ist. Die Schwertklinge wird ebenso wie das Speerblatt schwarz gelassen. Nur die beiden Ränder und der Grat

Abb. 120. Schwerter aus Ruanda. (1/6 d. w. Gr. III E 13071 und III E 13072. Ca. 63 cm lang.)

in der Mitte sind blank zugeschliffen. Der hölzerne Griff ist geschnitzt, und wir können an ihm oft, ebenso wie an dem Griffe des westafrikanischen Schwertes drei aneinandergefügte Teile unterscheiden. Manchmal fehlt aber das Mittelstück, und der Griff besteht aus zwei gestutzten, einander zugekehrten Pyramiden, wobei die obere kleiner als die untere ist. Die Scheide besteht aus zwei dünnen, an den Rändern abgerundeten Brettern, die mit Strohgeflecht zusammengebunden werden. Auf der vorderen Fläche der Scheide am oberen Rande erhebt sich eine kleine Pyramide mit einem horizontalen

Abb. 123. Typischer Ruanda-Schild. (1/6 d. w. Gr. III E 13761. 68 cm hoch.)

Abb. 121. Dolch aus Ruanda. (1/9 d. w. Gr. III 13736. 19 cm lang.)

Abb. 122. Keule aus Ruanda. (1/9 d. w. Gr. III E 6879. 95 1/2 cm lang.)

Loche. Durch dieses Loch wird das als Tragriemen dienende Halsband durchgezogen.

Das Schwert wurde mir wiederholt als eine Batutsi-Waffe bezeichnet. Man darf aber Bedenken haben, ob der Griff und die Scheide mit allen ihren Details in ihrer gegenwärtigen Form den Batutsi zugeschrieben werden können. Man darf nicht vergessen, daß Schwerter auch von den Batwa benützt werden und daß in den im Westen von Ruanda gelegenen Ländern, vor allem im Urwalde, Schwerter vorkommen.

Abb. 124. Schild aus Mulera. *a* Vorderansicht, *b* Seitenansicht. (1/6 d. w. Gr. III E 8969. 52 cm lang.)

Das Schwert spielt bei den Kultushandlungen eine wichtige Rolle. Es wird z. B. bei der Geburtsfeier benutzt.

Keulen kommen in Ruanda vor, sie spielen aber keine große Rolle. Sie werden, wie es scheint, mehr von den Hirten als von der übrigen Bevölkerung benützt. Ganz glatte, einfache Keulen sollen auch als Rangabzeichen verwendet werden. Ich konnte gelegentlich eine mit vier an der Spitze eingeschlagenen Messingnägeln verzierte Keule sehen. Der verdickte Teil ist oft fazettiert.

Abb. 125*a*. Schild aus Ost-Mulera. Vorderansicht. (1/6 d. w. Gr. L 15032. 65 cm lang.)

Schild. Schilde sind im eigentlichen Ruanda und in Kissaka sehr selten. Sie stellen ein muldenförmig gebogenes, ovales Brett mit einer vorstehenden Spitze in der Mitte dar. Hinter der Spitze wird an das Brett ein geflochtener bügelförmiger Griff angebunden. Der Schild wird von vorn mit schwarzer, weißer und roter Farbe bemalt. Er wird aus einem Stück Holz geschnitzt und ist 40—50 cm hoch, 20—30 cm breit und 10—20 cm tief.

Abb. 125b. Schild aus Ost-Mulera. Innenansicht.

In Mulera wird der Schild ganz allgemein benutzt. Er hat hier die Ndorwa-Form, wenn er auch gewöhnlich nicht so breit ist. Diese Schilde werden vorn mit Rotang beflochten und sind nicht bemalt. Sie zeigen also eine wesentliche Annäherung an den Uganda-Schild.

Die Schilde im Westen vom Kiwu, sagt Dr. KANDT[1]), „sind wie die im Osten (Ruanda) oval oder viereckig, mit abgerundeten Ecken, aus Holz, das auf der Vorderseite mit Weiden überflochten ist, die horizontal oder schräg laufen.

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 442, 443.

Sehr beliebt ist es, Glimmerplättchen zwischen die Flechten zu stecken. In der Mitte der Vorderseite befindet sich der Nabel, d. h. ein Buckel, der in Ruanda spitz, im Westen meist flach ist. Bei den Wahunde fanden sich noch andere Schilde, die die Häuptlinge trugen. Sie sind sehr hoch und breit, viereckig,

Abb. 126. Schild aus Baumrinde. Mulera. *a* Vorderansicht. *b* Innenansicht. (1/6 d. w. Gr. L 15034. 61 cm lang.)

rot bemalt, mit Fellstreifen eingefaßt, eminent geschickt aus Rohr geflochten und daher sehr elastisch; nur auf der Rückseite, gleichzeitig als Griff dienend, befindet sich eine ovale, ornamentierte Holzplatte."

In der Nähe des Luhondo-Sees an der Grenze von Ndorwa sah ich gelegentlich einen ganz primitiven Schild. Er bestand aus einem Stück dicker Baumrinde, an der in der Mitte ein Griff aus zwei beflochtenen, gekreuzten Zweigen befestigt war.

Der Schild spielt eine wichtige Rolle in den Kultushandlungen.

9. Kapitel.

Siedelung und Haushalt.

Siedelungsverhältnisse. — Gehöft. — Gebäude. — Hütteninneres. — Hausgerät. — Haushalt.

Siedelungsverhältnisse. Die Siedelungsformen weisen in den einzelnen Teilen von Ruanda bedeutende Unterschiede auf. Die typische Form der Siedelung stellt der Weiler, in dem ein unabhängiger Mann mit seinen Frauen, Kindern und Gesinde (bagaragu) wohnt, dar. Die Niederlassungen der wohlhabenden Leute haben einen bedeutenden Umfang und vereinigen oft ein Dutzend Hütten und noch mehr in sich. Die Armen zählen nur 1—2 Hütten eigen. Die großen Siedelungen der Batutsi sind überall, abgesehen von den nordwestlichen Provinzen, weit im Graslande zerstreut und fallen durch die hohen Euforbienhecken und Bäume ihrer Umzäunungen auf.

In Ost-Mpororo kommen nur in den Kulturen zerstreute Hütten, die in der Nähe der großen Bahima-Krals, wie z. B. des Kitaraya, etwas dichter werden, vor. Südlich von Kitaraya herrschen die in Euforbienumzäunungen verschwindenden Batutsi-Siedelungen vor. Am Mohasi-See dagegen treten wieder die zerstreuten Bahutu-Siedelungen und ihre Bananenhaine in den Vordergrund. Die Batutsi-Krals werden dort seltener.

In Kissaka und Nduga befinden sich die Bahutu-Siedelungen am Rande der Bananenhaine. Da aber diese durch die Bodenverhältnisse auf bestimmte Gebiete beschränkt sind, so ist dadurch auch eine gewisse Konzentration der Siedelungen zustande gekommen.

In der Umgebung von Niansa, der Residenz Musinga's, trifft man dagegen nur wenige und dazu stark zerstreute Siedelungen an, da das Land als Weide für die Kühe des Königs reserviert ist.

In Mulera, wo das ganze Land unter Kultur steht, hat man wieder eine recht gleichmäßige Zerstreuung der Bauernsiedelungen. Überdies läßt sich hier trotzdem die Tendenz der Verwandten, aus Sicherheitsrücksichten sich näher aneinander zusammenzuschließen, nicht verkennen.

In Bugoye, das manche Beeinflussung seitens der Wald-Bantu aufweist, sieht man schon viel enge, beinahe dorfartig zusammengeschlossene Hüttenkomplexe, wenn auch diese Agglomerationen einen sehr unregelmäßigen Aufbau zeigen. Hier schließen sich die Hügelbewohner, von denen ihr „mugabo" Steuern erhebt, um sie dem entsprechenden „mutware" (ku butaka, ku muheto usw.) auszuhändigen, schon zu einer ganzen Siedelung zusammen. Man kann

[p. 199]

in Bugoye Niederlassungen finden, die über 100 Einwohner zählen. Im Norden von der Vulkankette, in Bgisha, werden die Siedelungen am größten und weisen manchmal über 100 Hütten auf.

Die Banyabungu wohnen ebenfalls in großen, sehr sauber gehaltenen und mit hohen Umzäunungen versehenen Dörfern[1]).

Über die Umzäunungen der Siedelungen im Nordwesten des Kiwu sagt Dr. KANDT[2]): „Rings herum läuft, wie bei allen Dörfern, eine sehr merkwürdige Mauer, die aus Tausenden von Astgabeln und gespaltenen Wurzeln besteht und 10 Lagen in die Breite, 20 in die Höhe bildet, also ein für die Eingeborenen fast undurchdringliches Hindernis. Auf zwei Seiten der Dörfer, die nur durch Hohlwege oder ganz steile Zugänge zu erreichen sind, befinden sich die Tore, die durch Bäume rasch und sicher geschlossen werden können."

Ich konnte solche Umzäunung bei den Baamba am Ruwenzori beobachten. In Ruanda kommen sie in dieser Form nicht vor. Hier liegt das Wohnhaus in der Regel am Rande des Hofes und wird samt diesem von einer Euphorbienhecke umgeben. Die Hecken der einzelnen Gehöfte ranken sich ineinander ein und bilden ein Labyrinth, durch dessen Wände man sogar mit einem Buschmesser in der Hand nicht durchdringen kann, da aus den Ästen beim Schneiden ein stark ätzender und für die Augen sehr gefährlicher Saft spritzt. Diese Hecken werden an der Innenseite gewöhnlich durch einen Zaun aus zusammengebundenen Stäben gestützt. Nachts schließt man die äußeren Zugänge, die gewöhnlich den Hütten gegenüber liegen, durch Baumstämme, die mit ihren Verzweigungen nach außen gelegt werden, ab. Dieser primitive Verschluß läßt sich von der Außenseite aus nicht entfernen und bildet samt der Euphorbienhecke eine sehr wirksame, wenn auch nicht im geringsten auffallende Befestigungsform.

In armen Bahutu-Gehöften bleibt die Umzäunung manchmal ganz aus.

Gehöft. Der Weiler oder das Gehöft, in dem eine Familie mit ihren Angehörigen und Gesinde wohnt, besteht gewöhnlich aus mehreren Hütten, die zusammen eine geschlossene Einheit bilden.

Vor dem Haupteingange wird gewöhnlich ein sauberer, frei von Gras gehaltener, Platz frei gelassen. In den gebirgigen Teilen Ruanda's kann man von dort aus häufig eine recht prächtige Aussicht genießen, da die Siedelungen oft auf den Bergspitzen gelegen sind. Das trifft vor allem für die Batutsi-Siedelungen im Norden vom Mohasi-See zu. Am Rande dieses Platzes werden in den holzarmen Landesteilen große Vorräte getrockneter Kuhexkremente, welche zu Feuerungszwecken verwendet werden, aufgespeichert.

Der nachts verschlossene Haupteingang wird in den sorgfältig hergestellten Siedelungen von zwei, aus Elefantengras zusammengebundenen, Kolonnen umfaßt. In den Gehöften der wohlhabenden Leute, die mindestens aus drei Hütten bestehen, tritt man durch sie in den Vorderhof hinein.

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 377.
[2]) Ebenda S. 460.

Im Vorderhof, dem Eingange gegenüber, liegt das „kambele" genannte Haus, das vom Familienoberhaupte bewohnt wird. Seitlich, gewöhnlich links von diesem, befindet sich der Zugang zu den inneren Höfen. Der Vorderhof, ebenso wie die inneren Höfe, wird sauber und frei von Gras gehalten. Hier versammeln sich die Klienten und die Untergebenen des Hausherrn, um seine Wünsche, Befehle und Entscheidungen entgegenzunehmen. Hier empfängt er seine Gäste, die nicht weiter als bis in das „kambele" geführt werden. Hier wird auch geopfert. Im Gehöfte Musinga's sah ich zwischen dem Eingangstore und seinem Hause auf beiden Seiten der sie verbindenden Linie und zwar in einer gewissen Entfernung von ihr, zwei sorgfältig gepflegte Opferbäume. In den Vorderhöfen sieht man in der Nähe des Hauses auch kleine Geisterhütten.

In vielen Gehöften befinden sich im Vorderhofe überdies Hütten für kleine Kälber, auch das Vieh wird dort die Nacht über gehalten. In einem einzigen Falle allein sah ich aber eine Hütte für größere Kälber außerhalb der Umzäunung; man erklärte mir dies dadurch, daß die ganze Herde in ihrer Nähe die Nacht über gehalten werde.

Abb. 127. Gehöft aus Njansa am Mohasi-See. *a* „kambele", *b* „kagondo", *c* „mubahutu", *d* Kälberställe, *e* Speicher, *f* Geisterhütte.

Im Innenhofe liegt das „kagondo" genannte Frauenhaus, in welchem sich den Tag über die Gattin des Herrn mit ihren Dienstfrauen aufhält. Sie wird nur abends in einer Sänfte in das „kambele" gebracht. Im „kagondo" ißt der Mann bei seiner Frau. Gewöhnlich wohnt im Gehöfte (lugo) nur eine Gattin, und sie wirkt als unbeschränkte Herrin in den inneren Angelegenheiten. Es kann jedoch vorkommen, wie z. B. dies bei dem König der Fall ist, daß viele Frauen in einem Gehöfte wohnen und abwechselnd ins „kambele" gebracht werden. In diesem Falle gibt es mehrere innere Höfe mit Frauenhäusern.

Dem Innenhofe folgt der Hinterhof mit dem „mubahutu" genannten Kochhause, wo die Dienstleute wohnen. In seiner Nähe befinden sich Speicher mit Getreidevorräten. Ich habe sie aber auch im Innenhofe angetroffen. Auf meine Frage, weshalb ein fremder Muhutu im Gehöfte selbst im Kochhause wohne, bekam ich in Njansa am Mohasi-See zur Antwort: „Er hat zur Aufgabe, die Getreidespeicher zu füllen." Da er aber zugleich für die Küche sorgen mußte, so glaube ich, daß diese Antwort wörtlich verstanden werden muß, daß er also die von den Bahutu gebrachten Abgaben und nicht eigenhändig Produziertes in dem Speicher zu verwahren hatte.

Die Bahutu-Gehöfte weisen in der Regel einen Hof, in dem sich oft mehrere Hütten befinden, auf.

Gebäude. In Ruanda muß man vier Gebäudearten unterscheiden:

Wohnhütten,
Kälberhütten,
Geisterhütten und
Speicher.

Die drei ersten sind nach demselben Prinzip gebaut und unterscheiden sich voneinander bloß durch ihre Größe und durch die Sorgfalt, mit der sie ausgeführt werden. Am kleinsten sind die Geisterhütten, sie werden auch am nachlässigsten gebaut und stellen ein einfaches, mit Gras bedecktes Gerüst von in den Boden gesteckten Ästen dar. Die Speicher dagegen weichen ganz wesentlich in ihrer Form, wenn auch nicht im Konstruktionsprinzip ab.

Die Wohnhütte hat in Ruanda, wie auch in den übrigen Teilen des Zwischenseengebietes, die Bienenkorbform. Dieser Typus greift auch auf die Westränder des großen afrikanischen Grabens herüber und scheint gar in Butembo vorzuherrschen[1]), wenn auch daselbst Klubhütten mit vier Türen den Mittelpunkt des Dorfes bilden, und der Türverschluß aus Brettern hergestellt wird. Die dortigen Bauten scheinen mit denen, die ich bei den Baamba beobachten konnte, völlig übereinzustimmen.

Auf dem Wege von Niansa nach Mulera konnte ich am Südfuße des Ndisa-Berges, im Gehöft des Rwabakika, eine Rundhütte mit konischem Dach beobachten. Es war dies eine kleine Kälberhütte mit einem, deutlich über den zylindrischen Wänden vorspringenden, Dache.

Im Süden von Bugoye, und zwar in der Höhe von 2000 m, sah ich überdies Hütten, die den Eindruck von Rundhütten mit konischem Dache hervorriefen; bei genauerer Betrachtung stellte es sich jedoch heraus, daß es ganz gewöhnliche Bienenkorbhütten waren. Sie waren nur von außen mit einer Schicht Schilf umstellt. Über diese ragte die Hüttenbenähung aus Stroh herüber und erweckte den Eindruck eines vorstehenden Daches. Die Eingeborenen erklärten, daß die Hüttenwände in dieser Weise verdickt werden, um die Einwohner vor den starken, kalten Winden zu sichern. Dr. KANDT erwähnt ebenfalls diese Maßregel, indem er sagt[2]), daß die Hütten „durch eine Art Schutzmauer aus Gräsern geschirmt werden."

Es darf nicht unerwähnt bleiben, daß BAUMANN[3]) im Kagera-Quellengebiete Hütten mit zylindrischem Unterbau aus Bambus beobachtet hat. Sollte es sich hier vielleicht um die Überreste der früher weiter nach Osten vordringenden Rundhütten handeln, die später durch die Bienenkorbhütten der Batutsi verdrängt wurden? Jedenfalls ist die Bienenkorbhütte den waldlosen Gebieten besser angepaßt, denn sie kann im Notfalle ohne jedwedes Holz aus Elefantengras oder Hirsestroh aufgeführt werden.

---

[1]) GÖTZEN, G. A., Gr. v., Durch Afrika von Ost nach West. Berlin 1899, S. 261.
[2]) KANDT, R., Caput Nili. Berlin 1904, S. 298.
[3]) BAUMANN, O., Durch Massailand zur Nilquelle. Berlin 1894, S. 218.

Das Ruanda-Haus schwankt in seiner Größe sehr, je nach dem Wohlstand seines Besitzers. Die Höhe beträgt gewöhnlich vier bis acht M[illegible]. Der Durchmesser ist ungefähr anderthalbmal so groß.

Das Haus wird mit Papyrus aus Stäben zusammengebunden; Nägel kommen dabei nicht zur Anwendung.

Die Hauswand besteht aus drei übereinandergelegten Schichten: die mittlere Schicht wird gebildet durch senkrechte Stäbe, die von innen durch dicht aneinanderliegende, wagerecht befestigte Reifen aus Bündeln von Stäben gestützt werden; von außen wird die senkrechte Schicht ebenso durch horizontale Reifen, ebenfalls aus Stabbündeln, zusammengefaßt. Das so gebaute, engmaschige Gitterwerk wird mit Stroh sorgfältig benäht. Die Wände laufen oben in eine stumpfe Spitze zusammen. Diese wird mit einer besonderen Strohkappe, aus deren Spitze ein über einen Meter langer Stock in die Höhe ragt, bedeckt.

Der Hütteneingang ist von dicken Bündeln aus Stäben eingefaßt und durch ein vorgewölbtes Dach, eine Ausstülpung der Hüttenwand, geschützt. Diese Ausstülpung bildet hier im Gegensatze zu Kiziba ein Ganzes mit der übrigen Wand, und die horizontalen Reifen gehen hier durch, so daß man das ganze Dach des Vorraumes vom Inneren der Hütte sieht. In Kiziba sieht man nur den Ausschnitt der Türöffnung, an die von außen der Eingangsteil angefügt ist.

Im Nordwesten vom Kiwu haben die Hütten zwei Eingänge, wohl um den Einwohnern die Flucht bei Überfällen zu erleichtern. In Kishari liegen die Eingänge, nach Dr. KANDT[1]), einander gegenüber, in Mushari dagegen rechtwinklig zueinander. Diese Einrichtung muß den Babira (Barega) entlehnt sein, da ich die gegenüberliegenden Eingänge bei den Babira an den Ituri-Quellen beobachten konnte. Sie waren aber auch im Uele, bei den Mangbele des Gumbari, vorhanden.

Das Dach der Ruanda-Hütte wird über dem Eingange in der Mitte durch einen niedrigen, dünnen Pfeiler, der in der Mitte des ca. zehn cm hohen und ebenso breiten, ω-förmigen Randes der Schwelle eingetrieben ist, gestützt.

Von innen wird das Hausgerüst durch eine Anzahl ca. zehn bis fünfzehn cm dicker Baumstämme, die mit ihren gabelförmig eingeschnittenen oberen Enden unter die horizontalen Kreise greifen, gestützt.

Die Stützpfosten stehen im Innern recht unregelmäßig beieinander, und es gibt in der Mitte keinen zentralen Balken, der die Achse des Gebäudes bilden würde. Der Stock auf der Hüttenspitze hat nämlich mit den Stützpfosten nichts gemein. Beinahe in der Mitte des Hauses stehen die vier Pfosten, die den Herd umgeben. Bei den etwas geringeren Dimensionen der Hütte ist die Zahl der Stützpfosten kleiner. Sie sind die größten Holzstücke, die man für die Hütte braucht. Der ganze Bau erfordert sonst kein größeres Holz und kann bei kleinen Dimensionen aus Sorghostroh oder Elefantengras ausgeführt werden.

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 477.

Die Stützpfosten scheinen hier, ebenso wie in Kiziba, eine kultuelle Bedeutung zu haben, ich konnte jedoch darüber nichts Näheres ermitteln. Es gelang mir nur wiederholt beobachten zu können, daß einer von den Stützpfosten mit einem weißen, mit Kaolin (runoni) aufgemalten Bande versehen war, was bedeuten sollte, daß der Hausbesitzer eine Zeremonie ausgeführt hat. Ob dahinter vielleicht eine Einweihung in einen Geheimbund stack, konnte ich jedoch nicht erfahren.

Die Türöffnung wird durch das Vorschieben eines rechteckigen geflochtenen Schildes verschlossen, der durch zwei auf beiden Seiten des Einganges in den Boden eingetriebene Pfähle gestützt wird. Manchmal befinden sich auf beiden Seiten je zwei Pfähle, und der Türschild wird zwischen ihnen durchgezogen. Die geflochtenen Türschilde sind im ganzen Zwischenseengebiet allgemein. Im Westen jedoch, z. B. bei den Baamba, werden sie durch Türschilde aus Planken, die meistens in der Zahl von drei aufeinandergebunden werden, ersetzt.

Die Batwa-Hütten unterscheiden sich im Prinzip nicht von den Hütten der übrigen Banyaruanda. Sie sind nur kleiner und werden viel nachlässiger ausgeführt. Es darf aber nicht verschwiegen werden, daß nach Leutnant A. Couche, wie er mir das mündlich mitgeteilt hat, die Batwa aus der Umgebung von Uvira auf Bäumen wohnen sollen. Es scheint mir jedoch, daß mein Gewährsmann keine Gelegenheit hatte, das persönlich zu beobachten.

Wenn man ein Haus bauen will, so wird die ausgewählte Stelle mittels Butter geprüft. Die Wahl des Ortes ist nur dann eine glückliche, wenn das dort am Abend hingelegte Stück bis zum nächsten Morgen liegen bleibt[1]), was wohl auf das Fehlen von Termiten zu schließen gestattet. Der König soll diese Prüfung mit einem Stück „intobotobo yi mivembe" vornehmen.

Ist die Prüfung günstig ausgefallen, so wird von dem künftigen Hausbesitzer Bier bereitet und für Nahrung vorgesorgt. Sind diese Vorbereitungen getroffen worden, so werden die Nachbarn eingeladen. Diese kommen und bauen die Hütte auf, während der Hausbesitzer mit dem Bewirten der Arbeitenden allein beschäftigt ist. Einige Zeit später wird in derselben Weise die Tür hergestellt.

Die Hütten halten in den meisten Fällen nur zwei bis drei Jahre aus und müssen dann wieder neu aufgeführt werden.

Nach dem Tode des Hausbesitzers bewohnt die Hütte seine Witwe, wenn sie nicht zum Bruder des Verstorbenen herübersiedelt. Verlassen wird dagegen ein Wohnhaus, wenn sich auf ihm ein Ibis oder ein Kronenkranich niedergelassen hat. Im Falle, daß der Unglücksvogel ein Kranich war, verfolgt man ihn und baut das Haus, wenn das nur irgendwie möglich ist, dort, wo er sich nach dem Verlassen des Hüttendaches zum ersten Male niedergelassen hat, auf.

---

[1]) Classe, R. P., Mœurs et Coutumes des Bagoye. Les Missions Catholiques 1905, S. 425.

Der Ibis wird nicht verfolgt. In Mulera fürchten sich vor beiden Vögeln sowohl die Bahutu wie auch die Batutsi.

Gehen wir jetzt zu einer kurzen Besprechung der für das Ruanda-Gehöft so charakteristischen Vorratshäuser (kigega) über.

In Kiziba, wo die Basis der Ernährung die immer vorhandenen und nicht aufbewahrbaren Bananen bilden, kommen keine Vorratshäuser vor. Der geringe Vorrat an Bohnen und Hirse wird, in Bananenblättern eingewickelt, in großen Paketen an den Stützpfeilern der Hütte aufgehängt und so aufbewahrt. In Kissaka, wie auch in den übrigen Teilen von Ruanda, wo die Hauptnahrung Hirsemehl und Erbsen bilden, und die kleineren Bananenvorräte hauptsächlich verbraut werden, muß man Vorratshäuser bauen, um die reiche Ernte aufzuspeichern.

Die Vorratshäuser sind große zylindrische Körbe. Diese bestehen aus einer Schicht in der Länge des Korbes verlaufender Stäbe, welche durch eine Anzahl von Reifen aus Stabbündeln zusammengefaßt werden. Der so hergestellte Korb wird von unten durch mehrere in den Boden eingesteckte Holzgabeln, die unter die äußeren Reifen des Korbbodens greifen, gestützt.

Die Wände des Korbes pflegt man mit einer Mischung von Lehm und Kuhmist zu verdichten. Unter dem Korbe wird Asche als Schutzmittel gegen die alles verheerenden Termiten aufgehäuft.

Dieser große, zwei Meter hohe und ein bis anderthalb Meter breite Korb wird von oben durch eine Strohkappe, die an ein konisches Gitter aus Stäben angenäht ist, abgeschlossen. In Kissaka hat das Vorratshaus keine Zugangsöffnung, deshalb muß man beim Herausholen oder Hereinlegen der Vorräte die Dachkappe abnehmen.

In den Speichern wird die Hirse meistens in kurz abgeschnittenen Ähren aufbewahrt. Einmal jedoch konnte ich in Kissaka sogar den ungewöhnlichen Fall, daß ungedroschene Hirse in einer leeren Hütte aufbewahrt wurde, beobachten. Das kann aber wegen der Termitengefahr nur vorübergehend geschehen sein.

In Ruanda wird auch ein Teil der Vorräte in der Hütte aufbewahrt. Das geschieht aber nicht in Paketen aus Bananenblättern, sondern in mit Kuhmist gedichteten Körben. Die Körbe fassen bis zu einem Zentner (50 kg).

In der unmittelbaren Nähe der Hütten gibt es oft in Nord- und West-Ruanda Gruben zum Nachreifen der Bananen und zur Aufbewahrung des jungen Bieres bis zur Gärung. Die Gruben werden vor dem Einlegen der Bananen geheizt, und zwar durch das Hineintreiben des heißen Rauches von dem nebenan brennenden Feuer. Dieselben Gruben meint wohl auch Dr. KANDT[1]), wenn er von den Kellern der Banyabungu sagt: „Höhlen von Butterglockenform, deren Wände durch gebogene Äste und durch Reifen gestützt werden, die, von unten anfangend, in konzentrischen, immer kleiner werdenden Ringen bis zur mannsbreiten Öffnung laufen."

Aborte scheinen in Ruanda ganz unbekannt zu sein.

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 390.

Hütteninneres. Bei der Betrachtung des Hausinneren fällt in Kissaka als Unterschied gegen Kiziba das Fehlen fester, geflochtener Innenwände auf. Wenn man in die Hütte hereintritt, so stößt man scheinbar auf eine fein geflochtene Wand an; bei genauerer Betrachtung stellt es sich jedoch heraus, daß man nur eine Reihe Stützpfosten vor sich hat. Zwischen diesen Pfosten sind nach vorne ausgebogene, rechteckige, steife Matten eingeklemmt. Die Matten sind korbartig geflochten, haben eine Länge von zwei Meter bei einer Breite von vierzig cm und werden meistens durch Beschmieren mit Kuhmist gedichtet. Diese Wand trennt den Vorraum (umuriango) von dem Herdteile ab. Seitlich, und zwar links, ist die Wand unterbrochen, und man erhält so einen schmalen Zugang zum Hütteninneren. Seine Lage ist, wie es scheint, eine Reminiszenz der Bakondjo-Hütteneinteilung. Der Zugang kann aber, was meistens bei den Batutsi der Fall ist, auch gegenüber dem Eingange liegen.

Abb. 128. Grundriß einer Kissaka-Hütte. *a* Vorraum, *b* Herd, *c* Bettraum, *d* Hinterkammer, *e* Milchgestell.

Abb. 129. Hängenetz mit Korb. (1/8 d. w.Gr. III. 13100)

Im Herdteile an der Wand, meistens seitlich vom Eingange, befindet sich das Gestell für die Milchgefäße, eine ca. vierzig cm breite, ebenso hohe und bis zwei Meter lange, mit Matten oben und von vorne belegte Bank. Auf diesem Gestell stehen mehrere einfache, aus Holz geschnitzte Milchgefäße, die mit nicht sehr kunstvoll geflochtenen Strohdeckeln geschmückt und zugedeckt werden. Über diesen Gefäßen, an einem Querbalken, der auf zwei senkrechten Trägern liegt, hängen in Netzen große, zum Buttern verwendete Kalebassen. Die Hängenetze werden in wissaka nicht so sorgfältig und sauber wie in Kiziba ausgearbeitet. Die Butterkalebassen pflegt man durch das Einstecken kleiner Kalebassen in ihre Öffnungen, zu schließen.

Etwas links von der Mitte der Hütte befindet sich der Herd. Er hat die Form einer runden Tonplatte mit zwei konzentrischen, einen cm hohen und zehn cm breiten Kreisen, die das Verschleppen von Feuer und Herunterfallen von Asche verhindern. Bei den Wohlhabenden, die ein besonderes Kochhaus eigen nennen, findet man am Tage kein Feuer in der Hütte, sondern nur die sauber

ausgefegte Herdplatte. Feuer wird nur nachts angezündet. Über dem Feuer befindet sich ein Rost, eine auf vier hohen Pfosten aufgestellte Platte. Hierauf werden die zur Bierbereitung bestimmten Bananentrauben zum Nachreifen gelegt.

Gegenüber dem Milchgestelle, auf der anderen Seite des Herdes, liegt das geräumige Bett. Das Bett ist von Pfeilern umstellt, zwischen die ebenfalls steife Matten oder Flechtwerke eingeklemmt werden und in dieser Weise den ganzen Raum abschließen. Zum Bette führt ein Zugang. Dieser Zugang kann durch eine aufrollbare, jalousienartige Stäbchenmatte abgeschlossen werden.

Abb. 130. Grundriß einer Mulera-Hütte. *a* Kälberstall, *b* Bettraum, *c* Tempelecke, *d* Frauenteil, *e* Herd, *f* Kuhstall, *g* Eingang.

In Mulera hatte ich aber Gelegenheit abweichende Hütteneinteilung zu beobachten. Es fehlte dort die Abgrenzung zwischen dem Herdraum und dem Vorraum, und das Ganze wurde mir als Kühestall (rubumbiro) bezeichnet. Der Herd (isiko) lag in der Mitte der Hütte. Dasselbe soll meistens auch in Bunyabungu der Fall sein[1]). Hinter ihm befindet sich in Mulera der Frauenraum (mbele), von dem aus man die Biheko geweihte Ecke (ruhimbi) erreichen kann. Rechts vom Eingange hat man den Kälberraum (ruhongoro). Der Bettraum liegt zwischen der Biheko-Ecke und dem Kälberstall.

Abb. 131. Deckelkorb aus Ruanda. (1/6 d. w. Gr. III 6890. 25 cm hoch.)

Das Bett besteht in Ruanda aus einem Gestell aus Holzstäben. Auf vier in den Boden gepflanzten, oben verzweigten Trägern liegen zwei horizontale Stäbe, die eine Platte tragen. Die Platte besteht aus nebeneinandergelegten Holzstäben. Das Gestell wird mit mehreren Schlafmatten bedeckt, so daß eine relativ weiche Polsterung zustande gebracht wird.

Der Schlafende wickelt sich in eine Matte ein, so daß nur die „masunzu"[2]) und die Zehen herausragen, und nicht selten durch Ratten, die schlimmste Plage der Wohnhütten, angenagt werden.

Auf dem der Wand zugewendeten Bettrande habe ich hohe, runde Deckelkörbe (ichibo) mit Körnerfrüchten (zur Aussaat) gesehen.

Während das Bett in Mpororo, im zentralen und südlichen Ruanda und in Mulera in allen Hütten vorkommt, konnte ich in Bugoye Hütten ohne Bett beobachten. In Njundo waren es noch ganz wenige, in Ruagari aber, das nur vier Stunden nördlich an

[1]) Kandt, R., Caput Nili. Berlin 1904, S. 390.

[2]) Nicht wegrasierte Haarstreifen, die den Schmuck der Männer, Kinder und Jugend bilden.

der Grenze von Bgisha liegt, schlief man schon ganz allgemein auf Matten ohne Bettgestell in einem durch eine Scheidewand abgetrennten, Hüttenteile, wie das auch bei den Batwa des Chuma der Fall war. Bei den Bakondjo und bei den Einwohnern von Toro sind Betten in allen Hütten vorhanden, in Kiziba dagegen fehlen sie.

Im Westen vom Kagera fehlt das Bett bei den Batwa, weiter bei den augenscheinlich von ihnen beeinflußten Einwohnern von Bgisha und Nord-Bugoye und dann weiter bei den Pygmäen. Berücksichtigt man noch den Umstand, daß im Westen vom Kagera das Bett mit der Bogensehne aus Rotang (Bambus) und den hölzernen Pfeilspitzen vikariert, so darf man die Vermutung aussprechen, daß das Fehlen des Bettes in Nord-Ruanda mit den Batwa, resp. Pygmäen, in Zusammenhang zu bringen ist.

Im Inneren der Batutsi-Hütten sah ich gelegentlich noch einen besonderen, für Kinder und Gäste bestimmten Raum. Gewöhnlich schlafen die größeren Kinder und die Fremden im Vorraum (umuriango).

Der Boden der Hütte wird mit Matten bedeckt und nicht mit Gras bestreut, wie das in Kiziba und Mpororo der Fall ist. Auf dem Boden findet man gewöhnlich noch einen hölzernen Hockschemel.

Hausgerät. Das Hausgerät ist in Ruanda sehr roh gearbeitet, so vor allem die Mörser und die Mörserkeulen. Die letzteren sind ganz einfache, nach unten verdickte, ungeschnitzte Stöcke. Auch die Kürbisflaschen sind hier nicht so glatt und regelmäßig wie in Kiziba, wo alle Formen in der vollkommensten abgeschlossensten Entwicklung vorliegen.

Abb. 132. Geflochtener Korb aus Mulera. (1/6 d. w. Gr. III E 13103. Dm. 39 cm.)

Abb. 133. Schildkorb für Mehl aus Ruanda. (1/6 d. w. Gr. III E 10922. 27 × 23 cm.)

Das wichtigste Hausgerät bilden Vorratskörbe, Mahlsteine und diverses Koch- und Eßgeschirr.

Körbe wurden schon früher kurz besprochen. Wir erwähnten die konischen Vorratskörbe aus Bambus (Abb. 54), die kleineren genähten Strohkörbe (ichibo, Abb. 131), die Schildkörbe zum Getreideputzen (Abb. 28) und die Reisekörbe aus Stäbchen (Abb. 45, 55). Es bleiben hier nur noch die niedrigeren, breiten, bei Haushaltarbeiten benutzten, meistens geflochtenen, manchmal aber auch aus Stäbchen zusammengebundenen Körbe (Abb. 134) zu erwähnen übrig.

Die Mahlsteine haben in Ruanda die übliche afrikanische Form und bestehen aus einer Steinplatte, auf der ein kleiner, von einer knienden Frau in der Hand gehaltener Stein hin und her bewegt wird. In dieser Weise werden die zwei sich reibenden Flächen, zwischen denen das am Feuer ausgetrocknete Korn zerkleinert wird, geschaffen. Das Mehl fällt vom Steine in einen flachen Schildkorb (Abb. 133).

Abb. 134. Stäbchenkorb aus Ruanda. (1/6 d. w. Gr. III E 10032. Dm. 48 cm.)

Tongefäße werden zum Kochen und Aufbewahren von Wasser und Bier verwendet. Die Kochtöpfe unterscheiden sich von den übrigen durch größere Öffnungen. Sie haben, ebenso wie die übrigen Tongefäße, einen ausgebogenen

Abb. 135. Kochtopf aus Mulera. (1/6 d. w. Gr. L 15172.)

Abb. 136. Wassertopf aus Mulera. (1/6 d. w. Gr. L 15264.)

Abb. 137. Wassertopf aus Mulera. (1/6 d. w. Gr. L 14755.)

Rand, bei dem sie angefaßt werden können. Zum Kochen stellt man sie mit Hilfe von drei Herdsteinen auf. Die Wassertöpfe werden oft von besonderen geflochtenen Untersatzringen (ingata yo kubereka) gestützt. Fehlen diese, so stellt man im Boden eine kleine Vertiefung her und stellt die Gefäße hinein, um sie so gegen das Umkippen sicherzustellen. Der Boden des Topfes ist nämlich immer sphärisch. Die Biertöpfe von größeren Dimensionen werden oft mit einer Umflechtung, die das Tongefäß widerstandsfähiger gegen Stöße macht, versehen.

Abb. 138. Untersatzring aus Mulera. (1/6 d. w. Gr. III E 13726. Dm. 23 cm.)

Das zum Kochen notwendige Feuer pflegt man in Ruanda mit einem Feuerbohrer zu erzeugen. Im Urwalde, zwischen Kahama und Njundo, begegnete ich zweien Batutsi, die dort ihre Kühe weideten. Sie waren spärlich bekleidet und trugen Feuerbohrer am Halse auf einer Schnur. In Mulera habe ich einen Feuerbohrer, aus dem Vorratskorb (isaho) eines Hirten hervorragend, gesehen. In Bgisha tragen fast alle Leute im Tabaksbeutel neben der Pfeife auch einen Feuerbohrer. In den Dörfern der stark besiedelten Teile Ruanda's, wie in Mulera z. B., wird diese Kunst dagegen fast gar nicht mehr ausgeübt, und man holt sich das Feuer von den Nachbarn, denen man in dieser Weise seine freundschaftliche Gesinnung kundgibt. Das Feuer wird in der Asche sorgfältig aufbewahrt, und man zündet das Brennmaterial an den kleinen glühenden Kohlen an, wobei mit einem kleinen geflochtenen Schild (kakoko) gefächelt wird.

Abb. 139. Geflochtener Topf aus Ruanda. (1/4 d. w. Gr. III E 5246. Höhe 33 1/2 cm.)

Abb. 140. Feuerbohrer der Kiwu-Batwa.

Beim Kochen werden roh geschnitzte Kochpaddeln und langgestielte Löffel zum Mischen, vor allem bei der Herstellung des steifen Hirsebreies (umutsima), benützt.

Das Essen wird in hölzernen, geschnitzten, kleinen Schüsseln und in Körben serviert.

Abb. 141. Vorratskorb eines Hirten aus Mulera. (1/4 d. w. Gr. III E 13681. Höhe 18 cm.)

Abb. 142. Fächelschild aus Ruanda. (1/4 d. w. Gr. III E 13675. Dm. 21 cm.)

Die Körbe sind flach und breit und werden sorgfältig, wenn auch nur schwarz, gemustert. Sie unterscheiden sich in ihrer Form und Technik von den schön gemusterten nubischen Körben nicht, da sie ebenfalls aus einem spiralig zusammengenähten Strohbündel hergestellt werden.

Abb. 143. Kochlöffel aus Mulera. (1/4 d. w. Gr. L 13081. 65 cm Länge.)

Abb. 144. Korb zum Servieren der Speisen aus Mulera. (1/4 d. w. Gr. III E 13670. Dm. 38 cm.)

Die Holzschüsseln sind gewöhnlich elliptisch, manchmal aber auch sehr stark in die Länge gezogen und oft mit einem Griff versehen, so daß sie einem sehr kurzstieligen Löffel gleichen. Es kommen nicht selten auch Doppelgefäße, die ich in größerer Zahl in Mulera sammeln konnte, vor. Bei diesen sind die

Abb. 145. Holzschüssel aus Mulera. (1/4 d. w. Gr. L 15094.)

Abb. 146. Holzschüssel aus Mulera. (1/4 d. w. Gr. L 1561.)

Abb. 147. Holzschüssel aus Mulera. (1/4 d. w. Gr. L 15156.)

Hohlräume kleiner und haben eine gemeinsame Längsachse. Bei den aus einem Stück Holz geschnitzten Doppelschalen, die zum gleichzeitigen Servieren verschiedener Speisen verwendet werden, dient als Griff die Verkuppelung der beiden Schüsseln. Am Außenrande trifft man oft auch die Andeutung eines Griffes in der Form eines Knopfes oder einer Öse an. Ösen kommen aber auch bei einfachen Schüsseln vor.

Abb. 148. Holzschüssel aus Mulera. (1/6 d. w. Gr. I. 15160.)

Abb. 149. Doppelschüssel aus Ruanda. (1/6 d. w. Gr. III 9976. 37 cm lang.)

Abb. 151. Trinkschale aus Mulera. (1/4 d. w. Gr. III E 13097. Dm. 20 cm.)

Für Bier und Wasser werden Kürbisschalen benützt. In Mulera verwendet man zum Trinken, ebenso wie im Kongo-Becken, vielfach große Schalen (nlukiza) der ihrer Längsachse nach durchschnittenen, Kalebassen. Gewöhnlich pflegt man jedoch in Ruanda das Bier aus einer Kalebasse mit dünnem Halse mittels eines Strohhalmes zu saugen. Der Hals ist hier nicht so lang wie in Kiziba. Die Halme werden in den Hütten in kleinen geflochtenen, oder auch aus Holz geschnitzten Behältern (ikitembo), die Köchermodellen ähneln, aufbewahrt.

Abb. 152. Bierkalebasse aus Ruanda. (1/6 d. w. Gr. III E 13045. 17 cm hoch.)

Das Bier wird mit Hilfe von Trichtern in die kleinen Öffnungen der Bierkalebassen eingegossen.

Abb. 153. Geflochtener Saugrohrbehälter aus Ruanda. (1/6 d. w. Gr. III E 10060. 65 cm lang.)

Abb. 154. Geschnitzter Saugrohrbehälter aus Ruanda. (1/3 d. w. Gr. III E 13048. 32 cm lang.)

Abb. 155. Tontrichter der Batwa. (1/6 d. w. Gr. III E 6628. 16 cm hoch.)

Es kommen aber in Ruanda auch Ausgußgefäße vor. Diese wurden schon durch Dr. KANDT[1]) gesammelt und publiziert.

Milch wird in den schon besprochenen Holzgefäßen (kianzi) im Hause aufbewahrt. Zum Buttern werden große Kürbisse (kisabo) verwendet. Zum

Abb. 158. Hölzernes Buttergefäß. (1/4 d. w. Gr. III E 9971. Dm. 13 cm.)

Abb. 156. Ausgußgefäß aus Ruanda. (1/4 d. w. Gr. III 9983. 14 1/2 cm hoch.)

Abb. 159. Holzschemel aus Mulera. (1/6 d. w. Gr. III E 13745. 22 cm hoch.)

Abb. 157. Buttergefäß aus Ton, Ruanda. (1/4 d. w. Gr. III E 9995, III E 9992. Dm. 10 1/2 und 10 cm.)

Aufbewahren von Butter dienen besondere kleine Gefäße, die entweder aus gebranntem Ton hergestellt oder aus Holz geschnitzt werden. Die letzteren haben die Form winziger Eßschüsseln, aber mit stärker konvergierenden Rändern, und sind meistens mit einem Ösengriff versehen.

Das Hüttenmobiliar ergänzen die jedoch nicht in allen Haushälten vorhandenen kleinen einbeinigen Schemel.

Haushalt. Die Haushaltarbeiten fallen den Frauen zur Last. Sie bestehen in der Besorgung des notwendigen Wassers und in der Zubereitung der Nahrung.

Das Beschaffen des im Haushalte notwendigen Wassers bildet wohl den schwersten Teil der Frauenarbeit. Diese Last ist besonders groß im Lavagebiet, südlich von den Vulkanen. Die Flüsse verlaufen dort unterirdisch, und freie Wasserstellen sind manchmal sehr weit entlegen, ja sogar einige Stunden entfernt. Man behilft sich zwar dort in erster Linie mit dem Regenwasser und dem bitteren Saft der Bananenstämme, aber ein gewisses Quantum Wasser muß trotzdem auch in diesen Gegenden hergeschleppt werden. Das gesammelte Regenwasser ist sehr stark verunreinigt. Man fängt das Regenwasser nämlich

[1]) KANDT, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie. 1904, S. 346.

in kleinen Bodenvertiefungen ein und schöpft es von dort mit Kürbisschalen in größere Töpfe, in denen es aufbewahrt wird. In Buhumba, wo ich dies beim starken Regen auf dem Wege von Njundo nach Rutshuru beobachten konnte, befanden sich diese Wasserbecken in den unsauberen Höfen, und zusammen mit dem Wasser wurde in die Gruben auch Unrat geschwemmt.

Trotz dieser Schwierigkeiten in der Wasserbeschaffung verschütteten die Bahutu eine Quelle am Karissimbi, um die Batutsi, die dort mit ihrem Vieh zur Tränke kamen und ihnen die Felder verwüsteten, los zu werden. Dieses Beispiel eignet sich besonders zur Charakterisierung des friedlichen Zusammenlebens der Hirten und der Ackerbauer.

Mit dem Wasserschleppen der Frauen hängt vielleicht auch ihre größere Reinlichkeit zusammen. Es ist mir in Njundo aufgefallen, daß man an der Ssebeya stets sich waschende Frauen, aber nur selten badende Männer antreffen konnte.

Die Herstellung der Nahrung fällt ebenfalls im ganzen Umfange der Frau zur Last und beschränkt sich nicht allein auf das Kochen. Sie müssen überdies das Getreide dreschen, das Korn zu Mehl zerreiben, Feldfrüchte schälen, in den meisten Fällen auch Brennholz beschaffen und in Kissaka sogar die Töpfe herstellen.

Abb. 160. Einschneidiges Frauenmesser aus Mulera. (1/4 d. w. Gr. III E 13734. 20 cm lang.)

Bei der Ausführung ihrer Arbeiten bedienen sich die Frauen kleiner, roh gearbeiteter Messer. Nur im Westen kommen große, zweischneidige, schwertähnliche Frauenmesser, die ihrer Form nach den Messern der Babira-Frauen sehr nahe kommen, vor.

Abb. 161. Frauenmesser vom West-Kiwu. (1/4 d. w. Gr. III E 10172. 32,5 cm lang.)

Die Basis der Ernährung bilden gekochte Gerichte; Mais, Bataten und Erdnüsse werden aber auch geröstet.

Die Lieblingsspeise der Batutsi bildet geschlagene saure Milch — „kivuguto". Die Batutsi behaupten, nur von Bier, Milch und Fleisch zu leben. Sie essen aber im Geheimen auch Erbsen (maharagi), Bohnen, Mehlbrei aus Hirse (umutsima), Eleusine (buro), Kürbisse und Bananen. Bataten scheinen sie dagegen zu verschmähen. Vielleicht ist das letzte jedoch nicht den Tatsachen entsprechend. Die Batutsi gaben sich wiederholt Mühe mich zu überzeugen, daß ihre Nahrung von der der Bahutu ganz verschieden sei. Das scheint doch nicht zuzutreffen.

Die Nahrung der Bahutu ist, wie es von der ärmeren Bevölkerung zu erwarten ist, nur eintöniger, an Milch und Fleisch ärmer und in der Hauptsache auf „umutsima", Erbsen und Bataten konzentriert. Bei den Bahutu von Nord-Ruanda spielt eine als Nahrungsmittel sehr bedeutende Rolle der Fisch.

Feste Nahrung nehmen die Batutsi nur einmal, und zwar abends zu sich. Sie essen zusammen mit ihren Frauen, trinken tun sie dagegen nur mit Männern derselben sozialen Stellung.

Die Bahutu essen dagegen zweimal: einmal zwischen 1 und 2 am Nachmittage und das andere Mal abends zwischen 8 und 9. In Mulera ißt man auch am Morgen. Das gilt nur für Männer, da Frauen und Kinder den ganzen Tag hindurch essen. Auch die Batwa essen in einem fort, wenn sich nur eine Gelegenheit dazu bietet — „balandwa uk imga" —, „sie suchen wie die Hunde", sagt man von ihnen.

10. Kapitel.

Familienangelegenheiten.

Familie. — Stellung der Frau. — Ehe. — Außerehelicher Verkehr. — Scheidung. — Geburt. — Tod.

Familie. Die Zahl der in einer Familie im engeren Sinne vereinigten Personen weist in Ruanda große Unterschiede auf. Sie umfaßt den Familienvater mit seinen Frauen und ihren Kindern.

Da die Frau vor allem eine Arbeitskraft darstellt, so kann die Zahl der Frauen in einem Haushalte für den Maßstab seines Wohlstandes angesehen werden. Ebenso wie sich die Armen keine Frau halten können, haben die wenig Bemittelten nur eine, und die Minorität der Wohlhabenderen zwei und sogar mehrere Frauen. Deshalb besitzen auch die Batutsi mehr Frauen als die Bahutu.

Wenn auch eine Frau sich selbst ernährt, und der Kaufpreis einer Frau eine unbeträchtliche Summe bei den Bahutu beträgt, so muß doch der Mann jeder Frau ein Haus bauen und es erhalten. Die Menge der dabei notwendigen Arbeit scheint bei der geringen Dauerhaftigkeit der Strohbauten einen wichtigen, die Polygamie stark einschränkenden Umstand zu bilden. Es kommt zwar vor, daß mehrere Frauen sich in einem Hause vertragen können, doch wird der Mangel einer besonderen Hütte als eine gar große Benachteiligung empfunden, die meistens das Weggehen der Frau zur Folge hat.

Zur Familie im weiteren Sinne müssen noch die entfernteren Verwandten hinzugefügt werden.

Betrachtet man das Kind als den Mittelpunkt, so kommen zunächst sowohl bei dem Vater, wie auch bei der Mutter nur die Ahnen in der männlichen Linie in Betracht. Die Ahnen in der weiblichen Linie werden nicht berücksichtigt. Von den seitlichen Verwandten sind nur Onkel, Tanten, Vettern, Basen, Neffen und Nichten zu erwähnen. Außerdem dürfen die entsprechenden Verwandten des Gatten resp. der Gattin nicht vergessen werden.

Obwohl man für den sehr abstrakten Begriff des Ahnen im Kinyaruanda ein besonderes Wort — „basekuru" — hat, besitzt man doch kein Wort zur Bezeichnung des Begriffs Vater, und man muß immer „mein Vater, dein Vater, sein Vater" sagen. Auch für den Großvater hat man keine besondere Bezeichnung, da „sekuru" im Grunde genommen „sein Großvater" bedeutet, und der Begriff „dein Großvater" eigentlich durch „sokuru" ausgedrückt werden müßte.

[p. 216]

Es sollen hier in der folgenden Tabelle die Bezeichnungen der näheren Verwandten zusammengestellt werden:

	Väterliche Seite	Mütterliche Seite
Ahnen	basekuru	
Urgroßvater, Urgroßmutter	sekuruza, nyinakuruza	sengeneza, nyinangeneza
Großvater, Großmutter	sekuru, nyinakuru	senge, nyinange
Mein (unser) Vater, meine (unsere) Mutter	data, mama	
Dein (euer) Vater, deine (eure) Mutter	so, nyoko	
Sein (ihr) Vater, seine (ihre) Mutter	se, nyina	
Mein Mann	mugabo wanye	
Meine Frau	mugore wanye	
Sohn, Tochter	umwana	
Enkel	musukuru	
Großenkel	musukuruza	
Bruder meines Vaters, Bruder meiner Mutter	data wachu	marumi
Bruder deines Vaters, Bruder deiner Mutter	so wanyu	nyoko rumi
Bruder seines Vaters, Bruder seiner Mutter	se wabo	nyina rumi
Schwester des Vaters, Schwester meiner Mutter	nyina senge	mama wachu
Schwester deiner Mutter		nyoko wanya
Schwester seiner Mutter		nyina wabo
Der Knabe sagt „meine Schwester"	mushiki wanje	
Der Knabe sagt „mein Bruder"	mwene data	mwene nyina
Das Mädchen sagt „meine Schwester"	mwene data	mwene nyina
Das Mädchen sagt „mein Bruder"	musaza wanje	

Kinder zweier Brüder nennen sich gegenseitig: „mwene data wachu".
Kinder des Bruders der Mutter werden genannt: „mwene marumi".
Kinder der Schwester des Vaters werden genannt: „babyara" (sing. mubyara).
Die Vettern weiteren Grades werden ebenfalls genannt: „babyara".
Der Sohn des Bruders wird genannt: „umushungu wabo".
Die Tochter des Bruders wird genannt: „umugore wabo" oder „umukobga wabo".
Das Kind der Schwester wird von seinem Onkel genannt: „muishwa".
Das Kind der Tochter wird von seinem Großvater „akamumuishwa" genannt.
Die Frau meines Sohnes wird genannt: „umukazana".
Der Vater meines Mannes wird genannt: „sebukwe".
Der Bruder meiner Frau wird genannt: „umuramu".
Die Schwester meiner Frau wird genannt: „umuramukazi".

Die älteren nahen Verwandten werden einfach als Oheime — „data wachu" usw. — bezeichnet. Die entfernteren Verwandten nennt man kurz „mwene wachu".

Das in der Verwandtschaftstafel viel genannte „wachu" ist eigentlich das Possesivpronomen und bedeutet unser, ebenso wie „wanyu" euer und „wabo" ihr bedeutet.

Der Stiefvater wird einfach als Mann der Mutter oder Bruder des Vaters

bezeichnet. Das letztere hängt damit zusammen, daß die verwitwete Frau dem Bruder ihres Mannes als Erbe zufällt.

Es verdient beachtet zu werden, daß in den Verwandtschaftsbezeichnungen die Brüder des Vaters und die Schwester der Mutter als zwei parallele Gruppen gegenübergestellt werden, deren Angehörige untereinander Ehen abschließen dürfen.

Stellung der Frau. Die Frau gilt in Ruanda, im Prinzip wenigstens, für ein niedrigeres Wesen, und die Eheleute essen in der Öffentlichkeit nie zusammen, wenn sie auch unter vier Augen gewöhnlich zusammen speisen, wie ich das wiederholt beobachten konnte.

Trotz dieser Benachteiligung muß die Stellung der Frau in Ruanda für relativ gut gehalten werden. Auf ihr lasten zwar in den armen Haushalten die Hausarbeiten und die Bestellung des Feldes. Bei der letzteren Arbeit hilft ihr jedoch der Mann in dringenden Fällen und verrichtet dabei immer alle schwereren Arbeiten. Dem Mann liegt die Pflicht ob, Gebüsch auszuroden, Hütten und Speicher zu bauen und beim Hacken zu helfen.

Die wohlhabenden Frauen verbringen ihre Zeit mit kleinen Handarbeiten, wie z. B. dem Flechten kleiner, kunstvoller Körbe und sollen dabei dem Biertrinken eine übermäßige Aufmerksamkeit zuwenden. Sie verbleiben den ganzen Tag über im Frauenhause (kagondo), und man hat daher sehr selten Gelegenheit Batutsi-Frauen zu sehen. Überrascht man ein Gehöft mit einem unerwarteten Besuche, so erblickt man höchstens ein paar fliehende Gestalten, die man nach den Beinringen aus Gras (butega) als Frauen erkennen kann.

Während des Aufenthaltes der Expedition in Niansa, hatte Dr. Schubotz vergeblich versucht, von Musinga die Erlaubnis zu bekommen, seine Frauen zu photographieren. Musinga machte zwar Versprechungen, hielt aber sein Wort nicht.

In Niansa konnte man überhaupt keine Frauen sehen. Während meines ganzen dreiwöchentlichen Aufenthaltes begegnete ich nur am letzten Tage zwei nicht ganz jungen Frauen.

In Ruanda hört man nicht selten Klagen über das Weiberregiment. Vor allem beschweren sich die Bauern über die Frauen ihrer Häuptlinge, die sich ihnen, besonders in der Abwesenheit ihrer Gatten, sehr unangenehm bemerkbar machen sollen. Ich hörte ein paarmal von Bahutu, die durch Batutsi-Frauen verprügelt und durch Stockhiebe stark verletzt worden waren.

Die Frau nimmt eine hohe und geschätzte Stellung erst als Mutter ein. Das kommt am schönsten zum Ausdruck im Einflusse, dessen sich die Königin-Mutter erfreut. Ein Königssohn, der seine Mutter verloren hat, kann nicht mehr den Thron besteigen. Sterile Frauen werden verachtet, den unverheirateten Frauen wird nur insofern Aufmerksamkeit geschenkt, daß man sie verheiraten, d. h. verkaufen kann, und daß dadurch Verbindungen mit anderen Familien angeknüpft werden können.

Ehe. Die Heirat besitzt in Ruanda nicht überall dieselbe soziale Bedeutung, wenn auch im ganzen Lande der Mann durch seine Heirat und noch viel mehr durch Heiraten seiner Kinder in die Höhe kommen kann.

Im Norden von Ruanda aber, wo die Bahutu bis jetzt noch fast ganz frei sind, ist die Heirat ein politischer Akt von großer Wichtigkeit, da er zwei Geschlechter zusammenschließt und einen Schritt in der Richtung der sozialen Integration darstellt. In Nduga, wo die Bauern keine politische Bedeutung besitzen, haben auch ihre Heiraten keine Bedeutung. Mit diesem Umstande werden wohl auch die Unterschiede in den Kaufpreisen der Bräute zusammenhängen. Diese sind sehr hoch im Norden und sehr niedrig in der Nduga. Die Stabilität der geschlossenen Verbindungen ist im Norden daher auch bedeutend größer.

Die Höhe des Brautpreises, den man bei der Scheidung zurückerstatten muß, bildet die ökonomische Garantie für die Beständigkeit der geschlossenen Verbindung. In Mulera ist eine Heirat nach den Worten der Eingeborenen ein Austauschakt zwischen zwei Clans. Ein Clan liefert die gehörnte Kuh — „ntuku", die den Brautpreis bildet, der andere Clan gibt die ungehörnte Kuh — „nkunge", d. h. die Braut. Die Frau ist, ebenso wie die Kuh, ein Familiengut. Man läßt sie nach dem Tode ihres Mannes vererben, um ihren Brautpreis samt der Nachkommenschaft nicht zurückerstatten zu müssen. Das Vererben der Witwe wird „kutshura" genannt.

Um die Braut wird in Kissaka schon geworben, wenn sie noch ein kleines Kind ist. Der Werber schickt den Eltern der Braut Bananenbier. Sind die Eltern einverstanden, so nehmen sie das Geschenk an. Dann wird auch gelegentlich der Preis der Braut verabredet. In Erwartung der Mannbarkeit des Mädchens werden die Biergeschenke von Zeit zu Zeit wiederholt. Die Biersendungen, die hauptsächlich an den Werber erinnern und die Heiratsbesprechungen fördern sollen, erreichen die Höhe von zwanzig bis fünfzig Töpfen. Ist das Mädchen erwachsen (hat sie das Alter von ca. fünfzehn Jahren erreicht), d. h. sind ihre Brüste faustgroß geworden, so wird sie an einem der verabredeten Tage von der Schwester ihres Vaters, ihren Brüdern und ihrem Gefolge (bagaragu) in das Haus ihres Mannes gebracht. Die Gesellschaft bleibt den ganzen Abend zusammen, trinkt Bananenbier und unterhält sich. Die Braut sitzt inzwischen mit ihrer Tante im inneren Teile des Hauses, während sich die übrigen in dem der Tür zugewandten Teile (muliango) aufhalten. Nachdem der ganze Biervorrat aufgezehrt ist, ziehen sich alle nach ihren Häusern zurück, und die Neuvermählten bleiben allein.

Es kommt sehr oft vor, daß die Neuvermählte zu ihren Eltern entflieht und zum Manne nicht zurückkehren will. In diesem Falle muß der Mann den Schwiegereltern weitere Biergeschenke machen. Hat er vorübergehend kein Bier zur Verfügung, so muß er die Frau durch einen Mann, der Biersendungen verspricht, abholen lassen.

Der vom Bräutigam für die Frau bezahlte Satz ist in erster Linie eine Manifestation seines Wohlstandes und nicht der Kaufpreis der Frau. Deshalb zahlen auch die Reichen unverhältnismäßig mehr als die Ärmeren. So gibt ein großer Häuptling in Kissaka für eine Frau zwei Milchkühe samt ihren Kälbern. Ein kleiner Häuptling zahlt für eine Frau eine Milchkuh mit einem Kalbe; ein gewöhnlicher Mututsi dagegen gibt nur eine Kuh. Die Zahlung des Bräutigams wird „inkwano" genannt. Andererseits bekommt aber auch die Frau eine Mitgift, die „indongovanyo" (Hochzeitsgeschenk) genannt wird. Die Mitgift der Frau wird von ihrem Vater und seiner Schwester gegeben. Jedes von ihnen gibt je ein Kalb, das nur in den seltensten Fällen durch eine Kuh ersetzt wird.

Wenn der König eine Frau heiraten will, so schickt er einen seiner Männer mit einem gabelförmig verzweigten Holzstabe, der „isando" genannt wird, aus. Der König bezahlt für eine Frau viel Kühe, er nimmt aber keine Mitgift entgegen, weil ja ohnehin ihm alles gehört.

Bei den Bahutu von Kissaka sind die Zahlungen und Geschenke nicht so groß. Der Bräutigam zahlt z. B. für die Frau sechs bis acht Hacken oder oft auch ein „doti" (vier Yard) Stoff und ein Schaf. Der Vater der Braut gibt als Mitgift eine Hacke und seine Schwester ein Schaf mit. Die Quantitäten des bei diesen Anlässen vertilgten Bieres sind dagegen sehr beträchtlich.

In Bugoye, wo man für das Mädchen häufig eine Kuh gibt, kann die Braut auch abgedient werden. Diesem Kaufwerte verdanken die Mädchen auch die Komplimente, in denen sie von den eleganten Kavalieren mit Kühen verglichen werden. In Mulera, wo der Preis der Frau bei größerem Wohlstand der Bahutu höher ist, erhält man ohne Kuh keine Frau.

Das junge, unverheiratete Mädchen wird „inkumi" genannt. Von den alten Jungfern sagt man, daß sie in den Herd gefallen sind: „baguye kuziko" oder „akapfa nimulindo" — sie ist in Jungfräulichkeit gestorben.

Ehen mit Mädchen, die schon geschlechtlichen Umgang hatten, kommen vor, jedenfalls soll aber der schlechte Ruf, in Mulera wenigstens, Schwierigkeiten bei dem sonst leichten Auffinden eines Mannes verursachen.

Wenn ein Mulera seinen Sohn verheiraten will, so sieht er sich nach einem Mädchen, das ihm wichtige Alianten aus den Reihen ihrer Verwandten sichern würde, um. Ist die Wahl entschieden, und hat das angefragte Orakel günstig ausgesagt, so wird ein Biergeschenk den Eltern des Mädchens geschickt. Das Geschenk wird angenommen, wenn man die Zufriedenheit mit der Werbung ausdrücken will. Bei der ersten Biersendung muß der Vater des Mädchens zusagen, wenn er sich auch später zurückziehen will. Die Absage bei der ersten Sendung wird als eine schwere Beleidigung aufgefaßt und erzeugt bittere Feindschaft. Die Besuche mit Biergeschenken werden von Zeit zu Zeit wiederholt. Winkt der Vater des Mädchens nicht ab, so wird beim Biergelage die Höhe des Brautpreises gelegentlich festgesetzt. Er besteht in den meisten Fällen aus einer Kuh und zwei Töpfen Bier. Das Bier kann aber durch Hacken ersetzt

werden. Die Kuh trägt auf dem Halse die „mushishwa" genannte Schlingpflanze. Mit derselben ist auch einer der beiden Biertöpfe oder die ihn ersetzende Hacke umgebunden. Alles zusammen wird „bukwe" — Brautpreis — genannt. Die „mushishwa"-Pflanze wird hinzugefügt, um den Vertrag zu festigen. Sie soll die Abänderung des Beschlusses der Eltern verhüten und die Abgabe des Mädchens an einen anderen Jüngling verhindern. Außer dem Vater bekommen noch die anderen nächsten Verwandten des Mädchens Geschenke. Der Brüder des Vaters bekommt drei und der Bruder der Mutter zwei Töpfe Bier. Die Mutter des Mädchens bekommt drei Hacken, die Großmutter (von der mütterlichen Seite) und die Brüder je eine Hacke. Die Lieferung der Zahlung findet statt an einem der nächsten Tage nach der ersten Besprechung. Wenn die Heirat nicht zustande kommt, so muß der Brautpreis und vor allem die Hacke mit „mushishwa" zurückerstattet werden.

Steht der Termin der Heirat schon ganz nahe vor den Türen, so werden die Besuche mit den unentbehrlichen Biergeschenken in kleinen Abständen wiederholt. Nachdem ein angegebenes Quantum Bier ausgetrunken ist, wird der Tag der Zeremonie festgesetzt.

Die Angehörigen des Bräutigams bereiten eine größere Menge Bier vor. Der Vater des Mädchens oder, wenn dieser nicht mehr lebt, ihr älterer Bruder ladet Verwandte und Freundinnen ein, das Mädchen nach dem Hause ihres künftigen Gatten unter großem Gefolge zu bringen.

Das Mädchen wird, in eine Matte eingewickelt, geführt oder, wenn die Wege schlecht sind, getragen. Wenn es jemandem gelingt das Gesicht der Braut während dieses Ganges zu erblicken, so wird die Ehe von kurzer Dauer sein. Zugleich mit diesem Zuge wird auch ein leerer Kürbis, der dem Mädchen die Nachkommenschaft sichern soll, wie auch die Geschenke ihrer Verwandten gebracht. In einem der Körbe liegt das Kuhfell, mit dem sich die Verheiratete bekleiden wird, der andere enthält ihren Schmuck. Während des ganzen Weges wird gesungen. Das Mädchen wird am Eingange zum Hofe vom Bräutigam empfangen. Er geht ihr mit einem Kürbisse in der Hand entgegen, überreicht ihr diesen, hebt das Fell, mit dem er bekleidet ist, in die Höhe und zeigt den Oberschenkel mit den Worten: „ndakuhaye omurundi, uzachukura inka yo kukuhaliki" — Ich gebe dir das Bein, es wird dir ein Stier, um dich zu besteigen.

Der vom Manne überreichte Kürbis ist ein Symbol des Bauches der geschwängerten Frau, und die Zeremonie soll den Wunsch des Mannes, sie möchte ihm Kinder gebären, in symbolischer Form ausdrücken. Die Braut durchschreitet den Hof und begibt sich nach dem Hausgebäude, wo die Heiratszeremonie fortgesetzt werden soll. Dort gibt sie der künftigen Schwiegermutter ihr „kisabo" (den Kürbis) zur Aufbewahrung. Bei ihr werden auch: der im Zuge mitgebrachte Kürbis und die zwei Körbe mit Geschenken hinterlegt. Der zweite Kürbis wird sehr sorgfältig aufbewahrt. In ihm bringt die junge Frau

nach der Geburt des Kindes Bier nach dem Elternhause, um dort ihren Manen ein Opfer zu veranstalten. Die Manen werden in dieser Weise ersucht, dem Kinde nichts Böses anzutun. Aus demselben Kürbis gibt man kleinen Kindern zu trinken. Er muß ganz neu sein und darf vorher sogar nicht für Wasser benutzt werden.

Nachher verteilen sich die Gäste im Hause. Die Frauen begeben sich nach dem Frauenteil (mbele) vis-à-vis des Einganges, die Männer bleiben im „ikirambi", in der Mitte des Hauses. Die „basangwa", Gäste des Bräutigams, sitzen auf einer Seite, die „bahelekeza", die Mitglieder des Brautzuges, auf der anderen. Die Nichteingeladenen stehen vor der Hütte im Hofe.

Nachdem man dem Bier reichlich zugesprochen hat, wird nach dem Essen gefragt. Einer der Anwesenden macht den Vorschlag mit der Heirat zu beginnen, da es schon spät sei. Der Bräutigam steht auf, nimmt ein Gefäß mit Milch und begibt sich zu den Frauen. Die Frauen leisten ihm Widerstand und lassen ihn nicht zur Braut heran. Der Bräutigam verjagt sie mit Feuer und tritt auf das Mädchen, das auf dem Boden mit gespreizten Beinen sitzt, heran, kniet vor ihr nieder, speit aus dem Munde Milch auf ihre Brüste und sagt, sich erhebend: „mumpe impundu, ndalongoye" — Gebt mir den Freudenruf, ich habe geheiratet.

Das ist der Mittelpunkt der ganzen Heiratszeremonie. Dieser Handlung dürfen unverheiratete Mädchen nicht beiwohnen. Die Eltern des Mädchens und die Brüder ihres Vaters wohnen der Heiratszeremonie überhaupt nicht bei. Sie feiern die Hochzeit der Tochter beim Bier im eigenen Hause.

Um den Neuvermählten eine zahlreiche Nachkommenschaft zu sichern, zerreibt nach dieser Zeremonie eine der Schwestern des jungen Ehemannes Mehl, macht Hirsebrei und verteilt es an kleine Kinder. Dasselbe Mädchen bereitet am nächsten Tage auch das Essen für die junge Frau.

Die Heiratszeremonien werden durch das Opfern einer Ziege abgeschlossen. Nachdem die Kinder den Hirsebrei aufgegessen haben, sagt der Familienvater: „Wir gehen essen." Die Gäste antworten, die Frauen möchten sich die Hände waschen. Die Frauen erklären sich damit nicht einverstanden und sagen: „Wir werden essen, nachdem die Männer beendigt haben." Der Familienvater läßt dann eine Ziege holen. Nachdem die Ziege gebracht worden ist, wird diese von den Gästen prüfend angesehen und für nicht schön genug befunden. Man geht dann eine andere zu holen. Diese genügt auch noch nicht den Ansprüchen der Anwesenden. Dann wird die dritte geholt. Die dritte erst kann unter Umständen, wenn sie schön ist, angenommen werden. Ist die Ziege angenommen worden, so treibt man sie mit Stockhieben nach dem Hause des Bräutigams. Dort wird sie in der Nähe seines Bettes durch Keilhiebe und Fußtritte und nicht wie gewöhnlich mit einem Messer getötet.

Diese Zeremonie soll angeblich andeuten, wie die Frau behandelt würde, wenn dieses Opfer nicht gebracht worden wäre. Nach einer anderen Version

soll die Frau so nachgiebig und weich sein wie die Ziege, der man alle Knochen zerbrochen hat. Das Fleisch muß an die Anwesenden verteilt werden, sonst würde die Ehe kinderlos bleiben. Die Männer essen es an demselben Tage, die Frauen nehmen es nach Hause für die Kinder mit, da sie in Mulera kein Ziegenfleisch essen dürfen.

Die Männer essen das Fleisch mit Hirsebrei. Nachdem man zum Genüge gegessen und getrunken hat, gehen am Morgen alle auseinander. Die Gäste des Bräutigams begleiten dabei die Gäste der Braut eine Strecke weit, um sie in dieser Weise zu ehren.

Der junge Ehemann kehrt aber bald zurück, nimmt das vorbereitete Brennholz und zündet an den Stellen, wo die Frauen und die Männer saßen, zwei Feuer an. Die Braut geht mit allen übrigen hinaus, begibt sich aber zur Schwiegermutter und bleibt dort. Die Schwiegermutter bereitet das Essen vor, die Neuvermählte weigert sich jedoch es zu sich zu nehmen. Der Mann muß die hungrige Frau erst durch Geschenke dazu bewegen.

Am Abend wird die Frau von der Schwiegermutter eingeredet, sich nach der Hütte des Mannes zu begeben. Die Frau sträubt sich hartnäckig, sich dem Manne hinzugeben, und es kommt zu einem Streit. Es gehört sich, daß der Mann am Körper Spuren aufweise, die allen zeigen, daß sich die Frau heftig verteidigt und sich nicht wie eine Dirne hingegeben hat. Es kommt aber vor, daß der nicht genügend starke Mann den Widerstand der Frau mit Gewalt nicht brechen kann und sie zur Hingabe, wie auch zum Essen, durch Geschenke bewegen muß.

Nach der Heirat muß die Frau eine Zeitlang verborgen bleiben. Das dauert, bis ihre Angehörigen mit Geschenken aus Bier, Lebensmitteln und Armringen kommen. Dieser Besuch findet gewöhnlich am dritten Tage statt. Bei dieser Gelegenheit werden Matten mitgebracht, die von der jungen Frau im Elternhause gemacht wurden. Die junge Frau darf sich mit ihren Verwandten, mit den Mädchen, die die Matten gebracht haben, unterhalten. An diesem Tage wird getanzt, gesungen und viel getrunken.

Einige Zeit darauf schicken die Eltern ihrer Tochter wieder Geschenke. Unter diesen befindet sich, abgesehen von den Lebensmitteln, auch eine ganz neue Hacke mit neuem Stiel. An diesem Tage tanzt die Frau mit ihrem Manne und der neuen Hacke, unter Gesangbegleitung der übrigen Angehörigen, geht dann zum ersten Mal auf das Feld und arbeitet dort ein wenig. Bis zu diesem Tage übt der Mann keinen Geschlechtsverkehr mit den anderen Frauen aus. Dieser Tag wird „kushishura" genannt. Nach dem Hacken werden der jungen Frau Hirsekörner gebracht, eine Handvoll auf einer Matte zerstreut, und die junge Frau muß sie mit einer Handbewegung auflesen. Gelingt ihr das nicht, so sind die Aussichten auf eine zahlreiche Nachkommenschaft schlecht. Diese Körner werden von ihr, mit dem Manne zusammen, gemahlen. Das dabei erhaltene Mehl dient zur Bereitung von Bier, das kleinen Kindern gegeben wird, um selbst Kinder zu bekommen.

Während der ersten Menstruation nach der Hochzeit erhält die Frau das Kuhfell, das die Kleidung der Verheirateten bildet, und ihr Kopf wird abrasiert. Da aber die Mädchen nicht selten vor dem Eintritte der Geschlechtsreife verheiratet werden, so kommt es vor, daß die Verheiratete lange mit ihrem „masunzu" (Rasiermuster) herumgeht und auf das Kuhfell wartet. R. P. F. DUFAYS erzählte mir, daß er einen Fall kennt, wo die Frau acht Monate auf ihr Kuhfell gewartet hat. Es soll aber auch vorkommen, daß die Frau sogar zwei Jahre warten muß.

An die Rasiermuster auf dem Kopfe knüpft sich dabei der Aberglaube, daß, wenn die Frau auf ihren Mädchenschmuck zur gebührenden Zeit (erste Menstruation nach der Hochzeit) nicht verzichtet, so wird einer der Vermählten jung sterben. Nach dem Abrasieren des Kopfes bekommt die Frau vom Manne Geschenke.

Hat die Frau ihr Kuhfell angezogen, so geht sie ihre Eltern besuchen. Es kommt vor, daß bei früher Menstruation dieser Besuch vor dem ersten Hacken stattfindet. Sie ist auf dem Wege mit dem Kopfe ins Fell eingehüllt und hat den besten Schmuck an. Bei den Eltern reibt sie Mehl und füllt damit einen Korb. Vom überfüllten Korbe wird das überstehende Mehl heruntergenommen. Dieses bringt sie ihrem Manne. Das Mehl wird dort zum steifen Brei gekocht und mit dem Manne zusammen gegessen. Auch diese Zeremonie steht im Zusammenhange mit der Sicherung einer zahlreichen Nachkommenschaft.

Wenn auch die Kinder in der Familie im Vordergrunde stehen, von den Eltern zart geliebt und gut behandelt werden, und die Innigkeit der Beziehung zwischen Mutter und Kind den Vater etwas beiseite schiebt, so zeigen doch auch die Beziehungen zwischen den Gatten einen gewissen Grad von Anhänglichkeit und Zärtlichkeit. Das soll vor allem bei den Batutsi der Fall sein.

Wenn in Mulera ein Mann auf Reisen geht, so gießt die Frau von jedem hergestellten Bier ein wenig ab, stellt dieses beiseite und bewahrt es auf. Findet der Mann nach der Rückkehr kein Bier vor, so schließt er daraus, daß die Frau an ihn nicht gedacht hat und ihm untreu geworden ist.

Vor allem in Nduga scheinen die Ehen von mäßiger Dauer zu sein, wie das schon oben erwähnt wurde.

Die Hochzeit in Mulera wurde schön und eingehend durch R. P. FELIX DUFAYS[1]) geschildert, die Hochzeitsbräuche der anderen Teile Ruanda's hat R. P. P. SCHUMACHER[2]) behandelt.

Außerehelicher Verkehr. Nicht alle Frauen, die mit einem Manne eine wirtschaftliche Einheit bilden, sind seine regelrechte Gattinnen (basumba kazi), mit denen die formelle Kaufehe geschlossen worden ist. In Ruanda hält man sich überdies Konkubinen und Sklavinnen (baja). Die Konkubinen bestehen

[1]) DUFAYS, P., R. P., Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1909, S. 847—878.

[2]) SCHUMACHER, P. R. P., Die Ehe in Ruanda. Anthropos 1910, S. 870—906.

meistens aus kinderlosen Witwen und verlassenen oder flüchtigen Frauen. Diese lassen sich dort nieder, wo sie eine verhältnismäßig gute Unterkunft finden. Die „baja" werden von ihren Eltern als kleine Kinder, meistens während der Hungerszeiten gegen Lebensmittel, verkauft. Sie sind eben Frauen ohne Verbindungen, die aber sonst den anderen Frauen recht nahe kommen und meistens auch eigene Hütten haben. Ihre Kinder gehören angeblich ebenfalls zum Geschlecht ihres Vaters, wenn sie auch nicht als vollbürtig angesehen werden. Solche Kinder der Batutsi-Männer sollen z. B. nicht als Batutsi gelten, wenn sie auch dieselben Geschlechtsnamen tragen.

Die „baja" werden von den Häuptlingen ihren Klienten verliehen, wie man das z. B. bei den Azande und Mangbetu in einer noch viel übersichtlicheren Form sehen kann. Sie gehören zusammen mit der Kuh zu den Mitteln, mit denen der Mächtige seine Klienten an sich fesselt und sich die Grundlagen seiner Macht sichert.

Ebenso wie man einem Klienten eine Kuh verleihen und infolgedessen auch zurückziehen kann, kann man auch eine „muja" dem Begünstigten vorübergehend zur Verfügung stellen. Unter diesen Verhältnissen ist aber auch das Bewirten der Gäste mit Frauen, „die ihm das Bett erwärmen sollen", etwas ganz nahe Liegendes. Den weniger geschätzten Gästen werden „baja" gegeben. Die hoch angesehenen Gäste sollen dagegen durch die Anbietung regelrechter Gattinen beehrt werden.

Überhaupt stehen jedem, der sich auf Reisen befindet, die Frauen seiner Blutsbrüder zur Verfügung. Über die in mancher sozialen Beziehung positiven Seiten dieser Einrichtung sagt Dr. KANDT[1]): „Wo, wie in Ruanda, alternierendes Connubium, d. h. wechselseitige Paarung mehrerer blutsbefreundeter Männer mit allen ihren Frauen stattfindet, wird verhindert, daß durch die Untauglichkeit eines männlichen Teils auch der weibliche Teil der Ehe für die Erhaltung der Art verloren geht".

Diese Sitte scheint vor allem bei den Batutsi, wie auch bei den Bahima, verbreitet zu sein. R. P. ACHTE sucht darin den Grund der relativ geringeren Ausbildung der Polygamie bei den Bahima.

Trotz der Leichtigkeit des Eheschließens und der Polygamie, gibt es in Ruanda auch noch eine Art von Prostituierte. Sie rekrutieren sich aus der Zahl der verwitweten und älteren Frauen, wie auch der Mädchen, die keinen Mann gefunden haben. Sie geben sich den Männern für Geschenke hin, wodurch sie sich ihren Lebensunterhalt erwerben. Man nennt sie „inzorezi". Mit ihnen üben die jungen Leute den Geschlechtsverkehr vor der Heirat aus. Dies Wort ist vom Verbum „kuzerera" — herumlaufen — gebildet.

Von den Prostituierten und Konkubinen muß man unterscheiden die „nyamuraza", die herumlaufenden Mädchen, die eine Art Ehe auf Probe eingehen und sich dadurch den geschlechtlichen Umgang verschaffen. Sie hoffen

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 177.

in dieser Weise den Mann, der sie sonst nicht berücksichtigt hätte, zur Leistung der konventionellen Zahlung, und dadurch zur regelrechten Ehe, zu gewinnen. Dieser Versuch kann einige Male wiederholt werden.

Scheidung. Ist ein Mann mit seiner Frau nicht zufrieden, so darf er sie ohne weiteres nach Hause zurückschicken. War die Frau schuldig, ist sie untreu oder unfruchtbar gewesen, so kann dabei die geleistete Zahlung zurückverlangt werden.

In Mulera wird bei dieser Ehescheidung die für die Frau bezahlte Kuh samt der Nachkommenschaft zurückerstattet, wenn die Frau keine Kinder hatte. Wenn die Frau längere Zeit mit ihrem Manne gelebt hat, so können die Kühe durch Kälber ersetzt werden. Während meines Aufenthaltes in Ruasa ist die ganze Landschaft in Aufregung gebracht worden durch einen nicht alltäglichen Ehescheidungsprozeß. Ein Mann, namens Lwamakuba, bezahlte für seine Frau mit einer Kuh, die dem Schwiegervater im Laufe der Zeit zehn Kälber gegeben hat. Als die Frau alt wurde, schickte sie der Mann nach Hause zurück mit Hinweis auf ihre Unfruchtbarkeit und verlangte seine Zahlung zurück, die inzwischen zu einer Rinderherde angewachsen war. Nach vielen Unterhandlungen kehrte die Frau mit einer vorzüglichen Kuh zurück, die ihre Schönheitsdefekte ausbessern sollte. Der Mann nahm die Frau an, und die Angelegenheit wurde so geregelt. Nach einer Zeit wurde die Frau wieder zurückgeschickt. Fünfmal kehrte die Frau jedesmal mit einer neuen Kuh zurück. Zur Zeit meiner Anwesenheit wurde die Frau zum sechstenmal zurückgeschickt. Da man aber diesmal eine neue Kuh verweigert hatte, so leitete der Mann einen Prozeß zur Rückgabe der rechtswidrig zurückgehaltenen Kühe ein.

Wenn eine Frau mit ihrem Manne nicht mehr zusammenleben will, so geht sie zunächst zu ihren Eltern zurück. Dort hat sie aber kein angenehmes Dasein, da man sie ausschließlich als ein Arbeitstier und noch dazu als etwas Unreines betrachtet. Dem Vater schwebt vor allem die Rückgabe der erhaltenen Zahlungen vor, die er dem Manne nicht verweigern kann. Deshalb bleibt auch die Frau meistens nicht lange im Elternhause zurück. Nach einer gewissen Zeit zieht sie weg und läßt sich bei einem Manne, der vor den Differenzen mit ihrem Manne und Vater nicht zurückscheut, nieder. Ist die Frau einmal von ihrem richtigen Manne weg, so bleibt sie meistens nirgends längere Zeit und zieht herum, von ihren Vorteilen und Launen geleitet. So kommt es vor, daß eine Frau in wenigen Jahren mehrere Männer wechselt.

Die Streitigkeiten zwischen Mann und Frau sollen in Mulera vor einem extra gewählten Gericht aus älteren Frauen und Männern verhandelt werden. Erklärt sich die öffentliche Meinung zugunsten der weggezogenen Frau, so verliert der Mann das Recht auf seine Zahlung und muß sie durch Geschenke zur Rückkehr veranlassen. Dabei werden in der Regel die bestochenen Angehörigen der Frau zu seinen eifrigsten Widersachern, die auch ohnehin das Herumziehen sehr ungern sehen.

Die geschiedene Frau behält ihr persönliches Eigentum und die Mitgift, die sie in das Haus des Gatten gebracht hat.

Das Herumziehen der Frauen verursacht viel Unordnung im Leben der kleinen Gemeinden. Die meisten Streitigkeiten entstehen, in Kissaka z. B., wegen der Kinder. Die Muhutu-Frau hat dort einen geringen Kaufwert, und die Kinder sind infolgedessen wichtiger als die Frau selbst. Die Kinder gehören zum Clan des Vaters. Der Clan betrachtet die Kinder als eine Gegenleistung für die Zahlung, die die Eltern der Frau erhalten haben. Hat ein Mann eine nicht bezahlte Frau geschwängert, so geht das Recht auf das Kind, wie es scheint, verloren. Die Frau bleibt aber bei ihm, und das Kind kann, solange es wenigstens klein ist, der Mutter nicht weggenommen werden. Es entsteht hieraus eine Gerichtsfrage, in der die „batware" zu entscheiden haben. Ist der Mann mächtig, hat er viele Anhänger, so wird die Frage ganz wesentlich kompliziert. Ein schematisches Entscheiden wird dann nicht gut möglich, wenn auch das Kind einer nicht bezahlten Frau, wie es scheint, im Prinzip nicht zum Clan seines Vaters gehört.

Da die weggezogenen Frauen durch Staatsgewalt nicht zurückgeführt werden, so wird der Frau in dieser Weise eine gewisse persönliche Freiheit gesichert. Und wenn auch die Frau keine hohe soziale Stellung einnimmt, so kann sie doch durch die Drohungen, sie werde wegziehen, einen nicht unbedeutenden Druck ausüben. Daß diese Drohungen nicht leere Worte sind, das beweist zur Genüge die sehr häufige Anwendung dieses Mittels. Trotz der privilegierten Stellung des Mannes ist die Frau die Herrin der Hütte, sogar dann, wenn sie diese nur vorübergehend bewohnt. Sie ernährt doch das Haus mit ihrer Arbeit im Garten und Felde.

Geburt. Wenn auch Kinder von allen Frauen sehr gewünscht werden, so fürchtet man doch die Niederkunft sehr. Die Zahl der schweren Geburtsfälle ist in Ruanda nicht gering. Sie sollen besonders häufig im Norden, in Mulera und in Bugoye, vorkommen. Die Fälle, wo die Gebärenden sterben, sind in Mulera nicht selten. Man hat mir von Geburten, die eine Woche gedauert haben, erzählt. Diese Tatsache wird wohl mit der dort zu beobachtenden, ganz rezenten Vermischung anthropologisch stark verschiedener Elemente — der waldbantu-ähnlichen mit den batutsi-ähnlichen — zusammenhängen.

Die schwangere Frau legt, um sich eine leichte Geburt zu sichern, das „ibiheko"-Amulett an. Das Amulett besteht aus zwei kleinen, zusammengebundenen Holzstücken und wird auf der Brust getragen. Oft trägt man ein zweites auf dem Rücken. Nach der Geburt wird das Amulett nicht abgelegt. Die Frau behält es, bis das Kind das Alter von zwei bis vier Jahren erreicht hat.

Gegenüber den Schwangeren werden gewisse Rücksichten beobachtet, sogar dann, wenn sie von dem jähzornigen Gatten geprügelt werden. Er hütet sich, sie auf den Leib zu schlagen. Er ohrfeigt sie dann gewöhnlich. Greift er aber in seiner Wut zum Stock, so schlägt er sie nur auf die Schultern.

Die Geburt findet meistens in der Wohnhütte, und zwar in dem von den Frauen bewohnten Teile (mbele yinzu), statt. Doch ist das nicht immer der Fall. Die Bestimmung des Ortes der günstigen Geburt muß von einem Wahrsager getroffen werden. Soll die Geburt außerhalb der Hütte stattfinden, so wird ein Platz in der Nähe des Pfades gewählt, sauber mit Gras bedeckt, und die Schwangere begibt sich dorthin beim Beginn der Wehen, von einer Geburtshelferin begleitet. Ihre Hilfe soll sich aber nur auf das Herausziehen des Kindes beschränken. Die Niederkunft geschieht in kniender Stellung. Nur Frauen und Mädchen können bei der Geburt zugegen sein. Männer dürfen ihr nicht beiwohnen.

Stirbt die Mutter bei der Geburt, so wird in Ussuwi und Bukumbi, um das Kind zu retten, der Kaiserschnitt ausgeführt. In Kissaka und Mulera soll man diese Operation nicht auszuführen wagen.

Nach der Geburt wird die Wöchnerin mit einer Mischung von Milch und Rinderblut gestärkt. Später bekommt sie außer dieser Mischung noch Bier (nzoga). Als Nahrung dient ihr eine Mischung aus Erbsen und Bananen von der „nkamba"-Varietät.

Der Nabelstrang wird mit einem Rohrsplitter durchschnitten. Am vierten Tage soll eine definitive Beschneidung des Nabels stattfinden. Nach der Beschneidung des Nabels fegt die Wöchnerin die Hütte aus und legt den Unrat in zwei Körbe (ntaro), die sie mit Hilfe der Nachbarinnen herausträgt. Die Frauen gehen in einer Reihe, eine neben der anderen, und begleiten so die Wöchnerin nach einer vorher gewählten Stelle, wo der Inhalt der Körbe zerstreut wird. Nach der Rückkehr der Frauen bewirtet der Mann die Geburtshelferin mit Bananenbier, vorher macht er aber eine Libation.

Um die Geburt des Kindes zu ehren, machen die Nachbarn an diesem Tag Besuche und bringen Geschenke. Die Geschenke bestehen aus Speisen und Getränken, so bringt man z. B. Bananen, Erbsen, Bataten, Bier, und bei den Batutsi Milch. Diese Zeremonie wird „bihembo" genannt.

Der Vater wird in Kissaka von den Besuchern durch das Niederknien geehrt. Die Ehrungen empfängt er stehend, mit einem hölzernen Speer (muko) in der Hand und mit einem Schwert (ngota) hinter dem Rücken. Er ruft Binego und Mugasha an und bedankt sich für die Ehrungen, indem er auf die Besucher „nzoga" (Bananenbier) ausspuckt. Wenn das geborene Kind ein Knabe ist, so erhält es vom Vater einen kleinen Speer, kleinen Bogen, einen Nagel zum Aufhängen des Bogens und einen kleinen, aus Gras geflochtenen Schild in die Hand. Beim Schenken des Bogens an das Kind sagt der Vater spuckend: „akavuna muheto kandi ntaka uvune" — wenn er den Bogen bricht, so möchte er doch nicht mehr brechen. Beim Schenken des Speeres: „arakagua mukicho kandi ntaka kigwemo" — wenn er aus dem Hinterhalt angegriffen wird, er möchte es nicht mehr werden. Beim Schenken des Schildes: „kiliho arakagua mungabo kandi ntaka kigwemo" — wenn er auf seinen Schild fällt, er möchte

nicht mehr fallen. Zum Schlusse, sich dem Nagel zum Aufhängen des Bogens zuwendend, spricht er: „arakavuna ingaugo kandi ntaka uvune" — wenn der Nagel bricht, er möchte es später nicht mehr machen.

Ist das Kind ein Mädchen, so schenkt ihr die Mutter: „lugori" — ein Kopfband aus Maisstroh, das ein Symbol der Mutterschaft bedeutet, „luhindu" — eine Nadel und „ntamyi" — einen Papyrusfaden.

R. P. P. SCHUMACHER[1]) erwähnt bei der Beschreibung dieser Zeremonie, daß dem Kinde, sei es Knabe oder Mädchen, noch Hacken geschenkt werden, mit denen von eingeladenen Kindern ein einen Quadratmeter großer Acker bestellt wird, und zwar an der Stelle, wo die Unreinlichkeiten des Kindes eingescharrt worden sind. Diese Zeremonie wird „kusohora" genannt und findet am achten Tage nach der Geburt statt. Ihr wohnen die Mutter und das Kind, zum erstenmal seit der Niederkunft rasiert, bei.

Am nächsten Tage findet die Namengebung statt. In Kissaka soll man den Kindern erst im Alter von drei bis vier Monaten Namen geben. Dem Sohne gibt den Namen der Großvater und der Tochter die Großmutter. Bei dieser Zeremonie wird das Kind vor Sonnenaufgang auf den Boden gelegt und bei seinem Namen gerufen. Wenn ein Kind nicht im Hause geboren wurde, so bekommt es einen besonderen Namen. Einen Knaben nennt man dann Maira und ein Mädchen Nanzira. Abgesehen von diesen Namen werden den Kindern noch andere Namen, sogar von Fremden gegeben, die zum Teil Spitznamen sind und oft die eigentlichen Namen verdrängen.

Es muß noch erwähnt werden, daß mit jedermann nicht nur sein persönlicher Name und der Name seines Clans, sondern auch der Name seines „umuzimu", d. h. des mit ihm im Kontakte bleibenden Ahnengeistes, verknüpft ist. Über den letzteren Zusammenhang konnte ich nichts Näheres ermitteln. Es scheint, daß der Name des Geistes, dem ein Kind zu opfern und eine Geisterhütte (ndaro) zu bauen hat, als sein zweiter Name verwendet wird.

Außer diesen Namen führt man noch Prahlnamen. R. P. P. SCHUMACHER[2]) sagt: „Jeder Munyarwanda oder doch wenigstens jeder Krieger hat ein *kivugo*, d. h. einen Zunamen, der seine hervorragenden Eigenschaften, speziell kriegerische, feiert. Die *byivugo* (pl.), oft so lang, daß sie noch gerade in einem Atemzug abgesprochen werden können, werden stets ungeheuer schnell, singend, mit Tanzbewegung und in einem Atem vorgetragen."

Wenn eine Witwe zur Geburt kommt, so sagt man, daß das Kind im Blute seit dem Tode des Mannes geblieben und erst jetzt auf die Welt gekommen sei. Dieser Glaube hängt zusammen mit der Vorstellung von der mehrjährigen Schwangerschaft. Diese wird wohl durch Leiden der Geschlechtsteile (Tumoren), die Vergrößerungen des Unterleibes verursachen, hervorgerufen sein. Und wenn

[1]) SCHUMACHER, P., R. P., Die Ehe in Ruanda. Anthropos 1910, S. 901.
[2]) Ebenda S. 895.

eine Frau mehrere Jahre schwanger sein kann, so kann sie doch das Kind mehrere Jahre im Blute tragen.

Die Kinder werden inbrünstig erwartet und geliebt. Während aber im Südosten in Kissaka die Zwillinge für einen Segen betrachtet werden, was auch in der doppelten Beschenkung der Mutter zum Ausdruck kommt, die dann „nina babili" genannt wird, so ist dies im Bereiche der Einflüsse der Wald-Bantu im Nordwesten ganz anders. Dort ist der Kindermord überhaupt nichts Ungewöhnliches und kommt vor allem bei Zwillingsgeburten in Anwendung. Während meines Aufenthaltes in Mulera, wurden in der Nähe der Mission Ruasa Zwillinge geboren. Die Missionäre kostete es sehr viel Mühe, die Leute vom Kindermord abzuhalten. Die Eingeborenen antworteten am Anfange auf die Ausführungen der Missionäre, daß eine Frau zwei Kinder auf dem Rücken doch nicht tragen könne.

Die Kinder werden sehr lange, wie es scheint drei Jahre, gestillt. Man kann Fälle beobachten, wo Kinder, die schon ganz munter herumspringen und sogar Vieh weiden, ihre Mütter saugen kommen.

Den Kindern wird wenig Aufmerksamkeit geschenkt. Das kommt auch in ihrer großen Sterblichkeit zum Ausdrucke. Um die moralische Erziehung wird beinahe noch weniger gesorgt. Und wenn sie auch im Gegensatze zu den Europäern nicht geprügelt werden, so kommen doch manchmal, vor allem für Diebstahl, sehr schwere Strafen in Anwendung. Eine sehr beliebte Strafe, die auf das Erwecken hemmender Assoziationen beim Greifen nach fremden Sachen berechnet ist, bildet das Anbrennen der Finger. Die Hände der kleinen Diebe pflegt man zu umwickeln mit Grashalmen oder mit Fetzen alter Matten, die angezündet werden, und die Finger mit Brandwunden bedecken[1]).

Es ist klar, daß unter diesen Verhältnissen, wo der Kinderreichtum dem Vater Einfluß und Besitz verschafft und dem ganzen Geschlechte seine Existenz sichert, die Bedingungen zur Entwicklung der Kunstgriffe, welche die Kinderzahl in der Ehe vermindern, durchaus nicht gegeben sind. Doch kennt man antikonzeptionelle Mittel. R. P. SCHUMACHER[2]) sagt: „Als Antikonzeptionsmittel wird der Saft des *muhoko*-Strauches in leichter Wassertinktur eingenommen; stärkere Dosis dient zum Selbstmord. Als abergläubisches, aber ‚unfehlbares' Mittel benutzt die Mutter des Mädchens, um entehrenden Konzeptionen vorzubeugen, das erste Menstruationsblut. Auf ein beliebiges Zeug aufgefangen und eingetrocknet, bewahrt sie es auf oder bindet sich den Lappen z. B. an den Fuß (die massenhaft vorhandenen *butega* verdecken die List). Konzeption ist von da ab unmöglich, was das Mädchen auch anstellen mag."

Wenn eine säugende Frau schwanger wird, so treibt man die Frucht mit Rücksicht auf das kleine Kind ab. Die Abtreibung wird von einem Schmiede ausgeführt und soll auf mechanischem Wege und nicht durch innere Mittel besorgt werden.

---

[1]) CLASSE, R.P., Moeurs et Coutumes des Bagoye. Les Missions Catholiques 1905, S. 428.
[2]) SCHUMACHER, P., R.P., Die Ehe in Ruanda. Anthropos 1910, S. 894.

Dasselbe geschieht auch, wenn ein unverheiratetes Mädchen schwanger wird. Hilft das nicht, und kommt es zur Entbindung, so wird oft Kindermord begangen. Man läßt das Kind verhungern.

Tod. Hat man einen Sterbenden im Hause, so werden die nächsten Verwandten versammelt, und man besorgt auch gleichzeitig eine Stange, an die der Körper beim Transporte nach der Ruhestätte angebunden wird. Die Leiche darf nämlich nicht lange in der Hütte bleiben.

Der Tote wird von den Frauen beweint, und man nimmt ihm sämtliche Kleiderstoffe, Arm- und Beinringe weg. Die Leiche wird durch Zusammenbiegen der Arme und Beine in hockende Stellung gebracht, mit Butter eingerieben und in Matten (virago) ohne Beigaben eingewickelt. Der Batutsi-Leiche rasiert man überdies den Kopf, was bei den Bahutu nicht stattfindet.

In Kissaka wird der Tote, seinem Wunsche entsprechend, entweder im Bananenhain beerdigt oder in einen Papyrussumpf geworfen. In Nduga pflegt man die Leichen vorwiegend in die Sümpfe zu werfen. Nur dort, wo es keine Papyrussümpfe gibt, werden sie durch eine Schicht Erde bedeckt. In Mulera ist es allgemeiner Brauch, die Bahutu zu beerdigen. Das Grab hat dabei eine so große Tiefe, daß der Leichengräber darinnen mit dem Kopfe verschwindet. Nur die Erschlagenen pflegt man in Höhlen zur Ruhe zu legen. In Bugoye werden die zu Hause infolge einer Krankheit oder an Altersschwäche Gestorbenen in der Nähe des Hauses beerdigt. Die plötzlich Verstorbenen und die Totgeschlagenen läßt man einfach liegen oder wirft sie in das Gebüsch. Die, infolge einer Epidemie oder durch den Hungertod, Verendeten läßt man ebenfalls liegen.

Die im Sumpfe gelassenen Leichen werden den Tieren preisgegeben. Im Gegensatze dazu trägt man Sorge dafür, daß die Beerdigten nicht ausgewühlt werden. Man belegt zu diesem Zwecke das Grab mit Bananenstämmen und Dornen. Der Tote wird vier Tage gefeiert. Am vierten Tage legen seine Angehörigen die Armringe ab und rasieren sich von da an die Köpfe durch vier Mondmonate. Beim Tode der Frau legen den Schmuck nur die Mädchen ab, der Mann beschränkt sich auf das Rasieren des Kopfes. Nach vier Monaten läßt man die „masunzu", die in Mustern ausrasierten Haare, wieder wachsen.

In Bugoye und Nduga soll über der Hütte der verwitweten Frau ein Stock (kasongera) gebrochen werden. Dieser wird wohl den in der Hütte fehlenden Phalus symbolisch andeuten.

Das Wegwerfen der Toten, das vor allem in Nduga vorherrscht, wird man wohl mit dem Batutsi-Element in Zusammenhang bringen müssen. Die Bahutu von Mulera beerdigen ihre Toten, ebenso wie die Bantu des benachbarten Kongo-Beckens. Die Vernachlässigung der Toten steht im unerklärlichen Gegensatze zum Totenkulte. Sollte dies vielleicht die Umwandlung in ein Tier erleichtern? Die Angehörigen der Königsgeschlechter von Ruanda und Urundi sollen

sich doch nach dem Tode in Leoparden verwandeln, ebenso wie das Herrschergeschlecht aus Kiziba nach dem Tode, ähnlich den Massai, zu Schlangen wird.

Die Leiche des Königs von Urundi soll nach R. P. VAN DER BURGT[1]) ausgetrocknet, auf einem vierbeinigen Gestell ausgestreckt, so lange zum Anbeten exponiert bleiben, bis das von den Termiten angefressene Gestell zusammenbricht. Dann erst wird die Leiche eingewickelt und an derselben Stelle beerdigt, wobei viele Menschen geopfert werden. Die Leichen der Könige von Ruanda sollen dagegen auf dem Gestell durch Feuer ausgetrocknet und samt der Hütte eingeäschert werden. Der Feuertod in der niederbrennenden Hütte samt der ganzen Familie soll eine bei den Batutsi beliebte Form des Selbstmordes sein.

Es darf noch eine durch Dr. KANDT gemachte Beobachtung[2]) nicht unerwähnt bleiben: „Die Wanjaruanda — also ein Stamm tief im Innern ohne jede Beziehung zu abendländischen Anschauungen — nennen ‚Trauer haben' ‚ukwirabura', d. h. schwarz sein, und ‚die Trauerzeit hinter sich haben' ‚ukwera', d. h. weiß sein. Das ist um so sonderbarer, da die beiden Farben in keiner Beziehung, weder in Kleidung, noch in Bemalung usw., zur Kennzeichnung ihrer Trauer, beziehungsweise ‚Enttrauerung' in Erscheinung treten."

11. Kapitel.

Clan.

Schutz des Individuums. — Ruanda-Clans. — Blutrache. — „Abaziru". — Heiratsverbote. — Blutbrüderschaft. — Clangemeinde. — Besitzverhältnisse.

Schutz des Individuums. Die Grundlage der sozialen Organisation in Ruanda, ebenso wie in den übrigen Teilen des Zwischenseengebietes bildet die Sippe oder der Clan. Man nennt ihn hier „umuryango".

Der Clan stellt einen Verband dar, der seine Mitglieder durch natürlichen Zuwachs ergänzt, indem jedes Kind zum Clan seines Vaters gehört. Infolgedessen ist auch ein jeder Clan tatsächlich eine Vereinigung nächst oder entfernter in männlicher Linie miteinander verwandter Familien. Fremde werden in den Clan nur in Ausnahmsfällen aufgenommen. Das kommt z. B. in Mulera vor, wenn in einer Familie nur Töchter und keine Söhne vorhanden sind. Im Hinblick auf die Gefahr, daß das Fehlen des männlichen Nachwuchses die Streitkraft des Clanes schwächen würde, sucht man dem Übel durch Adoption der Schwiegersöhne zuvorzukommen. In solchen Fällen sollen die Kinder dem Clan ihrer Mutter und nicht dem ihres Vaters, welcher auf diese Weise die Interessen seiner Angehörigen aufgebe, angehören.

Die hier in Frage kommenden Gruppen sind zu klein, die Verhältnisse zu einfach und zu übersichtlich, um vergessen zu können, daß das Wohlergehen des Einzelnen von dem des Clanes direkt abhängig ist. Es muß daher auch die größte Sorge getragen werden, daß der Clan nach außen mächtig erscheine. Er muß möglichst zahlreich und schlagfertig sein. Dies zu erreichen — darauf muß alles Streben gerichtet sein; sonst droht den Clangenossen die Gefahr, daß sie gegen Ausplünderung, Aussaugung und gar gegen gänzliche Ausrottung nicht geschützt sind. Von diesem Standpunkte aus muß Mann wie Weib betrachtet werden, und die Kindererzeugung bildet daher die wichtigste Pflicht des Individuums. Deshalb auch die durchaus nicht beneidenswerte Stellung der kinderlosen Frau. Aus demselben Grunde zieht man die Söhne, die durch ihre Nachkommen die Zahl der Clangenossen vermehren werden, einer Tochter vor, wenn man diese auch sogar gegen eine Kuh eintauschen kann.

Wie wichtig die Stärke und Schlagfertigkeit eines Clanes sogar in Bugoye noch ist, davon überzeugte mich das Schicksal des Vaters meines dortigen Muhutu-Gewährsmannes. Ihr Clan wurde vor einigen Jahren durch die vordringenden Batutsi zersprengt. Auf dem alten Clanbesitz blieb nur sein Vater mit den

Kindern und sein Oheim übrig. Da die beiden Familien nur wenige Männer zählten und zu schwach waren, um sich zur Wehr setzen zu können, so ließen sich die Batutsi auf ihrem Grund und Boden nieder und erlaubten sich allerlei Unterdrückungen der schwächeren Bauern. Zur Zeit meines Aufenthaltes nahmen sie ihnen z. B. eine ganze Hütte weg und brachten sie in ihre Niederlassung, statt sich selbst eine neue zu bauen.

Jeder Einzelne steht unter dem Schutze des Clanes. Dieser verschafft ihm die Möglichkeit, ein mehr oder weniger gesichertes Dasein zu führen. Die Clanorganisation stellt eine Art sozialer Rückversicherung, welche in erster Linie gegen die Mißgriffe der clanfremden Stammesangehörigen gerichtet ist, dar.

Der Clan übt überdies auch Kontrolle über seine Genossen aus und wendet, bei schweren Vergehen einzelner Individuen, wenn durch sie die Interessen der Gemeinschaft gefährdet werden, sogar die Verbannung als Strafe an.

Der Clan kann sich auch in Familienangelegenheiten und vor allem in Erbschaftszwistigkeiten einmischen. Obwohl der Vater mit seinem Besitz nach seinem Gutdünken umgehen kann, so setzen doch seine Entscheidungen eine stillschweigende Genehmigung des Clanes voraus. Wenn durch die von ihm vorgenommene Aufteilung seines Besitzes die Interessen des Clanes gefährdet werden, z. B. durch Proletarisierung mehrerer Söhne, so schreitet der Clan gar manchmal ein, stößt seinen Beschluß um und nimmt eine ihm zweckmäßig erscheinende Teilung des Besitzes vor. Mit der Zersetzung des Clanes und Stärkung der Häuptlingsmacht geht diese Kompetenz auf den Häuptling über, der dann das letzte Wort zu sagen hat.

Die Rechte des Einzelnen werden stets den Interessen des Clanes geopfert. In Bugoye hörte ich sogar davon, daß der ganze Clanbesitz wieder aufgeteilt wird, wenn die Felder in den Händen einer Minorität konzentriert worden sind. Diese Neuaufteilung wurde mir „kutshura hasi" genannt.

Es soll jedoch jetzt mit den Fortschritten der Besteuerung und der Batutsi-Herrschaft vorkommen, daß die Clangenossen, die die Steuer nicht bezahlen können, verjagt und sogar durch Fremde ersetzt werden. Diese partizipieren sodann an der gemeinschaftlich gezahlten Steuer. Solche Erscheinungen sind selbstverständlich erst bei der Zersetzung der Clanorganisation möglich.

Der Clan schützt auch seine Frauen. Gibt es in einem Haushalt Töchter, die keinen Beschützer finden, so bleiben sie nach dem Tode ihres Vaters als väterliche Tanten im Hause ihres Bruders weiter.

Der den Clangenossinnen zukommende Schutz erstreckt sich jedoch auf ihre Männer nicht. Lassen sich diese, ohne adoptiert zu sein, bei den Clangenossen ihrer Frauen nieder, so werden sie nicht als vollwertig betrachtet. Dies trifft vor allem in den Fällen zu, wo sich eine Witwe, die mit ihren Kindern bei den Clangenossen ihres Mannes geblieben ist, einen Mann ins Haus nimmt. Der Letztere kann nach dem Tode der Frau ohne weiteres fortgejagt werden.

Die Gesellschaft schützt in Bahutu-Ruanda den Schwachen nicht. Das

auf sich angewiesene, durch keine Gruppe geschützte Individuum ist vogelfrei und kann durch jedermann bedrückt und sogar erschlagen werden. Solche Übergriffe werden hier nicht bestraft. In der Bedrückung der Schutzlosen erblickt man dort nichts Antisoziales, da diese im Grunde genommen sogar organisatorisch wirke. Sie ist die Haupttriebfeder, die das Zusammenschließen der spröden Menschenmasse in wohlorganisierte Gruppen erwirkt. Man kann hier den Zusammenhang, zwischen der Ausbildung der Clanordnung und dem Fehlen der allgemeinen rechtlichen Normen, nicht verkennen. Deshalb ist die durch die Batutsi verursachte Zersetzung der Clanorganisation trotz der ganzen Willkürherrschaft, die mit der Eroberung zusammengeht, von der Ausbildung allgemeiner Normen begleitet. Jetzt findet der Einzelne schon Schutz auch außerhalb der Clans, was früher nicht möglich war.

Ruanda-Clans. Schon im Kapitel 2 wurden die Clans von Ruanda aufgezählt. Im Hinblick auf die Bedeutung jedoch, welche die Verbreitung der einzelnen Clans in den verschiedenen Provinzen für die Besiedelungsgeschichte von Ruanda hat, muß man diese Liste noch durch weitere Angaben ergänzen. Es sollen hier nämlich zugleich die Namen der Provinzen, in denen die einzelnen Clans beobachtet wurden, angeführt werden.

[1]) Bakonno-Clan. [1]) Bakinkó-Clan. [1]) Bakano-Clan.

Der Clan der Baanzira soll in Kissaka nicht vertreten sein. Sein Name ist aber bekannt, merkwürdigerweise wird er beim Schwören der Frauen verwendet. So sagen die Frauen, wenn sie etwas ganz stark bejahen wollen: „Aha Baanzira batshu".

R. P. SCHUMACHER [1]) erwähnt für Bagessera und Barigaba, die im Ryangombe-Kult eine besondere Rolle spielen, die Bezeichnung Base oder Abase.

[1]) SCHUMACHER, P., R. P., Die Ehe in Ruanda. Anthropos 1910, S. 896.

Blutrache. Die Clans üben für ihre Genossen Blutrache (kuhora) aus. Wenn ein Fremder einen Clangenossen erschlägt oder verwundet, so rächen sich seine Genossen an den Clangenossen des Übeltäters.

Die Rache des Clanes bildet jedoch nicht überall eine einfache Abrechnung nach dem Prinzip Auge um Auge, Zahn um Zahn. In Kissaka z. B. befriedigt man sich noch mit dem Erschlagen eines Angehörigen des Clanes des Mörders, in Mulera aber ist die Rache stets größer als der Übergriff. Die Größe der Rache des geschädigten Clanes hängt von seiner Kopfstärke, von der Zahl der kampffähigen Männer ab. Der mächtige und schneidige Clan der Barashi, die in Mulera am Muhawura sitzen, rächt sich, seiner Stärke bewußt, sehr bitter. Die Barashi schlagen nämlich für einen ermordeten Clangenossen sechs bis acht Männer aus dem Clan des Mörders tot. Die anderen, nicht so mächtigen Clans von Mulera begnügen sich mit drei bis vier Toten. Die Batutsi dagegen verlangen sogar zehn bis zwölf Köpfe. Dieselbe Höhe erreicht die Rache der so sehr gefürchteten Batwa-Clans.

In Mulera sollen, im Gegensatze zu Kissaka, auch die weiblichen Angehörigen des Clanes gerächt werden. Von einem Totschlagen der Frauen dagegen aus Rache habe ich in Ruanda nichts gehört.

Der Clan, der seinen Toten gerächt hat, legt die Trauer ab und feiert das glückliche Ereignis mit Tanz und Biergelage. Dadurch wird den anderen bekanntgegeben, daß sie nichts mehr zu fürchten haben.

Wenn es auch beim Ausüben der Blutrache dem Clan des geschädigten in erster Linie darauf ankommt, die Angehörigen des Clanes des Übeltäters in die Hände zu bekommen, so wird doch auch dem Mörder selbst eine besondere Aufmerksamkeit geschenkt.

Während meines Aufenthaltes in Mulera ging ein Mann mit einem Topfe Bier auf dem Kopfe in eine benachbarte Siedelung. Unterwegs begegnete ihm ein Fremder und äußerte den Wunsch, von seinem Bier zu kosten. Auf eine ablehnende Antwort des Bierträgers erwiderte der Fremde mit einem Speerstich in den Rücken. Der Verletzte sank zu Boden und fing an zu schreien. Der Fremde ergriff die Flucht. Die Angehörigen des Geschädigten gingen jedoch dem Übeltäter nach, verwundeten ihn mit dem Buschmesser am Arme und am Kopfe und nahmen ihn gefesselt in ihre Siedelung mit. Dort mußte er den Ausgang der Krankheit seines Opfers abwarten, um im Todesfalle mit eigenem Leben seinen jähzornigen Leichtsinn zu büßen.

Die Blutrache bildet den Faktor, durch den der Clan am stärksten zusammengehalten wird und der zur Ausbildung des Solidaritätsgefühles bei den Clangenossen am meisten beiträgt.

Ein Clan, der sich nicht rächen wollte, würde in kurzer Zeit ausgerottet sein, da die Nachbarn seine Angehörigen ungestraft ausplündern könnten.

Das Ausüben der Blutrache in Ruanda und vor allem in Nduga, wo die Clangenossen am stärksten unter den Fremden zerstreut sitzen, hat die Form des geheimen Gelegenheitsmordes. In den nordwestlichen Gebieten, in Itambi z. B., wo die Clans größere geschlossene Zonen besiedeln, soll die Blutrache die Form eines regelrechten Krieges annehmen. Diese Verschiedenheit bildet ganz entschieden eine Anpassung derselben Institution an die besonderen Verhältnisse der beiden Gebiete.

Die schwebenden unerledigten Blutrachefälle der Clans bilden eine ständige Gefahr für die Clanangehörigen, zugleich bergen sie auch viele unerwartete, unangenehme Situationen in sich. Die Clans sitzen an verschiedenen, weit auseinanderliegenden Stellen, und der Einzelne ist nicht immer orientiert über die Verhältnisse seines Clanes zu den übrigen in den ferneren Gegenden. Aus diesem Grund verheimlicht der Munyaruanda seinen Clan und bezeichnet ihn nur dann, wenn er zum Fragenden Vertrauen gewonnen hat. Deshalb bot auch das Feststellen der Clannamen anfangs, und vor allem so lange, bis man nicht das, den Clan bezeichnende, Wort — „umuryangu" oder „umuliangu" — ermittelt hatte, so viele Schwierigkeiten.

Eigener Sicherheit wegen ist der Clan gezwungen, seine Angehörigen zu überwachen und im Notfalle zum Ausstoßen einzelner Individuen, welche die Gemeinschaft durch ihre Handlungen gefährden, zu schreiten. Das trifft meistens bei denjenigen zu, die durch leichtsinnige Morde ihrem Clan die Blutrache der Geschädigten auf den Hals laden. Der Ausgestoßene verliert das Anrecht auf Besitz und Schutz und wird infolgedessen nicht gerächt. Das Ausstoßen wird „kilenga ngoma" genannt und scheint häufiger als die Adoption vorzukommen.

Diese unvollkommenen Sicherheitsvorkehrungen verursachen in ihrem Streben, die Sicherheit des Einzelnen zu garantieren, einen ewigen Kleinkrieg. Die ganze Gesellschaft wird in eine Anzahl miteinander kämpfender Lager aufgelöst, wodurch die Widerstandsfähigkeit gegen die äußeren Feinde geschmälert wird. Das trifft vor allem für die Bahutu zu und wird eine der Hauptursachen bilden, warum sie von einer besser organisierten Hirtenminorität beherrscht werden können.

Die Clanfehden beschränken sich durchaus nicht auf die Bahutu. Meine anthropologischen Untersuchungen an den Batwa aus der Umgebung von Marangara wurden dadurch stark in ihrem Umfange verkleinert, daß einige Tage vorher gelegentlich eines Bierabends ein Mord durch einen Betrunkenen verübt wurde. Der Mörder und seine Clangenossen mußten schleunigst die Umgebung von Marangara verlassen.

„Abaziru". Wenn auch die Blutrache den Clan auffälliger als alle anderen Faktoren zusammenhält, so kommt doch die Abgrenzung des einen Clanes den anderen Clans gegenüber in dieser Form bei friedlichen Verhältnissen nur ge-

legentlich zum Bewußtsein. Im ruhigen Alltagsleben werden die einzelnen Clans viel mehr durch ihre Eßverbote voneinander geschieden. Die erwachsenen Angehörigen der einzelnen Clans dürfen nämlich verschiedene Speisen nicht genießen. So z. B. essen die Bagessera und Bashambo, ebenso wie einige Massai-Geschlechter, keine Leber, Bagahe und Bazigaba — keine Eingeweide usw. Jeder Clan kann dabei mehr als ein Eßverbot haben. So verschmähen z. B. die Bashambo außer der Leber noch das Fleisch fremder, gefleckter Rinder.

Die Angehörigen verschiedener Clans dürfen im Hinblick auf ihre Eßverbote nicht miteinander essen. Infolgedessen betrachten sie sich auch gegenseitig als unrein und verabscheuen es, im Grunde genommen aus Ekel, in näheren Kontakt miteinander zu treten.

Abgesehen von den Eßverboten der einzelnen Clans, die auf den SS. 235, 236 als „abaziru" verzeichnet sind, gibt es noch allgemeinere Eßverbote, welche größere Clangruppen umfassen und sogar die einzelnen Bevölkerungselemente voneinander scheiden. Diese allgemeineren Eßverbote werden zu den Eßverboten der einzelnen Clans hinzugefügt.

Bahutu können mit den Batwa nicht zusammenessen, weil die letzteren keine Eßverbote respektieren und sogar Hühner und Eier essen. Der Mututsi darf wieder nicht mit Bahutu zusammenessen, weil diese Ziegen und Schaffleisch genießen. Die letzteren Eßverbote sind, wie es scheint, gegenwärtig im Rückgang begriffen. Das das Ziegenfleisch verbietende Eßverbot wird nicht mehr scharf respektiert. Man erklärt diese Tatsache als eine Folge des Umstandes, daß der gegenwärtige Herrscher, Juhi Musinga, als Kind von seinem Vater Lwabugiri verstoßen, durch einen Muhutu erzogen worden sei und in seinem Hause sich das Ziegenfleisch angewöhnt und so das Verbot aufgehoben habe. Bezüglich des Genusses von Schaffleisch liegen die Sachen etwas anders vor. Die Bahutu von Mulera essen es im Gegensatze zu den Bahutu des Südens, die es höchstens im Geheimen genießen. Vielleicht ist das dadurch herbeigeführt worden, daß die Bahutu des Südens, wo der Batutsi-Einfluß stärker ist, durch diese beeinflußt auf das Schaffleisch verzichtet haben, um nicht als unrein zu gelten.

Am ekelhaftesten für Batutsi und Bahutu, wie auch für alle übrigen Einwohner des Zwischenseengebietes, die Batwa ausgenommen, sind Hühner und vor allem Eier. Deshalb werden auch die Europäer und ihr schwarzes Personal, die in dieser Beziehung den Batwa gleichen, verachtet. Die Banyaruanda-Hilfsträger wollten weder mit den Wassukuma-Trägern zusammen essen, noch die ihnen zur Verfügung gestellten Töpfe benutzen. Batutsi und Bahutu kommen in diesem Eßverbote den Galla, Somal, Wakamba, Wataita, Wakikuyu und Wadjagga, d. h. den Hamiten und den durch sie metamorphosierten Bantu, nahe[1]).

[1]) HILDEBRANDT, J. M., Ethnographische Notizen über Wakamba und ihre Nachbarn. Zeitschrift für Ethnologie 1878, S. 378.

Die weniger allgemeinen, nur einige Clans umfassenden Eßverbote sind wohl als Spuren der früheren größeren Clansverbände aufzufassen, welche sich später differenziert haben und in besondere, sich ihrer Zusammengehörigkeit nicht immer bewußte, Untergruppen zerfallen sind. Dieser Prozeß schreitet auch in der Gegenwart noch weiter fort. Die Mulera-Clans der Bangona, Besezera, Bagirima, Bayumbo, Badahe sollen Untergruppen des Basinga-Clanes darstellen. Man darf also wohl mit Rücksicht darauf erwarten, daß es in der Zukunft, durch weitere Untersuchungen der Eßverbote, gelingen wird den Differenzierungsprozeß der einzelnen Clans genau zu ermitteln.

Auf die Kinder erstrecken sich die Eßverbote nicht. Bei den Frauen ist dies aber durchaus nicht der Fall. Sie sind ebenfalls durch besondere Verpflichtungen in dieser Beziehung gebunden. Die Bahutu-Frauen von Kissaka und Mulera dürfen z. B. kein Ziegenfleisch genießen, trotzdem das den Männern gestattet ist.

Die im Leben von Ruanda so wichtigen Eßverbote sind jedoch nur eine Erscheinungsform der allgemeinen Verbote „abaziru" (sing. umuziru), die sich auf die einzelnen Clans beziehen.

Der Basinga-Clan hat zum „umuziru" eine schwarze, weißgestreifte Kuh. Die Clanangehörigen trinken die Milch solcher Kühe nicht und essen auch ihr Fleisch nicht. Sie fürchten sehr, sich mit den Kuhexkrementen zu beschmutzen, da diese von einer solchen Kuh herrühren könnten. Sie kaufen jedoch die Butter auf dem Markte, wenn sie nicht genau wissen, daß sie von solchen Kühen herrührt. Da solche Kühe für sie keinen ökonomischen Wert haben, so suchen sie dieselben immer zu veräußern und durch andere zu ersetzen.

Dieses Beispiel zeigt, daß die Enthaltung vom Genusse des Fleisches des „umuziru" allein nicht ausreicht. Man muß überhaupt jeden Kontakt mit ihm meiden. Dabei wird jedoch auf die wirtschaftlichen Interessen eine gewisse Rücksicht genommen. Das unnütze „umuziru"-Rind wird verkauft, und man fürchtet sich mehr vor seinen Exkrementen als vor seiner Butter. Die letztere wird nämlich benutzt, falls man ihrer Herkunft nicht ganz sicher ist.

Mit dem Begriffe „umuziru" faßt man die Gesamtheit der Erscheinungen, die einem Clan unantastbar (Tabu) sind, zusammen. Heilig sind sie eigentlich nicht, da das Moment der Verehrung fehlt. Man sucht nämlich die wirtschaftlich unnützen „abaziru", falls es sich um Haustiere handelt, an Fremde zu veräußern.

Die Handlungsfreiheit des Einzelnen, seinem „umuziru" gegenüber, ist jedoch eingeschränkt. Deshalb kommt man auch dem eigentlichen Sinne am nächsten, wenn man das Wort „umuziru" durch das Wort „Verbot" übersetzt.

Als „abaziru" wurden mir Säugetiere, ihre Körperteile, Vögel, Fische, Heuschrecken, Milch besonderer Kühe und andere leblose Gegenstände, wie ein leerer Korb z. B., aber keine Pflanzen, ein Strohhalm ausgenommen, bezeichnet.

Die Bedeutung der „abaziru" ist durch die unklare Vorstellung bedingt, daß jedermann nach seinem Tode die Gestalt eines „umuziru" annimmt. Man glaubt z. B., daß die Clangenossen der Herrscher von Kiziba in Schlangen, das Geschlecht der Könige von Ruanda in Leoparden und verschiedene Azande-Clans in alle möglichen Tiere verwandelt werden.

Ich hatte nirgends Gelegenheit, Angaben über die Abstammung von „abaziru" zu hören. Auch dann nicht, wenn die Umwandlung in Tiere nach dem Tode mit Bestimmtheit behauptet wurde. Die Verbote können daher kaum mit den Überbleibseln dieser Anschauungen in Zusammenhang gebracht werden.

Man bekommt dagegen Überlieferungen zu Gehör, die das Entstehen der Verbote aus den Erlebnissen der Clanangehörigen oder ihrer Protoplasten wahrscheinlich machen. So erzählte man mir in Kifumbiro, daß einer der dortigen Clans (Abazirambogo) kein Büffelfleisch esse, da einer seiner Angehörigen vor vielen, vielen Jahren auf der Büffeljagd verunglückt sei.

Wie Verbote eines einzigen Clanes auf größere Komplexe, auf ein ganzes Land verbreitet werden können, illustriert das Verbot Felle der „inganda"-Antilope zu tragen. „Inganda" ist „umuziru" des Basindi-Clanes. Seinen Angehörigen war es nicht gestattet, das Tier zu jagen, sein Fleisch zu essen und sein Fell zur Bekleidung zu gebrauchen. Zwei Frauen eines Königs von Ruanda stritten einst um dieses schöne Fell, und die eine durchstach die andere mit einem Messer. Der weise König erklärte darauf, um den Unfrieden ganz aus der Welt zu schaffen, daß das „inganda" zu einem allgemeinen „umuziru" für das ganze Land werden soll, ebenso wie es mit den Hunden, Affen und Vögeln geschehen ist.

Auch die Tatsache, daß die Banyaruanda, die sonst so gern den Fragenden mit der Phrase abfertigen: „unsere Väter haben es ebenso gemacht", bei den Verboten Überlieferungen über ihre Entstehung anführen, darf als ein Argument zugunsten der Ansicht, sie seien allmählich auf der Grundlage der Clanorganisation emporgewachsen, angeführt werden.

Die Tötung eines „umuziru" soll durch besondere Zeremonien gebüßt werden, und ein, absichtlich durch einen Clanfremden erschlagenes, „umuziru" kann unter Umständen sogar die Rache des dadurch betroffenen Clanes nach sich ziehen.

Heiratsverbote. Die Clanorganisation wird dem Bewußtsein des Einzelnen noch durch das Heiratsverbot nahe gebracht. Die Angehörigen desselben Clanes dürfen nicht untereinander heiraten. Der Clan ist streng exogam. Bei den Batutsi sind aber, wie es scheint, noch Spuren einer früheren Endogamie vorhanden. In ihrer Sage über Kigwa, den ersten Herrscher von Ruanda, erzählen sie z. B., daß alle Batutsi die Nachkommen der Geschwister Nyina Batutsi und Kigwa seien.

Die Exogamie bildet in Ruanda einen wichtigen Faktor der sozialen Integration. In Mulera, wo sich die alte Clanorganisation am besten erhalten hat, besteht der Eheschließungsakt im Austausch einer Frau gegen eine Kuh. Es wird in dieser Weise eine Interessengemeinschaft zwischen zwei verschiedenen Clans geschaffen. Der eine Clan hilft dem anderen seine unmittelbare Kopfstärke zu heben. Dieser wieder arbeitet darauf hin seinen Besitz, seinen Reichtum zu vergrößern. Diese Verknüpfung zwingt weiter zur Rücksichtnahme auch in anderen Angelegenheiten und fördert in dieser Weise das Zusammenleben von größeren Menschenmassen.

Im Gegensatze zur Exogamie der einzelnen Clans steht das Ausbleiben vollwertiger Mischehen zwischen Batutsi, Bahutu und Batwa. Der anthropologische und soziale Gegensatz dieser Bevölkerungselemente ist viel schärfer und noch auffälliger, als die Gegensätze zwischen Bahima und Bahiru im Runyoro-Sprachgebiete. Und wenn man dort zwischen Bahima und Bahiru-Clans zu unterscheiden versteht, so muß desto befremdender die Tatsache auffallen, daß man in Ruanda, wie es scheint, in den meisten Clans Bahutu nachweisen kann. Beim Nachfragen ergaben sich in vielen Fällen bei Batutsi und Bahutu dieselben Clannamen, und besondere Batutsi-Clans ohne Bahutu-Angehörige konnten kaum in der Hälfte der beobachteten Fälle festgestellt werden.

Das Auftreten der Batutsi-Clannamen bei den Bahutu läßt sich wohl auf folgende zwei Ursachen zurückführen. Die erste Ursache besteht in der Tatsache, daß die Nachkommenschaft der Sklavinnen — der „baja" — zum Clan des Vaters gehört, aber trotz der Batutsi-Väter nicht mehr zu den Batutsi gezählt wird. So gibt es Bahutu-Familien, die ihre Abstammung von den Ruanda-Herrschern herleiten. Die zweite Ursache bilden Ehen verarmter Batutsi mit den Bahutu-Frauen, die das Zurechnen der Verarmten zur Zahl der Bahutu noch mehr beschleunigen, trotzdem das Kind eines Mututsi, wenn es von seiner gesetzlichen Muhutu-Gattin geboren wurde, de jure ein Mututsi ist. Solche Kinder sind aber durch ihre Mütter aller Verbindungen beraubt, und dies beschleunigt ihr Aufgehen in der Masse der Bahutu.

In ähnlicher Weise kann es jedoch auch vorkommen, daß hervorragende Bahutu, wenn sie Häuptlingsstellen bekleiden, durch Mischehen mit den Batutsi verschmolzen werden. Das war z. B. mit dem Barashi-Häuptling Lukara lwa Bishingwe vom Muhawura-Vulkan der Fall. In dieser Weise werden sich wohl die, zu den Clans der Bazigaba, Basinga, Bagessera, Basita gehörenden, „Batutsi" erklären lassen.

Die Mischehen zwischen Batutsi-Männern und Bahutu-Frauen sind häufiger, als die Ehen zwischen Bahutu-Männern und Batutsi-Frauen. Mischehen mit Batwa sollen gar nicht vorkommen. Diese Abneigung bleibt auch in den christlichen Gemeinden bestehen, und ich hatte sogar Gelegenheit zu hören, daß der einzige getaufte Mutwa keine Frau in der christlichen Gemeinde finden konnte.

Blutbrüderschaft. Bei der Besprechung der Exogamie wurde diese als der erste Faktor sozialer Integration in der in gegenseitig sich bekämpfende Clans zergliederten Gesellschaft bezeichnet. Jetzt soll der zweite Faktor — die Institution der Blutbrüderschaft — besprochen werden.

Wenn man jemandem in Mulera zeigen will, daß man seine Freundschaft schätzt, so geht man zu ihm, um sich dort Feuer zu holen. Um sich jedoch die Freundschaft zu sichern, muß man mit dem Freunde Blutbrüderschaft abschließen (kunywana).

Die einfache Freundschaft unterscheidet man in Ruanda sehr scharf von der sozialen Institution der Blutbrüderschaft. Als Bezeichnung für Freundschaft verwendet man das Wort „kwuzulu", das wörtlich „gefüllt", „voll" sein bedeutet. Für Freunde gelten die, welche „miteinander durchdrungen sind" und infolgedessen aufeinander Rücksicht nehmen müssen.

Freunde gibt es auf allen Stufen der sozialen Organisation. Die Institution der Blutbrüderschaft knüpft sich jedoch in Ruanda, wie es scheint, an die undifferenzierte Clanorganisation des Nordens. Dies rührt wohl daher, daß der Einzelne in den Gebieten mit wohlorganisierter Häuptlingsmacht, wie in der Nduga-Provinz z. B., auf einen gewissen Grad des Schutzes seitens der Vertreter der Staatsorganisation rechnen kann. In den Gebieten jedoch, wo das ganze Land in Zonen verteilt ist, die durch verschiedene, oft einander feindliche Clans besiedelt sind, bleibt der Einzelne nur auf seine Clanangehörigen angewiesen. Geht er aber in die Fremde, außerhalb der Einflußsphäre seines Clans, so muß er sich persönliche Freunde suchen und sie zum Schutze seiner Person durch gegenseitige Dienstleistung verpflichten, um sich dadurch einen Aufenthalt in den fremden Landschaften zu ermöglichen. Deshalb sind es auch vor allem Händler, bei welchen die zahlreichsten Blutbrüderschaften abgeschlossen werden. Leute, die ihren Hügel nie verlassen, gehen dieses Bündnis nicht ein. Bündnisse zwischen den Einwohnern desselben Hügels sind auch nicht häufig.

Der Abschluß der Blutbrüderschaft wird von besonderen Zeremonien begleitet.

Am Tage des Abschlusses geht der, welcher die Blutbrüderschaft eingehen möchte, von einem Zeugen begleitet, in das Haus seines künftigen Blutbruders. Dieser empfängt ihn ebenfalls in Gegenwart eines Zeugen. Alle vier setzen sich in der Hütte auf einer Matte auf dem Boden nieder. Neben ihnen liegen die zu der Zeremonie notwendige „mutsima" (steifer Hirsebrei), ein Messer und eine Hacke.

Der Zeuge des Gastes macht ihm mit dem Messer rechts vom Nabel Ritze, fängt das Blut auf einem Stück „mutsima" auf und überreicht das Messer dem Zeugen des Hausbesitzers. Der wiederholt denselben Akt an seinem Kandidaten. Die beiden Blutbrüder essen nachher ihr Blut mit der „mutsima" gegenseitig auf. Der erste Zeuge nimmt dann das Messer zurück, fängt es an auf seiner Haut zu schleifen und sagt:

Mwumwe! Ntuza yaniwanye na ntuza. Elmwa kanaka uramuka umutatiye
Hört! Dieser schließt Blutbrüderschaft mit jenem. Höre du (dieser), wenn du ihn zu verraten [dich unterstehst,
iki k ihanga kikakwicha. Akomerekera mw' itawalo wanga kumuheka, iki
dieses Gelübde wird dich töten. Wenn er verwundet ist im Kampfe, verweigerst zu tragen (ihn), dieses
kihanga kikakwicha. Umushigisha amata iwawe, iki kihanga kikakwicha.
Gelübde wird dich töten. Verweigerst du ihm Milch deine, dieses Gelübde wird dich töten.
Wanga kumuheka, yarwaliye mw'itawalo, iki kihanga kikakwicha. Umugore
Verweigerst zu tragen, wenn er fällt im Kampfe, dieses Gelübde wird dich töten. (Falls) Frau
wawe amushigisha nzoga uta hali, iki kihanga utikikwiche.
deine ihm verweigern wird Bananenbier (wenn) du nicht bist da, dieses Gelübde wird dich nicht töten.

Nach diesem Fluche überreicht er das Messer dem zweiten Zeugen, der das Eisen gegen den Handteller reibt und den Fluch wiederholt. Dann stehen die beiden Zeugen auf, heben die beiden gebogenen Arme bis zu der Höhe der Augen und schlagen damit auf die Knie hinunter mit den Worten: „Ndateranya sinkiza" (Ich vereinige, ich behüte nicht). Darauf antwortend strecken sich die beiden Blutbrüder auf dem Boden aus und umarmen einander. Man bedeckt sie dann mit einer Matte, worauf einer der beiden Zeugen zweimal auf die Matte mit einem Stock schlägt und dabei folgendes sagt: „ndateranya, sinkiza, zubanda" (ich vereinige, ich behüte nicht, Pöbel). Die Blutbrüder antworten darauf, indem sie sich gegenseitig Schläge austeilen. Später, einander helfend, erheben sie sich in die Hockstellung. Diese Zeremonie bedeutet, daß die Blutbrüder auch miteinander streiten, doch ist dies eine innere Angelegenheit, die unter sich, im Geheimen (unter der Matte) ausgetragen werden muß. Außen vor der Welt dürfen sich die Blutbrüder nur unterstützen.

Nach dieser Zeremonie werden die Geschenke ausgetauscht. Ein Blutbruder nimmt sein Geschenk, in der Regel eine Hacke, und reicht sie seinem neuen Freunde mit den Worten: „End'isuka, nkukye ku kirago" (Empfange die Hacke, sie möchte dir helfen von der Matte aufzustehen). Der andere nimmt sein Geschenk, reicht es dem ersten und wiederholt dieselben Worte. Darauf erheben sie sich beide, und jeder gibt seinem Zeugen einen Armring als Geschenk.

Der Blutbruder (munywana) scheint durch die Zeremonie eine Art persönlicher Zugehörigkeit zum Clan des anderen Blutbruders zu erlangen, ohne aus seinem Clan auszutreten. Im Einklange damit steht die Tatsache, daß Blutbrüderschaft unter Clangenossen nicht abgeschlossen wird. Gelegentlich hörte ich, daß früher in unbestimmbaren „alten Zeiten" für Blutbrüder wie für Clangenossen Blutrache geübt wurde.

Die Blutbrüderschaft hat, wie es scheint, sehr stark an Bedeutung verloren. Das kann wohl als Folge der durch Staatsorganisation verursachten fortschreitenden Zersetzung der Clanorganisation angesehen werden. Daß dieser Prozeß aber nicht erst in der allerletzten Zeit eingetreten ist, beweist das Vorhandensein eines darauf Bezug nehmenden Sprichwortes in Ruanda. Das Sprichwort

sagt nämlich: „umwuzulu uluta umunywano" — Freundschaft ist besser als Blutbrüderschaft. Zugunsten der Ansicht, daß sich die Blutbrüderschaft an die Bantu-Unterschicht oder wenigstens an die Clanorganisation knüpft, lassen sich in Ruanda zwei Tatsachen anführen. Die Verwendung von Bananenbier und Hackengeld bei der Zeremonie und die Verknüpfung der Blutbrüderschaft mit dem System der Heiratsverbote.

Bei den ausschließlich mit den Batutsi verknüpften Kulten soll nur, wie es scheint, Hirsebier zur Anwendung kommen. Hier haben wir Bananenbier, das in der sicher alten Fluchformel erwähnt wird. Sehr merkwürdig ist aber, daß neben Bier auch Milch erwähnt wird. Der letztere Umstand mahnt zur Vorsicht.

Viel wichtiger ist dagegen das auch gegenwärtig peinlich berücksichtigte Heiratsverbot. Die Kinder der Blutbrüder halten sich für miteinander verwandt. Diese Verwandtschaft wird „bapfasoni" genannt. Die Angabe, daß sich das Heiratsverbot auch auf andere Verwandte des Blutbruders des Vaters erstrecke, wurde mir nicht bestimmt verneint. Sie scheint mir doch ganz unwahrscheinlich zu sein. Ebenso ist es mir nicht bekannt geworden, ob ein Mann Frauen aus dem Clan seines Blutbruders heiraten darf.

Der Geschlechtsverkehr mit der Frau des Blutbruders soll nach einigen Angaben als eine schwere Beleidigung aufgefaßt werden. Nach anderen Aussagen sollen die Frauen dem besuchenden Blutbruder zur Verfügung stehen[1]). Volle Klarheit über diesen Punkt konnte aber auch nicht erzielt werden, da sich die Freunde bei den Batutsi mit ihren Frauen ganz allgemein zu bewirten pflegen.

Batutsi und Bahutu schließen miteinander Blutbrüderschaft. Weder die einen, noch die anderen gehen dagegen ein solches Bündnis mit den Batwa ein.

Clangemeinde. Die politische Bedeutung des Clanes ist in den einzelnen Teilen von Ruanda sehr verschieden. Der Clan steht im Vordergrunde dort, wo der Batutsi-Staat noch nicht genügend Fuß gefaßt hat, wie das z. B. in Bugoye und vor allem in Mulera der Fall ist. In der Nduga dagegen haben die Clans eine geringe politische Bedeutung. Die letztere ist direkt proporzional dem Grade der räumlichen Konzentration der Clangehoesen.

Im Norden besiedeln die Angehörigen der einzelnen Clans größere geschlossene Gebiete. Diese autonomen territorialen Gemeinden können manchmal infolge ihrer inneren Solidarität und der häufig recht bedeutenden Kopfstärke bei den nicht besonders stramm organisierten politischen Verhältnissen eine sehr bedeutende Rolle spielen. In der Nduga dagegen wurden die Clans durch die Staatsgewalt zersprengt, zerstreut und der Möglichkeit, sich in politische, territoriale Clanverbände zusammenzuschließen, beraubt. Die Vertreter der ver-

[1]) Kandt, R., Caput Nili. Berlin 1904, S. 177.

schiedenen, sich gegenseitig bekämpfenden Korporationen wurden hier dann in territoriale Gemeinden zusammengefaßt und den vom Staate eingesetzten Häuptlingen unterstellt. Wenn man von Mulera über Bugoye nach Nduga geht, so kann man nacheinander die einzelnen Phasen der Staatsbildung beobachten. Man sieht hier, wie die unabhängigen, undifferenzierten Clans zunächst in das Bereich der mannigfachen Abhängigkeitsverhältnisse hineingezogen und dann allmählich absorbiert werden.

Die Angehörigen derselben Clans haben sich bei der Besitzergreifung von Bugoye an verschiedenen Stellen festgesetzt. Infolgedessen stellt auch das ganze Land ein Mosaik von Besitzungen dar, in welchen verschiedene, räumlich voneinander getrennte Teile derselben Clans wohnen und immer noch ihres historischen Zusammenhanges bewußt sind. Das kommt am schärfsten in der Institution der Blutrache, wie auch in den Eß- und Heiratsverboten, zum Ausdruck. Dieses Bewußtsein reicht jedoch nicht aus zur Bildung von selbständigen, größeren, wohldisziplinierten politischen Verbänden. Schon jede einzelne Niederlassung bildet eine ganz unabhängige Gemeinde mit ihrem Ältesten an der Spitze.

Der Schulze besitzt in den durch Eroberer unbeeinflußten Clangemeinden nur eine geringe Autorität. Er vertritt die Clangemeinde nach außen und schlichtet die inneren Streitigkeiten. Diese bilden eine der wichtigsten Emigrationsursachen für die Clangenossen. Er wird „mugabo" genannt. Seine Stellung ist erblich und geht gewöhnlich auf den ältesten Sohn über. Auf der weiter (S. 250, 251) folgenden Liste wurden die „bagabo" an erster Stelle verzeichnet.

Mit der Unterwerfung der Clangemeinden durch fremde Eroberer nimmt der „mugabo" eine besondere Stellung ein. Seine Obliegenheit ist es Steuern einzuziehen und dem durch den König beauftragten Beamten auszuliefern. Diese offizielle Stellung verschafft ihm aber einen gewissen Einfluß, der zusammen mit dem der fremden Eroberer, wenn er diesen dienstbar zu werden versteht, wächst. Da aber das Privilegium, Steuern einzuziehen, erblich ist, so birgt diese besondere Stellung einen Keim, der unter Umständen zu einer regelrechten Großhäuptlingswürde auswachsen kann, wie das durch den Fall mit dem Muhutu Lukara lwa Bishingwe, der durch die Ermordung des Missionars R. P. Paul Loupias auch in Europa bekannt geworden ist, bewiesen wird.

Die Häuptlingschaft der Barashi unter Lukara lwa Bishingwe stellt einen Clanverband dar, dessen Ältester durch den Einfluß der Batutsi zu einem Häuptling nach den Begriffen der Eroberer erhoben worden ist, wenn auch diese Entwickelung ihren Abschluß noch nicht erreicht hat. Der ganze Vorgang ist zu neu, zu wenig durch die Tradition gefestigt.

Die privilegierte Stellung des Barashi-Clanältesten datiert erst seit zwei Generationen. Lukara's Vater Bishingwe war ein sehr geschickter Jäger und hat

verstanden, eine Batwa-Gruppe sich dienstbar zu machen. Lwabugiri, der König von Ruanda und Vater Musinga's, dem er viel Elfenbein zu liefern verstanden hatte, begünstigte ihn dafür. Er behandelte ihn als seinen unmittelbaren Vasallen (mugaragu) und überließ ihm die Häuptlingschaft über seinen eigenen Clan, in dem er angeblich auch früher die Stelle des „mugabo" eingenommen hatte.

Diese Erhebung des machtlosen Clanältesten zum Häuptling wurde durch die Clangenossen nicht anerkannt, und bei ihnen besaß Lukara auch zur Zeit meiner Reise, wie ich das beobachten konnte, nur eine geringe Machtfülle. Um diesem Übelstande abzuhelfen, suchte er fremde Elemente aus zersprengten Clans und ausgestoßenes Gesindel anzulocken und diese auf dem freien Boden anzusiedeln. Aus dieser unorganisierten, als fremde jedem preisgegebenen Gruppe, die nur von Lukara Schutz erwarten konnte, bildete er seine Anhänger. Mit ihnen hielt er seine Clangenossen im Zaume. Diese drängten wieder die Fremden durch ihren Haß zu ihm hin, und in dieser Weise entstand jenes geschlossene, straff organisierte Gebilde, das Lukara seinen Gegnern so gefährlich machte. So gut diszipliniertes Gefolge wie Lukara besaß sein Hauptgegner, der Mututsi Luhanga, nicht.

Wie groß die ständigen inneren Reibungen dieses sozialen Gebildes sein müssen, hatte ich Gelegenheit an einem ganz kleinen Beispiele zu betrachten. Ich ersuchte Lukara, für meine Leute Wasser holen zu lassen. Nach beinahe zweistündigen Verhandlungen erklärte sich Lukara bereit, das zu tun und sagte seinen Leuten, die im Hofe versammelt waren, sie möchten das Wasser besorgen. Niemand beeilte sich den halbstündigen Weg zur Wasserstelle zu machen. Lukara erzürnte ob dieser Langsamkeit, ergriff ein paar Leute bei der Hand und zog sie beiseite, um sie das Wasser holen zu lassen. Einer der Gefaßten stieß Lukara's Hand zurück mit den Worten: „Bin ich denn kein Murashi" und ließ sich nicht an die Seite bringen. Lukara fing an zu schimpfen, fragte nach dem Namen seines Vaters, ließ ihn aber sonst ruhig gewähren. Das Wasser mußte durch die fremden Zuzügler geholt werden. Diese sind von ihm angesiedelt und können infolgedessen von ihm auch verjagt werden. Mit seinen Clangenossen kann er nicht so rücksichtslos umgehen.

Trotz der Reibungen zwischen dem Clanältesten und den Clangenossen halten die Barashi straff an Lukara. Sie wissen, daß sein Sturz ihre Unterwerfung durch Fremde bedeutet. Deshalb ist auch Lukara so stark seinen Gegnern gegenüber, wenn er auch nicht soviel Leute in das Feld stellen kann. Seine Batutsi-Gegner müssen sich auf Bahutu stützen, die durchaus kein so großes Interesse an ihren Erfolgen haben.

Lukara, dessen Vater erst zum „mugaragu" durch den demagogischen Lwabugiri gemacht wurde, gibt sich jetzt stets für einen Mututsi aus. Auch seine Leute behaupten, daß er ein Mututsi ist. Seine Clangenossen sagen zwar nur,

daß er seine Angehörigen wie ein Fremder, ein Mututsi, durch zugezogene Ansiedler bei Gelegenheit zu drücken versucht.

In dieser Weise verschmilzt der aus den Clanältesten gebildete Bauernadel mit den Batutsi. Man darf sich also wohl mit Recht fragen, ob diese allmählich durch das Vergessen der ursprünglichen Herkunft besiegelte Nobilitierung die Hauptursache des Vorkommens der Bahutu-Clannamen bei den Batutsi bildet.

Die Größe der autonomen Clangemeinden, die ungefähr unseren Dörfern entsprechen, ist sehr verschieden. In vielen Fällen beträgt ihre Bevölkerungszahl gegen hundert Köpfe, in einzelnen sogar einige tausend. Im Barashi-Gebiet wohnen z. B. 6000—8000 Menschen. Das fruchtbare Gebiet wird im Norden durch den Urwald auf den Vulkanen, im Osten durch den Bolero-See und im Süden durch die Lavasteppe begrenzt. Die Bevölkerung wurde aus der Lavaebene durch die Barashi verdrängt. Auf dem Muhawura sind jedoch die Batwa geblieben.

Die Bevölkerung dieser Gemeinden besteht aber, wie wir es gesehen haben, nicht ausschließlich aus Clangenossen. Es gibt darunter auch Fremde, die sich als Klienten (bagaragu) bei den Clangenossen niederlassen, ihnen Dienste erweisen, wofür sie verpflegt und von Zeit zu Zeit mit einem Stück Kleinvieh belohnt werden. Das sind arme Teufel, die sich in dieser Weise Mittel zum Ankauf einer Frau verschaffen müssen. Es sind aber auch solche, die in den stark besiedelten Gegenden, wo es an freiem Land fehlt, Äcker pachten und sogar auf dem gepachteten Boden eigene Häuser besitzen. Andere pachten nur soviel Land, wie für die Hütte und den kleinen Hof nötig ist und erwerben sich ihren Unterhalt als Tagelöhner.

Es muß noch bemerkt werden, daß das Sich-Niederlassen auf dem Boden eines fremden Clans schon eine gewisse Pazifikation und Stabilisierung der Verhältnisse voraussetzt und die nahe Zersetzung der Clangemeinde signalisiert. In den primitiveren Verhältnissen, wo die Clanorganisation ihre höchste Blüte erreicht, kommen Fälle des Sich-Niederlassens auf dem Boden eines fremden Clans seltener vor. Das Wohnen unter den Fremden ist dort zu gefährlich, wegen der eventuell ausbrechenden Blutrachenfehde. Es fehlt nämlich die Sicherheit, ob es nicht zur Fehde zwischen dem Clan der Gastgeber und dem der Ansiedler kommt, und dann fällt der Isolierte als das erste Opfer, da man ihn am leichtesten erreichen kann.

Besitzverhältnisse. Die Clans von Bugoye und Mulera besiedeln Gebiete, die vor einigen Generationen durch ihre Ahnen in Besitz genommen und gerodet worden sind.

Das Roden des Urwaldes spielt in den Eigentumsvorstellungen von Ruanda überhaupt eine sehr große Rolle. In Bugoye sieht man trotz der frischen Batutsi-Eroberung noch jetzt den Boden als Eigentum derjenigen an, deren Ahnen

die entsprechenden Urwaldparzellen in Besitz genommen und gerodet haben. Das kommt in den Gerichtsprozessen wegen des Grundbesitzes in dieser Form zum Ausdruck, daß der Stein, auf dem das „muhoro" (Buschmesser) beim Roden des strittigen Gebietes gewetzt wurde, als Zeuge zitiert wird. Die Anspruch erhebende Partei erklärt: „Ich werde den Wetzstein bringen (uzakuha ulutsiaga), den mein Ahne beim Roden dieses Stückes benutzt hat." Mit Rücksicht darauf können auch die Clangenossen als Besitzer des von ihnen belegten Bodens angesehen werden.

Während aber die Hütten, das Vieh und das ganze Mobiliar den unbeschränkten individuellen Besitz bilden, über den jedermann nach seinem Dafürhalten verfügen kann, ist der Bodenbesitz nicht ganz frei. Die Clangenossen sind eigentlich nur Nutznießer, die aus dem ihnen überlassenen Gemeindeboden Nutzen ziehen. Der Boden bildet aber, ebenso wie sein Besitzer, das Eigentum des Clanes, über welches nur mit Berücksichtigung der Gemeinschaftsinteressen verfügt werden kann. So liegen die Verhältnisse dort, wo die Clans nicht unterjocht und durch die Eroberer enteignet worden sind.

Durch die Eroberung geht der Boden in den Besitz des Königs über und wird den Untertanen in seinem Namen durch die von ihm eingesetzten Häuptlinge überlassen. Von einer freiwilligen Veräußerung des Bodens kann unter diesen Verhältnissen ebenfalls keine Rede sein.

Der Wohlstand des Einzelnen wird nicht an der Größe der von ihm beanspruchten Feldoberfläche gemessen. Das Maß des Reichtumes bildet ausschließlich die Zahl des in seinem Besitze bleibenden Viehes. Bei der wenig differenzierten sozialen Organisation und den schlechten Verkehrswegen ist der freie Absatz von Ackerbauprodukten, die hier fast ausschließlich die Bedürfnisse des Produzenten zu befriedigen haben, sehr gering. Es gibt außerdem noch in vielen Teilen von Ruanda eine genügend große Reserve von freiem Boden, so daß sein Wert verhältnismäßig gering ist, und die Monopolisierung dieser Form des Besitzes durch die privilegierte Schicht nur in zweiter Linie als Machtmittel sozialer Disziplin in Frage kommt.

Durch die Monopolisierung des Viehbesitzes kann die Macht in Ruanda viel einfacher ausgeübt werden. Deshalb streben auch die Batutsi danach, den ganzen Rinderbesitz in ihren Händen zu konzentrieren und die Einzelnen durch Küheverleihungen, die am Milchgenusse zu partizipieren gestatten, sich dienstbar zu machen.

Infolge der Durchführung dieses den Hirten am nächsten liegenden Beherrschungsprinzips wurden die Bauernrügen in Bugoye bei der Besitzergreifung durch die Batutsi nur in geringem Maße vorgenommen, und die Clans wurden nur mit den Steuern belegt. Seine Kühe muß der Mugoye dagegen in den Wald schicken und sie dort behüten lassen, wenn sie keine Milch mehr haben und für den Haushalt entbehrlich werden. Er unterzieht sich lieber dem Risiko, daß der Hirt mit seinem Besitze durchbrennen kann, trotzdem er die Kuh auch

in der Nähe seiner Wohnung ernähren könnte. Er fürchtet zu sehr die Begehrlichkeit der Mächtigen zu reizen, da das zu einer gelegentlichen Expropriation führen kann.

Zum Schluß sollen hier noch einige Angaben über die Angehörigen und den Besitz der drei Clangemeinden der Baishaza, Bahoma und Bagwabiro, auf den Hügeln Katebe und Kitebe in der Nähe von Njundo, gemacht werden. Diese Zahlen habe ich an Ort und Stelle durch Zählung gewonnen.

Diese kurze Zusammenstellung gewährt uns schon einen guten Einblick und orientiert über die Zusammensetzung und den Besitz der kleinen Clangemeinden. In dieser Liste wurden nur die Familienväter mit laufenden Nummern versehen, ihre erwachsenen Söhne sind nach ihnen verzeichnet, und wir können feststellen, daß die durchschnittliche Größe einer Familie samt Gesinde ungefähr sechs Köpfe beträgt, und auf eine Hütte drei bis vier Köpfe entfallen, da die Zahl der Hütten der Zahl der Frauen fast gleich ist. Sehr wichtig ist auch die Feststellung, daß der Schulze der Baishaza-Clangemeinde, der „mugabo" Ndiramiye, zur Zahl der ärmsten Bauern auf Katebe gehört.

[1]) darunter 21 männliche Clangenossen,
[2]) darunter 21 männliche Clangenossen.

12. Kapitel.

König und Staat.

König. — „Bagaragu". — Hof. — Etikette. — Soziale Organisation. — Politische Organisation. — Polizei. — Steuerwesen. — Kriegswesen.

König. Der aktive Faktor, der bei der Staatsbildung in Ruanda auf den passiven Faktor, die Clanorganisation eingewirkt hat, ist die Königsmacht. Der ganze Staat bildet eigentlich nur den ausgewachsenen Haushalt des Königs, in welchen alle Batutsi-Clans zunächst einbezogen und dann zersetzt wurden. Bei dem weiteren Auswachsen des königlichen Haushaltes wurden die Bahutu-Clans ebenfalls in seinen Wirkungskreis hereingezogen, zersprengt und differenziert, ein Prozeß, welcher bis jetzt seinen Abschluß noch nicht gefunden hat. Im Norden von Ruanda befindet er sich sogar erst im Anfangsstadium.

Bei der Betrachtung der Clangemeinden von Xatebe und Kitebe in Bugoye wurden schon erwähnt die „bagaragu" (Klienten), welche aus der Ferne kommen und sich den Besitzenden anschließen, um ihnen Dienste zu leisten, wofür sie verpflegt und versorgt werden. Es waren dárunter solche, die auf die Verleihung einer Ziege oder sogar einer Kuh gehofft haben. Bei den Clanältesten, wie z. B. bei Lukara, der sich eines großen Einflusses in seinem Clan erfreute, war die Zahl der Klienten eine große. Er verlieh ihnen Landparzellen, auf denen sie sich unter seinem Schutz niederlassen konnten. Am Hofe des Königs wiederholt sich dasselbe, nur etwas modifiziert und in einem viel, viel größeren Maßstabe. Den König umgeben als Klienten nicht etwa arme, ausgestoßene Teufel, sondern einflußreiche Leute, die ein zahlreiches Gefolge eigen nennen, und deren Klienten wieder Klienten unter sich haben. In dieser Weise stellt der Ruanda-Staat eine Pyramide mit dem König an der Spitze und der freien Bauernbevölkerung ohne Bodenbesitz als Basis, dar. Zwischen diese schieben sich die großen Häuptlinge mit ihren Unterhäuptlingen als organisierendes Element, das die Bevölkerung im Zaume hält, herein.

Juhi Musinga, der Herrscher von Ruanda, war entschieden der mächtigste der eingeborenen Potentaten, den ich auf der Reise zu sehen Gelegenheit gehabt habe. Er verfügte über das größte Land und konnte die größte Zahl von Untertanen aufweisen; den Eindruck des intelligentesten Herrschers machte er am Anfange unserer Bekanntschaft durchaus nicht. Später jedoch konnte ich mich wiederholt überzeugen, daß er sich stets Mühe gab dämlich zu erscheinen,

[p. 252]

wenn ihm die Wünsche der Europäer unbequem zu sein schienen. Durch Spielereien mit deutschen Wörtern, deren Inhalt er angeblich erfahren wollte, suchte er Zeit zu gewinnen, den Besuch in die Länge zu ziehen, den Gast zu ermüden, um sich auf diese Weise um die ganze Angelegenheit drücken zu können.

Am 10. August 1907 hatte ich zum ersten Male die Gelegenheit die schwarze Majestät zu sehen. Am Mittag traf ich bei der Hauptexpedition ein, und gegen drei Uhr kam Musinga, Seiner Hoheit dem Herzog den Gegenbesuch abzustatten. Ein schlanker, fein gebauter, 197 cm hoher junger Mann mit etwas schielenden, kurzsichtigen Augen und vorstehenden Zähnen, das war Musinga. Er hatte ein Stück roten Stoffes (bendera) auf den Schultern und ein weißes Tuch um die Lenden geschlagen. Das letztere wurde durch einen Gurt zusammengehalten, an dem man den am Tage zuvor geschenkten Hirschfänger Seiner Hoheit des Herzogs erblicken konnte. Die Prachtgestalten seines Gefolges machten einen viel vornehmeren und feineren Eindruck, als der König selbst.

Ganz anders wirkte auf mich der feierliche Besuch, den Musinga am nächsten Tage machte, wie er mit Diadem auf dem Kopfe, mit verdecktem Gesicht, in einer „ngobi" getragen, von dem feierlich mit „mukane" bekleideten Hofe umkreist, erschienen ist und von melodischen, wenn auch wilden Gesängen der Batwa begleitet wurde. Das ganze, der europäischen Beeinflussung bare Bild machte den Eindruck einer märchenhaften, unbeschreiblichen Schönheit: alles war so vollkommen und fein, so vornehm und elegant. Die stilvolle Zeremonie wurde mit einer bewunderungswürdigen Exaktheit und Eleganz eingehalten und ausgeführt. Man sah die vollständigste Negation des gewöhnlichen Negerstils, wie ich ihn bei meinen Trägern beobachten konnte, die im Frack unter Verzicht auf Hosen paradierten.

Es ist mir nicht klar geworden, inwiefern sich Musinga in der neuen, durch die europäische Eroberung geschaffenen Lage zurecht gefunden hat. Er weiß zwar, daß seine Aktionsfreiheit eine gewisse Einschränkung erfahren hat; er weiß es aber ebensogut, daß er die Regierungssoldaten zum Niederwerfen der kleinen, lokalen Revolten und zu einer nachdrücklichen Mahnung der rückständigen Steuerzahler benutzen kann. Noch besser hat er begriffen, daß Mpumbika, das Haupt der Anhänger des Kissaka-Prätendenten, nur mit Hilfe der Regierungstruppen aus dem Lande verbannt wurde.

Er hofft überdies, daß sein mächtiger Freund Tiki-Tiki (Hauptmann W. v. Grawert, der damalige kaiserliche Resident von Ruanda und Urundi) ebenso, wie er ihm schon Kühe von Mpororo geschenkt hat, einmal auch die Belgier aus Ufumbiro und Bunyabungu verjagen wird, und er selbst dort, wie sein Vater Lwabugiri, die königlichen Hoheitsrechte werde ausüben können.

Die Belgier haßt Musinga, wie jeder Mututsi überhaupt, ganz besonders; ja viel mehr als alle übrigen ekelhaften Eieresser zusammen. Sie knallten nämlich eine Menge Leute des Rudegambia nieder, als diese ihren Versuch, am Kiwu sich festzusetzen, vereiteln wollten. Dazu kommt noch der Umstand, daß sich

die Belgier zur Richtschnur ihrer Eingeborenenpolitik die Ausschaltung des unproduktiven Adels stellten, da sie die Eingeborenen allein, ohne die Batutsi daran teilnehmen zu lassen, exploatieren wollten. Sie mußten den Bahutu sogar einen gewissen Schutz gewähren, als Entgelt für die hohen Verpflegungslasten, die für die zahlreiche Besatzung des Russisi-Kiwu-Grenzgebietes notwendig waren, um dadurch eine zu starke Auswanderung hinzuhalten.

Die deutsche Politik verfolgt, im Grunde genommen, dieselben Ziele. Das Wahren der alten Formen sozialer und politischer Organisation und die langsame Entwickelung der neuen Verhältnisse gab jedoch Musinga keine Gelegenheit, das ganze Wesen der heranrückenden Gefahr, der gegenüber er doch ganz ohnmächtig war, zu begreifen. Er ahnte nur instinktiv die gefährliche Lage voraus. Die Gelegenheit, durch bedingungslose und eifrige Unterstützung der Europäer seinen Besitz territorial zu vergrößern, wie das Kahigi aus Kyanja gemacht hatte, ließ Musinga unbenützt. Ebenso hat er es nicht verstanden, sich in dem ihm zugewiesenen Mpororo zurecht zu finden.

Um das innere Verhältnis Musinga's zur neuen Lage zu charakterisieren, genügt es zu sagen, daß er, obwohl die Regierungstruppen ihn stets nur unterstützt haben, angeblich nicht schlafen könne, wenn auch nur ein Askari in Niansa weile.

Musinga ist sehr eitel und den Komplimenten zugänglich. Er besteht z. B. darauf, daß seine Leibtänzer besser als die geschicktesten Tänzer seiner Häuptlinge tanzen. Deshalb war auch die erste Frage, die er nach den Tanzvorführungen an Seine Hoheit den Herzog stellte, welcher Trupp am besten getanzt habe. Der durch R. P. L. Classe informierte Herzog konnte ihm das ersehnte Vergnügen bereiten und bezeichnete seine Tänzer als die besten, trotzdem sowohl auf Seine Hoheit, wie auch auf alle übrigen Anwesenden, die Tänze der Leute Kanuma's aus Kissaka den größten Eindruck gemacht haben. Musinga teilte wie es scheint, das allgemeine Empfinden; um sich jedoch zu vergewissern, daß er den Herzog gut verstanden habe, bat er ihn, seinen „ntore" kleine Geschenke aus Glasperlen überreichen zu lassen, damit alle glauben, daß sie tatsächlich am besten getanzt haben. Erst als dies geschehen war, beruhigte er sich und schaute seine „bagaragu" als besiegte Nebenbuhler verachtend von oben herunter an. Bei den schielenden, kurzsichtigen Augen der zwei Meter langen Majestät rief das einen sehr komischen Eindruck hervor.

Mit dieser kindisch kleinlichen Eitelkeit ist aber auch ein bedeutender Grad von Nichtsnutzigkeit verknüpft. So wies z. B. Musinga zweimal die Bitte des R. P. L. Classe ab, der die alte, verdorbene, von R. P. Brard dem Könige geschenkte, Drehorgel nach Issawi mitnehmen wollte. Sie stand hier in Niansa im Regen und ist zu einem Tummelplatz für Ratten geworden. Die abschlägige Antwort begründete Musinga damit, daß man Geschenke nicht weitergeben dürfe. Diese Begründung ist für Ruanda durchaus nicht stichhaltig, da man hier alles weitergibt, und eine dem Musinga geschenkte Uhr zum Schenker für ein Zwanzigstel ihres Kaufpreises durch eine dritte Person zurückgekehrt ist.

Der Grund der Absage, die Orgel zurückzugeben, war in einem anderen Umstande zu suchen. Das Instrument war verdorben, und die Missionäre wollten es ausbessern. Das wußte Musinga. Ein Ding, das dem König nicht spielen wollte, sollte den Missionären dienen! An der Drehorgel selbst war Musinga gar nicht gelegen. Er äußerte nicht einmal den Wunsch, sie reparieren zu lassen, trotzdem er gewöhnlich seine Besucher mit allerlei Bitten quälte, um sie zu ermüden.

Sehr interessant war sein Verhältnis zum Phonographen. Ganz abgesehen von der Freude, die ihm das Kunststück der modernen Technik bereitete, hörte er gern der, übrigens sehr mangelhaften Wiedergabe der Ruanda-Lieder zu. Die wesentlich besser aufgezeichneten europäischen Stücke machten ihm keinen Spaß und sind bald vom Repertoir der Phonographvorführungen verschwunden. Nur nach einem Stücke mit Militärkommando, Trommeln und Flöten der Infanterie fragte er manchmal nach. Wohl deshalb kümmerte er sich auch um die Drehorgel so wenig, auf der nur ihm unverständliche Stücke abgeleiert werden konnten.

Der König genießt eine kultuelle Autorität. Er verbot z. B. im Jahre 1906 den alten Frauen das Tabakrauchen, welchem Befehle sorgfältig Folge geleistet wurde, da man befürchtete, die Hartnäckigen werden sterben müssen. Die Pfeifen wurden auf den Hügelgipfeln niedergelegt, wo man sie noch zur Zeit meiner Reise (1907) sehen konnte.

Am Hofe des Königs wird ein ständiges Feuer durch Batwa unterhalten. Acht oder neun Monate vor meiner Ankunft in Niansa ist das Feuer durch die Nachlässigkeit der Wächter erloschen, was diese mit ihrem Leben büßen mußten. Das heilige Feuer soll auch in Kiziba gebrannt werden, nur muß es jedes Jahr frisch von den Sesse-Inseln geholt werden.

Das gewöhnliche Wort „sterben" kann auf den König nicht angewendet werden. Nach dem Tode wird der König nicht beerdigt, man mumifiziert seinen Körper über dem Feuer, und wenn dieser schon durch und durch ausgedörrt ist, so wird er samt seiner Hütte eingeäschert, so daß keine Spuren hinterbleiben. Nach dem Tode sollen die Könige ihr Dasein als Leoparden weiterfristen.

Zum König wird ein Sohn des verstorbenen Königs bestimmt. Er braucht nicht der Älteste zu sein, und ist es auch in der Regel nicht. Die Unbestimmtheit in der Thronfolge bildet auch in Ruanda die Ursache innerer Kämpfe, die zwischen dem Tode des alten Königs und dem Sich-Festsetzen des neuen Herrschers stattfinden und den Staat äußeren Überfällen preisgeben.

Es gibt jedoch einige Bestimmungen, die gewisse Kategorien von Königssöhnen aus der Zahl der Prätendenten ausschalten. So soll ein Ryangombe geweihter Mann unfähig sein, die „Trommel zu essen" (König zu werden). Dies sollte z. B. mit Ishirangabo, dem Bruder Musinga's, der seinerzeit Lt. Graf von Götzen geführt hatte, der Fall gewesen sein. Auch die Prinzen, deren Mütter schon gestorben sind, sollen nicht mehr die „Trommel essen" können

Dieser letzte Umstand hat zur Folge, daß sehr oft als Könige Kinder eingesetzt werden, denen als Regent ein Oheim oder Bruder der Königin-Mutter zur Seite steht. Das gilt z. B. von Musinga, in dessen Namen einige Zeit sein Onkel Kabare regiert hat.

Mit dem Regierungsantritte wechselt sowohl der neue König, wie auch seine Mutter den Namen. So wurde Musinga zum Juhi Musinga, und seine Mutter Kanzogera zur Nyina Juhi. Die Königin-Mutter und der Regent empfangen, solange der König noch unausgewachsen ist, alle Ehren eines Königs.

Eine weitere Maßnahme zur Herabsetzung der Zahl der Prätendenten, dieser schwächsten Seite des afrikanischen Staatswesens, ist die geringe Zahl der als vollberechtigt anerkannten Königssöhne. In dem Augenblicke, als der König einen anerkannten Sohn erhalten hat, soll die Königin-Mutter entfernt werden. Deshalb wirkt sie angeblich durch ihren ganzen, in der Regel sehr großen Einfluß darauf hin, daß der König solange wie möglich keines seiner Kinder als vollberechtigt anerkennt.

„Bagaragu." Der König ist der Besitzer des ganzen Bodens und der sämtlichen Kühe im ganzen Lande. Durch das Verleihen dieser Güter und durch das Zurückziehen derselben in Fällen seiner Unzufriedenheit übt er seine Macht aus. In dieser Weise setzt der König die Beamten, die in dieser Stellung als vorübergehende Großgrundbesitzer zu betrachten sind, ein. Der König hält sie in ihrem Amt und Besitze, er kann sie aber auch in jedem Augenblicke verjagen, ebenso wie er ihnen noch andere Ländereien verleihen kann.

Der König ist allmächtig, nur das physisch Unmögliche fügt sich ihm nicht. So kann er z. B. niemanden finden, der geneigt wäre sich in Ndorwa als Häuptling niederzulassen, da dieses Unternehmen trotz der eventuellen Hilfe des Königs zu gefährlich ist.

Die Macht und der Besitz des Einzelnen hängt hauptsächlich von der Gunst des Königs ab, und zwar in einem so hohen Grade, daß auch die Privilegierten stets im Kontakte mit dem König bleiben, oder sogar an seinem Hofe verweilen müssen; sonst können sie weder für ihre Erfolge sorgen, noch ihren Besitz bewahren. Ein Mann, mag er noch so reich sein, kann doch alles verlieren, wenn er keine Alianten hat, und ein Glücklicher die Gunst des Königs von ihm abzuwenden versteht.

Jeder Glücksfischer ist von einer Anzahl von Klienten umkreist, die, in der Hoffnung an den Erfolgen ihres Patrones partizipieren zu können, ihn überall im Gänsemarsch begleiten. Nach der Zahl dieser Glücksfischer zweiten Grades, die sich nicht selten mit den Milchspenden des Königs allein befriedigen müssen, kann man die Bedeutung und die Aussichten ihres Herrn bemessen.

Als ich in Niansa wohnte, hatte ich jeden Tag gegen 11 Uhr die Gelegenheit zu schauen, wie die Mächtigen mit einem Gefolge aus 50—60 Mann zum Morgengruß des Königs marschierten. Es gab aber auch gänzlich verarmte

Teufel, die, trotzdem sie zum König als seine „bagaragu" zogen, in ihrem Gefolge nur einen Muhutu zählten.

Die nächste Umgebung des Königs setzt sich aus den Großhäuptlingen zusammen, aus ihnen besteht seine Klientenschar (bagaragu). Zur Zeit meiner Anwesenheit in Niansa wurde vorwiegend von den folgenden Großhäuptlingen gesprochen:

1. Nshobozamigo; Luhanga ist sein „mugaragu" in Mulera;
2. Kanuma aus Kissaka;
3. Niamutezi aus Kissaka;
4. Lutangabo aus Kissaka;
5. Rwamanwa aus Niaruguru;
6. Rudegambia;
7. Kabare aus Bugessera, Nduga, Kifumbiro, Bugansa, Kissaka u. a.;
8. Lukara lwa Bishingwe (Muhutu) aus Mulera;
9. Ndazihiwe (Muhutu);
10. Ishirangabo;
11. Runiga (Muhutu vom Bahenyi-Clan);
12. Bushakwe; Lwakadygi ist sein „mugaragu" in Bugoye;
13. Niamuhanga aus Bgisha;
14. Lwabilinda aus Mukinjaga; Bruder des Lwabugiri Kigeri;
15. Ruemankiko aus Bulembo im Süden vom Ndisa-Berge;
16. Nigenzi aus Mukinjaga.

Diese Klienten wohnen in den Hütten, die den großen Kral des Königs umgeben. Die „Villen" (bilaro) machten auf mich den Eindruck eines vor wenigen Tagen aufgeschlagenen Lagers. Das rührte wohl daher, daß man sie nicht, wie es sonst üblich ist, mit Bäumen bepflanzen durfte, damit sie die Pracht der Bäume des königlichen Krals nicht schmälern. Der einzige Schmuck der ganzen Umgebung waren die auf einem benachbarten Hügel wachsenden Bäume einer alten, verlassenen Siedelung.

Die „bagaragu" des Königs haben keine bestimmten Dienstperioden am Hofe zugewiesen, wie dies mit den Musikanten z. B. der Fall ist. Die Zeit ihres ununterbrochenen Aufenthaltes schwankt zwischen Wochen und Jahren. Wenn man einen Großhäuptling fragt, wann er nach Hause zurückziehen werde, bekommt man immer zur Antwort: „Wenn der König es gestattet." Es werden am Hofe nicht nur die besonders beliebten, sondern vor allem die gefürchteten Fürsten lange hingehalten, damit sie so, von den eigenen Leuten ferne, durch eine Menge neidischer, habgieriger Nebenbuhler umgeben, ungefährlich werden. Infolge der allzulangen Abwesenheit verlieren sie allmählich jeden Kontakt mit ihren Anhängern. Die Zeit und die Entfernung läßt hier, wie übrigens überall, ihre Wirkung nicht verfehlen. So wurde z. B. ein rebellischer Häuptling von Mukinjaga so lange am Hofe zurückgehalten, bis er einen Reisekorb mit weißen, kleinen Perlen vollgefüllt hat. Zwei Jahre lang mußten seine Leute diese Perlen

zusammensochen, welches Lösegeld gewiß nicht darnach angetan war, den Untertanen die Freude an ihrem Herrn zu steigern. Als der Korb zu schnell gefüllt wurde, hielt der König die Kur seiner Gesinnung am Hofe noch nicht für genügend und ließ ihn noch ein Vorratshaus (kigega) mit Hacken vollfüllen. Erst darnach gestattete ihm Musinga nach Hause zu ziehen.

So spielt der Aufenthalt am Hofe neben der Sprengung des Besitzes die wichtigste Rolle in der Organisation und in der Stabilisierung des Ruanda-Staates, den er gewissermaßen gegen alle Eventualitäten sichert. Solange der Häuptling, der einflußreichste Mensch in seinen Besitzungen, am Hofe verbleibt, hält der König im gewissen Grade durch seine Person sein ganzes Landstück in der Hand.

Mit dem Aufhalten der „bagaragu" am Hofe des Königs ist enge verbunden auch die hiesige Besteuerungsweise. Die Großhäuptlinge müssen dem Könige möglichst große Geschenke machen, um nicht seiner Gunst verloren zu gehen; andererseits dürfen sie von ihren Leuten ja nicht zu viel verlangen, da diese fortziehen könnten. Das sind die zwei Punkte, durch die die Königsbeamten von oben und von unten eingeschränkt werden. Einen Ausgleich zwischen diesen beiden Faktoren zu schaffen, ist ihrer Individualität überlassen, und diese spielt infolgedessen eine unvergleichlich größere Rolle, als dies in den entsprechenden Stellungen unseres modernen Staatswesens der Fall ist.

Hof. Der Hof des Königs besteht aus Vertretern der Aristokratie, die unter seinen „bagaragu" stark überwiegen und verschiedene Ämter bekleiden, und aus verschiedenen Angestellten, die den Herrscher bedienen. Die Lehnsherren mit ihrem Gefolge bilden wohl die Hauptmasse der in Niansa anwesenden Bevölkerung. Sie kommen jedoch und gehen wieder zu ihren Besitzungen zurück, wenn dies der König gestattet. Aus diesem Grunde ist auch die Größe des Hofes sehr großen Schwankungen unterworfen. Während der Anwesenheit Seiner Hoheit des Herzogs zu Mecklenburg herrschte bei Musinga eine recht große Aufregung, und der ganze Hof vor dem Hause war immer voll Menschen. Auch der Zapfenstreich war entsprechend verschoben, man hörte ihn gewöhnlich erst gegen 2 Uhr nach Mitternacht, manchmal noch später.

Dies ist aber nicht das gewöhnliche Bild des Lebens am Hofe gewesen. Von den Festlichkeiten wurden alle so müde, daß der Hof nach dem Abzuge Seiner Hoheit des Herzogs ganz menschenleer wurde. Als ich am nächsten Tage nach dem Abmarsche der Expedition einen Besuch machte, fand ich beim Könige keinen Häuptling, der ihm den Hof gemacht hätte.

In ähnlicher Weise, wie die Großhäuptlinge dem Könige den Hof machen, sollen ihre Frauen der Königin-Mutter Gesellschaft leisten und bei ihr im Dienste bleiben. So erzählte Kahama Dr. Schubotz, daß seine zweite Frau bei Musinga (wohl bei seiner Mutter) sei, und wenn diese zurückkehre, so müßte sich dort eine andere Frau einstellen.

Der Hof der Königin-Mutter hat nichts mit dem Harem des Königs zu tun.

So reiste die Königin-Mutter Kanzogera weg, als die Nachricht kam, daß unsere Expedition heranrücke; die Frauen Musinga's blieben jedoch bei ihm, obwohl sie während der ganzen Zeit unsichtbar geblieben sind. Als ich mit R. P. Felix Dufays Gesänge mit dem Phonographen aufnahm und sie zur Probe bei Musinga wiedergab, waren die Frauen des Königs im Inneren derselben Hütte hinter der Wand aus Schildmatten versammelt. Sie lauschten den Geräuschen des unvollkommenen, aber trotzdem doch ganz übernatürlichen Instrumentes und verrieten von Zeit zu Zeit ihre Anwesenheit durch Lachen, das sie nicht mehr hinhalten vermochten.

Der Hof der Königin-Mutter scheint den Mittelpunkt des Frauenlebens in Ruanda zu bilden.

Neben den Großhäuptlingen gehören zum privilegierten Teil des Königshofes die „ntore". „Ntore" bilden die Leibgarde der Häuptlinge. Sie begleiten sie überall hin, in der Hauptstadt und auf dem Schlachtfelde. Die „ntore" der Häuptlinge rekrutieren sich aus den Söhnen ihrer Unterhäuptlinge. Sie sind Leibgardisten, Leibtänzer und Geißel zugleich, die für die Handlungen ihrer Väter verantwortlich sind. Die „ntore" des Königs sind die Söhne der allerhöchsten Würdenträger und werden „danga baganisi" genannt.

Musinga antwortete Seiner Hoheit dem Herzog zu Mecklenburg auf seine Frage, was die „danga baganisi" bedeuten, „askari wangu" (meine Soldaten). Sie halten aber keine Militärübungen ab und wetteifern nur im Tanz. Sie nehmen selbstverständlich unter Allen die höchste Stellung ein.

Außer diesen privilegierten Hofangehörigen gibt es noch andere, die besondere Dienstobliegenheiten am Hofe innehaben, wie z. B. Hofschmiede, Musikanten, Batwa-Leibwächter usw. Der Älteste der Hofschmiede soll sich eines großen Einflusses erfreuen, besitzt aber angeblich keine vom König zugewiesenen Ländereien. Als Ältester der Leib-Batwa wurde mir der Leibscharfrichter, der Mutwa Muhenehene, ebenfalls ein sehr einflußreicher Mann, bezeichnet.

Das Hoforchester besteht aus Bahutu und Batwa. Die Sänger sind Batwa, die Trommelschläger Bahutu. Die Musikanten bilden eine geschlossene Korporation und wechseln jeden Monat ab. Nach dieser Frist kehren sie nach Hause zurück und werden durch neue ersetzt. Der Einzug der neuen Musikwache wird am Neumondabend durch ein besonders feierliches Trommelschlagen signalisiert. Die Trommelschläger sind von gewissen Pflichten befreit. Unter ihnen befand sich auch ein Christ aus Isawi.

Etikette. Der König ißt immer allein, da man nur mit Menschen gleichen Standes zusammen essen kann.

Das Essen und die Getränke des Königs werden von Bahutu bereitet. Es scheint, als ob der König zu den beherrschten Bahutu mehr Vertrauen, als zu den herrschenden Batutsi hätte. Die Vorsicht geht soweit, daß die Getränke, um die Möglichkeit der Vergiftung zu verringern, in dem Gehöft des Königs aus den dorthin gebrachten Produkten hergestellt werden. Auch im Kral des Königs wird das Kochhaus „mubahutu" genannt.

Der König soll sehr lange schlafen. Es ist mir während des dreiwöchentlichen Aufenthaltes bei ihm nie gelungen ihn vor 11 Uhr früh zu sehen. Nur einmal hatte ich Gelegenheit ihn zwischen 11 und 12 zu treffen. Ich fing an, bei einem Individuum, das ich schon gemessen hatte, seine blauen Augen mit der Martinschen Farbentafel zu bestimmen. Als man die künstlichen Glasaugen sah, machte das auf die Anwesenden einen solchen Eindruck, daß man darüber sofort Musinga benachrichtigte. Musinga schickte sogleich einen Eilboten mit dem Wunsche, ich möchte sie ihm zum Ansehen senden. Ich erklärte meine Bereitwilligkeit, die Augentafel bei Gelegenheit des Besuches, den ich am Nachmittag machen sollte, mitzubringen. Die Neugier des Königs war zu groß, er konnte nicht bis zum Nachmittag aushalten und kam zu mir am Vormittag ins Lager, was er sonst nie tat. Bei dieser Gelegenheit konnte ich beobachten, wie er von seinen Gefolgsherren (bagaragu), die allmählich aus ihren Hütten ausrückten und sich dem Gefolge des Königs anschlossen, durch Händeklatschen begrüßt wurde. Dieser Gruß gebührt in Ruanda nur dem König, während er in Kiziba den Höhersituierten allgemein gezollt wird.

Von Musinga wird man gegen vier Uhr am Nachmittag in dem „muliango" (Vorderteil) seiner ersten Hütte (kambele) empfangen.

Das „kambele" befindet sich am Rande eines umzäunten, ca. hundert Meter breiten, elliptischen Hofes, in dessen beiden Brennpunkten sich zwei Kultusbäume befinden. Sie waren mit Stroh umzäunt und von Kreisen aus Ton umgeben. Das Innere der Kreise war sauber mit Gras ausgelegt. Vor dem „kambele" befindet sich ein zehn Meter breites, vier Meter tiefes und einen halben Meter hohes Podium. Auf ihm, rechts vom Eingange, befanden sich Rinderhörner und eine Pflanze, auf der Libationen vorgenommen wurden.

Bei dem Empfangen der Europäer ist Musinga von dem Bewußtsein seiner hohen Stellung durchdrungen. Der König sitzt auf einem Schemel von etwas größerer Dimension als die, die man in den Hütten der Eingeborenen sieht. Graf v. Götzen[1]) erwähnt, daß Kigeri auf einem mit weißen und rosa Perlen bestickten Stuhl saß. Der Stuhl Musinga's entbehrte diesen Schmuck. Der König bietet seinen Gästen keinen Sessel an, und man würde gezwungen sein, auf dem Boden wie seine Hofherren hocken zu müssen, wenn man seinen eigenen Stuhl nicht mithätte. Es darf nicht unerwähnt bleiben, daß im Zusammenhange damit in Ruanda mit dem Rechte, einen Schemel öffentlich benutzen zu dürfen, die Vorstellung einer privilegierten Stellung verknüpft ist. In diesem Sinne ist die Höflichkeitsformel „urakagira intebe" — du möchtest einen Schemel haben — zu verstehen.

Die Abende soll der König beim Biertopf zubringen. Bei dieser Gelegenheit werden die Überlieferungen über seine ruhmreichen Ahnen erzählt.

Die Musikanten müssen die ganze Nacht hindurch wachen. Den Zapfenstreich, eigentlich ein sehr heftiges Schlagen, habe ich nie vor 2 Uhr gehört,

[1]) Götzen, G. A., Graf v., Durch Afrika von Ost nach West. Berlin, 1899 S. 178.

manchmal sogar später. Bis zu dieser späten Stunde soll der König wach bleiben. Deshalb auch findet „ndamutsu", die Begrüßung des Königs, erst zwischen 11 und 12 am Vormittag durch heftiges Schlagen statt. Am frühen Morgen zwischen 4 und 5 Uhr werden ebenfalls die Trommeln geschlagen; diesmal aber nur um dem König zu zeigen, daß man Wache hält, und daß er ruhig schlafen kann. In der Schlafhütte soll der König einen Elefantenzahn haben, der immer in der Nähe seines Bettes liegt.

Auf seinen Reisen wird angeblich der König in einer kleinen Hütte von einer Schar Batwa getragen. Diese Hütte — „kitabashwa" — soll, von Batwa bewacht, in einem Hofe der Niederlassung des Königs stehen. Dort wird angeblich auch ein geweihter Elefantenzahn aufbewahrt.

Während der Anwesenheit Seiner Hoheit des Herzogs in Niansa bestieg Musinga auf Wunsch des Hauptmanns W. von Grawert hin auch die „ngobi", in der sich die Häuptlinge auf Reisen tragen lassen. Doch tat er das ungern, vielleicht aus Angst, vielleicht erschien ihm dieses Transportmittel nicht standesgemäß.

Während der Reise des Königs dürfen die ihn tragenden Batwa sich überallher die Nahrung holen, da alles doch als Eigentum des Königs anzusehen ist. Deshalb fiel auch Lwabugiri, der sich stets unterwegs befand, dem Lande so lästig. Nur die Batwa erzählen mit Sehnsucht von den Zeiten Lwabugiri's. Sie machten seine Züge mit. „Damals gab es viel Fleisch. Jetzt bedeuten die Batwa nichts", habe ich von ihnen wiederholt gehört.

Die Angabe von Prof. Dr. Hans Meyer[1]): „da eine geheiligte Tradition ihm (Musinga) verbietet, die Grenzen seiner zentralen Provinz zu überschreiten, ist er in seinem Gesichtskreise sehr beschränkt", muß auf einem Mißverständnis beruhen, da früher die Herrscher von Ruanda viel gereist sind, was auch in den Überlieferungen eingehend besprochen wird. Aller Wahrscheinlichkeit nach teilte der Eingeborene Prof. Dr. Hans Meyer seine Abneigung gegen die sehr lästigen Reisen des Königs mit und glaubte vielleicht, durch die Irreführung des einflußreichen Europäers in Zukunft die Reisen des Königs unmöglich machen zu können.

Soziale Organisation. In der Bevölkerung von Ruanda kann man vier Stände unterscheiden. Den privilegierten Stand bilden die königlichen Beamten. Hierher sind sowohl die Lehnsherren des Königs (bagaragu), ihre Unterhäuptlinge samt dem Gefolge, wie auch die übrigen Würdenträger am Hofe des Königs zu zählen. Die meisten Hofbeamten sind zugleich Lehnsherren, einige jedoch, wie der Häuptling der Hofschmiede, sollen keine Ländereien besitzen.

Unter diesen Ausgewählten nimmt selbstverständlich die höchste Stellung das Geschlecht des Königs, die Banieginia, und das Geschlecht der Königin-Mutter, die Bega, ein.

[1]) Reiseberichte von Prof. Dr. Hans Meyer aus Deutsch-Ostafrika. Mitteilungen aus den Deutschen Schutzgebieten 1911, S. 347.

Der privilegierte Stand besteht in der oberen Schicht fast ausschließlich aus Batutsi. In der Zahl der niedrigsten Beamten, welche die Gemeindevorsteher abgeben, gibt es, vor allem in Bugoye, recht viele Bahutu. In Mulera und in Bgisha treten Bahutu sogar als Hofherren des Königs auf. Die Beamten werden allgemein als „batware" (pl.) bezeichnet.

Den zweiten Stand bilden die Krieger, „ngabo". Sie sind besonderen Häuptlingen unterstellt und haben keine Arbeiten auf den Feldern der Häuptlinge zu leisten. Mit anderen Worten, sie sitzen auf eigenem Boden, der vor Generationen von ihren Ahnen in Besitz genommen und gerodet worden ist. Sie wurden von diesem bei der Eroberung des Landes durch die Batutsi nicht verjagt, und der König anerkennt ihre Freiheiten. Sie haben dafür nur die gewöhnlichen Steuern zu zahlen, müssen aber immer zum Kriege bereit sein. Auf ihnen liegt die Last der Blutsteuer, von der die gewöhnlichen Bauern (biletwa), theoretisch wenigstens, befreit sind.

Die Zugehörigkeit zum Korps der „ngabo" ist erblich. Man kann aber zur Strafe aus diesem privilegierten Stande ausgestoßen werden. Ob es aber auch vorkommt, daß gewöhnliche Bauern zum Stande der „ngabo" erhoben werden, ist mir dagegen nicht bekannt.

Die „ngabo" tragen als Abzeichen das „kigomero", den hölzernen Ring zum Auffangen der, beim Schießen zurückschnellenden, Bogensehne.

Im Innern des Landes, in der Nduga z. B., sind die „ngabo" weniger zahlreich und sitzen zwischen der übrigen Bevölkerung auf den Hügeln zerstreut. In den Grenzmarken sind sie dagegen viel zahlreicher und bilden in Mulera z. B. fast die ganze Bevölkerung.

Den dritten Stand bilden die „biletwa" — freie Bauern ohne Grundbesitz. Sie bebauen den Boden der Krone und entrichten dem Häuptlinge einen zwei- bis dreitägigen Frondienst während der fünf- bis sechstägigen Woche. Sie haben aber außerdem noch die Pflicht Steuern zu zahlen.

Den vierten Stand bildet der Pariastamm der Batwa. Sie sind Jäger, Töpfer, Regenmacher. Aus ihnen besteht die Polizei. Sie geben auch die Henker ab. Der Häuptling Songore, dessen Hauptbeschäftigung am Hofe das Peinigen der Delinquenten bildet, und der sie mit großer Kunst mit zwei kleinen Stöcken zu prügeln versteht, soll auch ein Mutwa sein.

Es gibt auch Sklaven in Ruanda. Die Institution der Sklaverei spielt hier aber keine Rolle, wenn auch die Zahl der Sklaven in Bugoye und bei den Batutsi von Nduga recht bedeutend sein soll. Sklaven werden hier, soweit es mir bekannt ist, vorwiegend durch Frauen „baja" gebildet, die als kleine Kinder während der nicht seltenen Hungerszeiten gegen Lebensmittel von ihren Eltern verkauft worden sind. Über die soziale Stellung der gegen Lebensmittel eingetauschten Knaben konnte ich nichts Genaueres ermitteln. Es scheint mir, daß sie mit dem Auswachsen in der Masse der Klienten (bagaragu) aufgehen.

Jedes Land, das von Zeit zu Zeit Hungersnöte hat, wie Ufumbiro z. B.,

liefert Sklaven, die im fremden Gebiete, durch ihre Angehörigen nicht geschützt, in einer untergeordneten Stellung bleiben und auf den Schutz ihres Herrn angewiesen sind. In jeder Mission kann man zwar mehrere kleine Sklaven sehen, die vor ihrem Herrn Schutz suchend, sich dort niedergelassen haben. Trotzdem aber muß die Lage der Sklaven im großen und ganzen als durchaus nicht schlecht bezeichnet werden. Von Mißhandlungen habe ich nirgends gehört.

Die Lasten werden in der Hauptsache von den „biletwa" getragen. Die Bahutu dieser Kategorie verfügen über persönliche Freiheit. Sie dürfen und können unter Verzicht auf Haus und Acker ihren Herrn wechseln. Sie dürfen nur nicht den Staat verlassen. Die „batware" an den Grenzen haben zur Pflicht aufzupassen, daß die Leute nicht aus dem Lande fliehen.

Tatsächlich ist aber die Existenz des kleinen Mannes etwas ganz Nebensächliches, das man nur unter der Bedingung, alle Ansprüche der Herrschenden befriedigen zu wollen, fristen darf. Der Eingeborene kann doch nicht oft ohne weiteres auf sein Feld und Hütte verzichten. Er muß sich kleine Ausplünderungen, die mit Vorliebe als Strafe für angebliche Vergehen angewendet werden, gefallen lassen. Er muß die Abgaben liefern, er muß die Reisenden, die auf Veranlassung des Königs verpflegt werden, mit Nahrungsmitteln versorgen, trotzdem der „mutware" selbst die Zahlgeschenke einsteckt.

In der primitiven, nicht differenzierten Gesellschaft sind jedoch die Ausbeutungsmöglichkeiten sehr beschränkt. Solange es sich nur um die unmittelbare Nahrungsmittellieferung für die relativ geringe Zahl der Herrschenden handelt, so lange können diese, auch bei dem größten Appetit, zufrieden gestellt werden. Es ist also durch die geringe Ausbeutungsmöglichkeit die Grundlage des sozialen Gleichgewichtes ohne juristisch festgesetzte Normen gegeben. Berücksichtigt man noch die ständigen inneren Kämpfe eines ungeordneten Staatswesens, wo es sehr auf die Unterstützung der Masse der Untertanen ankommt, so bekommt man das zweite, die Willkürherrschaft sehr stark einschränkende Moment. Die Machthaber müssen auf ihre Untertanen Rücksicht nehmen, sonst laufen sie Gefahr, daß sie, von ihren Anhängern und Untertanen verlassen, ihren Nebenbuhlern unterliegen werden. Die politische Weisheit besteht darin, daß man sich von den Launen nicht allzusehr leiten läßt und daß man nicht der relativ Schlimmste wird.

Die kleinen Kriege unter den „bagaragu" Musinga's und Schlägereien unter den „bagaragu" der „bagaragu" des Königs sind durchaus nichts Seltenes, auch jetzt, wo der Frieden im Lande herrscht. Sie kommen aber hauptsächlich an den Grenzmarken vor, wo die Macht des Königs nicht so stark empfunden wird. So z. B. kämpfte zur Zeit meiner Anwesenheit Lukara mit Luhanga in Mulera. Hier kommt es dabei nicht selten vor, daß der König keinen Mann findet, der sich nicht scheuen würde, die ihm überlassenen kriegerischen Bauern zu verwalten und zu besteuern. Die Bahutu erreichen in dieser Weise ihre Unabhängigkeit und werden erst durch eine Strafexpedition von neuem unterworfen.

Die inneren kleinen Kämpfe sind unter diesen Verhältnissen eine natürliche Funktion des Staates, die nicht Robeiten und Verheerungen allein zur Folge hat. In dieser, wenn auch unökonomischen Weise werden sowohl die schlechten Verwalter ausgemerzt, wie auch die Macht der Starken eingeschränkt. Dieser Satz scheint im ersten Augenblick paradox zu klingen, er entspricht aber sehr gut den Tatsachen. Bei der unbeschränkten Herrschaft, wo kein Protest im Prinzip zulässig ist, müssen doch dort, wo es zur Staatenbildung kommt, von selbst Schranken auftauchen, die das Zusammenleben großer Menschenmassen möglich machen.

Anders wird es aber mit dem Augenblicke der Pazifikation, des Aufschließens und der Organisierung des Landes durch die Europäer. Die natürlichen, alten, wenn auch unökonomischen Formen, die doch die Verhältnisse ordneten, durch das Überrennen der durch Emigration geschwächten Herrschaften, werden mit Waffengewalt abgeschafft. Andererseits gibt das Eröffnen des Exporthandels ungezählte Möglichkeiten, die Untertanen in einer früher unbekannten Weise auszubeuten. Die Lage der Eingeborenen verschlimmert sich, da die neuen juristischen Normen trotz ihrer humanen Phraseologie sie weniger schützen können, als die alten Regulative, auf denen die Staatsorganisation aufgebaut war. Man kann in Kissaka viele Eingeborene aus Ussuwi sehen, die sich dorthin vor dem Segen der europäischen, humanen Zivilisation geflüchtet haben. Unter diesen neuen Verhältnissen bleibt, als die einzige Waffe in der Hand der Untertanen, die ökonomische Schädigung des Häuptlings durch Abwanderung der Arbeitskräfte.

Am schlimmsten wird die Lage der Eingeborenen dort, wo die Europäer aus Rücksichten polizeilicher Bequemlichkeit die Zugfreiheit aufheben. Mit diesem Augenblick hören alle, den Eingeborenen gegen seinen Häuptling schützenden Momente auf. Infolgedessen wird dort auch das Bedürfnis eines tiefen Eingreifens der europäischen Verwaltung zu einer dringenden Notwendigkeit. Bei den gesteigerten Ausbeutungsmöglichkeiten müssen jetzt gewisse Normen durchgesetzt werden, welche die Interessen des kleinen Mannes schützen und ihm eine gewisse Freiheit gewährleisten. Mit anderen Worten, ihm alles das zurückgeben, was ihm früher durch die weniger vollkommene, weniger dicht schließende und drückende soziale Organisation, ohne jeglichen Vertrag, garantiert war. Das weitere Eingreifen der europäischen Verwaltung wird unter diesen Verhältnissen zu einer Notwendigkeit, da man doch noch nicht die Sicherheit hat, daß die neue Ordnung nur zur „vollkommeneren Ausnützung des faulen Negers" und nicht vielleicht auch zum Rückgange der Bevölkerungszahl beitragen wird.

Das Vergleichen der Verhältnisse in Ndorwa, Mulera, Bugoye und Nduga, läßt ohne Mühe die Richtung, in der sich die Verhältnisse in Ruanda entwickelt haben, feststellen.

In Ndorwa haben wir unabhängige Clans, die voneinander getrennt sitzen.

In Mulera sind die Clans vom König unterworfen und zahlen Steuern. Von einigen Hügeln haben die Batutsi die Autochthonen verjagt und gestatten den obdachlosen Angehörigen zersprengter Clans sich daselbst niederzulassen. Dieser Abschaum muß für den gewährten Schutz Frondienste verrichten und ihre Herren unterstützen. Das sind die neuen Gemeinden, die man eigentlich für analog mit den Gutsbezirken erklären müßte. Einige Clanältesten, wie der Bishingwe, Vater des Lukara, schließen sich den Eroberern an und werden von diesen unterstützt. Mit Hilfe dieser Unterstützung siedeln sie auf dem nicht bebauten Terrain Zuzügler an, die in das Frondienstverhältnis eintreten, ebenso wie dies bei den Batutsi der Fall ist.

In Bugoye verwischt sich allmählich die Grenze zwischen den Eroberern und dem Bauernadel. Im Zusammenhange damit verwischt sich auch der Unterschied zwischen den verarmten Clangenossen und den Zuzüglern, die vom Clanältesten auf dem freigebliebenen Boden angesiedelt werden, und aus denen seine Hörigen entstanden sind. Dieser Prozeß ist aber in Bugoye noch nicht vollendet.

Der Clan der Bambari arbeitet schon die „buletwa" auf dem Felde des Häuptlings, der ebenfalls ein Mumbari ist und als ehemaliger Clanältester aufgefaßt werden muß. Der Boden wird hier schon als sein Eigentum, als ein vom König verliehenes Gut, angesehen.

Die Bagwabiro, ein verarmter Batutsi-Clan, behaupten aber, daß sie das Buschmesser (muhoro) für Bugoye vom König bekommen haben. Sie besetzten größere Gebiete, verteidigten sie stellenweise mit Erfolg gegen die vorwärtsdringenden, geschlossenen Clans und besetzten sie durch Ausgestoßene, Obdachlose und Vagabunden. Aus diesen bildeten sich die „biletwa" der Bagwabiro. Im Gegensatze zu den übrigen Clangenossen, bei den die „bagabo" für die Bagwabiro nur Steuern einziehen, sind hier die Gemeindevorsteher Beamte des Königs. Es scheint aber die Tendenz vorhanden zu sein, den Unterschied zwischen Bagwabiro und den Steuereinziehern (Clanältesten) zu verwischen, und die Clangenossen, wie das bei den Bambari schon geschehen ist, zu Hörigen herunterzudrücken.

In Nduga ist die Bevölkerung auf den einzelnen Hügeln sehr gemischt. Sie gehört verschiedenen Clans an. Die Hauptmasse des Bodens gehört den Häuptlingen (den Großgrundbesitzern), und nur hie und da gibt es Kriegsbauern — „ngabo", die vom Frondienst (buletwa) frei sind, also auf dem eigenen (vom König verliehenen) Boden sitzen.

In dieser Weise wird die Clanorganisation in Ruanda durch die Hirtenherrschaft und durch die dadurch verursachte Entwickelung des Bauernadels gesprengt. Als Momente, die die Clanorganisation zusammenhalten, bleiben noch die Eßverbote, die Exogamie und die Blutrache.

Das Resultat der Einwirkung der Königsmacht auf die homogenen Clans ist die Differenzierung der Bevölkerung.

In Urundi scheint die zentralisierende Richtung der Staatsorganisation

noch keine allzugroßen Fortschritte gemacht zu haben. Wir haben nämlich hier noch Feudale, die unbeschränkte Herren in ganzen Provinzen sind, während sich in Ruanda die Häuptlinge keineswegs derselben Unabhängigkeit in ihren Ländereien erfreuen. Der Boden wird jedoch auch hier als das Eigentum des Königs betrachtet.

Politische Organisation. Ruanda besteht aus einer Anzahl von Provinzen, deren Namen geographische Begriffe, nicht aber administrative Einheiten bezeichnen. Es wurden oben erwähnt: Nduga, Mukinjaga, Bugessera, Bugoye, Bwischascha, Mulera, Bgisha, Ruweruka, Ndorwa und Kissaka.

Die einzelnen Provinzen weisen keine zentralisierte Verwaltung auf und haben keine Statthalter. Die Provinzen zerfallen in eine Anzahl von Gemeinden, wovon die meisten an die am Hofe des Königs weilenden Klienten vergeben werden. Dem Lehnsherrn, dem „manangwa", liegt die Pflicht ob seine Untertanen im Zaum zu halten, ihre Angelegenheiten zu ordnen und seinem Herrn, mit Waffen in der Hand und mit Gefolge, zur Seite zu stehen. Als Belohnung dafür bekommt er das Recht, sich durch die Einwohner der ihm anvertrauten Bestizungen versorgen zu lassen. Diese haben ihm als Entgelt für den ihnen zur Bebauung überlassenen Boden Frondienst zu leisten. Außerdem ziehen die Häuptlinge auch Nutzen von den anderen für den König eingezogenen Steuern.

Die Klienten des Königs verwalten ihre Besitzungen durch Unterhäuptlinge und haben in jeder Provinz eine größere oder geringere Zahl von zerstreuten Besitzungen.

Der Vertreter des „manangwa" wird „kissonga" genannt und gehört gewöhnlich zur Sippe seines Herrn. Er wird von ihm, ebenso wie der „manangwa" vom König, eingesetzt. Diesen Posten bekleiden häufig die Söhne der Großhäuptlinge. So sitzt Nigensi's Sohn Kassasi auf der Halbinsel Kwischara im nördlichen Mukinjaga[1]), Bushakwe's Sohn Mulangira mit seiner Großmutter Kiramato weilt in Kawagali[2]). Außerdem erwähnt v. PARISCH in Bwischascha noch den „mutware" Sebitana, Sohn des Bushakwe, und Dr. KANDT[3]) Semirigamba in Süd-Lubengera. In den Bahutu-Häuptlingschaften von Bgisha, die durch Sebikoko, Mogalule, Kati, Mutweki, Sebingiri, Chunga ngombe u. a. beherrscht werden, liegen die Verhältnisse etwas anders. Die wichtigste Persönlichkeit nach dem Häuptling ist sein Bruder. Er vertritt ihn in allen Angelegenheiten. Beide haben in den einzelnen Dörfern ihre Häuser, in denen sie während ihrer Reisen wohnen. Der Sohn rangiert erst nach dem Bruder seines Vaters, und ihm wird, nachdem er groß geworden ist, ein Dorf verliehen. Er hat kein Anrecht auf Geschenke in den anderen Dörfern seines Vaters. Nur in dem Falle, wenn er

[2]) PARISCH, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 73, 74
[3]) KANDT, R., Caput Nili. Berlin 1904, S. 505.

keinen Oheim hat, wird dieser durch ihn ersetzt. Trotz dieser Bevorzugung des Bruders des Häuptlings kommt dieser als Erbe doch nicht in Betracht, da der ganze Besitz an den Sohn nach der Beerdigung des Vaters übergeht.

Den „kissonga" unterstehen wieder ganz kleine Unterhäuptlinge, die auf den einzelnen Hügeln in den Gemeinden Aufsicht führen. In der Zahl der letzteren gibt es überall, vor allem in Bugoye, viele Bahutu, während die höheren Stellen fast durchweg mit Batutsi besetzt sind. Nur in Mulera und Bgisha sieht man Bahutu auch in den höchsten Stellen.

Die Bahutu-Beamten werden von ihren Vorgesetzten sehr gelobt, weil niemand so rücksichtslos und ergeben wie ein von seinen Stammesgenossen gehaßter Emporkömmling sein kann. Diese Charakteristik bezieht sich selbstverständlich auf die Clanältesten nicht, die in den freien Bauerngemeinden an ihre Stelle treten. Außerhalb von Mulera, Bgisha und Bugoye sind die Unterhäuptlinge die einzigen viehbesitzenden Bahutu.

Es unterliegt keinem Zweifel, daß bei der starken Durchflechtung des Besitzes der einzelnen Großhäuptlinge — das ganze Land gleicht in dieser Beziehung einem Dorfe mit Flurzwang — eine einflußreiche Schicht geschaffen wird, die vitale Interessen in den verschiedensten Teilen des Landes hat und den zentrifugalen, partikularistischen Tendenzen der einzelnen Provinzen entgegenwirkt.

Diese Verhältnisse scheinen das Resultat eines bewußten Strebens der Krone zu sein. Viel wurde, wie es scheint, in dieser Richtung durch Lwabugiri Kigeri, den Vater des gegenwärtig herrschenden Musinga, erreicht. Kigeri hat angeblich den Staat zentralisiert und die Besitzungen der Häuptlinge stark zerstückelt, zerstreut und miteinander durchflochten, um die zentrifugalen Tendenzen der feudalen Herren zu vernichten. Das verwickelte ihn in große Kämpfe mit den Lehnsherren, darunter mit seinem Schwager Kabare, die er aber mit Erfolg zu krönen verstanden hat.

Dem modernen Europäer, der an genau abgegrenzte Administrationsbezirke gewöhnt ist, und dem das auf der Durchflechtung ökonomischer Interessen basierte Gleichgewicht des Lebens seiner Gesellschaft nicht zum Bewußtsein kommt, erscheint dieses Verwaltungsprinzip absurd. So beurteilt z. B. Hauptmann GÖRING[1]) die Verhältnisse in Urundi: „Die Einteilung des Landes ist gänzlich systemlos; häufig findet man Watuale, die verschiedene räumlich weit getrennte Landschaften im Besitze haben."

Es wurde mir erzählt, daß die Politik des Lwabugiri durch Musinga fortgesetzt wird. Er soll mit Vorliebe kleine, von ihm unmittelbar abhängige Häuptlinge einsetzen und mit Ländereien beschenken. Diese kleinen, freien Leute bilden mit Rücksicht auf den Schutz des Königs ein von den Großen unab-

[1]) GÖRING, Hptm., Zu den Unruhen in Urundi. Deutsches Kolonialblatt 1911, S. 552.

hängiges und ihnen sogar feindliches Element. Ihre eigenen Interessen schützend, widerstreben sie den partikularistischen Tendenzen der Großen.

Diese Politik hat die Tendenz, die Grenzen der einzelnen Provinzen zu verwischen, und man stößt daher beim Ausfragen über die politische Gliederung des Landes auf sehr große Schwierigkeiten.

Nach dieser kurzen Besprechung der zentralen Staatsorganisation, die durch den König und anderthalb Dutzend großer Lehnsherren gebildet wird, sollen jetzt die politischen Verhältnisse in den einzelnen Teilen gestreift werden.

Die Organisation von Kissaka hat in schematischer Zeichnung folgende Gestalt: der größte Teil des ganzen Landes ist unter drei große Lehnsherren, Kanuma, Niamutezi und Lutangabo, verteilt. Ihre Ländereien durchsetzen sich in der Weise, daß keine abgeschlossene Provinzen gebildet werden können. Dieser Umstand verschärft die Gegensätze ihrer Interessen. Die Würdenträger überwachen infolgedessen einander und suchen sich durch Angeberei und Intriguen zu bekämpfen. Auf diese Weise wird eine, dem Staate sehr nützliche, gegenseitige Kontrolle, wie auch ein recht stabiler Gleichgewichtszustand geschaffen.

Diese drei Großhäuptlinge Kissaka's weilen fast immer am Hofe des Musinga in Niansa, und wenn sie die Erlaubnis ihre Ländereien aufzusuchen bekommen, bleiben ihre Söhne als wertvolle Geißeln, die gegen die eventuellen separatistischen Neigungen ihrer Väter eine Garantie bieten, übrig. Graf v. GOTZEN[1]) erwähnt nur einen Statthalter von Kissaka, den Kavahigi; er spricht aber überdies von Kaware (Kabare) im Norden des Landes.

Die kleinste politische Einheit bildet in Kissaka, wie auch im ganzen übrigen Ruanda, der Hügel (kashozi). Die auf dem Hügel angesiedelten Einwohner gehören zu verschiedenen Clans, und das vereinigende Moment ist ein rein politisches. Es wird in erster Linie durch den Häuptling, dem der Frondienst (buletwa) zu leisten ist, gebildet. Dieser Beamte wird ebenfalls durch den Großhäuptling eingesetzt. Die sehr großen Hügeln zerfallen aber nicht selten in Untergemeinden, die verschiedene Unterhäuptlinge haben. So zerfällt in Nsasa der Hügel Bare in die Gemeinden Bare, Ishua, Kibare und noch einige andere.

In Mulera, wo es nur sehr wenige Batutsi gibt und diese keine große Macht besitzen, haben sich wesentlich primitivere Verhältnisse erhalten. Die politischen Einheiten werden zwar auch hier durch Hügel dargestellt. Der Hügel hat aber eine homogene Bevölkerung, die aus den Angehörigen der Clans besteht. Diese Gemeinden unterstehen unmittelbar dem König und zahlen durch die Vermittlung ihrer Ältesten die Steuern an die Abgesandten des Königs. Es fehlt hier als integrierender Faktor der „mutware". Auf den wenigen Hügeln aber,

---

[1]) GOTZEN, G. A., Graf v., Durch Afrika von Ost nach West. Berlin 1899, S. 136, 139.

die in Mulera den Batutsi gehören, findet man doch ähnliche Verhältnisse wie in Kissaka. Die Abgaben werden auch hier den Häuptlingen und nicht den Abgesandten des Königs gezahlt. Es scheint mir, daß die Bahutu auf diesen Hügeln auch mit Frondienst belastet sind.

Ndorwa bildet ein nur nominell beherrschtes Land und zahlt keine Abgaben an Musinga. Man hat hier dieselben Clangemeinden, die jedoch völlig unabhängige, kleine politische Einheiten bilden.

Außer diesen zwei extremen Formen: der Gemeinde, die auf fremdem, durch den König dem Häuptling verliehenen Boden sitzt und durch die Person des Häuptlings beim König vertreten wird, und der freien Clangemeinde, die auf eigenem Boden sitzt, ihre Steuern den Abgesandten des Königs zahlt und beim König keinen Vertreter hat, gibt es noch Clans, die beim König ihre Vertreter haben. Einen solchen Bahutu-Clan bilden die Bahenyi, die im Gegensatze zu den Batutsi-Geschlechtern ein Oberhaupt haben. Zur Zeit meines Besuches war es Runiga.

Unter den Angehörigen der Clans gibt es aber auch Großhäuptlinge. So soll z. B. Kakawandi ein Muhenyi sein. Er herrscht im Njawarongo-Tale weit bis nach Mulera hinein, ob er aber in einem Teile des ursprünglichen Clanbesitzes herrscht, ist mir unbekannt.

Einen anderen Bahutu-Clan, der am Hofe von Musinga durch seinen Ältesten vertreten war, bilden die Barashi, die wir schon im vorigen Kapitel besprochen haben.

Die Verhältnisse von Bugoye nehmen ebenfalls eine Mittelstellung ein. Hier hat man neben der Gebiete der freien Bauern auch den an Häuptlinge verliehenen und durch „biletwa" bebauten Boden. Diese Ländereien stehen hauptsächlich unter Bushakwe, der im Lande durch Lwakadygi vertreten ist.

Polizei. Der König beaufsichtigt das ganze Land mit Hilfe einer sehr straff organisierten Polizei. Jede wichtige Persönlichkeit, jeder durchreisende Europäer werden peinlich überwacht. Jede Kleinigkeit wird dem Könige berichtet. Es ist durchaus nicht leicht verständlich, wie man eine so große Exaktheit ohne Schreibekunst erreichen kann. Der Polizeidienst wird von Ortshäuptlingen geleitet, und von ihnen werden die Nachrichten an ihre am Königshofe weilenden Großhäuptlinge weiter gegeben. Die Nachrichten werden doch nur von Hügel zu Hügel herübergerufen. Die Häuptlinge berichten dem König und suchen sich gegenseitig durch die Exaktheit und Schnelligkeit ihres Nachrichtendienstes zu übertreffen.

Die Polizeiagenten werden von der Bevölkerung sehr gehaßt. Das hatte ich Gelegenheit am Mututsi Lwakazina zu beobachten, der sich meiner Kolonne in Mulera anschließen wollte, um Schutz zu finden. Durch diesen gefährlichen Dienst hatte er die Leute so stark gegen sich aufgebracht, daß er seines Lebens und seiner Habe nicht mehr sicher war.

Graf v. Götzen[1]) erwähnt, daß die Batwa-Polizisten eine besondere Auszeichnung, ein Stirnband mit Affenfellhaaren, tragen sollen.

Öffentliche Bedürfnisse gibt es in Ruanda nicht, wenn man vom Fährendienste und von der Polizeiordnung, wenn dieser Ausdruck erlaubt ist, absieht. Das eine wie das andere dient doch in der ersten Linie nur zur Befriedigung der Bedürfnisse des Königs und seiner Günstlinge, die den Mittelpunkt der Staatsinteressen bilden.

Steuerwesen. Die Durchflechtung des Bodenbesitzes bildet nicht das einzige Mittel, das angewendet wird, um die lokalen, partikularistischen Bestrebungen zu paralysieren. In derselben Richtung arbeitet auch das Steuersystem, da die von den Bauern getragenen Lasten in mehrere Steuern eingeteilt sind und meistens von verschiedenen Häuptlingen eingezogen werden. Die Häuptlinge wirken hier eigentlich nur als Vermittler, in ihren Händen bleibt aber ein Teil der Abgaben.

Die Steuern der Bauern bestehen in Nahrungsmitteln, Hacken, Bier, Vieh und der Arbeit in natura.

Die Höhe der Belastung zugunsten des Königs wird durch ihn selbst festgestellt. Mit Rücksicht auf die besonderen Verhältnisse, in denen sich die einzelnen Gemeinden befinden, werden diese unter Umständen vom Tragen der Nahrung nach der Hauptstadt befreit. So wurde z. B. der Hügel von Issawi wegen der dort sich oft aufhaltenden Europäer von den Verpflegungslieferungen nach der Residenz befreit.

Die Höhe der Lasten zugunsten des Häuptlings wird durch diesen selbst festgesetzt. Er darf seine Leute aber nicht überlasten, da ihm sonst der Wegzug der Arbeitskräfte droht. Die Abgaben in Nahrungsmitteln werden während der Ernte eingezogen. Die Belastung zeigt in Ruanda bedeutende lokale Unterschiede. Sie ist auch bei den einzelnen Großhäuptlingen nicht dieselbe. So arbeiten z. B. in Marangara die Leute von Nshobozamigo 2 Tage während der fünftägigen Woche auf den Feldern ihrer Häuptlinge. Die Leute von Rudegambia und Kabare haben nur in der Residenz Dienste zu verrichten: z. B. Hütten zu bauen und Nahrungsmittel zu liefern. Die Felder der Unterhäuptlinge werden durch ihre Klienten bestellt, die sie sich durch Verleihen von Kühen dienstbar gemacht haben, wie auch durch Lohnarbeiter, die mit Butter und Milch entlohnt werden. In Issawi arbeiten die Klienten nicht auf den Feldern ihrer Gönner.

Man unterscheidet in Ruanda verschiedene Kategorien von Steuern, mit denen die Untertanen recht verschieden belastet werden.

Die größte Last ist „buletwa" — die Arbeit, die auf dem Felde des Häuptlings, des primitiven Großgrundbesitzers, in natura zu leisten ist. Auf dem

[1]) Götzen, G. A., Graf v., Durch Afrika von Ost nach West. Berlin 1899, S. 161.

Acker des „mutware" wird, zwei bis drei Tage der fünf- bis sechstägigen Woche, gearbeitet. Diese Arbeit bildet den Entgelt des Muhutu für den Boden, auf dem er sich niedergelassen hat, und wird nicht geleistet von den freien Bauern (ngabo), die auf eigenem, durch ihre Ahnen gerodetem Boden sitzen, von dem sie bei der Eroberung nicht verjagt wurden.

Die zweite uralte Last ist „butaka". Sie wird vorwiegend in Nahrungsmitteln und in Tabak, und nur zum geringen Teile in barem Hackengeld geleistet. Die Residenz des Königs besitzt keine eigenen Pflanzungen. Der Hof wird durch die Abgaben der Untertanen der nahen und entlegenen Provinzen ernährt. In der Umgebung der Residenz weiden nur Rinder. Es gibt dort keine ackerbautreibenden Bauern.

Alle am Königshofe weilenden Potentaten bekommen ihre Verpflegung vom Hause. Dieses Tragen der Nahrung für den in der Residenz weilenden Häuptling wird „kugemurira mutware" genannt. Die Lebensmittel werden fast alltäglich nachgeliefert. Infolgedessen ruft jede Stockung des Verkehrs bei den davon getroffenen Würdenträgern einen Proviantmangel hervor. Einen Markt, wo man sich versorgen könnte, gibt es nicht. Infolge dieser primitiven Einrichtung sind die Lebensmittel in der Hauptstadt stets recht knapp, und alle, mit denen ich darüber gesprochen habe, erzählten mir, daß man während der im Grunde genommen meistens unfreiwilligen Aufenthalte am Hofe nicht im Überflusse schwelge. Die Leib-Batwa behaupteten sogar, daß sie am Hofe einfach hungern müssen, und sie zögen daher auch sehr gerne nach ihren ärmlichen Siedelungen zurück.

Zu diesen zwei alten Lasten fügte Lwabugiri die Kriegssteuer (umuheto) und Musinga die Nahrungslieferungssteuer für die durchreisenden Europäer (ilali) hinzu.

Bei den Bahutu ist das Liefern der Nahrungsmittel für die durchreisenden Europäer nur eine Extrasteuer zugunsten ihres Häuptlings. Dieser betrachtet nämlich die Geschenke des Europäers als sein Eigentum und unterschlägt nicht selten einen Teil der von seinen Leuten für den Europäer gebrachten Verpflegung. Das letztere hatte ich in Kwa Ratagungira die Gelegenheit zu beobachten. Die durch meine Anwesenheit veranlaßte Requirierung ergab dem Häuptling drei Ziegen und vier Töpfe Bier. Ich erhielt aber nur zwei Töpfe und zwei Ziegen. Die größeren Töpfe und die schönste Ziege wurden vom Häuptling zur Seite gestellt. Dies wurde aber zu nahe von meinem Lager gemacht, um der Aufmerksamkeit der durch die herannahenden Biertöpfe aufgeregten Leute entgehen zu können.

Das Einziehen der Abgaben „butaka" und „muheto", die wenigstens theoretisch im ganzen Lande gezahlt werden, ist unter verschiedene Häuptlinge verteilt, wie das schon durch v. Parisch[1]) erkannt worden ist. Er erwähnt:

---

[1]) Parisch, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 74, 78.

Provinz oder Landschaft	Häuptling (mutware)	
	Ku butaka	Ku muheto
Bugoye	Bushakwe	Bushakwe
Mukinoni	Bushakwe	Rudegambia
Bwischascha	Bushakwe	Rudegambia
Mukinjaga	Lubilinda	Rudegambia
Niantungu (zwischen Bwischascha u. Nduga)	Bushakwe	Kabare
Munjaga (zu Nduga)	Lujondo	Kanuma
Kawagali (zu Nduga)	Bushakwe	Bushakwe

Außerdem wird durch v. PARISCH noch der „Mutware ku muheto" Balahanda genannt, der den Angriff auf Graf v. GÖTZEN geleitet hat.

Die „butaka" wird, wie es scheint, überall durch diesen Häuptling eingezogen, an welchen auch das Land verliehen ist. Die Sammlung der „muheto"-Abgabe bildet dagegen den Anteil des Häuptlings, dem das Vieh des Königs in diesem Bezirke anvertraut ist. Er hat das Recht, auf den abgeernteten Bauernfeldern Rinder zu weiden, was für die Bevölkerung eine sehr empfindliche Last darstellt. So gehört z. B. Rudegambia auf vielen Hügeln in Bugoye das Gras, wenn auch Bushakwe der Großhäuptling dieser Gebiete ist. Auf meinem Wege nach Kissenji hatte ich Gelegenheit, viele unbestellte Felder zu sehen, die brach liegen mußten, da die Batutsi mit ihrem Vieh zu spät sich zurückgezogen haben.

Dr. KANDT[1]) spricht ebenfalls von zwei Häuptlingen in den Provinzen. Er bezeichnet den einen als den Leute- und den anderen als den Rinderhäuptling.

Die „ilali"-Steuer wird, wie es scheint, durch besondere Beamten eingezogen, die zugleich mit der Beaufsichtigung der im Lande herumreisenden Europäer betraut sind. In manchen Fällen wird dieses Amt entweder durch die „batware ku muheto", oder die „batware ku butaka" ausgeübt.

Der von den Häuptlingen beim Einziehen der Steuern zu ihren Gunsten erhobene Satz wird „musogongero" genannt und ist für die Abgaben „butaka" und „muheto" fixiert. Für „ilali" scheint das nicht der Fall zu sein; die Größe der Abgabe ist von Fall zu Fall verschieden, je nach der Größe der zu verpflegenden Europäer-Karawane.

Um die Abgaben etwas näher zu charakterisieren, sollen hier die Lasten der drei Gemeinden auf Katebe und Kitebe, die wir schon früher eingehender besprochen haben, zusammengestellt werden:

[1]) KANDT, R., Ein Marsch am Ostufer des Kivu. Globus 1904, Bd. 86, S. 213.

Lasten der Gemeinden auf Katebe und Kitebe.

	Baidaza	Bulyelyo	Bagwahiro
Köpfe (mit „bagaragu")	104	61	41
Darunter männliche Clanangehörigen	47 + 2[1])	21	21
„Butaka" für Musinga	9 Stück Kaniki = 27 Hacken	10 Hacken	6 Hacken
„Musogongero" für den Häuptling Bizira Kuzama	6 Hacken	?	?
„Muheto"	3000 „butega"	1000 „butega"	1000 „butega"
„Musogongero"	3 Hacken an Makobi	Ziege für 5 Hacken an Murahangubo	?
„Ilali" (durch Gamidji)	1 Paket Bohnen	Kl. Topf Bier, Korb Bataten, Korb Bohnen	1 Last Bohnen
„Buletwa"	keine	keine	keine

Beim Häuptling Makobi hacken seine „bagaragu" als Entgelt für die gepachteten Felder oder auch bezahlte Tagelöhner (mubizi). Die hier besprochenen Clangemeinden sind aber von dieser Last frei, da sie auf ihrem eigenen Boden sitzen.

Es gibt auch Lasten, die von besonderen Geschlechtern oder Gemeinden getragen werden. Zu dieser Kategorie gehört das Liefern von Gegenständen, deren Herstellung eine besondere Fertigkeit voraussetzt. Hierher sind zu rechnen: Salz, das aus dem Sumpfgrase gebrannt wird, Weiberbeinringe aus Gras (butega), Otterfelle, Wildkatzenfelle, Kuhfelle, Rindenstoff, Waffen u. a. Die Träger dieser Lasten werden von einem Teile der normalen Leistung, die den Anteil des gewöhnlichen Ackerbauers bildet, befreit. So liefert Mulera eine größere Menge von „butega".

Bahenyi, die einen privilegierten Bahutu-Clan bilden, haben zur Pflicht, königliche Häuser zu bauen. Sie spielen aber auch im Kultus eine Rolle, sie bringen besondere Opfer dar und dürfen mit den Angehörigen anderer Clans nicht zusammen essen.

Die besondere Besteuerung der einzelnen Clans bildet, wie es scheint, ein Überbleibsel einer älteren Besteuerungsform, der Clansteuer, die sich in Kiziba, wo einzelne Clans dem König gegenüber besondere Pflichten haben, so schön erhalten hat. Solchen Charakter haben die in Mulera durch die besitzenden freien Bauern (ngabo) getragenen Lasten. Die Steuer bildet dort die Angelegenheit der Clangemeinde. Die Abgaben werden dabei durch den Clanältesten gezahlt, und die Verteilung der Belastung bildet eine innere Angelegenheit der Gemeinde. Alle ihre Angehörigen sind aber für die Steuerleistung solidarisch verantwortlich.

Die „ngabo" leisten ihre Steuern in Honig und geben jährlich dem König jedes zwanzigste Rind. Wenn der Viehbesitz weniger als zwanzig Rinder beträgt, so wird für jedes Rind eine Ziege als Steuer gegeben. Bei den Steuerrechnungen wird ein Rind 20 Ziegen gleich gesetzt.

[1]) Zwei Schwiegersöhne.

Die Steuern der „ngabo" werden in Mulera durch besondere Abgesandte des Königs eingezogen. Man braucht nicht die selbstverständliche Tatsache zu betonen, daß die mit dem Eintreiben der Steuer betrauten Beamten, wenn es nur geht, die Lasten zu ihrem Vorteile vergrößern und vor ganz gemeinen Plündereien nicht zurückschrecken. Wenn kein Großhäuptling, was meistens der Fall ist, dem Steuereinziehen beiwohnt, lassen sich die Balera diese Unterdrückungen nicht gefallen. Sie versuchen auch ihrerseits bei jeder Gelegenheit, der Steuerleistung gänzlich zu entschlüpfen. Deshalb entstehen bei jedem Eintreiben große Prügeleien, und es finden auch nicht selten offene Kämpfe statt. Auf dem Wege nach Mulera sah ich in Kwa Rutagungira mehrere verwundete Batutsi, die ihren Beamteneifer mit Löchern im Felle bezahlen mußten. Um die Geschäftstüchtigkeit der Steuereinzieher zu charakterisieren, muß erwähnt werden, daß sie die besseren, als Abgaben für den König gelieferten Rinder durch eigene schlechte Stücke zu ersetzen pflegen. Diese Mißbräuche und Plünderungen müssen bei ihrem chronischen Charakter als eine Form der Beamtenbesoldung angesehen werden.

Es muß hervorgehoben werden, daß die Steuern der „ngabo" in Mulera an die Gemeinde, an die Menschen, und nicht an den von ihnen bebauten Boden, gebunden sind. Deshalb partizipiert auch der Fremde, der sich mit Einwilligung der Ansässigen auf einem fremden Boden niederläßt, an den Steuern der Gemeinde nicht. Er hört aber nicht auf, die Steuern mit den Seinigen zu zahlen. Der Fremde zahlt nur dann die Steuern an seinem Ansiedlungsorte mit, wenn er dort durch den ansässigen Clan adoptiert wird.

Dieses Prinzip der Familiensteuer ruft sehr komplizierte Verhältnisse in dem Augenblicke hervor, wo die Pazifikation das Auseinanderfallen der Clans, die in den primitivsten Verhältnissen durch die Blutrache zusammengehalten werden, ermöglicht. Die Folgen dieser Komplikation der sozialen Verhältnisse konnte ich in Mulera in der Form einer Strafexpedition beobachten, wobei die Siedelungen des Kisseke-Berges eingeäschert wurden. Auf dem Kisseke siedelten sich einige fremde Leute an, die die Erlaubnis dazu von den Ansässigen durch Geschenke erkauft hatten. Einige Wochen nach ihrer Ansiedelung kamen Batutsi, die das Recht hatten, von der Gemeinde der Ansiedler Steuern einzuziehen und der altansässigen Bevölkerung ganz fremd waren. Die Ansiedler versprachen den Ansässigen einen Stier, und diese verjagten die Batutsi mit Waffengewalt, wobei einige getötet und mehrere verwundet wurden. Eine Strafexpedition der Regierungstruppen, die auf die Beschwerde Musinga's vorgenommen wurde, bildete das Nachspiel.

Eine besondere Last, von der vor allem die Händler getroffen werden, bildet die Fährgebühr, die von den „batware", die an den Fähren sitzen und deren Leute die Boote bedienen, eingezogen wird. Die Gebühr ist sehr hoch und beträgt pro Reisenden mit seiner Last 10 große Perlen, d. h. ein Drittel des Taglohnes. 20 Mann mit einer Ziegenherde zahlten ein Stück (nguo) Stoff.

Die die Fährengebühr einnehmenden „batware" haben auch den Verkehr zu überwachen. Auf den Grenzfähren, so z. B. auf dem Akanjaru, der nur an einigen wenigen Stellen infolge der Versumpfung seines Flußtales passierbar ist, haben sie zur Pflicht, die Eingeborenen daran zu hindern, daß diese Ruanda ohne Einwilligung des Königs verlassen. Es ist klar, daß unter diesen Verhältnissen die Fährengebühren gelegentlich sehr stark in die Höhe getrieben werden.

Eine weitere Last, die den Händler trifft, ist die Marktgebühr „indamu". Sie war in Njundo sehr hoch und machte bis 10—15% des Wertes des vertauschten Gegenstandes aus. Die Steuer zogen dort abwechselnd Lwakadygi, Gamidji und Makobi ein.

Die Höhe der Abgabe hatte zur Folge, daß sich auf den Wegen in der Nähe des Marktes kleine Nebenmärkte bildeten, auf denen die Transaktionen spesenfrei abgeschlossen wurden. Die das „indamu" einziehenden Häuptlinge schlichten auch die Marktstreitigkeiten.

Das Elfenbein der erlegten Elefanten und die Leopardenfelle bilden das Eigentum des Königs und müssen nach Niansa abgeliefert werden. Der Zwang, die Leopardenfelle abzuliefern, scheint sich an den Glauben zu knüpfen, daß das Geschlecht der Ruanda-Herrscher nach dem Tode in Leoparden verwandelt wird.

Kriegswesen. Der König entscheidet über Krieg und Frieden. Er führt den Krieg, um unbotmäßige Vasallen zu bestrafen, oder auch um die Vasallen der anderen Könige in die Zahl der Seinigen zu überführen.

Die Mannschaft bilden die „ngabo". Sie sind in Kontingente gegliedert, deren Namen sowohl von der Provinzeinteilung, wie auch von den Namen der zurzeit befehlenden Chefs unabhängig sind. Leutnant v. PARISCH[1]) erwähnt das Kontingent Bangogo unter Ruenankiko (Ruidangigo) und das Kontingent Lujango unter Kabare.

Für die Kriegszüge werden gewöhnlich nur einige Kontingente aufgeboten. So war es z. B. bei der letzten Expedition gegen den Mutwa Bassebia im Jahre 1906, die mit einem Mißerfolg geendigt hat, der Fall.

Der Feldherr wird vom König für jede Expedition eigens bestimmt. Gegen Bassebia, einen Unterhäuptling von Ngurube, des Mutwa aus Ndorwa, wurde zum Oberbefehlshaber des Expeditionskorps Ruhara Aramanzi ernannt. Der militärische Mißerfolg wird in der Regel durch das Leben des Führers gebüßt.

Graf v. GÖTZEN[2]) erwähnt, daß die Männer, von ihren Frauen begleitet, in den Krieg ziehen sollen. Die letzteren beteiligen sich aber am Kampfe nicht.

Im Kriegsfalle muß sich immer ein Muhenyi bei der Truppe befinden. Er selbst ist unverletzbar und hat zur Pflicht, die Feinde zu beschimpfen und ihre Waffen unschädlich zu machen. Eine durch einen Muhenyi begleitete

[1]) PARISCH, P. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 77.
[2]) GÖTZEN, G. A., Graf v., Durch Afrika von Ost nach West. Berlin 1899, S. 166.

Abteilung muß immer siegreich bleiben. Dieser Glaube wird jedoch durch die Tatsachen gar zu oft zuschanden gemacht. Die Expedition gegen Bassebia wurde geschlagen, und der Muhenyi, der die Kolonne begleitete, kam um das Leben. Dieser unerwartete Ausgang wurde durch die Feststellung erklärt, daß der Mutwa-Häuptling Bassebia über noch stärkere Zauberer verfügte, und die „unverletzbaren" Bahenyi werden auch noch jetzt von jedermann sehr gefürchtet und dürfen Gewalttaten begehen, die man seitens der Anderen nicht dulden würde.

Trophäen, die dem König von den Feldzügen heimgebracht werden, bestehen aus Köpfen und Geschlechtsteilen der gefallenen Feinde. Auf dem letzten erfolglosen Zuge gegen den Mutwa-Häuptling Bassebia wurden keine Batwa-Köpfe und -Geschlechtsteile erbeutet. Um den Mißerfolg zu verdecken und um nicht wegen der fehlenden Trophäen verhöhnt zu werden, töteten die zurückkehrenden Krieger eine Anzahl friedlicher Bauern, die ihre Köpfe und Geschlechtsteile hergeben mußten, um den Einmarsch der Truppen nach der Hauptstadt zu verherrlichen.

Mit Rücksicht auf die Art der Trophäen, bemüht man sich im Kampfe, die Gegner totzuschlagen und keine Gefangene zu machen, was wohl auch mit der sozialen Organisation zusammenhängt, die kein Bedürfnis nach den Arbeitshänden der Sklaven aufkommen läßt.

Kriegserklärungen gibt es, in Mulera wenigstens, nicht. Wenn ein Kriegszug vorgenommen werden soll, so wissen es schon alle lange vorher. Ein Geheimnis läßt sich nicht wahren. Die eigentliche Kriegserklärung bilden die Töne des Antilopenhornes, durch welche die Krieger gesammelt werden.

Als Friedenszeichen erwähnt BAUMANN[1]) mit Laub umwickelte Spaten.

---

13. Kapitel.

Rechtspflege.

Recht. — Rechtspflege. — Prozeß. — Beweisverfahren.

Recht. Ruanda besitzt kein kodifiziertes Recht. Die Rechtspflege bildet eine Angelegenheit der Landesverwaltung, wobei auf die seit altersher eingebürgerten Sitten Rücksicht genommen wird. In diesem Sinne einzig und allein kann man vom Recht in Ruanda sprechen.

Das Strafrecht ist hier nicht so hoch entwickelt, daß die verschiedenen Kategorien des Verbrechens mit ganz bestimmten Strafen gebüßt werden müßten. Man kann nur annähernd die Höhen der einzelnen Strafen bestimmen, da das unkodifizierte Recht dem persönlichen Gutdünken des Richters doch einen so großen Spielraum überläßt.

Die Grundlage der Clanjustiz bildet die Institution der Blutrache, die mit der Entwickelung der Staatsordnung allmählich zurückgedrängt wird. Dieser Prozeß befindet sich in Ruanda erst in seinen Anfangsstadien. In Kissaka dagegen soll man vor dem Ausüben der Rache den Häuptling davon in Kenntnis setzen. Die Blutrache für einen wegen Diebstahl erschlagenen Mann kann dabei angeblich durch den Häuptling verboten werden.

Abgesehen vom Mord, der auch im eigentlichen Ruanda noch durch Blutrache verfolgt wird, bestraft man auch die Kuhdiebstähle mit Rücksicht auf die Rolle, die das Rind im Leben von Ruanda spielt, besonders hart.

Beim ständigen Weitergeben der von dritten Personen erhaltenen Güter an seine Klienten (bagaragu) werden so komplizierte Abhängigkeitsverhältnisse geschaffen, daß man das Ganze nicht übersehen kann. Da aber die Batutsi die vorwiegend Verleihenden und Einziehenden sind, so pflegt man vom Stehlen (kwiba) nur bei den Bahutu zu sprechen. Bei den Batutsi spricht man dagegen vom Plündern, Einziehen (kuambura). Trotzdem, wenn beim Diebstahl bei einem anderen Mututsi der stehlende Mututsi nicht nachweisen kann, daß es sich um das Einziehen seines Eigentums handelt, verfährt man mit ihm wie mit einem Dieb.

Dem gefaßten Diebe werden die Arme zusammengebunden, und zwar in der Weise, daß eine Elle möglichst nahe an die andere kommt, was mit sehr

[p. 277]

großen Schmerzen verknüpft ist. So läßt man ihn warten, bis er durch seine Angehörigen ausgelöst wird. Die Höhe des Satzes, der durch seine Angehörigen bei der Auslösung bezahlt werden muß, bildet in der Regel das Zweifache des Wertes des Gestohlenen. Manchmal erhebt sich der Betrag bis zum Fünffachen. Eine Hälfte dieses Betrages bekommt der Geschädigte, die zweite diejenigen, die ihm beim Einfangen des Diebes geholfen hatten. Dieser Teil besteht gewöhnlich aus Bier (nzoga). Da der Geschädigte häufig die gestohlenen Sachen mit Hilfe des Häuptlings bekommt, so behält dieser die zweite Hälfte des Lösegeldes. Das ist z. B. immer bei Diebstählen von Kühen der Fall. Diese grenzen an offene Räubereien und können nur bei Einmischung der Häuptlinge verfolgt werden. Bleibt das Lösegeld aus, so bestraft man den Dieb selbst. Er kann sogar erschlagen werden. Gehört der Dieb aber zu einem mächtigen Clan, so beeilt man sich mit der Ermordung nicht, besonders aus Furcht vor der Blutrache. Fürchtet man die Angehörigen des Diebes nicht, so kommen verschiedene Strafen zur Anwendung. Manchmal wird der Verbrecher an zwei Pfähle angebunden und dem Hungertode und den Raubvögeln preisgegeben oder sogar gepfählt. Gewöhnliche Diebe, die keine Kühe gestohlen haben, bestraft man nicht so hart. Entschließt man sich, die Todesstrafe anzuwenden, so geschieht das dadurch, daß man den Verbrecher mit zusammengebundenen Armen ins Wasser wirft. Meistens begnügt man sich mit dem Abschneiden der Ohren. Diese Strafe soll durch den Vater des Musinga, den großen Lwabugiri Kigeri, mit Vorliebe angewendet worden sein. In weiter zurückliegenden Zeiten hat man sich damit nicht begnügt und schnitt dem Verbrecher noch eine Hand ab.

Einen eingefangenen Mututsi, der von seinen Angehörigen nicht ausgelöst wird, kann man angeblich nur mit der Erlaubnis des „mutware", der in dieser Weise die Verantwortung auf sich übernimmt, erschlagen. Gegen die Batutsi aus Süd-Ruanda scheuen sich die Bahutu überhaupt, anders, als durch die Vermittelung der Häuptlinge vorzugehen und suchen sich vor allem durch Diebstähle zu revanchieren. Die Eltern bemühen sich, ihre Kinder durch Brennen der Hände vom Stehlen abzuhalten.

Die Verbrechen gegen gute Sitten werden in Ruanda ebenfalls sehr streng bestraft, wenn auch eine Milderung dieser Strafen allgemein behauptet wird. Früher mußte in Kissaka das verführte Mädchen mit ihrem Verführer das Vergehen mit dem Leben büßen. Die Todesstrafe wurde dabei entweder durch Einwerfen ins Wasser oder durch Aufhängen am Hüttendach über dem brennenden Herd ausgeführt. Gegenwärtig beschränkt man sich, im schlimmsten Falle, auf das Ausstoßen des Mädchens.

Als die offizielle Todesstrafe für schwere Verbrechen gilt in Ruanda das Genickbrechen (kuhotora) und das Pfählen. Zu Lwabugiri's Zeiten, als die Todesstrafe häufiger angewendet wurde, soll man auch die Delinquenten mit abgeschnittenen Armen und Beinen in den Sumpf geworfen haben. Unter den Schädeln, die meine Leute in Niansa in dem Sumpfe, in den die Hingerichteten ge-

worfen werden, gesammelt haben, fanden sich aber auch solche, die Spuren der Buschmesserhiebe zeigten.

Bei der „kuhotora"-Exekution wird der Kopf zwischen zwei Hölzer gefaßt und mit dieser Hebelvorrichtung nach hinten gedreht.

Der Leibscharfrichter des Königs, der Mutwa Muhenehene, soll seine Opfer mit einem Speere töten.

Die Leichen der Hingerichteten werden in Niansa angeblich den großen Hunden des Königs zum Verzehren überlassen.

Der gepfählte Verbrecher, den Dr. A. Römer zu beobachten Gelegenheit hatte, war zwischen zwei Bambusstäben eingebunden, die dem Körper entlang, einer von vorne, der andere von hinten, gingen. Die Hände waren vorne zusammengebunden. Ein drei bis vier cm dicker Pfahl durchstach den Körper vom Perineum bis zum Schädeldach, ohne den Hals äußerlich zu verletzen. Der Leiche fehlten die Unterschenkelknochen. Wegen der stark vorgeschrittenen Verwesung, ließ sich nicht feststellen, ob sie von den Hyänen abgefressen oder vom Scharfrichter abgehackt wurden. Die Eingeborenen, die befragt wurden, waren darüber nicht einig. Dr. Kandt[1]) gibt für das Pfählen das Wort, „kuvamba".

Die Prügelstrafe scheint in Ruanda weniger als in Bgisha angewendet zu werden, wo der Häuptling die zu Bestrafenden an Bäume anbindet und sie durch bis 100 Peitschenhiebe auf den Rücken ihre Strafe abbüßen läßt. Dieser Brauch soll den englischen Askari, die dort stationiert waren, entlehnt sein.

Mit Rücksicht auf das Vermögensrecht sollen hier nur einige allgemeine Bemerkungen gemacht werden. Das ganze Land bildet das Privateigentum des Königs und wird entweder den Häuptlingen überlassen oder als an die Clans verliehen betrachtet. Alle Ackerbauer und Hirten sind dabei nur Nutznießer und Pächter. Infolgedessen haben auch bei der Vererbung des Benutzungsrechtes des sozusagen Kroneigentums, d. h. der Äcker und der Rinder, die Häuptlinge und die Clangemeinden das letzte Wort.

Nur das Mobiliar, die Rinder ausgenommen, bildet das Privateigentum in unserem Sinne, und hier ist der Wille des Aufteilenden ausschließlich maßgebend, wenn sich hier auch gewisse durch Sitte geheiligte Bräuche nicht leugnen lassen. So kriegt z. B. in Bugoye der älteste Sohn den Speer und den Schemel des Vaters, während der Schild den Anteil des jüngsten bildet[2]). Leutnant Spiltoirr erzählte mir, daß im Bunyabungu, wie es scheint, der Haupterbe der Sohn der Schwester ist, doch konnte er sich bei seinem kurzen Aufenthalte keine Gewißheit verschaffen.

Rechtspflege. Die Rechtspflege liegt in Ruanda in den Händen der Häuptlinge und des Königs.

Das Rechtssprechen wird zwar nur nebenbei ausgeübt, jedoch betrachten

---

[1]) Kandt, R., Bericht über seine Forschungsreisen in Ruanda. Mitteilungen aus den Deutschen Schutzgebieten. 1901, S. 120.

[2]) Classe, R.P., Mœurs et Coutumes des Bagoye. Les Missions Catholiques 1905, S. 439.

es die Häuptlinge als ein sicheres Mittel, das Einfluß verschafft. Die Parteien sehen in dem Prozeß einen Versuch, einen Starken — einen Häuptling — für ihre Angelegenheiten zu interessieren, d. h. ihre Angelegenheit zur Angelegenheit der Starken zu machen. Der Gewinnende im Prozeß ist einfach der, der vom Häuptling höher eingeschätzt wurde, und mit dem es von jetzt an gefährlicher wird, zu streiten. Vom Rechtsspruch bis zu der Exekution ist in Ruanda sehr weit. Das Urteil stellt nur eine gewisse Stellungnahme des Richters und nicht des Staates dar, der hier die abstrakte Gerechtigkeit auch im Prinzip nicht vertritt. Um das Urteil zu vollstrecken, muß man eine genügende Macht haben, sei es selbst, sei es dank seinen Alianten, sonst kann man doch nicht eine Handlung vornehmen, die den Anderen wenig Freude bereitet.

In den Gemeinden liegt die Rechtspflege in den Händen der kleinen Häuptlinge. Wer mit ihrem Spruch unzufrieden ist, kann sich an seinen Großhäuptling wenden. Ob sich der kleine Mann in seinen Angelegenheiten an den König wenden darf, wie ich das auch gehört habe, scheint mir nach den anderen Aussagen ganz unwahrscheinlich zu sein. Für den kleinen Mann kann dieses Recht, wenn es überhaupt besteht, keine praktische Bedeutung haben. Er darf es doch nicht mit den nächsten kleinen Potentaten, die für ihn in erster Linie in Frage kommen, verderben. Sich direkt an den König zu wenden, dies muß nicht allein für eine Demonstration des Mißtrauens den unmittelbaren Vorgesetzten gegenüber angesehen werden, es bildet zugleich einen Versuch, sich von der Hierarchie der Abhängigkeiten frei zu machen und sich dem König unmittelbar unterzuordnen.

Für die Klienten (bagaragu) des Königs ist sein Gericht die erste und zugleich auch die letzte Instanz, von der man nur noch zur Waffengewalt rekurrieren kann, vorausgesetzt, daß man eine Revolte wagt. Die höhere Gewalt greift daher zwar auch stets ein, berücksichtigt aber immer die allgemeine Ruhe und Ordnung und wird nicht durch abstrakte Prinzipien der Gerechtigkeit geleitet. Außerdem spielen Geschenke, die dem Richter gemacht werden, eine große Rolle und werden nicht für etwas Strafbares oder sogar Unpassendes angesehen. Die Parteien fassen sie als Gerichtsspesen auf, wenn man auch mit größeren Geschenken größere Hoffnungen auf den günstigen Ausgang der Verhandlung zu verknüpfen pflegt. Die Höhe der Geschenke scheint nicht festgesetzt zu sein. In wichtigen Prozessen kommt es zu großen Geschenken. Nicht selten wird dem Richter sogar eine Kuh geschenkt.

Trotzdem die Gerichtsverhandlungen vor dem König nicht häufig vorkommen, so hört man doch überall in Ruanda, daß jemand in Gerichtsangelegenheiten zu Musinga gegangen ist. Diese Äußerung rührt daher, daß die Leute zu ihren Großhäuptlingen gehen, die am Hofe von Musinga in Niansa weilen. Die Angelegenheiten werden in Niansa im Gehöft (bilaro) des entsprechenden Häuptlings verhandelt. So begegnete ich z. B. einem Trupp Leute, die „zu Musinga" aus Njaruguru unterwegs waren. Bei genauerer Untersuchung stellte

sich aber heraus, daß „zu Musinga" nur als Bezeichnung des Ortes seiner Residenz gemeint war. Der Richter, zu dem die Leute eilten, war Rwamanwa, Großhäuptling aus Njaruguru.

Wenn die beiden Parteien Leute verschiedener Häuptlinge sind, so wird die Angelegenheit beim mächtigeren verhandelt, da dieser aus gekränkter Eitelkeit die Vollstreckung des Urteils unmöglich machen könnte. Wenn die beiden Häuptlinge sich nicht einigen können, so gehen sie zu einem dritten oder zum König, der meistens von seiner Seite ihnen einen Richter bestimmt. Der König behandelt persönlich nur die wichtigsten Angelegenheiten seiner „bagaragu". Aber auch das tut er nicht gern.

Prozeß. Bei den Gerichtsverhandlungen werden gewisse Formen gewahrt. Die beiden Parteien hocken auf dem Boden vor dem Richter und begrüßen ihn mit Händeklatschen. Dieser Gruß gebührt sonst nur dem König. Sie tragen nacheinander über die Streitangelegenheit vor.

Nach dem Spruche des Richters erhebt sich der Sieger sofort und bringt etwas Gras, das er als Dank und zum Zeichen seiner Unterwürfigkeit zu den Füßen des Richters legt. Er singt dann sein Loblied, indem er in Mulera z. B. mit der Zahl der getöteten Feinde prahlt.

Es kommt vor, daß Leute zwei bis drei Monate in Niansa auf eine Verhandlung warten, und schließlich die Verhandlung der Angelegenheit bis zum nächsten Jahre vertagt wird. Die Häuptlinge tun das ebenfalls. Man fürchtet, durch einen Spruch von unberechneter Tragweite sich selbst zu gefährden.

Die Vollstreckung des Urteils bildet überhaupt die schwache Seite der primitiven Justiz. Es gibt keine Staatsorgane, die um die Ausführung der Beschlüsse Sorge tragen würden. Sogar die Sprüche des Königs werden bei weitem nicht immer zur Ausführung gebracht.

Um die Vollstreckung des Urteils zu sichern, wird manchmal der Verurteilte von der gewinnenden Partei bis zur Erfüllung seiner Verpflichtungen gefangen gehalten.

Das Urteil soll im Aufenthaltsorte der beiden Parteien vollstreckt werden. Zu diesem Zwecke schickt der König einen besonderen Boten. Dieser hat die Bevölkerung über den Spruch zu orientieren, bei territorialen Streitigkeiten die Ländereien abzugrenzen und bei Viehprozessen die Herden aufzuteilen.

Bei der langen Dauer der Prozesse, die allen Hofintriganten Gelegenheit geben, im trüben Wasser zu fischen, kommt es vor, daß die siegreiche Partei die Hauptstadt vor der Absendung des Königsboten verläßt. Dann benützt die andere Partei die gemeinschaftliche Reise dazu, um den Boten zu bestechen. Nicht selten nimmt der Bote große Geschenke von beiden Parteien und richtet nichts aus, und die Großhäuptlinge benutzen diese Gelegenheit, um ihre Ländereien zu besuchen. Der Prozeß wird vertagt, man entdeckt neue, wichtige, bis daher noch nicht berücksichtigte Umstände, und man beginnt wieder von Anfang.

Zur Zeit meines Besuches in Mulera dauerte der Gerichtsstreit zwischen dem Barashi-Häuptling Lukara lwa Bishingwe und Luhanga, dem Klienten von Nshobozamigo schon das vierte Jahr. Jedes Jahr wurde der Spruch gefällt, jedes Jahr wurde der Gerichtsbote abgesandt, und jedes Jahr kehrten die beiden Parteien wieder zurück. Zum Schlusse wurde Musinga der ganzen Angelegenheit müde und behielt Lukara beim Hofe. Nachdem sich Lukara unter dem Vorwande, mich nach Mulera führen zu wollen, von Musinga die Erlaubnis nach Hause zurückzukehren bekommen hatte, beschloß er zum letzten Argument, zu den Waffen zu greifen. Er überrannte die Leute von Lahanga und focht ein Scharmützel mit der Kolonne meines Expeditionskollegen, des Geologen E. Fr. Kirschstein, dessen Anwesenheit die Batutsi zu ihrem Schutz benützen wollten, aus.

Zum Schlusse, im siebenten Jahre, wurde der Streit endgültig zugunsten von Luhanga entschieden, als Lukara nach der Ermordung des Missionars R. P. Paul Loupias aus der deutschen Einflußsphäre flüchten mußte und später erfaßt und gehängt wurde.

Ein bedeutender Teil der Gerichtsverhandlungen knüpft sich an das Zurückziehen der Lehen und an das Ausüben der Blutrache (kuhora enzigo) für erschlagene Clangenossen.

Wenn A von B Kühe als Lehen bekommen hat, so besitzt B infolgedessen über A eine gewisse Macht. Er kann durch Drohen mit dem Zurückziehen der Kühe auf ihn einen Druck ausüben. Bekommt aber A noch Kühe von C, der mächtiger ist als B, so wird der Einfluß des letzteren geschmälert. Unter Umständen kann A in einen solchen Grad von Abhängigkeit von C geraten, daß B seinen Einfluß und damit zusammen auch sein Vieh zugunsten von C verliert. Diese Besitzverschiebungen geben Anlaß zu ungeheuer komplizierten Viehprozessen, die Jahrzehnte dauern und durch kleine Kompromisse, deren Rechtskräftigkeit nachher beanstandet wird, immer weiter kompliziert werden.

Bei den Zivilprozessen kennt die juristische Praxis die Einrichtung des „kugombeka". Wenn A dem Individuum B schuldig ist und nicht zahlt, oder den zurückgeforderten Lehen nicht zurückgeben will, so kann A unter Umständen gepfändet werden. Besitzt der Schuldner A bei C irgend etwas, eine Kuh z. B., so kann B dem am Besitz des A nutznießenden C ein Geschenk bringen und mit seinem Einverständnisse den Gegenstand des A für „kugombeka" erklären. In diesem Falle verliert A bis zur Erledigung seiner Angelegenheit mit B alle Rechte auf den bei C deponierten Gegenstand, der jetzt als Eigentum von B angesehen wird. Wenn A mächtig ist, so wird das „kugombeka" seines Eigentumes für nichtig erklärt, das sonst ein sehr gutes Geschäft bildet. Bei der langen Dauer der Prozesse hat C immer Aussicht, das in Verwahrung Gehaltene sich anzueignen, oder wenigstens ohne irgendwelche Lasten zu benützen. Er ist aber B gegenüber für das Gut unter „kugombeka" verantwortlich. Gibt er es dem ursprünglichen Besitzer A zurück, so muß er B seinen Wert ersetzen,

oder er bleibt ihn ihm schuldig, und es beginnt ein zweiter Prozeß zwischen B und C, der unabhängig von dem zwischen A und B geführt wird.

Lehnen die Nutznießer des Besitzes des A das „kugombeka" ab, so bleibt dem Gläubiger nichts anderes übrig, als zum „kufatira" zu schreiten.

Die Einrichtung des „kufatira" besteht in gewaltsamer Besitzergreifung eines Teiles des Besitzes des Individuums, das man zur Tilgung der Schuld oder zum Nachkommen seinen Verpflichtungen zwingen will. „Kufatira" wendet man auch an, um jemanden zu zwingen, zur Verhandlung eines Prozesses zu erscheinen. Die Anwendung der Gewalt ist im Falle der „kufatira" anerkannt, wenn auch sonst die Verletzungen des Eigentumsrechtes und die Gewalttaten im Grunde genommen als strafbare Übergriffe angesehen werden.

Das „kufatira" kann mit Erfolg nur den schwächeren Schuldnern gegenüber angewendet werden. Ist der Schuldner ganz schwach, so kann man ihn sogar einfach plündern und fesseln, und so lange am Strick halten, bis sich die Familie seiner erbarmt und ihn loskauft. Ist aber der Schuldner mächtig, so kann das „kufatira" die Folgen eines verlorenen Krieges haben, und es bleibt nichts anderes übrig, als seine Angelegenheit zur Angelegenheit der stärkeren Vormünde zu machen.

Bei Diebstählen vereinfacht sich das Verfahren ganz wesentlich, und die Geschenke an den Richter bleiben meistens aus.

Beweisverfahren. Die Zeugenaussage spielt bei der Gerichtsverhandlung in Ruanda eine große Rolle. Der Beschuldigte hat das Recht Zeugen zu verlangen, die seine Schuld nachweisen würden. Er hat aber auch das Recht, die Aussagen gewisser Zeugen unter Angabe triftiger Gründe auszuschalten. Als solche gelten z. B. die Verwandten, die Blutsbrüder und die Klienten (bagaragu) des Beschuldigenden. Der Beschuldigende ist verpflichtet, sich Zeugen zu verschaffen, die von ihm unabhängig sind und so diesen Ansprüchen genügen.

Der Zeuge darf die Aussage verweigern. Damit er aber von diesem Rechte keinen Gebrauch mache, bekommt er Geschenke von dem, der ihn zum Aussagen bewegen will.

Die Geschenke an die Zeugen bilden kein Geheimnis. Sie gelten als etwas ganz Natürliches, als eine Art Entschädigung für die Unannehmlichkeiten, die man sich durch die Aussagen bereiten kann. Deshalb kann man auch oft hören, daß ein Zeuge seine Aussagen auf paar Tage verschoben hat, um Zeit zu geben, ihm Geschenke zu bringen, oder auch, daß jemand gesagt hat, er würde aussagen, nachdem man ihm seine „nzoga" gebracht hat. In diesem Falle muß man unter „nzoga" nicht das Bier allein, sondern auch allerlei Geschenke, darunter Ziegen, Hacken oder sogar Rinder, je nach Bedeutung der betreffenden Angelegenheit, verstehen.

Trotz der Sitte die Zeugen zu beschenken, sind falsche Zeugenaussagen strafbar. So sollte der harte, aber gerechte Lwabugiri Kigeri z. B. falsche Zeugen einfach töten lassen.

Das Gerichtsverfahren läßt in Ruanda den Schwur des Beschuldigten und des Zeugen zu. Bei den Gerichtsverhandlungen wird nach der folgenden Formel geschworen: Der Schwörende steckt den Speer in den Boden und sagt: „Dieser Speer möchte mich töten, wenn ich das getan habe." Diese Art des Schwörens wird „kuchulika ichuma" genannt. Man fürchtet diese Schwurformel. Der Meineid wurde zu Lwabugiri's Zeiten immer mit dem Tode bestraft.

Im Zusammenhange mit den Schwurformeln sind noch die Versicherungsformeln zu erwähnen, die für die Zeugenaussagen z. B. in Anwendung kommen. Die der obigen Schwurformel entsprechende Versicherung besteht im Zeigen des Speeres mit den Worten: „dakolitera Musinga". Dieser kurze Satz hat den folgenden Sinn: „wenn das nicht wahr ist, so werde ich den König mit diesem Speer durchstechen". An diese Versicherungsformel schließt sich noch eine andere an. Sie lautet „bandoga Musinga" — „ich werde Musinga vergiften, wenn das nicht wahr ist". Diese Formel benützt man auch, wenn man den König versichern will, daß das Gesagte wahr ist. So fragte z. B. Musinga einen, ob er Kabare gesehen habe — „wabonye Kabare?". Dieser antwortete bejahend — „yee". Der König glaubte es nicht und wollte sich vergewissern — „nukuli". Der Gefragte antwortete dann — „bandoga Musinga" — und die Angelegenheit war damit erledigt. Wenn man an der Wahrheit der Worte des Gefragten zweifelt, so sagt man auch — „lahira" — schwöre. Dieser antwortet dann ebenfalls — „bandoga Musinga".

Die beiden letzten Versicherungen schöpfen ihre Bedeutung aus den traurigen Konsequenzen, die für einen das Äußern der dem König feindlichen Absichten haben könnte. Der Versichernde gibt öffentlich die Möglichkeit zu, im Falle einer Lüge sich wegen Bedrohung der heiligen Person des Königs verfolgen lassen zu wollen. Trotzdem haben die Batutsi, die im Lügen wohl einen Rekord aufstellen könnten, diese Phrase stets im Munde.

In den zweifelhaften Fällen, wo die Zeugenaussagen nicht vorhanden oder nicht genügend glaubwürdig sind, wie auch in den Fällen, wo ein Verdacht der Zauberei vorliegt, wird zur Giftprobe (kihango) geschritten. Die Giftprobe wird von den „babandwa" ausgeführt.

Das im Wasser gelöste Gift wird in Kissaka den beiden Parteien in zweien Kuhhörnern gereicht. Dieser Umstand gibt dem „mubandwa" die Möglichkeit, die Ergebnisse unmittelbar zu beeinflussen und nach seinem Dafürhalten den Schuldigen zu bestimmen. Trotz dieser Leichtigkeit des Mißbrauches glaubt man in Kissaka an die Giftprobe. Das tun sogar die Christen, trotz des sonst sehr großen Einflusses der Mission. Die Giftprobe hat in Ruanda nur selten Todesfälle zur Folge, da man nach der Einnahme des Giftes sofort spucken und erbrechen darf. Das Gift wird aber nicht immer getrunken, denn nicht selten befriedigt sich der „mubandwa" mit dem Einführen des im Gift eingetauchten Daumens in den Mund der Partei. Da der Untersuchte dabei sofort spucken darf, so kommt es in diesen Fällen ausschließlich auf den psychischen Effekt an.

Der im Lande seit sieben Jahren anwesende R. P. L. CLASSE hat von den durch Giftprobe verursachten Todesfällen nie etwas erfahren können.

Neben der Giftprobe spielt im Beweisverfahren eine sehr wichtige Rolle noch das Aussagen aus den Eingeweiden der zu diesem Zwecke geschlachteten Hühner, was weiter unten etwas eingehender im Zusammenhange mit den religiösen Erscheinungen behandelt werden wird.

Ganz unabhängig vom Hühnerorakel hat man noch ein Hühnchenorakel, das in folgender Weise gehandhabt wird: Der Beschuldigte nimmt ein ganz kleines Hühnchen und trägt es im Laufe des ganzen Tages in der Hand. Geht das Hühnchen ein, so ist der Mann schuldig, „yiera bura" (er ist schwarz). Bleibt das Hühnchen am Leben, so ist der Mann unschuldig, „yeira bwera" (er ist weiß). Für die Negerwelt eine sehr merkwürdige Farbenassoziation (vgl. S. 232).

Alle Beweis- und Versicherungsformeln, wie Giftprobe, Hühnerorakel, Speer- und Musinga-Schwur, werden ganz allgemein „kushoko" — das Trinken — genannt. Dieser Umstand darf als ein Hinweis darauf angesehen werden, daß die älteste Form in der Giftprobe stecke. Jemanden dieser Prüfung zu unterziehen, heißt „kushora". Das heißt einfach: „zu trinken geben". So sagt man z. B. sowohl: „Umututsi ashora inka ze" — „der Mututsi tränkt seine Kühe", wie auch „kushora ikihango — „Gift trinken", und „kushora inkoko"— wörtlich „ein Huhn trinken".

---

14. Kapitel.

Geschichte und Zeitrechnung.

Ruanda. — Kimaka. — Bugoye. — Zeitrechnung.

Ruanda. Über die Geschichte von Ruanda konnte ich nur mit großer Mühe Nachrichten erhalten. Die mündliche Überlieferung beschränkt sich im Zwischenseengebiete in der Hauptsache auf die Genealogie der Herrscher. Dieses feste Skelett wird noch gewöhnlich durch einige Angaben über die Hauptereignisse der entsprechenden Epoche ergänzt. Die Geschichte der Dynastie war aber meinen Gewährsmännern nur wenig bekannt. Sie waren eben vorwiegend Bahutu.

Musinga gab zwar Hauptmann W. v. Grawert, der mich bei ihm einführte, das königliche Versprechen, mir über die Vergangenheit des Landes berichten zu lassen oder sogar selbst zu erzählen. Das Hühnerorakel sagte aber aus, daß das Einweihen meiner Persönlichkeit in die Geschichte des Landes dem König Unheil bringen würde. Als ich das nächstemal Musinga aufsuchte und an dieser autoritativen Stelle die Widersprüche in meinen Aufzeichnungen der Ruanda-Herrscher aufklären wollte, wurde ich zwei und einhalb Stunden hingehalten, ohne zu einem Resultate zu kommen. Die schwarze Majestät war sehr freundlich, sie übte aber während der ganzen Zeit den wenig sagenden Satz: „kleine Speer ist schön", in deutscher Sprache ein.

Musinga wollte mir ein Vergnügen durch den demonstrierten Eifer in der Erlernung der deutschen Sprache verschaffen und mich in dieser Weise von dem Ausfragen ablenken.

Es scheint, daß man überhaupt in Ruanda, ebenso wie in Nkole, über die verstorbenen Könige mit Uneingeweihten nicht sprechen darf, da die in der Ruhe gestörten Geister sich rächen könnten. Man unterhält sich aber über die alten Zeiten während der Abende, wenn sich die Vornehmen beim König versammeln, um ihm Hof zu machen und Bier zu trinken. Diese kennen die Geschichte. Sie betrachten sie aber als ein heiliges Geheimnis der Batutsi, das zur Kategorie der „ibanga" gehört.

Über die älteste Geschichte ist es dem R. P. F. Dupays und R. P. P. Loupias gelungen, von einem mir persönlich gut bekannten Mututsi, dessen Name mit Rücksicht auf seine Sicherheit unerwähnt bleiben muß, eine Überlieferung zu erfahren. Der Mann ist in eine Kollision mit seinen Stammesgenossen geraten

[p. 286]

und wollte in dieser Weise den Missionären seine Dankbarkeit für den gewährten Schutz zum Ausdruck bringen.

Nach dieser Überlieferung wohnten die Menschen früher sowohl im Himmel, wie auch auf der Erde. Die Kinder der Nyina Kigwa: Kigwa, Lututsi und ihre Schwester Nyina Batutsi wurden zur Strafe für die Geschwätzigkeit ihrer Mutter vom Himmel auf die Erde verstoßen. Sie fielen nach Ruanda in Bugansa herunter und fanden im Lande die Bahutu-Geschlechter: die Basinga, Bagessera und Bazigaba und im Walde die Batwa. Die Bahutu und Batwa wurden vor ihnen aus dem Himmel verstoßen. Die neuen Einwanderer brachten den im Lande Ansässigen das Feuer, den Ackerbau (Hackbau), die Rinderzucht und das Gewerbe (Eisentechnik). Dadurch gewannen sie Einfluß, und Kigwa wurde zum Herrscher von Ruanda. Kigwa heiratete seine Schwester Nyina Batutsi und wurde zum Protoplasten der Banieginia, die von seinen drei Söhnen stammen und bis jetzt in Ruanda herrschen. Lututsi wanderte nach Karagwe aus, heiratete eine der drei Töchter Kigwa's und wurde zum Protoplasten der Bega, die den Königen von Ruanda ihre ebenbürtigen Frauen und Mütter ihrer Nachfolger geben. Kigwa und seine Nachkommen unterhielten einen Verkehr mit dem Himmel durch Batabazi-Erlöser, die ihnen in schwerer Not halfen. Es werden drei Haupt-Batabazi erwähnt. Der erste beschützte die Kinder der Nyina Batutsi und brachte die Tiere nach Ruanda, der zweite war Kihana, Sohn des Königs Ndahiro, und der dritte, Kyamweru, war Sohn des Königs Luzugira Iwijuru.

Diese Überlieferung weist einige Details christlicher Legenden auf, auf die wir hier aber nicht eingehen werden. Ihre Herkunft wird sich später wohl aufklären lassen, bildet aber vorläufig ein Rätsel. Die Angabe dagegen, daß die Kinder der Nyina Kigwa, damit sind außer Zweifel die Batutsi gemeint, ins Land das Feuer und den Hackbau gebracht haben, kann wohl ohne weiteres als historisch unzutreffend bezeichnet werden. Als sicher darf jedenfalls angesehen werden, daß uns hier über die Niederlassung der Batutsi in Ruanda, die in Bugansa ihre Herrschaft gegründet haben, berichtet wird, und daß zu dieser Zeit schon Bagessera, Basinga und Bazigaba im Lande saßen, und die Batwa im Walde herumstreiften. Mit anderen Worten, sie fanden Verhältnisse, die denen, die noch gegenwärtig in Mulera herrschen, sehr ähnlich waren.

Dr. KANDT[1]) berichtet etwas abweichend über die älteste Geschichte des Landes. „Als der erste Mensch in Ruanda lebte, mit seinen fünf Söhnen Kitussi, Kitwa, Kinjabungu u. a., erschlug Kitwa aus Neid einen seiner Brüder. Der Vater wollte ihn zuerst töten, stand aber davon ab, weil es sein eigen Fleisch und Blut war. Doch schickte er ihn mit dem Fluche, daß alle seine Nachkommen als Paria unter den Nachkommen der anderen Söhne leben sollen, in die Wildnis."

Hier finden wir, im Gegensatze zu der vorher besprochenen Überlieferung, keine Andeutungen darauf, daß die Batutsi später eingewandert seien, und die

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 302.

Vertreter sämtlicher Stämme werden als Nachkommen desselben Ahnen bezeichnet, was wohl am besten die geringe historische Bedeutung dieser Angaben charakterisiert.

Gehen wir jetzt zu den exakteren Angaben über den Ruanda-Staat herüber. Beim Ausfragen über die Geschichte des Staates ist es mir gelungen, eine Anzahl Angaben zu bekommen, die sich in der folgenden Herrscherliste zusammenfassen lassen. Es darf aber nicht unerwähnt bleiben, daß sich die einzelnen Quellen manchmal stark widersprachen; daher wird auch die definitive Fixierung der Genealogie noch weiterer Untersuchungen bedürfen. Man muß immer im Auge die Möglichkeit behalten, daß sich einzelne der hier der Reihe nach angegebenen Herrscher als Brüder erweisen können, wenn auch meistens die Seitenlinien der früheren Zeiten vergessen werden.

Die Herrscher von Ruanda:

1. Kigwa.
2. Nyeranda.
3. Kadji.
4. Muntu.
5. Kihanga.
6. Ndoba.
7. Ndore I.
8. Ndahiro I. oder Dabarasa.

9. Ruganzu oder Luzugira. (Kihana).

10. Lumazimpaka. (Kyamweru).
11. Mibambwe I.
12. Juhi I.
13. Lugazu, Sohn der Nyina Bachuzi.
14. Mibambwe II.
15. Chilima I.
16. Ruganzurwa, Sohn der Nyina Bunyana.
17. Kigeri I.
18. Mibambwe III.
19. Juhi II.
20. Chilima II. oder Rugwe.
21. Ndahiro II.
22. Ruganzu.
23. Chilima cha Kasseke.

24. Ndore II. Kahindiro Mibambwe IV.
25. Mutara Lwogera.
26. Lwabugiri Kigeri II.

27. Mibambwe V. Juhi III. oder Musinga.

Abgesehen von der Herrscherliste, konnte ich über die Geschichte nur wenig erfahren. Berücksichtigt man aber sowohl die große Zahl der Herrscher, wie auch die Tatsache, daß unter den verehrten Geistern des Landes die Sippe des Ndaula eine untergeordnete Rolle spielt, so darf man den sehr wahrscheinlichen Schluß ziehen, daß Ruanda mit den Staaten der Südhälfte des Runyoro-Gebietes nicht zusammenhängt. Schließlich wird auch im Zusammenhange mit dem Zuge Ruhinda's nur Kissaka und nicht Ruanda erwähnt. Andererseits kann man wohl aus der Tatsache, daß Kagoro, Mugasha und Wamara in der Religion Ruanda's erwähnt werden, auf Beziehungen zum alten Bunyoro-Staat und der Bachwezi-Dynastie schließen. Berücksichtigt man dazu noch die Zahl der Herrscher Ruanda's, welche die Zeiten der Gründung der Dynastie in das XV. Jahrhundert zu verlegen veranlassen, so darf man sich fragen, ob die Gründung des Ruanda-Staates nicht in demselben Verhältnis zu der Einwanderung der Baganda in das Zwischenseengebiet steht, wie sich die von Busindja, Karagwe und Buhaya zur Einwanderung der Babito nach Bunyoro verhält. Es ist doch nicht ausgeschlossen, daß die, durch die Baganda in ihrer Ruhe gestörten, Herrscher des nördlichen Teiles des Zwischenseengebietes im Süden wieder neue Staaten gegründet haben.

Ruanda, das zu allererst durch den Bezirk Bugansa im Süden vom Mohasi-See gebildet wurde, beschränkte sich später im Laufe längerer Zeiträume auf die Provinz Nduga. Die Zeiten aber, als Ruanda über diese beschränkten Grenzen hinausgewachsen ist, müssen recht weit zurückliegen, da man nicht nur in Mukinjaga, sondern auch in Mulera, die sicher nicht zu den älteren Stammprovinzen gehört, Überlieferungen über die Herrschaft von Ruganzu hat. Der letzte Ruganzu ist der fünfte Ahne von Musinga und herrschte wohl in den ersten Jahren des vorigen Jahrhunderts. Dieser Umstand veranlaßt zur Annahme, daß das große Ruanda-Reich keine Neubildung des letzten Jahrhunderts ist und eine lange Entwickelung hinter sich hat.

Die hier in Frage kommende Überlieferung hat ungefähr den folgenden Inhalt:

Einst kam Ruganzu, um im Walde des Vulkans Muhawura Elefanten zu jagen. Plötzlich wird ihm die Nachricht gebracht, daß die Barundi die Südgrenze seines Reiches überschritten haben. Er gibt die Jagd auf und geht, dem Feind zu begegnen. Unterwegs hielt er sich auf einem Hügel auf, um etwas auszuruhen. Nach einer kurzen Rast setzte er die Reise in seiner Sänfte (ngobi) weiter fort. Erst unterwegs wurde es bemerkt, daß der König auf dem Hügel seinen Speer vergessen hatte. Man rief sofort auf den Hügel herüber, man möchte den vergessenen Speer zurückerstatten. Die Balera erwiderten, der König hätte ihnen den Speer gelassen, und wenn er ihn zurückhaben wolle, so möchte er ihn doch selber abholen. Der König sagte darauf: „Wenn ihr Lebensmittel gestohlen hättet, so würde ich glauben, daß ihr Hunger habt, hättet ihr Kühe geraubt, so würde ich annehmen, daß ihr sie besitzen wollet. Aber einen Speer zu stehlen,

was bringt er euch. Er mag bei euch bleiben, sich vermehren und euch totschlagen." Deshalb gibt es auch immer Kämpfe in Mulera. Das königliche Wort lastet über dem Lande.

In Mukinjaga wird über Ruganzu berichtet, daß er zur Strafe für den Raub seiner Rinder die Landschaft Bukunzi mit der „bimara"-Steuer belegt hat.

Ruganzu lwa Ndahiro (Ruganzu, Sohn des Ndahiro) ist der König, von dem man in Ruanda am meisten zu erzählen versteht. Man schreibt ihm eine übernatürliche Gewalt zu und meint, er könne wieder einmal zurückkehren. Als sich im Jahre 1904 die Nachricht verbreitete, daß der kaiserliche Resident von Usumbura ermordet wurde, so erzählten die Eingeborenen, Ruganzu hätte ihn getötet.

Mutara Lwogera war auch ein erfolgreicher Krieger. Er eroberte Bugoye und fügte im Jahre 1876 das mit Waffengewalt bezwungene Kissaka zu Ruanda hinzu.

Lwabugiri Kigeri, den als erster Europäer Graf v. GÖTZEN besucht hatte, war ebenfalls ein sehr streitsüchtiger Herrscher. Er dehnte die Besitzungen Ruanda's im Rutshuru-Becken bis zum Edward-See aus.

Um die Persönlichkeit des Lwabugiri etwas näher zu charakterisieren, muß noch erwähnt werden, daß das Kühestehlen eines seiner Hauptvergnügen war. Der vom König ins Auge gefaßte Viehbesitzer wurde mit Konfiskation bestraft, wenn er sich wehrte, da er in diesem Falle doch dem „muami" zuwiderzuhandeln sich erkühnt hat. Leistete er keinen Widerstand, so nahm man ihm die Kühe, die er nicht verstanden hat zu verbergen, einfach weg. Die Kuhdiebstähle, mit denen er das Werk der Zersplitterung des feudalen Besitzes absichtlich gefördert hat, wie auch die ewigen Kriege, machten ihn den Batutsi sehr lästig.

Die Herrschaft von Lwabugiri bildete ohne jeden Zweifel eine Periode großer Machtentfaltung und großen Glanzes Ruanda's. Der Staat erfreute sich eines so großen Ansehens, daß sich weder die Araber noch STANLEY und EMIN PASCHA dort hineinwagten. Lwabugiri unternahm zahlreiche Kriegszüge, darunter auch einen erfolglosen nach Nkole (1891?). Er wollte von dorther die Rinder des Königs Ntare holen und in dieser Weise seine durch die Seuche stark dezimierten Herden ergänzen. Er zog in den Krieg dreimal gegen Urundi, zweimal nach der Insel Kwidschwi, dreimal gegen Bunyabungu und zweimal nach Kissaka. Außerdem verwüstete er dreimal Mulera, um dort die rebellischen Untertanen zu züchtigen, und plünderte in seiner Stammprovinz dreimal das Gana Mukari[1]) wegen des Aufruhres, der dort stattfinden sollte. Bei den Zügen gegen Urundi blieb der Erfolg aus. Die beiden Könige, Lwabugiri und Mwezi Kisabo (?), schlossen Freundschaft ab und bauten ihre Niederlassungen an der Grenze der beiden Staaten, am Akanjaru. Auch die Kämpfe mit den Einwohnern der Insel Kwidschwi wurden nur vom vorübergehenden Erfolge begleitet.

[1]) BRARD, A., Skizzen aus Ruanda. Afrikabote 1900—01, S. 99.

Kwidschwi, sagt Dr. KANDT[1]), gehört zur Einflußsphäre von Ruanda, ihre Einwohner bestreiten, früher Untertanen von Ruanda gewesen zu sein, was von den Banyaruanda behauptet wird. Mihiggo's Großvater, namens Mwendo, war Ruanda tributär. Sein Sohn Kaweggo versuchte sich unabhängig zu machen, wurde aber bekriegt durch Lwabugiri (1886) und mußte auf der Insel Ugishushu Zuflucht suchen. Durch seinen Sohn Nkudie verraten, fiel er in die Hände des Kigeri und wurde hingerichtet. Nach der Rückkehr des Königs (1888), der durch Unruhen in Ruanda zurückgerufen wurde, gruppierte sich die Unabhängigkeitspartei um Mihiggo, einen anderen Sohn, da Nkudie durch den König als Verräter seines Vaters hingerichtet wurde. Nach einigen Jahren (1892 oder 1893) unternahm Lwabugiri einen zweiten Kriegszug gegen Kwidschwi. Die Insel wurde wieder erobert, und Mihiggo floh nach Bunyabungu. Um Bunyabungu für das gewährte Asyl zu bestrafen, unternahm Kigeri einen Kriegszug gegen dieses Land, wurde aber krank und starb. Mit seinem Tode schlägt für Kwidschwi die Stunde der Befreiung, und Mihiggo kehrt als unabhängiger Herrscher zurück (1894).

Der sterbende König Lwabugiri wurde nach Ruanda zurückgebracht und verendete in Mukinjaga auf der Reise. Man erzählt, daß er von seinem Hofe vergiftet wurde, der der ewigen Kriege müde geworden war. Nicht alle betrachteten nämlich die Kriege, wie dies die dem Könige sehr ergebenen Batwa taten, nur für die beste Gelegenheit, um viel Fleisch essen zu können. Nach einigen Angaben sollte das Gift durch seine Frau Kanzogera, die Mutter Musinga's, bereitet worden sein.

In der inneren Politik verfolgte Lwabugiri zentralistische Tendenzen. Ihm fällt, wie es scheint, der Verdienst zu, die großen, erblichen Häuptlingschaften zersprengt und miteinander territorial durchsetzt zu haben. Der Kampf mit dem späteren Regenten Kabare, der angeblich kastriert wurde, steht wohl damit, wie auch mit dem Tode Kigeri's, im Zusammenhange. Nach einer Version nämlich wurde Kabare durch Lwabugiri kastriert, um dem ehrgeizigen Manne den Versuch, König zu werden, unmöglich zu machen. Nach einer anderen Version wurde der junge Kabare mit der Lieblingsfrau des Königs überrascht und dafür entsprechend bestraft. Kabare sollte wieder aus Rache alle Söhne des Lwabugiri bis auf Musinga, den Sohn seiner Schwester Kanzogera, nach dem Ableben ihres mächtigen Vaters, getötet haben. Diese Angaben stimmen überein mit der Notiz v. BERINGES[2]), die auf Mumusa, die Herrscherin von Mururwa in Mpororo, Bezug nimmt: „Die Mhumse behauptete, eine Frau des verstorbenen Sultans Lwabugiri von Ruanda zu sein und von diesem hierher gesandt zu sein, um den Nachstellungen des Häuptlings Kawalle, welcher

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 517—518.

[2]) BERINGE, v., Hptm., Bericht über seine Reisen im Gebiet der Kirungavulkane. Mitteilungen aus den Deutschen Schutzgebieten 1901, S. 39.

vier seiner Söhne getötet hatte, zu entgehen. Eine Verbindung der Mhumse mit Ruanda existiert indessen nicht mehr".

Mibambwe, den man nach dem Tode Lwabugiri's vorübergehend als König ausgerufen hatte, wurde mit allen Angehörigen in seiner Hütte verbrannt[1]). Die meisten seiner Brüder folgten ihm im Tode. Nur Ishirangabo, Kitetire und Musinga wurden geschont. Ishirangabo aber, als ein dem Geiste Ryangombe geweihter Mann, kam für die Herrschaft nicht in Betracht. Bilegea, ein Sohn Lwabugiri's, war seit seiner Jugend verschollen und wurde bis jetzt für einen möglichen, gefährlichen Prätendenten betrachtet. Seine Rückkehr ins Land wurde von den Herrschenden sehr gefürchtet[2]).

Musinga, der vom Vater verstoßen war, wurde durch einen Muhutu in sein Haus genommen und erzogen. Erst als kein anderer Sohn Lwabugiri's in Frage kam, wurde der vernachlässigte Sohn Kanzogera's zum König ernannt und bestieg den Thron als Juhi Musinga. Infolge seiner plebejischen Erziehung lernte der König Ziegenfleisch essen. Diese Sitte sollten aus Gefälligkeit auch die Hof-Batutsi angenommen haben.

Dieser Umstand würde dem jungen Herrscher wohl große Schwierigkeiten bereitet haben, wenn nicht drei Jahre nach dem Tode Lwabugiri's Hauptmann RAMSAY im Jahre 1897 ins Land gekommen wäre. Musinga wurde als Herrscher anerkannt. Hauptmann RAMSAY schloß mit ihm, oder wenigstens mit dem ihm als Musinga vorgestellten Manne[3]), eine besondere Art Blutsbrüderschaft. Er berichtet nämlich: „Ich mußte darauf einen Faden Juhi um den Leib binden, und er band mir einige Faden um; dann schüttelten wir uns energisch die Hände und die Blutsfreundschaft zwischen dem König von Ruanda und mir wurde geschlossen."

Seit dieser Zeit wird Musinga energisch durch die Regierung unterstützt, die wieder durch seine Person das ganze Land in der Hand hat. Musinga stehen zur Verfügung die Askaris der Schutztruppe, die im Notfalle seine Unbotsmäßigen eines Besseren belehren können, wie ich das im Jahre 1907 in Mulera zu beobachten Gelegenheit hatte. Mit dem Eingreifen dieses neuen Faktors hat die Ordnung im Lande wohl eine früher nicht gut denkbare Stufe erreicht.

Kissaka. Die Geschichte von Kissaka läßt sich nicht so weit, wie die von Ruanda, zurückverfolgen.

Über die ältesten Zeiten haben die Banyakissaka Überlieferungen, daß sie, ebenso wie die Banyoro und Baganda, vom Norden gekommen seien und nicht, wie die Wasukuma, aus dem Süden stammen.

---

[1]) KANDT, R., Caput Nili. Berlin 1904, S. 263.

[2]) Ebenda S. 264.

[3]) RAMSAY, Hptm., Über seine Expeditionen nach Ruanda und Rikwa-See. Verhandlungen der Gesellschaft für Erdkunde zu Berlin 1898, Band 25, S. 315.

Kissaka bildete schon seit sehr weit zurückliegenden Zeiten einen Staat. In der Überlieferung von Busindja[1]) wird berichtet, daß die Kissaka-Herrscher Basinga waren. Einer dieser Herrscher war mit Nyakachende, der Tochter Ruhinda's, vermählt, die ihm auch den Nachfolger gegeben hat. Mit Rücksicht darauf wurden, von diesem Zeitpunkte ab, die Herrscher von Kissaka, als Bayango Ruhinda's, bezeichnet.

Dieses Geschlecht mußte aber später um seinen Besitz gekommen sein, da mir die letzten Kissaka-Herrscher als Bagessera, also auch keine echten Batutsi, bezeichnet wurden.

Als erster Herrscher von Kissaka wurde mir Kimeni Ruahasha genannt; dessen unmittelbare Nachfolger, wie auch ihre Zahl, konnte ich jedoch nicht ermitteln. Abgesehen von dieser Lücke, ließ sich folgende kontinuierliche Herrscherliste feststellen:

Kimeni Ruahasha.
?
Vunengoma.
|
Mutaga.
|
Kwezi.
|
Luregeya.
|
Bazimye.
|
Kimeni II.
|
Lugeyyo } Prätendenten.
|
Lukura } Lukura wohnt bei Kahigi.

Kimeni II. wurde mit seinem Sohn Msongole im Jahre 1876 ca. durch Musinga's Großvater Lwogera besiegt und ermordet. Seit dieser Zeit bildet Kissaka einen Bestandteil von Ruanda. Msongole's Sohn, Wagazo, ist aber im Lande als Unterhäuptling des neuen Königs geblieben und war dort noch 20 Jahre später zur Zeit der Reise RAMSAYs[2]) im Amte.

Die Banyakissaka wollten sich ihrem Schicksal nicht fügen, und das ganze Land, sowohl die Batutsi wie auch die Bahutu, strebte nach Unabhängigkeit. Um die Ruanda-Herrschaft zu sichern, unternahm Lwabugiri Kigeri, Musinga's Vater, zwei Züge nach Kissaka. Im Jahre 1901 machte Kissaka den letzten Versuch, seine Unabhängigkeit von Ruanda zu erkämpfen.

[2]) RAMSAY, Hptm., Über seine Expeditionen nach Ruanda und Rikwa-See. Verhandlungen der Gesellschaft für Erdkunde zu Berlin 1898, Bd. 25, S. 310.

Lukura, Enkel des besiegten Kimeni II., Sohn des Lugeyyo (nach Dr. KANDT Sohn des Wantschurra[1]), beschloß, die in Kissaka herrschende Unzufriedenheit mit dem Ruanda-Regime zu seinen Gunsten auszunützen. Er kam von Kyanja, wo er bei Kahigi die Gastfreundschaft genossen hatte, nach Kissaka. Das Volk und die Batutsi erklärten ihn für ihren Herrscher. Er mußte aber bald fliehen, da Musinga, durch die Station in Usumbura unterstützt, einen Kriegszug unternahm. Der Führer der Lukura-Adhärenten, Mpumbika, wurde nach Urundi verbannt, wo er noch im Jahre 1907 beim Häuptling Muhini weilte. Mpumbika gehört ebenso wie Lukura zum Clan der Bagessera.

Nach dieser Revolte wurden die alten „batware" (Unterhäuptlinge) abgesetzt, und das Land den drei Ruanda-Häuptlingen, Kanuma, Niamutezi und Lutangabo, unterstellt. Das allmähliche Ersetzen auch der kleineren Häuptlinge durch Banyaruanda (Leute aus Ruanda) hat zur Abflauung der Unzufriedenheit mit dem Ruanda-Regime nicht beigetragen.

Bugoye. Bugoye hat im Gegensatze zu Kissaka keine Geschichte. Man weiß nur zu erzählen, daß das Land durch Mutara Lwogera erobert wurde[2]), der den Landeshäuptling Mvunye nach Bunyabungu vertrieben hatte. Man weiß außerdem noch, daß das Land erst vor wenigen Generationen besiedelt wurde. Die sehr alten Leute behaupten dabei, daß es ihre Großväter waren, die das fast nur von Batwa bewohnte menschenarme, waldige Land gerodet haben. Die Batwa wurden zum Teil verdrängt und zum Teil assimiliert. Die letzteren werden als „Batwa bikyugu" — Batwa des bewohnten Landes — bezeichnet. Sehr viele Kolonisten kamen aus Kishari und Kameronse, Landschaften im Norden vom Kiwu. Sie wurden aus ihrer Heimat durch die Razzias der menschenfressenden Balioko, wohl Manyema, oder vielleicht auch der, durch die Manyema getriebenen, Babira verdrängt. Dieser Emigration sind wahrscheinlich die rezenten Bakondjo-Spuren in Bugoye zuzuschreiben. Abgesehen von dieser Welle, kam nach Bugoye noch der Clan der Bambari aus Ndorwa und die Bagwabiro aus der Umgebung von Ischangi am Südufer des Kiwu. Die letzteren sind ackerbautreibende, verarmte Batutsi, die nur wenige Rinder besitzen.

Zeitrechnung. Die Zeit wird in Ruanda nach Jahren, Jahreszeiten, Monaten (Monden) und Wochen, die hier nur fünf oder sechs Tage haben, gerechnet. Dank der Freundlichkeit des R. P. BUISSON kann ich die Monatsnamen aus Kissaka und Ussuwi dem Kalender von Mulera und den Daten über Nkole von MELDON[3]) gegenüberstellen:

Mulera	Umuwi	Kissaka	Nkole
I. Kwakira — Erbsenernte, Anfang des Hackens für Hirse	Kimguru	Kashantare	Biruru
II. Mutarama — Hirseaussaat	Kakire	Werurwe	Kata
III. Werurwe — Ausjäten der Hirsefelder	Mahingo	Kichurasi	Katumba
IV. Mata — Aussaat der grünen Erbsen (nyagasha)	Ruwoza	Kamena	Ikoma
V. Kichurasi — Aussaat der Erbsen .	Muhirangusu	Nyakanga	Chabahezi
VI. Kamena — Man hofft bald viel zu essen	Rweru	Katumba	Nyerurue
VII. Nyakanga — Anfang der Hirseernte	Nyamatarugara	Itumba	Kichurasi
VIII. Itumba — Große Ernte	Nyairira	Nsenene	Kamena
IX. Katumba — Anfang des Hackens für Erbsen	Muhereze	Nkereza	Nyakanga
X. Nseri — Hacken für Erbsen	Kisua	Kushingwo	Kashna
XI. Kushingwo — Ausjäten der Erbsen	Nsenene	Kwakira	Musenene
XII. Kaboza — Pflanzen der Kürbisse . .	Kibuika	Kuwoza	Itumba

Der Kalender von Mulera bleibt hinter dem von Kissaka ca. zwei Monate zurück. Diese Verspätung ist durch den Umstand bedingt, daß die Namen der Monate im Zusammenhange mit den Beschäftigungen der Ackerbauer und den Weide- und Witterungsverhältnissen bleiben, und die einzelnen Feldarbeiten werden in den nördlicher gelegenen Bergen Mulera's zwei Monate später ausgeführt. In ähnlicher Weise bleibt der Kalender des, noch weiter im Norden gelegenen, Nkole zwei Monate hinter dem von Mulera zurück.

Für die Namen und Beinamen der einzelnen Monate ist es mir gelungen folgende Erklärungen zu bekommen:

„Itumba nyakime" — „itumba" der Besitzer des Taus.

„Katumba kanama" — „kanama" ist vom Verbum „kwanama" abgeleitet. Dies bedeutet „auf der Stelle bleiben". Der Monat ist sehr warm, und man bewegt sich ungern.

„Nyakanga mabuguma" — Hasser der alten Kühe (mabuguma) — die Weiden sind ausgedörrt und die alten Kühe gehen in diesem Monat ein.

„Kaboza kabozabihaza" — Wegen der zu starken Niederschläge faulen die Kürbisse.

„Mata" — wörtlich Milch, eigentlich Milchmonat — die Weiden sind sehr saftig, und man schwelgt in Milch.

In den Monaten „ntumba", „katumba" und „nseri" werden die Hütten gebaut. Das Hirsestroh ist reif und die Gräser sind am längsten. Am Ende des „nseri" muß alles fertig sein, da in dieser Zeit die Regen anfangen.

Im „katumba" fängt man an die Gräser auf den Bergen abzubrennen.

Die meisten Hochzeiten finden im „nseri" statt, da man in diesem Monat viel Bier brauen kann. Dieselbe Ursache hat auch zur Folge, daß in diesem Monat die meisten Schlägereien stattfinden.

Man unterscheidet in Kissaka drei Jahreszeiten:

I. „Itumba", die große Regenzeit, die die Monate März bis Mai umfaßt.

II. „Ichanda", die große Trockenzeit in den Monaten Juni bis Oktober.

III. „Ruhira" — die kleine Regenzeit, während der Monate November bis Januar und manchmal auch während des Februars.

Die kleine Trockenzeit im Februar scheint keinen besonderen Namen zu haben.

R. P. Ch. Lecoindre teilte mir mit, daß er den Eindruck gewonnen hat, daß es im Ruanda-Jahre dreizehn Monate gibt, und machte mich aufmerksam, daß auf meiner Liste der Monat „kashantare" zwischen „mutarama" und „werurwe" nicht verzeichnet ist.

Die Kunst der Zeitrechnung ist in Ruanda wenig entwickelt, und die Bahutu scheinen, im Grunde genommen, nur die Perioden der bestimmten Feldarbeiten zu kennen, die sie mit besonderen Namen belegen, wie z. B.:

„Itumba ya massaka" (im Herbst),

„Itumba lyi bishimbo",

oder auch die Sonnenzeiten:

„Rugaryi" — kleine Sonne.

„Itsi" — große Sonne.

Andererseits wird aber das Leben in der Residenz Musinga's, wenigstens das Einziehen der frischen Trommelwachen mit dem neuen Mond, durch die lunare Einteilung des Jahres geregelt, und die Beobachtung von R. P. Ch. Lecoindre scheint deshalb viele Gründe für sich zu haben. Am Hofe des Königs soll z. B. die erste Hälfte des Monats „kichurasi" getrauert werden. Während dieser Zeit haben die Männer angeblich keinen geschlechtlichen Umgang mit Frauen. Die Trommeln werden am Königshofe nur einmal gegen 11 Uhr zur Begrüßung (ndamutsu) des Herrschers geschlagen, man sagt, sie sind angebunden (kuzirika). Die Batwa unterhalten den König während der Abendversammlungen durch ihre Gesänge nicht. Der König fällt keine Gerichtssprüche und empfängt keine Geschenke. Bei den gewöhnlichen Gerichtsverhandlungen singt die siegende Partei weder ihren Lobgesang, noch prahlt sie mit den eigenen Taten und der Zahl der getöteten Feinde. Im „kichurasi" befriedigen sie sich mit einfachem Händeklatschen (kukoma mukono). Man legt bessere Kleidung und besseren Schmuck nicht an. Sogar die Stiere werden von den Herden entfernt. Jedes in dieser Zeit begonnene Leben wird als unrein angesehen und getötet.

Mit dem „kichurasi"-Vollmond endigt die Trauerzeit. Man fängt an die Trommeln zu schlagen. Am ersten Tage ganz schwach und wenig, am zweiten etwas mehr, und erst am dritten Tage wird das übliche Schlagen wieder aufgenommen. Am elften Tage bringen die Häuptlinge Geschenke dem König, betrinken sich mit Bier und opfern sterile Kühe.

Das Ende des Monats „kichurasi" wird mit einer großen Feier begangen, zu der sich die „ntore" am Hofe versammeln. Das Fest heißt „kukura kichurasi".

Ob dieses Fest in einem Zusammenhange mit dem Mythus vom Erlöser (mutabazi) steht, konnte ich nicht erfahren.

Das ist die Zeit der großen Zeremonien der „babandwa", wie auch der Opfer (kuterekera).

Der Mondmonat wird geteilt je nach der Phase des Mondes. So spricht man von:

„imboneko" — erscheinender Mond,
„kwezi" — wachsender Mond,
„inzoro" — Vollmond,
„mizima" — abnehmender Mond,
„imfunda" — verschwindender Mond.

Diese Bezeichnungen entsprechen aber den Wochen nicht. Die Wochen haben fünf bis sechs Tage und sind durch das Verhältnis der freien und Frondiensttage bestimmt.

---

15. Kapitel.

Religion und Verwandtes.

Ahnenkultus. — Unterirdische Welt. — Gedächtnisbäume. — Imana und „batabazi". — Ryangombe und seine „bagaragu". — „Umugani rwa Ryangombe". — Geheimbünde. — Initiation. — Geheimsprache. — Opfer. — Wahrsager, Zauberer und Medizinmänner. — Wahrsagen und Träume. — Medizinische Praxis. — Anthropophagie und Menschenopfer.

Ahnenkultus. Die religiösen Anschauungen der Banyaruanda lassen sich nicht in ein geschlossenes, harmonisches System bringen. Diese Tatsache hängt wohl nicht nur mit der niedrigen Entwickelungsstufe der Religion, sondern auch mit der Verschiedenheit der aufeinander wirkenden Kulturen der Batutsi und Bahutu zusammen.

Die Basis der religiösen Anschauungen in Ruanda, wie auch in den übrigen Teilen des Zwischenseengebietes, bildet der Ahnenkultus.

Die Geister der Verstorbenen, die „bazimu", werden gefürchtet. Sie sind nicht gut. Man erklärt sie der Mißgeschicke und Plagen, die einen quälen, schuldig. Man könnte das vielleicht, wenigstens in Mulera, mit der bekannten schlechten Lage der Greise in Zusammenhang bringen.

Abb. 162. Opfertopf für Bier aus Mulera. (1/4 d. w. Gr. III E 13 096. Höhe 8 cm.)

Jeder Familienvater opfert seinen Ahnen und verstorbenen Angehörigen in den „ndaro", kleinen Grashütten, die sich in der nächsten Umgebung seines Gehöftes befinden und den Aufenthaltsort der Geister bilden. „Ndaro" bedeutet „Schlafstelle", „Ruhestätte" und soll nach R. P. Buisson vom Verbum „kurara" — schlafen — abgeleitet sein. Ich möchte aber noch die Ähnlichkeit dieses Wortes mit „ndako" betonen. Das letztere bedeutet im Bangala und den Ababua-Dialekten einfach — „Haus". Abgesehen von den „ndaro" wird noch im heiligen Winkel, der sich in jeder Hütte befindet, geopfert.

Den Manen wird das Opfer in der Weise dargebracht, daß vor ihren Hütten um ein Feuer herum auf den in den Boden gesteckten Stäben kleine Fleischstücke, „umutsima"-Klumpen u. a. aufgesteckt und kleine Gefäße (imperezo) mit Bier aufgestellt werden. Diese Opfergaben werden durch den Opfernden vom mitgebrachten Fleisch und „umutsima" (steifer Hirsebrei) abgeteilt. Das übrige ißt der Opfernde auf.

[p. 298]

Die Opfergaben werden auch in die Hütten hineingelegt. Wertvollere Opfer pflegt man dabei nicht selten vorübergehend zu exponieren. Sie werden später durch die Angehörigen des Opfernden verspeist. Das soll vor allem der Fall sein, wenn man einem verstorbenen Mädchen der Sitte gemäß das Vorderbein eines erlegten Tieres opfert. Doch trifft das nicht immer zu, da ich wiederholt Gelegenheit hatte in den „ndaro" verwesende Ziegenvorderbeine hängen zu sehen. Das Den-Geistern-Opfern wird „kutonora bazimu" genannt. Den Geistern der Eltern opfert man gewöhnlich Rippen und Eingeweide der erlegten Tiere.

Unterirdische Welt. Nicht alle Geister der Verstorbenen bleiben in der Nähe ihrer „ndaro", um dort, von den Angehörigen versorgt, ein ruhiges Dasein zu führen. Viele Geister wohnen nach ihrem Hinscheiden in den Vulkanen, und die Tätigkeit der Feuerberge wird mit ihnen in Zusammenhang gebracht.

Im Muhawura soll, nach den Angaben der Balera, Ryangombe mit den Seelen der ihm zu Lebzeiten Geweihten wohnen. Sie bilden seinen Hof und sein Gefolge.

Am Hofe des Ryangombe kommt es nicht selten zu scharfen Auseinandersetzungen unter seinem Gefolge. Dann wird gewöhnlich zu Steinen gegriffen, die manchmal in großen Mengen in die Außenwelt gelangen. Diese Erklärungen der vulkanischen Erscheinungen hatte ich wiederholt Gelegenheit zu hören. Es kommt aber vor, daß die Geister durch Ryangombe zur Strafe in die Außenwelt verjagt werden. Die Verjagten quälen dann die Lebenden. Diese müssen opfern, damit Ryangombe die Geister wieder zu sich nimmt und sie selbst von den Belästigungen der Obdachlosen befreit.

Die Leute aus der Umgebung von Bobandana, denen ich auf dem Wege nach Rutahuru begegnete, bezeichneten den Niragongo als „Kilima ya Mungu" oder „Götterberg".

Auch nach Leutnant v. Parisch[1]) soll Ryangombe mit seinem aus den Seelen der ihm geweihten „babandwa" gebildeten Hofe im Muhawura wohnen. Nur die Seelen der „nsigo", d. h. der Profanen und in andere Kulte Eingeweihten, begeben sich nach dem Tode in den Niragongo. Er gibt aber zu, daß nach den anderen Angaben Ryangombe im Niragongo wohnt.

Die Vulkane spielen in der übernatürlichen Welt Ruanda's überhaupt eine sehr große Rolle. Hauptmann v. Beerecz[2]) erwähnt, daß die „birunga" (*pl.* von „kirunga" — Vulkan) nach den in ihnen angeblich wohnenden Geistern Sabinjo, Karisimbi, Mikeno, Namlagira und Gonga benannt werden. Der letztere ist der älteste von ihnen. Früher sollte mit ihm zusammen auch der später vertriebene Namlagira gewohnt haben. Die letztere Angabe bildet vielleicht eine Anspielung auf die rezente Entstehung des jüngsten Vulkans dieser Gruppe.

---

[1]) Parisch, P. R. v., Zwei Reisen durch Ruanda 1900 bis 1903. Globus 1904, Bd. 86, S. 78.
[2]) Beerecz, v., Hptm., Berichte über seine Reisen im Gebiet der Kirungavulkane. Mitteilungen aus den Deutschen Schutzgebieten 1901, S. 36, 37.

Gedächtnisbäume. Bildliche Darstellungen der Verschiedenen kommen in Ruanda nicht vor. Ich hatte keine Gelegenheit darauf bezugnehmende Skulpturen und Schnitzereien zu beobachten.

Mit dem Gedächtnis der Verstorbenen verknüpfen sich aber Bäume, die von ihnen oder im Zusammenhange mit ihnen, meistens in den Siedelungen, angepflanzt werden. So pflegt man bei der Geburt eines Kindes eine Ficus anzupflanzen, die später mit ihm, auch nach seinem Tode, im Zusammenhange bleibt. Es scheint, daß sich auf diesen Bäumen, wie auch auf den Hecken verlassener Siedelungen, Geister der Verstorbenen aufzuhalten pflegen.

Es werden aber auch Bäume zur Erinnerung an historische Ereignisse angepflanzt. So erwähnt Dr. KANDT[1]) z. B.: „Am Ende der Brücke (Felsenbrücke des Russisi) steht noch eine junge Ficus, eine „immana", ein Seelenbaum, den Luabugiri, der frühere König von Ruanda, gepflanzt hat, als er gegen Bunjabungu, das auf dem rechten Ufer liegt, in den Kampf zog. Steil, fast senkrecht steigt ein paar hundert Meter tief der Weg hinab, den er, in sein Verderben ziehend, mit seinen Kriegern kam. Am Baum hängen Stroh- und Metallringe, Opfergaben frommer Wanderer, und auf der Brücke zeigt man in den Fels gegraben die Fußspur des königlichen Leibhundes und erzählt eine der Roßtrappe ähnliche Sage."

Über eine andere Art der Gedächtnisbäume, die nur im indirekten Zusammenhange mit den historischen Persönlichkeiten bleiben, erwähnt Dr. KANDT[2]) an einer anderen Stelle: „Sie (Bäume am östlichsten Punkte des Sees) sind geheiligt, weil König Luabugiri an diesem Platze ein Lager hatte, als er den Feldzug gegen Bunjabungu (1894) antrat, aus dem er sterbend nach Ruanda zurückkehrte." „Unter den Bäumen liegt noch, halb in der Erde vergraben, in der Mitte gespalten, zum Teil verrottet und jährlich mehr zerfallend, das aus einem Urwaldriesen gehöhlte Boot, das den Herrscher in den Krieg trug; nach meiner Erinnerung ist es etwa 18 m lang und $^3/_4$ m breit."

Die auf den Anhöhen emporwachsenden Gedächtnisbäume sind für die Ruanda-Landschaft sehr charakteristisch und sie fallen auch durch ihren schroffen Gegensatz, in den sie sich zu baumarmen Hügeln stellen, auf. Ihr kultueller Charakter wurde schon durch Hauptmann HERRMANN erkannt, und man pflegt sie kurzweg als „Imana"-Bäume zu bezeichnen.

Die Verehrung der Gedächtnisbäume scheint in der Hauptsache mit der Batutsi-Schicht verknüpft zu sein. Dort, wo die Batutsi die größte Macht besitzen, sind die Ficusbäume auf den Anhöhen am zahlreichsten und am schönsten. Es soll dagegen vorkommen, daß sich Bahutu nachts im Geheimen Holz von den heiligen Bäumen holen. Batwa, die niemanden fürchten und auch in geistiger Beziehung ihre Unabhängigkeit zu wahren verstanden haben, tun

[1]) KANDT, R., Caput XIII. Berlin 1904. S. 365.
[2]) Ebenda S. 304.

das ganz offen auch am Tage. Doch sind sie nicht zahlreich genug um die Bäume zu vernichten und die Landschaft verändern zu können.

Imana und „batabazi." Schon bei der allgemeinen Besprechung des Zwischenseegebietes wurde es hervorgehoben, daß die Geister der verstorbenen Könige und Machthaber eine besondere Stelle unter den Manen einnehmen. Sie unterscheiden sich von der undifferenzierten Masse der „bazimu" durch bedeutendere Macht. Sie sind in größeren Kreisen bekannt und gefürchtet. Das trifft z. B. für den Geist des Kimeni in Kissaka zu. Es ist auch nicht ausgeschlossen, daß sich in dieser Weise der Gegensatz zwischen der unterirdischen, wie es scheint, nach dem Vorbilde der Batutsi-Staaten organisierten Herrschaft des Ryangombe und der Familienanarchie der gewöhnlichen Manen erklären lassen wird. Fraglich bleibt es dagegen, ob sich auch die zentrale Figur des Ruanda-Pantheons, der Schöpfer der Welt, Imana, mit den Geistern der Verstorbenen in Zusammenhang bringen läßt und nicht als Ergebnis einer fremden Beeinflussung anzusehen ist. Vielleicht läßt sich auch die unterirdische Residenz des Hofes von Ryangombe dadurch erklären. Die übrigen „bazimu" bleiben doch mit den lebenden Angehörigen.

Imana ist der Herr des Blitzes, Donners und Regens. Man wendet sich an ihn mit den Worten: „Nabone Imana yandemie ikalema tata, na sokokuru, na sokuruza, na mukaka, na mukakuruza, na mama. Ikankiza, nkuko yabakidjidji!" (Begünstige mich, Imana, der mich geschaffen hat, der meinen Vater geschaffen hat, und meinen Großvater, und den Vater meines Großvaters, und meine Großmutter, und die Mutter meiner Großmutter und meine Mutter. Er hat mich geheilt, wie hat er mich geheilt!)

Imana wird nicht geopfert. Er spielt infolgedessen im Kulte keine Rolle und befriedigt nur, wenn man so sagen darf, das philosophische Bedürfnis.

Wenn auch Imana der angebliche Schöpfer ist, so weiß man doch nichts Bestimmtes über sein Verhältnis zu den übrigen mächtigen Geistern, wie Ryangombe z. B., zu erzählen. Die Banyaruanda scheinen von ihm eine ganz vage und unbestimmte Vorstellung zu haben. Das Merkwürdigste ist die Erzählung von seinem Erscheinen auf der Erde in der Gestalt eines Kindes, das noch weißer als Kaolin (rumoni) war. Das Kind hatte eine übernatürliche Macht. Es hat unter anderem auch Wasser in Milch umgewandelt. Imana hat die ersten Menschen geschaffen. Der erste Mann heiratete seine Schwester. Beide hatten aber weder Vater noch Mutter. Imana gab ihnen das Feuer.

Leutnant v. Parmen[7]) verzeichnete für Imana die Synonymen Lugira, Lulema und Kihanga.

Die Mythen über Imana scheinen, in Kissaka wenigstens, weniger bekannt zu sein oder geheimer gehalten zu werden, als die Erzählungen über andere Geister.

---

[7]) Parmen, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 78.

Jeder Mututsi soll einen besonderen heiligen Stier aus seiner Herde verehren, der in einem geheimnisvollen Zusammenhange mit Imana steht. Der heilige Stier Musinga's war angeblich sehr böse und hatte manchen angegriffen. Es wird behauptet, daß die vom Stier Angegriffenen die durch das Tier erkannten Feinde des Königs sind. Sie wurden auch früher in den Fällen, wo sie mit ihrem Leben davonkamen, mit dem Tode bestraft. Im Laufe der letzten drei, vier Jahre, wohl infolge des intensiveren Kontaktes mit den Europäern, hörte dies auf, wenn auch die Unglücklichen sehr schlecht angesehen werden.

Man darf auch nicht vergessen, daß die von den Batutsi am Halse getragenen Gefäße mit Hühnerresten und Fett der geopferten Schafe ebenfalls kurzweg als „Imana" bezeichnet werden.

Noch rätselhafter als Imana sind im Ruanda-Pantheon die „batabazi". Sie wurden im Kapitel über die Geschichte Ruanda's schon erwähnt. R. P. L. Classe erzählte mir, daß in den „batabazi"-Legenden sowohl der Sintflutmythus wie auch der Gedanke von der Aufopferung des individuellen Lebens, um die Menschen zu retten, auftritt. Die Menschen überstehen die Flut in einer mit Erde gedichteten Hütte.

Die „batabazi" sind Batutsi, da man sie mit dem Herrschergeschlecht in Zusammenhang bringt.

Ryangombe und seine „bagaragu." Die Hauptrolle im Ruanda-Kultus spielt Ryangombe mit seinen „bagaragu" (Klienten) und Verwandten.

Es wurde hier schon die Vermutung ausgesprochen, daß in den Überlieferungen über Ryangombe die Erinnerung an einen historischen Helden lebt. Zugunsten dieser Ansicht könnte man außer der wenig sagenden, hier unten angeführten „umugani" (Erzählung), noch die Tatsache hervorheben, daß in der Zahl seiner Gefolgsherren Kakuku, Mugasha, Kagoro und Rubaga erwähnt werden. Die drei letzteren sind halbhistorische Persönlichkeiten und gehören nach unseren Feststellungen zum Geschlecht, das vor den Babito in Bunyoro geherrscht hat, während Kakuku wohl mit Bukuku aus der älteren Bunyoro-Dynastie identisch sein wird.

Die nächsten Verwandten von Ryangombe scheinen keine besondere Rolle zu spielen und werden nur mit Rücksicht auf den Helden erwähnt. Wir wollen sie auch nur den Namen nach aufzählen. Sein Vater hieß Ndema und sein Großvater Migongo. Babinga war seine Mutter und Nyundo seine Großmutter. Seine Frau Nyakisha schenkte ihm ein Kind, das genannt wird: „kachumu kato kato kavira imyuna mumbuga" (ein kleiner, kleiner Speer, der bis zum Stiel mit Blut befleckt ist). Nach anderen Angaben soll seine Frau Kadjumba und ihr Sohn Binego sein.

In der Literatur finden wir etwas abweichende Angaben. Leutnant v. Parisch[1]) nennt Ryangombe's Frau Njawirungu und seinen Vater Bawinda, was

[1]) Parisch, F. R. v., Zwei Reisen durch Ruanda 1902 bis 1903. Globus 1904, Bd. 86, S. 10.

wohl eine Verwechselung mit dem Namen seiner Mutter, Babinga, darstellen wird.

Hauptmann v. Beringe[1]) nennt dagegen Ryangombe's Großvater Nyundo, seinen Vater Bavinga und seine Frau Nina Ryangombe. Der letztere Name bedeutet aber einfach Mutter des Ryangombe.

Die wichtigsten „bagaragu" (Klienten) des Ryangombe sind: Binego, Kavuna, Mugasha, Kakuku, Kagoro, Senyakazana und Rubaga.

Die Unterordnung dieser Geister Ryangombe gegenüber wird stets sehr scharf betont. Das kommt auch darin zum Ausdruck, daß, um ihnen opfern zu können, vorher Ryangombe geopfert werden muß. Nur Rubaga bildet eine Ausnahme. Man darf sich an ihn mit Gaben wenden, ohne vorher Ryangombe geopfert zu haben.

Beim Opfern für die einzelnen dieser Geister werden bestimmte Formen berücksichtigt, und besondere Zeremonien eingehalten.

Beim Opfern für Binego steht der Opfernde mit gesenktem Haupte und murmelt: „Binego bya Kadjumba nyamunega amafizi amabuguma akapfa numulindu. Lukaraba nkaba n'inkuba yadjandja. Ulwamba lw'impiri namaganya y'inkuba aseseka ntanyobwe umushaidja mukanya." Den Inhalt und den Sinn dieser Formel konnte ich nicht ermitteln.

Kavuna werden kleine Strohhütten gebaut. Man opfert ihm Bananenbier mit Honigzusatz in doppelhalsigen Töpfen. Früher bedeckte sich der Opfernde mit einem Leopardenfell. Beim Opfern wird mit nach vorn gestreckten Händen gesungen: „Kavuna ushime ntango yawe" — Kavuna empfange mein Opfern.

Wendet man sich an Mugasha, so umwickelt man sich Beine, Hände und Hals mit Rinde des Bananenstammes. In der Rechten wird ein Stock am dünnen Ende gehalten. Der Betende trampelt mit den Füßen, schlägt mit dem Stock auf den Boden und wiederholt: „Mugasha akatema katoke niribiriri, niribirimbo."

Kakuku war ein alter, paralysierter Sklave. Will man sich an ihn wenden, so werden zunächst die Arme mit Asche eingeschmiert, und der Opfernde kratzt sich die Haut, weint und seufzt. Die geopferten Erbsen werden in verbogenen Fingern gehalten, weil der Paralysierte nicht anders essen konnte.

Kagoro werden kleine Pfeile aus Holz oder Eisen mit den Worten „busenda bwa Kagoro" geopfert.

Senyakazana opfert man „inkore" genannte Erbsen und Linsen.

Rubaga ist der Größte nach Ryangombe, und ihm werden auch Rinder geopfert.

mubwani bwa Ryangombe.
das Königstum des Ryangombe.

Die Übersetzung dieses, durch einen Missionsschüler in Nsasa geschriebenen, Manuskriptes verdanke ich R. P. Buisson.

Geheimbünde. Der Ryangombe-Kultus wird durch die Geheimbünde der „babandwa" gepflegt. Diese Verbände vereinigen sowohl Männer und Frauen, wie auch Batutsi und Bahutu.

Die Geheimbünde der „babandwa" umfassen in der Nduga vor allem einen bedeutenden Teil der Bevölkerung und scheinen dort, wie auch im übrigen Ruanda, nicht nur wohlorganisierte Kultusgemeinschaften darzustellen, sondern auch eine politische Rolle zu spielen.

Das soll z. B. mit dem Biheko-Kultus in großem Umfange der Fall sein. Man macht ihn für manche Unruhe im Norden von Ruanda verantwortlich. Biheko war angeblich eine Binego, dem Jünger Ryangombe's, geweihte Frau. Sie wurde durch Lwabugiri, der, wie es scheint, in ihrer Person die partikularistischen Tendenzen des Nordens bekämpfte, totgeschlagen. Um der Rache ihres Geistes zu entgehen, gestattete Lwabugiri seinen Untertanen sich dem durch sie vertretenen Kulte einzuweihen. Seit dieser Zeit soll der Biheko-Kultus in Mulera und Bugoye große Fortschritte gemacht haben.

Nach R. P. L. Classe[1]) war Biheko ein Mann aus Ndorwa, der die Brüder Lutindangezi, Gahaya und Maloli hatte.

Mit dem Biheko-Kultus werden in Mulera die „ikrosho" genannten Eisenstäbe in Zusammenhang gebracht. Sie wurden schon durch Stuhlmann[2]) aus Mpororo beschrieben und mit dem Nyawingi-Kultus verknüpft.

Die dogmatische Seite dieser Erscheinungen hat ungefähr folgende Gestalt. Mit Ryangombe dürfen nur die ihm Geweihten verkehren; mit Ryangombe muß man aber verkehren. Nur durch Opfer kann man Ryangombe bewegen, den verjagten Geistern die Rückkehr in die „birunga" (Vulkane)

[1]) Classe, R. P., Mœurs et Coutumes des Bugoye. Les Missions Catholiques 1903, S. 440.
[2]) Stuhlmann, F., Mit Emin Pascha ins Herz von Afrika. Berlin 1894, S. 233.

zu gestatten und die Lebenden von ihnen zu befreien. Dies ist vor allem bei Krankheitsfällen von großer Bedeutung, da die Krankheiten doch durch Geister verursacht werden. Deshalb pflegt man auch sehr oft Kranke in die Geheimbünde der „babandwa" einzuweihen, und zwar manchmal in so schweren Stadien, daß sie den Zeremonien nicht ganz bewußt beiwohnen können. Man hofft aber, dem Kranken durch die Einweihung einen so mächtigen Beschützer zu erwerben, daß er imstande sein wird die Genesung des neuen Bundesmitgliedes zu erwirken. Trotz der so basierten Erwartungen unterläßt man aber nicht auch den Manen zu opfern, um die Stimmung der Geister, welche für den Kranken in Frage kommen könnten, günstig zu gestalten.

Die Existenz des Bundes teilt die Bevölkerung in zwei Klassen: die Eingeweihten und die Profanen. Die Eingeweihten zerfallen wieder in zwei Unterklassen, die „babandwa", die die Zeremonien ausführen, und die „rusingo", gewöhnliche Eingeweihte der unteren Stufe. Es wird in dieser Weise eine Hierarchie geschaffen, in der die Angst vor der übernatürlichen Macht der Auserlesenen Disziplin übt. So sind die Geheimbünde mächtige Faktoren sozialer Integration.

Die Hierarchie der Geheimbünde entspricht nicht der territorialen Gliederung in Häuptlingschaften und der Gliederung in exogame Clans. Sie schafft Abhängigkeiten, welche die eben erwähnten Gliederungen überbrücken, und festigt in dieser Weise unter Heranziehung der „übernatürlichen Mächte" das soziale Gefüge.

Abb. 163. Bibeko-Eisenstäbe aus Mulera. (1/6 d. w. Gr. III E 13770 u. III E 13727. Länge 130 u. 111 cm.)

Es wäre müßig zu diskutieren, ob die Staaten des Zwischenseengebietes ohne Geheimbünde existieren könnten. Es ist aber sehr wahrscheinlich, daß die Herrschaft der Batutsi- und Bahima-Minoritäten durch die Organisation der Geheimbünde bedingt ist. Unter den „babandwa", die ihre Würde auf einen ihrer Söhne vererben, scheint das herrschende Element unverhältnismäßig stärker, als in der übrigen Bevölkerung vertreten zu sein. Diese Tatsache hängt wohl mit dem Umstande zusammen, daß der Ryangombe-Kultus ursprünglich ein Batutsi-Kultus sein sollte. Diese Ansicht wurde mir wiederholt in einer wenig bestimmten Form durch Missionäre und Eingeborene geäußert. Sie findet Unterstützung in der Feststellung von Rehse[1]), daß Ryangombe in Kiziba als ein Bahima-Geist angesehen wird. Dafür spricht auch die Tatsache, daß während der Einweihung die Vertreterin von Ryangombe

[1]) Rehse, H., Kiziba. Land und Leute. Stuttgart 1910, S. 134.

ausschließlich Hirsebier trinkt. Die ausschließliche Verwendung von Hirsebier bildet einen Hinweis auf die Steppen im Nordosten vom Victoria-Nil, von woher, den Überlieferungen gemäß, die Batutsi-Bahima einst eingewandert sind.

Am anschaulichsten wird der Zusammenhang des geheimen Kultes mit der Batutsi-Schicht durch die Tatsache charakterisiert, daß man in Kissaka, wie auch im übrigen Ruanda, viele Bahutu- und fast keine Batutsi-Christen hat. Die hohe soziale Organisation des Landes gibt die Möglichkeit, das Christentum zu verbreiten. Das beweisen auch die vielen bekehrten Bahutu. Bei den Batutsi stößt aber das Christentum auf einen anderen wohlorganisierten Kult, der seine Fortschritte zu annulieren imstande ist.

R. P. Paul Loupias vertritt die Ansicht, daß der Ryangombe-Kultus ein Bahutu-Kultus ist, und führt zugunsten dieser Ansicht die Tatsache an, daß der dem Ryangombe geweihte Königssohn, wie Ishirangabo, Bruder Musinga's z. B., das Anrecht König zu werden verliert.

Die Konzeption des Seelenreiches der Verschiedenen und die große Macht des Ryangombe, dessen Namen man ohne Schaudern nicht auszusprechen wagt, und dem nur Eingeweihte opfern dürfen, steht in großem Gegensatze zu den Geistern der verstorbenen Ahnen, die mit den lebenden Bahutu in engem Kontakt bleiben, mit ihnen wohnen und von ihnen verpflegt und versorgt werden. Dieser Gegensatz gestattet die Annahme, daß hier eine Vermischung stark verschiedener Anschauungen vorliegt. Außer Zweifel haben wir hier auf dem Religionsgebiete die Verschiedenheit der beiden aufeinanderwirkenden Kulturen: der Batutsi und Bahutu, vor uns.

Eine besondere Aufmerksamkeit verdient die Bedeutung des Hundes bei den „babandwa". Man hat mich versichert, daß der Hund die Kuh, d. h. das wichtigste, das heilige Tier der „babandwa" ist. Etwas Genaueres über seine Rolle im Kulte ist mir nicht gelungen zu erfahren. Die Anhänger der Ansicht, daß die Staaten Zentral-Afrika's Überbleibsel der Ausstrahlungen ägyptischer Kultur sind, könnten vielleicht in der Verknüpfung des Hundes mit dem Kulte des „Herrn der abgeschiedenen Seelen" eine Abspiegelung des hundsköpfigen Anubis sehen.

Die „babandwa" üben ihre Macht als Medizinmänner, Opferer und Wahrsager aus. Diese drei Funktionen sind sehr enge miteinander verknüpft, so daß eine Scheidung zwischen ihnen kaum möglich ist. Abgesehen von den „babandwa" und den Verehrern Biheko's, sollen noch die „balozi" einen Geheimbund bilden.

Initiation. Die Einweihung in einen Geheimbund ist mit langen und umständlichen Zeremonien verbunden. Man unterscheidet dabei zwei verschiedene Kategorien der Eingeweihten: die ganz Eingeweihten und die teilweise Eingeweihten, die nur die ersten Vorprüfungen überstanden haben.

Ich möchte jetzt versuchen, ein Bild der als sehr strenges Geheimnis gehaltenen „babandwa"-Einweihung in Ruanda zu geben.

Das Bild, das durch mühsames Ausfragen gewonnen wurde, zeigt uns wesentliche Übereinstimmungen mit der Beschreibung des R. P. VAN THIELE aus Ussuwi, wenn auch die Disposition der ganzen Zeremonie gewisse Unterschiede aufzuweisen scheint.

Abb. 164. Krone des Mugasha aus Mulera. (1/4 d. w. Gr. III E 13033. Dm. 20 cm.)

Soll jemand in den Geheimbund der „babandwa" aufgenommen werden, hat man z. B. einen Kranken, wie das meistens geschieht, dem das Hühnerorakel ausgesagt hat, daß er durch die Einweihung geheilt werden könne, so muß man die Eingeweihten durch Geschenke zur Aufnahme des Betreffenden veranlassen.

Man sucht zunächst einen einflußreichen Eingeweihten auf, der sich einverstanden erklären würde, als Vormund (Pate) aufzutreten. Der Vormund, den man auch „Vater" nennt, ladet die übrigen Eingeweihten in das Haus des Einzuweihenden ein.

Damit die Zeremonie der Einweihung stattfinden könnte, müssen gewisse Vorbereitungen getroffen und einige Gegenstände gesammelt werden; darunter befinden sich ein Schwert, eine Glocke, eine Fackel, ein größeres Quantum Bier und Lebensmittel, die vom Einzuweihenden besorgt werden.

Am verabredeten Abend versammeln sich die Eingeweihten in größerer Zahl in der Hütte des Einzuweihenden und fangen mit dem unvermeidlichen Biertrinken an. Die einzelnen „babandwa" treten dabei als die verschiedenen „bagaragu" des Ryangombe auf, was auch in ihren Insignien zum Ausdruck kommt. So soll der Vertreter Mugasha's mit einem Scepter in der Hand und mit einer Krone auf dem Haupte auftreten. Die Krone besteht aus einem nach der Art der Topfuntersätze geflochtenen Ring, an dem in zwei Reihen Schnüre hängen. Auf jede Schnur ist je ein kleiner Rohrzylinder aufgezogen und wird

durch den an dem Schnurende angebundenen Fruchtkern der wilden Banane festgehalten. Auch in Ruanda, ebenso wie in den übrigen Ländern des Zwischenseengebietes, verknüpft sich Mugasha mit der Banane. In ähnlicher Weise tritt uns hier Kagoro als tapferer Jüngling, mit Speer und Stock in der Hand, entgegen. Mit Rücksicht darauf kann man erwarten, daß der von R. P. van der Burgt[1]) beschriebene Kultus der Lanze (des Ikiranga) mit Binego im Zusammenhange stehe.

Die Uneingeweihten dürfen der Zeremonie nicht beiwohnen, und man pflegt sie aus der Nähe der Hütte des Einzuweihenden durch Stockhiebe in einer so rohen Weise zu vertreiben, daß sie ihre Neugierde oft mit schweren Verletzungen und manchmal sogar mit dem Leben büßen müssen.

Soll die Zeremonie anfangen, so setzen sich der „Vater" und das „Kind" auf den Schemeln einander gegenüber mit gespreizten Beinen. Die anwesenden Eingeweihten fragen, was sie hier eigentlich wollen. Der Einführende und der Kandidat antworten, sie möchten in den Bund eingeführt werden. Die Eingeweihten verweigern es und suchen manchmal den Kandidaten durch Prügel zu verjagen. Es kommt vor, daß der Einzuweihende den Mut verliert und davonläuft, womit auch die ganze Zeremonie ihr Ende findet. Flüchtet der Kandidat nicht, und ist man einverstanden ihn aufzunehmen, so unterwirft man ihn verschiedenen Prüfungen, durch welche er beweisen soll, daß er würdig ist dem Bunde beizutreten. Die ersten Prüfungen sind einfache Spielereien. Man gibt ihm den Auftrag einen Stern zu holen, mit dem Vermerk, daß der, der das nicht ausrichten kann, unwürdig ist, in den Geheimbund aufgenommen zu werden. Darauf nehmen die Eingeweihten glühende Kohlen vom Herde, werfen sie wiederholt in die Luft und fangen mit den Händen. Nach dieser Zeremonie versucht man wieder den Kandidaten mit Hieben zu verjagen.

Dann gibt man ihm geweihtes Bier durch einen verstopften Halm zu trinken mit denselben Worten: „Wenn das dir nicht gelingt, bist du unwürdig dem Bunde der ‚babandwa' beizutreten". Die Eingeweihten zeigen dabei, daß ihnen dieses keine Schwierigkeiten bietet und trinken Bier mit ihren guten Saugröhren. Dem Geprüften gelingt es wieder nicht. Nach dieser Prüfung geht man zur letzten über; man läßt den Kandidaten Steine essen. Auch dieser Versuch mißlingt ihm. Die Eingeweihten machen dabei vor, als ob sie Steine mit Leichtigkeit genießen könnten und essen Bananen.

Der Einzuweihende fragt dann seinen Vormund ganz schüchtern, wie solle man das alles machen. Dieser nimmt geweihtes Bier (buahoro) in den Mund und bespritzt ihn damit. Später schmiert er ihm das Gesicht mit Kaolin (runoni) ein, und spricht unverständliche, geheimnisvolle Worte. Diese Zeremonie wird „kurawa ingwa" genannt. Nachdem dies gemacht ist, nimmt der Einweihende

[1]) Van der Burgt, J. M. M., R. P., Dictionnaire Français-Kirundi avec l'Indication succincte de la Signification Swahili et Allemande. Bois-le-Duc (Hollande) 1903. S. 516.

eine Kohle vom Herde, wirft sie in die Luft, und der Einzuweihende fängt sie, später gibt er ihm Bier durch ein gutes Saugrohr zu trinken und reicht ihm eine Banane, die durch das „Kind" aufgegessen wird. Darauf erklärt man, daß der Kandidat aufgenommen werden könne. Mit diesem Augenblick fangen die Gesänge an. Während der Gesänge wird der Kandidat durch seinen „Vater" geschickt, Bananen zu stehlen. Ist ihm das, ohne erblickt zu werden, gelungen, so wird er nach der Rückkehr in die Versammlung beglückwünscht. Man rühmt seine Schlauheit und begrüßt ihn mit dem Namen, den er von diesem Augenblick an im Bunde trägt. Nach dieser Unterbrechung werden die Gesänge fortgesetzt, und der „Vater" geht zum Einweihen, wobei unverständliche Worte gebraucht werden, über.

Der Einzuweihende begibt sich mit seinem Vormunde zum „muku" oder „mulinzi", dem Baum, der Ryangombe geweiht ist. Hier schließt sich dem einweihenden „mubandwa" sein „muhiruka" genannter Gehilfe an. Außer ihnen darf in der Nähe des Baumes niemand zugegen sein. Nachdem man sich darüber vergewissert hat, streckt man den Einzuweihenden auf dem Boden auf dem Rücken aus, und der Einweihende führt mit seinem Gehilfen einen leidenschaftlichen Tanz aus, wobei dem Kandidaten wiederholt gedroht wird, seine Brust mit einem Schwerte zu durchstechen. Diese Zeremonie soll dem Kandidaten zum Bewußtsein bringen, was mit ihm passieren würde, falls er sich entschließen sollte, dem Bunde gegenüber eine Indiskretion zu begehen. Sie bildet auch zugleich den Schwur des Einweihenden, daß er die Strafe vollstrecken wird.

Nachdem der Tanz zu Ende ist, kehren alle drei in einem Zuge nach der Hütte, wo die Eingeweihten versammelt sind, zurück; der „muhiruka" geht vorn, der Einzuweihende in der Mitte und der „mubandwa" schließt den Zug. Andere Eingeweihte (babandwa) kommen ihnen entgegen. Unter ihnen befindet sich einer, der „kishego" genannt wird. „Kishego" trägt eine brennende Fackel (lumuri) und eine kleine Glocke, die von ihm geläutet wird. Alle zusammen kehren in die Hütte des Einzuweihenden zurück.

Nach der Rückkehr setzen sich der Einzuweihende und der einweihende „mubandwa" auf Schemeln einander gegenüber. Zwischen ihnen steht ein Topf mit „marwa" (Hirsebier), und neben dem Topfe sitzt eine alte Frau im Stirnschmuck, der einen Hasenschwanz trägt, und mit einem Stück „muku"-Holz in der Hand. (Das „muku"-Holz ist bekanntlich Ryangombe geweiht.) Alle Anwesenden hocken mit nach vorn gestreckten Händen und rufen Ryangombe an.

Ist die „marwa" Ryangombe in dieser Weise geopfert, so legt sich der Einzuweihende vor der alten Frau, die mit dem „muku"-Holz in der Hand Ryangombe vorstellen soll, auf den Boden. Der Einzuweihende sagt der Frau: „Unkize, undinde, muli uyu muaka umbesheho" (Lasse mich genesen, hüte mich dieses Jahr). Die Frau macht mit dem Kopfe eine Bewegung, als ob sie einverstanden wäre, stößt ein unverständliches Brummen — mmm — aus und sagt:

„Nzakubesho, ntanga yewe" (ich werde dich hüten, ich werde dich leben lassen, mein Kind); später fügt sie hinzu: „Chwaga, chwagura Ryangombe", was angeblich bedeuten soll: „Güte in Fülle, Du Ryangombe". Darauf nimmt sie Bier in den Mund und spuckt es auf den Einzuweihenden. Das ist der Mittelpunkt der Zeremonie. Ist dies geschehen, so nehmen alle kleine Fackeln und irren in der Hütte herum, als ob sie etwas suchten. Nach dem Suchen werden die, vorher zu dieser Zeremonie speziell vorbereiteten, Erbsen (maharagi) und steifer Hirsebrei (mutsima) gegessen. Bei den Batutsi genießt man bei dieser Gelegenheit außerdem noch Milch. Damit ist die Zeremonie dieses Tages abgeschlossen.

Nach dem gemeinsamen Essen singt der frisch Eingeweihte schon mit und wird durch die Anwesenden ostentativ geehrt. Er hat auf dem Kopfe eine Graskrone, trinkt Bier mit und genießt das geopferte Fleisch. Nachdem er aufgehört hat zu essen, erzählt man ihm, daß Ryangombe und vor allem der Geist, dessen Namen er trägt, ihn schützen werden, daß er viele Kinder haben wird, daß er den geheimen Versammlungen beiwohnen darf, und belehrt ihn über die Opferformeln.

Nach diesen Zeremonien wird noch Bier bis zum Morgen getrunken. Kurz vor Sonnenaufgang gehen die Anwesenden, den frisch Eingeweihten ausgenommen, die Hütten in den benachbarten Bananenhainen zu besuchen. Diese Zeremonie nennt man einfach „kusega". Die Besucher werden überall mit „marwa" und „nzoga", je nachdem was man hat, bewirtet und mit Bananen beschenkt. Nach dem Besuche kehrt man nach der Hütte, wo die Zeremonie stattgefunden hat, zurück, um das übriggebliebene Bier auszutrinken, und geht darauf nach Hause. Am nächsten Abend oder nach einigen Tagen kommt der „mubandwa" mit dem „muhiruka" zum frisch Eingeweihten, ißt mit ihm zusammen und erwärmt Wasser, das in den Topf geschüttet wird, welcher während der Einweihung das dem Ryangombe geopferte Bier enthalten hat. Das Wasser wird durch die Angehörigen des frisch Eingeweihten getrunken. Nachher werden die während des Morgenbesuches (kusega) eingesammelten Bananen in den unterirdischen Wärmer zum Ausreifen gelegt. Nach einigen Tagen, wenn das Bier aus diesen Bananen schon fertig ist, kommen Bekannte zu Besuch, und sie werden alle mit diesem Biere (nzoga) bewirtet.

In dieser Weise hat der Kandidat die untere Stufe der Einweihung erwirkt. Er ist „rusingu" geworden. Auf ihr bleiben sehr viele, ohne höher zu steigen.

Beim Einweihen der Batutsi schlachtet man bei dieser Gelegenheit ein Rind. Nachdem das Rind gefallen ist, legt sich der „mubandwa", der „muhiruka" und der Einzuweihende — es sind immer die drei tätigen Personen — auf das liegende Rind, einer nach dem anderen, hin. Diese Zeremonie heißt „kwitonda gira". Erst nach ihr wird das Tier zerlegt, und das Fleisch an die Anwesenden verteilt.

Will ein Eingeweihter in der Hierarchie höher steigen, will er statt „rusingu" ein „mubandwa" werden, so geht er zum „Vater", der ihn eingeweiht hat,

und bittet um weitere Einweihung. Ist dieser damit einverstanden, so wird eine Versammlung zu diesem Zwecke einberufen. Der Kandidat verschafft, ebenfalls wie zum ersten Male, Bier und Lebensmittel. Die Profanen werden wieder selbstverständlich ausgeschlossen. Es werden ähnliche Zeremonien vorgenommen, wobei der Kandidat mit Bier bespritzt wird; die Prüfungen sind jetzt aber hart. Und da man nur sichere und ausgewählte Leute zu der höheren Einweihung zuläßt, so sind diese Zeremonien in ein noch größeres Dunkel gehüllt. Die Kandidaten werden immer mehrere Male abgewiesen und erst in der dritten oder vierten Versammlung aufgenommen. Der neu Eingeweihte muß schwören, daß er weder die Geheimnisse der Vereinigung verraten noch in irgendeiner Weise das ihm geschenkte Vertrauen mißbrauchen wird. Bei dem Schwur berührt der Kandidat die Ryangombe geweihten Gegenstände, wie die Krone, die Glocke und andere. Nach der Zeremonie wird der frisch Eingeweihte durch die älteren Bundesgenossen nach Hause begleitet. Alle Teilnehmer dieses Festzuges tragen Äste des Ficusbaumes in den Händen. Von jetzt an hat der eben Eingeweihte das Recht, Ryangombe zu opfern, Kandidaten in den Geheimbund einzuführen und allen Zeremonien beizuwohnen. Der durch die Einweihung Neugeborene steht nun schon über dem Rechte der Profanen und gehört zur Zahl der Ausgewählten. Er darf nur nicht vergessen, seinem Schutzgeiste und Ryangombe von Zeit zu Zeit zu opfern.

Eine etwas abweichende und viel eingehendere Beschreibung der Einweihung in den Bund der „babandwa" gibt R. P. van Thiele aus Ussuwi. Diese Beschreibung bezieht sich, wie es scheint, auf die höhere Stufe der Einweihung, über die ich in Ruanda nur weniges erfahren konnte. Ich gebe sie hier in einem Auszuge, der nach der mir durch R. P. L. Classe zur Verfügung gestellten Notiz gemacht wurde.

Zur Einweihung sind zwei „babandwa" notwendig, ein Mann und eine Frau. Der Mann wird genannt „mugogo saidja" und die Frau „mugogo kazi". Man nennt auch den Mann „musego" — der Einweihende — und die Frau „muchwezi" — die Einweihende. Beide zusammen sind Eltern „baishebuhemba". Sie haben bei sich noch Gehilfen, die „bihale" genannt werden. Der Einzuweihende wird in der Zeremonie als ihr „Kind" angesehen. Das „Kind" ist gewöhnlich krank. Die Zeremonie wird vorgenommen auf Veranlassung des vorher herangezogenen Wahrsagers. Zur Zeremonie ist eine Anzahl verschiedener Gegenstände notwendig. Das sind ein Messer, eine Axt, Feuer, Schemel, Kalebassen, zwei Arten Bier, ein Löffel, ein Stock, eine große Nadel, eine Tabakwurzel, ein mit Haaren vom Schwanze eines Tieres (mbwisi) umwickeltes Stäbchen aus „musinge"-Holz, mit weißem Schnupfpulver (ntendere) bestreut, was zusammen „kimwanda" genannt wird, ein Pfeil, eine Hacke und zwei kleine Stücke Holz vom „mulinzi"-Baume, die man etwas aushöhlt, um ihnen die Bootform zu geben, das sind die „bilimbe", und zuletzt die „bisingo", d. h. mit Kaurimuscheln geschmückte Felle.

Nach der Ankunft in das Haus des Einzuweihenden setzen sich die „baishebuhemba" gekrönt auf ihre Schemel. Sie vertreten die an der Zeremonie teilnehmenden Geister. Die Frau läßt ihre Hände abwechselnd auf dem Stocke von oben nach unten gleiten. Vor ihnen steht das Bier. Der Kranke liegt zu ihren Füßen. Man gibt ihm Schnupfpulver. Nießt der Geprüfte, so beweist das, daß er sich zur Einweihung eignet. Wenn das Nießen ausbleibt, so findet die Zeremonie der Einweihung nicht statt. Einer der Angehörigen bittet die Geister Mitleid mit ihrem Menschen zu haben, ihn zu heilen, ihn als den ihrigen aufzunehmen und von ihm Besitz zu ergreifen. Nachdem steckt der „mugogo" dem Kranken die Tabakwurzel in den Mund und hält sie dort so lange, bis der Betreffende ohne Besinnung zusammenbricht. Dann wird ein Feuer gemacht, und an ihm „kimwanda", Pfeil und Hacke deponiert. Es werden zwei Geister angerufen, z. B. Ryangombe und Mugasha. Die Frau, die den Ryangombe darstellt, wird von dem Manne mit den Worten gebeten: „Komme, o Ryangombe! Heile und empfange deinen Mann!" Dieses Gebet wird genannt „kwentongeza", d. h. sich aufnehmen lassen, sich einweihen, Einweihung. Die den Ryangombe darstellende Frau ahmt mit geschlossenem Munde das Rinderbrüllen nach, was die Anwesenheit des Geistes bedeuten soll; das wird „kutangana" genannt. Dann sagt ein Eingeweihter: „Ich war ‚kutanganirwa' durch den Geist N. N.", und der Mann reicht der Frau einen Trinkstrohhalm. „Ryangombe" nimmt Bier in den Mund und wirft es zerstäubt auf den Kranken. Dieses Hirsebier wird in einem irdenen Topfe gehalten; es ist von der „endimasi"-Sorte zubereitet, die Ryangombe geweiht ist. Nun wiederholt die Frau dasselbe Gebet, sich an den Mann wendend, der auch mit einem Seufzer antwortet, was die Anwesenheit von Mugasha bezeugen soll. Der Geist trinkt auch durch einen Halm, der ihm von der Frau angeboten wird. Er trinkt aus einer Kalebasse Bananenbier „luhagwa" und spuckt es auch auf den Kranken. Dann nimmt der „mugogo" von seiner „kimwanda" etwas „ntendere", gibt dem Kranken die zweite Portion des weißen Nießpulvers, um ihn zum Bewußtsein zu bringen, schlägt ihn auf den Kopf mit der „kimwanda", und der Kranke erwacht. Damit endigen die Zeremonien des ersten Tages. Die „baishebuhemba" bleiben nachtsüber im Hause des Kranken. Sie wohnen dort während der vier Tage, die die Zeremonie in Anspruch nimmt.

Am nächsten Abend geht man ins Gebüsch, recht weit von den Hütten, nach einer Stelle, die „kagondo kato" genannt wird. Die Geister werden in derselben Weise wie am letzten Abend angerufen. Die Anwesenden trinken Bier, das auf den Kranken gespuckt wird, welcher im Falle einer Genesung den Geistern gehört. Dann nimmt der „mugogo" das Messer und die Axt und sagt dem Kranken drohend: „Ich werde dich totschlagen, wenn du Anderen sagst, was ich mit dir mache." Die Frau nimmt den Stock, legt ihn auf den Nacken des Kranken und bedroht ihn in derselben Weise. Man führt einige Tänze aus und kehrt nach Hause zurück. Diese Zeremonie heißt „mutalongo" oder „kumeramera."

Der dritte Tag ist der große Tag der Prüfungen. Diesmal dauert die Zeremonie länger, und man bricht bereits gegen Mittag auf. Zu den oben erwähnten Gegenständen kommen noch Lebensmittel und ein Bogen mit Pfeilen hinzu. Man geht nach „kagondo kakuru", das groß genannt wird infolge des Platzes, der nicht im Gebüsch liegt, sondern am Fuße eines großen Baumes. Man beginnt mit dem Anlegen eines Feuers. Der Kranke liegt ausgestreckt auf Blättern am Fuße des Baumes. Der „mugogo" steigt auf eine kleine Erhöhung und ruft die Eingeweihten aus der Umgebung zusammen mit den Worten: „Esaire, Esaire", d. h. Eingeweihte. Die „babisi", d. h. die Frischen oder Nichteingeweihten, wagen nicht und dürfen nicht kommen. Es kommen nur die, die einst eingeweiht wurden. Man geht wie zu einer Feier. Wenn alle da sind (es sind manchmal fünfzig und mehr), werden Amulette und Arzneien verbrannt, damit die „babisi", die Profanen, ihr heiliges Holz nicht schädigen könnten.

Später legt man den Kopf des ausgestreckten Kranken auf die Knie eines Anwesenden. Man läßt ihn die Zunge ausstrecken und legt eine Arznei darauf. Der „mugogo" nimmt ein kleines Brettchen, schiebt es unter die Zunge, nimmt in die andere Hand eine große, mit Arznei bestrichene Nadel und durchsticht mit ihr die Zunge des Kranken in der Weise, daß die Spitze in dem Brettchen stecken bleibt. Wenn das Blut rinnt, hat die Zeremonie keinen Wert: das beweist, daß der Geist den Betreffenden nicht will. Der Kranke wird durch die Gehilfen ausgestreckt gehalten, die ihm Arme und Beine fixieren. Sein Kopf ruht immer noch im Schoße eines anderen, der ihn unterstützt. Die Nadel bleibt in der Zunge eine kürzere oder längere Zeit, je nach dem Alter und der Kraft des Einzuweihenden, stecken. Manchmal läßt man sie 20—30 Minuten darin. Während der ganzen Zeit führen die Anwesenden Tänze aus. Die Frauen schlagen dabei auf die Felle, mit denen sie bekleidet sind, und die Männer bewegen ihre Bierkürbisse. Sie singen abwechselnd die zwei Worte „wabo", was bedeutet „sie", und „bagaburi", was bedeutet „sie verleumden mich". Dabei legen sie ihre Armringe vor den „mugogo", um den Kranken auszukaufen. Hat ihre Zahl die genügende Höhe erreicht, zieht der „mugogo" die Nadel heraus. Der Tanz hört auf, und es wird gegessen. Nach der Mahlzeit wird der Geist angerufen, und man bedroht den Kranken, wie an den beiden vorigen Tagen. Alles wird nur mit mehr Tobsucht gemacht. Man endigt mit der Einladung der Anwesenden, sich am nächsten Tage früh am Morgen zum Schlusse einzufinden und begleitet den Kranken tanzend bis nach Hause. Manchmal bleibt man noch die Nacht hindurch im Freien, „kulala alukome". Der Körper des Kranken wird mit Erde oder Sand eingerieben, damit er schöner zu den Ablutionen des nächsten Tages wird.

Am vierten und letzten Tage findet die Zeremonie des „mulwesero", was Ablution bedeutet, statt. Am frühen Morgen begeben sich alle Eingeladenen in Festgewändern zu einem bestimmten Flusse. Ein Junge wird durch die „baishebuhemba" unter dem Wasser gehalten, ein Erwachsener folgt ihm

tauchend. Sie schließen sich mit Fingern Nase und Ohren. Die „baishebuhemba" schütten Wasser in die kleinen Boote aus „mulinzi"-Holz. Nach den Tauchereien wird der Oberkörper des Kranken weiß gemacht durch Auftragen von Zeichnungen mit Kaolin (runoni). Die Anwesenden bewundern seine Schönheit mit den Worten: „Du glänzst wie ein Leopard", „Du bist ein anderer Mensch." Am Ufer des Flusses wird gefeiert und getrunken. Dann werden noch die Geister wie an vorhergehenden Tagen angerufen. Am Abend kehren alle singend und tanzend wie Besessene zurück. Im Hofe vor dem Hause angekommen, erhalten sie eine Hacke und vier Samenkörner von Hirse, Maniok, Kürbis und Erbsen. Der Eingeweihte vergräbt sie mit seinen „baishebuhemba" und anderen Anwesenden, wobei die Körner auf die beiden Boote aus „mulinzi"-Holz gelegt werden. Dann bekommt er den Namen eines Geistes und eine Krone mit zwei Kauris. Erst später darf die Zahl der Muscheln vergrößert werden. Darauf beginnt der Eingeweihte sich wie ein Besessener zu betragen. Er geht bis zum Beschimpfen seiner Angehörigen mit unanständigen Worten. Die „baishebuhemba" befehlen ihm sich auf den Boden zu legen, und nach einer Weile ruft ihn der „mugogo" mit seinem gewöhnlichen Namen, um ihn an das Alltagsleben zu erinnern. Der Eingeweihte macht vor, als ob er aus einem tiefen Schlafe erwachte, beschaut die Anwesenden und grüßt alle ruhig in der gewöhnlichen Weise. Das heißt wegnehmen den „luchwezi". Dann werden die Einweihungsspesen gezahlt und die Zeremonie ist beendigt.

Beide Einweihungsbeschreibungen zeigen einige Unterschiede, die wohl auch auf die lokalen Kultusunterschiede hinweisen.

Die allgemeinen Übereinstimmungen sind im Gegensatz zu den kleinen Unterschieden sehr groß. Es sollen hier nur erwähnt werden die Kaolineinschmierung, die Bespritzung mit Bier, das Anzünden des Feuers bei den Zeremonien, das Liegen des Kandidaten auf dem Boden, die Tänze am „mulinzi"-Baum, die Prüfungen, die Bedrohungen des Einzuweihenden, die weibliche Vertreterin des Ryangombe, der Zusammenhang des Ryangombe mit dem, in den Steppen des Nordens ausschließlich verwendeten, Hirsebier, und endlich die kultuelle Geheimsprache der Eingeweihten.

Sehr wichtig ist auch die Tatsache, daß der Vertreter von Mugasha, dem Geiste der Gewässer und Bananenhaine, Bananenbier aus einem Kürbis, im Gegensatze zur Vertreterin von Ryangombe, trinkt.

Geheimsprache. Die „babandwa" bedienen sich bei ihren Handlungen einer besonderen Sprache, die der übrigen Bevölkerung unbekannt ist und zur Gesamtheit der „babandwa"-Geheimnisse — „ibanga lyi bandwa" — gehört. R. P. van Thiele nennt sie „luchwezi" in Ussuwi, und mir wurde sie in Kissaka und Nduga (Marangara) als „lubandwa" bezeichnet. Es sollen hier nur die, durch R. P. van Thiele gesammelten „luchwezi"-Wörter den „lubandwa"-Wörtern, die R. P. Ch. Lecoindre gesammelt hat, gegenübergestellt werden. Andere Angaben über die Geheimsprache zu erhalten, ist mir nicht gelungen.

In Kissaka wird von den „babandwa" der Name des Schwiegervaters nie genannt, und man bezeichnet ihn „ikitari lwa hurawaa".

Opfer. Wenn auch jedermann opfern darf, so bezieht sich das nur, wie es scheint, auf die Manen. Die wichtigsten Opfer werden aber Ryangombe und seinen Jüngern gebracht. Diese Handlungen dürfen doch, wie es schon erwähnt wurde, nur Eingeweihte (babandwa) vornehmen.

Über diese Zeremonien berichtet R. P. VAN THIELE folgendes: Der zum Opfern aufgeforderte „mubandwa" begibt sich am Vorabend zum Spender und trifft in seinem Hause die notwendigen Vorbereitungen.

Am Morgen vor Sonnenaufgang begleitet die ganze Familie mit ihren Hörigen den „mubandwa" mit seinen Gehilfen nach dem Opferorte, der an einer Straßenkreuzung liegt. Der Vater geht mit Pfeil und Bogen. Das gefesselte Opfertier wird dort durch die Gehilfen des Zauberers festgehalten. Der „mubandwa" tötet es. Die vorher vorbereiteten Geheimmittel werden in das Blut des Opfers eingetan und den Anwesenden zuerst auf der Brust, dann auf der Stirn und zuletzt auf dem Rücken aufgelegt. Der „mubandwa" streckt dann auf dem Opfer kleine Bündel grüner Zweige, die „muyambo" genannt werden, aus. Nachdem er den Befehl zum Aufbrechen gegeben hat, machen sich alle auf den Weg; einer nach dem anderen überschreitet das Opfertier und begibt sich nach Hause, ohne sich nach hinten umsehen zu dürfen, weil sonst das Opfer seine ganze Bedeutung verlieren würde. In dieser Prozession geht der Familienvater als erster; ihm folgen die Söhne, diesen die Hauptfrau und nach ihr die übrigen Frauen und ihre Töchter. Der „mubandwa" bleibt mit seinen Gehilfen an der Opfer-

stelle. Wenn jemand in der Nähe der Opferreste vorübergeht, so bemüht er sich, ein Blatt aufzuheben, spuckt darauf und wirft es in der Richtung der Reste mit den Worten: Verfolge mich nicht (Geist, „umuzimu", Unglück oder Krankheit). Die letztere Handlung hängt mit dem Umstande zusammen, daß das Übel, der Geist, dessen man durch das Opfer losgeworden ist, an der Wegkreuzung den Vorübergehenden überfallen kann.

Abb. 165. Opfertopf für Bier aus Mulera. (1/4 d. w. Gr. L 15 173. Höhe 21 cm.)

Die Batutsi opfern Rinder, Schafe und Hühner, während das Opfertier der Bahutu die Ziege und in selteneren Fällen das Schaf ist.

Soweit ich mich erkundigen konnte, wird das Fleisch der geopferten Rinder bei günstigen Aussagen an alle Anwesenden verteilt. Sagen die Eingeweide ungünstig aus, so überläßt man es den Batwa. Das Fleisch der geopferten Schafe wird von den Angehörigen des Spenders nicht gegessen, und man überläßt es dem opfernden „inubandwa" und seinem Gehilfen. Die von R. P. van Thiele beschriebene Zeremonie bezieht sich deshalb ganz sicher auf das Opfern eines Schafes, was er zu erwähnen vergessen hat. Das Fleisch der geopferten Ziegen essen die opfernden Bahutu mit ihren Freunden auf.

a b

Abb. 166. Doppelte Tabakspfeife aus Ruanda. (1/2 d. w. Gr. III E 6595. Länge 9 cm.)

Die Batutsi tragen Fett und Knochen der geopferten Schafe als Amulette am Halse. Das Fett wird in kleinen Gefäßen, wie die Hühnereingeweide, auf Bastschnuren auf der Brust getragen.

Das Bier wird Ryangombe in Töpfen mit zwei Öffnungen geopfert. Aus einer Öffnung trinkt der Opfernde, aus der anderen Ryangombe. Demselben Zwecke scheinen die doppelten Tabakspfeifen zu dienen.

Beim Opfern dürfen die Batutsi keine Baumwollstoffe anhaben und müssen mit dem gefransten Kuhfell, „mukane", bekleidet sein.

Wahrsager, Zauberer und Medizinmänner. Abgesehen von den „babandwa", unterscheidet man in Mulera noch mehrere Kategorien Leute, die auf übernatürlichem Wege ihre Macht auf Lebende und Geister auszuüben verstehen. Es sollen hier genannt werden: „bapfumu", „bahuzi", „balozi", „bachunyi", „bahinza" und „bawubyi".

„Bapfumu" haben zur Aufgabe den Verkehr mit den Geistern der Verstorbenen (bazimu) zu besorgen. Man besucht sie nach einem Todesfalle in der Familie mit einem Geschenk aus Nahrungsmitteln und manchmal auch einer Ziege. Von ihnen erfährt man dann, wo es am zweckmäßigsten ist, die Geisterhütte des Verstorbenen (ndaro) zu bauen. Da der „mupfumu" im Kontakte mit den Geistern der Verstorbenen bleibt, und da diese Krankheiten verursachen, so fragt man ihn, ob der Kranke genesen wird. Der „mupfumu" gibt Antworten mit Hilfe des Brettchenorakels.

„Bahuzi" haben zur speziellen Aufgabe das Entdecken der Vergifter, die hier „balozi", im Runyoro-Gebiet „balogu" genannt werden. Wenn viele Todesfälle eintreten, wird sofort eine Vergiftung vermutet. Um dem Übel abzuhelfen, wird der „muhuzi" zitiert. Dessen Aufgabe besteht in der Feststellung, wer der Vergifter ist. Weiß man das, so kann man den Unheilsstifter totschlagen und dem Übel in dieser radikalen Weise Abhilfe, wenigstens für die Zukunft, leisten. Der „muhuzi" geht mit seinem verzauberten Antilopenhorn von Gehöft zu Gehöft. Überall wird er in der entgegenkommendsten Weise durch das Familienoberhaupt empfangen und beschenkt. Alle fürchten, daß der Unzufriedene auf sie als Vergifter zeigen könnte. Das hat immer den Tod zur Folge. Das Horn sagt während des Rundganges dem „muhuzi", wo sich das Gift befindet, und wer der Vergifter ist.

Die vom Blitzschlag Getroffenen werden ebenfalls durch den „muhuzi" behandelt. Schlägt der Blitz in eine Viehherde ein, so stößt der Herdenbesitzer ein Freudengeschrei aus, das in lange ausgestoßenem Hu.. besteht, wobei mit der Hand auf die Lippen geschlagen wird. Dieser Ruf wird durch die Nachricht ergänzt, daß der König seine Kühe zurücknimmt. Dies wird gemacht, um die betäubten Stücke zu retten. Der darauf geholte „maganga huzi" sucht diese unter Anwendung von Kräutern zu heilen und bekommt für seine Bemühungen als Honorar die Kiefer der erschlagenen Tiere mit anschließenden Fleischteilen. Die Hörner der gefallenen Stücke werden an der Unglücksstätte eingegraben. Die „bahuzi" haben auch die Aufgabe, den Kranken den Ausgang ihrer Leiden zu prophezeien.

„Balozi" — Vergifter — sollen ihre Opfer ums Leben bringen mit Hilfe eines Giftes, das sie unter dem Fingernagel verborgen tragen. Das Gift wird dem Opfer auf seiner eigenen Tabakspfeife gegeben, die der Vergifter verräterisch für eine Weile, um ein paar Züge zu machen, leiht. Alle plötzlichen Todesfälle werden als Vergiftung aufgefaßt. Diese Ansicht stützt sich auf der Tatsache, daß die Giftmischerei ein weit verbreitetes Verbrechen ist. R. P. F. Dufays erzählte mir, daß es ihm gelungen ist, einen durch „balozi" Vergifteten durch Brechmittel und Milch zu retten. Das läßt vermuten, daß es sich tatsächlich in diesem Falle um eine Vergiftung gehandelt hat. Während meines Aufenthaltes in Ruasa hatte ich Gelegenheit einen angeblichen Vergiftungsversuch zu sehen. Da Hauptmann W. v. Grawert für seine Strafkolonne den Führer

von Ruasa nahm, so brachten die Geschädigten uns einen angeblich vergifteten Topf Honig zum Geschenk. Der mißtrauische Mututsi, Lwakazina, der mich dort stets begleitet hatte, um durch Freundschaft mit einem Europäer sein Ansehen zu heben, entdeckte im Topfe ein in Bananenbast eingewickeltes Stückchen Fett. Er erklärte das als Leichenfleisch der von den Soldaten erschossenen Eingeborenen, was auch bei den Anwesenden allgemeinen Glauben fand. Die Art und Weise, wie sich die Schenker mit stolzem Bewußtsein verrichteter Pflicht und großem Schimpfen zurückgezogen hatten, veranlaßt mich anzunehmen, daß Lwakazina vielleicht recht hatte.

Vergiften und bezaubern wird mit demselben Wort „kuloga" bezeichnet. Deshalb ist es sehr schwer, in den Berichten die beiden Sachen auseinander zu halten. Vor allem ist es schwer festzustellen, ob nach Zauberern oder Vergiftern gesucht wird.

Ob die Vergifter hier einen Geheimbund bilden, konnte ich nicht erfahren. Sie sollen, wie ich wiederholt, aber immer in einer sehr unbestimmten und widerspruchsvollen Form, gehört habe, nachts am Feuer ihre Sitzungen (in Masken?) abhalten, Menschenfleisch oder sogar Leichen verzehren und Gifte bereiten.

„Bachunyi" sind Amulettfabrikanten. Wer sich mit einem Amulett (mpigi) versehen will, das ihn vor einem Übel schützen oder ihm in einer gewissen Beziehung helfen soll, begibt sich zum „muchunyi". Dieser versteckt sich und bereitet geheim das gewünschte Mittel mit Hilfe von Zaubersprüchen.

In Usuwi, nach R. P. VAN THIELE, haben die „bakoni", die wohl mit den „bachunyi" Ruanda's identisch sind, die Pflicht, das Gift der sagenhaft gefürchteten, geheimnisvollen „balogu" zu bekämpfen.

„Bahinza" beschäftigen sich mit den Angelegenheiten des Ackerbaues, vor allem also mit den Feldfrüchten und den Heuschrecken. Ihrer Mitwirkung verdankt man die gute Ernte. Deshalb gehen auch die „bahinza" nach der Ernte herum und sammeln für sich Spenden ein. Man beschenkt sie gern. Der „muhinza" kann durch seinen Fluch sowohl Menschen wie Tiere „austrocknen", so daß sie das Vermögen, Geschlechtsverkehr auszuüben, verlieren.

Die Baleta fürchten den Fluch des „muhinza" sehr, da er nur den Fluchspruch auszusagen und auf den Boden zu spucken braucht, und die Wirkung tritt von selbst ein.

R. P. F. DUVAYS erzählte mir, daß er Gelegenheit hatte zu beobachten, wie ein vom „muhinza" Verfluchter binnen kurzer Zeit aus Angst gestorben ist. Die „bahinza" sind immer Bahutu.

„Bawubyi" sind Regenmacher. Sie erscheinen in der Übergangszeit zwischen der Regen- und Trockenzeit und verlangen Geschenke für Regenmachen oder für Aufhören des Regens. „Bawubyi" sind immer vom Pariastamm der Batwa.

Mit Rücksicht auf die Tatsache, daß es nur sehr wenige Batutsi in Mulera gibt, und ihr Einfluß sehr gering ist, darf man annehmen, daß die hier besprochenen

und mir aus Mulera bekannten Kategorien der Wahrsager und Zauberer, wie auch die ganze Giftmischerei, Erscheinungen sind, die in der Bahutu-Kultur wurzeln und nicht als Entlehnungen von den Batutsi angesehen werden müssen.

In Ruanda werden, ebenso wie in Kiziba und Mpororo, Frauen den Geistern geweiht. Diese haben für die Bedürfnisse der Geister zu sorgen und ihre Kinder sollen als Kinder des Geistes angesehen und zu seinem Geschlecht gezählt werden, da den Frauen der Geschlechtsverkehr mit anderen angeblich verboten ist. Man erzählte mir aber ganz offen von einem Falle, wo ein Mututsi-Häuptling einem Geiste Bahutu-Frauen geweiht hatte und mit ihnen den Geschlechtsverkehr ausübte.

Wahrsagen und Träume. In Ruanda sind verschiedene Methoden des Wahrsagens im Gebrauch. An erster Stelle muß seiner großen Bedeutung wegen das Hühnerorakel genannt werden.

Um sich über eine Angelegenheit durch das Hühnerorakel orientieren zu können, muß der Fragende mit einem Huhn zum Auguren (mupfumu) gehen. Bei der Ankunft spuckt er dem Huhn in den Schnabel und überreicht es dem Wahrsager. Der Wahrsager legt zunächst das Huhn auf den Kopf des Besuchers und ruft darauf seinen Gehilfen, einen jungen Burschen. Der Junge faßt das Huhn unter die Flügel und legt es mit dem Rücken auf den Boden. Der „mupfumu" schlitzt das Huhn von der Mundspalte an auf, so daß die Zunge mit dem Unterkiefer bleibt, und hebt die Eingeweide heraus. Diese werden in ein improvisiertes Becken gelegt und gewaschen. Das Becken besteht aus einer Vertiefung im Boden, die mit einem Bananenblatt ausgelegt ist. Die gewaschenen Eingeweide werden auf der Hand ausgebreitet, und der Wahrsager sucht die „nkebe" genannten Wucherungen. Wenn die Anzahl der „nkebe" 2—3 nicht übersteigt, so ist die Aussage günstig oder bejahend. Ist die Aussage für den Fragenden ausgefallen, so werden einige Knochen vom Huhn genommen und in ein kleines Gefäß aus Rindenstoff gelegt. Zu den Knochen pflegt man noch manchmal die Eingeweide mit den „nkebe" hinzuzufügen. Dieses Gefäß wird nach der Austrocknung im Rauche des Hausherdes am Halse als Amulett gegen bösen Blick getragen. Ist die Zahl der gefundenen „nkebe" größer, so wird das Huhn weggeworfen, und die Operation wird an einem anderen wiederholt.

Das Überreichen des Amuletts aus einem Stückchen Rindenstoff mit Hühnerknochen und Fett geschieht mit gewisser Feierlichkeit in einigen Tagen nach dem Wahrsagen. Soviel Zeit ist zum Austrocknen des Inhaltes erforderlich. Der „mupfumu" kommt früh am Morgen in die Hütte des durch günstige Aussage Beglückten. Er wird sitzend empfangen. Der Mann sitzt auf einem Schemel, seine Frau neben ihm auf dem Boden. Der Wahrsager setzt sich ihnen gegenüber und streicht dem Manne etwas Kaolin auf die Stirn, auf den Rücken und

auf die Brust. Später reicht er dem Manne das Halsband aus Bast mit den daran hängenden Gefäßen, welche die Knochen des für Wahrsagen geopferten Huhnes enthalten. Als Bezahlung bekommt der Wahrsager eine Hacke und Bier, wenn es zu dieser Zeit vorhanden ist.

Abb. 167. Amulett aus Rindenstoff. Ruanda. (1/3 d. w. Gr.)

Abb. 168. Doppeltes Halsbandamulett aus Rindenstoff. Ruanda. (1/3 d. w. Gr.)

Das Hühnerorakel ist eine Batutsi- (resp. Bahima-) Sitte. Das kommt darin zum Ausdruck, daß sowohl die Auguren zur Hirtenoberschicht gehören, wie auch die Amulette mit Hühnerknochen vorwiegend durch Batutsi getragen werden.

In ähnlicher Weise wie Hühner, werden auch Rinder und Schafe zum Wahrsagen aus ihren Eingeweiden verwendet. Das scheint, wohl infolge seiner Kostspieligkeit, auf den König und die Vornehmen beschränkt zu sein. Die Ziegen werden wohl als Opfer, nie aber zum Wahrsagen verwendet.

Die Tatsache, daß das mit der Bahutu-Unterschicht enger verknüpfte Tier — die Ziege — zum Wahrsagen nicht verwendet wird, deutet wohl darauf hin, daß überhaupt die Sprüche auf Grund der Eingeweide der Opfertiere mit der herrschenden Batutsi-Schicht zusammengehören.

In Kissaka soll auch das Wahrsagen mit Kalebassen angewendet werden. R. P. van Theele beschreibt es folgendermaßen: Der Wahrsager hat zwei mit Körnern gefüllte Kalebassen. Er sitzt auf einem kleinen Schemel, mit dem Felle einer Schakalart bekleidet, und zwar in dieser Weise, daß der Kopf des Tieres auf dem Kopfe des Zauberers liegt und der Schwanz hinten herunterfällt. Der Wahrsager schüttelt mit den Händen die beiden Kürbisse und erzeugt mit den Körnern ein Geräusch. Nach einiger Zeit hört er auf, legt die Kürbisse beiseite, legt das Fell ab und streckt sich auf dem Boden aus. Nach einer Weile solcher Konzentration verkündet der Wahrsager seinen Spruch und wird bezahlt.

Abb. 169. Behälter mit Marken zum Rettichorakel aus Mulera. a) Kürbismarke, b) Eisenmarken, c) Knochenmarken. (1/4 d. w. Gr. III B 13 117. Länge 22 cm.)

Eine abweichende Form stellt das Wahrsagen mit der sprechenden Kalebasse und mit dem sprechenden Ziegenfell „nyabukobwa" dar. Mit diesem Hilfsmittel soll man zur Zeit des letzten unabhängigen Königs von Kissaka (Kimeni II.) die Ankunft der Europäer von Osten prophezeit haben. R. P. van Theele berichtet, daß er im „nyabukobwa" eine Rohrflöte gefunden hat, die beim Zusammenpressen des Sackes, durch die ausströmende Luft gespielt wurde.

In Muleira wird allgemein das Brettchenorakel angewandt. Der Wahrsager nimmt an einem Griff das 40 cm lange, 15 cm breite und 1—2 cm tiefe, muldenförmig ausgehöhlte Brettchen. Mit der anderen Hand wirft er ein paarmal einige Fruchtkörner, Metallplättchen, kleine Schafsknochen und ein Kürbisstück in die Luft. Das Kürbisstück wird „umwami" (König) genannt. Die Eisenplättchen bedeuten die „bazimu" (Geister) der Männer und die Schafsknochen — die der Frauen. Sie werden immer geschickt aufgefangen. Haben sie sich genügend vermischt, so kann man sie mit einem Schub auf dem Brettchen ausbreiten. Aus der Art ihrer Verbreitung wird die Antwort abgelesen.

Die Eingeborenen erzählen in Ruanda von Prophezeiungen, die schon vor mehreren Jahren auf die künftige Einwanderung der Europäer Bezug genommen haben.

So sollte vor Jahren der damals mächtige Vater Kaizuka's erkannt haben, daß ein Eroberer, der von allen bis jetzt bekannten Menschen verschieden ist und über den Donner Macht hat, von Osten ins Land kommen und die inneren Verhältnisse Ruanda's verändern wird. Diese Prophezeiung wurde allgemein bekannt und veranlaßte Monseigneur Hirth für die Mission den Weg über Usumbura und Urundi zu wählen, um die infolge dieser Prophezeiung möglichen Schwierigkeiten aus dem Wege zu schaffen. Im Jahre 1905, als der König der veränderten Lage bewußt wurde, ließ man angeblich Kaizuka, dem Sohne des Unglückspropheten, die Augen ausstechen und den Besitz rauben.

Eine ähnliche Prophezeiung erzählt man für Ruasa. Der Hügel, wo jetzt die Mission aufgebaut ist, führte einen früher ganz unverständlichen Namen „busakaza itaka", angeblich Land, wo mit Erde gedeckt wird. Vor ca. fünfzehn Jahren prophezeite ein Mann, daß „rote Männer" kommen werden, und ihr Haus mit Erde gedeckt wird. Als die Missionäre kamen und ihre Gebäude mit Backstein deckten, bekamen die Worte einen Sinn, und die Prophezeiung hat sich erfüllt. Etwas ähnliches soll es auch in Bugoye geben.

Das Wesen der Banyaruanda-Ansichten über Träume ist mir nicht gelungen zu erfassen.

Das, was man im Traume sieht, ist eine Angelegenheit der Vergangenheit oder der Zukunft, soweit es sich mit der Gegenwart nicht verträgt. Wenn man Verstorbene im Traume gesehen hat, so wird gesagt, daß die Geister der Toten zu Besuch waren. So ein Traum hat gewöhnlich Opfer zur Folge, da man annimmt, daß die Geister Not leiden und erschienen sind, um sich Hilfe zu erbitten. Eine Unaufmerksamkeit könnte für den Betreffenden sehr schlimme Folgen haben, da sich die Vernachlässigten rächen würden.

Sieht ein Jüngling seine Braut im Traume, so heiratet er sie nicht. Der Traum warnt ihn vor der Ehe, in der sich die beiden Gatten nicht vertragen würden.

R. P. F. Dufays träumte einst, daß einer seiner schwarzen Freunde nach übermäßigem Biergenuß geplatzt sei. Als er dies dem Betreffenden am nächsten

Morgen gesagt hatte, erschrack dieser sehr und fing an zu weinen. Als man ihn nach dem Grunde seiner Tränen fragte, erklärte er, daß das, was man im Traume gesehen hat, doch passieren werde.

Medizinische Praxis. Eine spezielle Form der medizinischen Behandlung, die Heilung durch Einweihung in einen Geheimbund, haben wir bereits kennen gelernt. Sie erschöpft aber nicht die ganze medizinische Praxis und wird auch nicht immer angewendet. Nicht alle Zauberer, Wahrsager und Medizinmänner gehören nämlich zu den Geheimbünden der „babandwa". Das Besänftigen der Geister mit Eleusine (buro) wird, wie es scheint, von den gewöhnlichen Wahrsagern (bapfumu) ausgeführt, um die Patienten von ihren Leiden, die durch plagende Geister verursacht sind, zu befreien.

In Kissaka, wo man mir über das „Besänftigen der Geister" mit Eleusine viel zu erzählen verstanden hat, zeigt dieses Verfahren ungefähr den folgenden Verlauf.

Der „mupfumu" nimmt eine kleine, „ntendere" genannte Kalebasse und füllt sie mit Eleusine. Hierzu werden Kaolinpulver, „nzuzi"-Körner und ein Knochen aus dem Vorderfuß eines Rindes hinzugefügt. Der Wahrsager reibt sich den Handteller mit Kaolin ein, legt auf die Hand die „nzuzi"-Körner und den Knochen, spuckt auf sie und sagt: „ngira amagara" — Ich bin stark. Die Hand wird bewegt, und der Inhalt in einen kleinen Korb „ntaro" geworfen. Darauf wird Eleusine aus dem Kürbis in den Korb geschüttet. Der „mupfumu" spuckt in die Eleusine und reicht den Korb dem Veranlasser der Handlung. Dieser spuckt ebenfalls in den Korb. Der „mupfumu" nimmt zum zweitenmal den Knochen und die „nzuzi"-Körner heraus mit den Worten: „ngira amagara" und schüttelt sie wiederholt in der Hand, als ob er sie mischen wollte. Der Inhalt der Hand wird mit den Worten „ngira amagara" in einen runden Korb geworfen und beiseite gestellt. Der „mupfumu" reicht dann den Korb mit Eleusine dem Manne, der mit den Worten „n'dapfa" — ich sterbe — dort hineinspuckt. Daraufhin spuckt der Wahrsager mit den Worten „ngira amagara". Der Geplagte sagt: „n'ziranyu muzimu" — ich leide von diesem Geiste — und sagt seinen Namen. Unter abwechselndem Spucken werden die einzelnen, in Frage kommenden Geister mit Innehaltung dieser Form durchgezählt. Diese Operation heißt „kushora umuzimu" (Geister besänftigen). Ist das geschehen, so nimmt der Wahrsager den kleinen beiseite gestellten Korb mit dem Rinderknochen, „nzuzi"-Körnern und nur wenigen Eleusinekörnern und reicht ihn dem Geplagten. Der Geplagte spuckt hinein und sagt: „ngira ubuhoro" — ich habe Frieden. Der Wahrsager bewegt den Korb mit den Worten: „agira ubuhoro" — er hat Frieden; „atapfa" — er stirbt nicht; „atafushe" — er möchte nicht totgeschlagen werden; „azaturaho" — er wird bleiben. Nach diesen Worten wirft der Zauberer alles in die Kalebasse, und die Zeremonie ist beendigt.

Als Belohnung für die Behandlung bekommt der „mupfumu" Erbsen, Bataten u. a.

In die eigentliche medizinische Behandlung und die angewendeten Heilverfahren konnte ich keinen Einblick bekommen, da das die Kenntnis der lokalen Flora voraussetzt. Darüber wissen die Eingeborenen auch wesentlich weniger, als über die eindrucksvollen Handlungen der autosuggestiven Kuren zu erzählen. Ich möchte mich nur auf die Bemerkung beschränken, daß die Heilmittel nicht nur gegessen und eingerieben, sondern auch am Körper in Hörnern und kleinen Gefäßen als Amulette getragen werden. Die Amulette mit Arzneien werden auf die kranken Körperteile angebunden. Da die Amulette eine stark spezialisierte Wirkung haben, so muß man gegen jedes Leiden ein besonderes Amulett, oft eines besonderen Medizinmannes, haben. Deshalb sieht man wiederholt auf einem Individuum ein Dutzend Amulette.

Abb. 170. Kopfamulett aus Ruanda. (1/2 d. w. Gr. III E 6978. Länge 1,8 cm.)

Abb. 171. Kopfamulett aus Ruanda. (1/2 d. w. Gr. III E 10133.)

Abb. 172. Halsamulett aus Ruanda. (1/4 d. w. Gr. III E 10153.)

Abb. 173. Halsamulett aus Ruanda. (1/2 d. w. Gr. III E 10147.)

Die Amulette weisen sehr verschiedene Formen auf. Zunächst sind es mit kleinen Glasperlen bestickte Holzstäbchen, die in der Zahl von eins bis zwei am Kopfbande aus Bast getragen werden. Manchmal werden am Halsbande mehrere dünne Holzzylinder mit Glasperlen zusammen getragen. Man kann aber auch größere Holzstücke in bedeutender Zahl am Halsbande sehen. Gelegentlich sieht man Amulette in der Form winziger, mit Fernmedizin gefüllter Tongefäße. Ähnliche Form besitzen die Liebestöpfchen (ingondo), die von den

Frauen in größerer Zahl auf der Leibschnur getragen werden und ihnen die Liebe ihrer Gatten sichern sollen. Zu demselben Zwecke dienen auch kleine, „bunuli"

Abb. 174. Amulettbehälter aus Ton. Ruanda. (1/3 d. w. Gr. III E 10 147.)

Abb. 175. Liebestöpfchen aus Ruanda. (1/3 d. w. Gr. III E 13087a, III E 13088c, III E 13086a, III E 13084b.)

genannte Kürbisse. Die Gefäße dieser Art werden mit der „isarazi"-Medizin gefüllt.

Manchmal wird der Kranke mit glühendem Eisen angebrannt. Man sieht sehr oft Brandspuren auf der Stirn, die auf eine Behandlung der Kopfschmerzen hindeuten. In anderen Fällen werden Einschnitte und Aderlaß angewendet.

Abb. 176. Liebeskürbis aus Ruanda. (1/3 d. w. Gr. III E 13119. Höhe 22 cm.)

Der Aderlaß (kurasha) ist in der Ruanda-Medizin im allgemeinen Gebrauch. Eine Vene wird auf der Stirn gewählt und durch Druck (Umwickelung des Halses) gestaut. Die gestaute Vene wird dann geöffnet. Zu diesem Zweck stellt man einen Pfeil oder ein Messer auf die Vene und führt es mit einem Stoß des Zeigefingers in das Gefäß hinein.

Ist ein genügendes Quantum Blut abgezapft, so wird die Ligatur abgenommen. Das Bluten hört gewöhnlich von selbst auf. Ist das nicht der Fall, so wird die Öffnung mit Ton verklebt.

Die Schröpfköpfe bilden ebenfalls ein beliebtes Mittel. Als Schröpfkopf dient ein Antilopenhorn, das mit einer kleinen Öffnung auf der Spitze versehen ist. Durch diese wird die Luft ausgesogen, und der Schröpfkopf mit Ficusblättern verschlossen. Die Schröpfköpfe werden bei Kopfschmerzen auf den Nacken gestellt. Um ihren Effekt zu steigern, wird nicht selten die Haut mit einem Messer durchschnitten. Den Schröpfkopf läßt man solange stehen, bis er von selbst abfällt. Die Schröpfköpfe unterscheiden sich nicht von denen der Dinka.

Bei Extremitätenbrüchen werden die Knochen geschickt zusammengelegt und in Schienen (busenge) fixiert.

Abb. 177. Aderlaßinstrument aus Ruanda. (2/3 d. w. Gr. I. 15066.)

R. P. van Thiele unterscheidet unter den Medizinmännern zwei besondere professionelle Geheimbünde: die „bakoni" und die „bageiye", die durch die „banga"-Zeremonie eingeweiht werden. „Bageiye" heilen die durch Schlangen Gebissenen.

Ich hatte in Ruanda keine Gelegenheit einen heilenden „bageiye" zu sehen. Als unterwegs zum Muhawura-Vulkan ein Mann durch eine Schlange gebissen

wurde, wollte man dem Verletzten als Mittel gegen das Schlangengift den Kopf des totgeschlagenen Tieres auf die Wunde binden.

Sehr interessant ist die Angabe des R. P. VAN THIELE über die folgende präventive Behandlung der so sehr gefürchteten Pocken (bushita).

Der Medizinmann versieht zunächst alle mit Amuletten, die aus Kürbiskörnern bestehen. Auch der Wassertopf bekommt sein Amulett. Dann gibt er ein Präventivmedikament, das er kochen läßt. Nach dem Kochen bläst er Luft durch einen Halm hinein, um es zum Schäumen zu bringen. Mit dem Schaum wird der ganze Körper eingerieben. Die Wirksamkeit des Medikamentes wird durch Inzisionen an fünf verschiedenen Stellen gestärkt. 1. Über dem rechten Auge drei Einschnitte, 2. auf der rechten Schulter, 3. auf dem Rücken, 4. über der rechten Hand, und 5. über dem rechten Fuß je ein Einschnitt. Die Einschnitte reibt der Medizinmann mit dem bespuckten kleinen Finger ein.

Anthropophagie und Menschenopfer. Das Problem der Anthropophagie und der Menschenopfer im Zwischenseengebiet gehört zu den dunkelsten und schwierigsten. In Ruanda soll z. B. die „bimara" — Blutsteuer — noch vor wenigen Jahren existiert haben. Die Bahutu von Bukunzi in Mukinjaga haben einst die Rinder des Königs Ruganzu geraubt und aufgegessen. Am nächsten Morgen fanden die Hirten auf Speeren hängende Fleischstücke, die den ganzen Überrest darstellten. An den Speeren wurden die Übeltäter erkannt. Zur Strafe hat man ihre Landschaft mit einer besonderen Steuer belastet. Sie mußte jedes Jahr eine Jungfrau und einen Jüngling liefern. Der Jüngling wurde unterwegs totgeschlagen und sein Blut dem König gebracht, die Jungfrau wurde eine „muja" (Sklavin) des Königs. Ich hörte, daß dieses Opfer zum letztenmal vor drei Jahren (1904) stattgefunden hatte und von Musinga aufgehoben wurde.

Außerdem sollen bei der Thronbesteigung ein Knabe und ein Mädchen geopfert und eine Trommel mit einem Menschenschenkelknochen geschlagen werden[1]). Man darf nicht vergessen, daß in Buganda[2]) Menschen in großem Umfange geopfert wurden.

[2]) ROSCOE, J., The Baganda. Their Customs and Beliefs. London 1911, S. 331.

Anthropophagie soll in Ruanda, abgesehen von den Batwa im Norden, noch bei den Vergiftern (baloei) ausgeübt werden. Koch[1]) bestätigt ihr Vorkommen bei den „balogu" der westlichen Uferlandschaften des Viktoria-Sees: „Es ist eine Tatsache, daß es augenblicklich dort noch eine geheime Sekte gibt, welche Leichen ausgräbt und auffrißt, und deshalb werden jetzt von den Angehörigen bei den Leichen Wachen aufgestellt. Sie glauben, wenn Jemand von Leichen ißt, so bekommt er unheimliche, zauberhafte Kräfte und kann sich in wilde Tiere verwandeln, wie in der Sage von unserem Wärwolff."

Nach Johnston[2]) soll das Verzehren der Leichen in Buddu und auf den Sesse-Inseln vom Geheimbund der „basezi", die sich nachts versammeln, ausgeübt werden. Johnston[3]) bezeichnet die Einwohner der Sesse-Inseln als berüchtigte Menschenfresser, die nur unter dem Drucke der Baganda diese Leidenschaft aufgegeben haben.

Die westlichen Nachbarn von Ruanda, die Bahunde, sind ebenfalls Menschenfresser, wie das auch durch Dr. Kandt[4]) festgestellt wurde. Er berichtet nämlich über folgenden Fund: „Da lag der Kopf eines höchstens vor 2 Tagen geschlachteten Menschen. Die Ohren, Lippen und das Fleisch von Wangen, Hals und Kinn waren weggeschnitten, die großen Röhrenknochen hatte man zerschlagen, offenbar um Blut und Mark auszusaugen. Die Feuerstelle mit Asche war noch vorhanden, der blutige Schurz aus Rindenstoff, die Stroh- und Drahtringe des Geschlachteten lagen rings zerstreut im Grase. Ich rief die Führer; sie kannten den Mann und sagten, wenn wir suchen wollten, würden wir noch viel andere solcher Reste finden, aber ich verspürte keine Lust dazu."

Aus diesen Tatsachen darf man den Schluß ziehen, daß früher die Anthropophagie im ganzen Zwischenseengebiete von den westlichen Seen bis zu den Sesse-Inseln allgemein verbreitet gewesen und erst nachträglich verdrängt, im Kultus, in den Geheimbünden ihre deutlichen Spuren hinterlassen hat.

16. Kapitel.

Ornamentik und Spiel.

Ornamentik. — Tanz. — Spiel. — Zeichenerklärungen.

Ornamentik. Schon bei der Besprechung der Rasier- und Tätowiermuster wurden einige sehr verbreitete Ornamentformen erwähnt; mehrere wurden auf den Körben, Matten, Köchern, Speerhaltern, Gefäßuntersatzringen, Schwert- und Messerscheiden abgebildet. Jetzt sollen diese Angaben noch ergänzt und zusammenfassend besprochen werden.

Das Ruanda-Ornament ist rein geometrisch und vorwiegend geradlinig, wobei die Linien hauptsächlich nur als Grenzen größerer, einheitlich gefärbter Felder in Frage kommen. Manchmal werden aber ganze Felder einheitlich mit Parallelstrichen, die auch Quadratennetze bilden können, bedeckt. Gekrümmte Linien kommen zwar auch vor, sie sind aber recht selten. Man begegnet ihnen gelegentlich auf den Messerscheiden. Nur in der Bemalung der Schilde und in den Tätowierungs- und Rasiermustern herrschen sie ganz ausschließlich.

In Kissaka hatte ich auch Gelegenheit in dieser Weise bemalte Scheidewände in den Bahutu-Hütten zu sehen.

Das Ornament ist in Ruanda sehr einfach und sowohl formen- wie auch farbenarm. Die Formen sind meistens Kombinationen von Dreiecken und geraden Linien. In der Ausstattung mit Farben handelt es sich in der Hauptsache um die Kontrastierung der schwarzen und weißen Farbe. Die rote kommt recht selten hinzu. Man sieht sie nur auf den Schilden und auf den Scheidewänden in den Hütten, von den kleinen Luxusflechtereien abgesehen. Die anderen Farben kommen in Frage nur als Nuance der weißen, die man rein infolge der Beschaffenheit des verzierten Materials (Matten, Holz) nicht bekommen konnte, worauf das Ornament durch Auftragen schwarzer Zeichnungen hergestellt wird.

Bei der Einfachheit des Aufbaues des Ruanda-Ornamentes läßt sich dieses ohne Schwierigkeiten in seine Bestandelemente gliedern. Die wichtigsten von ihnen wurden schon durch Dr. Kandt[1]) unter Angabe ihrer Namen beschrieben. Wir wollen sie hier zunächst ihren Namen nach aufzählen: „amatana" — Köcher, „ngabo" — Schild, „masaka" — Hirse, „amakota" — Messer, Pfeilspitze,

[1]) Kandt, R., Gewerbe in Ruanda. Zeitschrift für Ethnologie 1904, S. 343.

[p. 329]

„mushongole" — freundlicher Mensch, „nduhuda" — Speerzwinge, Schwalbenflügel, große Schwalbenflügel, „ikirizo" — großer Schweif und „imiambi" — Pfeile. Die drei letzteren könnten dabei schon als zusammengesetzte Formen aufgefaßt werden. Das Fünfeck nimmt eine ganz besondere Stellung ein. Es ist ganz isoliert. Alle diese Elemente sind geradlinig. Krummlinien treten in der Form von Segmenten, Halbmonden, Spiralen und Kreisen auf. Breite Kreise werden dabei „imikako" — Oberarmring und schmale Kreise „imirindi" — Handgelenkring genannt.

Das Hauptelement der Ruanda-Ornamentik ist das Dreieck. Es führt den Namen Köcher (amatana). Dieses Schmuckmotiv findet man auch am häufigsten

Abb. 179. Elemente des Ruanda-Ornamentes. a) „Amatana" — Köcher, b) „ngabo" — Schild, c) „masaka" — Hirse, d) „amakota" — Messer, e) Pfeilspitzen, f) „mushongole" — höflicher Mensch, g) „nduhuda" — Speerzwinge, h) Schwalbenflügel, i) große Schwalbenflügel, j) „ikirizo" — großer Schweif, k) „imiambi" — Pfeile, l) Fünfeck, m) „imikako" — Oberarmring, n) „imirindi" — Handgelenkring, o) Spirale, p) Segment, q) Halbmond.

auf den Köchern, wo sie in Reihen nebeneinander gestellt, die Wände als breite Ringe umgeben. Ein Ring aus ganz kleinen Dreiecken auf den Köchern trägt aber den Namen „imirindi" — Armring. Manchmal bedecken die „amatana" größere Flächen.

Die Rhomben, die durch Zusammenlegen zweier Dreiecke mit ihrer Basis entstehen, werden, wie schon erwähnt wurde, „ngabo" — Schilde genannt. Sie treten ebenfalls auf Köchern auf und werden, wie das „amatana"-Ornament, meistens als Ringe und seltener als Längsstreifen angebracht.

Als nächste Variante dieser Schildreihe muß die Quadratenreihe angesehen werden. Sie ergibt sich, wenn die Rhomben entsprechend erniedrigt werden, so daß sie sich in Quadrate umwandeln. Man nennt dieses Motiv „imikako" — Perlschnurband, wenn auch das einzelne Quadrat „masaka" — Hirse genannt wird. Als eine seltene Variante desselben Motives müssen längsgezogene Rhomben bezeichnet werden. Liegende Rhomben geben das „amasaro"-Motiv (Schnur).

Stehen aber die Dreiecke mit ihren Spitzen aufeinander, so daß sanduhrförmige Figuren entstehen, so bekommt man das Messermuster (amakota).

Diese Figuren bilden auf den weichen Schildmatten oft Kolonnenreihen, die durch unregelmäßige Abstände getrennt werden. Seltener werden die niedrigen, sanduhrförmigen Figuren liegend nebeneinander angebracht.

Die Pfeilspitzenmotive kommen manchmal zu pflanzenähnlichen Komplexen vereinigt vor, doch kann man diese Formen verhältnismäßig selten sehen.

Die „mushongole"-Motive werden gewöhnlich in senkrechten, symmetrischen oder alternierenden Kolonnen zusammengestellt, wobei die Elemente frei oder ganz geschlossen aneinandergefügt werden.

Die „uduhuda" — Speerzwingenelemente — pflegt man gewöhnlich in freien Reihen übereinander zu ordnen, so daß sie nicht umrandete Kolonnen, manchmal auch Treppenreihen bilden.

Die Schwalbenflügelmotive werden in schrägen und horizontalen Streifen angeordnet. Die erstere Disposition scheint die ursprüngliche zu sein; die Veränderungen, die in den horizontalen Streifen auftreten, entfernen sich sehr von dem ursprünglichen Aufbau aus homogenen Elementen. So haben sich im Muster senkrechte Stücke eingeschaltet. Es darf aber nicht unerwähnt bleiben, daß es auch beim „großen Schwalbenflügelornament" neben der einfachen Form zur Ausbildung einer komplizierteren mit eingeschaltenen Zwischenstücken kommt.

Das „ikirizo"-Motiv kombiniert sich zu Ornamenten im großen Ganzen in derselben Weise, wie das schon oben besprochene „mushongole"-Motiv, mit dem Unterschiede aber, daß die Elemente nicht allein an einer senkrechten, sondern auch an einer schrägen Linie angebracht werden können.

Das Pfeilmotiv (imiambi) wird in mehreren Reihen übereinander angebracht, so daß man in dieser Weise größere Flächen decken kann. Oft werden nur wenige Reihen horizontal oder auch schräg angebracht.

Zum Bedecken größerer Flächen werden außer dem Pfeilmotiv noch das Köchermotiv (amatana), Schildmotiv (ngabo), Hirsemotiv (masaka) und Speerzwingenmotiv (uduhuda) oft verwendet. Beim letzteren werden dabei manchmal Elemente verschiedener Größe kombiniert.

Fünfecke bilden eine sehr seltene Erscheinung in der Ruanda-Ornamentik. Ich erinnere mich, sie nur einmal (III E 13 644) beobachtet zu haben. Die längsgezogenen Fünfecke waren da nebeneinander angebracht.

Die Ruanda-Ornamentik kennt aber auch wesentlich kompliziertere Formen, die durch Kombinierung von zwei oder auch drei Motiven zustande kommen.

Die einfachsten zusammengesetzten Formen entstehen, wenn an einem schrägen Rande Ornamentelemente, wie „amatana" oder „ikirizo" angeordnet werden. Ebenso einfach in seinem Aufbaue ist das „muhiga"-Muster, das eine Kombination langer und schmaler mit kurzen und breiten Schwalbenflügelelementen darstellt. Nicht komplizierter ist das aus „uduhuda" und „mushongole" aufgebaute Ornament, wogegen das aus „uduhuda" und unvollständigen „Schwalbenflügeln" zusammengesetzte, etwas eigenartig aussieht.

Nicht selten kann man auch zwischen horizontalen Streifen (imirindi) eingeschlossene Schwalbenflügelmotive beobachten und in einem Komplex außer der neben einem schrägen Streifen angebrachten „ngabo" noch mehrere Linien von „imiambi" sehen, die den Dreieckenseiten parallel verlaufen.

Höher komplizierte Ornamentformen werden gewöhnlich durch mehrfache Wiederholung von zwei Motiven gebildet. Auf den Messerscheiden steht dabei sehr häufig die Vereinigung von „nduhuda" mit „imirariko".

Kreise und Spiralen kommen nur auf runden Gegenständen und vor allem auf den Böden der aus einer Strohspirale zusammengenähten Körbe, Teller

Abb. 180. Ruanda-Ornament. *a*) *b*) *c*) *d*) Messerscheidenmuster, *e*) Schildmattenmuster, *f*) Liebestöpfchenmuster, *g*) „Amagwe" — Leopard, Mattenmuster.

und Deckel vor. Dieser Umstand beweist, daß wir hier nur eine Anpassung der oben besprochenen geradlinigen Formen an das Material vor uns haben.

Segmente und Halbmonde werden in größerer Zahl isoliert nebeneinander auf Messerscheiden angebracht. Man kombiniert sie auch manchmal mit „nduhudu" oder „imiambi", durch welche die einzelnen Ornamentsegmente voneinander getrennt werden. Auf den kleinen Tongefäßen fließen sie auch häufig zu großen Komplexen zusammen und auf den Schildmatten kann man auch Fragmente des dreiträhmigen Geflechtes sehen.

Die Einfachheit der Ruanda-Ornamentik darf für ein Ergebnis der Anpassung an das Material, den aus einem spiralen Wulste zusammengenähten Korb, der in der Hauptsache ornamentiert wird, aufgefaßt werden. Es ist nicht aus-

geschlossen, daß wir hier mit einer sekundären Vereinfachung zu tun haben, die durch die Technik des Ornamentierens, welche vorwiegend im Umwickeln der Teile einzelner Windungen mit schwarzen Bananenblattscheiden besteht, verursacht ist. Die Namen der Ornamentelemente gestatten schon zu vermuten, daß man für die Vergangenheit mit der Möglichkeit realistischer Darstellungen rechnen muß. Zugunsten dieser Ansicht könnte das auf den Matten oft auftretende „amagwe"-Ornament angeführt werden. „Amagwe" bedeutet Leopard, und in der Zeichnung könnte man die Stilisierung eines vierbeinigen, gescheckten Wesens sehen.

Tanz. Während der Festlichkeiten, die Musinga zu Ehren Seiner Hoheit des Herzogs Adolf Friedrich zu Mecklenburg veranstaltete, hatte ich Gelegenheit, mehrere Tänze (kwamiriza), die sehr große Verschiedenheiten einander gegenüber aufwiesen, zu sehen. Bei der schnellen Abwechselung der aufgeführten Tänze konnte ich die wesentlichen Unterschiede nicht erfassen und ich muß mich in der Hauptsache auf das Durchzählen der Namen beschränken.

Die ersten vier Tänze wurden durch die „danga baganisi", die Ausgewählten des Königs", ausgeführt. Der erste war „imbunduza", der zweite — „rukatsa", der dritte — „tubagendane" und der vierte — „kuboko".

Den zweiten Tänzertrupp bildeten die „inkwaya za Kabure". Sie tanzten den „muganguza", jeder mit einem Pfeil in der Hand. Der Tanz ist auf der Taf. 18 Bd. III abgebildet.

Als dritter Tänzertrupp kamen die „ntore" des Kanuma aus Kissaka. Sie tanzten „kuhyereka rushara" und führten einen Kranichtanz auf[1]). Die kleinen Knaben des Kanuma führten einen anderen Tanz desselben Typus aus[2]).

Die Tänze zerfallen in zwei scharf gesonderte Gruppen: die „kwamiriza" und die „kuhyereka". Die ersten werden mit Speer oder Pfeil in der Hand, die man rhythmisch schwingt, getanzt. Das kriegerische Dekorum weist darauf hin, daß wir hier einen Kriegstanz vor uns haben. Die Tänzer haben bei diesen Tänzen eiserne Schellen am Knöchel und bewegen sich in einem geschlossenen Kreise oder in einer Linie von links nach rechts. Diesen Typus scheinen alle eigentlichen Batutsi-Tänze vorzustellen.

Die zweite Gruppe bilden die „kuhyereka". Hier führen den Tanz gewöhnlich ein bis zwei, und ganz selten drei Tänzer auf. Bei diesem Tanze wiegt sich der Tänzer mit ausgestreckten, oft nach hinten gebogenen Armen. Diese Handhaltung wird „kutega amaboko" genannt. Zum „kuhyereka" werden die Schellen, wenn sie überhaupt zur Anwendung kommen, unter dem Knie befestigt. Es ist sehr charakteristisch, daß bei diesen ursprünglich wohl Bahutu-Tänzen die Schellen an dieser Stelle angebracht werden, wo die durch Batutsi nicht beeinflußten Bakondjo ihre Beinringe anbringen.

---

[1]) Adolf Friedrich Herzog zu Mecklenburg, Im innersten Afrika. Leipzig 1909, S. 118.
[2]) Ebenda S. 119.

Die Tänze, die ich in Mulera zu beobachten Gelegenheit hatte, gehörten ausschließlich zur „kuhyereka"-Gruppe. Die passiven Teilnehmer des Tanzes, der durch zwei Solisten ausgeführt wurde, begleiteten ihre Bewegungen mit Gesang und klatschen dabei in die Hände, um den Rhythmus zu wahren. Der Tanz wurde manchmal auch durch „inanga"-Spiel begleitet. Dieses ausschließliche Vorkommen des „kuhyereka" in Mulera spricht ganz entschieden zugunsten seiner Zugehörigkeit zu der unteren Bantu-Schicht.

Spiele. Das gewöhnliche Kinderspielzeug bilden Rasseln. Größere Jungen spielen mit Vorliebe mit kleinen Bogen. Mit Bogen und Pfeil in der Hand, wird auch mit dem Diskus gespielt. Es bilden sich zwei Parteien, jede aus zwei bis sieben Jungen. Eine Partei wirft aus Bananenstämmen ausgeschnittene, weiche Disken, die andere schießt mit Pfeilen auf die rollenden Disken und sucht sie in dieser Weise zum Stillstand zu bringen. Sind alle Disken geworfen, so wird die Spielordnung umgekehrt; die Schützen werden zu Werfern, und die Werfer zu Schützen. Das Spiel kann in dieser Weise eine unbeschränkte Zeit fortgesetzt werden. Es hört meistens auf, wenn man nicht mehr genügend viel Pfeile hat, da nicht alle abgeschossenen Pfeile wieder gefunden werden.

Die Erwachsenen spielen leidenschaftlich „kishoro", das hier aber weniger verbreitet zu sein scheint als in den östlichen Ländern des Runyoro-Sprachgebietes. Gespielt wird auf einem Brett mit 32 Vertiefungen, die in vier Reihen angebracht sind. Man spielt mit 64 Körnern der wilden Banane, die am Anfang in den Löchern zweier Reihen deponiert werden, und zwar in der Weise, daß man die Körner einer Vertiefung in die Hand nimmt und auf die vier folgenden zu je einem verteilt. Der Inhalt der Vertiefung wird wieder in die Hand genommen und auf die folgenden Vertiefungen verteilt. Man wiederholt diesen Prozeß, bis man mit dem letzten Kern in eine leere Vertiefung kommt, da nach dem Durchgehen der gefüllten Reihe das Spiel in der leeren fortgesetzt wird.

Man muß durch geschickte Auswahl der Anfangsvertiefung dazu kommen, daß der letzte Kern, den man in der Hand hält, den Inhalt der Vertiefung, in die er gelegt wird, zu vier ergänzt; diese sind dann gewonnen. Trifft man mit dem letzten in der Hand gehaltenen Kern in eine leere Vertiefung, so spielt der Gegner.

Wetten sind in Ruanda bekannt; davon hatte ich Gelegenheit mich zu überzeugen, als Musinga mit einem der mich begleitenden Askari (Tingi-Tingi), den er sehr gern hatte, eine Wette abschloß, ob es diesem gelingen werde zwei Töpfe Bier, ohne aufzustehen, auszutrinken oder nicht.

n) „Imiambi" — Pfeile.

Tafel III. Ruanda-Ornamente.

a) Korbornament.
b) „Amatana" — Köcher.
c) „Ingabo" — Schilde.
d) „Masaka" — Hirse.
e) f) „Udubuda" — Speerwingen.
g) h) i) Korbornamente.
f) k) „Imirindi" — Armringe.

Tafel IV. Ruanda-Ornamente.

a) b) Schildmattenmuster.
c) d) Messerschildmuster.
e) f) g) h) Korbschalenmotiv.

17. Kapitel.

Sprachenaufnahmen des Ruhunde- und Bugoye-Dialektes.

Vokabularien. — Texte.

Während meines Aufenthaltes in Njundo (November 1907) benutzte ich die Anwesenheit der Eingeborenen aus Itambi, um über ihre Sprache Erkundigungen einzuziehen. Das Ergebnis dieser Erkundigungen bildet das vorliegende Material, das mit Unterstützung des R. P. L. Delmas gesammelt und mit der nebenstehenden Übersetzung im Bugoye-Dialekt versehen wurde.

Vokabularien.

Deutsch	Ruhunde	Kinyaruanda (Bugoye-Dialekt)
	A.	
Abend	mwigoro	kumogoroba
aber	—	aliko
abhauen	kutema	kutema
abreisen	kugenda	kugenda
abschneiden	kilashura	kilashibuka
abwischen	kuhanagula	kuhanagula
Achselhöhle	umushakwa	umukwaha
Adler	—	inkongoro
Ahne	umukuluza	umusukuruza
alle	boshi, bioshi, zoshi	bose, biose, zose
als	lialio	liali
alt	—	musaza
Ameise, schwarze	imbazi	ntozi
—, weiße	umushwa	umushwa
andere *pl.*	abandi	abandi
anderer	undi	undi
anfangen	kutangira	kubanza, kutangira
Angelhaken	ururobo	ururobo
anklopfen	kuhumba	kukubita

Deutsch	Rundi	Kinyarwanda (Bugoyo-Dialekt)
Berg	kitwa	kiwsi, rwosi
Berliner	kanzanda	kakababa
Beule	ubiso	ubiso
Beulenmutter	—	kabisoboso
Beutelbar	—	kanobutsa
Beton	—	kuingiga
betrinken sich	kutamira	kunindu
betrügen	kukonga	kubonda
Bett	ibitogo (umubitogo)	ubuliri (umubiri)
Bewegen	kuzungura	kunigunira
Biegen	kubeta	kubeta
Biene	inshuki	inzuki
Bienenschwarm	ikanba	irumbu
Bier, Pombe	umufu	umuga
Bieb (von Löwe oder Raubtierinbe)	umuhiki	umugwi
binden	kubiza	kwumbira
Bi	—	kugera
Bison	kabumagira	kabubagira
Blatt	akababi	akababi
blaßen	kutura	kutura
Blitz	murumo	murabio
Blume	umuno (buno)	uburabio (ururabio)
Blut	ibigwa	amaraso
Blutbruder	umunywani	umunywani
Blutschande	—	ndgwe
Bogen	—	umuheto
Bohrer	umutwero	umutwero
Boot	igato	igato
Brache, Wüste	ikigunda	ikigunda
brechen	kupfima	kuvuna
breit	rutambike	rutambike
brennen	kuzibia	kuzba
— (Hitze)	kutera	—
Brennholz, trockene kleine Äste	ikoti	utuboti
Brust	umuberuki	umugwi
Krippen	kaleta	kazera
Bruder	mukuruma, umuggale	murumuna, umuzana
Bruder mein	umuvuna wa mama	nzwene mama
" dein	— wa nyoko	— nyoko
" sein	— wa nyina	— nyina
Brust	kipfuba	kipfuna
Büchse	mubere	mubere

C.

Clan	ubugunda	umuhanga
Cousine, Kinder zweier Brüder	nzwene kata wayta	nzwene data
—, Kinder zweier Schwestern	— mama	— mama

D.

danach	nyira	hera
danken	kuzima	kuzbima

Deutsch	Rundi	Kinyarwanda (Bugoyo-Dialekt)
Darm	ikira (ibira)	ikira (ibira)
dein	wawe	wawe
denken	kutekereza	kutekereza
dick	nene	nyinyi
dienen	—	kubereza
dieser	huyu	huyu
Ding	ikintu (ibintu)	ikintu (ibintu)
dokumentieren	—	kwiganza
Donner	ingabo	inkuba
Dorf (Hügel)	ikitwa (ibitwa)	umusozi (imisozi)
Dorn	ikwa (amakwa)	ikwa
dort	haliro	hilia
drei	ma	ma
du	iwe	wewe
Dunkelheit	nwiziniya	nuyizine
durch	na	na
durchbohren	kutobora	kutobora
dursten	kugiri nyota	kugiri nyota
	E.	
Ebene	—	umuyaga
eben	kutinia	kutinia
Ei	igi (amagi)	igi (amagi)
einbringen	kuzobera	kuzocka
Eingeweide	ebiando	amara
einzeichnen	kwibira	kwibira
eintreten	kuingira	kwindjila
einwickeln	kufuka	kupfuka
Eisen	ibibanda	icbuma
Elenantilope	nutare	nutare
Elenantilopen	—	kukaro ibyuma
Elenantilopen	—	kuchala ibyuma
Enkel	umutakiraku	umuzukuru
Erlaubnisgrund	amakungubaka	imiteka
er	we	we
Erlaubnis	ubutaka buistengana	ibitengerana
Erde	ubutaka, ikitaka	ibumba
Erdgeist	umwami	umuteka
erhalten	kubaiga	kubaiga
erkennen	kwibukira	kwibuka
erwachen	kubika	kuzobera
ertrinken	kwiroha	kwiroha
erwachen	kuzoibuka	kubioka
essen	kuliya	kuliya
euer	wanya	wanya
	F.	
Fackel	umuzuri	umuzuri
falsch	kutoga	kugwa, kutoga
fangen	kukwata	kufata
Feder	ikiyoya	ibyoya

Deutsch	Rukunde	Kinyaruanda (Bugoye-Dialekt)
fegen	kubiza	kukoondora
fehlen	kushiba	kuaiba
Feind	—	umubisha
Feld	ishwa	umulima
Fell	obgoya	obwoya
Fels	rutare	kitare
Felsland	intare	—
fern	kulekale	kule
Ferse	akashinshiro	akatzintziro
Feuer	umuliro	umuliro
finden	kushanga	kusanga
Finger	iminue	intoke
Fisch	ifi	ifi
fischen	kuioba	kuroba
flechten	kuluka	kuboha
fliehen	kunganira	kugiriri
Fliege	—	isazi
Fleisch	nyama	nyama
fliegen	kukuba	kuahera
fliehen	kushaga	kuhunga
fließen	kukima	kutemba
Floh	inguku	imbaragasa
Flosse	ndana	—
fluchen	kutuka	kutuka
Flügel	ibibaba	ibaba (amababa)
flüstern	kuboberana	kongoberana
folgen	kulikira	kulikira, kukilikira
fragen	kubaza	kubaza
freuen, sich	kwisima	kwishima
Freund	umunywani	ishuti, umutoni
Friede	flagano	isezerano
fühlen	kumamata	kukabakaba
führen	kurongora	kashoreza
füllen	kwichula	kuzuza
Funke	ibibula	bushashi
fürchten	kubaha	kutinya
Fuß	ikishandu (ibishandu)	ikirenge (ibirenge)
füttern	kugabira	kugabulira

G.

Gast	umugeni	umushizi
Gatte, mein	umurume wetu	umugabo wanye
Gattin, meine	umukazi wetu	umugore wanye
gähnen	kwagula	kuhayura
gebären	kubuta	kubiara
geben	kugenda	kugenda
Geist	umuzimu (abazimu)	umuzimu (abazimu)
Gemüse	imini	imboga
genug	lekera	lekka
Geräßbacken	intungu (amatungu)	itako (amatako)
gestern	nuya	eyo

Deutsch	Ruhunde	Kinyaruanda (Bugoye-Dialekt)
Gestrüpp	ikishaka	ikihura
gießen	kushesha	kusuka, kusesa
glänzen	kuhaka	kuhaka
glauben	kuhikiriza	kuhikiriza
Gott	(wie Geist)	Imana
Grab	isinda (amasinda)	ichoba (ibioba)
graben	kutima	kuchukura
Graben	muhapfu	muhare
Gras, hohes	ubukere	ubwatsi
—, kleines	akakere	akatsi
Greis	munguma	mukangwe
Grenze	—	rubibi
— des Feldes	luhati (imbati)	imbago
— des Urwaldes	mberera	ingiko
groß	mulemule	kilekile
Großvater	shekulu	sukuru
grüßen	kukeza	kulamutsa
Gurt	umukoba	umukoba

H.

Haare	imfiri	imitsatsi
haben	kupfuga	kutunga
Hacke	ifuka	isuka
Haku	impagazi	issaki
Hals	ngosi (magosi)	kidjosi
handeln	—	kudiriga
Handteller	ikigandja	ikiganza
hängen	kuhanika	kumanika
hassen	kwanga	kuzira
hauchen	kuhumagi a	kuhahagira
hauen	kutema	kutema
Häuptling	umutambo	umutware
Hauspfahl	inguliro	ingigi
Haustier	ikivuganua	ikitungwa
Haut	uluhu	uruhu
heben	kubatula	kuterula
heilen	kukira	kukira
heiraten	kushwera	kulongora
helfen	kugwatisa	kufasha
Herd	umuliko	umuziko
Herdstein	ishiga (amashiga)	ishiga (amahiga)
heruntersteigen	kukima	kumanuka
Herz	umutima	umutima
heulen	kuhuma	kuhuma
Heuschrecke	emikuku	msanasi
heute	monobgire	none
hier	hano	hino
Himmel	ifuguba	idjuru
Hirtenstock	ingoni	ingenegene
hoch (konkret)	mukulu	mukuru
— (abstrakt)	luimuki	lihagalike

Deutsch	Rukunde	Kinyaruanda (Bugoye-Dialekt)
hochgelegen	halugulu	halugulu
hoffen	—	kutegeriza
Höhle	mivuma	mivuma
Hohlmaß	indengo	indengo
Holz	ishoti	inkwi
hören	kumwa	kumwa
Hügel	katwa	umusozi, kasozi
Huhn	inkuko[1])	inkoko
Hülse	ekishugu	ikishishwa
Hund	imbga	imbga
hungern	kufirisyara	kushonya
Husagan	inubusi	ingubiri
husten	kukohora	kukorora
hüten	kulagera	kulagira
Hütte	inyumba	inzu
	I.	
ich	nyeweni	nyewe
— selbst	yewe yewene	yewe yenine
ihr *sing.*	wabo	wabo
— *pl.*	mwe	mwebge
immer	mishi yosho	mishi yose
in, im	mu	mu
Insekt	akabuka	akasimba
Insel	kirimba	kirwa
irren	kukola nabi	kukola nabi
	J.	
ja	ye, ego	ye, ego
Jahr	umuaka	umuaka
jene *pl.*	balira	baliya
jener	ulira	uliya
jenseits	eshiria	hakulia
jetzt	gazenà ha	nuna ha
Jüngling (13—15 J.)	umuzana	umuhungu
— (heiratsfähig)	umutabana	umusore
	K.	
Kamm	urushokoza	urusokoso
kaneu	kushubia	kuhuza
kaufen	kugula	kugula
kennen	kumenya	kumenya
Kern	umutima	umutima
Keule	umuhiri	umuhiri
Kind	umwana	umwana
— abgestillt	inshuke	inshuke
Kinn	akalipfuru	akalipfuru
kitzeln	kukeregania	kukirigita
Klafter	inkalamo ya maboko	intamko ya maboko
Klauen	niala	nzara

[1]) Im Kisuaeli-Dialekt — ingwaki.

Deutsch	Ruhunde	Kinyaruanda (Bugoye-Dialekt)
kleben	kuhakat'a	kuboma
Kleid	miamboro	miambaro
klein	mufi, mulere	mugufi, mutoya
klettern	kuhiruka	kutarama
Klient	umushigi	umugaragu
klopfen	kukunguta	kuhungura, kukengemura
knarren	kunyagira	kunigira
kneifen	kunyosha	kunosha
Knie	ipfi (amapfi)	ipfi (amapfi)
Knöchel	akagombo mbuli	akagomba mbali
Knochen	ipfuha (amapfuha)	igufa (amagufa)
kochen	kuteka	kutega
Köcher	ikitembo	umutana
kommen	kwidja	kuza
klemen	kubasha	kushobora, kubasha
Korb, groß mit Deckel	ikitiri	inkangara
—, klein mit Deckel	indonga	akaseke
—, klein ohne Deckel	ikitonga	ikitukuru
Körper	umubile	umubili
Kot, Straßenschmutz	ibiondo	ichondo
Kopf	umutwe	umutwe
kosten (Nahrung)	kugeza	kugeza
kratzen	kuyavula	kwishina
Kraut	inini	imboga
Krieg	bararwa (sie schlagen sich)	indwano
Krieger	umuragi	indwari
Kürbis	itegete (amategete), kishya	ekihaza, kisabo, kichuma
—, kleiner	akasali	akachende

L.

Land	ikihugo	ikihugu
Längenmaß	inkalamo	intambo
langsam	buhoro	buhoro
lärmen	kwama, kikaya	kuhabira, kuyomba
lassen	kukiera, kuleka	kuleka

Spinne	urutagangulirwa	urutagangulirwa
Spitze	umuguta	akasongero
sprechen	kusagana	kuruga
springen	kugulaka	kusimbuka
stampfen	kasherekura	kasekura
stark	magala	magara
Staub	mutaka	muchuchu
stechen	kushinga	kushinga
stehen	kuhimana	kwagalala
stehlen	kwiba	kwiba
steigen	kwiruka	kuzamuka
Stein	ibari (amabari)	ibuye (amabuye)
stellen	kutura	kushira
Stern	inyenyezi	inyereri
Stimme	umulenge	idjwi
Stirn	ubusu	akahanga
Stock	ingoni	inkoni
—, dick, zum Abbiegen des Grases beim Schneiden	ikifumboro	arkabantu
stoßen	kusgumira	kusuniks
strafen	kukabita	kuhana
strecken	kubangana	kutongana
Strick	imbungu	ingoyi
Stück	ikiche	ikiche
Sumpf	—	kishanga
Sumpfgras	ulushasha	urukangaga
Sumpfhut	amaalba	ikishaga

T.

Tag	umwishi	umusi
Tal	ikisiya	kubande
Tante, mütterliche, meine	amalimalere	mama wachu
—, —, deine	nyoko wanyu	nyoko wanyu
—, —, seine	nyina wabo	nyina wabo
—, väterliche	amasenge	nyina senge
tanzen	kusina	kubina
tätowieren	kushaki bigabo	kuchimana

Deutsch	Ruhunde	Kinyaruanda (Bugoye-Dialekt)
Ton	lume	ikime
Taube	igutu	iguma
tauschen	kugulana	kugulana
täuschen	kukanga	kubenda
teilen	kugaba	kugaba
Termite	umuhwa	umuhwa
Tier	ikihuka	mamswa
Ton für Töpfe	ibumba	ibumba
Topf	nyungu	inkono
Tor (des Gehöftes)	ikiaahwa	ikembo
töten	kwita	kwitsha
tragen (auf dem Rücken)	kubeka	—
— (auf dem Kopfe)	—	kwikdera
trauern	kwiniga	kushavura
träumen	kukota	kukota
treffen	kufata	kufata
treiben	—	kushorera
Trinkhalm	mashoka	umuheha (imiheha)
Trinkkürbis	lwata	uruho
Trommel	ngoma	ngoma
tröpfeln	kutoga	kutura
Tür	urusi (inzusi)	urugi (inzugi)

U.

umarmen	kukerana	kukerana
umkehren	—	kugaruka
und	na	na
unser	wetu	wachu
unten	ashi	hasi
Unterschenkel	kuguln (amaguln)	kuguru (amaguru)
Usurpation	kunyaga	kunyaga

V.

Vater, mein	tata	data
—, dein	isho	iso
—, sein	ishe	ise
—, meiner Frau	isezala	sebukwe
verachten	kuvuma	kuvuma
verbergen	kubisha	kubisha
verbieten	kumahangira	kubuza
vereinigen	kukwatania	kufatania
verfolgen	kulonda	kulonda
vergeben	kuganira	kugirira
vergeblich	ubusha	ubusa
vergelten	kutsira	kuhora
vergessen	kwibilira	kwibagirwa
verkaufen	kutunda	kutunda
verkündigen	kubuza	kubgira
verlassen	kuleka	kuleka
verlieren	kubera	kubera, kuzimira

uzasubayo bazahumba, nukashanilawe, muje, kulya ubuntu, babachumbile.	uzasubirayo bazamukubita, mwakalama, mugende, kulya umutsima, babavagiye.	wer zurückkehrt wird geprügelt, lebet, gehet, esset Sorghobrot, das man euch bereitet hat.

[1]) Lehnwort aus dem Kisyarusanda.

18. Kapitel.

Phonogrammtexte.

Festlieder. — Kriegslieder. — Rätsel.

Die Texte dieses Kapitels verdanke ich meinem Freunde R. P. Felix Dupays. Die Worte wurden nach den Phonogrammen, ein Satz nach dem anderen, von Eingeborenen diktiert. Ohne Hilfe des Phonographen waren unsere Gewährsmänner nicht imstande, die Lieder in solchem Tempo vorzutragen, daß man sie aufschreiben könnte. Die Phonogramme wurden aufgenommen während meines Aufenthaltes in Mulera, im Oktober 1907. Die Phonogramme befinden sich im Besitze des Phonogrammarchivs in Berlin.

Festlieder.

Hangandur' ibano.

Hier schlägt in die Flucht der Pfeil.

(Phon. 38.)

Die Pfeile am Buhuga.	Emiambi muli Buhuga.
Hier schlägt in die Flucht der Pfeil, hier siegt der Speer.	Hangandur'ibano, hatsimbur'indekwe.
Die Speere fallen auf die Spitzen.	Amachumu aragw'emigembe.
Hier schlägt in die Flucht der Pfeil, hier siegt der Speer.	Hangandur'ibano, hatsimbur'indekwe.
Ja, Jungens, ich hab' sie gesehen.	Yego, bahungu, narababonye.
Hier schlägt in die Flucht der Pfeil, hier siegt der Speer.	Hangandur'ibano, hatsimbur'indekwe.
Sie kamen bis auf die Höhe von Mutanda.	Ligeze mu mpinga ya Mutanda.
Hier schlägt in die Flucht der Pfeil, hier siegt der Speer.	Hangandur'ibano, hatsimbur'indekwe.
Jungens, ich hab' sie gesehen.	Bahungu, narababonye.
Hier schlägt in die Flucht der Pfeil, hier siegt der Speer.	Hangandur'ibano, hatsimbur'indekwe.

[p. 355]

Kanyamanza.

Bachstelze.

(Phon. 68.)

Ach, die Bachstelze kam in die Umgebung.	Yo aï, kanyamanza yaje malaba.
Die Bachstelze Mabera.	Kanyamanza ki Mabera.
Kam aus Maberanyi.	Katurutse Emaberanyi.
Oh, sei still, oh du.	Ye, hora, yewe.
Der Reiche sieht sie,	Emuhire arakabona,
Der Arme vermißt sie.	Umutindi arakabura.
Die Bachstelze sieht aus wie?	Kanyamanza kasa gate?
Am Schwanz ähnlich einem Leoparden,	Ku mulizo kasa n'ingwe,
Auf dem Rücken ist sie vielfarbig.	Mu ku mugongo karatonye.

Umulambi wabyay'inka.

Der Hügel hat geboren eine Kuh.[1])

(Phon. 47.)

Ach Vater, ach Vater, ach du!	Aï baba, aï baba, aï we!
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Ich freue mich, ich werde den Hügel entlanggehen.	Nzalamba, ndalambagira.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Ich freue mich auf ein kleines Kind.	Nzalambir'akana kato.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Er hat nicht das Brennholz, ich werde nur hinterher aufraffen.	Arasenya, ndasonzorozo.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Er bebaut, ich pflanze nur.	Arahinga, ndatera gusa.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Der Hügel des Bgana[2]).	Umulambi kwa Bgana.
Der Hügel hat geboren eine Kuh,	Umulambi wabyay'inka,

---

[1]) Man sagt, daß ein Hügel eine Kuh geboren hat, wenn der Hügel von einem Reichen, Mächtigen in Besitz ergriffen ist.

[2]) Bgana ist der eingeborene Eigenname des R. P. P. Loupias, des Pater-Superiors der Mission Ruasa. Der Sinn des ganzen folgenden Abschnittes ist ungefähr der folgende: „Der Hügel Kabushinge, auf dem sich die Mission Ruasa befindet, ist nicht sehr steil; andere Berge sind steiler. Um auf jenen, wie auf diese zu klettern, schwitzt man, aber dies ist nichts im Vergleich zur Mühe, die der haben wird, der mich meines Haarschmuckes berauben will." Hier wird Bezug genommen auf das Abrasieren des Kopfes der Jungverheirateten, nach der ersten Menstruation im Hause des Mannes. Die Frau leistet dem Manne beim Wegrasieren der Haarzierde einen starken Widerstand, so daß es zu Schlägereien kommt, und der Mann die Frau durch das Schenken eines Schafes gewinnen muß.

Der Hügel, von anderswo ermüdet.	Umulambi na handi guralamba.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.
Ermüdet wird auch der, der mich rasiert.	Uzulambirwa, wa nkokoye.
Der Hügel hat geboren eine Kuh.	Umulambi wabyay'inka.

Klagelied der Mädchen.

(Phon. 77.)

Will klettern, will klettern, herunterzupflücken den Kürbis, der da hängt.	Nulire, nulire, manure akungu kimanitse.
Du glaubst zu klettern,	Wagira ngowulire,
Zu klettern, herunterzupflücken den Kürbis, der da hängt.	Wulire, manure akungu kimanitse.
O laß, der Vater ist gegangen zum König.	A leka, data yagiye bgami.
Ob er zurück ist, weiß ich nicht.	Niba alatashe, sinz'aho.
Sie auch, die Mutter, ist gegangen heim.	Mawe mama yali yaragiye wabo.
Ob sie zurück ist, weiß ich nicht.	Niba alatashe, sinz'aho.
Bruder mein ist weiden gegangen die Kühe.	Musaza wanye yali aralagiriye inte.
Ob er sie zurückgeführt hat, weiß ich nicht.	Niba arachuye, sinz'aho.
Kälber unsere hab' ich gelassen am Berge.	Inyana zachu nazisize ku kalambi.
Ob sie zurück sind, weiß ich nicht.	Niba zaratashe, sinz'aho.
Stock meinen hab' ich gelassen am Haufen Steine.	Akakoni kenye nakasize kukashinga.
Der Gebärer, der ihn gefunden, ist sein Brotherr[1]).	Umubyeyi we kabonye niwe muhatse.
Ich war, kann beraubt werden um neunzig[2]).	Yewe niberaga nyamunyagwa urwenda.
Jetzt bin ich Sklavin aus Burundi.	None nti nyirakaja ki Burundi.
Ich trank (Milch) einer Kuh mit langen Hörnern,	Yewe ninweraga ntenderi ya ntege,
Ob sie noch (Milch) gibt, weiß ich nicht.	Niba iratetse, sinz'aho.
O du, der mir gibst Milch gute,	Nya kump'amata meza,
Sieh, wo meine Herrin eingefallen ist.	Ndora aho mabuja yatebereye.
O du, der mir gibst Sorghobrot warmes,	Nya kumpa mutsima ushushe,
Sieh, wo meine Herrin eingefallen ist.	Ndora aho mabuja yatebereye.
O du, der mir gibst Bohnen gute,	Nya kumpa bishimbo byiza,

[1]) Soll bedeuten: der Glückliche, der ihn gefunden, soll ihn nur geliehen haben.
[2]) Soll bedeuten: Ich war reich.

Sieh, wo meine Herrin eingefallen ist.	Ndora aho mabuja yatebereye.
Bist du, bist du, bist du da, Mutter des Königs von Masagwe?	Ula, ula, ulaho mwami kazi wi Masagwe?
Ich bin da, ich bin da, ich bin da, kleine Sklavin aus Bungu.	Ndaho, ndaho, ndaho, nyakaja wi Bungu.
Moral: Der sich lobt, lobt sich Wie er sich stets lobt.	Abivuzi, balivugá Nkuko bivugaga.

Rugindiri.

(Phon. 62.)

Du, ach du!	Yewe, aï yewe!
Kind sei still, du.	Mama wiholere yewe.
Nun Tränen aus Nyundo.	Amaze malira ya Nyundo[1]).
Nun, wer weint, der kriegt.	Amaze yalira, yahabga.
Die Mutter ist gegangen heim.	Manir'agiye walio.
Und Kitundwa zu den Bazigaba.	Na Kitundwa mu Bazigaba.
Kind sei still.	Mam' wiholere.
Nun denn flohen die Weißen.	Be lwahungiye abera.
Dann wird er schwarz und nahm es ihnen.	Amaze lwirabula lubake.
Ich werde dich (deinetwegen) fragen deinen Vater, er gebe dich mir.	Nzakusaba so akumpe.
Dann, wenn er nicht will, nehm' ich dich.	Amaze nakunyirwa kwiche.
Die sich lieben, gehen zusammen.	Ebikundanyi birajana.
Morgen die Liebe nicht weggeht aus dem Brande.	Eyo mukundo lutawa mu nda.

Nyiranzanira.[2])

Die Läuferin.

(Phon. 46.)

Mädchenchor.

Wenn die Läuferin, wenn sie weint,	Aho nyiranzanira, aho yalira,
Wenn sie weint, Kind.	Aho yalira, ma[3]).
Kind, schweig.	Mama wiholere.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Schweige, Kanyarutse, es war die Schwester.	Yaliye Kanyarutse, yali mwene nyina.

[1]) Kosename.

[2]) Erste und dritte Zeile publiziert im Aufsatz: Dufays, P., R. P., Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1910, S. 847.

[3]) „ma" ist eine Abkürzung von „mama".

Wenn sie weint, Kind.	Aho yalira, ma.
O Jammer, Kind, wenn du doch still wärest.	Nyabuna mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Dann beweint sie die Jünglinge des Ndizihiwe.	Aho yalize mishana ya Ndizihiwe.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Dann die Läuferin im Frieden.	Aho nyiranzanira wa buhoro.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Gaben sie ihr einen Kürbis, um zu schlagen Milch.	Bamuhaye akasabo nko'achunde mate.
Wenn sie weint, Kind.	Aho yalira, ma.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie will einen Stock, um spazieren zu gehen.	Alend'akabando ngw'achumbagira.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Nun denn, Kind meiner Mutter, komm, daß ich dich beruhige.	Aho mwana wa mama uze ukwiholeze.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie beweint die Raben[1]), die herumwandeln.	Yaliz' ebikona bikonagira.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.

[1]) Bedeutet den Clan der Raben.

Sie beweint die Raben, die ihre Mutter erworben.	Yaliz'ebikona bikoye nyina.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie will die Reiher von Mubona[1]).	Alend' ebikongoro bya Mubona.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie beweint die Reste, die die Hunde haben gelassen.	Aliz'emikongo imga zeshegashe.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie weint über die Quellen, die bei Mubona.	Aliliy'amaliba ya muli Mubona.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie beweint die Balekezi[2]), ihre Schwäger.	Aliz'Abalekezi bal'obakwe be.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie will Nyirankwayo, ist ihre Schwester.	Alenda Nyirankwayo ni mwene nyina.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.
Sie weint Bigaruka des Lukara,	Alize Bigaruka bya Lukara.
Wenn sie weint, Kind.	Aho yalira, ma.
Wärest du still, Kind, wärest du still.	Iyo wiholeye mama iyo wiholeye.
Wenn sie weint, Kind, ihre Mutter beruhigt sie.	Aho yalira mama nyina aramuhoza.

[1]) Mubona, Landschaft an den Sodaquellen in Mulera.
[2]) Balekezi ist ein Clan von Mulera.

Nyiranzanira.

Die Läuferin.

(Phon. 54.)

Männerchor.

Als ich noch nicht wollte das schlechte Bier.	Aho nkyanga madandi[1]) kyankubilo
Wenn du still wärest.	Iyo wiholeye.
Sie beweinte den Kayonde (Sohn) des Mbanzabigwe.	Yalize Kayonde wa Mbanzabigwe.
Wenn du still wärest.	Iyo wiholeye.
Nyabiwugwa des Bumanza des Butiyuhizu.	Nyabiwugwa wa Bumanza wa Butiyuhizu.
Wenn du still wärest.	Iyo wiholeye.

Mwan wachu we.

(Phon. 45.)

Hochzeitslied der Mädchen.

Kind unser, o!	Mwana wachu we!
Schweige, Bevorzugte, ach!	Wiholere buganura aï[2])
Schweige, Kind einziges, ach!	Wiholere mwan'umwe aï!
Schweige, sie betrügen dich, ach!	Wiholere barakuhenda we aï!
Sie haben dich fortgeschleppt, ach!	Barakujana we aï!
Schweige, Kind[3]), ach!	Wiholere mama[3]) we aï!
In die geheimnisvolle Fremde dich, ach!	Ekihugu nama[4]) we aï!
Kind unser, ach!	Mwana wachu we aï!
Willst nicht des vollen[5]) Maßes, ach!	Uzir'ubugereranya we aï!
Wie das der Kaufleute, ach!	Bwa mu bagenza we aï!
Kind unser, ach!	Mwana wachu we aï!
Willst nicht geschlagen sein, ach!	Uzira kukuleitwa we aï!
Schweige, Kind, ach!	Wiholere mama[3]) we aï!
Kind unser, ach!	Mwana wachu we aï!
Willst nicht bebauen, ach!	Uzira kuhinga we aï!

---

[1]) Madandi ist junges Bier. Nyiranzanira ist das herumstreichende Mädchen, das von einem Manne zum andern geht und sich hingibt. Hier singen die Männer, daß seit der Zeit, als das Bier noch zu jung zum Trinken war, d. h. seit einigen Tagen, das Mädchen schon mehrere Männer zu beweinen (zu wechseln) Zeit gehabt hat. Diese werden der Reihe nach durchgezählt.

[2]) Aï, das einen schweren Seufzer bedeutet, bildet zugleich den von allen nach jedem Verse gesungenen Refrain.

[3]) Bedeutet Mutter, wird aber von den Mädchen als Kosename benutzt.

[4]) Im „ekihugu nama" bedeutet „ekihugu" — Land und „nama" — Geheimnis. Zusammen bedeuten die beiden Worte soviel wie die Fremde, die Ferne.

[5]) Ein Mann, der nicht will, daß sein Weib vom Proviantkorb sich etwas holt, hält diesen immer ganz voll. Dann kann er leicht merken, ob die Frau davon etwas genommen hat.

Bebauen ganz allein, ach!	Kuhinga wenyene aï!
Schweige, Kind unser, ach!	Wiholere mama we aï!
Schweige „nyambele" (die Vorderste), ach!	Wiholere nyambele aï!
Schweige, Bevorzugte, ach!	Wiholere buganura aï!
Kind unser, du, ach!	Mwana wachu we aï!
Willst nicht beschimpft werden du, ach!	Uzira kutotwa we aï!
Soll es zum Schimpfen (kommen), ach!	Aho kumutola we aï!
(So) führe man es nach Hause, ach!	Bamutotagize aï!
Man gebe es zurück dem Vater, ach!	Bazamushile se aï!
Seinem Vater, der es gezeugt hat, ach!	Ise wamubyaye we aï!
Schweige Kind, ach!	Wiholere mama we aï!
Schweige, „nyambele", ach!	Wiholere nyambele aï!
Kleine Jugendverwerferin du, ach!	Karabushesha[1]) we aï!

Aho lero mama[2]).

Ja, gewiß Kind.

(Phon. 48a.)

O Jammer, Kind, schweig, schweig jetzt.	Nyabuna mama uhore uholere naho.
Ja, gewiß Kind.	Aho lero mama.
O Jammer, Kind, sie betrügen dich jetzt.	Nyabuna mama barakuhenda naho.
Ja, gewiß, Kind.	Aho lero mama.
Sie betrügen dich, sie entführen dich jetzt.	Barakuhenda, barakujana naho.
Ja, gewiß, Kind.	Aho lero mama.
Sie entführen dich jenseits des Waldes.	Barakujanye inyuma y'ishamba.
Ja, gewiß, Kind.	Aho lero mama.
Jenseits des Waldes, gibt es nicht Leute.	Inyuma y'ishamba ntihab'ishanga.
Ja, gewiß, Kind.	Aho lero mama.
O Jammer, Kind, sei bereit.	Nyabuna mama utegutegura.
Ja, gewiß, Kind.	Aho lero mama.
O du Mädchen, hoffe, es kommt (was man dir versprochen).	Yewe mukobga utegerez'izaza.
Ja, gewiß, Kind.	Aho lero mama.
O Jammer, Kind, du weißt nicht, ob es reif wird (das Sorgho).	Nyabuna mama ntuz'ilizera.
Ja, gewiß, Kind.	Aho lero mama.

---

[1]) Wörtlich: Die kleine (ka), die die Jugend (bu relativ auf „buto" — die Jugend) verwirft (kusesa — zerstreuen, verwerfen).

[2]) Die erste Hälfte ist publiziert im Aufsatz: F. Dufays, Lied und Gesang bei der Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1910, S. 855.

Du weißt nicht, ob es reifen wird oder vor der Zeit stirbt.	Ntuz'ilizera ni lizalumba naho.
Ja, gewiß, Kind.	Aho lero mama.
Ach, Mädchen, was macht ihr?	Yemwe bakobga murakoli ki?
Ja, gewiß, Kind.	Aho lero mama.
Du, Mulundi, bist du gegangen.	Yewe Mulundi se wajanye.
Ja, gewiß, Kind.	Aho lero mama.
Du hast mitgenommen kleine Felle der Wildkatze.	Wajanye utoho twi mondo.
Ja, gewiß, Kind.	Aho lero mama.
Jenes Kind dort verschwindet (hinter dem Berg).	Kaliya kana kalengalenga.
Ja, gewiß, Kind.	Aho lero mama.
O Jammer, ein wildes Tier hat es gefressen.	Nyabuna ekisimba kyarakaliye.
Ja, gewiß, Kind.	Aho lero mama

Nyirabahutu.[1])

(Phon. 65 a.)

Jetzt und o ihr.	Amaze na yemwe.
Ach, Jammer heute.	Aï yemwe none.
O du, Malagane.	Yewe Malagane.
Ach, Jammer heute.	Aï yemwe none.
O du, Malagane.	Yewe Malagane.
Ach, Jammer heute.	Aï yemwe none.
Jetzt, Kind, der Nyirabalenzi.	Amaze mwene Nyirabalenzi.
Ach, Jammer heute.	Aï yemwe none.
O du, Musanganyi.	Yewe Musanganyi.
Ach, Jammer heute.	Aï yemwe none.
Den Korb mit schönem Rand hat geflochten Wisize.	Akebo kisozore kaboshe Wisize
Ach, Jammer heute.	Aï yemwe none.
Sieh da, ein Bohnenmahl.	Gako amaberere.
Ach, Jammer heute.	Aï yemwe none.
Bohnen und Erbsen aus Mulera.	Amahengeri y'Imulera.
Ach, Jammer heute.	Aï yemwe none.
Ich geh' nicht nach Rukiga, ich will nicht.	Sinj'Irukiga ndanze.
Ach, Jammer heute.	Aï yemwe none.

[1]) Fragment einer, wie es scheint, stark verschiedenen Variante. Vgl. P. Dufays, Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1910, S. 855.

Da ich soll anziehen (die Haut der) Affen von dort.	Amaze nambale inkima zaho.
Ach, Jammer heute.	Aï yemwe none.
O ja und ihr.	Yego na yewe.
Ach, Jammer heute.	Aï yemwe none.
Sekeresha kam.	Sekeresha alaje.
Ach, Jammer heute.	Aï yemwe none.
Der Freund Sekeresha, der Mututsi.	Mugenzi Sekeresh'Umututsi.
Ach, Jammer heute.	Aï yemwe none.
Meine Mutter sagte mir.	Mama yaramgiye.
Ach, Jammer heute.	Aï yemwe none.
Nun, Kind, sei still jetzt.	Amaze mam'wiholere none.
Ach, Jammer heute.	Aï yemwe none.
Geh, kenne, gewöhne dich.	Genda menye menyere.
Ach, Jammer heute.	Aï yemwe none.
Freundin, und ich widersetze ihr.	Mugenzi, nanye naramushubije.
Ach, Jammer heute.	Aï yemwe none.
Das Übel wird nicht angewöhnt.	Akabi ntikamenyawa.
Ach, Jammer heute.	Aï yemwe none.

Wigir'ingwe.[1])

Ähnele dem Leoparden.

Hochzeitslied.

(Phon. 65.)

O Kind, ähnele dem Leoparden.	Ye mama wigir'ingwe.
Ähnele dem Leoparden.	Wigir'ingwe.
Ähnele dem Leoparden im Mondschein.	Wigir'ingwe yu mwezi.
Ähnele dem Leoparden.	Wigir'ingwe.
Der im Dunklen beißt.	Yu mwijima iralyana.
Ähnele dem Leoparden.	Wigir'ingwe.
Deine mütterliche Tante hat geähnelt dem Leoparden.	Nyokosenge yigir'ingwe.
Ähnele dem Leoparden.	Wigir'ingwe.
Deine Schwester hat geähnelt dem Leoparden.	Mwene so yigir'ingwe.
Ähnele dem Leoparden.	Wigir'ingwe.
O Kind, ähnele dem Leoparden.	Wa mama wigir'ingwe.
Ähnele dem Leoparden.	Wigir'ingwe.
Fang an zu ähneln dem Leoparden.	Uzamanz'igir' ingwe.
Ähnele dem Leoparden.	Wigir'ingwe.

[1]) Fast identisch im Aufsatz: P. Dufays, Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1910, S. 857.

Deine Mutter hat geähnelt dem Leoparden.	Nyokulya wigir'ingwe
Ähnele dem Leoparden.	Wigir'ingwe.

Ewanyu nih'ugiye.[1])

Nach Hause, dahin bist du gegangen.

(Phon. 44.)

Hochzeitslied der Mädchen.

Nach Hause, dahin bist du gegangen.	Ewanyu nih' ugiye.
Geh, sei still, Kind.	Genda wiholere mama.
Nach Hause, dahin bist du gegangen.	Ewanyu nih' ugiye.
Geh, sei still, Kind.	Genda wiholere mama.
Das Kind, das einzige, ist gegangen.	Umwan' umwe yagiye.
Geh, sei still, Kind.	Genda wiholere mama.
Nach Hause, dahin bist du gegangen.	Ewanyu nih' ugiye.
Geh, sei still, Kind.	Genda wiholere mama.
Geh, kenne, gewöhne dich.	Genda menye menyere.
Geh, sei still, Kind.	Genda wiholere mama.
Nach Hause, dahin bist du gegangen.	Ewanyu nih' ugiye.
Geh, sei still, Kind.	Genda wiholere mama.
Geh, kenne den Hirten.	Genda menye mushumba.
Geh, sei still, Kind.	Genda wiholere mama.
Nach Hause, dahin bist du gegangen.	Ewanyu nih' ugiye.
Geh, sei still, Kind.	Genda wiholere mama.

Du wirst zurückkommen es holen.	Uzagaruk'ukende.
Friede.	Amahoro.
Du Kind (gehe) im Frieden.	Wa mama mahoro.
Friede.	Amahoro.
Da, wo du gehst, (sei im) Frieden.	Ih'ugiy'amahoro.
Friede.	Amahoro.
Wenn du zurückkommst, (sei im) Frieden.	Iy'uvuye amahoro.
Friede.	Amahoro.
Du Kind (gehe im) Frieden.	Wa mama mahoro.
Friede.	Amahoro.
Verlassen (sei im) Frieden.	Kitero mahoro.
Friede.	Amahoro.

Mama ndare.

Mutter, ich will schlafen.

(Phon. 78.)

(Schmerzensruf.)	Yololo, yololo!
	Yololo, yololo!
Mutter, ich will schlafen.	Mama ndare.
Der Wille hat seine Ursache.	Ubgende bugir'imvano.
Das Wort hat seinen Anfang.	Ijambo ligir'interulo.
Des Yuhi und Mibambge	Hya Yuhi na Mibambge
Güte hat, wer will.	Ubuntu bugir'uwenda.
Wer nicht will, der laß sie sein.	Utenz'akabulolera.
(Schmerzensruf.)	Aï we yelele, yelele.
Ich habe geträumt, man vertreibe mich.	Narose bantamagize.
Ach, ich habe geträumt, ich laufe durch hohes Gras.	Yewe, ndose mal'emikenke.

Durch hohes Gras, das schneidet die Beine.	Mikenke imal' ibirenge.
Wenn du mich schickst, gehe ich.	Wantuma nkagenda.
Aber du rufst mich, komme ich.	Aliko wampamagara nkaza.

Lwimanuye.

Spottgesang zur Hochzeit der Obengenannten.

(Phon. 80.)

He, Mutter, sie ist gekommen mit Bohnenhülsen.	Ye mama lwaje na nshimyemurwa.
He, Lwimanuye, je nun denn.	Ye Ulwimanuye yemwe none.
Je denn, Lwimanuye ist da.	Yemwe Ulwimanuye lwalaje.
Sieh herunter durch ein Feld in Brach.	Lwimanutse mu kateme.
Das Häuschen des Bilahire,	Indaro ya Bilahire,
Mutter, ist gedeckt mit Erbsenhülsen.	Maye ishakaje amajeri.
Das Häuschen des Ndabonye	Indaro ya Ndabonye
Ist gedeckt mit Erbsenhülsen.	Ishakaje nshimyemurwa.
Als Wandbekleidung dient Gras.	Itegulo ni mugyai.

Aï we ndaraye.[1])

Ach, ich habe geschlafen.

(Phon. 74.)

Ach, ich habe geschlafen.	Aï we ndaraye.
Ach, sei still.	Aï we ye hora.
Ach, schweig, ach schweig, ja.	Aï we hora ye hora nyene.
Ach, ich habe geschlafen.	Aï we ndaraye.
Hast du gesehen Kalire?	Wabonye Kalire?
Ach, sie ist geworden wie ein Kalb.	Aï we kabaye nk'inyana.
Ach, Kaguliro.	Aï we Kaguliro.
Er ist geworden wie ein Hackenmarkt.	Kabaye aka masuka[2]).
Willst du einen Riemen?	Ulenda kashumi?
O Elend, der schließt Blutbrüderschaft mit den Knochen.	Nyabuna kanywanye n'igufa[3]).
Willst Sorgho in Wasser?	Ulend' utukoma?
Ach, sei still, o schweig ja.	Aï we hora ye hora nyene.

[1]) Etwas abweichend im Aufsatz: Dufays, P., Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1909, S. 875.

[2]) Eine Wortspielerei auf den Eigennamen Bezug nehmend. „Kaguliro" heißt auch ein kleiner Hackenmarkt. Da der Besungene sehr mager geworden ist, und seine Knochen infolgedessen wie Hacken aneinander stoßend klappern, so bedeutet: „Kaguliro sei geworden wie ein Eisenmarkt" — so tönen (klappern) seine Gerippe.

[3]) Soll bedeuten: ein Riemen, der sich seiner Magerheit wegen bis in die Knochen verliert.

Sie hat geschlafen ein Sorghobrot.	Aray 'akatsima[1]).
Ach, so sagen sie.	Aï we nuko bagira.
Sie will eine Wohnung.	Alenda lwubake.
O Elend, sie ist geworden zusagend.	Nyabuna yabaye mwemezi[2]).
Lasset, ich will hinauf.	Muleke nterere.
O Elend, seit gestern Morgen.	Nyabuna naho bukereye.
Seit gestern Abend.	Naho bwiriye.
O Elend, hab' ich noch nicht gegessen heute.	Nyabuna sinali nalaya no.
Du hast mir gegeben Sorghomehl mit Wasser.	Wampaye utukoma.
O Dank (?), das hat gegeben Herz (Kräfte).	Nyabona kahaye katima.

Bgahih'ende?

Hat's geschnitten (das Gras) wer?

(Phon. 48.)

Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?
Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?
Haben's geschnitten Kinder im Rudel?	Bgahih'abana be manzabigwe?
Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?
Hat's geschnitten eine Frau und ein Mann?	Bgahih'umugore na mugabo?
Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?
Nyiramukunzi[3]) ist eine Liebhaberin der Trommel[4]).	Nyiramukunzi n'inkunzingoma.
Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?
Nyiramubyeyi[3]) hat mir geboren einen Schild[5]).	Nyiramubyeyi wambyay'ingabo.
Hat's geschnitten, wer, ach, hat's geschnitten, wer?	Bgahih'ende we, bgahih'ende?

[1]) Soll bedeuten: sie hat ein Stück Sorghobrot vor dem Schlafe gegessen.
[2]) Soll bedeuten: hat auf das Heiratsangebot zugesagt.
[3]) Frauenname.
[4]) Bedeutet: ist die Liebhaberin des Häuptlings.
[5]) Wörtlich Schild, bedeutet aber einen Jungen.

Kriegslieder.

Hediha.

Ruf.

(Phon. 63.)

Ach du, Mutter.	Aï yewe, maye.
Kam Kilinda,	Yalaye Kilinda yewe,
Kilinda mit Muluhuye.	Kilinda nu Muluhuye.
Kam Nyamusama.	Yalaye Nyamusama.
Diese Biere gingen wohin?	Izom'zoga zilaye he?
Sie gingen zu den Feinden,	Zilaye mu abangana,
Den Feinden der Trommel.	Abangana b'ingoma[1]).
Kam Musinga.	Halaye Musinga ye.
Er kam mit Musama.	Yalaye na Musama.
Drüben dort,	Hakulya haliya we,
Ging vorüber ein Häuptling,	Hanyuze mutwale,
Hatte kein Gefolge,	Utagir'umugarago,
Trug selber seine Schlafmatte.	Yitwajije akarago.
Kam Kilinda.	Yalaje Kilinda.

Karame ndaje.

Hier! ich komm.

Von Männern gesungen.

(Phon. 72.)

Hör' Sekidende, hör' Sekidende,	Umwa Sekidende, umwa Sekidende,
Sohn des Sekisabo.	Mwana wa Sekisabo ye.
Hier! ich komm.	Karame ndaje.
Er ging ins Belgische, er ging ins Belgische,	Igeze ku Mubiliga, igeze ku Mubiliga,
Er nahm weg einen belgischen (Stoff).	Ichuze umubiligihaï.
Hör' Mikaeli[2]), auch du des Lebeza.	Umwa Mikaeli, nawe wa Lebeza.
Hier! ich komm.	Karame ndaje.
Ein Elefant? ein Elefant?	Inzovu yi milindi? inzovu yi milindi?
Ist heruntergekommen von Chuve.	Amanutse Chuve[3]).
Hör' Bahinirangabo des Sekidende.	Umwa Bahinirangabo wa Sekidende.
Hier! ich komm.	Karame ndaje.

[1]) Feind der Trommel bedeutet: „Feind des Königs", da die Trommel das Symbol der Königsmacht ist.

[2]) Christlicher Name Michael.

[3]) Landschaft in Nord-Mulera.

Karame ndaje.

Hier! ich komm.

Von Mädchen gesungen.

(Phon. 73.)

Hör' du gehst.	Umwa ug'wagenda.
Er geht nach Niansa.	Yagir'iniansa ye.
Hier! ich komm.	Karame ndaje.
Hör' Ntibukunze,	Umwa Ntibukunze,
Sohn des Kibaba.	Mwana wa Kibaba.
Hier! ich komm.	Karame ndaje.
Also Nyabuyumbo.	Be Nyabuyumbo.
(Unser) Schwarzes (Huhn) ist fortgegangen.	Mukara iragiye.
Du trägst das Fell um die Lenden (und) hast noch kein Weib gefreit.	Nku kenyera utakoye.
Du vergeudest dein kleines Fell.	Nukucha kahu kawe.
Hahn der weiße hat das Fell um die Lenden.	Inkoko yu mweru ikenyer'itakoye.
Und Marseli, auch du Sohn des Lukira.	Na Marseli nawe mwana wa Lukira.
Hör', was ich dir erzähle,	Umwa nko ndakubalira,
(und dann) erzählst du den Anderen.	Ukabalir' abandi.

Ekichinya mudende.[1])

(Phon. 33.)

Du, du, hola, hola.	Yewe, yewe, hola, hola.
Nyagir'abahunde[2]), bist du fertig, so komm.	Nyagir'abahunde[2]) waramaze ulaze.
Ach du schweig.	Eh yewe yahola.
Du, du, hola, hola.	Yewe, yewe, hola, hola.
Ich war in Kalenzi mit Lwibishanga.	Nali Kalenzi na Lwibishanga.
Ich war in Musambira mit Kawale.	Nali Musambira na Kawale.
Du, du schweig.	Yewe ye yahola.
Nyagir'abahunde, du bist ein Fußring[3]).	Nyagir'abahunde ul'akasanyaza.
Nyagir'abahunde.	Nyagir'abahunde.
Ich schlief in Kitarama bei Kiruhura.	Ndaye Kitarama mwa Kiruhura.

[1]) „Ekichinya mudende" ist der Name der Frau, die am Fuße des Muhawura wohnte und das Lied in Mulera gedichtet oder auch nur eingeführt hat.

[2]) Angeblich ein unbekannter Eigenname.

[3]) Soll bedeuten: „Du bist ein schöner Mann".

Rulenge.

(Phon. 52.)

Du hast geschlafen zu Hunga bei Mutahunga.	Waraye Hunga mwa Mutahunga.
Seid vorsichtig, daß ihr nicht vertrieben werdet durch Kahunga.	Mwa mutahungirwa na Kahunga[1]).
Ich gehe zu meinem Wohltäter.	Nsanze muhire yesa muhinza.
O, ihr Mädchen, die Jugend ist schön.	Yemwe bakobga ubutobulosha.
O ja, o ja, gewiß.	Yemwe, yemwe lero.
O Jammer, das Volk.	Yemwe, rubanda lulangirana.
Du bist etwas geworden,	Kamwali muli bukende,
Du bist etwas geworden durch Kühe.	Kamwali ntiwali mwiza wagizwe n'inka.

Murashamula.

Greifet hin.

(Phon. 66.)

Ntunganye ist (Sohn) des Mulembo.	Ntunganye ni ya Mulembo.
Ach o ?	Aï we nyo.
Ekishingwe ist des Ndizihiwe.	Ekishingwe ni kya Ndizihiwe.
Ach o ?	Aï we nyo.
Ekitonga des Ntamuheza.	Ekitonga kya Ntamuheza.
Ach o ?	Aï we nyo.
Balindu, (Clan der) Balindu.	Balindu, Balindu.
Wartet.	Muralinda.
Batigula, (Clan der) Batigula.	Batigula, Batigula.
?	Mutigule.
Balekezi, (Clan der) Balekezi.	Balekezi, Balekezi.
Werfet die Speere.	Muralekere.
Greifet hin, greifet hin.	Murashamula, murashamula.
Ihr habt festgenommen?	Murafashe?
Jawohl, Kind, wir haben festgenommen, so wie wir sind.	Ego mama turafashe nikotungane.

Ebyuma biralima.

Die Eisen brechen durch.

(Phon. 71.)

Ich fand, die sich bereden.	Nsanze balaj'inama.
Die Eisen brechen durch.	Ebyuma biralima.
Bereden sich zu kämpfen.	Inama yu kutawala.
Die Eisen brechen durch.	Ebyuma biralima.

[1]) Landstrich der Barashi am Muhawura, die sehr gefürchtet werden als Räuber.

Die Eisen trafen die Stutzigen.	Byuma bihan'ingaba.
Die Eisen brechen durch.	Ebyuma biralima.
Eisen, Eisen, o.	Byuma, byuma we.
Die Eisen brechen durch.	Ebyuma biralima.
Eisen der Schlacht.	Byuma byu rubaga.
Die Eisen brechen durch.	Ebyuma biralima.
Ich weiß nicht, was mich beißt.	Sinz'akansegeta.
Die Eisen brechen durch.	Ebyuma biralima.
Auf der Dicke der Lenden.	Mu ngata mu mugongo.
Die Eisen brechen durch.	Ebyuma biralima.

Mpunga barungu.[1])

Ich fliehe die Askari.

(Phon. 76.)

O Jammer, Mutter.	Yalolo mama.
Kommst du zu fliehen, flieh' die Askari.	Nuja kuhunga, hunga barungu.
Flieh' die Askari.	Hunga barungu.
Bwana Mudogo war in Kasukuza.	Bwana Mudogo[2]) yali mu Kasukuza[3]).
Flieh' die Askari in Reih und Glied.	Hunga barungu ba kinihira.
Und Dr. R. Kandt war in Kasukuza.	Na Kanayoge yali mu Kasukuza.
Flieh' die Askari.	Hunga barungu.
Ich war in Njundo bei Barthélemy.	Nali ku Njundo kwa Baytelemi[4]).
Flieh' die Askari.	Hunga barungu.
Bei Barthélemy, König der Bagoye.	Kwa Baytelemi, mwami wa Bagoyi.
Flieh' die Askari.	Hunga barungu.
Eine Masse (Bier), die löschet.	Haliko akateko kamal' emyota.
Flieh' die Askari.	Hunga barungu.
Ich fliehe die Askari, ich fliehe Hauptmann W. v. Grawert.	Mpunga barungu, mpunga Tiki-Tiki.
Flieh' die Askari.	Hunga barungu.
Ihn und den Herrn von Kabushinge.	Nawe na Bwana ya Kabushinge.
Flieh' die Askari.	Hunga barungu.
Ihn Nyagasaza, Sohn des Mukemba.	Nawe Nyagasaza, mwene Mukemba[5]).
Flieh' die Askari.	Hunga barungu.

[1]) Eine Variante im Aufsatz: Dufays, F., Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos 1910, S. 867.

[2]) Eingeborener Name eines belgischen Offiziers.

[3]) Lager der Deutsch-Belgischen Grenzkommission.

[4]) Superior der katholischen Mission in Njundo.

[5]) Ein Eingeborener, der sich in Dienste der Europäer stellte und ihnen als Führer während der Okkupation gedient hat.

Sohn des Mukemba hat sich verstellt „boy".	Mwene Mukemba yaigize boy[1]).
Flieh' die Askari.	Hunga barungu.
Er hat sich verstellt „boy", als wäre der Europäer.	Yigize boy ngo mu Muzungu.
Flieh' die Askari.	Hunga barungu.

Lilaye.

Sie kamen (vom Krieg).

(Phon. 39.)

Sie kamen gekleidet in Federn (Pfeile).	Lilaye zambaye amabono.
Spute dich, daß man dich sendet.	Utebuke bakutume.
Sie kämpften in Bugarula.	Bateye Bugarula.
Sie brachten von da Beute.	Bahazany'umunyago.
Sie kämpften in Bugoye.	Bateye kwa Mbogoye.
Sie kämpften, sie beraubten mich.	Bateye ziranyaga.
Sie kämpften am See.	Bateye ku ngezi.
Ich sah die Schlacht der Männer.	Mbonye urugamba lwa bagabo.

Gahindiro.

(Phon. 58.)

Rezitativ.

Er schweigt Gahindiro (Sohn) des Mibamge.	Ali holera Gahindiro ka Mibamge.
Dann blieb er da.	Maze yiberaho.
Dann jagt, und fertig zu jagen mit Ntangazi	Maz'arahiga, n'amala kuhigana Ntangazi
des Gitara, er trug auf dem Kopf das „kambele"[2]), er trug	ya Gitara, yikoleye akambele[2]), aga-
auf den Händen das „kagondo"[3]), er sputet sich	tengat'akagondo, akabashika
zu gehen.	kugenda.
Dann kommt er (und) sagt: Ihr sagt, daß Bgiza	Maz'alaza ati: Mwagize nko Bgiza
ist gefragt worden, von wem? Die Anderen sagen:	yasabge, nande? Abandi bati:
Sie ist gefragt worden von Rugayi des Buzi,	Yasabge na Rugayi lwa Buzi,
König von Bugessera.	umwami wa Bugessera.

[1]) Er wurde für Vertrauensmißbrauch seiner offiziellen Stellung und seinen Landsleuten gegenüber begangene Übergriffe für längere Zeit an die Kette gelegt.

[2]) „Kambele" ist das Wohnhaus des Häuptlings.

[3]) „Kagondo" — das Haus zum Essen und Unterhalten.

Wer fragt ein Mädchen schönes, er soll	Wasabg'umukobga mwiza, araka
sterben sehen sein Kind,	pfusha umwana,
das versorgt ein Anderer.	arwaj'undi.
Er geht, als er ankommt, weiter	Aragenda, ngo aragera, hilya
sagt er: Vielleicht Bgiza ist gefragt worden, von wem?	ati: Halya Bgiza yasabge, nande?
Die anderen sagen: sie ist gefragt worden von Rugayi	Abandi bati: yasabge na Rugayi
des Buzi, König von Bugessera.	lwa Buzi, umwami wa Bugessera.

Ein Blatt.	Akabi.

Das Antworten auf die Rätsel und das Rätselspiel besteht in einer raschen Abwechselung der Fragen und Antworten. Die Anwesenden wohnen recht gleichgültig dem Spiele bei. Nur in den Fällen, wo ganz unerwartete Antworten improvisiert werden, wird herzlich gelacht, und der Antwortende wird mit Bewunderung angesehen. Das war z. B. hier mit den Hörnern des Hundes der Fall.

Gesänge aus Ruanda

Von

ERICH M. VON HORNBOSTEL

(Aus dem Phonogramm-Archiv des Psychologischen Instituts der Universität Berlin)

Vorbemerkungen

Auf der ersten Expedition ADOLF FRIEDRICHS, Herzogs ZU MECKLENBURG, hat Herr Dr. J. CZEKANOWSKI in Ruanda 84 phonographische Aufnahmen gemacht und nach seiner Rückreise freundlichst dem Berliner Phonogramm-Archiv überlassen. Es ist damit zum ersten Male ein einwandfreies Material musikalischer Dokumente aus dem äußersten Nordwesten Deutsch-Ostafrikas wissenschaftlicher Bearbeitung zugänglich geworden. Denn die Beispiele von Ruanda-Gesängen, die R. P. A. ARNOUX[1]) und R. P. F. DUFAYS[2]) ihren ethnographischen Abhandlungen eingefügt haben, sind — wenn auch von einem musikalisch begabten und sorgfältigen Beobachter — direkt nach dem Gehör aufgezeichnet und daher musikwissenschaftlich leider von eingeschränkter Verwendbarkeit[3]).

Von den CZEKANOWSKIschen Phonogrammen blieben nach Ausscheidung der beschädigten und allzu schwachen, sowie der Sprachaufnahmen, 57 für die musikwissenschaftliche Untersuchung. Ein Gesang der Wasukuma (Phon. 83) ist schon früher veröffentlicht worden[4]). Das einzige Instrumentalstück der Sammlung, eine Flötenmelodie der Banyambo (Phon. 36), bietet wenig Charakte-

[2]) Lied und Gesang bei Brautwerbung und Hochzeit in Mulera-Ruanda. Anthropos IV, S. 847—878 (1909).

[3]) Die Schwierigkeiten, die die tonalen und rhythmischen Verhältnisse in exotischer Musik der Auffassung des Europäers bieten, und die Gefahr der Angleichung an das Gewohnte, lassen sich ohne mechanische Hilfsmittel selbst dann kaum überwinden, wenn geduldige Einzelsänger zu endlosen Wiederholungen bereit sind; vollends unmöglich wird eine adäquate Wiedergabe, wenn mehrstimmige Chöre während der aktuellen Aufführung notiert werden sollen. Es ist schwer zu begreifen, warum so Viele, die Gelegenheit und Lust haben, die musikalischen Äußerungen sogenannter Naturvölker zu sammeln, dies auf mühsame, zeitraubende und wissenschaftlich ganz unzulängliche Weise tun, während seit einem Menschenalter bereits eine so bequeme und zuverlässige Methode, wie die phonographische, zur Verfügung steht und die größeren Phonogramm-Archive heute jedem Sammler bereitwillig unterstützen.

[p. 379]

ristisches und konnte hier füglich wegbleiben. Leider waren noch mehrere der übrigen Aufnahmen (5 Batwa-, 5 Batutsi-, 4 Bahutu-Chöre) zu undeutlich, um in allen Einzelheiten gehört werden zu können; ich habe sie zwar, so gut es ging, transkribiert, könnte aber nur eine Skizze in Noten geben und ziehe es daher vor, meine Aufzeichnungen nur bei der Gesamtcharakteristik der Gesänge mitzuverwenden. Für die Korrektheit der hier abgedruckten 43 Notenbeispiele[1]) glaube ich aber einstehen zu können. Manche Stücke stellen durch ihre Polyphonie und ihre komplizierte Rhythmik ganz ungewöhnliche Anforderungen an die Geduld des Bearbeiters. Um sicher zu gehen, wurden sie mehrmals zu verschiedenen Zeiten abgeschrieben und die unabhängig voneinander entstandenen Niederschriften konfrontiert und nochmals am Phonogramm überprüft. Auch wurden stets alle auf der Walze festgehaltenen Strophen einer Melodie in extenso notiert, um durch Vergleichung der Parallelstellen undeutlichere Partien zu ergänzen oder zu verbessern, Variables und Konstantes zu scheiden und einen Überblick über die Gesamtform zu gewinnen. Für die Publikation wurde dann immer nur eine besonders charakteristische Strophe ausgewählt. (Die Ordnungszahl der abgedruckten Strophe ist im Notenbild, wo nötig, angegeben.)

Abb. 181. Eiserne Schellen, nat. Gr.

Das Notenmaterial ist zunächst nach den drei Völkerstämmen von Ruanda, deren Gesänge es wiedergibt, den **Bahutu**, **Batutsi** und **Batwa**, geordnet. Die zahlreichste Gruppe, die der Bahutu-Gesänge, ist dann nach dem Wohnsitz der Sänger, den Dörfern (Hügeln) **Ruasa** (Mulera) und **Kabgaye** (Marangara) und weiter nach dem Geschlecht der Sänger untergeteilt[2]).

Der Besitz der Banyaruanda an Musikinstrumenten ist sehr bescheiden. Kürbisrasseln (Abb. 182) finden sich in verschiedenen Formen[3]), ebenso eiserne Schellen, die außer zur rhythmischen Tanzbegleitung[4]) (Abb. 181, 183) als Halsbehang für Kühe[5]) und Jagdhunde[6]) verwendet,

[1]) Auf den Walzen 53 und 77 sind je zwei Gesänge aufgenommen.

[2]) Die Hochzeits- und Klagelieder der Bakera-Frauen sind am Schluß der betreffenden Gruppe zusammengestellt. Auch No. 9 gehört zu den Hochzeitsliedern und ist nur versehentlich von ihnen getrennt.

[3]) Vgl. CZEKANOWSKI in diesem Werke Bd. III, Tafel 58 oben (Batwa); P. ARNOUX l. c. VII, S. 553; Berlin, Mus. f. Völkerkunde III, E. 10 140 (zwei Kürbisse an einem langen Stock), P. ARNOUX S. 546. (Stab mit 3, Gabel mit 6 Früchten.) Ähnliche, an gegabelten Stöcken aufgereihte Rasselfrüchte auch in Urundi: III, E. 6511 (zweizackig, mit 8 Früchten, beim Speerkult gebraucht), 12741 (dreizackig, mit 16 Früchten). Man beachte die kreuzförmigen Einschnitte in den Kürbisschalen, die auch bei den Schalenzithern dieses Gebiets üblich sind.

[4]) Auch Berlin III, E. 13 706; P. ARNOUX S. 547.

[5]) III, E. 5289, ANKERMANN, B., Afrikanische Musikinstrumente, Ethnol. Notizblatt III. 1. (1901). S. 29, Abb. 43; III, E. 10 138.

[6]) III, E. 13 704 (Mulera).

neben andern Dingen wohl auch an menschlichem Halsschmuck getragen werden. Die Trommeln (Abb. 184) gleichen in Form und Bespannung („Fellschnurfellspannung") denen der Nachbarlandschaften Uganda und Kiziba[1]); die Batwa am Hofe des Königs Musinga stimmen sie zu einem mehrtönigen Orchester[2]). Saiteninstrumente sind nur durch die 7- oder 8saitige Schalenzither[3]) (Abb. 185) vertreten, deren Saiten mit der Linken verkürzt, mit der Rechten mit Hilfe eines Plektrons angerissen werden; die Sese ist, wo sie auftritt, Suaheli-Import[4]). Von Blasinstrumenten finden sich außer Signal-(?)Pfeifen (Abb. 186) kunstlose Längsflöten aus Rohr mit vier Grifflöchern[5]) und Trompeten aus Antilopenhörnern mit seitlichem Blasloch und einem Griffloch an der abgekappten Spitze, das mit dem Zeigefinger gedeckt wird[6]). Flöten und Trompeten werden anscheinend nur als Soloinstrumente, die Schalenzithern auch zur Tanzbegleitung gebraucht. Der Mangel namentlich an melodietragenden Instrumenten ist bemerkenswert im Hinblick auf die hohe Entwicklung der Polyphonie (s. u.).

[5]) III, E. 5377 (Karagwe); KOLLMANN, P., Der Nordwesten unserer ostafrikanischen Kolonie (Berlin 1898), S. 42, Fig. 74; WEISS S. 112 (Bahutu). [6]) KOLLMANN S. 42 (Karagwe).

Bei der Transkription sind von diakritischen, in unserer Notenschrift nicht üblichen, Zeichen[1]) nur die wenigen folgenden verwendet:

+ und — über der Note für geringe Erhöhung oder Vertiefung;

( ) für Varianten;

[ ] für Konjekturen aus Parallelstellen;

⌒ vor der Note (in Nr. 44) für Aufwärtsglissando;

⌣ zwischen zwei Noten für pulsationslose Verbindung (Synkope);

· für Luftpausen:

ᵕ (in Nr. 14) für geringe, den Gesamtrhythmus nicht tangierende Verkürzung.

Chornoten sind nach abwärts gestrichen, besonders wenn sie mit der Solostimme in gleicher Zeile stehen. Die absolute Tonhöhe des Originals ist bei jedem Stück für den Anfangston der Notation angegeben: so bedeutet $c^2 = a^0$: Original eine kleine Dezime tiefer.

Es war nicht möglich, die Verteilung der von Herrn Dr. Czekanowski aufgezeichneten Textworte (vgl. S. 355 u. f.) auf die Gesangnoten festzustellen. Nur wo der Text des Refrains ganz eindeutig zu verstehen war, habe ich dies bei den Analysen angemerkt. Als Titel werden meistens — aber nicht immer — die Worte des Chorrefrains angegeben.

Die musikwissenschaftliche Besprechung folgt dem tatsächlichen Gang der Untersuchung. Es werden zuerst Beispiele, jedes für sich, analysiert, dann die einzelnen musikalischen Momente: Melos, Polyphonie und Rhythmus zusammenfassend charakterisiert und ihre theoretische Bedeutung hervorgehoben. Aus äußeren Gründen empfahl es sich nicht, schon hierbei die Gesänge der drei Stämme zu sondern. Der Versuch, sie stilistisch gegeneinander abzugrenzen, wurde daher für die Schlußbemerkungen aufgehoben, die die Ergebnisse noch einmal kurz resumieren.

Notenbeispiele und Analysen

A. Bahutu-Gesänge

1. Männergesänge aus Ruasa (Mulera)

1. (Phon. 39).

Von den zahlreichen Versen sind nur der fünfte bis achte notiert. Bei den späteren Wiederholungen wird das Solo schwächer und schließlich unhörbar, so daß der Chor deutlicher hervortritt; danach würde der Chorrefrain („Lilaye zambay' usw."), der sich offenbar das ganze Stück hindurch absolut gleich bleibt, in den ersten Versen ergänzt. Die Struktur des Gesangs wird aus Vers 7 klar: hier ist das Solo eine wenig variierte Transposition der drei ersten Chor-

[1]) Vgl. O. Abraham und E. M. v. Hornbostel, Vorschläge für die Transkription exotischer Melodien. Sammelbände der Internat. Mus.-Ges. IX, 1909.

takte um eine Quarte in die Höhe. Das Hauptmotiv benutzt das Tetrachord *c — ag* im Chor, *f — d c* im Solo, die Töne *h* und *e* — die Terzen der Grundtöne — kommen nur gelegentlich als Wechselnoten vor. Durch die Konjunktion der beiden Tetrachorde entsteht eine „fünfstufige Skala". Der letzte Solotakt führt gegen den Hauptton *g* hinunter, meist ohne ihn wirklich zu erreichen; der dritte und vierte Chortakt bekräftigen den Abschluß auf dem Hauptton. Der Choreinsatz ist daher nicht als melodischer Anfang, sondern als Fortführung der Solomelodie anzusehen. Es ergibt sich das Schema: $a^1b^1c^1/a^2b^2c^2/d\ e$ —, also wahrscheinlich 3 × 3 Takte mit Verkürzung der letzten Gruppe. Indem sich das Solo ganz über den Chorrefrain schiebt, entsteht eine fünftaktige Periode, und der Schluß bildet einen Bordun für den Anfang. Die Umfangsverengerung des Motivs in manchen Solovarianten (Vers 5, 6 u. a.) ist vielleicht durch Bevorzugung der simultanen Quarte (und Quinte) vor der Septime bedingt.

2. (Phon. 54).

Einfacher Wechselgesang, auch der Chor stets unison. Geringfügige Varianten treten in a häufiger auf. Von der Transposition des ersten Teils in die Unterquarte, die in c genau ist, weicht d erheblich ab; einige Wiederholungen, in denen *g* zu hoch oder statt des ersten *f* im letzten Takt *e* gesungen wird, zeigen, daß d dennoch als Variante von b gelten kann. Indem dieser Teil allemal zum Schlußton (Hauptton?) *f* zurückkehrt, wahrt er die tonale Einheitlichkeit des Ganzen; und indem er das *a* vermeidet, folgt er der Tendenz, die Oberterz des Grundtons zurücktreten zu lassen. So ergibt sich eine fünfstufige Leiter von der weitverbreiteten Form *d c — (a) g f*. (Man vergleiche mit dieser Melodie die gleichnamigen Gesänge der Bahutu-Frauen Nr. 10 und der Batwa Nr. 42.)

3. (Phon. 55).

Die Oberterz des Haupttons (*c*) wird vom Chor sehr tief — als „neutrale", zwischen *es* und *e* — genommen; dagegen ist in manchen Varianten des Solos das *e* am Schluß (Abton des zweiten Haupttons *g*) stark erhöht. Das Solo bringt eine Art Umkehrung des ersten Chortaktes; jedenfalls sind beide Motive rhythmisch verwandt. Der Rhythmus des ganzen Stücks ist ungeheuer merkwürdig: das Motiv des Solisten ist gegen das des Chors um ein Achtel verschoben, so daß die akzentuierenden Schläge hier auf die „schwachen", dort auf die „starken" Achtel fallen. Die Chormelodie ist zudem in sich synkopiert und für unsere (europäische) Auffassung ist das zweite Viertel des $^5/_8$-Taktes am stärksten betont, während das erste (*d*) als Auftakt wirkt. Man mag die Takteinteilung machen, wie man will, die rhythmischen Verhältnisse, die durch die Schläge und die vielfachen Wiederholungen absolut sicher gestellt sind, bleiben davon unberührt. Das Händeklatschen setzt erst in der Mitte des Phonogramms ein und zerstört die rhythmische Einstellung, die der Europäer durch die erste, unbegleitete Hälfte gewinnt.

4. (Phon. 60).

Sehr merkwürdig ist die auf den Tritonus *h* — *f* aufgebaute Tonalität. Sieht man von dem *c* in c^1 — das nur in einigen Wiederholungen und immer nur an dieser Stelle, als Wechselnote zu *h* vorkommt — ab, so ergibt sich eine obere Oktavhälfte, die in drei Ganztöne, und eine untere, die in zwei kleine Terzen gegliedert ist; wie die ganze Oktave, so ist also jede ihrer Hälften wieder distanzgleich geteilt. Vergleicht man die vorliegende Fassung mit dem gleichnamigen Frauengesang Nr. 14, so bemerkt man eine auffallende Ähnlichkeit des abschließenden Chormotivs. Auf gleiche Tonhöhe transponiert würde es in 14 die Töne *g f* — *d c* benützen. Danach wäre das *h* in 4 als vertieftes *c* und der Tritonus *f* — *h* als eine übermäßig große Quarte zu verstehen. — Als Zusammenklänge ergeben sich am Schluß der Motive a und c große Sekunden. Obwohl die Verteilung der Töne auf die beiden Stimmen aus dem Phonogramm nicht ganz sicher zu entnehmen ist, möchte ich die im Notentext wiedergegebene für die wahrscheinlichste halten. Denn sie läßt erstens die Verwandtschaft der Motive a^1a^2 und c^1c^2 hervortreten; zweitens stellt sich die zweistimmige Form als eine Art Kanon dar und die Zweiklänge würden sich aus dem Übereinandergreifen der Stimmen erklären — zu beidem finden sich Analoga in manchen anderen Melodien. Auch die rhythmische Struktur ist am einfachsten durch Gruppen von 3 × $^5/_4$ darzustellen, mit einer Verkürzung der dritten Gruppe in a um ein Viertel. Für den motivischen Aufbau ist offenbar nicht die einzelne Stimme, sondern das Ganze maßgebend, das in zwei analog gebaute Hälften zerfällt: $a^1a^2b^1$; $c^1c^2b^2$, und hieraus erklärt sich auch die Abweichung vom strengen Kanon, der durch das Abschlußmotiv b unterbrochen wird.

5. (Phon. 66).

Als Haupttöne sind wohl *d* und *g* anzusehen. Die Intonation der zwischenliegenden Stufen ist schwankend: *h* in a klingt in manchen Wiederholungen eher wie *c*, *c* in b wie *h*; der Ton in c liegt stets in der Mitte zwischen *a* und *b*, auch in d wird *a* manchmal sehr hoch genommen. Die Teilung der Quinte nähert sich also der distanzgleichen (nach javanischem Salendrotypus) an. Auch der Rhythmus ist ziemlich lax. Vermutlich sind 6teilige Gruppen gemeint, die aber vielfach — durch die Beschleunigung des Zeitmaßes innerhalb des Motivs — zu $^5/_4$, ja zu $^4/_4$ verkürzt erscheinen. So dürfte a als $^6/_8$ + $^3/_4$ intendiert sein, auch wo es, wie in der notierten Variante, objektiv $^2/_4$ (mit Triolen) + $^3/_4$ sind. Für uns sehr widerhaarig ist die Akzentverteilung in d, die, unbekümmert um die rhythmische Verschiebung, den zweiten Chorrefrain („muralinda") zu einer $^6/_8$-Gruppe zusammenschließt. Die rhythmische Freiheit ist um so erstaunlicher, als es sich um einen Gesang beim Lastentragen handelt.

6. (Phon. 72).

Abgesehen von der Wechselnote *f* liegt dem Gesang eine fünfstufige Leiter mit den Haupttönen *a* und *c* zugrunde. Für uns entsteht durch den kleinen

Terzenschritt *c* — *a* Molleindruck. — Die Einleitung zeigt den Aufbau in seiner einfachsten Gestalt: die Periode besteht aus sechs Motiven, die im Wechselgesang vorgetragen werden; im Schlußmotiv d („karame ndaje") erscheint der Normaltakt von $^3/_2$ auf die Hälfte verkürzt und zugleich in einer dem regelmäßigen Schlagrhythmus entgegengesetzten Akzentverteilung ($^6/_8$ gegen $^3/_4$). Das erste Motiv gibt den Chorrefrain (a) an; das zweite Motiv (b) tritt zunächst nur als eine einfache, den Umfang erweiternde Variante des ersten auf (b^1), entwickelt sich dann im Hauptteil weiter durch Anfangsreduplikation und reichere Gliederung (b^2, b^3). Das dritte Motiv c^1 ist eine freie Transposition des zweiten in die Tiefe: die disjunkten Tetrachorde *a* — *e*, *d* — *a* werden zu konjunkten *d* — *a*, *a* — *e*; im Hauptteil wird dieses Motiv durch Reduplikation metrisch erweitert, zugleich aber im Tonumfang eingeengt, indem entweder der Anfangston um eine Quarte heruntertransponiert, aus der absteigenden Quarte also eine Prim wird, oder der ganze Quartschritt wird um einen Ganzton nach abwärts gerückt (*c g* statt *d a*). Die erste (häufigere) Variante ist vielleicht eine Vorausnahme des Abschlußtaktes d. — Durch den vorzeitigen Einsatz von b^3 entsteht eine Verkürzung um ein Viertel, das aber durch die Erweiterung in der Reduplikation von c^2 wieder eingebracht wird. Die Berechtigung, den Aufbau des Hauptteils so zu interpretieren, ergibt sich aus der Analogie mit der Einleitung[1]).

2. Frauengesänge aus Ruasa (Mulera)

7. (Phon. 27).

Der Wechselgesang zwischen der Vorsängerin und Chor II wird durch ein stereotypes Motiv (Chor I) begleitet, das als rhythmisierter Bordun oder auch, mit Rücksicht auf die (seltene) Variante von b, als sehr einfacher Ostinato bezeichnet werden kann. In der Oberstimme, für sich betrachtet, sind zweifellos *d* und *a* die Haupttöne; nur in einer einzigen Variante wird das Solomotiv bis zum *g* hinuntergeführt. Doch muß man wohl den Bordun des ersten Chors als motivischen Abschluß des Solos und des Refrains des zweiten Chors auffassen. So ergibt sich ein durch beständiges Übereinandergreifen geschlossener Zirkel. Eigentümlich ist der Einschluß der Hauptquinte *d* — *g* in die Oktave e^2 — e^1, die den Ambitus bezeichnet: in manchen Varianten setzt das Solo ausnahmsweise auf e^2 ein, und in manchen (andern!) sinkt das Motiv des ersten Chors zum (merklich erhöhten) e^1 herab. Hierdurch tritt doch wieder *a* gegenüber *g* hervor. — Die rhythmischen Schläge betonen die Außenglieder der Dreiachtel-Gruppen, eine Akzentuierung, die auch uns geläufig ist („betonter Auftakt").

8. (Phon. 33).

Die Tonalität ist der von Nr. 7 ähnlich: wieder tritt in der Oberstimme die Quinte *d* — *g* hervor, während sich der Gesamtumfang von e^2 bis e^1 erstreckt;

[1]) Eine Variante dieses Gesangs ist unter Nr. 22 mitgeteilt.

das Ostinato-Motiv des Chors läßt hier aber die Quinte *h* des tiefsten Tons hervortreten, während *a* nur als Durchgangsnote vorkommt. Die tonale Struktur ruht also auf den beiden verschränkten Pentachorden *d* — *g* und *h* — *e*.

Die Melodie baut sich aus zwei voneinander nur wenig unterschiedenen Perioden von je vier $^3/_4$-Takten auf; durch vorzeitigen Einsatz der Solostimme entstehen Verkürzungen im Beginn der Wiederholungen. Als Hauptmotiv kann man die durch kurze Striche über dem System eingeschlossene Phrase auffassen; das Vorausgehende wäre dann ein (variabler) Auftakt, das Folgende eine verkürzte Wiederholung und die Chormelodie bestünde aus der zweimaligen Wiederholung des — vereinfachten und im Umfang eingeengten — Hauptmotivs mit angefügter Koda. (Für diese Auffassung sprechen u. a. die Atempausen.)

Auf jedes Viertel kommen ein oder zwei rhythmische Schläge, doch scheint das Auftreten von Achteln (statt Vierteln) an keine Regel gebunden.

9. (Phon. 45).

Die Motive dieses Wechselgesangs beginnen mit dem Chorrefrain, dem das Solo antwortet. Als Hauptton erster Ordnung (Tonika) erscheint daher der hohe Anfangston (*c*), als Hauptton zweiter Ordnung (Dominante) seine Unterquarte, die Finalis (*g*). Von dieser scheint die Solostimme in einigen Wiederholungen noch um eine kleine Terz abwärts zu gleiten („Abton" *e*), so wie der Chor von der Tonika (nach *a*) in einer Variante (a^2), die erst am Schluß des Phonogramms auftritt; hier erscheint auch — als Abschluß? — ein neues Motiv (c), das von der Oberquinte zur Tonika herabsinkt. Zusammenklänge durch Übereinandergreifen der Stimmen kommen auch erst in diesem Schlußteil regelmäßig vor.

10. (Phon. 46).

Die Tonalität ist ähnlich wie im vorigen Stück: der eine Hauptton *c* ist zugleich Anfangs-, der andere *g* Schlußton, das obere Pentachord g^2 — c^2 wird nur in einer kurzen Überleitung gebraucht; die Leiter ist fünfstufig ohne Halbtöne. Durch Übereinandergreifen entsteht an den Motivschlüssen ein Quartenzusammenklang (Tonika + Dominante), in dem die Stimmenverteilung regelmäßig abwechselt (Zirkelform). — Der Rhythmus, dessen Auffassung für uns durch die gehäuften Synkopen erschwert ist, ist durch die regelmäßigen Schläge auf jeder Halben sichergestellt. Die ganze Periode, die ohne bemerkenswerte Varianten immer wiederholt wird, besteht aus drei $^4/_2$-Gruppen, wenn man sich nach den Chormotiven richtet; gliedert man dagegen die Solomelodie in vier $^3/_2$-Gruppen — nach den Strichen über dem System —, so erscheint die dritte (b^2) als Variation der zweiten Gruppe (b^1), die erste (a) als monotone Einleitung[1]).

11. (Phon. 47).

Innerhalb der vorwiegend auf der Quinte *d* — *g* aufgebauten Tonalität befremdet das *f:s* am Anfang. Mit Rücksicht auf die transponierte Wiederholung

[1]) Vgl. die gleichnamigen Gesänge 2 und 42.

des ersten (synkopierten oder punktierten) Motivs ist es vielleicht als ein *f* zu verstehen, das zu hoch intoniert wird, weil der Sängerin die Oktave des Grundtons vorschwebt. Es ist auch möglich, daß wirklich g^2 intendiert, aber von der Stimme der Solistin nicht erreicht worden ist. An einen zerlegten „Terzquartakkord" darf man aber keinesfalls denken, den hört nur unser europäisches Ohr in die Melodie hinein. — Wieder klingen die beiden Haupttöne am Gruppenschluß in der Quinte zusammen infolge des Übereinandergreifens der Stimmen. Das Motiv b ist eine erweiterte Variante des Chorrefrains („umulambi etc.") und schließt sich mit diesem zum Zirkel. Ob der Ablösung der beiden Motive a und b eine Regel zugrunde liegt, läßt sich aus dem Phonogramm, von dem nur ein Teil deutlich ist, nicht entnehmen.

12. (Phon. 48).

Die Melodie gehört zum gleichen Typus wie Nr. 7. Eine Chorgruppe gibt einen rhythmisierten Bordun, der sich melodisch an das variable Solomotiv und den stereotypen Refrain der zweiten Chorgruppe anschließt. Durch Überschneidung von Anfang und Schluß dieser Motive ergibt sich die durch die Haupttöne (*d* — *g*) gebildete Quinte auch simultan (Zirkelform). Noch durchsichtiger wird die Struktur, wenn man die Melodie nach vier $^4/_4$-Takten gliedert, beginnend mit Chor II; dessen Motiv würde vom Solo — mit Auftakt — variiert wiederholt und durch das Bordunmotiv von Chor I beschlossen, das bei der Wiederholung sein erstes Viertel verliert. Die neue Strophe setzt dann bereits auf der ersten langen Note des Borduns ein, was eine Überschneidung von 6 Vierteln ergibt. (Vgl. die kleinen Gruppenstriche.) Manche Varianten des Solomotivs greifen weiter aus, eine — ziemlich häufige — bis zur Oktave des Grundtons, beschränken sich aber (von seltenen Durchgangsnoten abgesehen) auf die Töne der fünfstufigen Leiter. Die Reihenfolge der Varianten scheint willkürlich zu wechseln — nur drei besonders typische sind notiert. Die rhythmischen Schläge fallen auf jedes Viertel und sind gelegentlich in Achtel aufgelöst; sie erleichterten die Feststellung der Synkopen des Chorrefrains (und der einen Solovariante).

13. (Phon. 49).

Das Solomotiv, dessen Länge mit dem Text wechselt, fällt durch die Hauptquinte *g* — *c*, selten wird noch *a* (Dominantleitton) als Wechselnote hinzugenommen. Die Ausfüllung der Quarte *g* — *d* ist variabel, öfters tritt *e* an die Stelle von *f*; in der kurzen Phrase des ersten Takts, die mehrmals wiederkehrt, erscheint immer *e* (Leitton zur Nebentonika *d*?). Die Verteilung der Stimmen ist im Phonogramm nicht ganz klar, doch scheint sich der Chor auf einen einzigen Ton zu beschränken (rhythmisierter Bordun). Dieser ist die Obersekunde der „Tonika", und beide klingen in vielen Varianten zusammen — eine für unser Ohr besonders fremdartige und auch in den Bahutu-Gesängen singuläre Erscheinung. — Der Rhythmus ist durch den regelmäßigen Einsatz des Borduns und das Händeklatschen eindeutig als $^4/_4$ bestimmt.

14. (Phon. 52).

Die Notierung, die etwas kompliziert aussieht, versucht, den motivischen und rhythmischen Bau der Melodie möglichst klar hervortreten zu lassen. Die Melodie des Solos zerfällt in zwei analog gebaute Gruppen mit identischem Schluß; die 8 Viertel jeder Gruppe lassen sich wieder in einen Vortakt von 3 und einen den Hauptton (*d*) umspielenden Haupttakt von 5 Vierteln gliedern; eine Pausengruppe von $^4/_4$ trennt die Wiederholungen. Analog ist der Aufbau der Chormelodie, die zwei Viertel vor dem Abschluß der ersten Sologruppe, zugleich mit dem Schlußton des ersten Motivs, einsetzt. Die Motive des Solos sind tonal durch den Abstieg in der Quarte *g* — *d* charakterisiert, der vom Chor am Schluß der ganzen Melodie durch den Abstieg in der konjunkten Quarte *d* — *a* beantwortet wird. Dieser wird durch die lang ausgesponnene Umspielung des Haupttons verzögert. Der Schlagrhythmus kontrapunktiert die — schon untereinander rhythmisch verschobenen — Gesangstimmen mit einem neuen, regelmäßig wiederholten Motiv von 5 Vierteln. Läßt man es mit dem stark akzentuierten Viertel schließen (betonter Auftakt, vgl. Nr. 7), so fällt der Anfang mit dem des zweiten Chortaktes (und dem Schlußton der Solomelodie) zusammen: und hier, aber auch nur hier, bleiben Schlag- und Gesangrhythmus durch 5 Viertel konform[1]).

15. (Phon. 53a).

Die Hauptquinte *a* — *d* ist nur durch eine Zwischenstufe geteilt. Das Solomotiv geht immer bis zum „Abton" der Tonika (*c*) herunter, der Chorrefrain schließt das Motiv auf dem Hauptton. Das eintaktige Motiv wird ohne wesentliche Veränderungen beständig wiederholt; eine durch vorzeitigen Einsatz des Solos entstandene Verschiebung wird durch zeitliche Dehnung („Vergrößerung") ausgeglichen, so daß der Rhythmus konstant bleibt.

16. (Phon. 53b).

Der Chorrefrain, der sich dem Solomotiv (a) anschließt, transponiert dieses um eine Quart herunter, unter Weglassung des Auftakts (*a*) und geringfügiger tonaler Variation (Angleichung der Dreiachtelnote an die vorhergehenden Hauptton-Achtel, Erhöhung des Durchgangstons). Das zweite Solomotiv (b) entsteht durch Zusammenziehung des ersten (a) mit dem Chormotiv. — Der $^7/_4$-Takt ist vermutlich zu erklären aus dem Übergreifen von 5 Vierteln, bei einer Motivlänge von 12 (= 4 × 3) Vierteln (vgl. die kleinen Gruppenstriche!). Wenn man die Pausen nicht mitrechnet, so ergibt sich das Motiv zu 3 × 3 = 9 Vierteln mit 2 übergreifenden Vierteln. In jedem Fall kommt hier zur Überdeckung noch eine rhythmische Verschiebung hinzu.

17. (Phon. 62).

Der Melodie liegt die „fünfstufige Leiter" *a g* — *e d c* zugrunde, ganz selten tritt *f* als Zwischenton auf. Wesentlich ist für das Solomotiv der Schritt *a* — *g*.

[1]) Vgl. den gleichnamigen — und auch melodisch verwandten — Männergesang Nr. 4.

für den Chorrefrain der Schritt *d* — *c*, die Verbindung zwischen beiden stellt die Legatofigur am Anfang des Chormotivs her. Die geringere Bedeutung des *c* (absteigender Leitton zu *d*?) würde auch seine (im Chor) stark vertiefte Intonation (fast *es*) erklären. Sehr auffällig ist aber die Übereinstimmung der Intonation in dieser und der oben (Nr. 3) mitgeteilten Variante des Liedes. Die neutrale Terz ist also sicher kein Zufallsprodukt. — Der für uns äußerst widerhaarige Rhythmus wäre ohne die rhythmischen Schläge kaum sicher zu stellen gewesen, trotz der zahlreichen, ganz identischen Wiederholungen. Jedes für sich genommen, ist sowohl das Solo- als das Chormotiv einfach genug, auch für europäische Auffassung; aber wir würden den Chor um ein Achtel später beginnen lassen. Gegenüber dem Solo erscheint der Chorrefrain synkopiert, allein diese Deutung ist fragwürdig; nach Analogie anderer Beispiele ist wohl eher der scharfakzentuierte Schlag (im Klatschrhythmus) als letzter der Periode (betonter Auftakt) zu fassen und demgemäß für den Chor Betonung der (für uns) schwachen Zeiten — die auch sonst in außereuropäischer Musik gang und gebe ist — anzunehmen. Auch der Rhythmus ist dem von Nr. 3 analog. (Näheres s. S. 409).

18. (Phon. 63).

Von den 48 Wiederholungen des eintaktigen Motivs, die das Phonogramm enthält, sind nur einige besonders typische Varianten wiedergegeben. Das Motiv besteht aus zwei $^3/_4$-Gruppen ($^3/_4$ Solo + $^3/_4$ Chor), verkürzt sich aber durch Übereinandergreifen der Stimmen zu $^5/_4$; der Chorrefrain wird regelmäßig um ein Viertel, das Solomotiv gelegentlich auch um ein Achtel verlängert (Fermate). Die Variante (30) zeigt, daß ein Ton durch seine (Unter-)Quinte vertreten werden kann. Durch die Betonung des vierten Achtels (im Gesang, in zwei Varianten auch durch den Schlagrhythmus) verändert das Solomotiv seine $^3/_4$ fast in jedem zweiten Takt in $^6/_8$. Durch den starken Akzent ist wohl auch das (erhöhte) *g* in der 16. Wiederholung bedingt; es ist dies die einzige Abweichung von der fünfstufigen Leiter.

19. (Phon. 64).

Die Chormelodie besteht aus zwei fast gleichlautenden Gruppen, deren zweite sich durch den antizipierten Einsatz des kurzen Motivs, das die Vorsängerin dazwischen wirft, um ein Viertel verkürzt. Die Auffassung der Bahutu verrät sich in dem begleitenden Trommelrhythmus, der beim Einsatz des Solos plötzlich abbricht und von neuem beginnt. Die Wucht des Anfangs treibt offenbar auch die Intonation in die Höhe (*h* statt *b*!). Das Solomotiv setzt sich in der Chormelodie in natürlicher Weise fort, und die hier als erste notierte Gruppe erscheint so als (variierte) Wiederholung der andern.

20. (Phon. 68).

Die Hauptquinte *e* — *a* ist durch zwei Zwischenstufen, unter Vermeidung der Terz der Tonika, geteilt, und durch den Abton *g* erweitert. So entsteht hier eine fünfstufige Leiter mit dem Hauptgewicht auf dem zweittiefsten Ton. Für

die ersten drei Motive (a bis c) ist das Pentachord *e* (*d*) — *h a*, für das letzte (d) das Pentachord *d* — (*h*) *a g*, mit stark vertieftem *g*, wesentlich; der Wechsel der beiden entspricht innerhalb des Reinmelodischen etwa unsrer Modulation Tonika — Dominante. Das erste Solomotiv (a) faßt beide Pentachorde zusammen und exponiert so die Gesamttonalität. — Die Melodie besteht aus vier $^6/_4$-Motiven, deren jedes wieder in zwei Gruppen von $^3/_4$ zerfällt; die erste wird vom Solisten, im 4. Motiv (d) vom Chor (II?) gesungen, während die zweite Gruppe als (variierte) Chorwiederholung der ersten gelten kann. — Nur die beiden ersten Takte verkürzen sich durch Übereinandergreifen der Stimmen um je ein Viertel. Durch Händeklatschen wird jedes Viertel markiert.

21. (Phon. 69).

Bemerkenswert ist der Wechsel der Tonalität in den beiden Solomotiven, deren (vermutlich regellose) Wiederholung sich durch den ganzen Gesang fortsetzt: das eine (a) verwendet die große Oberterz des Haupttons, das andere (b) vermeidet sie. Der Leitton zur Tonika wird im Chor merklich vertieft. — Der $^5/_4$-Takt entsteht aus den $^6/_4$-Motiven (mit Schlußfermate) durch Übereinandergreifen der Stimmen.

22. (Phon. 73).

Das Hauptpentachord (*a* — *d*) ist nach oben durch einen Anfangsakzent (*c*) erweitert. Sehr merkwürdig ist die Erweiterung nach unten am Schluß (in b), die zwei Ganztöne unter dem Hauptton (*d* — *c* — *b*) bringt. Die Analogie mit dem gleichnamigen Männerchor Nr. 6 lehrt, daß das *b* als erhöhtes *a* aufzufassen ist. Es entstehn so zwei zur Hauptquinte symmetrisch gelegene Quinten *c*—*f* und *f*—*b*, die dem Mittelton *f* größere Bedeutung verleihen. — Sehr eigentümlich ist auch die Rhythmik des Schlußmotivs b: wir wären geneigt, hier $^5/_4 + {}^4/_4 + {}^6/_4$ zu zählen. Der regelmäßige Aufbau von $2 \times {}^4/_4$ läßt aber vermuten, daß auch die letzten 8 Viertel als eine Gruppe gemeint sind. Allenfalls könnte man alle Gruppen als nach 5 + 3 gegliedert annehmen. Man vergleiche damit, wie sich das $^6/_8$-Motiv („karame ndaje") an die aus $^3/_8$-Gruppen aufgebaute Variante in Nr. 6 anfügt. — Die neue Strophe setzt allemal um $^1/_8$ verfrüht ein.

23. (Phon. 74).

Das Hauptmotiv erscheint als Ostinato des Chors zweimal in jeder Periode. Hier ist es über die Tonika (*d*) nach der Tiefe erweitert. Als erstes Solomotiv (a) durchläuft es dagegen das obere Pentachord (*a* — *d*) und setzt um eine Halbe verzögert ein; den Abschluß des Solos bildet dasselbe Motiv in seiner einfachsten Gestalt (c). Im späteren Verlauf des Gesangs tritt eine Variante mit erhöhtem Anfang (Einsatzakzent, *h* statt *a*) auf. Die fünfstufige Leiter besteht also hier aus den verschränkten Pentachorden *a* — *d* und *fis* — *h*. — Die Synkopen und Triolen mit ausgehaltener Schlußnote erschweren die rhythmische Auffassung sehr; sie wird erst beim Eintritt der Schläge (auf jeder Halben) — etwa in der Mitte des Phonogramms — ganz sicher.

24. (Phon. 78).

Das von der Solistin vorgetragene Solomotiv (6 Halbe) zerfällt in einen variablen Teil (4 Halbe) und einen konstanten Refrain (2 Halbe). Der erste Chor fällt in den Refrain unison ein und leitet dann entweder durch den Abton (*fis*) und die Obersekunde (*h*) der Tonika zum nächsten Vers über, oder er wiederholt die Tonika als Schlußfermate (*a*). Der zweite Chor gibt ein Echo des Refrains auf der Dominante, von der er ebenfalls zur Obersekunde abgleitet. Für das Hauptmotiv ist wesentlich der Abfall durch die Hauptquinte *e* — *a*; dieser ist im variablen Anfang meist bis *h* geführt; eine Variante (13) kehrt noch einmal zum *d* zurück; eine andere (18) antizipiert den Refrain, indem sie das ganze Motiv auf 4 Halbe zusammenzieht; eine dritte (11) benützt nur das obere Tetrachord *a* — *fis* — *e* und nimmt das Chorecho voraus. (Die hier nicht notierten Verse sind unwesentliche Veränderungen dieser vier Typen. Der Periodenbau ist nicht klar, vielleicht schließen sich 6 Verse zu einer Strophe zusammen.) Bemerkenswert ist die tonale Struktur durch die Gegensätzlichkeit der beiden Tongruppen *e* — *a* und (*d*) — *h* — *fis*, durch deren Übereinandergreifen sich die simultane Sept fis^1 e^2 ergibt. Die Sängerinnen intonieren den Hauptton in der Qualität (Oktave) des Trommeltons. In manchen Versen (wie 10, 18) entspricht der Rhythmus des Solos dem 2. Takt des Trommelmotivs.

25. (Phon. 80).

Die Melodie baut sich auf dem Tetrachord *d* — *a* auf, das durch einen oberen Beiton der Tonika *d* erweitert ist. Das *cis* ist nicht als Leitton — als solcher kommt es nie vor —, sondern wahrscheinlich als distanzgleiche Halbierung des ganzen Motivraums (*f* — *a*) („ye Ulwimanuye") aufzufassen. — Der erste, invariable, Solotakt ist wohl als (unvollständige) Antizipation des Chorrefrains zu verstehen; der zweite bringt unwesentliche, vermutlich textbedingte Varianten. Durch Übereinandergreifen der Stimmen verkürzt sich die nach dem Schema 2 × (4 + 4) gebaute Melodie zweimal um zwei Viertel.

26. (Phon. 44).

Die Melodie zerfällt in analog gebaute Hälften, jede wieder in ein exponierendes und ein antwortendes Motiv. Das erste Solo-Motiv (a) benützt das Pentachord *g* — *e d c*, das zweite (b^1) das Pentachord *d c* — *a g* (Verschränkung). Hier erscheint die absteigende Achtelfigur des ersten Motivs in Verkürzung, die durch Reduplikation der Schlußfigur ausgeglichen wird (vgl. Nr. 24, Vers 181). Der hierdurch bedingten (vorhaltartigen) Betonung der Obersekunde der Finalis analog ist der langausgedehnte Vorhalt, der das erste Chormotiv c („ewanyu nih' ugiye") beherrscht; das zweite Chormotiv b^2 („genda wiholere mama") wiederholt das zweite Solomotiv, aber ohne Verkürzung und erweist sich als (nur wenig veränderte) Transposition des Anfangsmotivs auf die Unterquarte. Die Struktur der „fünfstufigen halbtonlosen Leiter", für die nur die

Quinten-, Quarten- und Sekundenbeziehungen wesentlich sind, nicht die Terzen, tritt in dieser Melodie besonders klar hervor:

27. (Phon. 67).

Der Chor beschränkt sich auf einen rhythmisierten Bordun auf dem Hauptton. Auch das eintaktige Solomotiv wird ohne wesentliche Veränderungen wiederholt. Die Zwischenstufe, die die Quarte *g* — *d* teilt, ist der melodisch schwächste Ton: sie fällt entweder ganz weg oder variiert je nach dem Zusammenhang (*e* als Abton von *g*, *f* als Wechselton von *d*). — Die Quartole auf den ersten drei Vierteln ist in vielen Wiederholungen deutlich.

28. (Phon. 70).

Die Melodie gibt ein besonders instruktives Beispiel für die typische Struktur der Bahutu-Gesänge: das Thema dehnt sich über vier Halbe aus, von denen aber das Solo nur die ersten drei übernimmt; während der auf der dritten Halben einfallende Chor das Thema zu Ende führt, beginnt das Solo bereits mit dem nächsten Vers. Das Solomotiv bringt den Abfall durch die Hauptquinte, der Chorrefrain („ewahoro") sinkt noch vom Hauptton um eine Stufe weiter hinunter. Im späteren Verlauf des Gesangs tritt eine Variante von stärker abschließendem Charakter ein: der Chorrefrain bleibt auf dem Hauptton, und die Vorsängerin fügt noch eine verkürzte Wiederholung des Hauptmotivs als Kadenz an. Natürlich fällt hier das Übereinandergreifen der Stimmen — das ja ein Mittel lebendigen Fortschreitens ist — weg, und so ergibt sich die zeitliche Vergrößerung des Themas auf $3 \times {}^{2}/_{3}$.

29. (Phon. 77 a).

Das Stück wird, wie unbegleitete Sololieder meist, rhythmisch ziemlich frei vorgetragen; die Notierung kann daher die zeitlichen Verhältnisse nur approximativ wiedergeben. Die Melodie beginnt mit einer Einleitung (a^1 bis d^1), in der jedes Motiv auf dem Hauptton (?) *a* schließt. Der folgende Hauptteil besteht aus einem variablen Vortakt (e) und einem in allen Wiederholungen konstanten Refrain (a^2 d^2), der auf der Obersekunde des tiefsten Tones (*h*) schließt. Die Leiter ist fünfstufig: im oberen Tetrachord (a^2 — *e*) wird die Oberterz der Dominante, im unteren (*d* — *a*) die Terz des Haupttons vermieden.

30. (Phon. 77 b).

Das erste Thema (A^1) wird viermal, mit unwesentlichen Varianten, wiederholt, dann vom zweiten Thema (B) abgeschlossen; die darauffolgende Variante

verändert das erste Thema ziemlich stark und erweitert es um einen kurzen Vortakt (vgl. auch Nr. 29). Rhythmisch ist vielleicht ein $^4/_4$-Takt intendiert, mit Erweiterungen durch den Auftakt; doch wäre auch eine Gruppierung nach $^3/_4$, wie die Striche über dem System sie andeuten, denkbar. Infolge der Freiheit des unbegleiteten Solos ist eine Entscheidung unmöglich. Das Stück ist übrigens vielleicht nur eine stark variierte Fortsetzung des vorigen, dem es nach einer kleinen Pause auf derselben Walze folgt; doch tritt in 30 auch im Text ein neuer Refrain auf.

3. Männergesänge aus Kabgaye

31. (Phon. 32).

Der Rhythmus, namentlich der Soloteile, ist sehr frei; die Notierung kann daher nur das allgemeine Schema skizzieren. Das am stärksten variable Motiv c erscheint als Erweiterung von a; in einer Variante wird das Schlußmotiv (Abfall durch das *d* — *g*-Pentachord) antizipiert, dem sonst immer nur das Vormotiv (Abfall durch das *e* — *a*-Pentachord) vorangeht. Die Gegensätzlichkeit der Tonalitäten der beiden Motive begründet vermutlich ein ähnliches Verhältnis von Spannung und Lösung im Reinmelodischen, wie es zwischen Konkordanz und Diskordanz („Auflösung") im Harmonischen besteht. — Quinten- oder Quartenzusammenklänge (durch Übergreifen) kommen nur gelegentlich vor.

32. (Phon. 34).

Die Melodie baut sich aus 5 Fünfviertelgruppen auf: in den ersten drei wird das erste Motiv (im Pentachord *d* — *g*) im Wechselgesang wiederholt, mit Verkürzung um 2 Viertel durch Übergreifen; bemerkenswert ist die Verschiebung der Sechszehntelfigur in a^2. Von den Schlußmotiven (Pentachord *c* — *f*) zerfällt das erste (b) in zwei Untergruppen von 5 Achteln, das zweite (c) ist eine Variante (Umfangsverengerung) von a.

33. (Phon. 37).

Der Rhythmus des Sologesangs hat für unsere Auffassung die Freiheit rezitativischer Deklamation. Die fünfteilige Gruppierung geht indes mit Sicherheit aus der Trommelbegleitung hervor, deren rhythmisches Motiv sich ganz regelmäßig wiederholt. Nur wie die Gruppen zu begrenzen sind, kann zweifelhaft sein. Der Einteilung, wie sie die ausgezogenen Taktstriche angeben — und die besonders durch Takt 6 nahegelegt wird — ist vielleicht die durch die kleinen Gruppenstriche angedeutete vorzuziehen. Der Chor, der erst im späteren Verlauf des Phonogramms deutlicher zu hören ist (vgl. den Schluß der Notierung), scheint einen konstanten Zweiton-Bordun von 5 Achteln durch das ganze Stück regelmäßig zu wiederholen. (Das erste, allein hörbare Achtel des Chormotivs ist in den Trommelnoten mit doppelter Cauda angedeutet.) Nur in

Takt 1 und 6 tritt eine Verschiebung ein. — Tonal baut sich der Gesang auf die Terzenreihe *c — a — fis — d* auf (vgl. Nr. 4).

34. (Phon. 59).

Das Phonogramm ist sehr undeutlich, namentlich die tiefsten Töne sind kaum zu hören; trotzdem glaube ich durch wiederholte, unabhängig voneinander vorgenommene Transkription und sorgfältige Vergleichung der Parallelstellen eine wenigstens in den Umrissen korrekte Notierung geben zu können. An dem Gesang sind außer dem Vorsänger wahrscheinlich zwei Chorgruppen beteiligt, von denen die eine das erste Solomotiv ergänzt und das zweite (variiert) wiederholt, während die andere nur das Schlußmotiv bringt. Die Melodie zerfällt in zwei Hälften von je 9 Vierteln, die durch Verkürzung aus den $^5/_6$-Motiven entstehen, indem die Stimmen am Schluß übereinandergreifen. — Soweit sich dies feststellen läßt, scheint sich die Melodie auf einer fünfstufigen Leiter aufzubauen, die im zweiten Motiv (b) vollständig durchlaufen wird, während das erste (a) nur das obere Tetrachord *c — a g*, das letzte Motiv (c) das untere Pentachord *g f — d c* benützt.

4. Frauengesänge aus Kabgaye

35. (Phon. 31).

Der Chor vollendet das erste Motiv und gibt so dem Solo Gelegenheit, mit dem zweiten vorzeitig einzusetzen; hierdurch verkürzt sich der erste Teil der Strophe um 2 Viertel. Der zweite Strophenteil bringt die beiden Motive unverkürzt im Chor, mit Veränderungen durch Transpositionen um eine Quarte abwärts. Der Abfall durch die Hauptquinte *d — g* wird in a^1, unter Betonung der Dominantsekunde *e*, stark verzögert (Spannung im Anfang!), in b^2 erscheint das Motiv in Umfangsverengerung (Verebben der Melodiebewegung am Schluß!). Die Leiter ist fünfstufig, die Oberterz des Grundtons (*h*) muß als Unterquart der Dominantsekunde verstanden werden.

36. (Phon. 35).

Der Chorrefrain bringt den melodischen Abschluß der Solomotive und schließt selbst mit derselben Formel, während die nächste Strophe schon einsetzt. Wir Europäer verfallen leicht in $^6/_8$-Takt-Auffassung, die sich aber nicht durchführen läßt. Für die Tonalität charakteristisch ist der Wechsel zwischen *e* und *f*, für die oft ein Mittelton ($\overline{f} = \overset{+}{e}$) eintritt. Es ist, als ob zwischen der Unterquarte von *a* und der Oberquarte des Haupttons (*c*) ein Kompromiß gebildet würde.[1])

[1]) Mit dem „Amahoro" aus Ruasa (21) hat das vorliegende Stück so wenig Ähnlichkeit, daß es fraglich scheint, ob die beiden überhaupt etwas miteinander zu tun haben.

B. Batutsi-Gesänge

(am Hofe des Königs Musinga)

37. (Phon. 12).

Die tonalen Verhältnisse sind lehrreich für das Verständnis der in Afrika häufigen „Terzen"Struktur. Das Hauptmotiv, das von der Dominante zur Tonika abfällt (in b, c), erscheint im Solo (a) oft (aber nicht immer) in Umfangsbeschränkung; der Refrain (d) umspielt die Tonika mit Benützung ihres Abtons (*e* = Unterquarte der Sekunde *a*), zu dem er am Schluß meist (aber auch nicht immer) noch einmal abgleitet (vgl. Nr. 7, 24). — In einer Strophe wird a dreimal und b zweimal wiederholt vor dem Eintritt von c, in einer anderen wird a zu einem längeren Rezitativ, hauptsächlich auf *h*, erweitert. — Der $^7/_8$-Takt ist wahrscheinlich als Erweiterung eines $^3/_4$-Takts zu verstehen, der in c (durch die Triole) öfters wirklich auftritt. — Die Verteilung der Stimmen ist nicht ganz klar; in manchen Strophen scheint der Refrain dem Solisten zuzufallen (?).

38. (Phon. 13).

Die Melodie baut sich auf den beiden (verschränkten) Pentachorden *d* — *g* und *a* — *d* auf; *h* und *e* sind, als absteigende Leittöne zur Dominante und Tonika des untern Pentachords, oft vertieft. Die Strophe zerfällt in zwei analog gebaute Teile, jeder von diesen in ein Solomotiv (a, d), dessen verkürzte Chorwiederholung (b, c), und eine Koda (e, f) mit Fermatendehnung am Strophenschluß. Eine Verkürzung um $^1/_8$ und ein Oktavenzweiklang entstehen durch Übereinandergreifen der beiden Teile. Bemerkenswert ist das Motiv d, das die beiden vorhergehenden (b, c) zusammenfaßt, den Abfall aber nicht durch die ganze Oktave, sondern nur bis zur Obersekunde des Grundtons (*e*) durchführt, mit der die Obersekunde der Dominante (*h*) im Chorauftakt zusammenklingt. (Man vergleiche mit dieser Bildung die tonale Struktur des vorigen Stückes!) — Wenn man rhythmisch-melodische Verschiebungen zuläßt, so kann man die rhythmische Struktur vereinfachen zu einem $^6/_4$-Takt, mit einer Verlängerung um $^1/_8$, die durch nicht vollständiges Übergreifen des Auftaktes (bei d) über den Chorschluß entsteht (vgl. die kurzen Gruppenstriche).

39. (Phon. 14).

Die fünfstufige Leiter entsteht in dieser Melodie besonders klar aus den Strukturverhältnissen: die Chormelodie (b^1) fällt vom Hauptton (*d*) durch eine Oktave, bei der Wiederholung (b^2) schränkt sich der Umfang auf eine Quarte ein; als Dominante fungiert die Unterquinte des Haupttons. Die obere Quinte *d'* — *g* wird im Solo (a) durch *h*, die Unterquarte der vorbereitenden Sekunde *e*, geteilt. Das Quartenmotiv des Anfangs bestimmt auch die Teilung der Oktave des Chorteils in zwei disjunkte Tetrachorde *d'* — *a* und *g* — *d*. Die Dominantsekunde *a* verzögert den Eintritt des Haupttons zweiter Ordnung (*g*), wie die

Sekunde *e* den der Tonika. Zugleich ist *a*, als Unterquarte (= Oberquinte) des Haupttons eine Art Nebendominante, die die Spannungstonalität ($e^1 — h\ a — e$) mit der Lösungstonalität ($d^1 — a\ g — d$) verbindet. — Auf dem 4. Viertel des ersten Chortaktes tritt regelmäßig eine heterophone Simultanquarte auf. — Der Soloteil unterliegt bei den Wiederholungen mannigfachen rhythmischen und tonalen Variationen, deren Einzelheiten das Phonogramm leider nicht deutlich wiedergibt. Der Chorteil bleibt stets unverändert. Für uns wirken alle ersten Viertel als Auftakte, doch stimmt die gewählte Einteilung besser mit der Phrasierung und dem motivischen Aufbau.

40. (Phon. 21).

Dem stereotypen Chorteil, der die Hauptmelodie bringt, geht ein frei variables Rezitativ des Solisten voraus, das aber stets mit derselben Kadenz (r) schließt. Die von den beiden Haupttönen *a* und *e* gebildete Quarte ist durch eine Zwischenstufe ($\bar{g} = fis$) distanzgleich geteilt. Die ziemlich schwankende Intonation dieser Stufe deutet darauf hin, daß sie die doppelte Funktion der Oberquinte (Unterquarte) von *h* (= Obersekunde der Dominante) und der Oberquarte (Unterquinte) von *d* (= Untersekunde der Tonika) zu erfüllen hat. Das Haupttetrachord ist nach oben und unten durch symmetrisch gebaute konjunkte Nebentetrachorde erweitert. — Das hier wiedergegebene Solorezitativ zerfällt in drei $^6/_8$-($^{10}/_8$-)Gruppen; rechnet man die ersten beiden Chorviertel als Auftakt noch zu r, so erscheinen auch die Chormotive fünfteilig, mit einer Dehnung in b^1 (Viertel statt Achtel am Anfang).

41. (Phon. 25).

Das erste Motiv (a) durchläuft die Hauptquinte von der Dominante (*a*) zur Tonika (*d*) und schließt mit dem Zusammenklang beider Haupttöne. Das zweite Motiv (b) setzt dem ersten das Pentachord zwischen *g* und *c* (Spannungstonalität) entgegen, schließt aber wieder auf der Tonika. Der Abschluß wird verzögert durch eine verkürzte Wiederholung des Motivs a (α) und eine erneute Spannung durch die ausgehaltene Untersekunde der Tonika (β). Die Melodie wird ohne bemerkenswerte Varianten fortgesetzt wiederholt.

C. Batwa-Gesänge

(Hofsänger des Königs Musinga)

42. (Phon. 1).

Die Stimmenverteilung ist nach dem Phonogramm nicht sicher festzustellen. In der ersten Gruppe (a) wechseln Solo und Chor, in den beiden folgenden singen entweder Chor und Vorsänger zusammen oder der Chor singt geteilt, so daß der einen Gruppe ein rhythmisierter Bordun auf *a* zufällt. Möglicherweise liegt aber auch hier ein Ostinato vor, wie im folgenden Stück, indem die Unterstimme an den Gruppenschlüssen nach *c* hinaufgeht. Die drei Gruppen sind analog gebaut:

jede besteht aus einem vorbereitenden ruhenden und einem zum Schlußton *c* abfallenden Motiv. Die tonale Struktur scheint wesentlich durch die Haupttöne (*c*, *g*) und deren Obersekunden (*d*, *a*) gegeben; mit dem starken Hervortreten der letzteren in a und c hängt vielleicht die ungewöhnliche Auszeichnung des *e* (als Unterquarte bzw. Oberquinte von *a*, nicht als Terz von *c*!) zusammen. — Die Wiederholungen bringen keine bemerkenswerten Varianten.

Im Aufbau und der melodischen Struktur (der Gruppen b und c) erinnert diese Melodie an den gleichnamigen Bahutu-Gesang 2 von dem sie aber rhythmisch verschieden ist.[1])

43. (Phon. 6).

Über einem Ostinato (Chor I), das vom Grundton (*a*) erst am Schluß aufsteigt, baut sich eine Gegenmelodie auf, die teils dem Solisten, teils einer zweiten Chorgruppe zufällt. Diese Melodie benützt fast ausschließlich die (Ober-)Quinte und Quarte des Grundtons, läuft aber am Schluß[2]) mit der Begleitungsstimme im Unisono (auf *c*) zusammen. Wie aus der (häufigen) Variante von a hervorgeht, ist *e*, nicht *d*, der Hauptton der Oberstimme. Dieses Zusammentreten der beiden Stimmen aus der Quinte in den Einklang auf der Mese erinnert an mehrstimmige Gesänge von den Salomonen[3]).

44. (Phon. 3).

Das sehr undeutliche Phonogramm gestattet nur eine flüchtige Umrißzeichnung, die hier mit allem Vorbehalt wiedergegeben wird. Die Melodie bleibt, von geringen Varianten abgesehen, in allen Wiederholungen gleich; sie wird abwechselnd vom Vorsänger und der einen Chorgruppe vorgetragen, während die andere Chorgruppe anscheinend eine Ostinatobegleitung gibt, die sich auf zwei Töne (Grundton und Obersekunde) beschränkt, ähnlich wie in 42 und 43. — Das erste Motiv (a) bleibt nach dem Abfall durch das obere Pentachord (*d c — a — g*) auf der Dominante, das zweite (b) betont die Sekunden der Haupttöne (*a*, *d*), das letzte (c) kadenziert durch das untere Pentachord (*g f — d c*).

Zusammenfassende Charakteristik

I. Melos.

Für die Beschreibung und Vergleichung von Melodien ist es zweckmäßig, sie in Typen zu ordnen. Unerläßliche Bedingung für jeden solchen Gruppierungsversuch ist, daß die Charakteristika der Typen den Melodien selbst entnommen, nicht auf Grund theoretischer Vorurteile in sie hineingetragen werden.

---

[1]) Vgl. auch den gleichnamigen Bahutu-Gesang 10.

[2]) Der Schluß von c ist maßgebend; das Solomotiv d ist unsicher.

[3]) Vgl. meine Untersuchung: Die Musik auf den nord-westlichen Salomo-Inseln in: R. THURNWALD, Forschungen auf den Salomo-Inseln und dem Bismarck-Archipel, Bd. III, Berlin (D. Reimer) 1912.

Vor allem muß man sich hüten, nichtharmonische Melodien im Sinne der neuzeitlichen europäischen Musik zu deuten: man würde sich damit von vornherein jede Möglichkeit des Verständnisses nehmen. Manche landläufigen Begriffe unsrer Musiktheorie — wie namentlich „Dur" und „Moll" — sind auf reinmelodische Musik schlechterdings unanwendbar und sollten überhaupt vermieden werden[1]). Andere — wie „Tonalität", „Tonika", „Dominante", „Leitton" usw. — lassen sich eher auf Analoges übertragen, wenn ihre Bedeutung entsprechend modifiziert und so bestimmt wird, daß dem tatsächlich Vorgefundenen kein Zwang angetan wird. Außerdem werden sie durch neue Begriffe ergänzt werden müssen. Die Aufstellung tonaler Typen kann gewiß helfen, eine Theorie des reinen Melos anzubahnen. Um der Gefahr eines starren Schematismus zu entgehen, werden die Begriffe nicht zu eng gefaßt, die Zahl der Typen nicht zu sehr beschränkt werden dürfen. Schon die Abstraktion von Rhythmus, Phrasierung, formalem Aufbau, Vortragsweise (und Text) bringt eine Entfernung vom lebendigen Melos mit sich, die um so größer sein wird, je wesentlicher die vernachlässigten Seiten in der Auffassung der Musizierenden sind. In der Musik der Kulturvölker, und besonders der Europäer, verschiebt sich das Gewicht — durch den Einfluß von Instrumenten, Notenschrift und Harmonie — zugunsten des tonalen Moments, und wir sind infolgedessen leicht geneigt, dieses in rein melodischer Gesangmusik zu überschätzen[2]). Und noch innerhalb des Tonalen selbst muß das Schema von den Einzelheiten der Melodiebewegung — dem wichtigsten gestaltbildenden Faktor neben dem Rhythmus — absehen.

Durch bloße Ordnung der Melodietöne nach der Höhe zu „Skalen" wäre wenig oder gar nichts gewonnen. Mindestens muß noch die melodische Funktion der Töne berücksichtigt werden. Ganz frei von subjektiver Auffassung läßt sich das Gewicht der Töne wohl nicht bestimmen. Aber die Kriterien können nachträglich ihre Rechtfertigung finden, wenn die Typen Gesetzmäßigkeiten der tonalen Struktur hervortreten lassen, die den Melodien selbst nicht ohne weiteres anzusehen sind.

Die Hauptrichtung der Bewegung in den Ruanda-Melodien ist durchwegs absteigend. (Wir beginnen deshalb die Tonreihen in der Typenübersicht — Notentafel S. 402 — mit dem höchsten Ton.)

Das Hauptmotiv fällt meist durch eine Quinte oder Quarte (Hauptquinte, Hauptquarte). Zwei Töne, die in einem dieser Verhältnisse stehen, treten als Haupttöne erster Ordnung hervor. Man kann in manchen Fällen zweifeln, welcher der beiden Töne der bedeutendere sei; meist aber wirkt doch der tiefere, dem die Bewegung zustrebt, als Basis des Melos sowohl, wie der

[1]) F. Densmore (Chippewa Music, Bureau of Amer. Ethnol. Bull. 45, Washington 1913 und 53, 1910) verfällt in diesen Fehler bei der Klassifikation der von ihr bearbeiteten Indianergesänge.

[2]) Dieser Gedanke ist näher ausgeführt in meinem Aufsatz über „Melodie und Skala", Jahrbuch d. Musikbibliothek Peters 19, Leipzig 1913.

Mehrstimmigkeit (s. u.).[1]) Ihn wollen wir darum als Tonika, den mit ihm durch die Quarten- oder Quintenbeziehung verknüpften oberen Hauptton als Dominante bezeichnen. [Die Tonreihen in der Übersichtstafel sind so transponiert, daß sie sich, wenn irgend möglich, ohne Versetzungszeichen schreiben lassen. Für diatonische siebenstufige Leitern wäre nach diesem Prinzip die Lage der Tonika durch die der Halbtonschritte eindeutig bestimmt. Bei stufenärmeren Reihen hat man dagegen die Wahl zwischen verschiedenen Oktavausschnitten; so ließe sich 27 mit *c* (statt *g*), 22 mit *d* (statt *a*) als Tonika darstellen. Als zweites Prinzip für eine übersichtliche Zusammenstellung hat dann zu gelten: Die Leitern werden so transponiert, daß bei möglichst vielen die Tonika höhengleich wird. Danach wird *g* Tonika in der ersten Hauptgruppe, um 20 und 32, *a* Tonika in der zweiten Hauptgruppe, um 6 ohne Versetzungszeichen schreiben zu können[2]).]

Nach den beiden Haupttönen erster Ordnung lassen sich die Typen zunächst in Modi gruppieren, die durch die Lage der Tonika in der Gesamttonreihe — oder, was auf dasselbe hinauskommt, durch die Lage der Halbtonintervalle zur Tonika — bestimmt sind; nach dem Hauptintervall kann man dann innerhalb des Modus eine Quintengattung und eine Quartengattung unterscheiden. Von den Bahutu-Melodien gehören weitaus die meisten (26[3])) zum Sol-Modus (Tonika *g*), dem sich auch die Melodien der Batutsi und Batwa fast ausnahmslos zuordnen lassen; sicher zu belegen ist ferner der La-Modus (Tonika *a*) durch 5 Melodien. Drei weitere Melodien — denen auch noch die Batwa-Melodie 44 zugefügt werden kann — sind vielleicht als Repräsentanten des Do-Modus aufzufassen. Ganz vereinzelt tritt der Si- (oder Fa-) Modus auf, dessen Tonalität, mit dem Tritonus als Hauptintervall, eine Sonderstellung einnimmt.[4]) Nr. 40 ist als Re-Modus notiert, um den Zusammenhang mit den übrigen Batutsi-Melodien klarer hervortreten zu lassen, könnte aber ebensogut als Quartengattung des La-Modus gelten.

Eine weitere Unterteilung der Modi ergibt sich aus dem Verhältnis der Haupttöne zweiter Ordnung zu denen erster Ordnung. In absteigender Melodik haben die höheren Nachbarn der Haupttöne die Funktion von Leittönen: die Gravitationskraft nimmt mit der Annäherung zu. So wird zunächst die Obersekunde der Tonika (*a* im Sol-Modus), die zugleich als Unterquarte mit der Dominante verwandt ist, zur Nebentonika; und diese ist wieder durch die Quintenbeziehung mit dem Leitton der Dominante verbunden, der nun zugleich als Nebendominante fungiert (*e* im Sol-Modus). Diese erste Unter-

[1]) Diese Auffassung wird bestätigt durch die Intonation des Haupttons als Oktave des Trommeltons in 24.

[2]) Es versteht sich wohl von selbst, daß die Notenzeichen und Tonnamen in einem Strukturschema zur Stufen, nicht absolute Tonhöhen bezeichnen.

[3]) 27 mit Nr. 33.

[4]) Es ist übrigens fraglich, ob Nr. 4 wirklich als Beispiel dieser Tonart gelten darf (vgl. oben S. 384). Vielleicht gehört aber 33 hierher.

gruppe, die man „Tonika-Leittonart" nennen könnte, ist durch 6 Bahutu-Melodien (35—24) vertreten. In andern Fällen (17—8) gewinnt der Leitton der Dominante (*e*) das Übergewicht und mit ihm seine Oberquinte oder Unterquarte (*h* im Sol-Modus). So ergibt sich als zweite Untergruppe die „Dominant-Leittonart".

Nicht nur die oberen, auch die unteren Nachbarn von Tonika und Dominante können als Haupttöne zweiter Ordnung auftreten. Die Melodiebewegung schießt sozusagen übers Ziel hinaus, die Tonika wird vorübergehend selbst Leitton, es entsteht eine „Ausweichung" in die gegensätzliche Tonalität der Subtoniumquinte. Von der „Tonika-Leittonart" unterscheidet sich die „Tonika-subtonart" wesentlich durch das Gewichtsverhältnis der beiden benachbarten Hauptquinten: dort ist die untere, hier die obere überlegen. Diese verhältnismäßig seltene Spezies kommt außer im Sol-Modus (20, 32) auch im La-Modus (22, 6) vor.

Der untere Nachbar der Dominante (*c* im Sol-Modus) tritt schon in dieser dritten Tonart — als Nebendominante — stärker hervor, als in den beiden ersten. In einer vierten Untergruppe — „Dominantsubtonart" — wird er zum bedeutendsten Ton neben den Haupttönen. Als Quart der Tonika ist er zugleich dieser zugeordnet, und nur das Übergewicht der Quinte unterscheidet die Dominantsubtonart der Quintengattung (34—26) von der Quartengattung (36—10).

Schon hier wird eine strenge Systematik durch die fließenden Übergänge unmöglich. Aber auch innerhalb der einzelnen „Tonarten" erscheinen die Charakteristika in sehr verschiedener Ausprägung. (Die Tonreihen der Tabelle sind nach steigendem Gewicht der Haupttöne zweiten Ranges geordnet; mehr zurücktretende Strukturintervalle sind durch punktierte Klammern bezeichnet.) In den beiden ersten Beispielen (27, 21) tritt neben der Hauptquinte überhaupt kein Strukturintervall hervor. (Die Zuordnung zur ersten Gruppe läßt sich aber durch die funktionelle Äquivalenz von *c* und *h* — vgl. 5 und 7 — rechtfertigen.) Das Intervall *d* — *a* (Dominante — Tonikaleitton in der Quintengattung) ist in allen Gruppen gelegentlich neben dem charakteristischen ausgezeichnet (13, 12, 7, 17, 29, 9); in der Quartengattung verbindet es die beiden Leittöne (1, 18)[1]) und wird dadurch gegensätzlich zur Hauptquarte („Leittonart"). In 26 erscheinen *g* — *c* und *d* — *g* als Hauptquinten, deren jede von ihrer Leittonquinte begleitet ist: es sind also eigentlich zwei Leittonarten zu einer Dominantsubtonart zusammengeschlossen. In 36 ist die Tonikaleittonart der Quintengattung mit der Quartengattung kombiniert. Es können, wie die letzten Beispiele zeigen, auch mehr als zwei Intervalle für die Struktur einer Melodie bedeutsam sein, und daher auch Haupttöne dritter (und eventuell noch höherer) Ordnung auftreten. (Für eine einheitliche Terminologie dürfte es zweckmäßig sein, stets den Ausgangston der Bewegung als „Dominante", den Zielton als „Tonika"

[1]) 1 und 18 sind de facto von gleicher Struktur; durch die konjunkten Quarten erlangt der höchste Ton (als Dominante der Dominante) eine Bedeutung, die ihm als Septime der Tonika nie zukommt.

zu bezeichnen; nur wo ein Hauptton in mehreren Oktaven auftritt, mag, wie der Tonname, auch die Funktionsbezeichnung der Einfachheit halber gleichbleiben, falls nicht die Struktur hierdurch geradezu verschleiert wird. So wird man in 12 auch das höhere *g* „Tonika" nennen dürfen, obwohl es, streng genommen, als (Neben-)Dominante der Dominante *d*, die ja zugleich (Neben-)Tonika der höheren Motive ist, fungiert; und ebenso kann in 9 das tiefere *d* „Dominante" heißen, obwohl es den tieferen Motiven als Tonika dient — in beiden Fällen ist eben die Beziehung der Tonqualitäten 𝔇𝔊[1]) die Hauptgrundlage der Tonalität. Dagegen ist in 26 das höhere *g* (Neben-)Dominante der Nebentonika *c*, und eben dieses Verhältnis ist wesentlich für die Charakteristik der Tonart, während das Oktavenverhältnis zur Tonika zurücktritt.) — Es ergibt sich ferner, daß ein Ton Dominante sein kann für zwei Toniken; ebenso wie eine Tonika mehrere Dominanten haben kann. So ist in 12 das *d* (Haupt-)Dominante der (Haupt-)Tonika *g* und zugleich (Neben-)Dominante der (Neben-)Tonika *a*, die außerdem noch *e* zur (Neben-)Dominante hat.

Zwischen die strukturbildenden Haupttöne sind Durchgangstöne eingeschaltet, deren geringere Bedeutung sich schon durch die Variabilität ihrer Lage verrät. So wird in den Melodien der ersten Gruppe (Tonika-Leittonart) die Quarte *d* — *a* (Dominante — Leitton) bald durch *c* (Untersekunde der Dominante), bald durch *h* (Obersekunde des Leittons) überbrückt, nie aber kommen beide zugleich vor. Da die Untersekunde der Tonika, *f*, hier — wie in allen Melodien außer denen der dritten Gruppe — fehlt, ergeben sich „fünfstufige halbtonlose Leitern"; wie man sieht, wäre es aber sinnlos, diese in der üblichen Weise danach einzuteilen, ob die (Ober-)Terz oder die (Ober-)Quarte des Grundtons fehlt. Der Ausfall von *h* in den beiden Subtonarten und in der Quartengattung erklärt sich von selbst; interessant ist aber, daß das *h* auch im La-Modus in seiner Leittonfunktion durch *c* vertreten werden kann. Im Do-Modus scheint dagegen das Subsemitonium die Rolle der Nebentonika zu übernehmen, zu der die Oberterz der Tonika als Nebendominante gehört. (Auch hier ist der absteigende Leitton schwach.) Vergleicht man hiermit die fakultative Erhöhung der Untersekunde im La-Modus ($\frac{+}{g}$), so liegt es nahe, in diesen Strukturen Ansätze zu den Tonalitäten zu sehen, die in Europa unter dem Einfluß der Simultanharmonie zur Alleinherrschaft gelangt sind (Dur und Moll).

In der folgenden Tabelle sind die tonalen Typen noch einmal übersichtlich zusammengestellt. Die Stufen sind nach dem Quintenzirkel angeordnet, um zu zeigen, wie „fünfstufige Leitern" sich einfach aus dem Vorherrschen der Quinten- und Quartenbeziehungen ergeben.

[1]) Die neuere Tonpsychologie hat den Begriff der Tonhöhe in mehrere Komponenten aufgelöst und versteht unter „Tonqualität" diejenige Eigenschaft, die einem Ton mit allen seinen Oktaven gemeinsam ist, die also beim Durchlaufen der Tonreihe periodisch wiederkehrt. Die von der Höhenlage („Helligkeit") abstrakte Tonqualität wird nach einem Vorschlage STUMPFs mit Frakturbuchstaben bezeichnet. Vgl. G. RÉVÉSZ, Zur Grundlegung der Tonpsychologie, Leipzig (Barth) 1913.

THE BATUSE OR BALYANWANDA OF RUANDA

CHAPTER XXVIII

THE TRIBE AND ITS GOVERNMENT

The clans—government—powers of the chiefs—taxation—murder—homicide—death in battle—suicide—the chief priest

115 THOUGH much of the Ruanda country became Belgian after the war, there is still a large part of Kigezi which is British Ruanda. My information with regard to these people was derived from two chiefs who were political prisoners in Mbarara. One of them was a prince of Ruanda who had fought against the British during the war and had been captured, and both were exiles from their own country because their king regarded them as dangerous to him and wished to kill them.

THE CLANS

614 The tribe was divided into clans which were totemic, having both primary and secondary totems. Sub-divisions of several clans were mentioned, but the information given was so imperfect as to be of little value. The names given were the same as some of the main clans and details as to the totems were lacking. The list, however, is given to show the existence of such sub-divisions:

1. Abanyiginya, totem, *mpekhi* or *epu* and *efuti*, a calf born feet foremost?

This was the royal clan and had three sub-divisions with the same totems:

(a) Abasindi.
(b) Nabaganzo.
(c) Abene, which had also a third totem, an unmarried girl with child.

2. Abega, totems, *mpekhi* and *efuti*.

Sub-divisions with the same totems:

(a) Abakono.
(b) Abaha.

[p. 184]

301

Chief of the Batuse, Ruanda

[facing p. 184]

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

614 3. Abakono.
4. Abagisere, totem, *enyamanzi*, wagtail.
Sub-divisions:
(*a*) Abasinga, totems, *enyamanzi*, and *lubombo*, a cow.
(*b*) Abazigaba, " "
(*c*) Abatyaba, " "
5. Abazigaba.
6. Abasinga.
7. Abawungara.

[582] The members of this clan intermarry and also marry people from outside tribes and from the clans Abakongole, Abaswere and Abasinga, but not from other clans, for these four clans were despised people and men of other clans would not marry girls from them.

8. Abatyaba, totem, *enyamanzi*. Abanyiginya and Abega clans refuse to marry girls from this clan.
9. Abasindi, totems, *mpekhi* and *efuti*.
10. Abakongole.
11. Abasambo, totems, *epu* and a house burned down and lightning. These came from Ankole.
12. Abaswere.

GOVERNMENT

643 692 The head of the country was the king, whose title was *Omwami* or *Mugabe*, and all important cases had to be brought to his court (*Kambera*) for trial. The king, however, did not 634 appoint the great chiefs or *Abatwala*, for their offices were [428] hereditary and they had been appointed by former kings, who divided the land into some forty districts and put a district chief over each. When, however, a district chief died leaving a son who was too young to manage the estate, the king appointed a guardian, often a brother of the dead chief, who administered the estate until the real chief was old enough. The new chief might then give his guardian a chieftainship under him and retain him as an advisor. If the guardian did not receive or accept such an office, he went to the king, who found him some post.

634 Each district chief was the magistrate in his own district; —693 but appeal might be made from his jurisdiction to the court [203] of the king, to which the chiefs were summoned by crier, for

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

634 the district chiefs formed the council of the king. The court
[693] was under the direction of a special man, a kind of steward or *inhebe*.

The district chiefs were also responsible for building and other work for the king and the state; they had to find the necessary workmen and appoint overseers to direct them. Another man of the king acted as a kind of household steward to see that the buildings were kept in repair and properly attended to.

Each district chief appointed chiefs of the second rank or *Ibisonga* in his own district, and they in their turn appointed the chiefs of the third grade or *Abafragizu*. Each district chief also appointed a steward or *inhebe* who acted in his place when he had to be absent from his district. This man always possessed land near his chief so that he might be at hand when he was wanted. His special duty was to take charge of any building for the chief.

Taxation

634 Every year a district chief had to bring two or three
651 hundred large pots of honey, each holding some two gallons, and a supply of millet, peas, and beans to the king. This was brought to the district chief by the people on his estate, and he took a portion for himself before passing the required amount on to the king.

Twice in the year each person with cattle gave to the king
[231] a cow and a calf to supply him with milk and a fat animal to be killed for his meat. Milk was also sent daily to the court for the use of the king and his household.

Murder

It was the duty of the relatives of a murdered man to hunt
682 down and capture the murderer and put him to death; they
628 rarely accepted any other settlement. If a murder was committed before witnesses, they would seize the murderer and hand him over to the relatives of the dead man. If, however, one man abused another before witnesses, the offended man

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

might put the other to death without fear of punishment, for 682
the witnesses would state the reason for his action and he 628
would not suffer for it.

When a murder was committed secretly and the body was found without any trace of the murderer, it caused much difficulty. The relatives had to inform the chief of anything they knew concerning the relations of the dead man with the people of the district. Any person with whom the dead man had had a quarrel or disagreement was captured, and a priest killed a fowl and took an augury in order to find out whether [695] he was guilty or not. Should the augury be in the suspected man's favour he was released, and some other magical means of finding the murderer were tried.

Sometimes a murderer would confess his deed to the king or chiefs and notify his desire to atone. The family of the murdered man were called to a meeting and the murderer had to supply a sheep. The king was present at the meeting and ordered the animal to be killed and cut open, after which the murderer and the head-man of the murdered man's clan placed their hands on the entrails. Portions of every kind of food used by the people were brought and placed in the sheep with purificatory herbs, and again the two men placed their hands in it. The sheep was then called *Maana* or god and was the pledge of peace. Some clans, however, refused to make peace with a murderer and awaited an opportunity of killing either the criminal or some member of his clan.

When a man killed another accidentally and succeeded in proving that there was no malice or intention about the act, he paid fourteen cows to the family of the dead man, with whom he remained on friendly terms. If a man wounded [683] another he paid him eight cows as compensation.

When a warrior killed a man in battle, the king and chiefs 727
honoured him and gave him presents of land and cattle. Sometimes when the king was specially pleased, he would give a warrior a princess to wife. The warrior had to be purified on his return from the battle, but observed no other taboo.

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

762 When a man committed suicide, he was buried as usual;
766 but a medicine-man was summoned to tell by augury whether
787 the house had to be deserted or was still fit to live in.

Religion

773 I received a statement respecting the religion of the Batuse
[115] from Captain Phillips, the District Commissioner. They were,
[776] he said, monotheistic and had a chief priest who was initiated
into his office by a journey up a certain mountain where there
[778] was said to be a flock of sheep sacred to the god. This was a
[782] dangerous exploit, but before a man was accepted as priest
he had to go there with a sheep, which he offered to the god.

This chief priest kept all the fetishes and carried out all religious observances for the king, who kept neither fetishes nor priests about him. When there was any illness or other trouble, the king sent a bull, a sheep, or a fowl (in the case of
[787] war, a bull, a ram, or a cock) to the priest, and an augury was taken from the flow of blood and from the markings on the lungs and intestines.

CHAPTER XXIX

THE KING

The kings of Ruanda—government and taxation by the king—food of the king—wives of the king—heir to the king—death of the king—mourning—burial—accession—the king's mother and her brother

643 The list of the kings of Ruanda was given as follows: Kigwa,
173 who came from heaven—his son, Kimanuke, who begat Randa — Merano — Kobo — Gihanga — Kalyaruanda — Ruganza — Kirimu — Kigeri — Mutabazi — Gahima — Ndahiru — Ndole — Muhenzi — Namuhesera — Sekalongoro — Huhi — Kirima — Ndabalasa — Mubamwhe — Gahiridirwa — Lwogera — Lwabugiri — Lutariridwa, who was killed by his brother Musinga, who still reigns.

692 The king's court was the court of appeal for all his subjects
645 and his council was composed of the high chiefs.

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

and his council was composed of the high chiefs. He imposed taxation of honey, millet, peas, beans, cattle, and milk, and the chiefs were responsible for any building or other state work he required.

The king's first meal in the morning was of milk, which he took either fresh or clotted as he preferred. At noon he generally drank beer, but he took no other food until evening, when he had meat with peas, beans, or millet porridge, but he might never eat sweet potatoes. After this meal he drank either beer or milk, which shows that the people were abandoning the strict rules of the milk diet which would have forbidden his drinking milk immediately after eating meat and vegetables. During the night he was roused and offered milk to drink. The favourite wife waited upon him and ate with him, and special boy attendants ate any meat that was left over from his meal.

The king married as many wives as he wished, suitable girls being added to his harem as they were found. The favourite of the moment was treated as the chief wife. These women were continually consulting medicine-men and priests, who told them whether they were going to bear children and took auguries to decide who would be the mother of the future king. The king often chose a prince to succeed him, and when he grew up informed him of his future and made him a partner with him on the throne. The other princes were sent to govern different parts of the country as chiefs.

When the king felt that he was seriously ill, he ended his life by taking poison. When he died the news was circulated over the country. There was no rule against naming the king after his death nor against saying that he was dead. The whole tribe shaved their heads and all men kept apart from women during the two months of mourning. The males of cows, goats, and sheep were also separated from their females for this time, and the udders of cows, after milking, were smeared with ashes instead of with white clay as was usual at other times. One cow was killed when the king died.

A certain district was reserved for the burial of the kings,

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

643 and each king had a hill kept for his grave alone. On this a
766 large house was built and the grave was dug inside it; servants were selected to look after the tomb, and cows were dedicated to the dead king. The hill was thereafter looked upon as sacred and no king would walk upon the hill where a predecessor lay buried. Though only one cow was killed for
[782] the king at his death, two or three hundred were sacrificed at the end of the mourning.

643 The king usually stated which son was to reign in his stead
721 and if possible his wishes were respected; but if he had made no appointment, the chiefs chose a prince to be their new king. If in this case any brother prince objected, the two princes went to war until one or the other was killed.

644 The king's mother and her brother acted as advisors to the
766 king. A special district about four miles from the tombs of the kings was reserved for the burial place of the kings' mothers.

CHAPTER XXX

LIFE AND OCCUPATIONS OF THE PEOPLE

Food—serving meat—entertainment of visitors—fire—the cattle—care of the cows—value of cows—birth of calves—goats, sheep, and bees—agriculture—growing millet—drums—dances—adoption—slaves and servants

FOOD

262 THE Batuse were not so dependent upon milk as were the
234 cow-people of Ankole, but it formed an important part of their diet. When a man rose in the morning, his wives or
[302] servants brought butter and anointed him, rubbing it well into the skin. They then gave him as much milk as he could drink and he took no solid food till evening. At noon he might drink beer or milk, after which he usually slept for a time. In the evening, however, he had a meal of meat and plantain or millet porridge, and after it he might drink milk again.

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

Meat was always cut from the bones before being served, 252
and the bones were given to the servants or to peasants. Men 264
sometimes ate with their families, but almost always they ate
alone and in secret, and even the food that was left over from
their meal might not be seen, for should there chance to be [626]
bones amongst it, the man was laughed at and made fun of
by those who saw it. It was the duty of a man's wife to cut
up the meat and remove all bones. If a friend paid a visit he 574
might partake of a meal only if he was with his host from the
beginning of it; if he arrived during the meal he was not
permitted to approach. The rules of hospitality were very
strict, and even a poor person of the same clan would be [614]
invited to share a man's meal, while the richest member of
one of the despised clans would never be allowed to do so.
Among the better classes the cooks were men, but among [462]
poor people women cooked for their husbands.

There were no special rules about fire; but it was always 372
preferable to obtain it from some other fire, and only if this
was impossible would they use fire-sticks to kindle it.

The Cattle

The people were largely agricultural, but cows were looked 231
upon as their wealth and they kept large herds, some running 556
even into thousands; while a man who was considered only
moderately rich would have four or five hundred.

The people, because of their agricultural pursuits, had fixed 233
dwellings, but the herdsmen wandered about with the cows [361]
for pasture. The cattle were of mixed types, some short-
horned and some long-horned; they were divided into herds
of two to four hundred, each herd being under the care of a
head-man and twelve or more others. They roamed the pasture
lands two or three months at a time without returning home,
sleeping in grass huts hastily erected, while the cattle were left [343]
in the open without fences. The calves were kept in the huts and
their presence prevented the cows from straying, while a watch
was kept to protect them from wild animals. The men stayed
only a few days in each place. The wives of the herdsmen lived

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

233 in the villages near their fields; but they had to bring food daily to the place where their husbands were, for even the herdsmen did not live entirely upon milk. Cattle were never kept inside the fences enclosing the dwellings of the king or other owners, but the herdsmen had to bring milk after each milking to the owner of the herd even if the cattle were at some distance.

The men regarded their cows as their own and might sell [422] or exchange them as they thought fit, but the king claimed all the cattle in the country and might take any he wanted from any herd. The value of a cow was twenty goats and of [435] a bull fifteen goats, while a goat was valued at five hoes. A woman who had been captured in war might be restored to [727] her tribe for a payment of three cows for a woman of the better class and six goats for a peasant.

When a cow was thought to be about to calve at an incon- 233 venient time during a journey or while grazing at such a 825 distance that the calf would have to be carried home, the herdsmen tied a little grass round its horns close to the head and this was said to retard the birth. When a cow which had calved did not cast the after-birth, the first milk was placed upon a stool for a time and then poured away. If the cow recovered without parting with the after-birth, the owner might not drink the milk from it but left it to the herdsmen until the cow had another calf and the placenta came away. For fourteen days after a cow calved, the milk was drunk by the herdsmen or by children and not by the owner of the cow. [784] No taboo was attached to the navel cord of calves.

Goats were preferred to sheep, but both were reared in 231 large numbers, not so much for meat as in order to exchange 437 them for cows and other necessary articles. Most men also [651] kept bees, for honey was demanded as a tax by the king and [237] was an article of food among all classes. A large pot of honey with the comb was sold for a goat, and a small pot of refined honey for two hoes.

Agriculture

241 Each wife possessed a plot of land on which she raised crops to supply the family with food. Among the better classes the

7:Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

Among the better classes the 241
wife did not go out to work herself but left it to the servants [565]
and slaves. Among the poorer people, however, both husband [462]
and wife worked in the field.

They grew millet, both the large kind and the small millet called *bulo*, peas, beans, maize, sweet potatoes and various other roots, and kassava.

For the millet crop the ground was dug over with the 243
common short hoe; and before the seed was sown, a small basket of it was taken to the medicine-man, who gave it his blessing and mixed some medicine with it or placed a fetish in it. Some of this seed was mixed with that which was to be sown, and the basket with the remainder was kept in the field during the sowing and afterwards taken home and kept in a safe place to ensure good crops.

As the grain ripened, guards were placed to scare off birds and wild animals. The firstfruits of the crop had to be eaten by the owner and his wife, and the grain was stored in granaries near the houses. For use the millet was ground and boiled to [252]
a stiff porridge which formed the principal food of the people.

Drums and Dances

Drums were in common use in the country and were beaten 534
morning and evening. Drums were beaten before the king's house at the noon hour and all the people clapped their hands. It was thought that if these drums did not sound, disorder would prevail and the people would not know what time of day it was. Even when the king was dead these drums were sounded. Special drums were also beaten at new moon, and were the signal for a fresh relay of monthly workers to take up their posts and relieve those on duty about the king.

The chief drums were *Kalinga*, *Kiragutu*, *Kirimugezi*, and *Basibihugo*. Kalinga was given to the king on his accession by the people and he accepted it by taking the stick, beating the drum, and then clapping his hands. The people were never again permitted to see this drum. When the skin wore out a new skin was put on over the old, and each month [782]
a bull was killed and the blood smeared over the drum.

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

534 A chief wore two beads on each side of his head, but he
782 did not possess a drum and only used one when it was
634 necessary to propitiate some ghost which was troubling him.
[301] A drum was given to him for this special purpose, and he took it to his kraal, where he beat it for the benefit of the ghost.

[644] When saluting the king, the people knelt and clapped their hands.

534 There was always dancing at new moon, which was accom-
panied by singing, by the music of the royal band, and by bells.
[535] The musical instruments consisted of drums and the horns of animals through which the musicians blew, while some members of the band had bells on their legs which sounded as they stamped to mark the rhythm.

Adoption

597 A man who had no son might adopt the child of some relative without any ceremony, but, as a man might take as many wives as he wished, it was not often that a husband was left without a son. If a boy who had been adopted committed some misdeed for which he was cast off by his new parents, his own parents would not take him back. He had to find means of atoning for his fault and gaining the forgiveness of his adopted parents.

597 If a man adopted a boy from a clan other than his own,
614 he took him to the fireplace, dropped some millet into the fire and said, "This is my own son and when I am dead he will attend to my needs." A woman naturally did not welcome
[578] an adopted son, for he was a standing rebuke to her.

Slaves

567 There were several classes of slaves:

(1) The conquered aborigines of the land who were really free but were regarded by the upper classes as slaves inasmuch as they did menial work for them.

(2) Household slaves. These were mostly women from among the free people who engaged of their own will in this

567 kind of service. They could not be sold and might leave service and marry when they wished.

(3) Slaves who had been purchased or captured during wars or raids. These were also women and were seldom sold; when once a slave entered a family she remained there for life. Such slaves were often taken by their owners to wife, and their sons were regarded as legitimate and might inherit property.

CHAPTER XXXI

MARRIAGE, ILLNESS, AND DEATH

Forbidden relationships—initiation—arranging marriages—marriage ceremonies—taking home a bride—polygamy—entertainment of visitors—treatment of illness—death—burial—mourning—the heir—the widows

582 MARRIAGE between the descendants of a brother and sister was forbidden until they reached the fourth generation, that is, the great-grandchildren of a brother and sister might marry.

[881] There were no initiation ceremonies, but before the sons of princes or chiefs were considered to be of marriageable age, they had to prove that they were capable of settling some quarrel or lawsuit between men. The chief instruction given [869] to a youth was how to manage cattle, but he was also taught to cultivate the land.

584 Infant betrothals were common, and the parents of a boy might agree with those of a baby girl for their children to marry when of a suitable age. The boy's parents gave the others a cow as a pledge of the betrothal, and as long as they kept the cow the engagement was binding. If, however, the parents of the girl discovered any cause for breaking the pledge, they returned the cow with a message that the engagement was at an end. When a boy thus engaged came to a reasonable age, he was told of the arrangement and took presents of beer to his prospective father-in-law. When a boy

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

584 grew up without anything being arranged for his marriage, he asked his father's brother to find a wife for him.

585 When the day of the marriage came, the bridegroom took a cow and, accompanied by some friends, went to the kraal of the bride's parents, timing his visit to arrive at sunset when the cattle returned from pasture. The friends and relatives of the bride received the young man outside the kraal and they drank beer together. Then a sister of the bride came, and conducted the young man, leaving his friends outside, to a hut in the kraal where the bride was sitting. The bridegroom carried with him a runner of wild gourd which he twisted into a wreath and put on the bride's head. A pot of milk was given to him and he drank a mouthful which he puffed over the bride. He and the bride then placed their hands on the stones of the fire-place on which the pots stood while cooking; they churned a little butter together; a pot with water was put on the fire and together they sprinkled in flour, stirred it with one stick, and made porridge. Then the bridegroom returned to his friends outside the kraal gate and there they danced and drank beer all night, for none of them might sleep.

In the morning a mat was spread outside the kraal gate and the bride's father and some friends sat on it with the bridegroom. A cow was given to the friends of the bridegroom when they left to go home, and later in the day, after the bride's friends had discussed matters, the bridegroom also went home to prepare things for his bride's arrival.

The party which conducted the bride to her new home included her father, her brother's wife, her sister, and her young brother. The bride was carried in a litter and veiled, and the party arrived at the bridegroom's kraal when the cows were returning from the pasture. The bride was received by women relatives of the bridegroom, who took her into a house which they had prepared for her.

In the evening the bride joined her husband, but her young brother slept between her husband and herself that night and sometimes for two or three nights and the marriage might not

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

be consummated until he had gone. The rest of the bride's 585
party left on the second day, after receiving presents.

A son-in-law did not fear his wife's parents, but was re- [606]
garded and treated by them as a son.

A man might marry as many as five wives, but he brought 595
only one of them to live in his own village; for the others he
built houses in their villages and visited them there. If he
was wealthy, which was usually the condition of a man who [556]
married more than one wife, he gave each of them cows to
supply her with milk, a man to herd them, men to dig her
field, and also maids to wait upon her and work in her field.

A wife was usually restricted to her husband in sexual 837
intercourse, but when a great friend of the husband paid him
a visit he might permit him to live with one of his wives who
acted as the visitor's wife for the time. It was, however, more
usual for a guest to go to another house with his own wife,
or for the host and his wife to sleep on a mat on the floor and
leave the bed to the guest and his wife.

Illness and Death

When a man fell ill, his wife informed his relatives and a 754
medicine-man was summoned to discover by augury whether
magic was being used or whether the illness was the work of
some ghost. If magic was found to be the cause of the illness,
the name of the person using it had also to be discovered by [787]
augury, and he was accused and brought before the king or
some chief to be tried. Invariably a man who had been dis- 695
covered by augury to be guilty was condemned without 683
question; he might appeal to the poison ordeal, but he had
very little chance of escape, and was always put to death.
If the augury showed the illness to be due to a ghost, a bull [775]
was offered to the ghost and it was begged to stop troubling [782]
the man.

Before a man died he generally named his heir, who was 428
usually one of his sons, though not necessarily so and not [765]
always the eldest son. If a man died without having named

7: Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

428 his heir, the king or his clan appointed someone to inherit his property.

764 When a man died, all ornaments and clothing, with the exception of a loin-cloth, were removed, his legs were bent up into the squatting posture, and his head was shaved. A cow was brought to the bedside, a little hair from it was put in the right hand of the dead man and a little milk milked over it. This hand with the hair in it was then placed under the head.

In the case of an ordinary man, the grave was dug by the relatives or servants in the garden near, or, should he have no land, in some secluded spot, and the body was buried there.

766 Should he, however, be a wealthy man, the grave was dug big enough for a bedstead to be placed in it. This was covered with skins, on which the body, wrapped in mats, was laid and covered with skins of wild animals and cows. A second bedstead was placed on top of the first to keep the earth from the body, and the grave was filled up with earth, which was piled into a mound over it. The weapons of a dead man were put on his grave, and in the case of a woman her flour basket was buried with her.

764 A hut without any doorway was built over the grave and a growing fence planted round it. There was always the fear that someone might disturb the dead by digging up the body for the purpose of working magic, and the heir was therefore responsible for keeping this fence in repair until it had grown big enough to keep off people and cattle, after which no further attention was paid to it. After the burial all the people who took part in it were given hot water to wash their hands before leaving for their own homes.

765 A cow was brought and killed by the grave after the burial and was cooked and eaten by the mourners. The skin was dressed and worn as mourning by the heir, or by some favourite child of the dead man, for two months, during which time he might not come into the presence of the king. The mourners might neither wash nor shave. They lived together in one house, avoided all other people, and had to be strictly chaste lest they should incur the ghost's displeasure.

7:Roscoe M-5 (1919-1920) 1924
FO42 Rundi FO42

After the mourning the heir was purified by an elder of the clan, and he then took the mourning garment and buried it in some secret place. The mourners shaved their heads and hid the hair. A medicine-man decided whether the house of the dead man might still be inhabited or not. If the people were permitted to remain there, they, the place, and the pots had to be purified; but if they had to go they gave the pots and furniture away and left the house to fall down. 765 [783]

The heir was purified again by an elder of the clan and then went to buy a cow, which he took to the king, whom he was not on this occasion allowed to see. The next day he visited the king, taking a present of a young bull, and informed him of the death. This reception constituted his acknowledgment by the king as the dead man's heir, but if he proved unsatisfactory he might later be dismissed from the chieftainship. 768 [643] [431] [428]

The heir took all his father's widows except old women and his own mother. He even took widows with children, and the children regarded him as their father. [587]

When a married man lost his father he lived apart from his wife for two months, and on the death of his mother he avoided his wife for one month.

THE STUDY OF NATIVE COURT RECORDS AS A METHOD OF ETHNOLOGICAL INQUIRY

R. DE Z. HALL

217 WHEREVER native courts have been established and maintain records of their proceedings, there is available a mass of material concerning native law and custom which, properly regarded, may be of great value to the ethnographer as well as to the administrator. In Tanganyika Territory, from one portion of which the material for the present paper is derived, the making of elaborate records of evidence and judgements is deprecated at the present stage of development, as likely to interfere with the smooth working of the courts. A minimum is required of the names of parties, a brief statement of the subject-matter, and a short judgement signed by the holder of the court, be he chief, headman, or chairman of a council. Under such
121 circumstances, a study of records will show, at the least, the types of
217 social maladjustment which bring people to court, with the relative frequency of different kinds of case: the manner in which different types of case are viewed by the court, whether as offences against society or as affecting only families or individuals: and probably some general indication of the tone of the society. From this type of record there will be an upward range to the most valuable of all for the student, those containing a précis of evidence and a full reasoned judgement.

Whatever the amount of material available, it can only provide a limited picture of native law. In most, possibly all, areas, large numbers of disputes never reach the courts at all, but are dealt with in family council or by village elders. Further, the courts are only resorted to when disequilibrium has come about, and it can seldom be safe to argue the positive from the negative. Nevertheless, generalizations should emerge, and even where they do not, lines of inquiry should be indicated and facts brought to light and explained, which might otherwise have remained obscured or not understood. Most important, it is likely that evidence of change will be found, either clearly stated or in the form of indications which will offer material for further study.

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

An instance which shows a number of these possibilities comes 217
from the court book of Bugufi, a chiefdom in the north-west of
Tanganyika Territory. A custom which might or might not be noted 233
by the ethnographer—something must escape the most meticulous of 643
observers, and this one is not recorded by Meyer for the Barundi, of 423
whom the people of Bugufi are ethnologically part—is the right of the
chief to pasture his cattle among the millet-stalks after the harvest,
before the peasant may put in his own cattle or any which he is
herding for some one else. The court book records eight peasants
coming to court to complain against a Tusi who has driven off their [694]
cattle. The Tusi replies that the men had pastured their cattle in their
millet before the chief had had access. Asked by the court whether
he was instructed to drive off the cattle, the Tusi replies that he acted
as he was bound to do in accordance with ancient custom and his
obligations to the chief. New concepts have, however, found their
way into the court, which gives judgement for the plaintiffs on the [178]
grounds that the land and the cattle were theirs. This case is exceptional in the wealth of statement and suggestion which it offers, but there are many others helpful in lesser degree.

The value of native court records in this way was brought home to 127
me while stationed in this area, Bugufi, during the years 1929–31, 217
when I went through the available material with a view to seeing what
were the normal causes of litigation and getting a general idea of the
law administered. Starting with the year 1924, the series was examined
up to the end of 1930. For these seven years, 850 cases were found
where judgement issued, there being a further 225 which had been
settled out of court or dismissed for want of prosecution or by reason
of limitation. Of these 850 cases, almost one-quarter concerned con-
tracts where cattle were involved, nearly one-sixth were marital cases, [673]
and another sixth were over administrative matters, including offences
against the Native Authority Ordinance: only one-seventh were of
offences against person and property, and the remainder concerned
debts, land, inheritance, damage to property and a few miscellaneous
matters.

The fullest records were those of the numerous marital cases, and 127
these have been fully collated with a view to giving an idea of how 217
much information can be gleaned and what gaps remain, and what

127 217 suggestions there are of the effect of latter-day conceptions in superimposing themselves upon and modifying primitive law. Before 105 563 going on to this, it should be added (what does not appear from the record) first, that the society of Bugufi is symbiotic, with a pastoral Tusi aristocracy, headed by a chief, dominating a semi-servile Hutu agricultural population, who largely outnumber the Tusi: secondly, [178] that there have in Bugufi been strong forces making for change, quite apart from European administrative control. To go into these changes in detail is quite outside the scope of the present paper. It may be 563 briefly mentioned, however, that the relative status of Tusi and Hutu 178 is in process of rapid alteration, owing to the opportunities afforded 557 to the Hutu under modern conditions of acquiring independent wealth, both through their labour (chiefly in Uganda) and latterly by the establishment in Bugufi of an economic crop, coffee. This change [182] has meant maladjustment of the tribal structure. The chief sees in the [578] economic independence of the Hutu an encroachment on his rights: and the Hutu regard the assertion of those rights as oppression. This 648 conflict, together with the mental immaturity of the chief and the 645 distance of the chiefdom—four days' march—from an administrative station, made it necessary for the government to establish a check in the form of a 'Native Adviser'. This system continued until early 1930, by which time an administrative station had been opened near the chief's head-quarters, and, he having shown signs of development, it was felt that an opportunity should be afforded the chief of ruling his country without the restriction of an adviser who was really a controller most of the time. These advisers, three in all, were alien to Bugufi. The first came from Bukoba, on Lake Victoria, where he later became town headman: the second was of Arab descent, having come from Urundi to live in Bugufi, where he had been settled for many years and enjoyed considerable respect: the last, a native of really fine character, who made every effort to train the chief for his work, was a Muziba from Bukoba District. All of them were charged [671] with the dispensing of justice according to native law and custom—[177] subject to altered concepts of crime, already imposed by the European régime, and to a general instruction to curb the oppressiveness of the chief, an instruction the interpretation of which might depend partly on the system of native law under which the adviser had been brought

up, partly on the personality of the administrative officer of the day, 645
and partly on his own judgement. In any event, conflict with the 648
indigenous system at some points was to be expected, together with permanent modifications to give expression to the alteration of the status of the Hutu.

THE SYSTEM OF MARRIAGE IN BUGUFI

(as disclosed by Native Court records)

The normal precedent to marriage is formal betrothal, which must 584
be effected by members of a woman's family, and a contract which she makes herself or through unauthorized persons is void.

Instances: A girl goes to a neighbour, who takes her to the man of her 584
choice and offers her in marriage, the offer being accepted and bride- 684
wealth being paid. Her father is sued for refusing to give the girl in marriage and wins the case, the neighbour who received the bride-wealth being ordered to refund it.

A man sues another for seducing his sister. The defence is that he and she agreed to marry. The Court finds that there could be no agreement since there were no witnesses of any kind, much less the woman's mother or brother who ought to have been present.

But there is a case of this rule being overridden by a wealthy man.

A man, brought to Court by a woman's guardian for seducing her, says that he wishes to marry her and considered himself wealthy enough to dispense with the usual preliminaries, and in any case did not know who her relatives were. He is fined, but is permitted to pay bride-wealth and marry the woman. The Court adds that the fine would have been larger had not the woman expressed her desire to marry the man.

The neighbour cited above who acted as the woman's agent had only to refund the bride-wealth which he had received: but in another case a man was imprisoned for enticing away a woman and giving her in marriage without her father's knowledge or consent.

Betrothal is only binding for a reasonable time.

Instances: A woman having been betrothed and the man having delayed to come to complete the marriage, her father marries her off to another man and refunds the bride-wealth.

A woman is betrothed to one man and married off to another. It is found that the former has been looking for bride-wealth for eight years, and he is held to have no justification for claiming the woman.

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

584 In certain circumstances a woman is at the disposal of the Chief or his headmen and not her relatives. Thus, in one case the Chief had brought a girl up and successfully sued her father for giving her in marriage: there is no record of why the girl was in the Chief's hands. In another, it is specifically stated that a man having died with only female issue, the daughters were taken over by the village headman: in a suit brought by her relatives, claiming the right to give her in marriage, they were successful, though it is stated in the record that this was contrary to ancient tribal custom.

583 686 Bride-wealth is normally handed over before marriage, but not necessarily. Instances of exceptions are:

> A man is sued for payment of bride-wealth by his wife's brother, who has seen that his sister is being ill-treated. The man cannot pay, so the Court dissolves the marriage and returns the woman to her brother.
>
> A woman's relatives are sued for return of bride-wealth, she having run away: and it is found in evidence that, in fact, it has never been paid.

If it has not been paid, there are limits to the right of the woman's relatives to sue for it.

> A man has married a woman and had two male children by her and then sent her home. Her relatives claim that he had no justification for sending her away and ask that he be made to take her back and to pay bride-wealth, which he had not previously done. The Court finds that the suit should have been brought at least ten years before, and the relatives lose.

It is not held exclusively by the senior member of the woman's family. Thus, in a case where two sisters were married, their elder brother (their father being dead) retained both payments, but the Court ordered that he should hold only one and his younger brother the other. There is nothing to show whether in general the bride-wealth is held by an individual or shared out among several members of a family.

581 583 There are indications that marriage is regarded by a woman's relatives as a commercial transaction to some extent.

> *Instances*: A woman's brother successfully asserts his right to sell a cow received as bride-wealth, stating, as his justification, that exchange of

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

the woman for the cow completed the transaction between him and the husband. 581 583

A man promises his daughter to another man in marriage in consideration of the annulment of a debt of 10*s.* and 6 hoes.

And, in two cases, suits arise because a woman, having returned to her parents ill, has been sent to a doctor for treatment: payment has not been forthcoming, and the woman has been handed over to the doctor. (In one case he has married her himself, in the other he has given her in marriage and kept the resulting bride-wealth in lieu of his fee.)

But this is not necessarily the view of the woman herself. In one of several cases where a woman has returned to her relatives, consequent on the removal of the bride-wealth by her husband, she states that she went away on account of the slight put upon her.

In a considerable proportion of the marital causes brought before the Court, the record mentions the amount of bride-wealth involved, and these display a remarkable range of variation, both in the nature of the property handed over and in the value. The categories comprise cattle, goats, cash, hoes, beer, cloth, and copper bracelets: and the value ranges from 9 cows to 1 hoe. Tabulating these in rough order of value, according to equivalents disclosed by the records themselves (1 cow is worth 2 bulls and is worth more than a calf: a bull worth 10*s.* or 11*s.* and also equalling 2 goats and 2*s.*: a goat worth 4*s.* or 5*s.*: a hoe equalling a pot of beer and also 1*s.*), the result is: 583 435

9 cows.
3 cows (twice).
2 cows, 3 hoes, 3 pots of beer.
2 cows (three times).
9 hoes, 46 pots of beer.
1 cow, 23 pots of beer, 4*s.*
1 cow, 1 calf, 3 hoes.
1 cow, 3 hoes, 18 pots of beer.
1 cow, 15 hoes.
20*s.*, 20 pots of beer.
8 goats, 1 copper bracelet.
1 cow, 7 hoes, 7 pots of beer.
1 cow, 11 hoes, 1 pot of beer.
1 cow, 5 hoes, 5 pots of beer.
1 cow, 1 bull.
1 cow, 2 hoes, 6 pots of beer.
26 hoes (claimed, though only 8 admitted).
7 hoes, 27 pots of beer.
11*s.*, 14 pots of beer.
1 bull, 3*s.*, 2 pots of beer.
10*s.*, 6 pots of beer.
1 goat, 6 hoes, 2*s.*
13 hoes.
8 hoes, 5 pots of beer.
12 hoes.
8*s.*, cloth value 3*s.*
10*s.*
10 hoes.
9 hoes.
4 hoes, 5 pots of beer.
1 goat, 2 hoes, 1 pot of beer.

583 1 cow, 7 hoes (twice).	7 hoes.
435 1 cow, 6 hoes, 1 pot of beer.	4 hoes, 3 pots of beer.
1 cow, 4 hoes, 3 pots of beer.	1 hoe, 5 pots of beer.
1 cow, 6 hoes (twice).	2 hoes, 3/50 worth of cloth.
1 cow, 5 hoes (four times).	5 hoes (twice).
1 cow, 5 pots of beer.	4 hoes (twice).
1 cow (thirteen times).	1 hoe.

The analysis of this list reveals 42 cases where bride-wealth is paid in cattle, alone or accompanied by hoes, beer, cash, or a combination of these latter. Thence, with a few exceptions, there is an abrupt drop to a standard where hoes alone or with beer are paid in bride-wealth, three of the exceptions being where cash is paid with beer: there are 27 cases in this second main class. The quantitative relation of the number of bride-wealths in media other than cattle to those where cattle are a constituent is unlikely to be of importance. There is a [694] standard fee of 2*s*. in marital causes in the Native Court, and a man who can only command sufficient property to pay a bride-wealth of a few hoes is not to be expected readily to raise a court fee.

583 A summary of the analysis shows:

20 cases of payment in cattle alone.
10 " " of cattle with hoes.
1 " " " " beer.
8 " " " " hoes and beer.
2 " " " " beer and cash.

11 cases of payment in hoes alone.
6 " " of hoes with beer.
3 " " of cash with beer.
1 " " of cash with cloth.
1 " " of cash alone.
1 " " of hoes and cloth.
3 " " of goats, once with a bracelet, once with hoes and beer, and once with hoes and cash.

There are evident norms of payment in cattle alone and of payment in hoes alone, but further investigation is needed to discover how far these correspond with the symbiotic social system of pastoral Tusi and agricultural Hutu. A wide field of suggestion is opened up. For instance, are there any cases of wealthy Hutu paying bride-wealth in

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

cattle alone? and if so, are they marrying into Tusi families, bridging 583
the social gulf? or are they only marrying into other rich Hutu families, adopting the Tusi standard of wealth? And what is the meaning of the mixed payments in cattle and hoes? Are Tusi marrying into Hutu families, and being expected to utilize the Hutu standard as well as their own? or are wealthy Hutu, again, adopting Tusi standards? It would seem to be almost certain that change of some form or another is going on. The records are not helpful, save for one case where payments of the unusual number of three cows are mentioned as being as in respect of members of the Chief's clan: and another, where a woman's father, suing for payment of bride-wealth of a cow, finds that no cow is available and accepts, *faute de mieux*, 11 hoes—this must surely be a Hutu.

There are seven instances where payment in cash is a constituent of 436
the bride-wealth and one where cash alone is involved. This cash 583
element only appears in the years 1928–30, the last of the series, and is exactly paralleled in the suits for recovery of debts, where hoes are the normal subject-matter in the years 1924–6, are being replaced by cash in 1927, and virtually disappear in the later years. In five of the seven cases it is the hoe which has been replaced by cash in the bride-wealth payment, and that this change may be making marriage more of a commercial transaction, even if it was not before, is instanced by the case already cited, where a father was ready to part with his daughter in return for the extinguishment of a debt of 10*s*. and 6 pots of beer. And one would like to know whether the cattle standard has also been attacked in the case where the large amount of 20*s*. appears.

The function of the perishable article, beer, as an element in bride-wealth, does not appear from the records. There is nothing to show whether its appearance in only one-third of the cases reviewed means that it has not been a constituent on other occasions, and if so, why it is in issue sometimes and not at other times.

Bride-wealth in the possession of a woman's family need not neces- 583
sarily be maintained intact. 691

Instances: Where a woman's brother has lost a cow paid in bride-wealth and is brought to Court by her husband, the Court makes no order: it finds that the woman is still with her husband, that no grounds for

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

583 691 divorce have arisen between the married pair, and that there is therefore no cause of action.

And, a case already cited, a man hears that his wife's brother has sold the cow paid in bride-wealth, and thereupon drives away his wife and sues for his bride-wealth. The sale is admitted, but the plaintiff fails in his suit, as no grounds for divorce have arisen between his wife and himself: he is therefore to take his wife back.

586 691 On the termination of a marriage, bride-wealth, with rare exceptions, is returnable in full: and where cattle are involved, the increase is also to be returned (three cases in the records): but a man who sued for three bulls, the progeny of a cow paid in bride-wealth, was unsuccessful when it was established that the bulls were dead.

Circumstances under which the bride-wealth is not returnable in full are:

(*a*) when the wife has borne children or is pregnant at the time of the dissolution of marriage.

Instances: A claim is made for the repayment of bride-wealth of 4 hoes. Three only are awarded by the Court, as a child has been born of the marriage.

In a claim for repayment of bride-wealth of a cow, 7 hoes, 7 pots of beer and some fat, the Court only awards the cow and the hoes, as the woman was pregnant at the time of divorce.

(*b*) when the wife dies in pregnancy.

In such a case, a woman's father was sued for the return of bride-wealth, but pleaded, to the satisfaction of the Court, that her death in pregnancy amounted to her having been killed by her husband. No bride-wealth was to be repaid.

(*c*) when the wife dies after an illness, unless she has come to her husband ill or otherwise unsound at the time of marriage, or has returned home without cause given by him, and there fallen ill and died.

Instances: A widower sues for the return of his bride-wealth on the ground that the woman was unsound when he married her. Her father shows to the satisfaction of the Court that the husband did not disclose the defect at the time of marriage, and that the woman died at her husband's home: and the widower loses and is further ordered to return the clothes and ornaments of his dead wife to her father.

A man marries but does not build a home and remains at his brother-in-law's. Later, he quarrels with the brother-in-law and removes, with his wife. She falls ill and goes home to her brother, and there dies. The Court decides that her husband has no justification for reclaiming

his bride-wealth, since his brother-in-law did not take her away, she 586
went home when ill because she had no home. In any case, the Court 691
adds, bride-wealth is not to be returned as a matter of course just because a woman dies.

In a third case a woman has died after bearing one child; the circumstances of death are not stated. The widower, reclaiming his bride-wealth, a cow, which by increase has become 8 head, in a village meeting, has been awarded 5 head and the woman's father 3. The widower has later taken one of his father-in-law's share to provide milk for the child, and now claims his right to retain it and receive the balance. The Court confirms the decision of the village meeting, on the grounds that although the widower has lost a wife, her father has lost a child.

(*d*) when a husband drives away his wife without due cause, or abandons her.

Instances: A man takes his cow, paid as bride-wealth, away, then drives his wife out of the house, and now reclaims the balance, 11 hoes. He is adjudged to have forfeited these.

A man reclaims 7 hoes, balance of bride-wealth of a cow and 7 hoes, from his brother-in-law, who has taken the woman when ill to a doctor and has not returned her. The husband is found to have seized the opportunity to take back his cow and to have abandoned his wife, and he is held to have no claim to his hoes.

A man claims 6 cows, the increase of one, paid as bride-wealth. It is established that after the woman had borne him 5 children, he emigrated, leaving her, and that she is still unmarried and willing to return to him. He admits in cross-examination that he wants the cattle, not his wife—and loses both.

Bride-wealth is also returnable when a woman, left a widow, 587
declines to remain under the custody of her late husband's heirs, and 768
goes to her relatives. But custody must be claimed at the time of the 851
husband's death: in a case where this was not done, and the woman had gone away and remarried, the new marriage was allowed to stand, subject to the proviso that the child of the marriage would be a member of the family of the first husband when it grew up, if it desired. In one case, a man waives his claim to the bride-wealth in respect of the widow of his dead son, she having returned to her relatives.

On the termination of a marriage, the custody of children is always 586
the right of the husband. If he dies, the right passes to his heirs: there 768
851

586 is, however, an exception recorded, where, on a man dying leaving
851 only female children, these were taken charge of by the village head-
768 man. The right to custody sometimes involves investigation of paternity, the nature of which is fully understood.

[691] *Instances*: A man sues his wife's new husband, after divorce, for payment of bride-wealth or else for custody of a child of which he claims she was pregnant when she left him. A count of months establishes the paternity of the new husband.

The son of a man deceased sues the man to whom the widow has gone, she then having a four-months' old child, for the first offspring of the new union as well as the other child, on the grounds that she was pregnant at the time of her husband's death. The Court finds that no woman has ever been heard of suckling a four months' child and pregnant of another, and therefore awards the eldest child only.

In a third case, it is necessary to establish paternity as between three possible fathers.

[862] An unweaned child will remain with its mother till weaned. If not claimed then, her relatives or new husband may claim recompense for the cost of bringing the child up: in one case a goat is to be paid, in another, half the milk of a cow, and 3 hoes.

As a corollary to the right to the custody of a child, the heir of a
768 man who has died has the right to the bride-wealth in respect of a
428 girl-child, when the widow has returned to her relatives and the child has not been claimed before she reaches marriageable age, subject to a deduction for the cost of bringing her up.

[691] *Instances*: In the case just cited, the milk and three hoes represented a deduction from the total bride-wealth of a cow and five hoes.

In another case, the woman's relations resist such a claim on the ground that when she left the heir, her son, and went home, he claimed only her clothes but not the child. Their case fails.

In one case, a man lost his reason, and his wife went off to another man with her three children, of whom two were females. This other man married off one child and betrothed the other. Both contracts
[681] were dissolved, the man was fined and in addition was made to refund to their father 14 hoes which had been handed over for maintenance of the children.

586 Dissolution of marriage is found to take place on numerous grounds. The records disclose causes of offence by the husband as follows:

586

Impotence.
Loss of reason.
Failure to clothe the wife.
Failure to cultivate.
Failure to provide food.
Wandering habits.
Measuring out food to the wife (instead of giving her free access to the store).
Refusal to eat food.
Accusation of witchcraft.
Continued insult and beating.
Removal of bride-wealth from the relations-in-law.

There are three marital causes where dissolution is threatened, one, because the cow paid in bride-wealth has died, in another because it has gone blind, and in a third because it has borne twin-calves: such a cow is taboo for this purpose, presumably on account of the danger [845] of sympathetic influence on the wife—the advent of twins is not hailed with joy, witness a case where a cow is in issue, the fee of a doctor for removing the curse of twins.

Grounds for divorce of the wife include:

Refusal to work and to cook.
Continued sickness.
Desertion, subdivided into cases where she has gone to her relations, and where she has gone off to another man.

Adultery as such is never cited as a reason for divorce. There is but one case of adultery on record in the Court, the offending man being [837] punished and the woman returned to her husband.

It is but rarely that a woman or her relatives come to Court to sue for a divorce. Normally, if she feels that she has reason for dissatisfaction, she returns to the home of her father or brother, whose duty it is [691] to endeavour to reach an amicable settlement. If this is not done, she remains and abides the issue, or, not infrequently, is married to another man, this precipitating proceedings by the husband. But in a fair number of instances, she goes straight off to another man.

The Court will try to compose matters and to maintain the marriage wherever possible.

586
691

Instances: A runaway wife, sued by her husband, complains that he does not give her clothes and is stingy with food to the extent of measuring

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

586
691

it out. The Court awards him his wife on condition of his paying her two barkcloths for clothing, and a sleeping mat.

A man has removed his two cows, paid in bride-wealth, and his wife has gone away and has been married off elsewhere. He may recover his wife by immediate payment of the cows, when the second union will be declared invalid.

A woman has left her husband on account of his cruelty, and her father has married her again. She agrees to return to her husband if he will guarantee to clothe her.

The cases of a husband resuming possession of cattle paid in bride-wealth are fairly frequent, but the marriage is never *ipso facto* dissolved on this account: the position would rather seem to be that the relation of the man and the woman reverts to one of betrothal.

The Court discourages recourse to it when it appears that full recourse to conciliation has not been made or that action is otherwise premature.

Instances: A wife admits running away, and her father admits marrying her to another man. The husband gets his bride-wealth back, but loses his costs because he did not try to arrange matters with his father-in-law before coming to Court.

A woman's father has returned the cow paid in bride-wealth, as being of poor quality, and his daughter has left her husband on this account. He sues for payment of a sound cow and wins, but costs are given against him for his manner of action.

A man sues his father-in-law for taking his daughter away. The reply is that she came home ill, and stayed, with his concurrence, because her husband gave her no clothes. This the husband admits, but costs are given against the father because he took no steps to bring about a reconciliation.

A man claims his wife from his mother-in-law, to whom she has gone. He wins, but loses his costs because he did not ask his mother-in-law for his wife before bringing a case.

A man sues his mother-in-law for marrying off his wife to another man while he was absent in Uganda. It is found that she had merely returned home to await his return, and he loses his costs.

It has been mentioned above that a husband who tries to get rid of his wife without sufficient cause is liable to forfeit part of his bride-wealth. Nor does the runaway wife who cannot back her action by sufficient reason for discontent get any sympathy from the Court.

Instances: A wife has left her husband and maintains that she went because

her husband gave her no clothes. She is ordered to return to him, as she had made no complaint to her father. 586

A wife who went back to her relatives because her husband walked out of the house, saying it smelt, is ordered to return to him. 691

So with a wife who left her husband on account of his deafness.

And another who said that her husband was impotent, but could not satisfy the Court of this.

Another runaway wife is returned to her husband and told to sue before the Court at a later date if she has any concrete reason for disagreement with him, such as his failure to produce clothes or to work on the land.

The seducer of an unmarried woman is always punished and may have to pay compensation to her father. In one such case compensation is ordered on account of the girl being 'destroyed'. In the case, however, of the man who has enticed away a married woman or has willingly accepted a wife who has deserted her husband, there is no such uniformity of practice, and much depends on the circumstances of the case. Usually the man is punished or at any rate cautioned. 684

Instances: A wife leaves her husband and offers herself to another man. She is returned, much against her will, to her husband, and the third party is fined and informed that he will be imprisoned if he accepts the woman again.

An enticer offers the defence that he is willing to pay bride-wealth to the woman's father. She is returned to her husband, whom the enticer, as well as being fined, has to compensate.

A wife, having run away, is reclaimed by her husband, and the man to whom she has gone is punished.

But in four cases, he is only cautioned.

Sometimes the woman is returned without her unlawful partner being punished.

Instance: A runaway wife, pregnant by another man, is returned to her husband, in spite of her alleging against him that he deprives her of food and clothes, is always wandering, and has accused her of witchcraft. (The Court was probably sceptical of the veracity of so formidable an indictment.) The child, when born, is to belong to the original husband; but there is no further mention of the other man.

On other occasions, presumably when the husband has been at fault, the second partner is allowed to refund the amount of his bride-wealth and to retain the woman as his lawful wife. [586] [587]

8: Hall G-5 (1929-31) 1938 FO42 Rundi FO42

586 691 587 837 *Instances*: A man has beaten his wife and driven away her relatives when they came to see him. She leaves him for another man, who is ordered to refund the bride-wealth.

A wife has left her husband and is now pregnant by another man. The husband will be satisfied either with the child or his bride-wealth. The paternity of the second man is established, and bride-wealth is to be paid over.

In several cases a woman's relatives are found to have married her to another man in her husband's absence, or after she has left him and returned home. Here again circumstances determine whether the first or the second union shall be dissolved. In considering these, the voice of the woman is not disregarded, and in one case, after judgement has issued in the original husband's favour, it is amended there and then owing to his wife's refusal to return to him.

586 661 Several marriages are found to be broken up on account of the Chief's seizing cattle paid in bride-wealth.

Instances: A wife goes off to her father's because the Chief has taken the bride-wealth cow.

A man from Urundi pays a cow in bride-wealth, which is seized by the Chief in order to recoup himself after some of his cattle have been stolen by Urundi natives: and the woman's father therefore takes her back.

In a third case, this right or propensity is deliberately made use of by a husband who wishes to shuffle off his wife. He arranges for the Chief to seize the bride-wealth cow with its two calves, and then sends his wife home. But the stratagem fails.

595 578 586 Finally, the existence of polygyny is to be referred to. That it may lead to disharmony in the home appears from two cases, in the former of which the first wife is so aggravated by her husband taking another spouse that she has assaulted him, while in the other a husband is brought to Court for tying up his second wife on suspicion of her having bewitched the first one, with a threat that he would kill her if the first one died. And a third husband finds himself heavily fined for being influenced by the predilections of his first wife. He had paid bride-wealth for a second: the first wife did not approve of the newcomer: her sister coming soon afterwards with a gift of beer, he kept her instead; she had already been promised in marriage, however, and he has to face an indignant betrothed as well as her father, in Court.

INTRODUCTION

THE greater part of this work is directly concerned with the description and analysis of the political organization of Ruanda. The first chapters, however, are devoted to other aspects of the social system: kinship and affinity, marriage and family. As the whole system of social relations in Ruanda constituted a closely knit fabric, it was thought that an understanding of the political institutions necessitates also some treatment of the other structures of human relations. Moreover, a brief account of the physical environment, the quest for food, shelter, and health, and some demographic data have been included because these elements, if external to the pattern of political relations, set the limits within which the Ruanda system of domination grew. 121

This study refers to the period immediately preceding the time when Ruanda was submitted to the influence of Western culture through its European agents. That is to say, in the continuously moving historical stream, we have chosen to study the particular configuration of the Ruanda political organization at the moment when it had been moulded by the action of many forces, but not by the full impact of European contacts. For reasons mentioned later, the 'zero point' of direct European influence on Ruanda society is not difficult to assess. It is in the first decade of this century. Ruanda social structure did not undergo any significant modification due to European influence until roughly 1910. This date is fortunately not very distant, and around 1950 it was still possible to interview many people who had been young when the old régime was still a working concern. As far as we know, there had been also no direct and continuous contact between Arabs and Ruanda prior to that time. 121 114 [177] [177]

To remind the reader that we are describing structures and institutions which no longer exist, at least in their entirety, my account is given in the past tense even when it refers to features which are still functioning today. The expressions 'today', 'now', 'at the present time', &c., refer to the period 1950–1 during which basic research was carried out in Ruanda. 128

As a social anthropologist of the *Institut pour la Recherche Scientifique en Afrique Centrale*, I carried out field work in Ruanda 114

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

114 for two years, from December 1949 to November 1951. During that period information was secured by continuous observation and by informal interviews with Africans and Europeans. Some administrative officers and missionaries, keenly interested in the society and culture of the Ruanda, have contributed much information and stimulating opinions.

In addition to this work, three systematic inquiries on specific [121] subjects have been completed: political organization, kinship and family structures, and cosmological and ethical systems. Each of these inquiries was prepared by a preliminary survey on the subject, on the basis of which schedules of topics and specific questions were framed.

125 The preliminary survey of political organization enabled me to 114 collect a considerable amount of information on that subject. Consequently, a later inquiry could aim primarily at checking and making more precise what was already known. To achieve this purpose a hundred-question schedule was devised. It was the object of each question that it should fulfil as adequately as possible the following conditions: to be neutral (formulated in such a way as not to suggest that the investigator preferred one answer rather than another), significant (likely to clarify obscure or controversial issues), concrete (such as 'Were there more or less people in group A than in group B?') rather than abstract (such as 'Give a definition of the administrative organization'), and simple (to be answered by 'yes', 'no', or one word). This last requirement was particularly important as it made possible a summing up of the answers. A translation of this questionnaire is given as Appendix One.

124 The choice of informants was made according to the following procedure. About a dozen persons, Africans and Europeans, who had been living for many years in Ruanda and had been in close contact with many members of the African community, were asked to give a list of Ruanda (Hutu, Tutsi, and Twa) who, in their opinion, would be familiar with the pre-European political structure, particularly from direct experience. The importance of listing people living in all the different regions of the country was stressed. By collating the various lists I finally obtained a set of about 350 names of men scattered everywhere in the country.

In order to interview them, I had to move between seventy-four different places which were about evenly distributed through the

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

whole area of Ruanda. This took several months. With the help of two assistants, Messrs. G. Sebyeza and M. Sekanyambo, to whom I had given some training in interviewing and recording data, 326 informants were eventually interviewed. The aim of the inquiry was explained to them in small groups, but each interview was privately held to prevent informants from influencing each other's answers. In order to make sure that answers could be accurately recorded, the questionnaire had been printed and the answers of each informant were written on a separate copy. 124

As might have been expected, the more competent persons on political organization were Tutsi and in fact more than ninety per cent. of our informants were Tutsi. Since the number of Hutu and Twa was too small to be of any significance (there was, in fact, only one Twa!) their interviews were not taken into account in the computation of the results. A few more interviews were discarded on other grounds (such as suspicion about the sincerity or the mental ability of the informant). In the end the number of interviews used in the summing up was reduced to 300. 115 124

To count up the answers, some questions had to be modified. For instance, the question, 'Give the name of your patrilineage head', was replaced by, 'Do they know the name of their patrilineage head?' The computation of answers for the whole of Ruanda is given as Appendix Two.

Obviously, this class of 300 informants does not constitute a random sample representative of the total Ruanda population: the informants are practically all Tutsi and have been chosen according to certain criteria. This does not invalidate our procedure, however, as our aim was not to assess the opinions and knowledge of the whole of the Ruanda population on their past political organization, but to discover as accurately as possible what that organization was. This is why we attempted to interview only the most informed persons on the subject and to take into account the divergence of their views.

On kinship, family, and related subjects, the preliminary survey did not give as much information as the preliminary political survey revealed. Consequently, another procedure had to be adopted. A very comprehensive schedule of topics to be brought into the interview was elaborated. There were 542 items distributed under sixty-two headings to be covered with each

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

informant. Sixteen Hutu and twenty Tutsi informants were interviewed. Two junior administrative officers, Messrs. E. Finoulst and G. De Clercq, who were taking a six-month course of training in anthropology, participated in the different stages of this inquiry, as did Mr. S. Naigisiki, who acted as assistant and interpreter.

The inquiry into the cosmological and ethical systems was carried out on similar lines. A schedule of thirty-five headings, under each of which several points were listed, was used in several collective and individual interviews.

This research from 1949 to 1951 forms the main basis for my *Système des relations sociales dans le Ruanda ancien*, published in 1954. But I have spent two other research periods in Ruanda (December 1952–December 1955 and September 1956–September 1957) on more specific topics. What was observed in these later periods, however, bearing on the topic of the earlier study, has been taken into account in the present volume.

Secondarily, the present study of Ruanda is based on literary sources published both before and after 1954. These are fully listed in the Bibliography.

• • •

All my field work in Ruanda was sponsored by the *Institut pour la Recherche Scientifique en Afrique Centrale* (I.R.S.A.C.) for which I am deeply grateful. At the same time I assumed the functions of Head of the Scientific Research Centre of I.R.S.A.C. in Astrida. I wish to extend my thanks particularly to Professor L. van den Berghe, Director of I.R.S.A.C. The late Professor F. Olbrechts, when he was Chairman of the *Commission des Sciences de l'Homme* of I.R.S.A.C., also greatly encouraged my research.

For guidance in planning the research project on Ruanda and for supervision of all its later stages, I gratefully acknowledge my indebtedness to Professor Daryll Forde.

I should also like to thank Miss Barbara Pym, of the International African Institute, London, who very kindly corrected the first typescript, and Dr. R. J. Apthorpe, of the Rhodes-Livingstone Institute for Social Research, Lusaka, for his patient and invaluable help in preparing this edition of my book.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

I have given Ruanda words in the orthography now customary in Ruanda-Urundi. Articles and prefixes have been omitted wherever possible, as for instance in the words *hutu*, *tutsi*, *twa*, *ruanda*, *garagu*. The prefix has been kept in words widely used and which, if reduced to their radicals, might not be easily recognized. This is the case with the words *mwami* and *buhake*, whose roots are *-ami* and *-hake*.

CHAPTER I

THE COUNTRY AND ITS PEOPLE

1. PHYSICAL ENVIRONMENT

THE Kingdom of Ruanda lies within latitudes 1° 20′ to 2° 50′ south and longitudes 28° 50′ to 30° 55′ east. Physically it is a part of the elongated highland zone extending at varying elevations from the Red Sea to Lake Nyasa. This East African highland zone is characterized by large blocks of upland and the giant cracks of the rift valley system. 131 133

Ruanda is situated on the western border of the central region of this zone. It is a high plateau in which numerous rivers cut deep valleys separating a multitude of hills. The main feature of Ruanda orography is the chain of mountains with an elevation from 2,250 to 3,000 metres (6,750 to 9,000 feet) which separates the Congo and Nile drainage basins. This has a north-south trend approximately fifteen to twenty-five miles east of Lake Kivu (elevation: 1,460 metres or 4,380 feet) and forms, with the northern part of the Ruzizi river, the western boundary of Ruanda. From this mountainous chain to the east, elevations fall gradually to the Kagera River Valley, the eastern limit of Ruanda. The greater part of the Kagera here consists of swamps which may be as much as sixteen miles broad. The elevation of the region along the Kagera is from 1,300 to 1,500 metres (3,900 to 4,500 feet).

The northern boundaries of the country are not as clearly defined by physical factors, except in the west by the Virunga volcanic massif including eight peaks, the highest of which, Karisimbi, reaches 4,507 metres (14,873 feet). The Akanyaru and Lua rivers—which form part of the southern border of the kingdom, separating it from its Burundi neighbour—cannot be considered as natural frontiers, as they are not difficult to cross.[1] Ruanda's relief, together with its central situation in Africa 131

[1] The present-day political boundaries of Ruanda do not include the whole territory which was politically and culturally part of the kingdom in the past. There are Ruanda populations in the north, in the Kivu Province of the Belgian Congo (between the actual border and Ryashuru), and in the Kigezi District of Uganda (along the actual border). [162]

[P. 7]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

131 (about 1,000 miles from the two nearest sea-ports, Mombasa and Dar-es-Salaam), probably accounts for the country's long isolation from Arab and European contacts, in spite of its easily accessible [50] frontiers in the north and south. Although slaves were occasionally sold to the African middlemen in touch with Arab traders operating in the neighbourhood of Ruanda, it seems that the traders themselves never penetrated the country. At all events Ruanda was never a regular place of supply. The first European reported 648 to have been in the country was Count G. A. von Götzen, a German officer leading a scientific and military expedition across Africa from the Indian to the Atlantic Ocean. He stayed in Ruanda only for a few weeks, in 1894.

133 The interior highlands, which have been compared to the massif of Abyssinia and to the mountains of Bohemia, or even to Switzerland and Tibet, are not very large. Their longest north-south extent in a straight line is about 100 miles, the extent from west to east being about 140 miles. The area of present-day Ruanda 131 is 26,338 square kilometres (10,166 square miles). In 1907 Professor Jan Czekanowski, a member of the Duke of Mecklenburg's expedition to Central Africa, estimated it to cover about 28,900 square kilometres.[1]

132 The climatic effects of equatorial latitude are mitigated by the elevation. In the Congo-Nile mountain chain the temperature may drop to freezing point, but the greater part of Ruanda enjoys a temperate climate. The average is about 20° C. (68° F.), and the maximal variations (which are greater between day and night than between the seasons) rarely exceed 10° C. (18° F.) above or under the average. In the eastern lower part the temperature is, of course, higher.

Similar distinctions must be made for rainfall in the high mountains of the west, the highlands of the middle country, and the Kagera lower region of the east. In the first region rainfall averages 1,250 mm. a year (50 inches), in the second it is between 1,250 and 1,000 mm. (50 and 40 inches) and in the third less than 1,000 mm. (40 inches).[2] These figures alone do not have very much bearing on soil fertility, as the significance of rainfall depends on other factors, such as volume and intensity of precipitations, declivity of ground, type of vegetation, and characteristics of the soil.

[1] Czekanowski, 1917, p. 114. [2] Ministère des Colonies, 1951b, p. 89.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

There is as much as a one-month range of variations in the dates of the rainy and dry seasons each year. The precipitations are very irregular. Sometimes for a few weeks there is heavy rainfall lasting ten or twelve hours followed by a few dry days, at other times there is a 2- or 3-hour shower every day. Besides this fundamental irregularity there is no uniformity throughout the country. Owing to the very uneven relief, neighbouring regions or even neighbouring groups of hills and valleys, may have quite dissimilar climates. 132

Although it is believed that the country was covered with forest in the remote past, now only three per cent. of the surface of Ruanda is woodland; even if savannah with trees is taken into account the figure is not brought up to more than 6·5 per cent.[4] At the beginning of the century the figures were almost certainly not higher, and very likely lower. Indeed, the policy of the Administration has been to attempt to protect by regulation the forests which were left and to promote the replanting of trees. The present-day typical Ruanda landscape, eucalyptus-covered hills and roads bordered by three or four lines of trees, is new. Fifty years ago the country had an even more denuded appearance than it has today. 311 [656] 134

The result of the scarcity of trees in a country of steep hills has been erosion. Torrential rainfall has washed off the more fertile top soil. The deterioration of the ground has been a long process which has not yet been reversed. The north-western part of Ruanda provides an exception to the general poverty. Here the soil is of volcanic origin, formed from recent lava, and rich. The land at the bottom of valleys everywhere is, of course, notably better than on the slopes.

A good top-soil is important not only for cultivation: allowing a slow infiltration of water, it helps to form subterranean watersheds situated not too deeply underground. A decrease in this top-soil has had the effect that some of these practically superficial water reserves which feed sources have drained away. I have been told more than once by old people that in such or such a place there was a water source when they were young. When digging a well now one has to go very deep. 133 134

These phenomena, erosion, impoverishment of soil, and drying up of sub-soil, are not to be attributed only to the action of the purely natural factors mentioned (the heavy rainfalls and the 134

[4] Ministère des Colonies, 1951b, p. 331.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

orography of the country). They are due to the conjunction of these physical circumstances with the particular way in which the human occupation of the land has taken place.

2. HUMAN OCCUPATION

Several hypotheses have been advanced in attempts to reconstruct the history of the human occupations of Ruanda. We are not concerned with them here. Let us summarize only those features which are of significance for our purpose and which have a high degree of probability.

The present population of Ruanda is clearly composed of three groups: Twa, Hutu, and Tutsi. These groups are very unequal numerically. In the middle of 1956, according to a Government demographic survey, the Twa constituted 0·67 per cent. of the total Ruanda population, the Hutu 82·74 per cent., and the Tutsi 16·59 per cent.[5] Differences that are immediately noticeable between these groups concern their activities, their social statuses, and their physical types. The Twa are hunters, potters and ironworkers. Twa hunters are not numerous, as game is rare in most parts of Ruanda owing to the scarcity of forest. Some of them make a living as singers, dancers, and buffoons. The Hutu are agriculturists and the Tutsi pastoralists. The statuses of the three groups are hierarchically ranked. The Tutsi group constitutes an aristocracy, the Hutu are commoners, and the Twa are said, half jokingly, by most of the other Ruanda, to be more akin to monkeys than to human beings. A definite physical appearance is considered typical of each group. According to the socially accepted descriptions of the three stereotypes the typical Twa is short, pygmoid rather than pigmy, with a head low in the crown, face and nose flat, cheek-bones prominent, forehead bulging, eyes narrow and slightly oblique. Hutu characteristics are woolly hair, flat broad nose, thick lips often everted, and middle stature. Tutsi are very slender and tall. They often have a straight nose and a light brown skin colour. The objective measurements of Professor Jean Hiernaux do not entirely coincide with these stereotypes.[6]

[5] These figures have been kindly communicated by Mr. J. Revelard who was at that time in charge of the Ruanda-Urundi Demographic Surveys (Endemoru).

[6] Hiernaux, 1956b, pp. 34-53. Cf. Czekanowski, 1917, pp. 122-34. See the interesting photographs in Czekanowski, 1911, plates 1-41 and in Hiernaux, 1956b, plates VI-VII.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The Twa are thought to have been the first inhabitants of Ruanda. This may be inferred from the general reconstruction of the vast human migrations that are supposed to have taken place in Africa in the remote past, and according to which Pygmies and Pygmoids would appear to be the most ancient inhabitants of that part of Africa. Whatever the validity of this hypothesis, the Twa, being hunters and collectors of fruits, seeds, and roots, did not greatly modify the natural vegetal cover of the country.

It was left to the Hutu hoe-cultivators to begin the transformation of the country. The time of their arrival, either after or contemporary with that of the Twa, is immaterial in this connexion. The important fact is that the Hutu had to begin the clearing of grasses, shrubs, and bushes and eventually the felling of forests to make their fields. The extent to which this process of deforestation had been carried out before the arrival of the Tutsi is difficult to assess. It is unlikely, however, that the Hutu were so numerous as to have to cultivate such considerable tracts of the country as to disrupt its natural equilibrium. It is very likely that the increase of population and the cattle-pressure following the Tutsi arrival has been a determining factor in this processs.

The Tutsi immigration into the country is an historical fact attested by the traditions of Ruanda and of neighbouring peoples. Their occupation of Ruanda is an episode of the great southbound pastoral migration which resulted in the formation of the different societies which Baumann terms *Circle of the Lakes*,[7] Schapera, the *Lacustrine Bantu*,[8] and Meinhard, the *Interlacustrine Province*.[9] Pastoral peoples who according to Seligman's classification were 'half Hamites' (probably of eastern Hamitic origin),[10] for an unknown reason migrated with their large herds of long-horned cattle into an area delimited in the west by the Central African rift valley from Lake Tanganyika to Lake Albert, in the north and east by Lakes Kyoga and Victoria, and in the south by a line running westwards from Muanza Bay (Lake Victoria) to the Malagarasi River. Incorporating the Bantu agriculturists previously settled in that area, they constituted a number of political units (such as Nyoro, Toro, Nkole, Ganda, Sogo, Mpororo,

[7] Baumann and Westermann, 1948, pp. 213-23. [8] Schapera, 1929, p. 83.
[9] Meinhard, 1947a and b. See also Roscoe, 1924.
[10] Cf. Seligman, 1930, p. 97, pp. 157 ff.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

174 Ruanda, Burundi, Ha, Karagwe). It is not known where these
101 pastoralists came from.

Because of cultural and physical similarities the Galla or Somali country of Southern Abyssinia has been advanced as their possible place of origin. As the invaders have completely adopted the Bantu language of the agriculturists, the lack of linguistic clues so important in such questions is a great setback to any historical reconstruction. It should be noted in this connexion that the use of
[119] the linguistic term 'Hamites' to denote Tutsi, who do not speak a Hamitic language at all, is unfortunate and misleading. Dr. Meinhard's suggestion of using a term not burdened with linguistic connotations such as 'Ethiopians' or 'Ethiopoids' should be considered.[11] The population movement which brought the
174 invaders to Ruanda is probably at least four centuries old. The
643 present ruler is traditionally the fortieth king of Ruanda. We know the names of thirty-nine predecessors, but it is possible that the list is incomplete. On the other hand it seems that the first nineteen are legendary figures. Taking account of this and assuming that a reign lasts about twenty years, we go back to the sixteenth century.[12]

174 As the Tutsi migration seems to have been gradual and peaceful, an infiltration rather than a conquest, it is probable that at the beginning their cattle grazed on the unoccupied grasslands. But the population increased as more Tutsi kept on entering the country and more land had to be tilled to feed them. Cattle were also increasing and the Hutu had to move from the most fertile soil, in the bottom of valleys, because during the dry season these places were the only ones where cattle could find fresh grass. This process must have been in operation for a few centuries to produce the situation as we know it now.

161 Statistics are not available for the 1900–10 period, with which this study is concerned, but we may from the present figures (with
[174] some modifications) get a fairly good idea of the situation at the beginning of this century. The population was estimated on 31 December 1949, to be 1,870,410 souls: in 1956, 2,374,136, which

[11] Cf. Meinhard, 1947a, p. 3.

[12] According to Meyer, 1913, the pastoral invasion took place in two ways. The first, at the beginning of this millenium reached the north-east of the Province; the second, in the fifteenth and sixteenth centuries brought them farther southward. According to Kagame and Delmas, the first Hamitic populations invaded the country in the eleventh and twelfth centuries. (Gouvernement du Ruanda-Urundi), (1956), p. 9.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

gives a density of 235·8 per square mile or 91·9 per square kilometre.[13] This density is among the highest in Africa, south of the Sahara.[14] What may we infer from these figures as regards the population at the beginning of this century? According to the available statistics for the last fifteen years, when the circumstances are favourable the yearly increase of Ruanda population may reach three per cent. This increased ratio could hardly have been maintained over the whole of the last fifty years, mainly because the 'favourable circumstances' refer to medical amenities, new hygienic practices and the reduction of famine. Such conditions were by no means prevalent when the Europeans occupied the country in 1899.[15] Even since 1935, however, events have not always been favourable, as for three years (1941–2–3) there was a decrease of population due to a severe scarcity of food. Consequently it seems safe to assume that during the decades preceding the European occupation, the population was already very dense. According to Captain Bethe, it numbered about 2,000,000 in 1899.[16] In 1907, Czekanowski estimated the Ruanda population at approximately 1,710,000.[17]

According to a detailed survey made by the Department of Agriculture, there are about 60,000 to 70,000 families (out of a total of about 380,000 families) more than can be adequately fed by the country.[18] There is also an excess of cattle. In 1950 there

[13] There is a census for the male and able-bodied adults who are taxpayers. To obtain the total number of the population (females, old people, and children) the number of taxpayers in each administrative district is multiplied by a certain coefficient which is determined in each case by a sample-census of a few hills.

[14] For comparative purposes, there are a few density figures for some African territories according to present political boundaries: Uganda: 52·8 per square mile; Tanganyika: 20·7; Belgian Congo: 12·9; Nigeria: 92·0; Sierra Leone: 66·5. All these figures, taken from Hailey, 1957, p. 143, refer to the years 1948–52.

[15] Captain Bethe, a German officer, obtained from the king in 1899 Ruanda's acceptance of the Imperial Government's protection. There was no treaty, only an oral agreement which was followed by a permanent occupation by the German authorities. The first Christian mission was established in 1900, at Issavi, by the White Fathers. Belgian troops took possession of Ruanda during the First World War in 1916. The Belgian occupation of Ruanda-Urundi was confirmed by the Orts-Milner Agreement in 1919. In 1924, Belgium agreed to administer Ruanda-Urundi under the supervision of the Permanent Mandates Commission of the League of Nations. After the Second World War, Ruanda-Urundi became a United Nations Organization Trusteeship Territory administered by Belgium. Cf. Jentgen, 1947, pp. 9–11, 83–9

[16] Quoted by Czekanowski, 1917, p. 109n. [17] See Czekanowski, 1917, p. 114.

[18] This study is based on an estimate of the optimum cultivated area needed by a family, the quality of the soil being taken into account. A similar method has been used in the case of cattle. Cf. Ministère des Colonies, 1951b, pp. 343–7.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

There is also an excess of cattle. In 1950 there
233 were about 450,000 head of cattle for which cattle tax was paid,
433 but in fact they are considerably more numerous. It is estimated that out of these 450,000 there is a surplus of 200,000. Again, although veterinary assistance has lessened the incidence of many cattle diseases, it is highly probable that there has been an excessive cattle population for a very long time.

168 This overpopulation by both men and cattle, which is in-
433 creasingly rapidly transforming the country into a desert, is the most pressing problem for those who are in charge of the country at the present time. But—and this is why I have stressed it so much—the type of human occupation which is responsible for it had prevailed for several hundred years at the time chosen for this study. The Ruanda thus have long had to adapt themselves to an
511 ecological situation allowing them a very narrow security margin in the fulfilment of the primary condition for survival, food.

3. FOOD

433 It is mainly by agriculture and cattle-rearing that the people managed to get from the land as much food as their implements and their abilities allowed.

224 Hunting played very little part in their quest for food. Only
[262] the Twa, for whom hunting was a traditional occupation, ate
[186] game, which is another reason why they were despised by the Hutu and Tutsi. Hunting was significant in two connexions only. In the first place it was a means of providing the Tutsi with a supply of skins and ivory. Skins were used at the court for clothing
[237] and ornament, and war dancers wore loin-cloths made of leopard or civet skins and head-dresses decorated with the long white hair of colobus monkeys. In the second place the Tutsi regarded hunting as a sport. They liked to show their adroitness with spears and javelins, bows and arrows. But the meat of the quarry was left to Twa who had tracked the game, and to dogs.

226 Fishing has never been very much practised, though lakes in Ruanda are numerous, Kivu on the western border, Mohasi, Bulera, Mugesera, &c. Before the introduction of tilapia (a fish well adapted to these waters and excellent to eat) into these lakes in 1936, the kind of fish to be found there was neither very abundant, nor edible. In any case, the eating of fish, even when
262 very good according to European standards, was regarded as disgusting. Even now it is very difficult to persuade people to eat

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42.

tilapia. Fishermen sell it mainly to foreigners: Congolese, Europeans, etc., but they themselves eat it very rarely.

Agriculture was the principal Hutu occupation. The Tutsi considered this kind of manual work below their dignity and the Twa preferred other tasks. Cultivators used the hoe (*isuka*) and a kind of bill-hook (*umuhoro*) as their main agricultural implements.[19] The main cultivated plants were beans and peas, sorghum, eleusine, sweet potatoes, cassava, maize. Besides these basic foodstuffs, there was also a garden cultivation of other plants used to complement the main dishes or to make them more tasty. These were pumpkins and other varieties of gourds, groundnuts, yams, tomatoes, shallots, and red peppers. Around the huts there were groves of bananas, which were widely used as food as well as in banana-beer.

The yearly calendar of agricultural activities was as follows.

Long rainy season

October. There were usually a few rainy days in September. In October the rains began and were not expected to be very abundant. Soil was prepared for the sowing period which began later in the month. Beans, peas, maize, pumpkins, eleusine, and groundnuts were sown or planted. Banana trees were pricked out.

November. Sowing went on. Because of the rains it was possible to plant sweet potatoes and cassava even on hill-tops. Bean fields were weeded.

December. New plots to be used later on were filled. At the end of the month harvesting began.

Short dry season

January. Peas and beans were harvested. Sorghum, maize, and eleusine were planted, and, in the valleys, potatoes and cassava. Beans were thrashed.

February. Late planting time for sorghum. Sweet potatoes and cassava were planted at the bottom of valleys. Eleusine fields were weeded.

Short rainy season

March. Beans were sown, and sweet potatoes and cassava planted on hill-tops. Sorghum was weeded. Second weeding of eleusine.

[19] See Czekanowski, 1917, pp. 136, 140.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

April. Tillage of fallow-land in preparation for potato planting next month. Planting of yams, gourds.

May and first half of June. Second tillage of sorghum fields. Beans were weeded. Potatoes were planted. Banana groves were cleared of grass. Cassava planted on hill-tops was gathered.

Long dry season

June, second part. Sweet potatoes and cassava planted in the bottom of valleys. Granaries were stocked.

July. Harvesting of beans, sorghum, maize.

August. Tillage of soil.

September. Tillage went on. At the end of the month there could be an early sowing of beans.[30]

In agricultural tasks, there was no specialization by sex. Men and women worked together in the fields. Although to a large extent the Hutu culture was permeated by the Tutsi scale of values, they did not share the noblemen's disdain for agricultural work. Their ideal type of successful man was that of a rich and hard-working peasant. They were proud of such a reputation when they achieved it, although they recognized that the status of a powerful Tutsi was much higher. But it belonged to another order practically closed to them. In a hierarchical society, certain ideal types may embody values that are for a lower stratum at the same time supreme but not sought after.

Cattle were never reared for their meat in Ruanda. The Tutsi and Hutu appreciated meat very much, but cattle were not usually slaughtered just to be eaten, except occasionally as when a barren cow was getting old. But the contribution of cattle to the diet was great: milk and butter were the food *par excellence* for Tutsi noblemen. The Hutu also liked dairy products very much, but a good supply of them required a larger number of cows than a Hutu would normally possess. Only cows feeding calves were milked. During the dry season their production was very low. In recent years, the average milk production was only from 1 to 1·5 litres a day (from about 1¾ pints to 2¼ pints) including that taken by the calf. Hides were formerly used for clothing purposes.

As may be expected in a society dominated by pastoralists, livestock was a major focus of interest in Ruanda culture. Its importance in the political structure—which will be considered

[30] See Schumacher, 1942 and Everaerts, 1947, pp. 61-69.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

later on—adds still further to its interest. There was a very elaborate series of prescriptions and taboos concerning the care of cattle, and a very full terminology which took into account the differences in colour of skin, in shape and length of horns, and in origin of possession or ownership, &c.[21] According to experts, Ruanda empirical knowledge of cattle-rearing was quite good.

In this field there was a very strict division of labour by sex. Cattle could be cared for only by men. This restriction was based on magical beliefs regarding impurity, as females before puberty and after menopause were permitted to take care of the livestock. The strictest prohibitions were on women in their menstruating periods. Hutu were not excluded from cattle rearing, and in fact most of the menial tasks were performed by Hutu servants or clients.

The Tutsi were not nomadic pastoralists. Cattle moved according to the seasons from valleys to hills, but usually in the same area. It might happen, however, that when the drought was particularly severe herds had to be led to another area which might be some distance away. But this did not imply any change of residence for the owners of the cattle which were accompanied only by shepherds.

When in October grass began to grow again, the cows were lean and starving. As they recovered strength on new grass, their milk came back. In November rains were sufficient to allow grazing on the hills. Flies were myriad in December. Then the short dry season began. In January, however, there was still too much water in the valleys for cattle to pasture there, and they stayed in kraals, near huts. In February and March they went out again on to the hills. With the rains flies came again. Milk output increased. In April pastures reserved for the dry season were closed. At the beginning of the dry season (end of May, beginning of June) milk diminished as the grass dried up, and grazing was confined to the valleys. July was not a bad month because cows could pasture on the harvested fields. Flies disappeared in the dry season. August and September were the two worst months for cattle.[22]

Sheep and goats were also kept for their skin and their milk. The Hutu ate goat-flesh but mutton was ritually forbidden. Even today it arouses a very marked repugnance and only the shameless Twa will eat it.

[21] Cf. Vanhove, 1941, pp. 46–59. [22] Schumacher, 1942.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

Fermented beverages were popular in Ruanda. There were three varieties: those with a sorghum base, those with a banana base, and hydromel. As these drinks were made in each household, their alcoholic content varied greatly. According to the experts, however, their nutritive value was generally considerable. The Tutsi did not drink sorghum-beer (*amarwa*) which they thought was fit only for children and Hutu. It is not as strong as banana-beer (*urwagwa*) and hydromel (*ubwuki*), which may contain 11.5° of alcohol.[23] Hydromel results from the fermentation of a must which is an aqueous solution of honey.

The Tutsi diet was based mainly on dairy products and was more liquid than solid. When still lying on his bed a Tutsi began his day with a pot of curdled milk (about 1½ pints). At noon, before his siesta, he again took about the same amount. Around six p.m. when talking with his friends and clients, he drank, and offered, hydromel or banana-beer. At about half past eight or nine p.m. everybody left his hut and he took his evening meal with his wife (or one of his wives), his young children of both sexes and his daughters even after puberty. A usual menu was sweet bananas (or beans) cooked in water, cut in small pieces which were eaten with hot salted butter, and some sort of 'bread' made with a sorghum flour paste and, of course, milk was drunk. On the rare occasions when they had meat it was boiled, cut in small pieces, and eaten with hot salted butter. After that, when the women had left, the evening was spent with friends and clients, in long, subtle, and witty conversations, while beer and hydromel were served again.

The Hutu ate more food, but it was less refined. They consumed much less milk and butter, if any. They took two main meals a day, one in the beginning of the afternoon and one in the evening. They made a kind of porridge with beans, peas, or maize. Sweet potatoes, regarded as too common to eat by the Tutsi, were consumed in large quantities by the Hutu. A present day evaluation is about seven pounds a day per adult. In the morning, while working in the fields, they ate one or two snacks made of the remains of the preceding evening meal. They drank mainly banana and sorghum beer.

The Twa apparently enjoyed eating much meat and drinking much beer when and where they could get it. Their diet was very

[23] Ministère des Colonies, 1941b, pp. 32 f.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

irregular, dependent on circumstances—a good hunt or a generous reward for dancing and singing. 262 264

The Tutsi had a strictly controlled attitude towards solid food. They behaved as if the need for nourishment was, if not shameful, at least beneath their dignity. The taking of a meal was something to be done privately. Friends were offered beer or milk, but they were not asked to share a whole meal. When travelling the Tutsi were not supposed to eat solid food and if the journey did not exceed two or even three days, they very often actually did not eat. It is said that a true Tutsi subsists only on milk and beer and some old men take pride in boasting of it. This attitude towards solid food might be explained as an attempt on the part of the conquering pastoralists to stress their independence of the foodstuffs produced by and characteristic of commoners and on a deeper level as an affirmation of what we might term a fundamental difference between themselves and Hutu. The Tutsi, according to their legends, came from another world. They were human beings like the Hutu, but not in quite the same way. This interpretation of the Tutsi attitude to food is supported by their emphasis on greediness in the Hutu character, and gluttony in the Twa. In most of the tales in which Hutu appeared, they were conspicuous by their overeating. For the Twa this feature was still more stressed. Another fact significant in this respect was the very strong prohibition on Hutu servants attending the meals of their Tutsi masters to reveal what they ate. This prohibition was magically sanctioned. 261 [574] [484] 261 186

4. CLOTHING AND SHELTER

In the highlands, especially during the rainy season and at night, adequate covering against cold and damp is needed. Boys and girls, however, go completely naked as long as they are *abana* (children), that is up to the age of eight or nine for girls and ten or eleven for boys. As children usually do not go very far from the compounds, they may find some protection against cold either inside the hut or by picking up a skin or blanket. But the great number of diseases of the respiratory organs among children is a sign of their inadequate protection against bad weather. 291 [164]

The traditional Twa garment was a sheep skin. The Hutu wore bark-cloth as a sort of skirt from the waist down to the knees.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

291 On top of this men might add a goat skin and women a piece of
[854] cow-hide in which they eventually carried their babies on their
[482] backs. Before the Europeans came, important Tutsi had already for some time replaced the traditional cow-hide of the pastoralists or the bark-cloth borrowed from the agricultural group with large cotton cloths, white or light coloured, elegantly draped. The Tutsi wore two, one as a kind of long, narrow skirt, and the other flowing and tied on the shoulders. Both men and women wore them in this way. These goods were imported by African traders
[439] coming from the east where they bought them from Arab merchants. Up to their marriage Tutsi girls wore only a very short loin-cloth made of cow-hide.

302 Tutsi men had their hair cut in such a way as to leave a few tufts shaped according to a traditional and extremely elegant pattern (*amasunzu*). Unmarried girls, Hutu as well as Tutsi, had their hair cut the same way. The heads of Hutu men and Hutu
[301] and Tutsi women were shaved. Necklaces and bracelets in white, blue, and red beadwork were favourite ornaments.
304 There were no artificial bodily deformations such as flattening of the head, chipping of teeth or circumcision. Everybody went
[291] barefooted.

592 The dwelling unit was a compound (*rugo*) consisting of at
361 least three huts, each almost always situated in a circular enclosure intersecting and communicating with the other enclosures of the compound. Huts were of the beehive type usual among the
349 interlacustrine peoples, made of reed and grass. There was a
[171] 'bed-sitting' hut (*kambere*), another, where pots, baskets, &c.
857 were kept (*kigonii*), and a kitchen (*kagondo*). Hutu boys and girls
513 under the age of puberty slept in the kitchen if there was no special hut for them. In addition there were granaries, and the small hut
393 devoted to the ancestral spirits, &c. The circular fences were ficus
346 hedges, much higher than a man. This pattern of combined
351 circular fences made possible an almost unlimited extension of the compound without its losing its compactness. Indeed, compounds of rich Tutsi constituted a kind of intricate labyrinth in which it was easy to lose one's way. Whatever the number of enclosures, there was only one narrow communication with the outside world. The open enclosed area might be very large and was used as a
[231] kraal in which cattle spent the night during certain periods of the
361 year at least. There was no difference of pattern between Hutu

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

and Tutsi compounds. Only the size and number of huts and enclosures were different.[24] 361

These compounds, usually surrounded and more or less hidden by banana groves, were scattered throughout the country. They were on the top or on the slopes of hills, never in the valleys which were flooded every year at the end of the rainy season. They were usually rather isolated but even when they were not far from each other (and they were never so near together as to have two adjacent hedges) they did not constitute villages in the sense of concentrated clusters of dwellings situated near the centre of the territory worked by the inhabitants. There was, however, some grouping on a predominantly local basis of people who were all personally acquainted with each other. They could be described, following Murdock's terminology, as *neighbourhoods*.[25] These neighbourhoods were made up of a certain number of compounds (from twenty to sixty) situated on a hill (*umusozi*) or a part of a hill (*umurenge*). The people living there had a few common activities: mutual aid in the building of huts and in the performance of certain agricultural tasks, and recreational gatherings (such as dancing, jumping competitions, arrow shooting, &c.). They showed a certain *esprit de corps* in taking the side of one of their members in a dispute against a member of another similar community. The word used to designate the members of such groups expressed this idea of neighbourhood. They were called *abazimya muriro*, 'those who put out the fire', people very often needed. One important person in the group such as a lineage-head, was appointed as neighbourhood-head (*umukoresha*) by the traditional administrative authority to take charge of the collection of dues and tribute-labour of a hill or, more frequently, of a group of hills (*umutware w'umusozi*). He acted as an intermediary between his neighbours and the hill chief. The group could refuse the appointment of a certain person and another would be chosen. These neighbourhoods had no communal place for meeting, exchanging goods, or worshipping. 621 [476] 622 621

The same pattern of local grouping was to be found throughout Rwanda.

[24] Cf. Czekanowski, 1917, p. 200 ff; Pauwels, 1953; Vincent, 1954, pp. 12-15.

000 Ruanda. The exception was the place where the royal court
361 happened to be established. At the end of the nineteenth century
644 the most permanent site was Nyanza, which was and still is regarded as the capital. One or two thousand people lived there, but Nyanza was not a village or a town. It was rather the great homestead of the king surrounded by the small temporary dwellings occupied by the different chiefs when they came to the court to pay a more or less long and obligatory visit to their sovereign. The king had other residences throughout the country where he stayed regularly.

443 Markets do not appear to have been numerous in Ruanda before the European occupation. Goods were exchanged mainly through
[437] other channels; the tribute of subject, dues of clients, gifts from the lords, &c. At all events the few markets where goods from
[439] abroad, such as rock-salt coming from the Lake Edward region, were exchanged, did not become centres of villages as in many other parts of Africa.

5. HEALTH

121 The general health of a people is as significant a part of the background of their culture and social institutions as are physical environment or demography. We can only conjecture about the
[174] situation before Europeans came, but there is some evidence.

The health of a group of people depends partly on their diet.
146 The present day diet is lacking in animal proteins, vegetable fats (containing vitamins A, D, and E), and green vegetables.[26] We have no reason to believe that there was a higher consumption of meat fifty years ago, or that there were oleaginous plants growing which have disappeared and that the habit of eating green vegetables has been lost. According to nutritionists, these shortcomings cannot be compensated by a consumption, however abundant, of carbohydrates, a high percentage of which is to be found in maize, sorghum, peas, and beans. Also, if a fairly adequate consumption of the latter foodstuffs is possible now (in the sense that the total annual yield for the country is sufficient for the total number of people), it is not to be assumed that the total production was as
[433] high fifty years ago as it is now. On the contrary, the figures we have indicate that fifty years ago, the production of maize, sorghum, peas, and beans was much lower than today.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

It should also be pointed out that the supply of the staple foods was usually short at the end of the dry season and that starvation periods, in which many people died, were occurring several times in a life-time. For instance in a thirty-year period (1900–30) among the events used as references to assess the age of people, three famines are remembered: in 1908, 1918, and 1924.

The above considerations take into account only the total production of available food in the country. But it is obvious that in a society composed of several groups very unequal in power, access to food was not the same for everybody. It seems that we may safely infer that the normal diet of many Hutu was barely adequate to sustain people who had to spend a considerable amount of physical effort in agricultural tasks.

In the preparation of meals, two facts relevant to health should be mentioned. Firstly, the methods of cooking very often resulted in a diminution of the nutritive value of food. For instance, beans cooked in water lose from one-sixth to one-fifth of their carbohydrates.[27] Secondly, the standards of cleanliness in food preparation were very high among the Tutsi, though more for magical than for hygienic reasons. This applies particularly to milk. To avoid flies and dust, receptacles containing milk were always closed with basketwork conic covers adorned with elongated geometric patterns. It is believed that if milk comes into contact with anything impure, the cow would be harmed. The contaminating substances were not always connected with the Western idea of dirtiness. For instance water was considered dangerous to milk. Consequently the wooden vessels in which milk was kept were not washed out with water but with cows' urine.

The equatorial situation of Ruanda, combined with the rather cold climate due to its elevation, resulted in the spreading of diseases characteristic of tropical as well as of temperate regions. Yaws, typhoid fever, tuberculosis, recurring fevers, and a large variety of intestinal diseases are quite common in Ruanda today.[28] They are not new diseases resulting from new conditions introduced by the European occupation, such as malaria, which was unknown in Ruanda except in the narrow strip adjacent to the Ruzizi River until roads were built permitting a very rapid transportation of people, or some venereal diseases which spread

[27] Ministère des Colonies, 1951b, p. 49-51.
[28] Cf. Lestrade, 1955; Vincent, 1953, pp. 16-18.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

from the great commercial centres where there is an important transient foreign population of Africans from the Congo, Arabs, Indians, and Europeans. They are not new in so far as the factors favouring their spread have been in existence for a very long time. I have already mentioned the inadequate clothing of children. Bark-cloth and hides which were not washed, grass and reed huts and enclosures where cattle were living near the dwellings, which were never built in the valleys, were effective deterrents to corporal cleanliness. The Tutsi took hot baths and washed and rubbed themselves with perfumed butter, but the Hutu, particularly the women, did not seem to wash completely very often, if ever.[29]

Defences against these diseases were, as one may expect, very inferior compared with those which Western medical science can now provide. When somebody was ill and the usual remedies known to every old person did not work, he had to have recourse to a herbal expert. I have been told by a missionary who had studied the question for several years that knowledge of these medicinal plants was very often extremely penetrating and that cures, especially in dysentery and other intestinal diseases, were quite often successful. These remedies were collected or administered in a magical context. When that course of action did not produce the expected results, the diviner (*mupfumu*) had to be consulted. He was an interpreter of the will of God (Imana), which he could read in the patterns made by knuckle-bones, in the viscera of chickens, rams, and bulls, or even by a certain intuition without the help of any apparatus. Some diviners used a medium, usually a female possessed by Biheko, an important spirit of the dead, or were possessed themselves. The diviner was asked to identify the malevolent agent sending the illness, which could be either a *muzimu* (spirit of a dead person) or a *muroxi* (sorcerer). If the spirit was identified, the diviner could tell what would appease him, and could offer some counter-magic to deal with a sorcerer.[30]

These resorts to the non-material world probably had the useful function of making bearable a situation in which nothing could otherwise be done to alter the course of the illness. It is doubtful, however, if this method had any other effect on the patient's health.

[29] Cf. Czekanowski, 1917, pp. 118-21. [30] See photographs in Maquet, 1957.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The conditions favouring contamination by different diseases and the very limited defences against them permit us to assume that illness and mortality through these diseases must have been very high and a constant threat to everybody. 164

These brief notes on health conditions in Ruanda would be incomplete without a mention of mental health. We are not attempting here an assessment of the neuroses and psychoses which can be found in Ruanda or to the number of people affected by them and who, in the Western world, would be considered in need of psychiatric treatment. There is not sufficient information on these matters at present. But we would like to consider very briefly conditions which are likely to result in psychological tensions. 121

We have already mentioned the circumstances which make life objectively hard (a barely sufficient diet, starvation periods, and diseases). In addition it was often dangerous. When informants were asked what sort of reputation they particularly wished to avoid, they did not usually answer by listing the opposites of those particular qualities which they would like to have attributed to them, but by pointing to some definite reputation in which danger might be inherent. Above all, a Tutsi feared to be regarded as an enemy of the king. It was no doubt partly because he felt a genuine respect for the king, but mainly because to be thought of as an enemy of the king was extremely dangerous. It could mean dispossession of everything, the severance of all social relations, exile, or even death. He also feared to be considered a traitor to his chief. This was a dangerous reputation, although it entailed sanctions: if a client had been disloyal to his lord the latter might take back from him all the cattle he had previously given him and eventually all his cattle. The Hutu said that they feared an accusation of witchcraft, for such an accusation could certainly mean immediate death. There was little that could be done actively to avoid such a danger except to be a good neighbour, to be envied by nobody, to have no enemies, and especially to have a powerful protector. The Hutu were also afraid of acquiring any reputation which could result in their losing the protection of the lord to whom they owed allegiance and consequently leaving them exposed and defenceless against the arbitrary actions of the powerful.[21] 152 626 681 571 181

[21] Cf. Maquet, 1954a, or Maquet, 1958.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

Twa, as people living an active and dangerous life, and regarded as almost sub-human, had little to fear except being deprived of food by their master's whim.

All these dangers were real enough and no behaviour could ensure complete immunity. But most people appear to have felt that with some skill and right conduct they were avoidable and consequently did not constitute oppressive threats. Frustrations entailed by starvation and Tutsi requirements were regarded in pre-European days as part of an immutable natural and social order. Ruanda men and women were not inclined to speculate on the impossible, and any order of things other than that they knew belonged definitely for them to the sphere of the impossible. We shall see later on that a deep belief in the fundamental inequality of men had pervaded the ethos of the whole society, and had helped a great deal in the acceptance of frustrating conditions. Consequently these have not led to the usual feeling of aggressiveness or resentment.

Let us now turn to the invisible world as the Ruanda conceived it.[22] Although it was dominated by Imana, a god essentially powerful and good, it was a disquietening world. Indeed the spirits of the dead (*bazimu*), whatever their temper when they were in this world, were thought of as bad. The direct ascendants of the father's and mother's lines were usually protective if their living descendants had observed the proper filial behaviour, if they had not neglected prohibitions and avoidances, and if they had not forgotten offerings. But all other *bazimu* belonging to the same patrilineage were always harmful. *Bazimu* of other lineages were less dangerous unless there were feuds between the particular kin groups concerned. Among the spirits of the dead, a small clique, called the *imandwa*, was particularly powerful and might be helpful to those who had been initiated into the sect of Ryangombe, their chief.[23] Apart from these exceptions, ghosts were essentially malevolent towards living people. At best they did not harm. Of the two categories of men who had special relations with the invisible world, diviners and sorcerers, the latter were definitely considered to be criminals who either used poison (or other deadly substances as for instance when they mixed in food a powder made from the lungs of a person who had died from tuberculosis), or magical

[22] Maquet, 1958, pp. 326-30; Pauwels, 1958.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

means (sending a *muzimu* to strangle somebody, acting through lightning or an animal, or using spells).[34]

What was the impact of this frightening world on the everyday life of Ruanda people? It seems that it was not ever-present in their daily lives. The Ruanda considered that most of the events in the human sphere as well as in the material world may be understood without reference to the action of the supernatural world. Some antecedent events or acts were considered as natural causes of the consequent ones. To get a cold at the beginning of the dry or rainy season was considered due to the change of weather. It was known that yaws could be got by contagion. Even death was very often interpreted without any magical explanation. It was expected for instance that people would die because of old age. When beans were sown on poor soil, a bad crop would not mean that the field had been bewitched. Thus when recurrences had been observed or when 'causes' had been discovered in the sphere of physical or human phenomena, events happening according to these recurrences or following their causes were considered as intelligible without any reference to the supernatural world. But when events appeared inexplicable in terms of these natural antecedents or causes, or were attended by some peculiar circumstances, intervention of spirits or sorcerers were suspected and a diviner was consulted. If somebody had tuberculosis and no one among his ascendants or the people with whom he lived had suffered from that disease, it was thought that the cause was a sorcerer. If somebody died from an illness usually considered 'natural', but his death occurred a few days after a theft of which he was the supposed culprit, he was said to have been magically striken at the request of the robbed person.

Even as regards his own death, the individual Ruanda seems to have taken a rather 'secular' view. All our informants agree that to die meant almost exclusively simply to quit life. They believed that they would become *bazimu*, but this left them rather indifferent. To abandon children, cows, fields, and friends was sad for people. But it was accepted without dramatization, as one of those facts which were in the normal order of things.

To sum up, freedom from want, frustrations, and objective fears was far from being achieved in Ruanda. Moreover, supernatural

[34] Cf. Czekanowski, 1917, pp. 302 f.; Arnoux, 1912-13; Pauwels, 1949b; Bourgeois, 1956.

155
829

agents instead of being comforting were always potential enemies. There appear to have been certain defences, however. Firstly, there was a belief in the immutability of natural and social order; consequently this order and its frustrations were accepted as a matter of course. Secondly, there was always a means, whatever its efficacy, of coping with dangers and consequently people were able to hope that they would not be defenceless against them. We may thus conclude that social and natural conditions in Ruanda did not seem to prevent the bulk of people from enjoying the amount of psychological security necessary to go on living without tensions and anxieties such as disturb mental balance.

CHAPTER II

THE SYSTEM OF KINSHIP AND AFFINITY[1]

1. DESCENT GROUPS

611

AMONG the Ruanda people, Tutsi as well as Hutu, the social principle of descent was agnatic. When any informant is asked who are his ascendants, he always answers by giving the names of his father, his paternal grandfather, his paternal great grandfather up to some male ancestor beyond whom he is unable to go. He does not mention his mother nor any of her ascendants.

61. 178

Questions on the actual groupings founded on this principle and their functions elicit less unanimous and clear answers. The reason is that kinship groups have undoubtedly undergone a slow process of change in several respects during the Tutsi occupation of the country. What we know of its history[2] is quite sufficient to convince us that there has been a progressive territorial expansion under one dynasty of rulers together with an intensification of the

[642]

[1] In order to make clear the connotations of the main concepts used in this chapter, here are a few definitions:

128 602

Ego's *kin* are his socially recognised relatives to whom he is connected through parent-child and-or sibling links. *Consanguineal* and *cognatic* relatives are used as synonyms for kin.

Ego's *affines* are his socially recognised relatives to whom he is connected through a marriage link. This link may be the first traced from Ego (the affines are then Ego's spouse's kin) or the kinship link may be the first one traced (the affines are then Ego's kin's spouse).

Ego's *patrilineal* or *agnatic* relatives are those of his kin who descend by male links from the same male ancestor as Ego.

Ego's *matrilineal* or *uterine* relatives are those of his kin who descend by female links from the same ancestress as Ego.

Ego's *cross-line* relatives are those of his kin who are neither patrilineally nor matrilineally related to him.

Ego's *paternal* or *patrilateral* relatives are those of his kin to whom he is connected through his father.

Ego's *maternal* or *matrilateral* relatives are those of his kin to whom he is connected through his mother.

To sum up:

Relatives:
- are *kin* (or consanguineal relatives or cognates) who can be distinguished as
  1. patrilineal (or agnatic)
  2. matrilineal (or uterine)
  3. cross-line
- or as
  1. paternal (or patrilateral)
  2. maternal (or matrilateral)
- and *affines* who can be distinguished as
  1. kin of Ego's spouse
  2. spouses of Ego's kin.

[2] See for instance, Pagès, 1933.

[P. 29]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

61 degrees of control exerted by that central authority on the territory.
178 These processes have necessarily had an impact on the autonomy
642 and social significance of Hutu and Tutsi kinship groups, on their connexion with a particular tract of land, and on their functions.
121 We shall not be concerned here with any reconstruction of these processes but only with them as they existed in the immediate pre-European days. It should be borne in mind, however, that this was the period of an evolution. This explains the sometimes confused picture given by some informants.

(a) *Inzu, ubwoko, umulyango*

613 Hutu and Tutsi recognised a patrilineal kin group (*inzu*)[3] which included all who could actually trace their agnatic relationship through usually no more than four or five ascendent genealogical links to an ancestor recognised as the original ancestor of the group.

Members of the inzu of a male Ego were: Br, Si, Fa, FaSi, FaBr, FaBrSo, FaBrDa, FaFa, FaFaBr, FaFaSi, FaFaBrSo, FaFaBrDa, FaFaBrSoSo, FaFaBrSoDa.[4]

Ego's sororal nephews and nieces (SiSo, SiDa) and his paternal cross-cousins (FaSiSo and FaSiDa) did not belong to his *inzu*. However they participated in some of its activities if they lived
[591] with their maternal uncle (Ego), which happened when the bride-wealth for their mother (Ego's Si) had not been entirely paid.

Diagram A.

Other generations above Ego's (that of FaFaFa, &c.) or under his (that of SoSoSo, &c.), were not necessarily included in Ego's

[3] *Inzu* means also hut.
[4] I follow the symbolisation system used by Murdock, 1949.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

inzu. Their inclusion depended on the situation of Ego's generation with regard to the ancestor recognized as the originator of the group. Suppose a new inzu had begun with F (Diagram B), in the sense that F's descendants referred to themselves as 'people of F' rather than as 'people of A' (as F referred to himself). In that case, Ego would not consider E (FaFaFaFa) as of his inzu although he knew that he was the father of his great-grandfather.

Or suppose that D was considered as the origin of the inzu. In that case Ego's son, J, was separated from D by five links. It was quite possible that if, for instance, G had had many children and had been a man of standing and repute, J and K (and all G's descendants in their generations) would some day refer to themselves as 'people of G'. As long as Ego was living, however, J would consider himself as a member of the same inzu as his father and Ego would not think of his son as belonging to another inzu. One informant, Kayijuka, told us that one of his great-grandchildren will probably take the initiative in forming the new inzu of 'people of Kayijuka'.[8]

Although the inzu was a transitory group about six generations deep, it must be understood that the formation of a new inzu was not rigidly determined and did not automatically happen at the birth of the first child in the seventh generation. The operative factors were mainly the fast growing number of inzu members after a few generations (in genealogies collected, the sixth

Diagram B.

[8] This was no boast as Kayijuka is now a very important political personality in Ruanda. It may be of interest to mention that Kayijuka was at the court, as a young nobleman, when the first Europeans entered the country. At that time there was a considerable amount of suspicion on both sides. A missionary asked him to point out the queen-mother among the women who were present at the Court. This was prohibited as it was feared that the White Fathers could harm her by magic. Kayijuka did it, however, and for that reason, when the visitors had gone, he was blinded with a red hot iron. But as on the following day he addressed somebody by name after having recognized the voice, it was believed that the operation had not been a success and it was performed a second time. Kayijuka is now a loyal courtier of the king.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

613
571

generation alone seems to comprise about 100 persons), the existence of a man prominent (by wealth, political functions, &c.) among the ascendants closer than the fifth, or a change of residence. The first two factors were usually realized in the span of six generations. If they were not, and if the inzu remained a small group of, say, a dozen people, these and their descendants went on referring to themselves as 'people of' an ancestor of the seventh, eighth, or ninth generation. One informant told us that his own inzu, already six generations deep, was not yet numerous enough to be split into new ones though it probably would be after two more generations. The fact that the ancestor of a new inzu was chosen, and was not simply the son of the ancestor of the former inzu, shows that there was a definite emphasis on the personal prominence of the ancestor.

Among the Tutsi, it seems that inzu tended to grow rather large before segmenting. In their intrigues for power, it was an advantage [557] to be connected by agnatic links to many and important people. Consequently, before initiating the formation of a new inzu, the Tutsi were very cautious: they did not want to diminish their social power by severing their connexions with the members of their present inzu. Besides, a change of residence was a less compelling reason for the Tutsi to split the inzu: they were not attached to a particular region to the same extent as the Hutu; when appointed to different offices, they often had to move from one part of the country to another and they frequently travelled to the court.

The formation of a new inzu was not necessarily a segmentation resulting in the concomitant formation of two new units of the same age and importance. It could happen that among the inzu 'people of A', those of the sixth generation who were the descendants of B preferred to think of themselves as 'people of B' because B was a famous warrior and they were numerous enough to constitute an inzu of their own. This did not compel those of the sixth generation who were descendants of C and D to do the same. They would go on considering themselves 'people of A'. After a couple more generations, when the number of the descendants of F had increased, they would refer to themselves as 'people of F' who was a rich owner of cows, and the descendants of G as 'people of G' because he had been an important province chief, whereas the descendants of C would some day take the name of 'people of E' if they moved into another region.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The ubwoko was the largest kin group of the patrilineal type. 614
Its members recognized a traditional bond of common descent in the paternal line, but were definitely unable to trace their

Diagram C.

relationship to the ancestor who was, perhaps, mythical. Two members of the same ubwoko have an idea of a certain kinship tie between them, but nothing more. Ubwoko were geographically dispersed.

There were thirteen such groupings in Ruanda: Abanyiginya (the royal ubwoko), Abega (the ubwoko from which the queens usually came), Abatsoba, Abacyaba, Abasinga, Abatira, Abakono, Abaniakarama, Abazigaba, Abagesera, Ababanda, Abaha, Abashambo. This number was consistent for a very long time. Ubwoko were permanent groups.[8]

Larger in membership than inzu and smaller than ubwoko, a 613
third kinship group called *umulyango* existed in Ruanda. What it was is not quite clear in the mind of most of our informants. This is due, I think, to the fact that umulyango varied considerably in their degree of organization, corporateness, and functions. But also there was some uncertainty in terminology: the same group, say the Abahindiro, has been referred to by our informants sometimes as inzu, and sometimes as umulyango.

[8] See Czekanowski, 1917, pp. 41-45 and 235 f.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

613 Umulyango appears to have been the group of living people
5T/1 who would have belonged to the same inzu if that primitive inzu had not split into new ones. This explains the fluidity of the use of the term. For instance the word 'Abareganshuro' (people of Mureganshuro) has meant first 'the members of the inzu of Mureganshuro'; then, after the splitting of that inzu, 'the members of the umulyango of Mureganshuro'. When an inzu divided into different new ones, the ancestor of the former one became the ancestor of the umulyango. Thus the umulyango link existed between members of different inzu having the same origin.

As may be expected, the strength of these links was quite different at the time of the splitting and a few generations afterwards. This accounts for the fact that in some cases the umulyango appears almost as a corporate group very similar to an inzu, and in other cases as a purely nominal group.

The span of life of an umulyango seems less defined than that of an inzu. It is doubtful, however, whether it was longer. Suppose inzu A splits into B and C and becomes umulyango A. Six generations later inzu B splits into inzu D and E and becomes umulyango B. At that time it is very likely that the primitive ancestor being twelve generations past will not be clearly remembered and that, except for some extraordinary reason, he will be superseded by the ancestor of umulyango B.

614 Descent groups in Ruanda were thus of two different types
613 A permanent group, the ubwoko which fulfilled the definition of patriclan (if exogamy be excluded from that definition) and two temporary groups, inzu and umulyango, the second being rather the surviving shadow of the first. The latter were both patrilineages. As they were not segments in the same sense as among, e.g.
613 the Nuer, it would be misleading to differentiate them according
128 to the terminology of Evans-Pritchard.[7] We would suggest calling inzu a primary and umulyango a secondary patrilineage in order to convey the idea that the umulyango originated from the inzu and that the inzu's functions were more important for the individual and society at large than those of the umulyango.[8]

[7] Evans-Pritchard, 1940, pp. 192-4.

[8] Members of the inzu were called *bavandimwe* (which primarily means sibling), agnatic relatives, *bamwaca* and relatives, affines included, *abaca*.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

613

(b) *Organization and activities of the inzu*

The primary patrilineage had a head who was usually called *umutware w'inzu* (chief of the inzu). Sometimes he was designated *umutware w'umulyango* (chief of the umulyango) even when his group was clearly an inzu. Among the Hutu, particularly in the north (Bugoyi, Mulera, Ndorwa), he was often called *umukungu*.

The man who first formed a new inzu did not necessarily become its head: he could choose its chief from among his uncles, brothers, cousins, or sons. Then the lineage head chose his successor. He was usually the eldest son but he could be any son or a nephew. If the person chosen seemed unacceptable to the Ruanda administrative authority, a meeting of the inzu was held and the political chief asked them to choose another inzu head. If the objections came from the group itself, they could resort to the umulyango head—if the umulyango concerned was still a strong group—or to the administrative authority, or in the case of an Hutu inzu which depended on only one lord for its cattle (*shebuja*), to him.

In addition to presiding over the collective activities of his lineage, the head had some power of his own. He was a judge in disputes between the members of his inzu; he also had the right to punish a member of his inzu who had wronged another, except in the case of murder, when the political authority was responsible for the punishment. Anyway, those who were dissatisfied with the decisions of the lineage head could always appeal to the political chief. Sometimes the lineage head legislated for the members of the inzu. A Hutu informant told us that his grandfather, who was the inzu head, had prohibited cross-cousin marriage in his inzu. The lineage head also detailed members for military service and assigned individual contributions to the tax required by the authorities. Officially and towards individual outsiders, he acted as the representative of the inzu. When a girl of his inzu ran away from her husband, he tried to settle the dispute with the head of the husband's inzu. He was responsible for the inzu's tax contribution and for handing over to the political authority any member of the lineage who had committed a crime against an outsider.

The significance of the inzu as a collective body was apparent in ritual, marriage, mutual aid, and blood-feud. In the ritual

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

613 sphere, there was the initiation of a member of the inzu into the
199 Ryangombe sect. Ryangombe was supposed to have been during
[173] his life the chief of a small band of friends and clients. He was accidentally killed by a buffalo during a hunting party. Unwilling to leave Ryangombe, his friends threw themselves on the buffalo's horns. Imana gave them a special place, the Karisimbi, a former volcano, where they were believed to enjoy a notably more agreeable life than the other spirits. In order to have the privilege of joining them there and of enjoying their protection while living, Ruanda had to be initiated into Ryangombe's sect (to be initiated: *kubandwa*). This sect was not a permanent organization, in the sense that churches are. It was only for an initiation ceremony that people who were members of the candidate's inzu as well as members of the sect, came together. An initiator and the different people who were going to impersonate the imandwa (Ryangombe's friends) were chosen from the inzu concerned. The initiation ceremony took place in a hut, secretly (in the sense that non-initiates were not admitted, but not in the sense that affiliation to the sect was kept secret). It was an occasion for the gathering of the inzu as the great majority of its members, men and women, particularly among the Hutu, were initiated.

613 A second collective ritual was celebrated yearly in the inzu to
769 honour the ancestor of the lineage (*guterekera*: to make an offering to a *muzimu*—a spirit). Presents were offered in the little hut dedicated to the ancestor's spirit in the lineage head's compound. They consisted of what the deceased person liked most in life (milk, hydromel, beans, &c.). This celebration lasted six days and six nights and took place after the sorghum harvesting, in July. There was a kind of ritual meal at the inzu head's compound in which every descendant of the ancestor participated (a cow, a
[062] goat, or beans were eaten according to the means of the people). This custom was more widespread among the Hutu than among the Tutsi, where, also, more restraint in eating, drinking, and feasting was observed.

613 Another collective activity of the inzu was the meeting of
623 councils in which all the important members of the inzu sat. Sometimes all the adults joined, but it was certain that the
[554] opinions of only the old, wealthy, and politically powerful men would prevail. The questions discussed concerned proposals of

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

marriage coming from another inzu or to be made to another inzu, and whether the council thought that a connexion with such or such lineage was to be accepted, sought, or avoided. A certain number of disputes that the lineage head could not or would not settle alone were submitted to the council. When somebody had lost his cattle and was ruined, the council could determine and apportion a collective contribution to help him out of his difficulties. Finally, blood-feuds were discussed. When a member of the group had been killed by a member of another all the kinsmen of the victim attempted to retaliate by taking of the life of a kinsman of the offender. Compensation was not usual. I was told, however, by the Hutu of Bugoyi that there the murderer's group could prevent the taking of vengeance by handing over a beautiful girl. Political authority kept the feuds under strict control. Permission to retaliate had to be obtained from the king and when it was granted and vengeance had been achieved, the feud was at an end. No further vengeance could be taken. Sometimes the king made representatives of the two lineages share a meal.

As the preceding paragraphs suggest, there was no clear-cut division between the powers of the head and of the council. It was a question of the particular traditions in each inzu and of the individual characters of the persons concerned. Usually, however, the inzu was an oligarchy rather than a monarchy. The head could not rule in opposition to the men of standing in his lineage; they had the means to put pressure on him and then there was the possibility of recourse to the political chiefs, always glad to interfere in a domain which was not completely under their control.

The obligations and rights of the individual members of a primary patrilineage were many. There was first a prohibition on sexual intercourse within the group, which applied to relations whether in or out of wedlock. It was feared that the mating of descendants from the same inzu ancestor would produce sickly and malformed children. A few informants add that exogamy was necessary to promote connexions between descent-groups, these connexions being thought of as beneficial in a vague way. The Rusnda did not distinguish incestuous relations from prohibited relations because of consanguinity. For them all the latter were incestuous. But they recognized order in the degrees of gravity in

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

613 incestuous relationships. The most serious in the inzu would be
835 between Ego and Da or Ego and FaSi. These were said never to occur. Incest was viewed with horror as a beastly thing, a view reflected in one of the words used to describe it, *ubuhene*. The root of this word is *ihene* (goat) because, as an informant put it, only he-goats pair with their mothers and sisters. A breach of this rule was the concern of everybody in the group as it was likely to bring about calamities affecting them all.

613 Another duty of a member of a primary lineage *vis-à-vis* any
476 of his kinsmen was that of rendering assistance when he was in difficulties (as for instance when a father was unable to help his son to pay bride-wealth or when the cows of a herdsman had been killed by an illness). This obligation was particularly binding when the misfortune was no fault of the victim, but even if it was, aid was often given. As has been mentioned, the lineage-head or the council usually determined the amount to be contributed by everybody. But mutual help was also an individual duty.

A kinsman could enlist the help of the wise and experienced men of his inzu when he had to go to the tribunal. He was accompanied
[692] by them, and was helped not only by their advice but also and sometimes mainly by the mere fact of their moral support. The chief who was judging could see the power of the group behind the plaintiff or the defendant.

Inzu solidarity operated both actively and passively in blood-feuds. All adult kinsmen of the victim were obliged to take up arms and carry out vengeance. Kinsmen of the murderer had to defend themselves and all adult males of his inzu had to accept the risk of being killed because of their kinsman's crime.

613 When a member of the inzu died, all others met in the deceased's
764 hut and watched by the corpse for eight days. After this the corpse was not buried but thrown away in some isolated place, such as the top of a rocky hill, which could be used by the people of any inzu living nearby. Mourning lasted two months for a
613 man and one month for a woman. During that period there was a
765 prohibition on intercourse for people very closely connected with the deceased (his son, his wife, his son's wife, his father). At the end of the mourning period all the inzu gathered together again.
[833] There was a beer-feast and obligatory intercourse for all the inzu members with their own spouses. When there was no spouse, as

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

for instance with a widow, intercourse took place with a brother or a parallel cousin of the deceased husband.

Among the Hutu when the inzu as such possessed fields (*ingobii* or *ubukonde*), as happened particularly in the northern area (Bugoyi, Mulera, Ndorwa), the individual member had a right to a plot (*isambo*). He could not sell such a plot, but could let it (at a rent of about one hoe for two years). If the ancestor has received cows from a lord (*shebuja*), these cows, or rather their offspring, were the property of the inzu which happened to have some pasture land. Among the Tutsi there were usually no land rights vested in the inzu. Tutsi as well as Hutu inzu had no sacred place other than the ancestor's shrine in the *rugo* (enclosure) of the lineage-head and the small huts in the enclosure of each descendant.

From this one may infer that the lineage group at the end of the nineteenth century was not a group with a territorial basis. It is very likely that a territorial lineage group was common among the Hutu and had persisted in the north where Hutu were predominant and where Tutsi occupation had always been scanty and superficial (there were very few Tutsi settlers in that region, apart from administrative chiefs).[9] On the other hand all the activities of the inzu just described implied a rather close co-residence (which is, of course, different from the concept of a territorial basis). These frequent gatherings, blood-feuds, and the rendering of help in difficult circumstances would hardly have been possible if the members of the group had been living in scattered places several days' journey apart. This explains also the crucial importance of the change of residence in the formation of a new inzu. When a branch of an inzu had to leave and settle elsewhere, it was bound to become a new inzu because the former relations with the members of the inzu who did not move could not have been maintained, at least among the Hutu and ordinary Tutsi. This was less important for Tutsi chiefs who were in any case moving about and travelling frequently.

(c) *Social roles within the inzu*

Following the authors of *Toward a General Theory of Action*, social role is understood here as the totality of reciprocal

[9] For an account of the specific structure of the kinship system in the north of Ruanda, the present-day districts (*territoires*) of Kisenyi, Ruhengeri and part of Biumba, see Hertefelt, 1959.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

interactions of Ego and Alter once an organized system of interaction between themselves has become stabilized. 'Alter expects Ego to behave in given situational conditions in certain relatively specific ways, or at least within relatively specific limits.'[10]

Members of an inzu were supposed to have more confidence in each other and to be readier to help and sympathize with each other than with outsiders. Within the inzu itself, each member was expected to assume a certain role which defined, within narrow limits, expected behaviour towards other lineage members. Before these intra-inzu roles are described, a list of kinship terms used within the inzu to address or designate members, will be given. Some characteristics of these behaviour patterns are reflected in the terminology, as, for instance, the predominance within the lineage of the horizontal or generation principle of grouping over the vertical grouping by branches of the lineage.

Data will be presented first and implications analysed at a later stage. Our point of reference will be the conventional Ego. All the terms and their symbolizations are to be understood as relating to Ego who is a male (Tutsi, Hutu, or Twa). The same terms are used by a male as by a female, except where otherwise indicated: f.s. (female speaking) and m.s. (male speaking).

VIII. The generation of Ego's great grandchildren		
SoSoSo	Mwana	Muzukuruza
SoSoDa	Mwana	Muzukuruza
IX. The other generations under		
Descendant		Ubuvivi[11]

Let us now turn to the description of the most important of these roles.

593 During all his father's lifetime, Ego remained subject to his authority, though before puberty the young son was allowed to show some familiarity in his relations with his father. Even at that early age, however, the interests and comfort of his father predominated, and it seems that the weakness of a child was not considered a reason for giving him relatively more food and other comforts than his father. When he reached puberty and was [881] initiated into the Ryangombe sect, he was treated more severely and had to behave as an obedient servant of his father. He could [882] not go to sleep before his father, or get up after him in the morning, without permission. He had to stay near the gate of the fence, to close it at night and open it in the morning, instead of sitting near the fire. This was especially true among the Hutu who did not [883] have servants. There the son had to tend the cattle (goats, sheep, and eventually cows) with the help of his sisters. His training in 593 different men's activities was given to him by his father. Among the 868 Tutsi, where such training included dancing, composition of poetry, and the use of weapons, different specialists were required. The training was given at the court of a chief or of the king. But even when separated from his father for a long time, the young Tutsi was expected to manifest the same attitude of obedience.

593 When his son was getting married, the father, Hutu as well as [583] Tutsi, had to help him to pay the bride-wealth. Marriage did not change the son's attitude towards his father, who still had the right to inflict severe punishments if disobeyed. He could curse him, [681] which amounted to complete ostracism and being obliged to flee to a region where he was not known and consequently where it was extremely difficult for him to make a living. The father could carry out less severe but more humiliating punishments, such as beating [606] his son with a stick or preventing him from sleeping with his wife for some time by monopolizing her; (it should be noted that

[11] Compare with Vanhove, 1942, pp. 11-16.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

the absence of a taboo on sex-relations between father-in-law 593
and daughter-in-law may have induced some severe fathers to [606]
punish their sons in this way). As long as their fathers lived, sons were never emancipated.[18]

The father had a slightly different attitude towards his daughter, though she certainly had to obey and respect him. Like the boys the girls went to sleep later than their parents and got up earlier. [883]
They participated in a large measure in the domestic chores, among the Hutu. They were more closely associated with their mother, the father did not have the task of punishing them, and they were never beaten by him after puberty. They were said usually to have great influence on their father and could get what they wanted from him. When they married the father received the [583]
bride-wealth, but he had to supply some of the counter-gifts. Marriage did not cut the links between the girl and her inzu which remained her inzu. But her close connexion with her husband's [613]
inzu sometimes divided her loyalties, though I was told that this was rare and anyway not a part of her expected behaviour. *Amahitamo yaje, umwana ni uwa se* (when a choice has to be made, one is the child of one's father).

Ego regarded his paternal uncle very much as another father. 604
He referred to him as 'our father'. Like the father, the father's brother had the right to punish. This is why a man who had committed some offence did not dare to take refuge with his paternal uncle. Their relations were, however, more cordial and less tense: the paternal uncle was the usual intermediary between Ego and Fa when the former wanted to obtain something from the latter. Ego, for instance, told his FaBr first when he wished to marry. There was no significant difference of behaviour towards the father's brothers, unless the relative ages of Ego and his FaBr were exceptional. If the nephew and his uncle were about the same age, there was a more familiar relationship between them. If FaBr was about as old as Fa, the attitude was more polite and respectful.

The paternal aunt (FaSi) had perhaps a still more prominent position. As she had received no part of her father's heritage, she felt free to ask from her father or from her brothers whatever she wanted for her nephews (Ego's children). Moreover, as her [582]
nephews could marry her daughers without any very urgent [584]

[18] Cf. Vincent, 1954, pp. 106-14.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

obligation to pay the bride-wealth, she could exert further pressure on her brothers by not agreeing to the marriage; finally, she had the power to curse her nephews and nieces. All this accounted for the importance of her role in the inzu. Nieces and nephews very often turned to her and she was often said to love them more than her own children. This difference between FaBr's and FaSi's attitudes toward Ego is perhaps reflected in the terminology. FaBr referred to his nephew by the word *muhunguwacu* (our-boy) and to his niece by *mukobwawacu* (our-girl), whereas the FaSi referred to both of them by *musengenezawanjye* (my niece/nephew). This last word contains the possessive 'my' used in kinship terminology usually for only the primary relatives, whereas the term of reference used by the FaBr includes the form 'our' usually used for secondary or more distant relatives.

Between Ego and the members of the generations alternate to his own, there were symmetrical relations of great familiarity and joking, with a preponderant sexual theme. The grandfather called his granddaughters his little wives and his grandsons his love rivals. The reason given for this familiarity is that it helped to cheer up the old people and to train the young ones in socially enjoyable talk. Grandfathers also participated in the socialization of the grandchildren by transmitting proverbs, legends, tales of past history, and mythological conceptions in which a great deal of the Ruanda view of the world was embodied.

As regards siblings, Ego was expected to have a respectful attitude towards his eldest brother, *uwamboneye izuba* (the first who saw the sun) even if the latter happened not to inherit the paternal authority over his brothers. In these cases he was honoured more than his brother who wielded the paternal authority. The eldest brother's advice was always asked by his siblings. Other brothers were expected to assume what we would call fraternal attitudes. But as brothers competed for their father's favour and had to share his heritage, there was under this appearance of cordiality a very deep rivalry and mutual distrust. It should be noted that all that is said of siblings applied both to half paternal siblings and to full siblings. In a descent group founded on agnatic principles the distinction of full and half paternal siblings is largely irrelevant.

Sisters were also expected to respect and obey their oldest brother. After they had reached puberty, however, he could not enforce obedience. The oldest sister's role was somewhat similar

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

to the oldest brother's as regards her younger sisters. But the 593
importance of seniority was less stressed among sisters than among
brothers. There was often rivalry between married sisters as there [607]
was no taboo on intercourse between a woman and her sister's [835]
husband.

Sisters and brothers were playmates during their childhood. After puberty their relations were restricted, but certainly not to the point of avoidance. As girls did not inherit from the father, as [428]
they were the prospective paternal aunts of the future children of their brothers, the relations between siblings of opposite sexes did not manifest the same covert strain as that between brothers.

Parallel paternal male cousins of Ego were assimilated to his 605
brothers, but as there was no inheritance rivalry, and as Ego was not required to manifest a particular respect for his eldest cousin, Ego's actual relation with his parallel cousins was in fact more fraternal than with his brothers. Ego considered the daughters of [589]
his paternal uncle as sisters with whom there was a marriage prohibition. There was consequently a certain reserve between them which, however, did not prevent them from exchanging [835]
obscene jokes at a celebration or a gathering, but any sexual acts were severely tabooed.

(d) *Organization and activities of the umulyango and the ubwoko*

The two other descent groups may be described much more 613
briefly. The secondary patrilineage when it had just divided from the primary group continued to share in the previous functions of the formerly united inzu. There were still gatherings of the descendants of the umulyango's ancestor, mutual aid, judgements in disputes, and participation in the blood-feuds. But gradually 613
these activities were confined more and more within the new inzu 571
and after an intermediate period, the umulyango generally disappeared as a corporate group.[13] Obviously if the splitting was due to a change of residence or a dispute, the functions of the former inzu were very quickly assumed by the new one and relations with other branches of the former inzu (which then constituted an umulyango) were not very close.

Did the umulyango as such have any special characteristics 613
or activities? All our informants agree on the rule of exogamy.

[13] For a definition of a corporate group see Radcliffe-Brown and Forde, 1950, p. 41.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

613 When the umulyango had a head (chosen in a similar way to the inzu head), he is said to have had the power to give orders to the heads of the component inzu and to draw up general rules for all the umulyango members. I was told, for instance, that the chief of a certain umulyango had ruled that the members should not marry girls of the ubwoko of the Abacyaba. This prohibition about 150 years old is still observed. When the secondary lineage had a head, he fulfilled very much the same function as an 'appeal court' for all decisions taken within the inzu. Such an umulyango organization existed among Hutu and Tutsi, but seems to have been more common in the important Tutsi lineages.

614 The patriclan (ubwoko) had no head and no collective activities. It was usually agamous, although there may have been an exogamy rule in one particular clan. An animal species was associated with [778] each clan. Its members were not allowed to kill any of them and were even obliged to protect them. The animal was not thought of as a reincarnation of the ancestor's spirit but probably only as a living symbol of the clan.[14]

614 563 Unlike the inzu and the umulyango, any ubwoko could have both Tutsi and Hutu among its members. There was no purely Hutu or purely Tutsi patriclan. When asked if this meant that Tutsi and Hutu of the same clan descended from the same ancestor, Tutsi answered that it did not. They explain it by the relationships which have linked Hutu to Tutsi as clients or servants. After some time the Hutu were identified with the group of their master. Such identification was particularly easy since Tutsi frequently emigrated from one region of Ruanda to another with their Hutu clients and servants. Some Hutu told me that as Gatutsi, Gahutu, and Gatwa (mythical figures who, as their names indicate, were supposed to be ancestors of the three groups) were brothers, it is not impossible that Tutsi and Hutu of one clan could have had the same ancestor. At all events clansmen who were of different socio-'racial' groups did not exhibit any solidarity at all and behaved towards each other as complete strangers.

613 562 As has been said, Ego's wife belonged to her own patrilineage for ever. This is why the social role of Ego's wife has not been mentioned in this section. But as she took part in many of the

[14] Some examples of the totemic animals of patriclans are: Abazigaba, the leopard (*ingwe*), Abasinga, the hawk (*sakabaka*), Abega, the frog (*igikeli*), Abagesera, the wagtail (*nyamasaza*), Abacyaba, the hyena (*impyisi*).

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

activities of her husband's inzu and was not bound by all the obligations common to the members of her own inzu, a few words should be added about her behaviour in this connexion. 613 562

She participated in the cult of Ego's (= her husband's) ancestor and of her own ancestor, but she was not allowed to build a shrine in honour of her ancestor in Ego's enclosure. She gave the ritual gifts at the birth of a child in her own inzu as well as in Ego's inzu, and did the same at marriage ceremonies. In times of mourning, Ego's inzu was predominant: his wife had to practise sexual abstention for two or three months when Ego's parents died. For her own parents she was not bound by any such observances. She received protection from her husband's group, but from [illegible] only when she had disputes with Ego's lineage [465]

2. THE DESCENT GROUP OF EGO'S MOTHER

A man (or a woman) was not a member of his mother's patrilineage, which is why in the preceding section only his agnates were considered. But the picture of Ego's position in kinship relations would be incomplete if it were limited to that. Ego's mother's agnates were not complete strangers to him. In everyday life, he met them often and his culture provided him with roles to assume in these circumstances. In some cases Ego's behaviour to 'maternal' kin was very similar to that which he was expected to observe towards the agnatic counterpart of that kin. 602

593 Ego's mother, who was the link between Ego and her descent group, was not a figure of authority to the same extent as Ego's father. Her children had to behave respectfully and obediently towards her, but as she was a wife of their father, they saw that she, like they themselves, had to submit to an authority in the home. Moreover, Ruanda placed a very high value on their children and they were more important for the father than his wife. Consequently the children knew that from their father's point of view their mother did not enjoy a status superior to their own. Consequently the mother-son and mother-daughter relations were usually free and affectionate. Very often the mother, when widowed and old, came and lived with one of her children, whereas the old [589] widower frequently lived alone.

604 The relationship between Ego and his maternal uncle was one of extreme restraint. It was not avoidance: they spoke to each other and Ego came and called on him from time to time. These attitudes were not completely symmetrical: the uncle seemed to consider his nephews only as nuisances. For him they brought ill-luck and they were treated accordingly: they were not allowed to look into his granaries or to milk his cows, and they ate with the servants. The uncle seemed to do all he could to induce them to keep away. But they visited him because there they met his children with whom they were traditionally permitted to have very familiar relationships. The maternal uncle was afraid that Ego would have [836] intercourse with his daughter and that her betrothal to somebody [584] else would thereby be broken. He was also afraid that if Ego married her he would not easily obtain bride-wealth from his [582] brother-in-law. All these reasons were understandable enough.

[15] We do not mention here the maternal half-siblings because they do not belong to their mother's descent group. They are referred to as *Muvandimwe* (child of mother).

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Why did they not operate in the case of FaSi? As mother of Ego's paternal cross-cousins, with whom Ego could enjoy the same familiarities, she could have reacted in the same way. We have seen that, on the contrary, she was extremely cordial to her nephews. The only reason seems to be that her nephews belonged to her own lineage, whereas her daughters did not. Consequently she was less interested in bride-wealths, &c. Her husband (FaSiHu) probably reacted in the same way as MoBr. 604

The relations of Ego with his maternal aunt (MoSi) were supposed to be similar to his relations with his mother, but in fact great trust and affection did not often exist between them because of the usually tense relations of the aunt with Ego's mother, her sister. If, for instance, Ego's aunt's husband (MoSiHu) neglected his wife and preferred his sister-in-law (Ego's Mo), with whom intercourse was not taboo, the relations between the two sisters became tense. The incest taboo applied to the relations between Ego and MoSi (as an extension of the incest prohibition between Ego and his Mo) and also MoSiDa (although she did not belong to Mo's inzu). In the latter case, the reason was that for Ego, his maternal parallel cousins were assimilated to his paternal parallel cousins. He had consequently to consider her as his sister. In the next generation this incest taboo still existed (between So and MoSiDaDa, i.e. between any male and his FaMoSiDaDa). The incest between Ego's male descendants and his MoSi's female descendants through females lasted, I was told, as long as the original sibling relation (between Mo and MoSi) was remembered. 604 835 [593] 605 835

Between Ego and his maternal grandfather, the relations were very similar to those between him and his paternal grandfather. As we may expect, the fact that his maternal grandmother did not belong to the maternal patrilineage did not prevent her from being considered as a grandmother and not only as MoFaWi. 603

As has just been indicated, Ego could enjoy with his female maternal cross-cousins great familiarity expressed in practical jokes, pleasant talk, and erotic games. But as long as the girls were unmarried anything more than caressing and petting (erotic kissing seems to have been unknown among Ruanda) was prohibited. It was only after the female cross-cousins' marriages that sexual intercourse with them was tolerated. This behaviour was extended to wives of male cross-cousins (MoBrSoWi). 605 [832] [835]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

3. EGO'S CROSS-LINE RELATIVES

602 The cross-line relatives of Ego are people who are socially recognized as related to him although they do not belong either to his parents' descent groups or to the category of his relatives by affinity.

[605] In Ruanda, the category of cross-line relatives was limited to Ego's paternal cross-cousins, his maternal parallel cousins, their [604] descendants, his sororal nephews and nieces, and their descendants.

Paternal cross-cousins did not belong to Ego's father's patrilineage since they were members of their own father's (FaSiHu of Ego) lineage. It could be said that they were agnates of FaSiHu who was himself an affine of Ego. It seems, however, that the link between Ego and his paternal cross-cousins was their mother (FaSi) and not their father (FaSiHu). This is why I do not include Ego's paternal cross-cousins among Ego's affines.

Maternal cross-cousins were not Ego's cross-line relatives because they were related to Ego as agnates of Ego's mother. On the contrary maternal parallel cousins of Ego were cross-line relatives of Ego's mother: her sororal nephews and nieces. Ego was not related to them through his MoSiHu but through his MoSi as the term of reference used by Ego indicates: child-of-my-maternal-aunt (*mwenemamawacu*). This is why I regard them as Ego's cross-line relatives.

604 Ego was related to his sororal nephews and nieces through his sister in spite of the fact that her children belonged to her husband's agnatic group.

601

Role	*Term of address*	*Term of reference*
FaSiSo	Name, nickname or Muvandimwe	Mubyarawanjye

MoSiSo	Muvandimwe	Mwenemamawacu
MoSiDa	Muvandimwe	Mwenemamawacu
SiSo	Mwana	Mwishywawanjye
SiDa	Mwana	Mwishywawanjye

605 Familiarity, jesting, erotic games without actual intercourse before marriage, were the relations of paternal cross-cousins (as well as maternal cross-cousins) of the opposite sex. The difference was that paternal cross-cousins had to assist each other and often fought together in blood-feuds although, as they did not belong [613] to the same inzu, they could not be killed in retaliation.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

This privileged sexual partnership is not to be understood as an unrestricted freedom irrespective of circumstances. From the point of view of a married woman sex relations with these relatives were privileged in the sense that her husband could not divorce her or dismiss her on these grounds as he could do if the lover was not a relative of that category. For the lover himself, it did not make much difference as the woman was always regarded as being responsible for adultery ('she should have refused'); the husband usually had no claim against him although the lover might have to endure some punishment such as being beaten if caught in the act. We may say, however, that intercourse with a woman relative was privileged for a man in the sense that his wife was supposed not to resent it. In any case these relations were kept secret as far as possible, and it was regarded as seriously lacking in respect to indulge in them when the spouse was not away. When the spouse was absent, travelling for a long time, they were considered normal.

This tolerance concerned only married women. Before marriage girls were supposed to remain virgin. When an unmarried girl became pregnant, she was either killed with the infant or sent away, usually to an island on Lake Kivu where she was left to die, unless rescued and taken by a man of a very much despised tribe, the Shi, living on the western shore of the lake (the present Belgian Congo side). Of course, such a drastic course of action was not always followed, but this was the traditional rule. When the unmarried girl was impregnated by a cousin, these dreadful consequences could be more easily avoided if the parents wanted to exert pressure on the lover to make him marry the girl. But this is the only sense in which it may be said that sexual intercourse for an unmarried girl with a relative was privileged.

On the contrary, maternal parallel cousins of Ego had to be treated with restraint. Although not members of his patrilineage, as were his paternal parallel cousins, his attitude towards them and particularly towards the girls was supposed to be very similar. The incest taboo existed between Ego's descendents and his parallel cousins' descendents until such time as the fact that the two mothers were sisters had been forgotten.

Towards his sororal nieces and nephews, Ego's role was similar to his avuncular role *vis-à-vis* his brother's children. He could not marry or have intercourse with his sororal nieces. His behaviour

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

604 was expected to be protective, but he had no authority over his sister's children unless bride-wealth had not been paid for her.

4. EGO'S AFFINES

128 Following *Notes and Queries*, I shall distinguish two classes among the relatives by marriage. First, those in which the affinal link is the first traced from Ego, i.e. kin of the spouse; secondly, those in which the kinship link is the first one traced, i.e. persons who have married kinsmen and kinswomen.[16]

602 I shall begin with the second class: spouses of members of Ego's patrilineage, of Ego's mother's patrilineage and their own agnatic relatives. Not all of these spouses were considered by Ruanda to be significantly related to Ego. They say, for instance, that the wife of the maternal uncle (MoBrWi) is just a stranger, whereas there was a particular code of behaviour laid down towards the wife of the paternal uncle (FaBrWi). Among affines I include, besides these spouses of Ego's consanguineal relatives, the consanguineal relatives of these spouses, such as DaHuFa, SoWiFa, &c.

601 *(a) The Spouses of Ego's Kin*

This is the nomenclature of the second class of Ego's affines.

603 Grandparents by affinity were regarded in the same way as grandparents by consanguinity. Relations with them were symmetrically playful and familiar.

604 The two uncles by affinity (FaSiHu and MoSiHu) were treated with respect because they were older than their nephews and with sympathy in so far as their wives got along well with them. If they did not, the nephews tended to side with their aunts. The ideal behaviour, however, was to act towards the aunts' husband with rather more confidence than towards mere outsiders.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

604 The paternal uncle's wife (FaBrWi) was more deeply connected with Ego's inzu. She bore children who were Ego's parallel cousins; there was no incest taboo between her and Ego's father and if her husband died, she might become a wife of Ego's father. For all these reasons, respectful and almost filial behaviour towards her was expected from Ego.

835 For the affinal relatives of Ego's generation, the rule was quite simple. There was no incest taboo; there was on the contrary a privileged sexual partnership (as described earlier in connexion with the paternal cross-cousins) between a male Ego on the one hand and on the other the wives of his brothers, parallel cousins, and cross-cousins. And the same *mutatis mutandis* when Ego is female.

606 Between Ego and his daughter-in-law (SoWi) there was no incest prohibition, although there was between a female Ego and her son-in-law (her DaHu). This was rationalized by saying that the SoWi is for Ego a little spouse and not a daughter, whereas for the son-in-law, his wife's mother is his mother. As may be imagined the role of SoWi, 'daughter' and rival of her HuMo, was not an easy one as regards Ego and Ego's wife. Her ambivalent situation was reflected in her traditionally expected behaviour. She had to behave respectfully, obediently, and affectionately, as a daughter, towards her parents-in-law, and at the same time she was expected to assume almost an avoidance attitude: she was not allowed to pronounce their names nor even words which sounded similar.

Ego's daughter's husband was expected to conform to the same verbal taboos as regards his father-in-law (Ego) and his mother-in-law (Ego's wife). He was not allowed to eat at his parents-in-law's until his wife had had a child. Even then he never spoke if not invited to. After a certain period of time, however, when the marriage was stable and had produced a few children, relations eventually became freer, though they remained always rather reserved.

601 All other affines of generations following that of Ego were designated by the same term, even if they were not connected through his patrilineal descendents, DaDaHu for instance.

(*b*) *The kin of Ego's wife*

602 Let us now consider the other class of affines, that in which the affinal link is first traced from Ego. These are the consanguineal

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

relatives of Ego's spouse among whom we have included the patrilineal kin of the spouse's mother. More exactly, in this total class of potential affines, the Ruanda chose a few of them who they considered as relatives of Ego because for one reason or another they had a certain role to play in his social or cultural life. The others had been neglected. It has been necessary in this case to distinguish between a male and a female Ego.

Role	*Term of address*	*Term of reference*
I. The first generation above Ego: Male speaking		
WiFa	Sogokuru	Databukwe (father through marriage)

606
601 As has just been mentioned in connexion with the SoWi and the DaHu roles, Ego and his wife were expected to behave respectfully, with restraint as well as with affection towards their parents-in-law. This was reflected in the terminology. WiFa, WiMo, HuFa, HuMo were addressed by the term used for the grandparents. We know that Ego's conduct towards his grandparents was extremely familiar. He had to use the same term for in-laws and was not allowed to pronounce their name. As the preceding nomenclature indicates, the use of the same term of address was extended to all in-laws of the generation above Ego's one. There was again no distinction between the grandparents and great-grandparents who were patrilineal ascendents of the spouse and those who were only in the maternal line.

607 Ego's conduct towards his wife's relatives of the same generation depended mainly on the privileged sex partnership. The determination of those who could be partners was conditioned by the simple principle which assimilates a person to his siblings and parallel cousins. According to this, Ego could have sex relations with those who were assimilated to his wife: her sisters and her parallel cousins. The same applied to a female Ego: her privileged partners are thus her husband's brothers and parallel cousins.

We have indicated what was meant by a sexual privileged

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

partnership among cross-cousins and that this was only one aspect of wider behaviour patterns of familiarity and joking. The relations between Ego and certain of his affines should be understood in the same sense. 607 [602]

These relations were reciprocal in the sense that the husband of Ego's partner was also the privileged partner of Ego's wife, as the two husbands had the same relationships of affinity with each other's wives. This reciprocity seemed essential to the working of the system, which otherwise would have been probably too frustrating. The case of the wife of Ego's wife's brother (WiBrWi) confirms this interpretation. Although she was quite unrelated to Ego, there was a kind of 'incest' taboo concerning any relation with her. There was a strict avoidance (Ego was not allowed to stay alone with his WiBrWi) and such a relation was considered to bring ill-luck not only to the partners but to the lineages concerned. The reason for that prohibition, I was told, was that the husband of WiBrWi, being the brother of Ego's wife, was prevented by the incest-taboo from having any reciprocal relations with her. It appears, however, that the common resentment of Ego and his WiBrWi against their common in-laws may have been such that these sanctions were not a sufficient deterrent.

These different patterns of behaviour were expressed in terminology. Ego referred by the same term to his wife's female parallel cousins and by another to her cross-cousins and male parallel cousins. There was also a special term to designate those who are husbands of privileged partners. A female Ego used terms in which similar distinctions appeared. 601

5. SOME COMMENTS ON KINSHIP PRINCIPLES IN RUANDA

(a) *Analytical table of kinship terms*

The attention I have given and have still to give to kinship terminology rests on the assumption that the use of kinship terms indicates what aspects, among the many that could be stressed in a kinship system, have been actually emphasized in a particular society. Terminology indicates first the principles according to which, among the almost unlimited mass of possible relationships some have been given a name and are thus considered as social roles. Secondly, terminology shows the lines of cleavage according to which the totality of relationships have been separated in different classes. 121 601

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

128 To investigate systematically the social significance of kinship terminology, some procedure should be adopted whereby every term is analysed from a set of relevant viewpoints. In order to do this we are setting them in the following table. The table recapitulates the sixty-one kinship terms mentioned in the preceding sections and for each of them gives eleven characteristics. In this [113] choice I have followed closely the chapter 'Analysis of Kinship' in Murdock's *Social Structure*.[17]

1. Linguistic structure.
2. Denotes generation.
3. Denotes sex.
4. Denotes affinity and consanguinity.
5. Denotes lineality and collaterality.
6. Denotes bifurcation.
7. Denotes polarity.
8. Denotes age in generation.
9. Denotes speaker's sex.
10. Denotes decendence of link.
11. Range of application.

In the first vertical line the linguistic structure of the term is given. An elementary term (symbolized by 'e' in the table) is 'an irreducible word which cannot be analysed into component lexical elements with kinship meanings', a derivative term (symbolized by 'dr') is 'compounded from an elementary term and some other lexical element which does not have primarily a kinship meaning' and a descriptive term (symbolized by 'ds') 'combines two or more elementary terms to denote a specific relative'.

In the second line a cross (+) indicates that the term is never applied to two individuals to different generations. The dash (–) points out that it can be so used.

The third characteristic is the sex of the person designated by the term. Again (+) indicates that the term is only applicable to males or females and (–) that it may be applied to persons of either sex.

A cross in the fourth line shows that the term may indicate certain individuals among both affinal and consanguineal relatives of Ego; a hyphen denotes that the term can be applied only either to affines or only to consanguineal kinsfolk. In the assessment of this characteristic, the patrilineal descent group of Ego's mother has been considered as a group of consanguineal relatives of Ego.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

128
601

In the following column (—) indicates that the term may be applied only to individuals who belong to the same direct line (people who either descend from one another or have all the same ascendants) or only to persons who are collaterals. For instance if the term A may be applied only to Ego's paternal uncle, Ego's paternal uncle's son, and Ego's paternal uncle's grandson, we say that it denotes only people of the same line. If the term B may be applied to Ego's paternal uncle and to Ego's paternal uncle's cousins, we may say that it denotes only collaterals. A (+) means that the term may be applied to a class of individuals, some of whom are collaterals and some belonging to the same line.

In the sixth line there is a cross for the terms which indicate the sex of the relative who is the link between Ego and the role designated by the term, and there is a hyphen for terms which do not denote the sex of the link. The symbol (o) means that there is no link. When there are several links, only the person directly connected to Ego has been considered. For instance if the same term denotes MoBrSo and MoSiSo but not FaBrSo and FaSiSo, only the direct link to Ego, i.e. Mo has been considered. Consequently in this case the term is bifurcate although it does neglect the sex of the second link: Br or Si.

There is polarity when the two participants in a relationship do not refer to each other by the same term. Consequently a (—) means that the term is used reciprocally by the two participants and a (+) that it is not.

The eighth characteristic concerns distinctions of age within the same generation. A hyphen indicates that the term may be used for the complete range of age variations within one generation; a cross means that it applies only to people of a definite age, absolute or relative, within the generation. The symbol (o) means that a term by definition could not denote age differences within a generation as it applies to different generations.

Next, the speaker's sex is considered. There is a dash for terms which may be used by males and females alike and a cross when they are used only by one of the sexes.

The tenth characteristic, as the sixth, is concerned with the person through whom kinship is traced. A dash indicates that the term applies as well if the link is deceased or living and a cross that it applies only when the connecting person is either alive or dead.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The last column of the table indicates the range of application of the term: is it classificatory or denotative? Although the nine preceding characteristics are criteria of the range of application, I have considered as denotative not only the terms which have these nine characteristics, but those which show only characteristics 2, 3, 4, 5, and 6, i.e. generation, sex, distinction between affinity and consanguinity, lineality and collaterality, bifurcation by sex of connecting relative.

If we sum up the different symbols in the vertical lines, we obtain for the sixty-one terms of the table (fifty-five terms of reference and six of address) the following results:

1. Linguistic structure: 6 elementary terms, 48 derivative, 7 descriptive.
2. 54 denote generation, 7 do not.
3. 43 denote sex of the relative, 18 do not.
4. 54 do not cover both affinal and consanguineal relative together and 7 do.
5. 45 do not denote a class of people including lineal and collateral relatives, 16 do.
6. 34 indicate the sex of the person through whom kinship is traced, 19 do not and in 8 cases the question does not arise as there is no link.
7. 50 terms indicate polarity, 11 do not.
8. 59 do not denote age within generation, 2 do, and in 7 cases they ignore age differences by definition.
9. The speaker's sex is indicated in 16 cases, it is not in 45.
10. There is no case in which it is indicated whether the link is living or dead. Thus, except for the 8 cases in which there is no connecting relative, 53 terms ignore that characteristic.
11. 41 terms are classificatory and 20 are denotative.

(b) *Concluding remarks*

Let me conclude this chapter with a few remarks on the Ruanda system of kinship and affinity. They are suggested by the previous description of kinship roles or by the table.

Descent is reckoned patrilineally and a lineage is a corporate group of agnates. But Ego does not feel that all others are strangers. He lives, as it were, in a cognatic as well as an agnatic world. For help in important questions, when it is necessary for him to assert his rights to be assisted, he turns to his patrilineal kinsmen, but in

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

everyday life, when he needs only some slight service, some advice and sympathy, he asks for and receives it from his maternal relatives as easily as from his paternal ones. Moreover, in matters very important to him concerning playmates, sex partners, and marriageable girls, the two groups stand equal: taboo and tolerance apply to maternal as well as to agnatic cousins. Kinship terms, even terms of reference, used to denote the grandparents are the same in both lines.

If the descent groups tend, in many respects, to merge in a kind of cognatic structure, the distinction between affinity and consanguinity is more clearly maintained. Affines are often identified with their spouses who are Ego's kin, and in a situation subordinate to the latter's from the point of view of Ego (as for instance FaSiHu and MoSiHu), or they are considered only in connexion with privileged sexual access. The distinction between affinal and consanguineal relations is emphasized in terminology as only seven terms out of sixty-one denote both affinity and consanguinity relationships. Among the seven, there are five terms of address.

Generation is another focal point of attention in Ruanda kinship relationships. There are broad behaviour patterns expected from people in their relationships simply because they belong to the same or to different generations. Respect should be shown to the members of the generation immediately above, domination and protection are correct behaviour towards people of the generation immediately under Ego, a certain equality tends to prevail between people belonging to the same generation, and there is a great familiarity among those who belong to alternate generations. This is again clearly supported by kinship terminology: fifty-four terms apply only to people of the same generation, whereas only seven fail to denote the generation of the relative. On the other hand, very little attention is paid to age differences within one generation: two terms only denote them, whereas fifty-two do not (in the seven cases left the question does not arise).

In spite of the principle of assimilation of parallel cousins to siblings the distinction in terminology between lineal and collateral relatives is observed more often than would be expected. In forty-five terms, there is no merging and out of the sixteen cases of merging, it should be mentioned that there are six terms of address in which the failure to distinguish is less

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

significant because terms of address are more likely to be classificatory. 602 601

Another important principle of cleavage among relatives is sex. Very rarely, as the preceding brief survey of the different kinship roles shows, is kinship behaviour the same towards relatives of both sexes. Out of our list of sixty-one terms, forty-three denote the sex of the relative. Further analysis indicates that what is important is sex in connexion with privileged relations. Terminologically, male parallel cousins of Ego's wife are lumped together with her cross-cousins, whereas her female parallel cousins are designated by another word. This is a case in which the principle of sexual privileged partnership has been more operative than other principles such as descent, &c. The eighteen terms ignoring sex denote relatives with whom Ego could not have sexual relations, either because they would be incestuous or because the difference of age would be too great. It could be argued that sex is not such an important principle in kinship as there are only sixteen terms which denote the speaker's sex and forty-five which do not. I do not think that this objection is a valid one, however, because when terms are not written by an anthropologist but are spoken—as they are meant to be when they are used in everyday life—it is clear to anybody whether the speaker is a man or a woman.

To sum up, the Ruanda kinship system seems to have evolved according to principles stressing the importance of generation and the predominance of an almost cognatic system over affinity, keeping a very clear distinction between lineal and collateral relatives and emphasizing sex especially when connected with privileged sexual access. 601

[P.64]

CHAPTER III

MARRIAGE AND THE FAMILY

I. MARRIAGE

121 59 THE family, the social group characterized by common residence, economic co-operation, and reproduction[1] had in Ruanda a conjugal basis[2] that we shall consider in this section.

Married life will not be dealt with here but only the ways and conditions of the establishment of that 'union between a man and a woman such that children born to the woman are then recogized legitimate offspring of both partners'.[3]

(a) *The choice of a spouse*

582 In a primary marriage (the first that an individual contracts) there were few positive socially recognized criteria of choice and none of them indicated one or a few individuals as preferential partners. Among close kin cross-cousins were possible spouses, but it was generally an unfortunate circumstance that obliged a man to marry his cross-cousin. It was usually either because he was not able to pay bride-wealth immediately, or because his cross-cousin had become pregnant by him. We should add that there was no restricted or generalized exchange among the [114] Ruanda in Lévi-Strauss's sense. On the contrary I was told that because they limited connexions, exchanges were not in favour except in some special circumstances.[4]

In the preceding chapter we have mentioned persons whom Ego was prohibited from marrying because of his relations of kinship or affinity with them. Let me sum up the different categories of these persons.

We may start with that which seems fundamental in the sense

[1] Murdock, 1949, p. 1.
[2] Linton, 1936, p. 159.
[3] Royal Anthropological Institute, 1951, p. 110.
[4] Lévi-Strauss, 1949, pp. 189, 322. There is restricted exchange if, when a man of group A gets a woman from group B, it results in a man of group B claiming a woman from group A. Exchange is generalized if when a woman of group A is given to a man of group B, a woman of B must be given to a man of C and a woman of C may be claimed by a man of A.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

that in questions of exogamy, informants mention it first and attempt to relate other categories to it: I refer to the primary patrilineage (inzu). People descending in the paternal line from a common ancestor did not intermarry because they were of the same blood. The same principle was logically extended to the secondary patrilineage (umulyango). 582 [613]

A second extension of the taboo concerned the maternal kinship group and had a double basis. First the idea that it would be unnatural and horrible to conceive a marriage between Ego and his mother and consequently between him and any person assimilated to her (her sisters and female parallel cousins). Second, because of the tendency to recognize the cognatic principle, some matrilateral relatives were tabooed because their paternal counterparts were tabooed. This applied to the maternal parallel cousins. [835]

Only when Ego was a male was there a third extension to his in-laws. The explanation given is that it seemed distasteful that a man could have intercourse with a girl and her mother. Consequently the wife's mother and all the relatives assimilated to the mother were in the prohibited class.

The same taboo included also sororal nieces and grand-nieces of Ego because he had to assume an avuncular attitude towards them, although they belonged to another patrilineage.

A further extension included the spouses of uncles and aunts. The spouse of an aunt was regarded rather as an uncle, and the spouse of an uncle was regarded rather as an aunt.

Ruanda were so eager to form new connexions with unrelated kinship groups that they were very keenly aware of any factor favouring them. Some informants stressed the function of exogamy rules from that point of view. Increase of social communication by marriage does not explain all the particular prohibitions, however, since some of them were concerned with people of a different patrilineage. Taboos on marriage and sex relations (they were co-extensive) had, it appears, in some cases the function of keeping a certain cohesion within the large group of relatives by kinship and affinity by preventing rivalry. Prohibition of relations between Ego and his WiBrWi could not favour social communication, but it certainly made possible harmonious relations between Ego and his WiBr.

Inter-caste marriage was not prohibited between Hutu and 000

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

Inter-caste marriage was not prohibited between Hutu and
564 Tutsi. Hutu informants say it happened frequently, Tutsi in-
580 formants claim that such marriages were very rare, but that Tutsi
often had Hutu concubines. This discrepancy shows clearly that
[558] for a Tutsi to take a Hutu as wife in a primary marriage entailed
a loss of prestige. It was resorted to mainly because of poverty.
[583] Bride-wealth was lower in these inter-caste unions (not in the
sense that the standard bride-wealth among Hutu was much
lower than among Tutsi) and a Hutu girl worked harder than a
Tutsi. It does not seem on the other hand that the Hutu girl was
particularly proud of having a Tutsi husband. But it is not easy to
[562] assess the feelings of a girl in that respect, as no informant seems
to have cared very much about them. A prosperous Hutu could
[583] marry a Tutsi girl, but then the bride-wealth was often greater
than for a Tutsi (three cows instead of one). It happened also that a
Tutsi cattle-lord (*shebuja*) would grant a daughter to one of his
Hutu clients. Here again the feeling of the girl was unknown to
informants. Such a match could be eagerly sought by a Hutu
[557] social climber, but in general Hutu opinion did not look upon it
with favour. In a caste society only a few atypical persons are
anxious to get as near as they can to the higher stratum. Hutu and
Tutsi informants considered any question suggesting inter-
marriage with Twa as very insulting.

582 It was possible to marry a foreign woman, often a war captive
567 who had become a sort of domestic slave. The bride-wealth then
had to be paid to her master. Sometimes Ruanda living near the
582 borders married a girl of the neighbouring people (such as Nkole,
698 Rundi) when peaceful relations with that particular people had
lasted for some time. There was much reluctance to let a Ruanda
girl marry an alien.

581 Within the borders of Ruanda, local proximity was an important
positive factor for Hutu in the choice of a mate. They did not
travel very much and as a marriage was primarily a patrilineage
affair, they had to know the inzu of the prospective bride or groom
and they only knew the groups residing nearby. Tutsi, and par-
ticularly those of importance, were less localised than Hutu.
They had to go often to the court; they were appointed to admini-
strative charges in one part of the country, then in another one.
Consequently inter-regional marriage was favoured as it usefully
extended kinship connexions.

What were the qualifications socially considered as the most

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

important for prospective spouses? Among Hutu and Tutsi both patrilineages looked for the right connexion. Has the man's (or girl's) inzu a good reputation? Is it well considered at the king's court? Are they rich? Is it strategic, in present circumstances, to be allied to them? What are the relations between their cattle-lord and ours? Individual qualities considered as socially important were for the prospective wife of a Tutsi that she should be expert at keeping a house very clean, at basket work, and at commanding servants. The Hutu wanted a hard-working wife able to help them in the fields. The Twa appreciated, as we may expect, a skilled potter. The most important qualities of the culturally defined ideal husband was his ability to support economically his wife and their children. That meant for a Tutsi that he should be rich in cattle and clever in political intrigues; for a Hutu that he should be a good labourer and a client appreciated by his lord, and for a Twa that he should be a good craftsman or hunter or a buffoon, liked by his Tutsi protectors. These qualities mentioned by our informants are those which made spouses good partners in the co-operative economic unit of the family. In the mind of Ruanda that aspect of the family was clearly emphasized. Beauty and sex-appeal were also highly appreciated, however, particularly by Tutsi. 581 [184]

The normal marriage age for boys was around twenty-five for Tutsi, seventeen to eighteen for Hutu, and fifteen for Twa. For girls, when 'breasts were fully developed and beginning to fall down' I was told. This gives a rather large range of age. A girl could be married before puberty but she remained with her parents till her first menstruation. 582

According to informants, virginity was appreciated more than both beauty and ability to co-operate in economic pursuits. This was rationalized in terms of virginity being a guarantee of fertility and of stability in the family. Among the Hutu a small gift was sent to the girl's parents by the husband when the girl was found to be virgin. 831 [585] [431]

The prospective spouse was not chosen by his or her future partner. The boy could express only to his paternal uncle or aunt nothing more than a wish to get married. The father was told of his son's desire and then looked for a suitable girl. When she was found, the inzu council met and the advisability of a connexion with the girl's inzu was discussed. When an agreement was reached on the choice, the boy's father asked for an appointment with the 584

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

584 girl's father, allowing a sufficient time for the latter to consult his patrilineage. If the answer was favourable, the meeting took place. Accompanied by a kinsman or a client, the boy's father came to visit the girl's father and offered him a jug of beer. After some preliminary talk, he came to the point and asked for the girl.

These preliminary steps were taken very skilfully. Nobody should ever be directly refused. If the girl's kinsfolk did not want the match, the visit of the boy's father was indefinitely delayed under several pretexts. Nobody should be put in such a position as to lose face. The boy and the girl were never officially consulted during these preparatory stages. If, however, one of them categorically refused the choice made, he was not obliged to marry. But it happened very rarely and the opposition of the individual concerned had to be extremely persistent if it was to succeed.

583 To marry a certain girl against the consent of one's own and her parents was impossible. But the following procedure could be attempted. The boy hid himself in a place to which he knew the [834] girl would go. When she was coming he spat in her face a certain [585] herb which had been chewed and mixed with milk (*imbazi*). They were then considered married as this was the central rite of any wedding. Often the ordinary wedding ceremonies followed. If, however, the girl's inzu were still opposed to that match, they [784] obliged the girl to whistle and milk a cow. As both these actions were tabooed for a married woman, it was clearly meant that the [684] girl was not married. The boy's father had then to pay a fine to the girl's people as a reparation for the wrong done to the girl's family.[5]

595 In secondary marriages (any marriage subsequent to the first one) there were not many more cultural criteria determining the choice of the spouse. Sororal polygyny was permitted but rare. In order to obtain new connexions the husband preferred to choose subsequent wives from an inzu other than that of his first wife Another reason given is that to have two or three sisters as wives brought more domestic troubles than wives who were not consanguineal relatives. If, however, his first wife was sterile, the [583] husband was likely to ask for one of her sisters or parallel cousins as a second wife, without paying bride-wealth. But this was not a sororate, for the first wife's sister was not said to give birth to children for her sister: she was regarded as bearing them for herself.

[5] See description of other forms of this type of marriage in Pauwels, 1951, pp. 126–9.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

herself. A widow became the wife of one of her late husband's siblings or agnates designated by the inzu head. Usually an older brother of the husband was chosen. Among the Tutsi this resulted in a levirate: the first husband was still the pater of the children whose genitor was the second husband. Among the Hutu, in similar cases, the genitor was pater. A widower often married a younger sister of his late wife if he was on good terms with his parents-in-law, and if they did not require bride-wealth for the deceased wife's younger sister. This marriage was favoured because it was thought that it was appropriate that the children of the first wife should be brought up by her sister.

(*b*) *The bride-wealth*

Bride-wealth had to be paid before the wedding ritual, but payment could sometimes be delayed. In that case more jugs of beer had to be given.

There were some regional variations in the amount of the bride-wealth, but within one region it did not vary very much within each caste. Among Tutsi it was usually one cow plus some jugs of beverage, and one hoe. The bride-wealth proper was the cow, as the beverages were rather contributions to the different celebrations taking place at the wedding. Among Hutu it was one heifer or cow (which could be replaced by about one dozen goats) and a number of jugs of banana-beer. The following table indicates the average bride-wealth paid by Tutsi and Hutu in the central region of Ruanda. Among Twa bride-wealth was composed of a certain number of pots of beverages.

TABLE OF THE STANDARD MARRIAGE GIFTS AND COUNTER-GIFTS IN CENTRAL RUANDA

A. HUTU

Groom's inzu		*Bride's inzu*
1. Father	one hoe, one jug of beer after agreement →	Father
2. Father	one heifer or twelve to fourteen goats (bride-wealth) from one to three weeks after 1. (*gutenbutsa*) →	Father
3. Groom	household equipment on wedding day (*ibirongoranywa*) ←	Father
4. Groom	one hoe or one sheep or one goat + jugs of beer at the end of seclusion period ←	Father

9!Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

583 184 TABLE OF THE STANDARD MARRIAGE GIFTS AND COUNTER-GIFTS IN CENTRAL RUANDA—*cont.*

A. HUTU

Groom's inzu		*Bride's inzu*
5.	one hoe or one sheep or one goat (even one heifer) a week after each birth	
Groom	←	Kinsfolk
6.	counter-bride-wealth (stock increase of the bride-wealth) two or three years after marriage	
Father	←	Father

B. TUTSI

1.	one jug of hydromel, one hoe, one *isando* (forked branch of ficas tree)	
Father	→	Father
2.	one cow (bride-wealth) (*inkwano*) a few days later	
Father	→	Father
3.	one cow (counter-bride-wealth) when the bride leaves her father's homestead	
Father	←	Father
4.	household equipment on wedding day (*indogoranyo*)	
Groom	←	Father
5.	one heifer (*izimano*) on the day following wedding	
Father	→	Male abashyitsi
6.	one steer (*izimano*) on the day following wedding	
Father	→	Female abashyitsi
7.	jugs of beer, pots of milk, sorghum flour (*imitwa*) at the end of seclusion period	
Groom	←	Father
8.	one cow, jugs of beer, pots of milk at each birth (*ibihembo*)	
Groom	←	Kinsfolk

583 All our informants agree that bride-wealth was not considered very expensive. Moreover, counter-gifts were about as high. The girl's father had to provide the young couple with household equipment and to give the husband's father a counter-bride-wealth approximately equivalent to the bride-wealth itself. Among Tutsi it was proper to give the counter-gift before the wedding. Hutu gave back another heifer not later than after the third calving of the bride-wealth cow. In addition valuable gifts were given by the wife's kinsfolk after each birth.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Bride-wealth was definitely not a compensation for the economic loss entailed by the girl's departure from her patrilineage. Her departure was not an impoverishment of her group because it provided it with a new alliance with another descent group; all informants agree on that. Bride-wealth was the socially recognized symbol of the legitimate transfer of fertility from one descent group to another. As long as bride-wealth had not been given, children borne by the woman were considered as belonging to her inzu (they are called *nkuli*). The husband was only their genitor, not their pater. 583 583 851

Bride-wealth received by the girl's father was not to be used only to provide the bride's brother with a wife. There was no direct relation between a man's possibility of getting a wife and his sister's marriage. 583

(c) *The wedding ceremonies*

Wedding ceremonies (*ubukwe*) taking place at the groom's father's were very long and complicated. The central rite constituting the wedding was the spitting on the bride's head of chewed herbs mixed with milk, and the placing on her head of a garland made of the leaves of a certain plant (*umuwishywa*). Other rites symbolized the dominance of the patrilineages' interests in the marriage. Both inzu were represented by two groups, the *abashyitsi*, the agnatic relatives of the bride, and *abasangwa*, agnatic relatives of the groom. When the rite was accomplished, *abashyitsi* had to express sorrow by their laments and *abasangwa* to rejoice loudly. Another rite stressed the concern of the kin-groups in the intimate relations between the spouses. A younger brother or paternal parallel cousin of the bride had to lie between the new spouses during some part of their first night together (*gucahagati*). The groom had to beg him to leave. I was told that this signified that it was the bride's patrilineage which had to give permission for the first intercourse. Moreover, after the central rite and before the first intercourse, the father and mother of the groom and the father and mother of the bride had to have sexual relations. If the girl's parents (who did not attend the wedding party) were living far away, the young couple sometimes had to wait for a couple of days before having intercourse.[6] 585 [824] [613]

The high value of virginity was also symbolically stressed.

[6] On wedding celebration, see Kagame, 1954, pp. 143-72.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

585 Firstly, all these ceremonies did not take place when the bride had already been married before or when the girl had been struck by lightning because, as I was told, she was considered to have [693] been raped by the king (thunder being one of the symbols of the king). Secondly, the spreading of the herbs and milk mixture had to be done by surprise and the girl had to cry immediately afterwards. Thirdly, in the first intercourse the girl had to struggle and penetration had to be achieved by force.

For about ten or twelve days the young couple lived semi-secluded in a hut in the groom's father's homestead. Then, at the end of that period, there was another ritual celebration (*gutwikurura*) attended by those who were present at the marriage. The central rite of the ceremony was a dance by the new couple in public. After that, the young wife was allowed to cook for her husband for the first time. The latter was given by his father his [428] share of inheritance, and the couple settled in a compound of their 591 own. Residence was occasionally neolocal but usually patrivirilocal (at the HuFa's).

(*d*) *Polygynous unions*

595 Ruanda may be said to be a polygynous society in two senses. Firstly, polygynous unions were culturally preferred. Secondly, probably thirty per cent. of the unions were polygynous.[7] It was no grand scale polygyny. A man rarely had more than four wives. Usually a polygynous Tutsi had two wives, a Hutu three or four, and a Twa two.

Supplementary wives were an economic asset for rich people, [556] as a Tutsi having herds of cattle in different places found it very useful to be able to put a wife in each of his homesteads as manager; but if he had only such cattle as he could care for himself, a second wife was an expense. It was the same for a Hutu: if he had so many plots that he could not cultivate them all by himself and with the help of his wife, a second one was very useful. If not, she was rather expensive.

To have several wives was also to have many children, which [842] were very highly valued by all Ruanda. For Tutsi occupying very high positions, plural union was a means of establishing useful

[114] [7] 'Any society in which plural unions, however strongly favoured, actually occur in less than this percentage [set arbitrarily at 20 per cent.] of all marriages, is considered monogamous with respect to the family [. . .]' (Murdock, 1949, p. 28).

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

connexions with several inzu. These important chiefs sometimes had more than four wives. 595

Our informants were aware of these different functions of polygyny, but it did not seem necessary for them to look for reasons why people are polygynous. It appeared obvious to them that everybody wanted to have several wives.

(*e*) *Divorce*

Marriage could be ended by divorce (*gutana*). The parents of both spouses and their patrilineage heads usually took part in the various preparatory steps. Nevertheless, divorce was not decided by them, but resulted from the will of the spouses or even from the will of one of them. 586

Divorce itself was usually preceded by one or several temporary separations (*kwahukana*), although these separations did not necessarily lead to divorce. The wife left her husband and went to her parents', or to her husband's parents', or to her husband's brother's home. She complained that her husband had insulted her, beaten her, neglected her, was lazy, &c. The fathers of both spouses then met, talked to the husband, and tried to persuade him to take his wife back, and her to return to him. Very often it was difficult to convince them because the spouse who initiated the separation merely wanted it to be temporary in order to exert a certain pressure on the other. So married life was resumed.

It is to be noted that whoever felt wronged, it was always the wife who left and that among well-to-do people she was never expelled by her husband. He merely showed her by his behaviour (not spending the night with her, &c.) that she was unwanted, and then she left.

For a divorce the procedure was essentially similar to that of a temporary separation. The wife left when either she or her husband definitely wanted to end the marriage. Of course there was very strong pressure from both kin-groups to keep the marriage going, in order not to break the alliance between the two patrilineages. Consequently, the spouse who wanted divorce had to try to convince both inzu and public opinion at large that he (or she) was in one of the cases socially recognized as providing legitimate grounds for divorce. These grounds were for a wife: repeated ill-treatment by her husband, his failure to support her, and his refusal to cohabit with her. Impotence was not regarded as

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

586 sufficient grounds, as in that case the wife had the right of cohabitation with one of her husband's agnates. Socially accepted grounds of divorce for a husband were his wife's neglect of domestic duties, or repeated adultery with a non-privileged partner. Sterility was not a reason for divorce as the man could always take another wife.

The divorced woman left with her only belongings—her clothes. Usually the husband gave her new clothes on that occasion. If bride-wealth and counter-gifts had been exchanged, nothing had to be given by either father. If bride-wealth had been paid, but not the counter-gifts, bride-wealth had to be returned except either where children had been born or where there were other marriage links between the two lineages concerned. If bride-wealth had not been paid, children went to live with their mother's kinsfolk unless their father paid the bride-wealth later. If bride-wealth was not returned and there were no children, the children borne by the wife in a following marriage could be claimed by the former husband.

Young children stayed with their divorced mother till they were seven or eight years old. They were then sent to their father's home where they were taken care of by another of his wives. Later on these children could visit their mother whenever they wished.

587 Divorced women usually married again easily. Their bride-wealth was lower and its payment was delayed till after marriage. But if it was felt that they were responsible for the failure of their previous marriage, then they did not always find another husband.

(f) *Celibacy*

589 Voluntary celibacy was unknown in Ruanda. Every man wanted to be married, to have children and a place of his own. Every girl wanted to be a mother. Those who were impotent (*ibirumba*) usually did not marry. Lepers (*ababembe*), the insane (*abatazi*), [582] and people ill with tuberculosis (*abanyagitundu*) were forbidden to [734] marry. Girls who had refused a husband often remained unmarried, as few men wanted to take the chance of being refused also. Single people lived with their kinsmen. Sometimes Tutsi bachelors were given a homestead and servants by their fathers.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

2. THE FAMILY

Two basic types of family were to be found in Ruanda: the 594
nuclear family which was the most widespread, and the poly- 595
gynous family. The Ruanda polygynous family constituted a type
of organization fundamentally different from the nuclear family. 595
It was not just a nuclear family with a few more persons, the
secondary wives and their children, but a structure composed of
several elements, each of them constituting almost a nuclear family
from the sexual, economic, procreational, and educational points
of view. On the other hand, the polygynous family was not an
aggregate of nuclear families because the uniqueness of the
husband gave to the various elements a type of integration different
from that merely of a sum of nuclear families.

A nuclear family (*rugo*) was composed of a man, his wife, and 594
their children. It could happen that some additional persons lived 592
with them, such as the widowed mother of one of the spouses or an
old female relative (old men usually lived by themselves, with the
help of a grandson). There could also be a child, a son, or a
daughter of the husband's brother or even of the husband's sister
(if the bride-wealth had not been given for his sister), or a child
of the wife's brother.

Adopted children were also included in the rugo. These could 597
only be children who had no lineage relatives left. Tutsi children,
when adopted by Tutsi, were treated, while they were young, as if
they were the adopter's own children; Hutu children if adopted by
Tutsi were considered as clients. But adoption did not confer the
full status enjoyed by an offspring of the adopter: the ward could
marry a descendant of his foster-father. Cases of adoption seem
to have been frequent and people appear to have been so eager to
adopt that we may suspect that all the advantages were not for the
child. The Ruanda highly appreciated all children, and this attitude
accounts for the fact that a child was as such always welcomed in a
family. Moreover, the man adopting a child expected more
material advantages: a girl's marriage brought him the benefit
of a new family connexion and boys could be as useful as his
sons without having a right to inheritance. Our informants say
that most of the boys when grown up fled away, hoping to find
some distant relative of their own.

The members of a nuclear family lived in a compound called 000

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

The members of a nuclear family lived in a compound called
594 by the same name, rugo. I have described earlier this complex dwelling place composed of intersecting circular enclosures. In
[592] the case of rich people, their clients during their time of service
[559] and their servants had huts in the compound.

The compound, surrounded by fields and banana-groves, and not far from pastures, was situated on that part of the paternal homestead given by the father to his son at the latter's wedding. If the father's homestead was not large enough to provide all his sons with areas to live on, the young couple either had to ask the political authority to allocate them a plot, or they had to rent one belonging either to a relative or an unrelated person.

595 The ideal type of residence of a polygynous family was a compound for each wife surrounded by its own cultivated area. These rugo could be on the same homestead or on several homesteads. The latter arrangement was more frequent with Tutsi than with Hutu. None of these compounds was more important than the others, except occasionally. The husband had no rugo regarded as being more his residence than the others.

Between these two sharply different types of family organization, there were intermediate kinds. If it happened that a Ruanda wanted a second wife, he looked for one even if he could not afford a second compound. She lived then in the same compound as the first wife, in a separate hut. But such an arrangement was regarded as unfortunate, and should be assimilated to that of a nuclear family notwithstanding the plurality of wives.

121 We will now consider whether and how these types of organization fulfilled the functions that might be expected of any type of family, for some of these functions seem to be fulfilled by all the family structures known, and the others by most of them. The points to be considered are: sexual gratification, economic cooperation, reproduction, socialization, and ritual.

(a) *Sexual relations*

581 The Ruanda distinguish the sexual from the procreational function of marriage. Neither the husband, nor apparently the wife, ever feared (except in very unhappy circumstances of poverty) that pregnancy might result from any particular act of
[842] intercourse; on the contrary such an event was usually longed for. As some informants said, why have relations with a sterile woman? Sexuality, however, had for them a value in itself.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

For husband and wife, sex was not only that pleasurable 831
activity in which tensions are released, but it was also linked with feelings of affection and sympathy. Moreover, as some cases of prohibition and obligation make it clear, it was a means of participating in collective feelings and of relating oneself to natural processes and rhythms.

For men, marriage was not the only socially approved means of 836
obtaining sexual gratification. Before marriage young Tutsi were often given Hutu temporary concubines, wives or daughters of their father's clients. Moreover, they, as well as young Hutu, had privileged partners: married cross-cousins, brothers', and parallel cousins' wives. If they had affairs with unrelated women or even related or unrelated girls, the blame and the risk were for the latter more than for themselves. But as these affairs were occasional and had to be kept secret, marriage brought to men stability, continuity, and quietness in their sexual life. Homosexuality was [838]
widespread among Tutsi and Hutu young men. For girls, any heterosexual activity before marriage was strictly prohibited and severely sanctioned. After marriage, their sexual needs could be satisfied not only with their husbands but with their privileged partners.

Cohabitation was an obligation for each spouse. Refusal over a 833
certain time—one, two or three weeks according to different in- [586]
formants—was a cause of temporary separation or even of divorce (of course this does not refer to a refusal based on culturally accepted reasons such as illness or menstruation). Frequency of intercourse is said to have been up to three times a day for Tutsi when they were newly married, then once a day for young people, and about once every other day later on. Hutu accounts suggest that the average frequency was not as high in their group (once a day for newly married, every other day for young people, and twice or once a week later on). The difference was attributed to the more leisurely life of Tutsi. 'They were not tired by work in the fields.' Women were said to be more eager than men but I was told by some informants that men thought this 'because they never refused intercourse'. Women, however, had to behave in a restrained way and to leave the initiative to men. It was very improper for a wife to manifest pleasure or to be other than purely passive during love-play and intercourse. Both partners sat or lay on their sides. Coitus with the woman lying on her back

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

833 under the man was not usually practised. In the polygynous family
[595] the husband had to spend two nights with each wife *seriatim* and to have at least one intercourse.

The Ruanda thought that when the sex activity of an individual had begun, he could legitimately expect an opportunity to enjoy intercourse as frequently as was socially thought normal. Some
864 parents were said to be severe towards sexual play among children. When the latter indulged in imitation of adult relations, in masturbation, and other manipulations, they were beaten and
838 flogged. Others were more permissive.[8] Homosexuality was common among young Tutsi when being trained at court, and was almost exclusively ascribed to the lack of heterosexual contacts.

831 Later in life, sex needs were regarded as requiring satisfaction just as any other natural need. If the husband or wife was not
837 available, it was socially permitted to have another partner
835 (among the privileged ones) even if the absent spouse resented it. The sexual needs of a woman were thought to be more urgent when
[843] she was pregnant; intercourse once a week was regarded as a
[833] minimum. If her husband was absent, therefore, cohabitation with one of his brothers or parallel cousins was viewed almost with favour. When a husband had been away for a very long time, and if it was not known even if he was still living, though his wife could not obtain a divorce she could cohabit and have children with one of her privileged partners, preferably belonging to her husband's patrilineage. A wife never accompanied her husband on his
[593] travels to the court or elsewhere. In such cases the Tutsi took with
[484] them a concubine, the daughter of a client for instance.

At the court of the king or of important chiefs, there were a few
548 Tutsi women who were openly servants of the chief or the king (*abaja*). In fact they were courtesans, either the daughters of Tutsi clients of the chief or king, who had been invited by the chief or king to come to the court as servants because of their beauty, or divorced women. They received costly presents and were often well-off, having their own herds of cattle. These presents appear to have been rewards not only for sexual favours but also, and perhaps mainly, for some inside information so useful in that world of intrigue.

831 The preceding paragraphs should not be understood as implying that the Ruanda emphasized exclusively the physical and

[8] Cf. Vincent, 1954, pp. 167-71.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

physiological aspect of sexuality. They do not seem to have thought 831
of sexual relations as the fulfilment of a romantic love between two
individuals meant to mate with each other and nobody else. The
way spouses were chosen by the two patrilineages prevented any [581]
such ideas, for the choosing of spouses rested on the assumption
that any boy and any girl of the right age and reasonably attractive
could be good partners in marriage and sexuality. But feelings of
sympathy and affection developed later as a result of their life
together rather than as its basis. According to our informants,
love, in the sense of attractiveness based on individual characteristics, was greater in non-marital relations. 'One slept with a
certain woman to make her happy because one liked her,' I was
told.

Various prohibitions and obligations indicate how sexuality 834
in marriage was related to events concerning the community and 765
the patrilineage. During the mourning period for the husband's
father and mother, which lasted one, two or three months according to the region, intercourse was prohibited for both husband
and wife. It was also prohibited for one moon after the death of the
wife's child, and for two or three moons for the surviving spouse
when one of the spouses died. The meaning of this taboo was not 765
only that one had to refrain from enjoying oneself when one 831
should have been in sorrow. It meant also a certain symbolic
participation in death or in the diminution of life affecting the
patrilineage. This is, I think, what informants have in mind when
they say in this connexion that sex is a sacred activity. This
interpretation seems to be supported by what happened when a
king died. Not only had all Ruanda to be continent for a certain
period (some informants said two moons, others one year),
but the bulls were separated from cows and rams from sheep. The
king (*mwami*) was identified with Ruanda. If he was strong, Ruanda
was strong, if he was getting old and weak, he had to commit [643]
suicide because he endangered the country's life. In that context, [762]
if animals were prevented from mating it was to express symbolically the idea of the death of the community rather than, it
seems, to deny them pleasure.

On the other hand, intercourse was obligatory when events 833
fortunate for the patrilineage or the community at large occurred.
For instance when a new hut was occupied, when six days had
passed after the birth of a child, when the first teeth of the baby

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

833 were growing, when a child had his hair cut in tufts for the first time, at the initiation into the Ryangombe sect, when a daughter was asked to marry, on the wedding day of a son or a daughter, on the accession of a new king, at sowing time, and at the celebration for July harvesting. All these events were happy and joyful because they were growths or increases in life. Intercourse was also obligatory at the end of the mourning periods when life had to go on and start again after that period of abeyance.

This obligatory intercourse took place between husband and wife. When it was impossible because one of the spouses was absent or dead, one had to rely upon a privileged partner, or, if this was impossible, had to get medicine prepared from certain herbs by a diviner.

There was no prohibition of intercourse between the spouses [853] during the suckling months (the first eighteen to twenty-four).

(*b*) *Economic co-operation*

595 The nuclear family and, to a large extent each wife's compound [594] in polygamous cases, was a self-sufficient unit of economic co-operation. Among rich Tutsi who could afford separate homesteads for their wives, each wife was in fact the superintendent of her own. She had to command her husband's clients, servants, cultivators, and herdsmen. It was no wonder that women who could be entrusted with such responsibilities were respected within their family and in society at large. If the homestead was small, as among ordinary Tutsi, or consisted only of a small cultivated plot, as among most Hutu polygamists, each of these wives had, nevertheless, some economic responsibility, even if it was only that of working by herself in the fields. This important participation of polygynous wives in the management of a small unit of production and consumption, should be studied in relation to the 562 status of women in Ruanda.[9] This status was by no means equal to that of men but it was far from being one of slavery. Tutsi [593] husbands and wives ate together, the wife was consulted by her husband on many problems, and she was treated with much politeness. The Hutu were ruder and more temperamental, but they followed a more or less similar pattern. Under the present administration there are two or three women, widows of Tutsi chiefs, who act as sub-chiefs. The mere fact that it is taken for

[9] See Naigiziki, 1959.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

granted that a woman may fulfil these functions emphasizes the high status that women have enjoyed in Ruanda society. It is tempting to regard their status as a consequence of the economic responsibilities of the polygynous wives when replacing their husbands. 562

Besides this form of economic collaboration, wives, in nuclear as well as in polygynous families, had to perform certain economic tasks within the rugo. The activities which belonged exclusively to the wife, though she was sometimes helped by her daughters and certain other females were, for women of any caste: cleaning and brushing the hut and the enclosure, milk churning, and basket-making. In addition to these, Tutsi women made particular objects in basket-work (such as screens used in the hut, very finely woven plates, &c.), butter perfumed with the wood of a certain tree *umubavu* (such butter was used as a cosmetic), and garments in bead work. Hutu women had to cook and to apportion food. In agriculture their particular tasks were to sow and plant, to grind sorghum, and to sift peas. Twa women simply cooked. 462 84 [285] [303]

The husband's contributions to the economic activities of the compound were, among the Tutsi, cattle-rearing and hunting (for the hides and skins); among the Hutu, hut-building, minding cattle (if they had any), felling the bush, and usually all the agricultural tasks requiring considerable physical strength. Moreover, they prepared bark-cloth and skins and forged iron implements. Among the Twa, husbands hunted and made bows and iron weapons.

The principles underlying this division of economic tasks exclusively performed by males or females were according to informants that men should carry out tasks which either were particularly hard, or required intelligence, had to be performed far from the compound, or were thought 'noble'.

Most other duties could be performed by men or women and were shared between husband and wife according to individual arrangements. Such activities were, for instance, in the case of the Tutsi: watching labourers working in the fields, and supervising them, doing menial tasks such as mending the enclosure, milking the cows or looking after the herds. For the Hutu they were: harvesting, brewing beer, drawing water, cutting and collecting wood, lighting and maintaining fires, making mats and baskets, &c. For the Twa: pot-making and brewing beer.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

592 Economic co-operation was not limited to husband and wife. Their children, their relatives living with them, their clients, and servants participated in productive activities. Each compound was supposed to produce the necessary foodstuffs for its inhabitants. In polygynous families the husband sometimes made his wives work together in common fields, but this was not the socially approved pattern.

(c) *Procreational function*

181 When a Tutsi informant was asked what the people of his group wished for above all, the answer came immediately: 'Children and 554 cows'. A further question, 'Why?', disclosed that they were not regarded as ultimate values to be sought for themselves but that they were intermediate ones, the means to attain more important fundamental ends—power (*amaboko*) and reputation (*ugukomera*).

571 To be powerful is to be able to exert significant pressure upon somebody. In Ruanda society that meant, for a Tutsi, to be able to compel somebody to give him tribute in labour or in kind, and to induce assistance in support of his claims. To have many children 557 was almost indispensible for this purpose. Girls, by their marriages, 858 extended family connexions. Boys were sent while very young to the court of the king or of an important chief, and thereby reinforced their father's influence very considerably. He would be able to know from his son what was going on and the king or chief would be constantly reminded of the father by the son's presence, which was considered a great advantage for the father. The boy could also increase the influence of his family by becoming the client of a powerful Tutsi. By this means he obtained protection and cattle for himself and his patrilineage. Finally the matrimonial alliances of his sons could create new links between the father's kin group and his daughters-in-law's lineages. To sum up, from the point of view of power, the significance of children was to provide cattle and connexions. Cattle, as will be explained [556] later on in more detail, had very much the same function as money in our culture: to provide the man who owns it with means to exert pressure on those who do not have enough money of their own and thus need to get some in exchange for services. By connexions is meant here that type of relationship in which one [571] party may require something from another under the covert threat of a sanction.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Independent of their being instruments of power, children enhanced the reputation of their fathers. The strength of a lineage and its vitality were highly valued in Ruanda. To have numerous offspring ensured that the group ancestors would be honoured, traditions maintained, and legends transmitted.

Ambition for power may be a very fitting pursuit for people who do not have to worry about fundamental human needs such as food, shelter, &c. For the Hutu, the ultimate value was security which was achieved by getting for oneself the protection of a member of the superior caste. To secure this protection, one had to become a client, and therefore to be able to supply a lord with services in labour and goods. Consequently, it was essential to produce a surplus and not only what was necessary for the subsistence of the people living in the compound. Surpluses could be obtained only by work, and children were very important in this respect. As in most peasant societies, they were useful when still quite young in helping their parents in their work. Moreover, as in the case of the Tutsi, offspring could bring supplementary protection and wealth to the compound by their ability to obtain cattle and connexions.

The preceding account might give the impression that for the Ruanda children were just means to their ultimate value of power, fame, security. This would be very misleading as they enjoyed having children simply because they liked children. This is not to question the genuineness of their affection for their offspring. I want only to stress here the social functions of children in this particular society.

Ruanda biological knowledge of the processes of procreation was extensive. They knew that a single ejaculation could produce pregnancy, that there is a relation between menstruation and fertility, that conception is not prevented during the suckling period, &c. According to their theories, the man's participation in conception was more important than the woman's. The analogy with the sowing of seeds in a field is commonly used by informants. It was pointed out to me that if it is indeed necessary for the seed to be buried in the soil, strength and vitality are unquestionably in the seed rather than in the passive ground.[10]

This last theory is important in that it gives a biological basis to the patrilineage principle of descent and to the difference between

[10] Cf. Lestrade, 1955, pp. 85-86.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

cross and parallel cousins. Lévi-Strauss's crucial assertion that parallel and cross-cousins 'from the point of view of the degree of biological proximity are strictly interchangeable',[11] would not be considered true by the Ruanda. For them any paternal cousin is *biologically* much closer than a paternal cross-cousin. The former, so to speak, originates from the same seeds as Ego, those of a common grandfather, whereas the latter comes from other seeds. This should be a relevant argument in the discussion of Lévi-Strauss's theory, since surely what matters here is not the biological conceptions of the anthropologist but those of the society which in this case differentiates parallel from cross-cousins.

Many characteristics of individuals were thought to be innate, a view coherent with the ideology of a caste society. Features were expected to be similar to those of the father (and, our informants say, this was the only way to be sure of who was the genitor). The complexion was supposed to be inherited from the mother. Psychological traits and temperament were said to come from the father, particularly in the case of his sons. Daughters were often regarded as more similar to their mothers.

The birth of a child was nearly always welcomed by a married woman, even if she were actually divorced. The only exception was in the case of twins of different sexes. This was regarded as caused by a particular intervention of Imana and as a sign of ill-luck. The diviner had to be consulted about it and often the only way to escape the evil consequences was to let one of the twins, usually the boy, die. If such a thing happened to cattle, the steer had to be killed. But a newly born baby was never unwanted. On the contrary, when it was not very clear to what group he belonged, the child was usually claimed by more than one.

The general rules were as follows: the husband was the pater of any child borne by his wife. The genitor had no right over the child even if he had been conceived in such circumstances as for instance during a very long absence of the husband in which there was no doubt about the genitor. A child borne by a divorced woman belonged to her father's inzu, though the genitor could pay a 'child-wealth' and have the child. This did not mean that he married the woman; he was redeeming the child from those who had rights in the mother's fertility. A genitor who was a married man could pay the child-wealth as well as a bachelor. If the

[11] Lévi-Strauss, 1949, p. 156.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

woman's divorce was not yet completely settled (i.e. if the exchange of marriage-gifts and counter-gifts had not taken place), the former husband was still regarded as a pater of the child and the genitor had to pay him the child-wealth, if he wanted to have the child. 851 586

My male informants affirmed not to know of any contraceptives and they did not think that women knew better. In Ruanda culture, they would probably have been used exclusively for premarital relations. One informant, however, stressed the fact that too many pregnancies were bad for very poor people not having enough cow-milk and goat-milk to give to their babies, who then often died from malnutrition or from intestinal diseases (goat-milk was regarded as vermifugal). A certain herb called *umuhoko* was known for its abortive effects and used sometimes by pregnant unmarried girls with the help of their mother. 842 [935] [853] 847 824

(d) *Socialization*

The young Ruanda spent the first years of his life in his mother's compound. There the first stages of the long process of his socialization, which was completed only after he had achieved marriage and parenthood, took place. 854 [885]

In matters of education, as in others, the supreme authority in the compound was the father. The paternal uncle could discipline his nephews and nieces only when they were in his compound or when the father was not present. His role was that of a substitute for the father. The maternal uncle had no authority except where the bride-wealth had not been paid. The mother had no authority of her own and had to be backed up by the father. It is clear, however, that in everyday life and particularly when the children were young, the mother was a disciplinarian and the main agent of socialization. 855 593 604

The training for the different activities expected to be mastered by any member of his caste began early for the child. From weaning (when they were about two years old) to the age of five, children were supposed to be clean, quiet, and not to wander far from the compound. Not later than five years old, children began to collect wood, to carry water, to watch goats and calves. A ten-year-old boy was taught how to handle a hoe and worked with his father in the fields. A girl learned how to light a fire, to brush, and to carry out the household duties of a woman. Boys from twelve to 857 [862] 868 857 000

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

Boys from Twelve To

883 fifteen were in charge of cattle herds and were absent for several
[22A] days and nights from the compound. They also hunted with their fathers.

Even before puberty, some socialization processes took place
869 outside of the nuclear or polygamous family. Mythological tales about the material world, the origin of man and animal species, the arrival of the Tutsi in Ruanda, beliefs concerning *Imana*, the spirits of the dead and other beings from the invisible world, the history of the kings of Ruanda, of the military conquests, folk-lore and poems about cattle, and stories of the ancestors and the lineage
[603] heroes were transmitted to the younger generation by the grandfather. He was also the main agent of education in the modes of
867 behaviour indicating what was to be done and what was to be avoided in order to gain social approval.

882 Between puberty and marriage the further education of Tutsi boys took place at the court of a chief or of the king. Hutu stayed
[868] in the paternal compound, mastering the different techniques of cultivation and also the attitude and abilities necessary for them to
[869] be appreciated by the lord. Sometimes the young man replaced his father in the service of the lord.

595 What has been said in this section up to now applied equally to each compound of the polygynous family. Children of different wives were not brought up together. In each compound the mother had a role very similar to that of the mother in a nuclear family. There was no head-wife. Usually one was preferred by the husband (*inkundwakazi*, the favourite one), but because of her qualities (obedience, tidiness, beauty, &c.), and not because she
[428] was the first married. But the fact that the eldest son of the first wife often succeeded to the father, gave her a particular importance and respect by the others because, after the husband's death, all of them would probably be dependent on her eldest son.

595 The mutual behaviour of wives and their children has been
593 mentioned before. It may be summarized as: respect to the favour-
183 ite wife and the first wife, and good 'fraternal' relations between all the wives and the children. This was the ideal behaviour which was often overtly maintained as long as the husband was living. But
[152] according to all out informants, the modal and covert behaviour was jealousy and hatred. A polygynous family was often designated by the word *amihali*, whose root *ishyali* means jealousy, and
COD one wife used to refer to another as her *muheba*, rival. In these

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

conditions it was evidently impossible to socialize and to educate together all the children of the same polygynous family.

The father had very considerable authority to punish during the period of the educational processes, and could even go as far as to curse and disinherit his sons. He could not use such drastic punishments for daughters except in the case of a pregnancy of an unmarried one. Then she could be killed, but mainly because such an event was regarded as being unlucky for the whole lineage. This case has to be interpreted in connexion with those others in which the father could condemn a daughter to death for fear of her conveying ill-luck: these were should her breasts not develop or should she have no periods. The father could appeal to the inzu head when he was unable to discipline his children and the married children could appeal to him when they had been punished by sanctions they found too heavy.

(*e*) *Ritual function*

The inzu ancestor was honoured mainly in the compound of the patrilineage head. A small hut was devoted to him and on certain occasions all his descendants met to make offerings to him. Some of these occasions were fixed, others were decided only after consulting a diviner.

In each compound there was also a small hut dedicated to the spirits of the dead, where the ancestor of the patrilineage was honoured. The wife could not build there a hut for her own ancestors. Nearer forbears were honoured in the compound more than the inzu's ancestors: the husband's grandfather or great-grandfather. The husband introduced his wife to him saying: 'Here is the woman I have taken in order to beget children for you, to multiply your lineage.' The bull used for stud purposes was also presented to the great-grandfather's spirit. Not only forbears but other dead members of the patrilineage or the family were honoured, but less often.

Almost every day small offerings were made. A few drops of milk or of beer, or some beans or peas were thrown into the hut. Or a girl spent some time in the ancestor's hut to enable him to enjoy a woman. But sometimes the spirits required more.

We have mentioned earlier that they were often angry and could send illnesses, sterility, cattle-epidemics, and death. They were regarded as beneficial only in a negative way, i.e. when they did

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

769 not injure the living. Consequently the cult addressed to the *bazimu* (spirits of the dead) was essentially aimed at appeasing them. When an unfortunate event was ascribed to a dead relative's [182] ire by the diviner, the spirit had to be placated by the immolation of a goat or even a bull.

These practices were symbolic. It was not implied that the *bazimu* really drank the milk, ate the meat, or slept with the girl. [262] When a goat or a steer was offered, most of it was eaten by members of the family. Other practices are more difficult to interpret. It sometimes happened that water was given to the spirits and at the same time they were told very loudly that it was milk. The explanation given by most informants is that *bazimu* were regarded as rather stupid and that these mock offerings were not given to the ancestors who were respected but only to the collaterals who, as *bazimu*, were hated. To have feared powerful *bazimu*, however, [183] and at the same time to have deceived them so grossly does not appear very coherent and requires, I think, further explanation.

Every fourth reign, there was an important ritual connected with the final burial of the fourth predecessor of the king. As all *bazimu* were thought to accompany the spirit of the king long ago deceased, their cult was abolished. The inzu heads, however, continued to be remembered.[18]

[p. 89]

CHAPTER IV

ECONOMIC PRODUCTION

As we mentioned earlier, it was by land cultivation and cattle rearing that the Ruanda satisfied their fundamental subsistence requirements. Consequently land, cattle, knowledge of agricultural and cattle-breeding techniques, implements, and ability to work were essential in the economic process of production. 433

Ruanda economy was primitive in the sense that every rugo[1] was a unit which had to produce practically all that was necessary for the subsistence of its members. None of these units concentrated on certain crops and obtained other foodstuffs by exchange. Every family head was a producer. What access had he, then, to the different factors of production? 592 [438]

Knowledge of agriculture and cattle-rearing techniques was part of the common heritage of every Ruanda. The Hutu were more expert agriculturalists than the Tutsi, and though some Tutsi were probably more versed in cattle-rearing any Hutu had the knowledge necessary to a tiller and a herdsman. Equipment was not very elaborate, and hoes and bill-hooks were not scarce. 463 [184] 412

Access to the other factors of production, land, cattle, and labour, was more restricted. We shall now consider what were the opportunities of the individual family head from that point of view. 471

I. LAND TENURE

When Ruanda are asked who is the owner of the fields and pastures, some answer it is the king, others the land chief or the cattle chief, others the family head or the lineage head. All of them are right, which means that the question is wrongly phrased 423

The Ruanda did not conceive of ownership as a private and exclusive right to the various uses to which a thing may be submitted. They regarded each of the uses as the object of a particular right. It was not thought necessary that one person should be endowed with the sum of the rights affecting one object. On the contrary, it was usual that different persons could claim 421

1. [rugo: The basic dwelling unit or compound; cf. p. 30 -- analyst]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

421 different uses of the same thing. For instance, one person could have the right to sow a plot and to collect the harvest and another to use it for grazing purposes at another time of the year. Neither of them was considered as the owner letting somebody else use his property as a pasture or as a ground for cultivation.

423 643 On each pasture, cultivated plot or forest area, the king had a right very similar to the *dominion eminens* of Roman law, the kind of public ownership that a State has over the land within the borders. But he had also the right to prevent, if he chose to do so, somebody from using a particular tract of land in any way at all, which amounts to saying that the mwami had over land a right potentially superior to that of anybody else. The mwami's rights could be opposed to 'private rights'. In fact, the king very rarely insisted on this use of his rights and then only when he wanted to punish somebody who was guilty of disobedience or of some other crime.

423 651 The land chief's and cattle chief's rights to fields and pastures will be considered later in the section dealing with the administration. Suffice it to say here that these tax-collectors had the right to evict people for certain offences and to allocate land to newcomers in their districts.

423 The person endowed with rights on land for cultivation purposes was the head of a family (*rugo*). Mostly these rights came 425 to him from his father's inheritance. Sometimes, however, it was a [428] part of the bush that he had himself cleared. If he had not received enough from his father to support his family, he extended his plot in this way with the agreement of the political authority. If, because of a dispute with his brothers, he wanted to move elsewhere and the land chief could not allocate him a field already prepared at the place where he wanted to settle, he did the same. Such a plot was called *buhonde* as long as it was occupied either by the man who had cleared it or by his descendants. A third source of cultivation rights was the assignment by the land chief of a plot already prepared (*inhangu*). The former user of it had either to be evicted by the authority, or had left, or had died without heirs.

In the same way the family head had the right to use a certain area as pasture for his cattle either by inheritance, or by felling the trees of a tract of forest or by having it conceded by the cattle chief.

000 At the end of the nineteenth century the inzu had no collective

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

At the end of the nineteenth century the inzu had no collective rights over certain areas except in the north of Ruanda (Mulera, Rwankeri, Bushiru, Bigogwe) where the Tutsi occupation had been more superficial. I have been told that there the soil belonged to the patrilineage and that there was no land or cattle chief. From the point of view of the individual, however, the situation was very similar: he inherited a share of his father's tract. The difference was that, if the part were insufficient, he had to apply for more to the lineage head instead of to the land-chief, and a plot left without heirs returned to the patrilineage instead of the political authority. 613 423 [425]

The person entitled to the use of a plot could not sell his right but could let the tract. The rent was about one hoe every other year plus a jug of beer each harvest. The tenant was not permitted to settle by building a hut or planting banana trees. 423 427

The Twa resented very much the expansion of fields and pastures in the forests they regarded as their possession. The authority was not concerned with the way they divided it into hunting areas.[1] 311

2. RIGHTS OVER CATTLE

The rights over each head of cattle were also manifold. Property in the Western sense was split up into different aspects. 422

A global right existed over all Ruanda cattle, even sheep and goats, by which the king could claim actual possession of any of them. The mwami used this right more frequently, it seems, over cattle than over land. An important chief indulging in intrigues regarded as dangerous by the king might find himself dispossessed of all his cattle. The king's right over all the cattle of Ruanda was a constant threat which seems to have very effectively deterred the Tutsi of the ruling set from becoming too independent. 422 643 [662]

Another right was very similar to our bare ownership. The person who had it was not in possession of the cow but could at any time claim possession of the animal and the heifers and cows produced by that beast since the time when the possession had been transferred. This was the right of the lord (*shebuja*). 422

In contrast there was the usufruct right with respect to cattle. The person endowed with it could dispose of the milk, the male increase of the cattle, and the dead cows. This was the typical right of the client (*garagu*).

[1] For a more extended account of the land tenure system in traditional Ruanda, see Maquet and Naigiziki, 1957.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

422 Sometimes these rights (bare ownership and usufruct) were possessed by the same person. The cattle concerned were then called *imbata*.[8]

3. INHERITANCE RULES

768 When the father died, the family unit of which he had been the head did not disappear as well. Some of the family functions had still to be carried on for some time: the younger sons had to be given a wife and the bride-wealth paid for them, the younger daughters had to be married, and perhaps young children had still to be taken care of by their mother for several years. In order that the family unit should be able to perform its tasks before its breakdown, it was necessary that the duties of the rugo head should continue to be fulfilled. Consequently the father chose one of his
592 sons who could be trusted with that role (*umutware w'urugo rwa se:* head of his father's family). He was often, but not always, the eldest son of the first wife. The father could even choose a brother or one of his parallel cousins if he thought none of his sons was capable. The father's choice could always be reversed by the lineage head or the political chief or even the lord, if it appeared unwise to these authorities or if it was the cause of complaints from the other members of the family.

593 It was the father who was endowed, as we have just seen, with
421 rights to land and cattle. The totality of these rights plus goods such as trees, huts, and household implements, constituted his patrimony.

If there was no declaration of will, custom determined the
428 division of the patrimony according to the following rules.

The first heirs were the sons of the deceased, or, failing these, his brothers, then his paternal male parallel cousins, his grandsons, the sons of his brothers and their male paternal parallel cousins, his paternal uncles. Then any male in the inzu or the umulyango. If there was no known kinsman left, the political authority (land or cattle chief) or the lord was the heir. In that case the patrimony might be divided according to the kind of rights left, for instance those over cattle went to the lord, those over land to the land chief. Or the more powerful authority was able to secure for himself the whole of the inheritance.

[8] See Vanhove, 1941, pp. 48-59, for still other, but less important, rights over cattle.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Nothing was definitely left to the wife, the daughters or the affines. But the wife had the usufruct of the rugo in which she had been living while she still had young children to care for. Even when all the children were married, it happened frequently among Tutsi that the wife remained in the rugo till her death. This was usual when the widow married one of her husband's consanguineal relatives, or did not marry again. If she married a man completely alien to her former husband's patrilineage, usually she had to leave the rugo.

The father, before he died, had already given a share of the inheritance to each of his married sons, at the time of the wedding. Consequently, what was left at the father's death had to be divided among the sons who had not yet received anything. In principle rights to cattle as well as to land were equally shared. When bare ownership of cattle was divided between the sons of a lord, the clients of the father became clients of the son to whom the bare ownership of a particular cow or herd of cattle had been ascribed. When usufruct on cattle had to be inherited, the successors became clients of the people who had the bare ownership of the same cattle. But the lord had to agree on the choice of his new client.

In a polygynous family the principle of equality of shares held good for each rugo. Consequently the shares of the sons of the same father could vary considerably if the number of sons of each wife was very dissimilar.

The son chosen as head of the rugo had a supplementary share (*ingarigari*) as he had more economic responsibilities. Normally he received it before his father's death. This was called *gukubita itoko*, to stroke the thigh, meaning to give a favour.

Debts owed by the deceased were divided between his heirs, but the family head had to meet a greater part than the others. Judiciary fines were cancelled by the death of the debtor. When the deceased was creditor, the debt had to be paid by the rugo head who shared it with his co-heirs.

The father could also make a will and usually did. He could alter the traditional procedure within rather narrow limits, and for reasons regarded as valid by the patrilineage head or sometimes the political chief or the lord. A son who had been cursed was *ipso facto* disinherited. A son could be punished in the same way

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

without having been cursed but by being guilty of some major disobedience or lack of respect towards his father, such as beating him. The father could also give a greater share to the sons he preferred, but this had to be justified on grounds other than his personal feelings. It had to appear as a reward for particular devotion or good behaviour. The father could not skip a category of traditionally defined successors and still less could he leave his rights to non-relatives. The persons who felt that they had been wronged could always appeal to the different authorities mentioned.

As may be expected, matters of inheritance were causes of suspicion, rivalries, and disputes among the sons. Each wanted to be favoured by his father. Even if there was no will, an equal division of goods and rights so different in kind was not easy to achieve, particularly in a society without money or any other standard of value.[3]

4. LABOUR

Much labour had to be expended on the soil and on the stock to produce consumer goods. It was, therefore, not sufficient for the producer to possess a certain amount of capital (land, cattle), he had also to control labour. What were his rights over the labour of various individuals?

The labour of wives, unmarried sons, and daughters belonged almost exclusively to the father, head of the rugo. He could make all these dependants work in the rugo fields and he could require his sons to give tribute labour to the political authorities in his stead or to carry out services for his lord.

The different political authorities had rights over the labour of their subjects. These rights were limited either to certain tasks (e.g. to build or to mend the chief's enclosure), or to certain periods of time (e.g. two days each week). The mwami, the supreme political authority, did not usually require more than a chief but in theory all the men of Ruanda belonged to him and he could demand all their labour as well as take their lives.

According to the 'agreement' by which the lord granted the usufruct on certain cows, the client had, in return, to give a not precisely limited number of days of work. These labour rights and duties were inherited with the bare ownership and the usufruct of the cattle.

[3] See also Bourgeois, 1954, pp. 344 ff.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Servants' labour belonged completely to their masters. These servants (*abatindi* for men, *abaja* for women) were either war captives or simply very poor people (this is the first meaning of the word *abatindi*). Their payment consisted in receiving food, shelter, and clothing from their masters. Sometimes it was agreed that after a certain period of time (such as three years) the master would either pay the bride-wealth to provide the servant with a wife or would even give him his own daughter. 357 461 [727]

Family heads were the only persons who could dispose of their own labour resources, with the exception of that part required by the lord and the political authority. 593

• • •

Almost any Ruanda family head could command enough rights to capital goods and labour to make his rugo self-supporting, with a certain surplus for his chief and his overlord. But these rights were not finally his. The ultimate control of the factors of production was not his. Labour, land, and cattle, in that order, were increasingly slipping away from his control. Command of the factors of production and political power was so interwoven in Ruanda social structure that they are to be analysed together in the following chapter devoted to the political organization. 491 [182]

[P.96]

CHAPTER V

POLITICAL ORGANIZATION

I. DEFINITIONS

121 POLITICAL organization is a sector of the social structure not easy to define.

The phrase, widely used in everyday speech, immediately evokes the idea of government and rulers. That is to say, persons who deal with matters which are important because they concern the group as a whole and consequently the commonweal. Moreover, these persons are authorities, and are powerful; what they have decided will be carried out. Often they enjoy many privileges which they usually attempt to justify and which they try in any event to keep and to increase. Finally, they have relations with their counterparts in other groups: they discuss with them on an equal footing, sometimes they threaten them or are threatened by them and by opposing the forces of their groups they try to settle the dispute to their advantage.

The term 'political' thus suggests to us persons (chiefs, governing bodies), abstract ideas (authority, power), certain kinds of activities (which are called 'public'), a value which should be the aim of the action of the chiefs (the commonweal), the private interests of the rulers, diplomacy, and war. These elements are too numerous and varied for all of them to be included in a useful definition at the beginning of an inquiry.

A distinction must be made between the use of 'political' in an intragroup or intergroup context. Political relations between two groups have a completely different meaning from those existing between people belonging to the same group. Let us begin by an intragroup definition to use in the present inquiry.

(a) *Intragroup political organization*

A political organization is the totality of culturally patterned relationships between certain individuals who possess the legitimate use of physical force and all the others who inhabit a certain territory at a certain time.

The first words of this definition, *a totality of relationships*,

9:Maquet E-5 (1949-1951) 1961 FO42 Rundl FO42

indicate the level of reality we are dealing with. As any social system, political organization is a reality composed of relationships between men. What differentiates each system is how the human actors in the relationship are defined. A kinship system, for instance, is made of relationships between persons defined in terms of descent and siblinghood.

These relationships are *culturally patterned*. Political behaviour is not to be invented. Any well-socialized member of the group knows what is expected of him.

The two actors in a political relation are members of the *same group* which has a *territorial* basis. We follow here the majority of sociologists for whom a political organization must be linked to a territory. This certainly seems a necessary condition for the use of physical force, an essential part of the definition. As men are situated in space, it would not be possible for their rulers to inflict on them a physical coercion, or at least to threaten them effectively with it, if the rulers had not the control of a certain area where those who are to be submitted to pressure live. The *time* dimension is added. Indeed it is not necessary that the group inhabits always the same territory. For instance, nomads moving each season to new grazing land do not have a constant territorial basis, but they have a territory in the sense that their group has at any time the ultimate control of a certain area, even if that area is different every day.

Among members of the same group, what distinguishes the political relationship from others is that one of the actors possesses the legitimate use of *physical force*. This element of coercion has been stressed by many sociologists and anthropologists. For Oppenheimer, the origin of the state lies in the force used in conquest.[1] Max Weber speaks of 'that human association which within a definite sphere . . . successfully claims the monopoly of legitimate physical force'.[2] Lowie writes that 'the state embraces the inhabitants of a definite area who acknowledge the legitimacy of force when applied by individuals whom they accept as rulers or governors'.[3] Radcliffe-Brown, too, emphasizes the physical force component of a political organization: '. . . the organized exercise of coercive authority through the use, or the possibility of use, of physical force'.[4] MacIver and Page regard coercion or

[1] See Oppenheimer, 1922. [2] Quoted by Lowie, 1948, p. 156.

[4] Radcliffe-Brown in Fortes and Evans-Pritchard, 1940, p. xiv.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

121 the threat of it as characteristic of the political law.[5] Such quotations can be easily multiplied.

It could be objected that some of the authors quoted above deal with the state rather than with political organization in general. The two terms are used here almost as synonyms. The only difference is that the word 'state' implies a greater emphasis on the stability and the permanence of the group which has the capacity to exert physical coercion.

Those in the dominant situation will be called rulers, superiors; the others, subjects, inferiors.

It is not necessary that compulsion be applied; it is sufficient that it could be made effective.

The term *legitimate* has no Western moral connotation here. It only means that the group regards physical coercion as a proper reaction when coming from some individuals. If it is admitted in a particular society that the chief has the right of life and death over all his subjects whether they have committed an offence or not, the suppression of anybody when ordered by the chief is legitimate. But when a thief steals valuables from somebody under the threat of harming him, the victim, in our society and probably in any other, is regarded as having been submitted to illegitimate coercion.

The preceding definition mentions neither the explicit aim nor the function of that totality of culturally patterned relationships. In his definition, Radcliffe-Brown includes the function of political organization which is, according to him, 'the maintenance or the establishment of social order'.[6] Herskovits mentions 'the regulation of affairs that concern the group as a whole'.[7] Indeed a functional definition is intellectually more satisfactory. But it should follow an analysis and not precede it. It is true that in any society certain social functions must be fulfilled if the group is to subsist and perpetuate itself (there must be a means to collect food, to distribute it, to obtain the security necessary to raise and educate children, &c.), and other functions may be fulfilled (such as the provision of the individual with certain comforts in the difficulties of life, with a world-view, &c.). But in spite of several attempts,[8] no satisfactory exclusive connexions have been established between these different functions and particular institutions

[5] Cf. MacIver and Page, 1949, p. 456.

[8] For instance, Malinowski, 1931, p. 645; 1944, pp. 91 f, pp. 125 f.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

which fulfil them. As we have seen previously, the Ruanda family organization had several functions (sexual, economic, reproductive, educational, ritual), some of which also belong elsewhere to other institutions. The same institution, religion for instance, may be a factor of social cohesion in one society, yet it may break the unity of another. Moreover, the same structure may have functions varying with time as the modern state which directly takes care of the welfare and health of the people living in its territory.

Consequently it seems better to distinguish clearly a social structure from the functions it may fulfil. By analysing an institution in a particular social context, we shall be able to determine what are its functions in the particular society studied.

(*b*) *Power*

Frequently what is political is identified with what concerns power. Lasswell has listed a series of social values and a series of institutions through which these values are formalized and shared among the members of a group. He indicates 'government' as the institution corresponding to 'power'.[9] This means that the political organization is the network through which power is distributed within a group. This conception does not seem to fit with Lasswell's own notion of power (which I entirely accept)—an interpersonal situation in which a severe deprivation may be inflicted by one person on another[10]—according to which power relations should be considered a *genus* of which a political relation is a *species*. Political relation is indeed power relation: to exert physical coercion against somebody, even if it is legitimate, is surely a way of inflicting severe deprivation on him. But all power relations are not necessarily political. An employer may threaten his employee to dispossess him of his livelihood. This is a power relation but it is not political.

(*c*) *Social power*

Another sort of power to be distinguished from political power is *social power*. It is an interpersonal relationship in which each of the human actors belongs to a different group or stratum of the same society; because of these different affiliations only, one person is able to exert pressure on the other.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

(*d*) *Intergroup political relations*

121 Intergroup political relations are essentially different. They do not imply inferiority and superiority. The opposite assumption is made: the two groups are supposed to be independent and equal. If by diplomacy or by war one succeeds in subduing the other, the subsequent unequal relations will be more similar to intragroup than to intergroup political relations.

If our definition of intragroup political organization be accepted, the word 'political' when applied to intergroup relations conveys a different and derivative meaning. Those who control legitimate coercion within a social structure are also those who are qualified to enter into intergroup relations. Subjects do not represent their own group, only rulers do. The ability to deal with intergroup relations results from a superior situation in internal political relations. In that sense, the political external relations may be said to be secondary. In the following account of Ruanda political organization the emphasis will be on the primary political relations, the internal ones.

• • •

642 571 In Ruanda, there were two types of relationships sanctioned by legitimate coercion on the part of the superior. Consequently we may distinguish within the political organization two structures which may be termed administrative and military. Another system of social relations was the clientage structure or the feudal organization. It occupied an intermediate position between the political and the private spheres. It was not purely political, but it was much more than a private agreement such as a loan. Consequently the feudal relations in Ruanda will be considered in close connexion with the administrative and military ones.

[183] 641 The three structures were interwoven and interconnected at each level. This was particularly the case at the top and at the bottom. The mwami held the supreme position in the three systems and the commoners were taxpayers, members of an army, and clients. In the intermediate levels it happened, too, that a superior and an inferior were linked by several ties: one could be at the same time the lord and the cattle-chief of an individual, and the client of one's army chief.

I shall describe and analyse each structure separately.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

2. DESCRIPTION OF THE ADMINISTRATIVE STRUCTURE

(a) *Districts, hills, and neighbourhoods*

From the point of view of territorial administration, the border zones were distinguished from the rest of the country. Border zones which were permanently threatened by foreign attack were administered by the chief of the army, the headquarters, and camp of which situated in the region. The centre of Ruanda and the regions which were close to a foreign territory not regarded as dangerous were divided into what we shall call administrative districts. There is an almost complete unanimity of informants (97 per cent.) on this.[11] 631

Unfortunately, there is confusion about the names applied to these areas. Five names were given by informants, with the following percentages: *igikingi* (3 per cent.); *igiti* (19 per cent.), *urugo* (12 per cent.); *umurwa* (7 per cent.); *ubukebe* (24 per cent.). Moreover, the three terms *igikingi*, *igiti*, *urugo* were all used, according to 2 per cent.; *igiti* and *urugo* according to 4 per cent.; *igikingi* and *igiti* according to 6 per cent.; *igiti* and *ubukebe* according to 8 per cent.; *igikingi*, *igiti*, and *ubukebe* according to 1 per cent. Finally, to add to the confusion, the same word was used to mean different but related units. For instance *igikingi* could mean a subdivision of a hill—according to 97 per cent.—and a hill was itself part of a district to which, as we have just indicated, 12 per cent. applied the term *igikingi*.

At all events the whole country was divided into administrative locations that may be designated as districts. Each of them was ruled by two chiefs, neither of them dependent on the other. Their authority extended over the same territory but from different points of view. The land-chief (*umunyabutaka*) took care of the dues from agriculture and the cattle-chief (*umunyamukenke*) of the dues from stock. According to 60 per cent. of our informants, the same person could not have the two charges. It was possible, however, according to 36 per cent. of the Tutsi asked. But the usual situation was to have two chiefs and not a single one. 634 [622]

The district was divided into hills (*umusozi*). At that level the ooo

[11] As has been explained in the introduction, a hundred questions on the political organisation have been put to three hundred informants chosen from all the regions of Ruanda (the interviews took place in seventy-four different places). The percentages to be found in that chapter refer to this sample. When the percentages included decimal fractions, the figures have been brought to the nearest unit. [125]

The district was divided into hills (umusozi). At that level the
622 cattle- and land-chiefs had only one subordinate, the hill-chief, *umutware w'umusozi*, whose counterpart in the present administrative organization is called sub-chief or *ibisonga*.

621 On each hill, there were usually several neighbourhoods. In
622 each, one of the family heads living there was chosen as its head by the hill-chief. He was called *umukoresha*.

(*b*) *Taxes*

651 Tributes and dues for which the land-chief was responsible
647 were: any kind of labour, usually agricultural; *uguhuniha* (putting into the granary), which consisted of a certain number of baskets of beans, peas, and sorghum to be delivered at harvest time; *amavu* (bananas to be used for brewing beer). These tributes were due from Hutu. The person who provided these things was the family head who was considered as the individual producer of the rugo. But between him and the land-chief, there was a hierarchy of persons responsible for the carrying out of the levies: sometimes the lineage head (if he was living in the same neighbourhood), then the neighbourhood head, and finally the hill-chief.

[622] Through the hill-chief, too (according to 68 per cent. of the informants), the cattle-chief obtained jars of milk from the Tutsi. Moreover, the latter had to provide (according to 88 per cent.) *inkuke*, cows kept by the beneficiary in order that milk could be consumed fresh.

These tributes were centralized in the royal residence of the district which was occupied by the king when he was travelling in the district. This residence was called *rugo*, the ordinary word meaning a compound dwelling. 95 per cent. of our informants remembered several names of royal district residences and 86 per cent. had not forgotten the name of the residence in the district where they used to live as children.

Revenues of a district were either reserved to the king himself or were granted to one of the king's wives. In the first case, the [647] residence was called *ingaligali* and was administered by a king's concubine (*umuja*, girl-servant).

Administrative officers collecting tributes, had the right to keep a part for their own benefit. According to 95 per cent. of our informants, the hill-chiefs had the right to deduct some agricultural produce, of which they could keep about a third. Then the land-chief—according to 99 per cent.—could also keep a part of it,

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

probably a little less than a third. For tribute labour, the hill-chief handed over to the residence the number of labourers requested but could have the others to work for himself.

According to respectively 92 and 91 per cent. of the Tutsi interviewed, neither the hill-chief nor the cattle-chief could deduct similar proportions from cattle dues. I have been told, however, that the cattle-chief required from the hill-chief more jars than the royal residence asked. It is very likely that the hill-chief imposed a similar obligation on those who had to bring the milk.

The land-chief acted as judge in disputes about rights over land between Hutu of his district.

Some places were not integrated into the district organization and were free from the cattle- and land-chief interferences. They were the domains belonging to *biru* and the royal funeral grounds. Biru, as we shall see later, were very important people keeping the secret traditions according to which the order of succession of the kings was determined, the ritual to be used in wars, the measures to be taken in times of famine, &c. In their privileged domains biru enjoyed powers similar to those of the king over Ruanda. 76 per cent. of our informants mention the name of a hill ruled by one mwiru (singular of biru) and 79 per cent. affirm that these domains were completely independent of the administrative chiefs.

The other privileged hills were those on which the royal corpses were laid. As the dead body of the king was believed to undergo different metamorphoses, it was not immediately buried, but mummified and left for a certain time in a wood, on the top of a hill. The corpse was watched by some chiefs and servants and finally buried. Even now 88 per cent. of our informants can mention the name of such a hill where a royal cemetery is to be found. One of the more renowned places is Rutare, not far from Kigali, which is mentioned by 71 per cent. 84 per cent. said that these hills were exempted from any tribute to the district residence.

3. ANALYSIS OF THE ADMINISTRATIVE STRUCTURE

Analysis of the different structures described here will be made from the point of view of the social function of these institutions. Social function is understood here as the contribution made by an institution, an association or a cultural trait to the working and the maintenance of a particular social structure. The contribution may

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

128 be negative or positive. It is to be distinguished from the aim explicitly stated in the charter (written or not) of the institution or the purpose of the association consciously conceived by its members.

Take, for instance, some of the religious ceremonies of a particular group. Their aim as known and admitted by every member of the group may be to honour the ancestral spirits, whereas their function, of which perhaps nobody in the group is completely aware, is to manifest and reinforce the *esprit de corps* of the group. Or an association whose explicit purpose is some philanthropic activity may have as its function the giving of certain political control to a particular set of people. Aim and function are not necessarily different. It may happen that the aim expresses one of the ways in which the institution is significant from the viewpoint of the perpetuation of the particular organization existing in that society.[12]

(*a*) *Fiscal function*

649 It is not difficult to determine the main social function of the administrative structure of Ruanda. It was identical indeed with its explicitly recognized aim in that society. Aim and function were fiscal: the country had to provide its rulers with consumption goods.

651 634 Tribute collecting was very methodically organized. Because of the division of the country into about seventy to ninety districts, the amount to be supplied was distributed in a way which did not favour one region more than another. Even parts of Ruanda which were far from the royal court had to provide dues for the local royal residence. The timing of the levies was also fortunate as the agricultural products were not demanded when the rulers needed them but at harvesting time. Tribute labour seems also to have been regularly required during the year.

641 Were these impositions heavy? It is very difficult to assess the proportion of foodstuff and labour required from each family head. I gathered from different informants that about a third of the labour of one individual was required from each family. It is important to stress the fact that only one person in each rugo had to fulfil this demand whereas there were usually several men able to give that tribute in each family.

[12] See Radcliffe-Brown, 1922, p. ix; 1940, p. 10; 1952, pp. 200 f; Maquet 1950a; 1954c, p. 63.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

It is still less easy to assess the relative importance of land and cattle taxes. Informants say that in the past they had to give a great deal, but such recollections of taxpayers do not mean very much. It is certain that if such a fiscal system has been maintained for numerous generations, exploitation has been kept within bearable limits. In Ruanda, as elsewhere, if the taxpayer is overburdened with dues and levies to such a point that he has not enough time and food left to go on producing, the source of impositions will dry up. Fifty years ago, after long practice, the Ruanda rulers had been able, it seems, by trial and error, to determine the exact amount of exploitation that the country could support. Yet if the group of taxpayers as such were not over-exploited, it is certain that some individuals in the group have been very heavily taxed merely because those who had the power to impose taxes wanted to avenge a particular offence. 651 661

The taxpaying group was not restricted to the Hutu stratum since some tributes were due on cattle holdings. Agricultural dues and tribute labour however, were entirely provided by Hutu and as they constituted about ninety per cent. of the population, the total amount of their contribution was considerably higher than that of other groups. 641 [162]

Those who received benefit from this system were, first of all, the king and his spouses. They did not have to come and live in a district residence to have the use of the produce collected in that district. Goods were sent to the court or wherever the king wanted them. Other beneficiaries were the chiefs in charge of the collection: land-, cattle-, and hill-chiefs. About two-thirds of the impositions on agricultural produce was deducted by them. Were they all Tutsi? No, answered the Tutsi interviewed. According to ninety-two per cent. of them a Hutu could be appointed land-chief. But he could not become a cattle-chief, according to ninety-one per cent. This is quite understandable, as the first had to deal with Hutu and the second with Tutsi. But were many Hutu in fact endowed with the profitable responsibilities of the land-chief or the hill-chief? 258 informants (eighty-six per cent.) were able to give the names of Hutu land-chiefs, but they mentioned only thirty-four different names. A Hutu land-chief, Ndarwubatse, was mentioned 180 times, another, Kanyonyomba, 109 times, and another, Segore, ninety-seven times. As our informants were scattered throughout Ruanda it is very probable that the cases of 661 [643] [622] 554 622 184

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

554 Ndarwubatse, Kanyonyomba, and Segore were exceptional and
622 that, in fact, Hutu were not very numerous among land-chiefs.
184 The share of Hutu in political power was probably symbolic rather than quantitatively great. Hutu could also be hill-chiefs and sixty-nine per cent. of our informants were able to mention a few names. According to ninety-nine per cent. a Twa could be neither land-chief nor cattle-chief, unless he were ennobled. But in that case, he was not socially a Twa any more, but assimilated to a Tutsi. Twa could be hill-chiefs; sixty-five per cent. of our Tutsi informants mentioned the names of such Twa. Neighbourhood heads were frequently Hutu, but the advantages they drew from their office were minimal, if any.

(*b*) *Maintenance of the central rulers in power*

661 One may conclude that the very great majority of the beneficiaries of the fiscal function of the administrative structure were people of the Tutsi group.

A second function of the administrative structure was to enable
661 those who enjoyed political power to keep it. The mwami and his
634 wives centralized the means necessary to afford an important court.
641 Moreover, by granting the profitable offices of land-, cattle-,
622 and hill-chiefs, the mwami increased the number of his faithful dependents. For these chiefs of the administrative structure were appointed by the king. To the question 'who appointed the land- and the cattle-chiefs?' ten different answers were given, but if one adds up all the answers which named the mwami as the person or one of the persons who granted these official appointments, a majority of sixty-five is reached. The confusion in the answers seems due to the fact that different principles operated together in the nomination of such a chief. Firstly, one of the sons of the former office holder usually succeeded to his father, and the latter could often indicate his preferences, but this did not mean that the office was hereditary. Merely, it happened fairly frequently that the mwami liked to strengthen a man's loyalty on the understanding that if he was a good chief, the office could remain in his family. Secondly, the appointment could be made by the mwami following presentation of the candidate by an important chief, such as the army-chief. Consequently, it could appear that the latter was the one who gave the appointment. But the third principle remained: the king kept a complete control of these offices in the sense

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

that no other authority had the final say in such appointments. 661

The danger of having some chiefs becoming more and more 634
independent of the central government was avoided by the 699
mwami's power to dismiss anybody and also by the curious duality 622
of chiefs in each district. Increasing the control of the central government over its subordinates seems to have been the function of that duality. Tensions arose between these two chiefs who were neighbours and who exerted their prerogatives in the same territory yet were independent of each other. The mwami was always kept well informed by each of these chiefs of the exactions or suspicious activities of the other. Moreover, both chiefs had the same subordinate, the hill-chief. Consequently the mwami could be sure that if by chance the two chiefs were in agreement, it was very likely that if their common subordinate had some difficulty with one of his superiors, he would attempt and often succeed in getting the other on to his side: *duobus litigantibus tertius gaudens.* In addition, as conflicts of power were unavoidable in such a situation, the chief had to resort to the mwami as judge. In that way the links of the dependence of both of them on the mwami were tightened.

In this analysis it is not suggested that the duality of chiefs was conceived and put into being by a certain mwami in order to fulfil what we regard here as its function. It is possible that it happened in that way. But even if nobody ever thought of reinforcing the royal power by this dual organization, it was nevertheless its function in Ruanda society.

(c) *Social cohesion*

I have mentioned that the hill-chief required dues and tributes 651
not from the individual taxpayer but from the lineage head when 602
possible, and the latter demanded it from the family head. This 571
way of reaching the individual through his kin group and family group enhanced the importance of the descent principle of of kin solidarity. Even in Ruanda where the political organization had taken over so many functions from descent groups, the individual as such was not yet recognised in very important matters like the contributions to the maintenance of the rulers. In this interpretation, the kinship and the administrative structures promote the social cohesion of the group as a whole.

To provide the central government with regular revenues, to 000

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

To provide the central government with regular revenues, to maintain its predominant and privileged situation, and to favour social cohesion, were the functions of the administrative structure. Moreover, as any authority in Ruanda, the land-chief was judge in the disputes concerning rights over land. The cattle-chief, however, had no judicial capacity because disputes about cattle were dealt with by the army-chief.

Impositions and taxes exist in all societies which have a centralized organization of political power. Rulers to maintain their dominant position need to be able to dispose of great revenues. The more centralized a government is, the larger is the amount of goods needed because the administrative officers are numerous.[13]

This political necessity of taxation has been justified differently according to the ideology of each culture.[14] Thus in modern democratic states, taxes are said to be the contribution of each citizen to the maintenance of services used by all members of the community, such as roads open to everybody, a police force which protects property and life against internal dangers, courts and tribunals for those who feel that they have been wronged and want to obtain reparation, an army which protects the community against an external threat, &c.

In Ruanda, tributes in labour and goods to the mwami were justified by the nature of the royal power. Kingship was divine. The first king of Ruanda, Nkuba (which means lightning), lived in heaven with his wife Nyagasani, their two sons Kigwa and Mututsi, and their daughter, Nyampundu. One day the three siblings fell from heaven and settled on a Ruanda hill. There Kigwa married his sister. Their descendents constituted the Abanyiginya clan. Mututsi, Kigwa's brother, married one of his nieces. Their descendents were the Abega. The two royal clans (usually the Abanyiginya married Abega girls) had thus a divine origin.[15] From this godlike nature of the mwami followed the justification of his absolute power and of the sovereignty of his rights over the people, the cattle, and the land of Ruanda. By virtue of that divine sovereignty, the king could require tribute. Because everything and everybody was his, he could confiscate any cattle or agricultural produce, and take the labour or even the life of anybody.

This was the theory. In fact the mwami did not use his prerogatives more than the rulers who were not divine but had the same means

[13] Maquet, 1952. [14] Maquet, 1954c, p. 63. [15] See Pagès, 1933, p. 491.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

of coercion at their disposal. If a mwami attempted to go beyond his effective power even without exceeding the limits of his divine rights, he exposed himself to the chance of meeting some obstacles. Nevertheless, he had sovereign as well as divine rights and his subjects were constantly reminded of these by the tributes they had to pay. 643 183

4. DESCRIPTION OF THE MILITARY STRUCTURE

Every Ruanda, Twa, Hutu as well as Tutsi, was affiliated to an army (*ingabo*). This is stated by ninety-nine per cent. of our informants. Although this military organization is obsolete at the present day—indeed it no longer exists—ninety-eight per cent. of the Tutsi interviewed can still give the name of the army of their paternal ascendants. 701 [198]

There were several armies. The name of each one had a military meaning. It was a challenge, a boast, the memory of a dynastic or historical event: for instance 'the tough ones' (*abashakamba*), 'the first to be praised' (*imbanzamihigo*), 'the fearless ones' (*inzirabwoba*), &c. At the beginning of each reign a new army was organized by the king. Moreover, a very important chief could be authorized by the mwami to raise an army.

(a) *Recruitment*

An army was recruited in the following way. The mwami asked his Tutsi clients to bring to the court their sons who had not yet had any military training. When about 150 to 200 young men were gathered, they constituted what we may call a company (*itorero*). During the reign, four or five companies were recruited in the same way and were added to the first one. According to ninety-six per cent. of our informants a man had to stay all his life in the company he had first entered. The young men (*intore*, the chosen ones) lived at the court of the king or of the chief who had been allowed to recruit an army. Under the direction of an officer called the chief of the king's residence (*umutware w'urugo rw'umwami*) or of its counterpart at a chief's court, they were trained for several years in military skills such as bow and arrow shooting, the use of the sword, spear, and javelin. They learned warlike dances, and to memorize and to recite the poems in which the high deeds of extraordinary bravery and boldness of the past warriors were exalted.[10] They were also taught how to compose poems in imitation of these great models. 702 704 702 [411] [538]

[10] See Kagame, 1949b; 1951.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

000 702 poems in imitation of these great models. They attended evening sessions near the fire, in the kraal, where by sarcasm and humiliation, their capacity for self control was put to the test.

704 These few companies constituted the nucleus of a new army. It was completed by detaching a certain number of people from other armies to incorporate them in the new one. Except for this, armies existed indefinitely. When a king died and when a new army was formed, the previous army founded by him did not disappear. Only some members of the former armies joined the new one. These people were not incorporated individually but [613] with their patrilineages, primary (*inzu*) or even secondary (*umulyango*).

704 613 Except for the *intore*, it seems more accurate to say that an army was made up of patrilineages rather than of individuals. Indeed 100 per cent. of our informants affirm that a man was not affiliated alone to an army but that he was in it together with his sons, married or not, his brothers and their sons, and his paternal uncles. It was a group of agnates indeed, as the sister's sons were not included in the group according to ninety-eight per cent. of our informants. In the army, the patrilineage remained a closed group under its inzu head. Our informants were unanimous (100 per cent.) that dues and services to which the army chief was entitled had to be asked for from members through the lineage chiefs. This rule did not apply to the *intore*. They entered alone into the army, although later their children would also join. According to 100 per cent. of the informants a man belonged only to one army. The army chief was called *umugabe* or *umutware w'ingabo*.

(*b*) *The warriors' section*

704 In any army, according to eighty-four per cent. of our informants, there were two sections—the warrior's section and the herdsmen's section (warrior: *ingabo*, herdsman: *umushumba*). The warriors' section was made up of the few companies of men who had received the *intore* training to whom were added their personal dependents who were also fighting. Warriors did not wear a uniform but had some special badges.

723 As mentioned in a preceding section, a certain number of warriors of an army camped near the borders threatened by neighbouring enemies. If an attack occurred, they called the other [721] warriors who lived nearby and, while waiting for their aid, held
The aggressors at bay

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

the aggressors at bay. Army herdsmen also lived in the same region. Armies constituted during previous reigns were more likely to be localized in the interior of the country. 723

Expeditions against neighbouring countries were made. They were prepared by spies' reports. Military chiefs had at their disposal people named *abatasi*. They depended directly on the court and had taken an oath not to betray Ruanda. They were the only ones who could have connexions with foreign governments without committing an offence punishable by death. 708 [641]

There were two kinds of expedition: those planned by the king (*igitero*) and those planned by a military chief. The latter expeditions were short raids which could not last more than two days (*agateroshuma*). A very complicated ritual was observed in the choice of the leader of the expedition (*umugabe w'igitero*). This choice was made after divining operations by means of the viscera of steers and rams. During the battle, the general of the expedition would sit motionless in his headquarters; every move backwards of his would have resulted in his forces' flight. 721 [787] [726]

Some of the warriors (*abakoni*, stick-bearers) had the special charge of capturing cattle. If the expedition was successful, it ended with a celebration lasting several days. During the festivities, rewards and badges of honour were granted, warriors marched off in triumph, and their deeds were hymned and praised in poems. 727

(*c*) *The herdsmen's section*

The section of herdsmen, as its name suggests, tended the army's cattle. A certain number of herds were regarded as linked to a particular army. The army-chief was also responsible for these cattle and in that capacity he commanded several head herdsmen (*umutware w'inka*, *umutware w'inyambo*). 705

An army's cattle did not constitute an homogeneous group from the point of view of the rights enjoyed over them by different persons. Four categories of an army's cattle may be distinguished according to the person who had the right of effective disposal of the cattle. By effective disposal is meant here the rights allowing one person to give cattle to another, who then becomes his client. A first category of the army's cattle comprises those of which the mwami had an effective disposal; the other three categories were those in which the rights belonged respectively to the army-chief, 705 422

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

705 422

a member of the warriors' section, and a member of the herdsmen's section.

The mwami could effectively dispose of the *nyambo* and *mabara*. *Nyambo* were cows which had some marked physical characteristics (as for instance long horns). The mere fact that beasts had such characteristics gave the king exclusive rights of disposal of them whatever may have been the previous rights of other people over them. Many lyrical poems were devoted to the praise of *nyambo* in which they are divided into two 'clans', the brown one (*ibihogo*) and the red-brown (*amagaju*) which were supposed to be in a permanent state of war.[17] A herd of *nyambo* numbered about fifty cows. There were not *nyambo* with every army. *Mabara* were ordinary cows, not fulfilling the *nyambo* qualifications, and of which the mwami had the effective disposal. One or several herds of *nyambo* and *mabara* were entrusted by the king only to certain armies.

[43] [825]

The cows over which the army-chief had the rights of effective disposal were also considered, according to ninety-six per cent. of our informants, as army cattle and were tended by the army herdsmen.

Cattle at the effective disposal of each member of the herdsmen's section of the army were also regarded as army cattle. Here we have to distinguish between cattle possessed as a client and cattle not obtained from a lord (ninety-two per cent. of our informants said that one could have cattle which were not received from a lord). The former kind of cattle were linked to the lord's army and not to the client's army although the client had the right of usufruct and of effective disposal (as defined here) over that cattle. The latter kind of cattle was composed of cows obtained by exchange (*impahano*) which were regarded as army cows according to ninety-five per cent. of our informants; of cows given by the prospective husband to his father-in-law (*indogoranyo*) also according to ninety-five per cent.; of cows received as reward for brave conduct in war (*ingororano mu ntambara*) again according to ninety-five per cent.; of cows received as gifts (*inka z'ubuntu*) according to ninety-six per cent. Cows not kept by somebody as a client were called by the generic name of *imbata*, or, according to sixty-two per cent. of our informants, the mwami's cows (*inka z'umwami*), which is confusing.

[17] Kagame, 1947b, p. 792.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Finally, the cattle that the warriors of an army could personally effectively dispose of were also considered as army cattle. There was a distinction between cows obtained from an overlord and *imbata*. Warriors' cattle, however, were linked to the army differently from herdsmen's: only the cattle of the latter were submitted to the different taxes I am going to examine now.

Each army had its own grazing grounds, particularly for the *nyambo*, *mabara*, and the chief's cattle as the other kinds were usually kept by those who had usufruct rights over them.[18]

(*d*) *Tribute due by the army*

Besides the personal services mentioned earlier (training, watching at the border, defending the country, foreign expeditions), each army had to provide the king, the court, and its chief with other benefits.

On a new king's accession, each patrilineage of the army had to give him a cow. This gift (*indabukirano*) showed the recognition of the authority of the person to whom it was offered. At the beginning of each reign there was also a ceremony called *murundo*, during which all the cattle of an army were numbered and presented to the king. A certain proportion was retained by him. Cattle raided by the stick-bearers (*abakoni*) of the army belonged to the king, according to eighty-seven per cent. of our informants.

Warriors and herdsmen of each army had the duty of keeping in order a part of the royal residence (*incyubagaba inkike*), according to ninety-three per cent. of our informants.

Each army was obliged to keep at the court a few cows to provide the king with fresh milk (*inkuke*). This herd was called *intamara* and was looked after by an officer, *umutware w'intamara*. According to ninety-eight per cent. of our informants, to provide *inkuke* was the duty of the herdsmen's section only. Besides they had to deliver daily to the court a certain number of milk jars (*igicuba*), according to ninety-nine per cent. A very important majority of Tutsi interviewed (eighty-nine per cent.) said that herdsmen had to supply the court with the necessary slaughter animals (*indwanyi*). Finally, each army had to provide the court with young steers used for divination purposes (*amamana*). According to fifty-five per cent. of our informants these had to be

[18] On this section, see Kagame, 1952.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

701 provided by both sections of the army, according to forty-one
651 per cent. by the herdsmen only.

All these services or dues were required only from Tutsi and from Hutu possessing cattle. Other Hutu replaced them by tributes consisting of agricultural produce (said ninety-two per cent. of our informants) and Twa by products from pottery or hunting.

701 The army-chief, too, could claim several dues from the army to his profit. When appointed to his charge, he was offered a cow (*indabukirano*) as a present recognizing his authority. According to a few informants, that present could consist of hoes or sheep for those who had no cattle, but ninety-two per cent. said such a present was necessarily a cow. As the king, the army-chief, when he was nominated to his office, had the right to have the cattle of his army numbered, presented to him, and a certain percentage offered to him (*murundo*). Ninety-six per cent. of our informants say that the presentation was always made at the same time as the recognition was offered. But certain informants indicate that the army-chief could not require the numbering to be done before a certain time had elapsed since the numbering for his predecessor. Moreover, according to eighty-three per cent. of our informants, the army-chief had to obtain the mwami's permission before summoning a numbering meeting. The cows kept by the army-chief were put at his effective disposal according to all informants. They were entrusted to the army herdsmen (according to eighty-eight per cent.), to army herdsmen only (according to thirty-five per cent.), and to them and *to inkomamashyi*, herdsmen alien to the army (according to fifty-three per cent.).

An army member, on certain occasions, principally when wanting to obtain a favour, used to give his chief a cow called *ituro*.

Finally, the army-chief could claim a certain part of the loot
[721] collected during an expedition in which his army had participated (*intorano*: cattle raided). Moreover, if the expedition had been a brilliant success, he received as a reward from the mwami a gift of several dozen cows.

(*e*) *Advantages for the members*

701 When in difficulty army members could ask for their chief's
703 protection which could not be refused unless they had previously been disloyal to their chief. A chief could prevent a member of his

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

army from being submitted to judiciary torture; he could be his surety if the member was unable to repay a debt. When one desired to obtain a favour, such as to be judged by the mwami, it was very useful to be accompanied by one's army-chief, said twenty-seven per cent. of informants. (Thirty-nine per cent., however, would have preferred to be accompanied by their lord and eighteen per cent. would have wished to have both of them.)

A client wanting to lodge a complaint against his lord requested his army-chief's intervention, according to fifty-three per cent. of the informants. (However seven per cent. thought that it was better to address the complaint to the lord's army-chief and eleven per cent. to the mwami.) A lord dissatisfied with his client could raise the question before his own army-chief according to fifty-three per cent. of the informants (thirteen per cent. would rather have gone to the client's army-chief and 9.3 per cent. to the mwami).

When a dispute concerning cattle arose between two Tutsi of the same army, it was judged by the army-chief, according to ninety-one per cent. of the informants. If the two litigants belonged to different armies, the case was settled by both army-chiefs, according to eighty-two per cent. of the informants.

The army-chief was chosen by the king and could be dismissed by him. Army members had the right to bring a charge against him at the mwami's, according to eighty-three per cent. In that case they sent delegates from the army to the court, said seventy-two per cent.

5. ANALYSIS OF THE MILITARY STRUCTURE

We are accustomed to regard an army as first 'the instrument of force in external relations'. It must defend the territory of the community against external threats and eventually attempt to expand the territory or to subdue alien groups. In Ruanda armies had other functions besides this.

(a) *Warlike function*

Permanent encampments established not far from the borders were defensive indeed, but they were also bases for expeditions into neighbouring territories. Whatever their frequency, it is certain that they were foci for strong feelings of admiration, pride, and emulation. Many features of these events exalted the spirit of

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

conquest: the procession of the victorious warriors, and the recitation of poems telling of the achievements of heroes. The whole country was mystically committed in the expedition through the king, the country's personification, who was magically taking part in it. The king and the queen-mother had (as the expedition leader) to sit motionless during the day of the battle (the army-chief in the field when deciding when to attack had to take into account the space of time necessary for a messenger to reach the court). The secrecy about the expeditions stressed their importance. Even after the battle was over, a messenger was sent to the court who could not tell anything about the expedition except that it was over. Then a few warriors were chosen by the army-chief to go and tell the king—and the king only—the story of the battle.

Ruanda was an aggressive neighbour. Its history, as it appears in the old traditions collected by Father Pagès for instance, is made up of numerous wars of annexation. The Abanyiginia dynasty started from about the centre of the present day Ruanda and expanded their domination progressively.

They were never permanently at peace with their neighbours, and when they had an alliance with some of them it was in order only to be free to concentrate their forces on others. They used any means that could ensure domination. In addition to direct attacks, they interfered in quarrels between smaller neighbours, helping one against the other and then overcoming both; they even murdered the chiefs and kings of small states.[19] Besides the territorial annexations they raided neighbouring countries for captives and cattle.

From the Ruanda point of view this policy of imperialism and looting did not require any rationalization. Their ethical obligations were limited to in-group relationships. One could not kill, steal from, or harm another Ruanda, but a foreigner was fair game. Ruanda people thought themselves to be quite different from people of other tribes, their land was the most important in the world and the country where Imana (the high god) came home every evening and spent the night. It was consistent with these beliefs to use out-group people for one's own purposes without the need for further justification.

The Ruanda military structure appears thus to have been in its

[19] See for instance Pagès, 1933, pp. 121 f.; pp. 298 ff.; pp. 554 ff.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The Ruanda military structure appears thus to have been in its warlike role an organization for conquering and looting rather than for defence. But this warlike function was not its only one and perhaps not the most important in the appreciation of many Ruanda. Whereas almost all our informants (ninety-eight per cent.) still remember the name of the army in which their inzu had been incorporated first, only a smaller proportion is able to remember certain features concerning exclusively the warlike life. Only sixty-eight per cent. still know that *abakoni* were warriors whose task was to lay hold of cattle during the battle, sixty-nine per cent. that *umudende* was a badge of honour given to those who had killed seven enemies during a campaign; just fourteen per cent. can define *impotore* as the distinction granted to those who had killed fourteen enemies and merely eleven per cent. remember that *gucana uruti* (to burn the spears) was a ceremonial to honour warriors who had killed twenty-one enemies during an expedition. This less extensive knowledge of purely warlike aspects of the army is not to be accounted for merely by the fact that one does not organize raids now and that an opportunity to kill twenty-one enemies during an expedition does not arise frequently. As the whole military structure, even in its well-remembered aspects, became obsolete at about the same time as wars, the relatively poor knowledge of its warlike features suggests that the other functions of the armies were felt to be very important.

701 703 173 [198] [182]

(*b*) *Socialization*

Every society is much concerned with socializing or 'encultural-izing'[20] the younger generation. Ways of life, common abilities, values, and beliefs of the group have to be inculcated into children in order to make them efficient and conforming participants of their own culture. 121

In Ruanda this process of socialization was formalized for Tutsi young men. During the years they spent at the court of the king or of a chief, they were systematically given education and instruction. Education is that part of a socialization process which aims at transmitting the bulk of knowledge and behaviour expected from any well-adjusted member of a group. Young Tutsi were taught the traditional sports and dances becoming to young noblemen, they were trained in poetry and the ability to carry on an eloquent and witty conversation. The great traditions of military 86 868 000

[Facing P. 118]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

The great traditions of military

867 courage of their forbears were made known to them, and the picture of the ideal Tutsi was impressed upon them.

The three main components of that ideal picture were *ubutware*,
577 *ubugabo*, and *itonde*. *Ubutware* was the military courage so important in a group of conquerors. *Ubugabo* meant the quality of being a man (*mugabo*). This included trustworthiness in reference to promises, generosity in treating one's friends well, liberality towards the poor, moral courage to accept one's responsibilities. In a society where relations of inferiority and superiority were pre-
[571] dominantly personal in the sense that authority was rarely abstract (a law, a principle) but generally identified with a person (chief, king, lord, &c.), emphasis was put on fidelity in all interpersonal relationships. *Itonde* could be translated by self-mastery. To lose
[152] one's temper, to manifest violent emotions was shameful. Anger, particularly, could not be violently expressed. The demeanour of a Tutsi was always to be dignified, polite, amiable, and a little supercilious. It was taken for granted that only vulgar persons showed off all their emotions. Hutu not being very self-controlled were much impressed by the external dignity of the Tutsi. There
867 was in the *intore* companies a practical training in self-control.
152 By jeers and scoffing, companions of the young Tutsi as well as older people, tried to make him angry and if he reacted emotionally, he was punished by further jokes. So finally he was able to remain apparently quiet and polite in any circumstances which would have elicited more violent reactions from people not thus trained.

86 Instruction aims at communicating a specialized knowledge and at teaching abilities in order to prepare certain individuals to fulfil the specialized tasks particularly useful to their group. The
702 Ruanda armies instructed the young Tutsi in becoming experts in war and raiding. Some Tutsi are still proud of the superiority
186 of their strategy over that of the Hima, pastoralists of related origin, who were living a more nomadic life in neighbouring territories.[21]

564 This socialization process, equipping personalities with qualities
184 required of a nobleman, a courtier, and a warrior, was intended for Tutsi only. Hutu young men were not *intore* and did not become
86 warriors, although Hutu were also members of the armies. But for them it meant being auxiliaries who carried the supplies

necessary to the warriors during the expeditions, and being liable for various services. 564 184 86

(c) *Army and lineage*

In its herdsmen's section, an army was constituted of patrilineages rather than individuals. According to 100 per cent. of the informants, the inzu head was the necessary intermediary between the army-chief and the army members of his lineage. He had the important task of apportioning the dues incumbent on the lineage between the different family heads. For instance when the numbering took place, he decided who was going to give, say, the three cows which were due by the lineage as such. 701 613 571

This connexion between the army, a group founded on a wide territorial basis, and the lineage, a group based on kinship, was very significant from two points of view.

Firstly, social cohesion was favoured and strengthened by the integration into one single structure of two systems which embodied different principles of grouping. In some other societies such systems remained independent. In Ruanda they formed a supple and strong network by which each Ruanda was tied to a political structure through a kinship structure.

Secondly, the authority of the inzu head over his kinsmen was limited by his incorporation in the military structure. In some circumstances an inzu member could ignore the authority of his inzu head and with the protection of his army-chief, remain independently in the army. At the numbering of cattle, for instance, he could present his own cattle separately from those of his patrilineage. This was, of course, advantageous for the chief who could claim a proportion of the cattle of the lineage plus a fraction of the cattle of the independent member. The lineage members could also bring a charge against their inzu chief before the army-chief, who could sometimes dismiss him. This limited the power of the lineage head and incited him to remain on good terms at the same time with his army-chief and the members of his inzu. This principle limiting the power of intermediary chiefs by the direct recourse of their subordinates to a superior authority had other applications in the Ruanda political organization. Its function was to reinforce the authority of the superior chief and to protect subordinates by giving them the possibility of resisting 703 613 642

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

642 their immediate superiors without endangering the principle of authority and social discipline.

701 From the point of view of social cohesion between the different
564 strata of the population, it should be mentioned also that Tutsi,
571 Hutu, and Twa were affiliated to the same army. But as the last two groups had only a secondary and not a fighting role in war, one cannot think that their association with the army was extremely important in this respect.

(*d*) *Redistribution of wealth*

701 Within Ruanda society, the main function of the army was that
651 it acted as an agency for the redistribution of wealth, i.e. consumption goods and cattle.

Fresh milk provided by the *inkuke*, milk brought in jars, agricultural produce, spoils of the chase, pottery, butcher's meat, and steers utilized for divination purposes were consumption goods. Included in this category was statute labour (building and repairing royal enclosures). Most of these goods could not be kept for a long time and had thus to be provided regularly. This kind of tribute is characteristic of cultures which have neither a sufficient knowledge of the means of storing perishable goods nor a standard value of exchange permitting the dues to be collected in 'money'.

The beneficiary was the king. In this respect the army fulfilled a function very similar to that of the administrative structure.

556 A second category of wealth redistributed through the channel
422 of the army was cattle. They constituted a special category of goods because of the particular significance of their possession in Ruanda society. Cattle, whatever their economic value, had a unique prestige value. One was as proud to be the owner of a beautiful herd of long-horned cows as, in some other societies, to possess race-horses. During the European Middle Ages, a noble had to have some landed property. Without going down in public estimation and losing his status, he could not have exchanged his real estate for gold and other goods of that kind even if they were 'worth' much more. Cattle in Ruanda were also noblemen's property. A Tutsi who did not own any cattle was still a Tutsi
[558] but a very poor one, dangerously slipping down in the social stratification, whereas a Hutu who possessed cattle was very near the aristocratic group and not infrequently could marry a Tutsi girl.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The emphasis put on the social prestige bestowed by cattle ownership has sometimes led to the underestimation of a second meaning of their possession. Effective disposal of cattle was the main institutionalized means of achieving power. It certainly enables a person to secure labour and agricultural produce through the clientage structure. And at the present time, the disposal of cows gives more advantages than could be obtained by their counterpart in money.

Consequently, the redistribution of cattle operated through the army was extremely important and had much wider social implications than the dues paid in commodities.

Here, again, the mwami was the main beneficiary of the bovine tributes concentrated through the army. On his accession he received one cow as a recognition gift from every lineage, and a certain proportion of the cows presented at the numbering; after a successful campaign, the 'bow of the army' (cattle seized upon by the *abakoni*) was his. The king usually kept only the bare ownership of that cattle and granted its usufruct to important chiefs who then became his clients.

The army-chief was also much favoured in army cattle dues. He received a recognition gift on entering his office, a part from the herds presented and numbered, a certain proportion of the private booty of the warriors, rewards extended by the king after a victorious expedition, and gifts offered by army members. He had the effective disposal of these cows as long as he was in charge, that is to say, up to his death if he was not dismissed. He thus controlled a considerable amount of cattle, symbols of prestige and instruments of power. He could build up a wide clientage among army herdsmen as it was particularly among them that he chose his clients. But he could also grant his cows to non-army members (*inkomamashyi*), who then became army members.

In what measure was the ordinary army member affected by cattle? Firstly, whether warrior or herdsman, he was deprived of some of his own cows by the different payments to the king and the army-chief. Secondly, a member of the herdsmen's section could receive some cows as a client of the army-chief. Was it a real advantage? The question may be raised as the herdsman had to give cows to the chief. Obviously, there was an advantage only if he received the usufruct of more cows than he had given. This means that only a certain number of army members were very likely to

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

701 651 422 be favoured. This was a kind of redistribution of wealth among the lineages of the army made according to the preferences of the army-chief. Thirdly, the warriors as such did not receive cows from the army-chief (but they could be at the same time warriors and herdsmen). Their only privilege as warriors was to loot privately after the *abakoni* had laid hold on the 'bow of the army'. Moreover, if they had shown any particular gallantry, the mwami or the army-chief rewarded them with a gift of a few cows.

(*e*) *Protection*

701 571 When compared with the considerable benefits in cattle that the king and the army-chief derived from the military structure, the advantages of ordinary army members, particularly the warriors, seem to have been very meagre. The army tribute in goods and services were compensated for in a different way by the protection extended to his subordinates by the army-chief.

This protection could be asked for and received in all the difficult circumstances of life without being limited to any particular kind of circumstances. An instance frequently mentioned by our informants was the army-chief's support to one of his subordinates who was a party in a lawsuit. If the protection of a man of high standing appeared useful or necessary in such a situation one must suppose that judicial decisions were not taken only on the case's own merits, but that the respective power of the two protectors was weighed by the judge.

The army-chief's protection was diffuse and general, not limited to a few cases clearly defined. We have already come across such a characteristic of the superior's protection in respect of the chiefs of the administrative hierarchy. This suggests that power relations were emphasized in Ruanda and that the rights and properties of isolated men, that is to say those not identified in any respect with a powerful one, were insecure.

[692] The judicial role of the army-chief must be related to his function of protection. In the disputes between two members of his army, he exercised a kind of paternal jurisdiction, as did any Ruanda authority. In contentions between members of different armies, the fact that the question was settled by the army-chiefs concerned suggests more a compromise in which each chief acted as a representative of one of the litigants, than a judgement based on pre-established norms.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The army-chief's protection was not unconditionally granted to any army member. The chief could refuse to give support to one of his subordinates if he had been disobedient or disloyal. It was up to the chief himself to decide if his warrior or herdsman had an objectionable attitude. The fact that the chief was the only judge of the attitude did not, of course, give the subordinate the assurance of a fair treatment; however, the chief could not indulge often in arbitrary refusals of help because a member could always leave the army and join another if allowed to do so by the chief of this other army. Moreover, the principle of recourse to a superior authority against an intermediate authority was operative here also. If discontent was widespread in an army, the chief could be dismissed by the mwami. Consequently the chief had to take into account public opinion to some extent and could not be indifferent to his popularity. It is clear, however, that the means of pressure that a chief did have on his subordinates were more efficient than the ones subordinates had on him. They had thus to assume a submissive attitude and to gain the chief's favour by gifts and proper behaviour.

701 591

* * *

The different functions of the military structure of Ruanda were profitable mainly to the rulers: they contributed to the maintenance in power positions of those who were occupying them. Through that structure, the king secured, in addition to what he received from his tax collectors, an important amount of commodities (necessary for the upkeep of a numerous court), more cattle (consequently the possibility to increase the number of people personally bound to him), and a more complete control of all the chiefs under him (by the possibility of a direct recourse of the subordinates to the royal supreme authority). The ruling position of the army-chiefs was also consolidated by their increase of control on cattle.

701 661

The preceding analysis has also disclosed how the army was an important instrument of domination for the Tutsi caste. Warriors being recruited only among Tutsi, organized physical force was exclusively theirs. They alone had in their hands the ultimate basis of political power. Moreover, by the serious training of the future, the aristocratic values and virtues so well adapted for domination were inculcated into the new generations.

701 564

The army organization was also a factor for maintenance of the

000

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

The army organization was also a factor for maintenance of the
701 social order by the protective function of the army-chiefs. A minimum of individual security must be granted to every member of a society. The support of the army-chief secured partly that minimum of security. The protection against incursions of enemies was also provided by the army as such. Finally, the participation of
[564] Hutu and Twa in foreign expeditions, although extremely re-
[186] stricted, certainly contributed to the formation of a Ruanda 'national' feeling.

6. THE CENTRAL GOVERNMENT

642 In the administrative and military structures, the king was the supreme political authority of Ruanda. Very closely associated with him was the queen-mother, who had an official role in the political sphere. Next, the highest dignitaries of the kingdom were the *biru*, guardians of traditions concerning the important events of the collective life of Ruanda. Finally, there was the council of the great chiefs. These four institutions may be regarded as having constituted the main element of the central government of Ruanda.

(a) *The king*

643 The theory of the Ruanda kingship was that the mwami was an absolute monarch in the fullest sense. There was no stated limit to his powers over the inhabitants, cattle, land, and even commodities of his country. His powers were not delegated by any authority and thus he had not to render an account of them to anybody. He was the supreme judge: his sentences were without appeal. He was the legislator having the right to change customs.

This theory of the king's powers was founded on their divine origin as mentioned earlier. The bami (plural of mwami) were very careful not to let their subjects forget their heavenly origin. Many rites stressed that they did not participate in the common nature of other men. This was also the reason why special words were used to indicate their common activities and the everyday objects they used (as for 'to get up', 'it is raining on the king's hut', 'his bed', 'his house', etc.). It was thus emphasized that in spite of their appearances, these activities and objects were fundamentally different from what they were for ordinary people.[22]

In fact the king's powers were of course limited. He had to respect the vested interests of important Tutsi lineages, he had to

[22] Pagès, 1933, pp. 491 f.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

refrain from decisions which could have impaired the economic 643
production of the country, such as requiring tributes which were too heavy, or which could have lowered the level of personal security to such an extent that people would have preferred to flee abroad.[33] Moreover, profound legislative modifications would have roused the resistance of the *biru*. Nevertheless, his powers were still extremely great. A fact which reinforced and consolidated 643
them was the tradition of the long past of the dynasty. The present 173
mwami, Mutara III Rudahigwa is regarded as the fortieth king of Ruanda. Even if the first twenty names are considered as legendary, three or four centuries is a considerable past for a dynasty. The Abanyiginya clan has indeed been able to keep the kingship of Ruanda as long as kings are remembered.

The mwami was not only of divine origin but he was Ruanda 643
personified. This mystical identification with the country resulted in numerous avoidances and a very careful behaviour was expected from the mwami. What happened to him would reverberate, as it were, over the country. He should not bend his knees, for instance, lest Ruanda's territory would shrink.

Royal succession was not completely fixed by custom. The heir was chosen by the king from among his sons. He was generally one of the youngest because the strength of Ruanda was magically connected with the king's strength. The name of the chosen one was kept secret. Even the future mwami did not know it. It was revealed only after the king's death by the three most important biru whom the mwami had entrusted with his decision. The other sons and their mothers generally did not agree willingly to the choice and there was often a period of unrest, even of civil war, [669]
before the new mwami became an effective ruler.[34]

A new name was given to the new king, one of the five royal 643
names which were chosen according to the same sequence: 553
Cyilima, Kigeli, Nibambwe, Yuhi, Mutara. The kings named Cyilima, Yuhi, and Mutara were called 'peaceful bami'. They were not allowed to cross the Nyabarongo, a river which runs in the centre of the country, not far from Nyanza, the capital, and this symbolised the fact that they should not send their armies abroad. This rule very wisely allowed the country to recuperate and to assimilate new territories conquered during a preceding warlike reign.

[33] Maquet, 1953. [34] See Gluckman, 1954, p. 8.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

643 The symbol of kingship was Kalinga, the sacred drum. To possess
534 this drum meant to be king. Kalinga was regularly sprinkled with the blood of the animals used for divination. Around Kalinga were hung the genitals of Ruanda enemies killed by the bami. Kalinga was never beaten but other drums were beaten in its honour as they were beaten for the king.[35]

(*b*) *The queen-mother*

644 It was essential that the role of queen-mother (*umugabekasi*) should always be fulfilled. If the mwami's mother's death occurred when her son was still living, he had to be given another 'mother'. The queen-mother had no special task, but she shared the royal prerogatives. She lived at the king's capital where she had her own court, and her protection was eagerly sought. She had herds of cattle and clients. But her role should not be regarded as independent of that of the king.

It can be said that the same kingship was realized by two persons at the same time, without any division of responsibilities or privileges. This was expressed by the term often used to designate together the mwami and his mother: the kings (*abami*). In that partnership the king, however, kept a predominant position: when he died, his mother completely lost her powers.

(*c*) *The biru*

645 The *biru* did not constitute a council or a board. They were
[193] dignitaries with different tasks and very strictly ranked in a fixed hierarchy. Their activities, however, in common were concerned
[196] with the preservation of ritual knowledge and the accomplishment of ceremonies essential to the existence of Ruanda and its government. This knowledge and activities were kept secret from everybody who was not a *muniru* (singular of *biru*).

[243] *Biru* were under the king's authority in the sense that he could create new offices of *muniru* and he could dismiss one of them who had been disloyal. The royal control was limited to this. It was really the minimum without which *biru* would have been completely independent of the mwami. The offices were hereditary and even when a *muniru* had been dismissed one of his sons succeeded him. As we have seen previously, their domains were exempt from any interference of the land- or cattle-chief.

[35] Vanhove, 1941, pp. 88 f. See the series of photographs in Maquet, 1957.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The most important *biru* were the three to whom the king communicated the name of his successor and the recommendations he wanted them to transmit to the new king later. There were about a dozen main *biru* offices. These important *biru* had assistants from their lineages, prospective successors whom they gradually trained in order that the oral traditions should not be lost. 645 61

Biru had to memorize secret rules, governing for instance the order according to which queens would be chosen from different descent groups, the ritual to observe in case of spreading of cattle disease, lack of abundance of rain, warlike ceremonies, celebrations of the sorghum harvests, &c. [196]

The *biru* institution safeguarded the interests of the great Tutsi descent groups. This function appears clearly in the determination made for several reigns in advance of the secondary lineages and clans from which the queens should be successively chosen. The *biru*, as representatives of their kinship groups had, as it were, established the order in which the interests of different clans and lineages would be favoured in turn.

No one *mwiru* knew the entire body of customs. That knowledge was divided into parts, the remembering of each being entrusted to a *mwiru*, that is to say a descent group, as the office was hereditary. In this way it may be said that the exclusive knowledge of a part of the most important Ruanda ritual had become almost the property of each great Tutsi descent group.

A second function of the *biru* institution was to secure the continuity and the prevalence of the tradition which could have been endangered by the very considerable powers of the king. That traditional body was not unlike a constitution in a modern state and the *biru* institution could be said to have had a role similar to that of a supreme court judging whether a new rule is compatible with the fundamental charter of the country. Of course they had explicitly neither such a task nor such institutionalized means to prevent the mwami from establishing new rules, but the disapproval of an innovation by the *biru* was not to be taken lightly as they represented the great Tutsi kinship groups. [642]

To assess more exactly the function of this institution, one should know more about it. The present day *biru* are still very reluctant to provide information and still less to let it be published, in spite of the encouragement to do so that they receive from the king.[36]

[36] See Kagame, 1947a.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

(*d*) *The council of the high chiefs*

645 The most important chiefs were called *batware w'intebe*, which means chiefs with a stool. Sometimes, especially in times of crisis, the king summoned them and they were consulted on the situation.[27]

645 643 It seems that the patterns of behaviour in the face-to-face relationships with an authority, particularly the supreme one, were such that an opinion opposed to that of the mwami was very unlikely to be voiced. Consequently, the main use of that council appears to have been for the king to explain what he wanted to do and to elicit suggestions on the means of carrying it out.

One of these chiefs was called the 'favourite counsellor' and acted as a sort of prime minister to the king. Besides the tasks he fulfilled by helping the mwami in administering the kingdom, the favoured counsellor's role included the most useful function of taking the blame for what the mwami did wrong. As the king was divine and essentially good, he could never be criticized even by those who suffered from one of his decisions. To relieve the tensions raised by an arbitrary action of the king, however, it was better that the responsibility for it could be imputed to somebody else. The favourite counsellor was that scapegoat: the victims of a royal decision and their friends could go on saying that the king was good but that his favourite counsellor was very bad and cruel and responsible for what they had suffered. This aspect of the favourite counsellor's role was no small contribution to the feelings of trust that Ruanda had for their ruler.

[P.129]

CHAPTER VI

THE CLIENTAGE STRUCTURE

1. DESCRIPTION OF THE *BUHAKE* INSTITUTION

THE *buhake* is an institution to which anthropologists who have studied Ruanda social structure have devoted a great part of their attention, if not the greatest. The name is not easily translated. *Buhake* comes from *guhakwa*, a verb meaning 'to pay one's respects to a superior in his court'.[1] It has been called cattle-lease (*bail à cheptel*),[2] recommendation (in the sense of the mediaeval latin *recommendatio*),[3] and contract of pastoral servitude.[4] 571 675

The *buhake* denoted the relation which existed between a person called *garagu* and another called *shebuja*. That relationship was created when an individual, Hutu or Tutsi, who had an inferior social prestige and who was less well provided with cattle, offered his services to and asked protection from a person whose status was higher and whose wealth was greater. The following sentences were usually, but not ritually said by the man offering his services, after he had given a jug of beer or hydromel to the other: *urampe amata* (I ask you milk), *urankize* (make me rich), *uramenye* (always think of me), *urambere umubyeyi* (be my father), *n'ange nzakubere umwana* (I shall be your child). [273]

If the offer was accepted, the man in the superior position bestowed on the other one or several cows. From that time on, they were in the institutionalized relation of *shebuja* (which I translate 'lord' or 'patron') and *garagu* ('client').

(a) *The client's rights*

The rights the client enjoyed over the cattle granted to him were those of usufruct: he had full rights of ownership over milk, the male increase of the cattle, and the meat and skin of a cow which had died or had had to be slaughtered. The female increase of the cattle remained at his disposal under the same conditions as the original cows given to him by the *shebuja*. Cows received

422
591
605

from a patron could be granted by the client to somebody else by another *buhake* agreement in which the original client became a lord. The protection granted by the patron included support in lawsuits (*kulengera*): according to thirty-nine per cent. of our informants, it was usual and very useful to be accompanied by one's *shebuja* if one wanted to be judged by the mwami. Moreover the patron extended help to his client if the latter was in a state of poverty. For instance, he gave milk for the *garagu*'s children if their father's cows did not yield enough; he contributed to the payment of the bride-wealth if the client and his lineage could not meet the expenses; he provided his Hutu *garagu* with a hoe when it was needed; he granted meat and hides to his client if, on certain occasions, they were badly needed. When the *garagu* committed an offence, his lord had to help him out of his predicament by paying the fine or the compensation to the victim (*kugura*).[5] If the client was murdered and his lineage was too weak to do anything about it, the *shebuja* had to demand justice from the mwami or even avenge his death by blood feud (*kumuhorera*). Finally, if, after the *garagu*'s death, his widow and children could not be taken care of by his brothers or parallel cousins, the lord had to help them (*kumuremera*).

(*b*) *The client's obligations*

On the other hand, the client had to go and pay his respects to his lord. This included personal service which required the presence of the client at the patron's rugo for a certain time. Some obligations were common to Hutu and Tutsi *garagu*. They were: to accompany the *shebuja* when he was travelling, for instance when he went to the king's court or participated in a military expedition (*kumutabaraho*); to carry the lord's messages (*gutumwa*); to build or repair a part of the *shebuja*'s rugo (*kubak' inkike*). It was advisable also for clients, Hutu as well as Tutsi, to offer from time to time to their patron, some presents such as jugs of beer. If the lord happened to lose his herds, the *garagu* had to provide him with cattle and jars of milk. Some services were imposed only on Hutu clients, such as working in the *shebuja's* fields (*kutanga imibyizi*), or joining the night watch in the lord's enclosure (*kurarira*).[6]

[5] Cf. Vanhove, 1941, p. 77s.
[6] Cf. Bandrart, 1930, p. 152; Vanhove, 1941, p. 75s.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

The measure of the different obligatory gifts and services (number of days, &c.), was not fixed. It depended on the *shebuja*'s temper, his requirements, the number of cows granted to the *garagu*, and on the client's expectations. Moreover, each client was usually not requested to fulfil all the obligations we have just mentioned. The patron, particularly if he had many *garagu*, frequently gave to each of them a precise task in which the client was particularly competent (to brew beer, to cook, to mind the cattle, &c.). Even now, in spite of the limitations added by the native courts to the clients' obligations (for instance the building and repairing of the enclosure cannot be claimed by the lord more than once a year; not more than a month a year may be required by the patron for all the household services, &c.), we are still far from having a list of precisely defined duties and claims standard for the whole of Ruanda.

571 675 [692]

(c) *End of the* buhake *relation*

The *buhake* relationship was perpetuated even after the death of both parties. The *shebuja*'s heirs inherited their father's relations of *buhake*, *vis-à-vis* his clients and the client's heirs kept the cows (and/or their progeny) granted to their father. But the *shebuja* had the right to refuse to recognize as a successor of his client a person without the proper qualities to be a good *garagu*. The lord could then designate another heir of his client, or end the relationship and take back the cows. The person receiving an important number of clients by inheritance (several dozen, for instance) could require them to present him with all the cows which were then numbered, as in the case of the army-chief's *murundo*; he could then choose a certain number of them, usually the best ones, which he took away from his clients either to keep the usufruct himself or to endow other people with them.

The *buhake* relation could be ended when both client and patron or only one of them wanted this. But the person who initiated the breaking off usually gave some reason for it, such as the non-fulfilment of a particular obligation by the other party. At all events the *shebuja* could not oblige his client to stay in his service and the client could not prevent his patron from dismissing him.

What happened to the cows in such a case? As mentioned earlier, all the cows a client effectively controlled were not necessarily received from a patron, that is to say they were not all *inhazibii* [927]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

when the client was Hutu and *ingabane* when he was Tutsi. A *garagu* could have cows from another source (called *imbata*) such as those received as bride-wealth, as a reward for bravery or acquired by exchanging other goods. In the case of a Hutu client, who possessed both *inkazibiti* and *imbata* at the time when his relation with a *shebuja* was broken off, there are two opinions with regard to the cows' ownership. According to the first, the *imbata* possessed by the client before he entered in the *buhake* relation were regarded as *inkazibiti* and consequently the lord had the same rights over them as over those he had given to the client as cows of *buhake*. Moreover, the cows which the client eventually acquired when he was already *garagu*, and which in other circumstances would have been regarded as *imbata*, were also added to the cows received from the lord. The result was that at the breaking off of the *buhake* relation, the patron could take all his client's cows, *imbata* as well as *inkazibiti*. The other opinion is that the *imbata* acquired by the client before or after the *buhake* relation began, remained definitely *imbata* and that the lord had no claim on them.

It seems that both opinions are accurate, but that they refer to different periods. The second probably expresses the most ancient rule which had been prevalent up to about 1920. The practice of merging *imbata* and *inkazibiti* (or *ingabane*) in favour of the lord is likely to have been introduced only during the last forty years. This would be due to the fact that the chiefs of the administrative divisions (recognized by the Belgian authority under the names of *chefferies* and *sous-chefferies*) assumed at the end of the reign of king Yuhi Musinga (who was dismissed from his royal charge by the Belgian Administration in 1931) an undue importance, because their powers were no longer counterbalanced by those of the chiefs of the other hierarchies. Army chiefs did not enjoy their former authority, as the military structure had received no official recognition; Musinga, isolated in an attitude of indifference and hostility towards Europeans, was left without much effective power. Administrative chiefs who were important lords are said to have taken advantage of this situation, and to have modified the custom to their own advantage by establishing the principle of the merging of the cows received from the lord with those acquired independently of any *shebuja*.

It was not impossible, though it was rare, to be the client of

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

It was not impossible, though it was rare, to be the client of more than one lord, I was told. Firstly, the services required were such that it was not easy for the same person to perform them twofold. Secondly, a lord did not like to enter into *buhake* relations with somebody who was already the client of another *shebuja*, because such an arrangement was very likely to result in a considerable lessening of each lord's control on his client. 571 675

2. ANALYSIS OF THE CLIENTAGE STRUCTURE

(a) *Notion of feudality*

If the term 'feudal' is to be legitimately applied to the social structure described in the preceding section, it must be understood as a notion covering more than the historical sense of that term as used when referring to the Western Middle Ages. Feudality is here an 'ideal-type' in the Weberian sense. 114 642

Feudality is a particular ordering of certain human relations. This organization is based on an agreement between two individuals who unequally partake in the symbols of wealth and power culturally recognized in their society. The person who, in that respect, is inferior to the other, asks the other for his patronage, and, as a counterpart, offers his services. This is the essence of the feudal régime which must be found in any social system qualified by that term. Feudality is manifold in its modalities. The latter differ in many respects. For instance, obligations of each party may vary and be more or less definite in measure; the symbols and proofs of the feudal relation may be very dissimilar. Thus, in the European Middle Ages, the symbol and the proof of the feudal agreement was the tenure of a tract of land granted by the man in the superior position to the other. That piece of land was called a fief and the parties concerned became suzerain and vassal as soon as the tenure had been granted and accepted.

It seems that the qualification 'feudal' may be applied to the organization of social relations between a *shebuja* and a *garagu* described in the preceding section. At the root of that relation, there are two individuals having a different social status. From one of these individuals, there is a demand for aid and protection, and from the other a promise of assistance in counterpart of services. Granting the usufruct of a few cows to the man of inferior status is the symbol and proof of the agreement. 571 675

The word 'agreement' is employed here rather than 'contract' which is more frequently used in this connexion. I do not consider

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

PLATE 5

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

591
675

that the kind of covenant in which the bond *shebuja-garagu* originated can be said to be a contract in the sense given to that term of Roman law and legal systems which are derived from it. There are three main differences between a contract and the *buhake* agreement.

Firstly, the freedom not to enter into such an agreement was socially illusory. In a society such as that of Ruanda, it was most inadvisable to be found without a patron. As a proverb put it, 'a dog is not feared for his fangs, but for his lord'. To live without a lord was to invite trouble.

Secondly, the lord and the client faced very different situations when *buhake* relationships had to be ended. When he wanted to break off the relation, the *shebuja* either did not give any reason or more frequently accused the *garagu* of a breach of the agreement because in that case, even if there was no merging of *imbata* and *inkazibiti* cows, he could take one or two more cows as a sort of fine. Then he recovered the cows that he himself or one of his ascendents had granted to the client. Sometimes a client accused of a breach could manage to obtain protection elsewhere, and to bring the case before a court, whereas the *shebuja* was under no obligation to present the proof of his client's misdemeanour before punishing him by seizing the cows. He was thus in a very favourable situation if, for one reason or another, he coveted some of his client's cows, or if he merely wanted to harm him. Nevertheless, informants say that a lord could not take too much advantage of his capacity to punish and despoil his clients without incurring implicit social sanctions. If he got the reputation of being a bad *shebuja*, people who were considering a *buhake* agreement were led to choose another lord.

In the reverse situation, when a client wanted to terminate the *buhake* relation with his lord, he certainly could do so, but he incurred the risk of being deprived of some of his *imbata* and if he had grievances against his lord, it was certainly not easy for him to obtain redress. Here again, however, the situation could be corrected by the interplay of the safeguards that an able and cunning man did not fail to secure. Supported by his army-chief, his lineage head or his cattle-chief, he could obtain more favourable results. But even if these counterbalances had some efficacy, it remains that the lord and the client, because of these very different conditions, did not enjoy that equal freedom to end the

relationship which should be enjoyed by both parties according to the classical definition of contract. 571

A third way in which *buhake* was different from the Western conception of contract lay in the vagueness and uncertainty in the measure of the reciprocal obligations. The patron could be more or less generous in the number of cows he granted, more or less exacting in the services he required; the client could be more or less prompt and zealous in his service. If there was a dispute about these differences in the execution of the agreement, there was no charter one could refer to for an assessment of rights and duties. 675

(*b*) *Caste structure*

To understand the functions of the feudal system in Ruanda society, one must first clarify some important features of that society. 121

As our descriptions and analysis of Ruanda proceed, it becomes more and more certain that there was there a caste structure or something very similar to it. Sociologists usually define a caste society as one composed of several graded groups, each of which is endogamous and practising an hereditary occupation, membership of which can be obtained only by birth.[7] [564]

Birth was, indeed, the usual way in which one became a Tutsi, a Hutu or a Twa. This does not mean that the three strata were 'racial' units, but that an individual was a Tutsi, a Hutu or a Twa when his father was a Tutsi, a Hutu or a Twa. In the same way was his father a Tutsi, a Hutu or a Twa. But in order to avoid such expressions, which could go on *ad infinitum*, a definition other than an hereditary one should be found. But it does not seem that there is any other than that a Tutsi, a Hutu or a Twa is a person who regarded himself, and was regarded by all those who knew him, as a Tutsi, a Hutu or a Twa, the usual way for a person to fulfil this social definition being to realise the hereditary one. In some cases, however, it was possible to be socially recognized as a Tutsi without having been begotten by a Tutsi father. For instance a Twa who had been ennobled or the son of a rich Hutu cattle owner and of a Tutsi woman, was sometimes regarded as a Tutsi. But these were exceptional cases and we may say that the caste criterion of membership by birth held in general for all the three Ruanda groups. 564 [554]

The same may be said of the criterion of endogamy. We saw

[7] Cf. Lowie, 1948, pp. 10, 273.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

the same may be said of the criterion of endogamy. We saw
564 previously that marriages between Hutu and Tutsi were not
[580] banned but that they were neither favoured nor frequent. Marriages between Twa and the two other groups were prohibited.

Since cattle rearing, agriculture, and hunting, with pot making, were the main activities characteristic of our three strata, the criterion of hereditary occupation was certainly realized in Ruanda.

The fourth criterion, the hierarchy of the groups within the society, was certainly to be seen in Ruanda. We must, however, consider more closely what kind of ranking existed between the castes.

121 Social power has been previously defined as an interpersonal relation in which each of the human actors, because he belongs to a different group or stratum of the same society, is able to exert pressure on the other. One occupies a postition of power over somebody, not because of personal qualities or the specific social role one fulfils or one's wealth, but only because one is a member of a certain group. The two human terms of the relation do not stand on their own personal merits but as representatives of their groups. Personal characteristics do not matter, only the identification with a group.

This notion of social power which operates in interpersonal relations is based on social power regarded from the collective point of view. Collectively, social power is the intergroup relation in which one of the two groups may inflict on the other a severe loss. It is the pressure exerted by one group as such on another.

564 The three Ruanda castes were in a hierarchic order, then, from the standpoint of social power, both collective and individual. The Tutsi caste could as a group inflict severe deprivations on the Hutu or Twa castes, and any individual Tutsi could exert strong pressure on any Hutu or Twa irrespective of their personal qualities and possessions.

Let us now turn to the function of the feudal system in Ruanda.

(c) *Protection by identification*

121 To live in a society where several castes very unequal in their social power coexist, frequently puts the individuals of the weaker groups in a very difficult position. Indeed, anybody may be at any time confronted with an exacting demand made on him by somebody possessing higher social power. To be protected against such

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

a demand, it is indispensable for the person submitted to it to increase his own social power. It is impossible to do this directly as he cannot, except very rarely, enter into the upper caste, but he may obtain it indirectly by succeeding in identifying himself with a person endowed with great social power. Feudality is an institutionalization of that identification of an individual socially weak, with another, socially powerful, who secures for the former the necessary protection against other socially powerful individuals.

Is it not possible, in a caste society, to protect the persons enjoying little social power by other means than a clientage system?

The political power of the superior group could be limited by preventing that group from using the pressure of legitimate physical force. For instance, it could be made illegal for a person of the upper group to force somebody to work for him under the threat of having him imprisoned or beaten if he refused. This solution was aimed at in the nineteenth-century Western liberal state. There the groups were not castes but classes, defined both by amount of wealth and the type of its usage (capital investment versus consumer goods buying). The difference between classes and castes is irrelevant at this stage of our argument. According to its Marxist critics, that solution has not succeeded in preventing the domination of the economically weak group by the economically powerful one. If, they said, a rich man is not allowed to force another one to work for him under the threat of police, he may force him as effectively by the threat of taking his livelihood from him. Consequently, the Marxists proposed another solution to make the economic power of all individuals equal.

It is clear that both solutions attempt to solve the problem of the protection of socially weak individuals by changing the hierarchic structure of the society. In the liberal solution the dominant group is stripped of its political privileges, which makes it weaker as a superior group; in the Marxist solution, it is deprived of its preponderant social power, and completely disappears. It seems that a clientage institution is the only means permitting the protection of socially weak individuals without destroying the unequal participation of the groups in social power. In that system the groups continue to be endowed with an unequal collective social power, whereas the range of variability in individual social power

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

121 is made narrower in order to give everybody the opportunity of obtaining sufficient personal security.

Such was, it appears, the first function of the *buhake* system in Ruanda. In that society where it was advisable to go into court 675 accompanied by socially powerful persons, and when a Hutu 564 possessing some wealth but no protector was risking the loss of his 642 possessions, the feudal organization, by institutionalizing the identification of the Hutu client with the Tutsi lord, secured the necessary protection and security for the socially weak. With a few exceptions, the Twa were outside that feudal system. Their caste occupations were not compatible with cattle-rearing and made available to them other means of obtaining the personal protection of upper caste people. On the other hand, their small number made that kind of protection very effective.

(*d*) *Social cohesion*

A second function of the feudality in Ruanda was its contribution to the cohesion of the society.

In this respect we have to distinguish the feudal agreements in which clients were Hutu from those in which they were Tutsi. Let us first take the former. In order that two castes whose interests were so often divergent or opposed could constitute a stable unitary structure, it was necessary that they should not remain merely juxtaposed but should show some solidarity. Through the feudal relations economic currents flowed between Hutu and Tutsi: the land tillers had at their disposal some cattle; the pastoralists consumed agricultural produce and had fields cultivated by their servants and clients. In this way the economic system of production in Ruanda was mixed, made up of techniques, abilities, and wealth brought by the two groups. Through *buhake*, Hutu participated in the Tutsi values. They valued cattle very highly and entered the prestige system based on bovine [177] possession. They assimilated some Tutsi alimentary habits, such as drinking milk. Feudality proved a very effective instrument for [184] the constitution of a culture common to all Ruanda.

When there was a feudal agreement between two Tutsi, the *buhake* had another relevance to social cohesion. It may be said that any Tutsi client was also a lord and any Tutsi lord was also a client. The mwami was the only patron who was nobody's client. His *garagu* were the great Tutsi chiefs, the lords of less important

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Tutsi, who themselves were patrons of still less important Tutsi, and so on. In this way the Tutsi consituted a homogeneous unit of individuals linked to one another by bonds of fidelity and protection. From that point of view, *buhake* contributed to the unity and the solidarity of the aristocratic caste. 675 564 642

(*e*) *Maintenance of caste privileges*

Besides the protection of socially weak individuals and the promotion of social cohesion, a third function was fulfilled by the feudal system: the maintenance of the social *status quo* and the perpetuation of Tutsi privileges. This function seems somewhat opposed to the first two. Let us see how all these functions have been combined by the *buhake* system. 675 564 642 178

In a stratified society where control of a category of goods or a type of ownership is characteristic of the superior layer, the access of the members of other groups to these goods or to the particular rights of ownership constitutes an active factor of social mobility. It is the reason why the aristocracy frequently keeps exclusively for itself these goods and these rights. Thus in Ankole the Hima pastoralists bar Iru cultivators from the ownership of productive cows. They may possess only barren cows and bull calves.[8] [121]

Ruanda Tutsi did not impose such severe rules but by the *buhake* system they obtained very much the same results. They allowed Hutu to have cattle at their disposal—which in exchange provided Tutsi with labour and agricultural produce—but at the same time prevented them from gaining independent ownership rights over these cattle. Those who had the final control of cattle were always Tutsi. As the Hutu had been granted only usufruct rights over cattle which were different from those enjoyed by the lords who were Tutsi, there was no chance that the group of cattle owners could be invaded by Hutu. [922]

By definition the client's possession was precarious. This uncertainty in the duration of the disposal of cattle was further emphasized by the circumstances mentioned above. The breaking off of the *buhake* relation was almost always favourable mainly to the lord and could often be disastrous for the client. It may even be said that when the practice of merging the *buhake* cows (*inkatibiti*) with the cows not received from a lord (*inbata*) was regarded as customary, all the Hutu cattle were precariously held and under

[P. 140]

571
621
631

Diagram D.

This diagram suggests the complexity of Ruanda social relations if it is remembered that an individual generally has several political roles. Thus a high chief was very often also an army chief as well as a client of the king, and all the chiefs of the two premier hierarchies had their places in the system of feudal relations as clients and patrons. The broken lines indicate some of these possible pluralities of relationships.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Tutsi control. A Hutu who in exchange for labour or agricultural goods had been able to acquire a few cows had necessarily to ask for the protection of a lord in order that his cows should not be seized upon under some pretence by a socially powerful neighbour. Then he received cows from his lord and they were merged with his own *imbata*. Consequently, if the agreement had to be ended, the lord could take away besides the cows he had granted, those which had previously belonged to the client. 675 564 692 178

The two political structures benefited most–those among the Tutsi who were rulers. The feudal structure, by granting only a precarious possession of cattle to the clients, left in the hands of the Tutsi the ultimate control of cattle, symbol of social prestige and instrument of power. On the other hand, by the same *buhake*, Tutsi were obtaining the advantages of being provided with labour and agricultural produce. From that standpoint, the Ruanda feudal system granted a minority the means to live—and to live better than the bulk of the population—without having to participate in the manual labour of economic production, by the moderate and clever exploitation of the majority. 564 661 692

In order that an aristocratic structure may perpetuate itself without change as long as it is profitable to the superior caste, it is not sufficient to prevent an invasion or even an infiltration of members of inferior groups who, by modifying the proportion between exploiters and exploited, would completely disturb the smooth working of the system. It is also necessary that all those who are by birth members of the upper caste should live according to the standards of their group. It is most unusual for an upper caste to regard the falling off of some of its members without uneasiness and dismay. This is particularly true when the group position of power is rationalized in terms of innate superiority. Some modern governments in Africa, for example, are much concerned about the 'poor whites' because their decadence threatens the myth of the white racial superiority. 564

The Tutsi had a similar pretence to a natural superiority as has been pointed out already. Consequently, if one of them was unable to support himself in a way becoming to his caste and seemed on the point of slipping down into the group of those who work manually, it was regarded as a shocking situation that should at once be put right. The remedy was to become the client of a richer Tutsi. The cows thus received, allowed him to subsist in [186] [558]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

such a way that he could become the patron of a few Hutu who would work for him and cultivate his fields. On the other hand, while the lord of such a Tutsi would not get many material advantages from him, his social prestige was enhanced by an increase in his following, and by being advised by a trusty Tutsi he was able to exert a greater influence in the different intrigues which played such an important part in his life.

(f) *Feudal and political structures*

We have said earlier that the Ruanda clientage system occupied an intermediate position between the public and private spheres. It must now appear more clearly why *buhake* was not just a private agreement between two persons, such as a loan. The element of pressure, although not going usually as far as the use of physical force, was certainly an important aspect of that relationship. There was also a constant interplay of the feudal structure of the two political ones (administrative and military). When, as frequently happened, one was at the same time administratively subjected to and a client of one's hill-chief, a client's obligations were not merely added to a subject's tribute: the total amount was reduced. This was a very favourable situation for the subject-client. All the great political chiefs were also rich lords. Their political offices helped them to increase their clientage, as is particularly evident in the case of the army-chief who could require cows from the army members merely in order to be able to gain more clients. On the other hand their wealth helped them to obtain important offices and to keep them.

It would be impossible, for these reasons, to describe adequately the working of the two political structures in Ruanda without describing the feudal system as well. It might even be said that the *buhake* is more fundamental in the sense that many political relations have been patterned on the client—lord relation. For instance, the army chief was really a lord for the members of the herdsmen's section of his army.

In spite of the psychological and perhaps historical precedence of the feudal system, it has been described after political organization because, as I wish to focus attention on the political organization, it seemed that the role of the feudal system in that respect would emerge more clearly.

[p. 143]

CHAPTER VII

THE PROBLEM OF TUTSI DOMINATION

At the beginning of this century, after an historical development of which we can at the most have only a glimpse, Ruanda society appeared to be composed of two main strata, the Hutu and Tutsi castes. The latter was dominant in social power and used it to exploit economically the former and to retain political power exclusively. 564 661

This system of the social domination of a caste and of the political domination of a group within that caste seemed to be successful and stable at the beginning of the twentieth century. How did the Tutsi achieve the difficult task of keeping such a large caste kingdom a working concern? Before considering the social structural factors which were operative one must take into account the frame in which and the background against which the problem of domination had to be solved. By frame and background, is understood here the totality of circumstances which appeared to the Tutsi, and were for them, unalterable. Tutsi had to adapt their pattern of domination to these circumstances as they were in any event beyond their control. These circumstances were very numerous, pertaining to physical environment (ecological), to human biology, and even to the culture of the group. What these very various elements had in common was that, at the time referred to in this study, they set limits to the action and ways of life of the group. Some of these limits were not immutable in themselves but they were so none the less for the Tutsi at the beginning of the twentieth century. 21 178

From this vast congeries of natural, biological, and cultural factors, I shall review only a few which appear most significant from the present point of view: that of the conditions of domination.

1. FRAME AND BACKGROUND OF THE DOMINATION SYSTEM 178

A first relevant background fact was that, apart from the ultimate control of a most valuable resource, namely, cattle (a subject which will be discussed later), the difference between the equipment of Tutsi and Hutu was not very considerable. It is 564

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

178 possible that when Tutsi first came into the country, the difference
564 was greater than at the beginning of this century. It was not, however, to be compared with the difference existing, for instance, between the material culture of the Europeans in Central Africa and of the Africans during the nineteenth century and at the present time. A large and complex material culture is one of
114 the most important factors not only in conquest but also in the
554 maintenance of a dominant group's superiority. Motor vehicles, dwellings in permanent materials, electric power, European kinds of food are so fundamentally different from the traditional Central African means of transportation and habitat that it is easy for those who have the almost exclusive use of them to maintain high prestige and great power.

554 Except for cattle, Tutsi material equipment did not allow them
564 to impress on Hutu minds, to a comparable extent, the idea of
178 their superiority. Certainly they had more spacious compounds,
184 they were better dressed than the Hutu, they drank better beer, and when travelling, instead of walking, they were frequently carried on a litter by Hutu or Twa servants. All these differences, important as they were, were only, however, differences of quantity and degree, characterizing two strata which had not the same access to the good things of life, rather than essential differences. By 'essential' is meant here that the Tutsi equipment did not include elements such as steam-machines, electricity or gun-power, which, when possessed exclusively by a group, are sufficient to secure an easy domination. Tutsi power did not rest on a superiority in material culture.

Another relevant background factor was the ratio between Tutsi and Hutu. As was previously stated, it is not possible to
[162] know that ratio very accurately. It is very likely, however, that it was never greater than ten or fifteen per cent. This fact was extremely important, because an economic exploitation of land tillers for the benefit of cattle-raisers would have been impossible if the Tutsi had numbered much more than this percentage of the total population. If, for instance, the Tutsi had constituted fifty per cent. of the population, the Hutu would not have been able to provide them with the foodstuffs and labour necessary to
[171] comfortable subsistence. Oberg makes similar comments on the ratio between pastoralists and agriculturalists in Ankole.[1]

[1] Oberg, 1940, p. 126.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

One may wonder whether this demographic factor appeared to the Tutsi as a purely natural fact completely beyond their control, or whether they tried to maintain that fortunate proportion. We know that they made it difficult for a Hutu to enter their caste, but it does not seem that they favoured a restriction in the number of their group and an increase in the Hutu group. They shared with the Hutu a very high valuation of fertility and appreciated families with numerous offspring. It should not be forgotten that if a decrease in population would have contributed towards giving each member of the Tutsi caste a greater share in the wealth of the group in an imperceptible degree, for the individual, to have many children was a way to obtain also a greater share of wealth in a very perceptible manner. I suspect that the latter consideration was much clearer than the former for any Tutsi. It is also questionable if the bringing about of the first situation would have been psychologically compatible with the attitude of self-assertion of a domineering caste of warriors. At all events the demographic situation of Ruanda has been a factor favouring, even making possible, the economic exploitation of a majority by a minority.

A third factor which made the second so crucial was the type of economy of the country. Because of the relatively poor soil, the irregularity of the rains, and the methods of cultivation, there was not a very considerable surplus. Having to subsist on a very limited national income, the rulers had to cope with an economic problem in the fundamental meaning of the term—that is, they had to organize a way of life with means insufficient to meet needs. This emphasized the capital importance of compulsory labour and tributes, of regular and efficient collection, and of an apportionment of levies which did not let any prospective taxpayer escape.

A limited character of national resources is certainly a circumstance adverse to the centralization of a government. Indeed, a very centralized government needs a complex machinery: agencies, army, messengers, civil servants, local delegates, &c. Such an organization had been built up in Ruanda in spite of the small economic surplus.

A biological element also has been significant in the establishment and maintenance of Tutsi power in Ruanda. This was the difference in physical appearance between Tutsi and Hutu. Whatever may be the objectivity of physical caste characteristics,

9:Maquet E-5 (1949-1951)1961 FO[illegible]ndi FO42

184 it is certain that there were (and still are) Tutsi and Hutu physical
564 stereotypes socially recognized. Such characteristics regarded as
826 significant were, for the Tutsi, to be slender, tall, and light
178 skinned; for the Hutu, to be short and stout with coarse features. To conform to one of these types was not sufficient to make of a man a Tutsi or a Hutu. Indeed there were some Tutsi and Hutu who did not possess the physical characteristics of their caste.

114 Sociological and psychological studies devoted to racial problems, and particularly to anti-semitism, have stressed the importance of the physical stereotypes of groups. It is immaterial whether the stereotypes are verified in the majority of cases, or only quite rarely. What *is* important is that they provide a basis on which many moral, psychological, and occupational characteristics are crystallized and form a simple picture. This picture, haunting the imagination of those it is supposed to represent as well as of the others, makes everyone extremely conscious of his group participation and of the differences that separate his group from the others.

178 The fact that a group is characterized by a physical type
564 differentiating it from the others is a factor which may act both
826 ways from the standpoint of social and political power. A minority
184 endowed with a stereotyped physical appearance will have a very great social visibility. If that minority is at the bottom of the hierarchy, its members are constantly despised, and develop attitudes characteristic of those who are looked down on by those with whom they have to live. Consequently, they are hopelessly confined to their group and enjoy almost no opportunity to increase their power. This was the case of the Twa. Their physical stereotype stressed all the features which could be interpreted as ape-like.

If, on the contrary, that physically stereotyped minority is at the top of the power structure, it avails itself of its appearance, regarded as 'beautiful', to support its claims to an innate superiority. Consequently, it is an asset to its power.

Tutsi have been able to use the three different stereotypes of the
[554] physical characteristics of the Ruanda castes as a confirmation of their superiority: they have convinced all Ruanda that to be slender and light skinned is much better than to be stout and dark
[531] (this was even aesthetically translated in the patterns used in the ornamentations of baskets: they manifested a preference for elongated slim forms). They used the stereotypes also as a proof

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

of their different nature which entitled them to rule and as a guarantee against social mobility: because a Hutu was usually not endowed with the Tutsi physical characteristics he could not easily pass the line.

Two other important elements related to the political power system of Ruanda were its extent and its orographic configuration. The country was not very large, about 100 miles from north to south and 140 from west to east. But its relief was that of a maze of hills, many of them very steep, separated by deep valleys. Moreover, it was traversed, from north to south, by a chain of mountains which separate the Congo and Nile basins and is covered with very dense forests inhabited by elephants, leopards, and buffalo.

A centralized government requires good communications. The king must remain, as much as possible, in constant contact with all the regions of his country; tribute must reach the capital regularly, armies must arrive rapidly in any place threatened by an external enemy; local authorities must not be left isolated lest they become too independent. The small extent of Ruanda was indeed an asset from this point of view but this was largely neutralized by the relief which made communications extremely difficult. Notwithstanding these unfavourable physical factors, the mwami had been able to establish and maintain his political network connecting all the subordinate authorities of Ruanda to himself.

These five elements are among those which more significantly affected the domination system of the Tutsi. They are the only ones. Three of them refer to the social power of the Tutsi caste (type of material culture, Tutsi-Hutu ratio, physical appearance), while two others (economy with a small surplus, area, and relief) were operative rather in the sphere of political power. Only two of these background facts (demographic ratio and physical type) were favourable to the domination pattern whereas one (absence of a different material equipment apart from cattle) was neutral and two (lack of a great surplus, geographic configuration) were obstacles.

2. THE SOCIOLOGICAL PROBLEM OF DOMINATION

Within the limits set by these conditions external to the social system, Tutsi had to adapt their organization in order to keep the dominant position for their caste and its rulers. Their problem

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

was: how to monopolize social and political power to their benefit without preventing a Ruanda society from existing and functioning as a unity? How to realize an equilibrium between the necessities of any social life and the necessities of a permanent dominion of a group? This fundamental problem may be analysed into three antinomies: maintaining a caste society and promoting the cohesion of the society as a whole; exploiting and protecting the lower stratum; delegating powers to subordinate authorities and establishing a centralized and absolute government. How were these antinomies solved?

(a) Caste society and social cohesion

In order that the members of a dominant and hereditary group may keep their privileges, it is necessary that what gives prestige remains exclusively under their control. We have seen that in Ruanda the basis of social power and prestige lay in the effective disposal of cattle. As indicated earlier, the feudal system permitted the Tutsi to keep complete control of all Ruanda cattle, as the whole of a client's cattle was always liable to be confiscated by the lord under any pretence. Moreover, outside the *buhako* structure, the king kept the pre-eminent right over all Ruanda cattle. Even if he did not use frequently his rights against Hutu, they were not forgotten: the very cows which were not received from a lord but acquired by one's own efforts and over which the possessor had usufruct plus bare ownership, were called 'king's cows' (*inka z'umwami*) as often as *imbata*.

Usually, an upper caste shows its superiority by, among other things, its leisure and pleasant life. It has to enjoy a greater share of the good things of life than the commoners and it has to get this apparently without effort, rather as a right than as a reward for specific tasks. It was again the *buhake* which made it possible for the Tutsi caste to enjoy 'gracious living' becoming to its high social status. The man in control of a few head of cattle could, through the clientage institution, live without having to participate in the manual work of the production processes.

A third requirement for the maintenance of a caste identity is the preservation of the group's *esprit de corps* and traditions and their handing on by one generation to the next one. This was done in the kinship groups mainly by the grandparents, particularly by the paternal grandfather. There, lineage values and particular

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

traditions were transmitted. But a multiplicity of kinship group agents cannot be entrusted with a function as important for the caste as the socialization of its young members and their training in the qualities and virtues which had permitted their forbears to obtain power. Consequently, in Ruanda some formal institutes of education and instruction were set up. The *intore* companies in which every young man of the Tutsi caste spent several years, fulfilled these functions. 554 564 186 867

In order to avoid the dogma of the innate superiority of the upper layer being questioned if one of its members had to be cast out because he was unable to live up to the standards of his group, the clientage system acted as an institutionalized means of rescuing such people. It should be mentioned that the rescuer was not losing anything, as the Tutsi saved from social death could give him in return what was mainly expected from any Tutsi client: his attendance and his councils. 564 675 [558]

The tendency which leads a powerful group to constitute a closed caste, to maintain jealously its advantages, and to try to increase them, cannot be left without something to counterbalance it. Each caste, as Linton says, is a society in itself.[2] If the caste accentuates too much the characteristics which make it a socially complete group, isolated in the society of which it is only one layer, the cohesion of that society may be destroyed. Consequently, powerful factors of cohesion are needed to check the tendency towards social disintegration that exists within any caste structure. I have described solidarity factors already, but they may be summarized here. 564 182 184

First, there are certain groupings in which Tutsi and Hutu were to be found together. Names of the Tutsi and Hutu clans were similar. This suggested a certain solidarity among the bearers of the same clan name, however minimal it was. A comparable kind of Hutu participation existed in the armies. It is possible that the fact of having been commonly associated in dangerous circumstances gave a deeper feeling of unity to Hutu and Tutsi. The Ryangombe sect was open to Hutu and Twa as well as to Tutsi. Ryangombe himself is said to have addressed his invitation to join to every Ruanda, explicitly calling the Tutsi, the Hutu, the Twa, the men and the women.[3] As initiation ritual took place among kinsmen, however, there was no real inter-caste mingling in the [614] [701] [594]

[2] Cf. Linton, 1936, pp. 130 f. [3] De Lacger, 1939, vol. I, p. 257.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

564 ceremonies. We may say that clan, army, and sect were 'national'
182 only nominally and superficially. Notwithstanding, these associa-
184 tions between Hutu and Tutsi had probably some limited significance from the standpoint of social cohesion.

In that connexion, *buhake* is a much more important factor. By that agreement, almost any Hutu was linked to a Tutsi, and [675] partook in the social power of the upper caste by identifying himself with a protector who was a member of the dominant group. He obtained for his disposal some cattle, the symbol of artistic values, and he entered into exchange relationships with the nobility. Through the clientage institution, Ruanda constituted a unified economic system which distributed agricultural and pastoral products among the totality of the population. The personal bond with a privileged caste member and access to possession, however precarious, of cattle, seem to have been essential from the point of view of national solidarity.

A third integrative factor was social mobility, even as limited as [554] it was in Ruanda. It is certain that the number of Hutu and Twa assimilated to Tutsi because of their holding of political offices or because of their wealth, has always been tiny.

The possibility of being accepted into the superior group even if it is illusory for almost all the members of the inferior group has had in many societies a very great integrative influence. It is well 000 known that in the United States, during the first quarter of this century, the fact that a few men among the wealthiest of the country had been born poor, greatly contributed to the psychological solace of a considerable mass of men and women who had personally no opportunity to achieve such brilliant successes. In addition to individual comfort, the belief that there was no intrinsically insuperable obstacle (such as having been born outside a closed hereditary group) helped Americans to feel that they were all members of the same nation regarded as not significantly stratified.

564 I do not imply that the social ascent of a few Hutu has played a
178 similar part in Ruanda. Firstly, there was no egalitarian ideology
554 which makes almost unbearable the fact that one is obliged by
184 birth to live in an inferior social group; secondly, cases of intercaste mobility were extremely rare in Ruanda. Nevertheless, these cases were a proof for Hutu that, although not belonging to the upper stratum, they were members of the Ruanda nation as well as Tutsi. They did not feel that they were out-group people.

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

well as Tutsi. They did not feel that they were out-group people.

A fourth factor which counterbalanced the socially disintegrative influence of the caste system was the plurality of the structures in which any Ruanda was affiliated.

Through several structures, subjects were much more efficiently bound among themselves and to their rulers than in a unique hierarchy. In the latter case, indeed, if the individual can extricate himself from that hierarchy, he becomes absolutely unattached. In Ruanda, even if one link was broken, the subject did not escape from his superior chiefs. Indeed, he was linked to them, particularly to the mwami, by more than one tie. Almost any Ruanda was dependent on the king through two hierarchical channels: *via* his hill-chief (who himself was subordinated to the cattle- and land-chief) and *via* his army-chief. In addition, the feudal system integrated him into a set of personal loyalty relations such that the person occupying the superior position in one of these relations is himself an inferior in another relation.

It should be mentioned also that any Ruanda was a member of three kin groups: primary and secondary patrilineages and clan. Of course kinship affiliations as such did not cut across caste lines (except for the clan name), but as many of these kinship groups had been for so long established in Ruanda territory, they were certainly a supplementary link between the individual and his country.

The network of relations woven by the political and clientage systems was particularly important in a country where there were no clear-cut groupings based on co-residence. This has led some observers to believe that Ruanda were living in a kind of social vacuum. On the contrary, a Ruanda was never isolated: his social links connected him with the authorities and were ramified, if not in the whole territory, at least in a large area of it.

The last factor of social cohesion to be mentioned here was the ideology developed around the monarchic institution. The mwami was regarded as the king of all Ruanda and not only of the Tutsi. His divine origin keeping him separate from men, bestowed on him an authority which no commoner thought to question. He was closely connected with Imana, conceived as a supreme god rather remote but benevolent. The mwami, representative of Imana, was the father and protector of all Ruanda. Was it not enough to assume towards him a filial attitude and to feel one's

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

571 dependency upon him? As in many cultures in which a king is a
564 paternal and divine image, the Ruanda monarch certainly con-
184 tributed towards the creation in Ruanda individuals of a feeling of
643 belonging to a unit which presented some similarities to a family.

This was, it seems, how the Ruanda political and feudal struc-
564 tures, by their complexity, succeeded in keeping an equilibrium
182 between, on one hand, the tendencies towards social disintegra-
184 tion that a caste system necessarily produces and, on the other, the minimal cohesion necessary to the maintenance of a social unit such as a nation.

(*b*) *Exploitation and protection of Hutu*

728 The Tutsi were confronted with the dilemma that all conquerors must solve when they settle on a new territory with the intention of staying permanently: are they going to draw upon the natural resources of the country themselves, using their own labour and equipment, and to remove from the area the aboriginal inhabitants by pushing them further on and even by exterminating them as a people, or are they to let them stay and use them by having them working for their benefit? Europeans who settled in North America adopted the first solution, they did not [171] attempt to use Indian labour and they expelled the native population from their hunting areas and began to cultivate their country. The second method has been chosen in most parts of Africa south of the Sahara where Europeans have settled.

564 Whether Tutsi have explicitly considered this problem is
661 immaterial here. In fact they have adopted the solution which was most advantageous to them. Being pastoralists and not numerous (in comparison with the Hutu peasants), they had no interest in expelling them. If this had been done, they would have had either to till the land themselves or to dispense with beer, peas, sorghum, &c. It was preferable for Tutsi to adopt what Oppenheimer calls the bee-keeper's policy (as opposed to the bear's policy who for the purpose of robbing the beehive, destroys it),[4] that is to say, to keep in the country peasants in order permanently to exploit their productive work. Those who control territory are not a dominant group; it is upon men that power is exerted.

We have seen how, through the political and feudal structures, the country's surplus resources were drained and concentrated in

[4] Oppenheimer, 1922, pp. 65 ff.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

Tutsi hands. From that point of view, we have to distinguish here 564
two categories. In the first, we put the mwami, the court, the 661
intermediary military and administrative chiefs, whom we call the rulers; in the second, the ordinary Tutsi. The rulers received tributes and labour through the military and administrative channels; the second got fewer consumption goods directly, but mainly labour by the *buhake*. Thus the satisfaction of the needs of the superior caste was not obtained by economic means but by social pressure.

Were these services in labour and in kind heavy for the Hutu caste? It seems that it was not a too painful obligation for about nine-tenths of the population to secure the whole of the agricultural produce of the country. But we should not forget that it was an [433]
economy based on rudimentary techniques and which did not yield a considerable surplus. Moreover, the standard of life of the dominant group was much higher than that of the inferior [511]
castes; one may thus safely assume that Tutsi consumed much more than a tenth of the total production. Such an assessment is not very precise but it does not seem possible to obtain a more accurate one.

What is certain is that the social power enjoyed collectively by 564
the Tutsi caste was so great that it must have been a permanent 661
temptation for them to increase their demands on the Hutu group. 554
Such a situation was indeed at the same time both advantageous 182
and dangerous as it carried in itself the seeds of its own destruction. For if the measures of the impositions were exceeded (and the technological and environmental circumstances made the margin very narrow), the subordinate group would be weakened and its productivity would diminish. Eventually, it might be led to leave the territory. To prevent such detrimental occurrences was all the more difficult as each Tutsi was endowed with so much individual social power that he might be inclined to misuse it.

How did the Tutsi deal with this threat? Firstly, by a universal distribution of the levies obtained through the military and administrative structures. Every familial unit of production was obliged to contribute—certainly not equally, but the mere fact of having universal impositions tended to prevent very considerable differences, because a sufficient return was secured and rules were established. These rules were not as fixed and publicized as the fiscal laws in a Western society, yet the mere fact of their existence

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

564 made for certain guarantees. For the *buhake* services, what each
661 client had to give or do was less clearly determined and depended
559 more on the *shebuja*'s wishes. There were also in that sphere,
182 however, some traditionally admitted limits.

Universality and regulation of dues as such do not prevent the exactions committed by socially powerful individuals and those who required payment of taxes were powerful. Another more efficient obstacle to an exaggerated exploitation was the fact that the political and clientage structures gave to any individual of ability the opportunity to secure for himself a defender and a protector. This opportunity resulted from the plural character of the Ruanda hierarchy.

When one belongs to a single structure, there is only one immediate superior. Consequently, everything must be obtained from
[642] him and is owed to him. In a plural system, there are several immediate superiors of approximately equal rank and who are not interdependent. Consequently, it is possible to have the support of one chief (or his complicity even) when resisting another.

564 This is what happened in Ruanda. An example will show how
662 the plurality of chiefs could be used. Suppose a Hutu had in-
182 herited cattle granted by a lord to his grandfather who had also received cows from his army-chief, and who had acquired other cattle by exchange of goods (*imbata*), and because his present lord was too exacting, our Hutu wanted to change and become the client of another important man. He knew that his lord would try to seize all his *imbata* and to choose the best cows among his other cattle. By some gifts, he obtained the support of his army-chief. Before entering into discussion with his lord, he and his army-chief had agreed that all the best cows he had at his disposal and all his *imbata* would be said to have been received from the military chief. They were removed and put on grazing grounds directly protected by the army-chief. Then when the lord claimed more cows than his client wanted to return to him, he had to settle the matter not with a man of very limited power but with the army-chief.

Of course this required clever handling of the situation, but when it succeeded it secured efficient protection against extortion.

It should be added that the recourse of a subject to a higher authority within the same hierarchy was approved and even encouraged in Ruanda. This was another means of putting a check on the exorbitant demands of immediate superiors. This, however,

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

did not play an important part in the feudal system because there were no socially recognized ties between a client and his lord's lord. Feudality was not a ranking system in the same sense as were the political structures. Each lord had his personal following; he was not as such the representative of a higher authority.

To sum up, the political and clientage structures at the same time secured the economic exploitation of the Hutu and protected them against an exaggerated pressure which could have led to disaster for the upper caste.

(c) *Delegation and centralization of political power*

Before the European occupation the kingdom's population was already numerous, probably around 1,700,000 inhabitants. The orographic configuration of the country made communications rather difficult. In that non-literate culture, an efficient collection of tributes required almost a face to face acquaintance between the subject and his ruler. These circumstances necessitated a delegation of authority to many intermediary chiefs who would be the local representatives of the rulers.

But such an unavoidable system was very dangerous for the central government. Its subordinated agents having frequently authority over a rather numerous population which could provide them with abundant supplies (if nothing was sent to the court) could be tempted to isolate themselves completely from the capital and become independent. Such a course of action would have been facilitated by the military structure and the feudal system.

Some important chiefs were, indeed, authorized to raise an army. Moreover, any military chief whose army was encamped near the border, in a district far from the capital, could gain such ascendancy over his warriors as to win over their allegiance to himself.

The *buhake* was perhaps still more dangerous because, as in any feudal system, it created personal bonds of allegiance between the client and his lord. As such, that bond of loyalty did not extend beyond the lord. One had to obey one's lord because he was one's lord and not because he was a mwami's representative. This is why any feudal system has always been so dangerous for a central government. Independence and revolt against the king have been recurring events in the areas where a feudal system existed.

Ruanda rulers were able to check successfully these tendencies

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

Ruanda rulers were able to check successfully these tendencies
640 towards the fragmentation of the political unity of their country,
643 first, by the ritual character of the royal power.
182 To revolt against the king, identified with Ruanda and supported by Imana, was a sacrilege and a profanation. It is not claimed that such a theory was sufficient to secure the kings with effective power indefinitely. Elsewhere similar ideologies of absolute and divine power of the monarchs have not prevented some of them from being stripped of their real authority, whereas their divine prerogatives were still respected. The ritual sanction does not seem to have had a primary importance in the maintenance of submission to the Ruanda kingship. In 1896 or 1897, a young
[669] mwami, Mibambwe IV Rutalindwa, was assailed and eventually lost his life in a revolt instigated by the brother of the queen-mother. That queen-mother was not the mother of the mwami but another wife of his father. Her clan, the Abega, wanted a son of hers as mwami.[8] This shows that when the king lost effective control of power, ritual sanctions were not an effective safeguard for his prerogatives, or even for his life. This is why it has not been thought necessary to expand on the ritual aspect of the Ruanda kingship. But it certainly was a factor which contributed to the obedience of the Ruanda nobles.

Another check was that the king kept at his disposal the
[701] coercive force of the armies. Even if the rebel had the support of one or two armies, the king had all the others.

But the main factor which I think prevented local authorities
640 from asserting their independence from the central government,
578 was the plural character of the political and feudal organization.
182 In connexion with the maintenance of the effective power of the central government, this plurality of structure was a very effective means of maintaining misunderstanding, hostility, and jealousy among the subordinate chiefs. It is certain that the *shebuja* of our example in the preceding section, would have been only too glad to denounce to the mwami the army-chief if the latter was indulging in suspicious manœuvres. The co-existence of chiefs of almost the same rank who were constantly induced by their subjects to take sides in disputes was sufficient to create mistrust among themselves. Moreover, conflicts were numerous, particularly when two chiefs had the same territorial power (as in the case of the cattle- and land-chiefs). To settle conflicts they had to resort to the

[8] Pagès, 1933, pp. 195-206.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

superior authority's judgement and this increased the ruler's power over his subordinates.

This applied not only to the political organization but also to the feudal structure, which had potentially the most disruptive action on a centralized government. Indeed, the subject-client had often to ask protection and support from his political chief against his lord and from his lord against his political chief. Consequently, between the important lords, even those who were not themselves prominent in the political hierarchies, and the political chiefs, relations were often very tense. Moreover, as the very important lords who could have attempted to resist the central government held at the same time political offices, they were directly enmeshed in rivalries and jealousies.

Engendered by the hierarchic plurality, the mistrust which prevented the subordinate chiefs from uniting against the central government, which led them to spy on each other and to inform the king of anything suspect, was the main check against tendencies towards local autonomy in Ruanda. Even if that hostility between important Tutsi happened to express itself openly and violently, the central government was not very anxious to restore peace as long as troubles remained localized and did not threaten the regular collection of taxes and the authority of the king.

3. THE FUNCTION OF THE POLITICAL ORGANIZATION IN RUANDA

At the beginning of this study, in order to delimit the social phenomena we wished to study, political organization in an intragroup context was defined as 'the totality of culturally patterned relationships between certain individuals who possess the legitimate use of physical force and all the others who inhabit at a certain time a certain territory'. This definition did not include the function of a system of political relationships because, it was stated, it is only through analysis that the function fulfilled by a set of institutions in a particular social context, may be ascertained.

In the preceding chapters, the different political structures have been analysed from a functional point of view. It will be sufficient to summarize what has been said to grasp the function of the Ruanda political organization as a whole. Here we shall consider together the feudal as well as the administrative and military systems.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

642 178 At the beginning of this century, Ruanda political organization was an instrument of social immobility. It was not a force of expansion meant to increase the Tutsi dominion over the country, but a machinery which succeeded in maintaining a difficult equilibrium between the antinomic tendencies I have reviewed. Any institution in which divergent tendencies meet and are kept balanced bears in itself the principle of its own disintegration. But in Ruanda the equilibrium problem had been so efficiently solved that it seems that an optimum point had been reached. The political organization that sustained the domination system could have been perpetuated as long as forces external and internal to the system itself remained constant. The external influence which modified the political organization has been the contact with the [648] Europeans, another conquest group entering Ruanda history around 1900. But apart from such a consequential event, internal phenomena such as a modification in the demographic ratio, the introduction of new agricultural techniques, the impoverishment of the soil, &c., could have been sufficient to destroy the equilibrium maintained by the Tutsi political organization.

642 178 564 661 What was 'immobilized' by the political organization was the Tutsi's caste's and rulers' almost exclusive control of power. They used it for exploitation, by which is meant here the satisfaction of needs not by economic production but by pressure. I follow here closely Oppenheimer's distinction between economic and political means. Both have the same end, he writes, the satisfaction of needs. But when this end is obtained by one's labour and the equivalent exchange of one's own labour for the labour of others, one may speak of 'economic means' while the unrequited appropriation of the labour of others is 'political means'.[8] This should, however, be qualified in the *buhake* where the client received the usufruct of cattle.

642 564 571 It would, of course, be completely misleading to assume that Ruanda political organization had for its only function the preservation of Tutsi exploitation. Through the political structure, as has been shown, the inferior castes enjoyed security. Collectively, peasants were protected against raiding expeditions of neighbours and against an unlimited and too arbitrary exploitation. Individually, in the difficult or dangerous events of life, a Hutu could rely upon the protection of his lord, of his army-chief, and

[8] Oppenheimer, 1922, p. 25.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

of his administrative chiefs if he could not or did not wish to ask his lineage's aid. 692 569 571

Should one, then, speak of a counterpart and interpret the Tutsi privileges as a retribution for the care of the commonweal and public order? No, political organization in Ruanda fulfilled different functions. It cannot be said that one function is the counterpart of the other merely because it benefited different groups. It just so happened that two different functions were fulfilled by the same set of institutions.

To sum up, this political system was a means of maintaining a certain social order in which the group of rulers and their caste appropriated to their consumption a considerable part of the country's goods without having to use their labour in the productive processes. [661]

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

[P.160]

CHAPTER VIII

THE PREMISE OF INEQUALITY

I. DEFINITIONS

121 114 THERE is in a culture much more than can be observed (artifracts, behaviour) or known by direct questions (myths, religious beliefs, &c.). There are conceptions concerning the place of man in the world, his destiny, his main values, his attitudes to his fellow men, the meaning of the invisible world, &c. That covert part of a culture is partly or totally implicit in the sense that these fundamental conceptions and values remain for the culture bearers unexpressed or even unconscious. They are thus reached by induction, some by immediate inference from observation, some by a process encompassing several states of abstraction.

Some elements of the covert culture are particularly fundamental because they underline different cultural phenomena which hitherto might have appeared unrelated. They act as a principle in the logical order from which a set of conclusions may be deduced. This is why the word 'premise' has been preferred here to others such as 'configuration',[1] 'sanction',[2] and 'theme'.[3]

On the other hand, the word 'premise' should not be thought to imply that the relationships between the cultural principle and its cultural consequences obey the strictest laws of rational logic. This relationship may be said to be logical only in a very broad sense. Or more accurately, we must clearly distinguish between 'logical' and 'rational'. There are relationships which are meaningful although they express a sequence which is emotional or 'psychological' or even unconscious rather than rational. Such relationships, however, may be said to be 'logical' in the sense in which we speak of a logic of sentiments or emotions. This simply means that we expect them, 'understand' them.[4]

114 To make the point clear, let us take an example of a logical but not rational relationship between two social phenomena. In the past, a positive correlation has been noted between low economic

[1] Kluckhohn, 1941, 1943.
[2] Opler, 1945.
[3] Herskovits, 1948, pp. 222 f.
[4] Maquet, 1951, p. 165.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

indices and the lynching of Negroes in the Southern States of the Union. There is evidently no rational means for the whites of the south to impute the responsibility for the lack of rain—which was then the cause of the poor cotton crops—to Negroes. This typically irrational behaviour, however, becomes comprehensible if we accept the frustration-aggression sequence. In this sense, it can be said that the relation between the two phenomena, economic crises and lynching, is a logical relation.[5]

Ruanda political relations disclose one of the premises of that culture. Underlying the political and feudal structures there was a general assumption about human relations. In order to formulate it as accurately as may be possible, I shall first consider more closely the social roles of the superior and inferior in the field of political and feudal relations. In the following section the words 'ruler' and 'subject' refer to superiors and inferiors in the administrative, military, and clientage structures.

2. THE RULER'S AND SUBJECT'S SOCIAL ROLES

The analysis of the political organization of Ruanda indicates that the ruler was expected to assume a complex role towards his subject. The two poles of it were protection and profit. The subordinate was somebody whom one protected: he was also a resource from which it was normal to draw some advantage.

Protection was not restricted to a certain field of action, but potentially encompassed the whole of the subject's life. When the inferior needed some help, any help, he was expected to apply to his ruler even if the issue was completely alien to the sphere of the main relations between the ruler and the subject. A client could ask his *shebuja* for aid in matters not pertaining to cattle and *buhake* services. It was even thought proper for the ruler to interfere in difficulties which his subject through his own misdemeanour had run into as, for instance, when an inferior had been caught stealing from somebody. When protection was refused, it was not because the question was not the ruler's concern, but on other grounds, such as disloyalty.

The extent of that protection was not strictly defined. It did not constitute for the ruler a set of particular and fixed obligations. The subordinate had a general right to be protected but very few claims to particular advantages. In *buhake*, when one offered one's

[5] Dollard, 1939, p. 44 (quoted by Maquet, 1951, p. 166).

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

571 829 156 641 services to a lord in order to become his client, one was entitled to receive usufruct of his cattle. But the number of cows was not determined. It could be one or twenty or fifty or even more.

It was up to the ruler to decide if any protection was to be granted and to what extent. Of course the pressure of public opinion obliged him not to refuse aid to his subordinate unless he had some socially accepted reason to do so (such as the subordinate's disobedience), but the measure of the protection depended on his own will and pleasure.

These characteristics of the protective attitude (care of the whole of the subordinate's life, its very variable extent being left to the superior's judgement) allow us to apply to it the qualification of 128 114 'paternalistic'. Paternalism is understood here as 'the principle of acting in a way like that of a father towards his children. Because of the total dependency of the human offspring, during their first years, on those who nurse and educate them—and they are usually their parents—the latter's authority ranges over the whole of the life of the child. In everything he needs his parents, in everything they have to direct and control him. Moreover, parents sovereignly judge what they are going to give their children. Undoubtedly, their social groups force them to secure for their children the protection they need to live and develop but the children may not require such or such a particular service. Parents decide without further ado what is suitable for the child and think that better than he they know what is 'best for him'.

571 829 156 641 A paternal relation does not exclude profit. In describing the Ruanda's father's role towards his sons, I mentioned that the father's interests were usually thought to be predominant in respect of the children's interests. When inferiors were not the superior's children but his subjects or clients, that aspect of profit was much more emphasized. All those who occupied the inferior position in the relations of the political and feudal structures had dues to give and tribute labour to perform for the profit of their superiors, and some of these obligations were heavy. It did not appear at all unusual to Ruanda that power brought many privileges to those who had it. If one is a chief, is it not fitting to draw advantages from one's situation? Here, again, the extent of the subject's obligations was left within very broad limits to the superior's discretion.

The ruler's role seems to have been that paternalistic blend of

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

protection and profit. Of course, that role was not always perfectly 571
fulfilled. Chiefs who have been more exploiters than protectors 829
are remembered. It was by comparison with that ideal picture 156
that their behaviour was judged and blamed. 641

The subject was expected to have a role complementary to the one we have just described. He was supposed to assume an attitude of dependency. Inferiority is the relative situation of a person who has to submit to another in a well delimited field. Dependence is inferiority in the whole of life. When the ruler gives an order, he has to be obeyed, not because his order falls within the field over which he has authority, but because he is a ruler.

It could be objected that in Ruanda this attitude of dependence was not in principle unlimited. We saw that cattle- and land-chiefs could not require as many dues as they liked, that subjects could resort to higher authorities against their immediate chiefs, and that it was possible to oppose one chief against another. This does not change the fact that the dependent attitude was the only one socially expected of the subject. Indeed it was impossible to be considered a 'good' subject if one asserted independence of one's superior. A claim of independence, even limited, obliged one to leave the superior, to ask for the support of another and to assume towards the latter an attitude of complete compliance. This appeared clearly in the feudal relation. A lord could not be refused what he asked (even at the present time a shop assistant who is obliged by the law to sell only for cash, will find it very difficult not to sell on credit to his lord). He could only be deserted for another.

3. FORMULATION OF THE INEQUALITY PREMISE

When paternalism and dependence define the permanent roles 571
expected from two persons, much more is implied than when they 829
express the transitory roles of a father and his young son. In the latter case it is known that the son will grow up and one day, even if he has to wait till after his father's death, will be equal to what his father was when the latter was young. But when paternalism and dependence are linked in permanent reciprocal roles, the assumption is that there is a fundamental inequality between the two persons. The subject will never grow up, he will never 'reach his majority'. It is implied without any doubt that there is between the ruler and his subject a difference so fundamental that it never 181
can be suppressed. This fundamental inequality of men is the

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

181 cultural premise underlying the social roles of the ruler and the subject.

564 We have seen that Ruanda society is made up of three hereditary
829 groups with a very different participation in social power and that these differences were explained in terms of innate qualities. On the other hand, in a very great proportion of the political and feudal relations, the superior and the inferior belong to different castes. This indicates in what sense Ruanda feel men to be unequal.

This was not an inequality founded on differences in individual qualities or possessions. Of course, a very clever and artful man, a very wealthy possessor of great herds of cattle, could exert much greater influence, could have access to many more amenities of life and would command much more respect than a not very intelligent or a not very wealthy man. But these differences were not regarded as entailing such a significant inequality between them if they belonged to the same caste. Caste affiliation was mainly what made men unequal.

564 Several stories expressed the differences between the three
186 castes and the qualities which were thought characteristic of them.[6] I mentioned above physical stereotypes. To them, moral qualities were added. Tutsi were said to be intelligent (in the sense of astute in political intrigues), capable of command, refined, courageous, and cruel; Hutu, hardworking, not very clever, extrovert, irascible, unmannerly, obedient, physically strong; Twa, gluttonous, loyal to their Tutsi masters, lazy, courageous when hunting, without any restraint. These stereotypes, admitted with only minor qualifications and slight differences and emphases by all Ruanda, Hutu and Twa as well as Tutsi, were thought to be essentially linked to caste affiliation. When asked if a Hutu brought up with Tutsi, and as a Tutsi boy, could not develop the Tutsi qualities, Hutu and Tutsi informants answer that such a training
[608] could change the boy to some extent, but not completely; the differences pertain to nature.

Caste status was, of course, not founded on a difference of
564 qualities, objective or assumed, in the sense that if a particular Hutu was recognised as intelligent and courageous as a Tutsi, his status remained nevertheless unaffected. What mattered primarily indeed was not to have the qualifications of the upper caste, but to have been born in it. This was sufficient to determine a very

[6] Cf. for instance Baudrot, 1930, p. 139; Hurel, 1922.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

different share in social power and fundamentally different rights. 564

The Ruanda principle of inequality could be expressed in the following terms: people born in different castes are unequal in inborn endowment, physical as well as psychological and have consequently fundamentally different rights. [181]

That premise, closely connected with the caste structure, is suggested by the analysis of the political and feudal structures. Indeed, when a principle of inequality exists in a society with respect to a certain type of relations, it does not fail to spread to other relations more or less similar. In Ruanda, the inegalitarian premise of inter-caste relations has permeated the intricate relations which could be regarded as analogous in certain respects. A Tutsi who was lord over another Tutsi was thought to be superior over his client in a way comparable to the manner in which he was superior over his Hutu clients. Of course significant differences remained between inter- and intra-caste relationships of superiority, but the latter tended to be patterned on the former ones. 181 571 564

The extension to intricate relations of the premise of inter-caste inequality made it a principle of integration with a very wide bearing as it could, and did, in fact, pervade all the human relations in which a superiority of one actor over the other was implied. It could be the relation between a mother and her young child, a father and his son, a man and his wife, an old man and a youngster, a craftsman and an apprentice, &c. These relations constituting the texture of social life, the impact on collective living of the premise of fundamental inequality, cannot be over-estimated.

4. THE THEOREMS

In order to understand better how the inequality premise influenced the whole of Ruanda social life, the different aspects of that influence must be made explicit. They will be expressed as a set of theorems, by which is meant general propositions or statements which are not self-evident. 128

Theorem One

When two persons are involved in any kind of social relation, it is their mutual hierarchical situation which is regarded as the most relevant element of the relation. 571 156

Superiority and inferiority were *faci* of the Ruanda social structure to such an extent that as soon as they entered as a 554

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

571 156 554 component in the content of a social intercourse, other components were regarded as less important and were coloured by the hierarchical situation of the two actors. In Euro-American culture, relationships of inferiority are defined not only as regards the people taking part in them but also as regards the matters concerned. A business executive may give orders to one of his employees only within very well-defined limits of competence and time, but he cannot oblige him to accept his views on for instance artistic or political questions. In Ruanda, on the contrary, when one of the persons involved in a dyad was superior to the other from a certain point of view, the superiority was diffused, as it were, through the whole relation. For his subject, a chief was always a chief in whatever matter.

This first theorem is a consequence of inequality conceived as essential. When two persons are considered unequal by nature, the [829] superiority of one over the other cannot be limited to a certain sphere. Obedience in everything must be required: there is no field in which a father could be wrong and his son right.

Theorem Two

As in almost any human relation there is some superiority of one actor over the other, as that aspect is always stressed and as inferiority relations are patterned on inter-caste relations, paternalistic, and dependent attitudes were to be found in almost every human relation in Ruanda.

The only exceptions were relations between people who were equal from any point of view, as for instance young men of about the same age, belonging to the same caste and whose families were about at the same level of wealth.

This is very noticeable today, even in relations with Europeans. A clerk usually assumes towards the European he assists, a dependent attitude different from the behaviour of a European employee. The clerk expects from his employer a behaviour similar to the paternalistic attitude of the Ruanda superiors and he is puzzled and disappointed if the employer does not assume such an attitude.

Theorem Three

There is no private sector in the life of the inferior *vis-à-vis* his superior. The superior has the right to control the whole of his

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

subordinate's activities. This is not resented by the inferior as unbearable meddling. On the contrary, it is expected by the inferior who feels that such interference is a proof of the interest his superior extends to him. When a European employer avoids intruding into the privacy of a Ruanda subordinate, the latter not infrequently tends to interpret it as a withdrawal from the protective role expected from any superior. 571 156 554

If a subordinate were to refuse his Ruanda superior's interference on the grounds that he should not be concerned with his private affairs, such a pretension would be regarded as at least a definite lack of respect. [577]

Theorem Four

Strictly contractual relations are not possible. To enter into a contract implies that the intended parties are previously independent of one another. If one is submitted to the other for the whole of his life, how could he freely commit himself to give the other certain services? And how could the other promise to secure his inferior a counterpart that the latter can legally claim? When entering into contractual relations, it is necessary that each prospective partner should be a person independent of and equal to the other in that context. In the Western world, admittedly, it frequently happens that an agreement which verifies the juridical forms of a contract is entered into by persons who are not independent and equal. Circumstances may exert such a pressure that freedom to accept or refuse a particular obligation is purely illusory. Conditions of independence and equality, however, are often realised. In ancient Ruanda such a situation could almost never have happened as it was rare for two persons who might otherwise be related by a contract, not to be already involved in paternalistic and dependent relations. 571 675 554

Moreover, after the contract has been concluded it is necessary that each partner should be able to defend himself against any demand of the other which would exceed the terms of the covenant, and that he should have the means to oblige the other to fulfil what the latter has agreed to give or to do. This implies again that one part is not completely dependent on the other. Now, as I mentioned earlier, the extent of the superior's obligations is left, in Ruanda, to his will and pleasure. Consequently, it was unthinkable for the party who was at the same time in a position

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

571 inferior to the other to claim some particular fulfilment of the
675 agreed promises from the other.

554 This appears clearly in the difficulties Ruanda often meet when they have to adjust themselves to European labour contracts.
[177] They are sometimes confused by the fact that the employer requires from them at the same time less and more than they
[829] expect. Less because the employer does not ask for more services, for longer office hours for instance, than what has been stipulated, and more because he is very exacting in the execution of what has been undertaken, for instance in matters of punctuality.

Theorem Five

571 With such socially accepted conceptions about inequality, those who occupy the superior positions in most of the social relations
156 in which they are involved, tend to develop a permanent authori-
554 tarian behaviour. This is characterized by a propensity to command, to be self-assertive, arrogant, protective, and compassionate.

Chiefs, rulers, and other superiors try to extend not only the size or range of their power (the number of people controlled) but its density (the degree of control of the subordinates).[7] Any independence manifested by the inferior will be resented as rebellious.

This leads to intolerance. The superior's opinions should never
[829] be opposed by the inferior who is always and everywhere expected to manifest his dependence by attitudes of compliance. Even today this conduct tends to prevail. Some years ago a Ruanda deliberative assembly of people of standing was asked its opinion on a contemplated reform. After the most important person present there had given his opinion, everybody voted for his proposal. But after the meeting many expressed privately their divergent opinions. At the time of the vote, they had considered it improper and impolite not to agree with the superior.

Theorem Six

571 Even if the caste system and political and feudal institutions
156 have succeeded to a large extent in moulding personalities in such a way as to make inferiors self-effacing, submissive, compliant,
[181] and dependent, the conditioning has not been perfect. Often the inferior wants to disagree with his superior's opinions, to avoid executing an order or obeying his commands. A straight refusal

[7] Cf. Russell, 1938, pp. 185 f.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

being regarded as insulting, disrespect or revolt, the only way out for the inferior is to appear to behave always as expected: to fall in with any desire of his superior while concealing his own opinion, never to say no to any order but to find clever excuses for not doing it. Consequently dissimulation is very highly thought of and a skill necessary to master for someone wanting to live more or less securely under such a political régime. 571 156

Many stories and proverbs give evidence of the frequency of covert disobedience to the rulers and of the appreciation in which an astute excuse and a 'good lie' were held. This was the only way to adapt oneself to such a situation. [538]

Theorem Seven

It is commonly accepted in the Western tradition that truth has a high value and that language is the medium used to express 'truth', that is to say, 'what reality appears to be to the person who speaks'. Undoubtedly, in Western practice, language is used, even in the cognitive sphere, for many other purposes than to express what the speaker thinks. Moreover, most of the scholars who, in recent years, have studied the problem of the origin and function of language, bring qualifications to the traditional view. In the almost unanimous opinion of the carriers of Western culture, however, the ideal verbal behaviour must express 'truth' and not what is useful to the speaker. This is, for example, what is inculcated into children in schools. 000

In a society in which human relations are imbued with some cultural premises as the one being considered in this chapter, 'truth' cannot be recognised as a dominant value. Indeed, one is supposed to use language not to say what is thought to conform to reality but what is thought to conform to the ruler's opinion. Nobody, the ruler included, entertains many illusions on the sincerity of what is said, but submission has been expressed at the right time and this is felt to be most important. 181 829 577

This theorem could be formulated in this way: the verbal behaviour towards a superior must express dependence rather than 'truth'.

Theorem Eight 554

Once it is taken for granted that in hierarchical relations, behaviour must conform to the superior's expectations even to the 181 571

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

point of agreeing with all his opinions, a similar attitude tends to spread to other fields. Each time there is a conflict between what is useful to the speaker or expected from him and what he thinks, he is apt to say rather what is useful or expected.

Thus a dependent attitude in hierarchical relationships favours the extension to all social relations of a utilitarian usage of language.

5. ORIGIN OF THE INEQUALITY PREMISE

We have read the premise, as it were, into the Ruanda political and feudal organization. But this does not solve the question of their mutual priority. Had the political organization of Ruanda, as it existed at the beginning of this century, been built in order to express a belief deeply buried in the psyche of those who have slowly formed and shaped it? Or, on the contrary, is it that the premise of inequality and its sequels have been evolved from the political organization as an ideology and a set of attitudes which fitted the political situation well?

To raise such a question is certainly legitimate in the sense that it expresses a genuine problem which, if it could be solved, would add significantly to our knowledge of the working of social systems and of cultural premises. But there are certain facts crucial to the solution of that question that we are not likely ever to know, such as a good knowledge of the Tutsi culture and its premises before the pastoralists reached Ruanda. It seems possible, however, to make some comments on this problem.

Tutsi came into Ruanda as conquerors. Even if their arrival into the country inhabited by Hutu looked rather like a peaceful infiltration, it was nevertheless a conquest. They wanted to settle in the country and they built a permanent system of economic and political relations with the Hutu whereby they established themselves definitely as masters and exploiters. That is to say, a caste society evolved from their will to stabilize the conquest situation with all its advantages. Now, the more obvious rationalization of a caste structure is the belief that there are inborn and fundamental differences between the members of different castes.

This is not meant to be a schematic view of the historical origin of the Ruanda inequality premise. It is possible that Tutsi had previously to their arrival in Ruanda such a belief, perhaps already embodied in their social organization, or in their external relations with surrounding peoples, and that quite naturally they

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

shaped the new Ruanda situation according to their ideology. Again, it is possible that some themes and types of organization of the Hutu cultivators were particularly capable of being used in the formation of the Ruanda ethos as I have described it. But a conquest evolving into a caste structure is sufficient to account for an inegalitarian premise. Even if prior to the conquest each of the two groups concerned has an egalitarian ideology, the establishment of hereditary groups, whereby the status of vanquishers and vanquished is perpetuated, suffices to give birth to a theory of inequality.

I am of the opinion that such a theory is a necessary 'superstructure' (in the Marxist sense) of a caste system. Undoubtedly, a body of inheritance laws, opportunities for a certain kind of education restricted to the wealthiest, a difference in languages, &c., may maintain for some time a high social power in the hands of the conquerors' descendents, even if the cultural ideology is that all men are born equal. But such a lack of internal coherence ('all men are born equal' versus 'political and economic power is restricted to those who are descendants of the conquerors') is very likely to result rapidly in an evolution from a caste system to a class society. A 'racial' theory seems the only ideology perfectly consistent with a caste structure. It is very probable that conquerors adopt it not only for consistency's sake, but because it is more efficient, more easily understood and accepted, particularly when different physical traits are characteristic of each caste.

It should be understood that when we speak of 'the adoption of an ideology by the conquerors', it is not meant that one day the conquerors made a conscious choice among various possible ideologies. Rather, once a caste system operates, the patterns of political domination and of economic exploitation require people to behave as if the upper caste members were by nature different from that of the lower caste members. When the 'idea behind' these behaviours is made more or less explicit, as in tales and proverbs, it is rationalized in terms of fundamental and inborn inequality.

If there is such a necessary link between caste systems and the premise of inequality, then to know whether the conqueror's ideology, prior to the conquest, was egalitarian or not is only an historical question; when the vanquisher settles and establishes a caste system, the inegalitarian ideology is produced, as its corollary.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

121 The question of the previous premise of the conquerors' culture,
114 however, remains very important in another connexion: to what extent does an anterior egalitarian ideology deter the conquerors from establishing a caste system? Is the conqueror, if imbued with an ethos of egalitarianism, inclined to admit that his principles are valid also in his relations with the vanquished group? Or does he think that obviously the conquered groups are different people? Because of our ignorance of the Tutsi cultural premises before they entered into Ruanda, these questions have to be left unanswered in the case of ancient Ruanda.

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

[P 173]

APPENDIX 1

Translation from Ruanda of the questionnaire on political organization. 125

1. (*a*) Name of informant.
   (*b*) Son of . . . .
   (*c*) Is he a Tutsi, a Hutu, a Twa?
   (*d*) What is or was his occupation, office, title?[1]
   (*e*) What is your 'territoire' (Belgian administrative division)?
   (*f*) What is your 'chefferie' (*igihugu*)?
   (*g*) What is your 'sous-chefferie' (*umosozi*)?
   (*h*) Give the name of your patrilineage (*umulyango*).
   (*i*) Give the name of your clan (*ubwoko*).
2. Give the name of your patrilineage head.
3. Where are people more numerous, in the *inzu* or in the *umulyango*?
4. Were all the members of your *umulyango* under the command of a single army-chief or were you scattered in different armies?
5. Give the name of the chronologically first army to which your *inzu* was affiliated.
6. Has your *inzu* been affiliated to armies other than the first one?
7. Have you been trained as an *intore*?
8. Was every Ruanda (whether Tutsi, Hutu or Twa) a member of an army?
9. Was a man ever under the command of two army-chiefs?
10. When an army-chief wanted to recruit *intore* or to require services, could he request it from any individual directly or had he to ask the patrilineage head?
11. Could a young man be incorporated into two *intore* companies?
12. Do you know anybody who has been in that situation? Give his name.
13. When somebody was a member of an army, was he usually the only person of his kin group in that army?
14. Or was he with his married sons?
15. With his unmarried sons?
16. With his brothers?
17. With his brothers' children?
18. With his sisters' children?
19. With his paternal uncles?
20. With his clients?
21. Was it possible for somebody who had never received any cows from a lord to have cows that belonged to him and did not depend on any lord?
22. Were the cows acquired by somebody's independent economic activity regarded as army cows?

[1] The preceding questions were usually answered by the investigator, not directly by the informant. To the following the informant's reply was recorded.

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

125

23. Was a married man who was left without any living member of his *inzu*, regarded as an *inzu* head and had he the same obligation towards his army-chief?
24. Was it the same or was it different to be a client and to be commanded by an army-chief?
25. Were the cows called 'cows of the king' received from a lord?
26. Could all the members of an army be required to perform services concerning cows and war or were they divided into two groups, one of warriors and one of herdsmen?
27. When a new army-chief was appointed, had all the army members the obligation of numbering the cows (*murundo*) and of giving him a cow as recognition of his authority (*indabukirano*)?
28. Was the army member who had no cows obliged to give another recognition gift?
29. Had the army-chief an effective disposal of the cows taken by him during the *murundo*?
30. Could the army-chief order the numbering by himself?
31. Who minded the cows taken during the numbering?
32. When two Tutsi members of the same army and living on the same hill had a dispute about cattle, who had to judge the case?
33. If the two Tutsi were members of different armies, who had to judge the case?
34. When a client wanted to complain about his lord, to whom did he bring the case?
35. When a lord wanted to complain about his client, to whom did he bring the case?
36. When somebody wanted his litigation to be judged by the king, by whom was it advisable to be accompanied?
37. Could anybody, whether Tutsi, Hutu or Twa, appeal to the king if he did not want to accept the previous judgement of another authority?
38. If somebody wanted to appeal to the king and was prevented from doing so by some pressure, what happened if the king knew of it?
39. Could army members who were dissatisfied with their chief do anything to have him dismissed?
40. If it was possible, what did they do?
41. What section of the army had to give to the court the cows supplying fresh milk (*inkuke*)?
42. The service of jugs of milk (*igicuba*)?
43. The foodstuffs (*amahovo*)?
44. The bulls to be slaughtered (*indwanyi*)?
45. The steers for divination purposes (*amamana*)?
46. The service of the maintenance of the enclosure?
47. Were all these services and dues given by the patrilineage head or severally by every member of the army?
48. Did the king command the whole country directly or was it divided into several districts?

9:Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

49. What was the name of these districts?
50. What was the name of the royal residence of the place where you lived? 125
51. Do you remember the names of other royal residences or districts?
52. What is the meaning of *umunyamukenke*?
53. What is the meaning of *umynyabutaha*?
54. Who collected the sorghum tribute (*urutete*) for the court?
55. In addition to the judgs of milk and other *inkuks* sent by the royal residences to the court, were there other jugs of milk and other *inkuke* requested by the tax collectors and sent to the residence?
56. Who required these additional jugs of milk from the hill chief?
57. Which cattle provided the milk?
58. What is the meaning of the word *abakoni*?
59. For the benefit of whom were the cattle seized during military expeditions?
60. What is the meaning of the word *umudende*?
61. Could you give the names of five persons who had *umudende*?
62. What is the meaning of the word *impotore*?
63. Could you give the name of five persons who had *impotore*?
64. What is the meaning of the words *gucana uruti*?
65. Could you give the name of five persons for whom the *gucana uruti* ritual has been performed?
66. Who granted the *umudende* badge?
67. Who granted the *impotore* badge?
68. Who performed the ritual of *gucana uruti*?
69. Did the army cattle include only *nyambo*?
70. Were the army-chief's herds regarded as army cattle?
71. Were the cows given as rewards to the warriors for bravery regarded as army cattle?
72. Were the cows received as bride-wealth regarded as army cattle?
73. Were the cows given to an army member regarded as army cows?
74. Were the cows received by exchange by army members regarded as army cattle?
75. Who granted the hill-chief his office?
76. Who was the superior of the hill-chief?
77. What was the difference between *ibikingi* and *umusozi*?
78. Was any *ibikingi* depending directly on the royal court?
79. Who appointed the heads of these royal *ibikingi*?
80. Had the cattle-chief authority over them?
81. Could the land-chief require tribute labour from the people living on these royal *ibikingi*?
82. Were those who had received these *ibikingi* from the king under the authority of the army-chief?
83. Was the cattle-chief allowed to retain a part of the milk he sent to the court?
84. Was the hill-chief allowed to retain a part of the milk he sent to the cattle-chief?

9:Maquet E-5 (1949-1951)1961 FO42 Rundi FO42

125

85. Was the land-chief allowed to retain a part of the foodstuffs he sent to the court?
86. Was the hill-chief allowed to retain a part of the foodstuffs he sent to the land-chief?
87. Give the name, if you can remember it, of a hill on which there was a royal cemetery.
88. Were the people living on such hills obliged to pay taxes (in agricultural produce) to the court?
89. Do you remember the name of a place under the authority of a *mwiru*?
90. Was such a place submitted to the authority of the cattle- and the land-chiefs?
91. Was it possible for the same person to be at the same time land-chief and cattle-chief?
92. Was the office of the cattle-chief granted only to Tutsi or to Hutu as well?
93. Was the office of land-chief granted only to Tutsi or to Hutu as well?
94. Give the names of Hutu you know, who have been land-chiefs or cattle-chiefs.
95. Give the names of Hutu who have been hill-chiefs.
96. Give the names of Hutu who have been army-chiefs.
97. Could a Twa be appointed hill-chief?
98. Give the names of Twa who have been hill-chiefs.
99. Without being ennobled, could a Twa be appointed cattle-chief or land-chief?
100. When a Twa or Hutu was appointed chief, did the Tutsi living under his authority have to obey him?

9: Maquet E-5 (1949-1951) 1961 FO42 Rundi FO42

[P. 177]

APPENDIX 2

Computation of answers given to the Questionnaire by a sample of 300 Tutsi.

128
125

		Absolute figures	*Percentages*
1. Is there a difference between *umulyango* and *uwoko*?	yes	274	91·3
	no	26	8·6
2. Do they know the name of their *umulyango* head?	yes	278	92·6
	no	22	7·3
3. Is there a difference between *inzu* and *umulyango*?	yes	295	98·3
	no	5	1·6
4. Was your family under the authority of one or several army-chiefs?	one	248	82·6
	several	52	17·3
5. Do they know the name of the first army to which their *inzu* belonged?	yes	295	98·3
	no	5	1·6
6. Has your *inzu* belonged to other armies?	yes	90	30·0
	no	210	70·0
7. Have you been *intore*?	yes	187	62·3
	no	113	37·6
8. Was any Ruanda a member of an army?	yes	298	99·3
	no	2	0·6
9. Was it possible to be a member of two armies?	yes	1	0·3
	no	299	99·6
10. Could the army-chief require dues directly from anybody or only through the lineage head?	direct	0	0·0
	lineage head	300	100·0
11. Could a man be incorporated into two *intore* companies?	yes	13	4·3
	no	287	95·6
12. Do they give the name of somebody who has been in such a situation?	yes	13	4·3
	no	287	95·6
13. Was an army member usually the only person of his kin group in the army?	yes	0	0·0
	no	300	100·0
14. Or was he with his married sons?	yes	300	100·0
	no	0	0·0
15. With his unmarried sons?	yes	300	100·0
	no	0	0·0
16. With his brothers?	yes	300	100·0
	no	0	0·0
17. With his brothers' children?	yes	300	100·0
	no	0	0·0

29. Had the army-chief the effective disposal of the *murundo* cows?	yes	300	100·0
	no	0	0·0
30. Could the army-chief order the numbering by himself?	yes	14	4·6
	no	269	89·6
	DK	17	5·6

[1] The symbol DK denotes not only the avowed ignorance of the informants. It has been used also when an answer had to be discarded for other reasons such as its irrelevance indicating that the informant did not understand it, or when it appeared clearly in the interview that the informant was giving any answer for answer's sake, or was answering what he thought the anthropologist wanted.

WOMEN OF BURUNDI: A STUDY OF SOCIAL VALUES*†

Ethel M. Albert

SUCCESS IN REALIZING the central values of Rundi society is, for men and women alike, dependent on inherited caste position, intelligence and "luck".[1] In this feudal, patriarchal society, the central values are political power and authority; wealth—especially cows and lands and, today, money and the goods and services it can purchase; respect and love from one's dependants; and elegance of appearance, manners and material possessions. What is needed before all else for obtaining the good things of life, the Rundi say, is the favour of *Imana*, the Supreme Being or Providence. Divine favour is also requisite to the realization of such other important values as numerous children, protection against one's many enemies, and the retention of goods already obtained. The chief terrestrial asset for realizing values is position in the social hierarchy.[2] The likelihood of happiness is greatest for the *mwami*, the king, and for the men and women of the royal and princely patrilineages. Opportunity and hope diminish progressively with decreasing status in the hierarchy, through the patrilineages of the Tutsi herders, the Hutu farmers and serfs, and, at the bottom, the Twa, potters and pariahs.

Women, in so markedly patriarchal and patrilineal a society as

*Author's translation.

562 that of Burundi, are by definition socially inferior to men. Political power, judicial rights, inheritance of cows and lands, and, indeed, the right to independent action outside the walls of the house, are traditionally accorded to men only.[3] Yet, in point of fact, there are [556] women who enjoy considerable authority and who own or control cows, lands and other forms of wealth. What a Rundikazi—a woman of Burundi—cannot do as a woman, she manages very well to do as a Rundi. The life-history of an individual is limited but not fully determined by the formal structures of the society. The dynamics of the social system make provision for political and economic mobility by which all but the most wretched Rundi know how to profit.

562 The social status of a Rundi is established by the caste and class 557 inherited from the father. A woman is inferior to the men of her own social level and to her husband, but not to men of lower castes [564 and classes than her own. The opportunities of a princess or of a 565] woman of the aristocracy to acquire wealth are fewer than her father's or brother's but much greater than those of an ordinary herder or, certainly, of a poor farmer or serf. Moreover, women use the same techniques that make it possible for some farmers to own herds of cattle, or for some ordinary herders to become wealthier than some nobles. To advance from his official inherited status as far as possible towards happiness, a Rundi needs the favour of a superior in the social hierarchy. All good things come from the superior. The greater the power of the superior—whether the feudal master, the father, or the husband—the greater the ambition of the inferior—whether a herder, a serf or a woman. For the latter, it is sometimes enough to have a father who is impulsive and generous, or a husband who is docile or too stupid to distinguish the truth from a lie or true affection from flattery. Women attain their goals by means of men. There are always a good many of them available for use in projects both large and small.

562 Although caste and character rather than the simple fact of 577 being male or female determine the lot of a Rundi, the mode of life and the behaviour patterns of women are decidedly different from those of men. Unlike a man, a Rundikazi in public does not speak, nor does she look you in the eyes. To each question, she answers: *Ndabizi?*—How should I know? In public, she lets it be thought that she knows nothing about politics, or where her husband is today, or even the wedding date of her daughter. She is the modest and obedient wife of her husband, the mother of her children, the conscientious mistress of her house, who is always working. What-

Ill:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

ever she does, she does within the limits of her various feminine roles. However, the obligations of motherhood, of the household and of wifehood hardly prevent a woman from participating in other activities. Indeed, in Burundi, everyone is busy with politics —the large scale politics of the kingdom for the *abakuru*, the great ones, and the petty politics of daily life for the *abatoyi*, the humble folk. Women are not less interested in it than men, nor peasants less than princes. A peasant widow plays politics to obtain a length of cotton cloth or to protect against her enemies her rights to her little plot of cultivable land. A princess plays politics to obtain jewellery and cows and to decide a princely succession. A woman is sometimes driven by ambition for the sake of her son; sometimes it is to her advantage to help her husband; sometimes she enters the game entirely in her own interest. Peasant or princess, if a Rundikazi understands and desires happiness, if she knows how to dominate men in all subtlety, if she is clever and courageous, she may even defeat her own father or husband in the political game. The ambition of a Rundi or Rundikazi of inferior birth is seriously limited by the restrictive rules of the caste system. However, the ambition of a woman as such encounters only the sometimes purely apparent obstacle of a patriarchal, patrilineal system in which all the legitimate titles to wealth and power are for men.[4] Women who are ambitious and intelligent do not seem to be at a disadvantage in having to function in politics by indirect means and in secret. These are, in any case, the preferred methods of men in the delicate business of increasing power and wealth.

Thus, in Burundi as elsewhere, one finds charming but formidable matriarchs who have considerable authority and who are perhaps more intimidating than the harshest of patriarchs. On the other hand, most of the women of Burundi never even approach realization of the central values of the society. They must work to the limit of their strength so that they will not die of hunger. This is because most Rundi are of the inferior castes, where men and women share the wretchedness of the poor. It would be vain to try to calculate the difference between the misery of a man and that of a woman, if both of them are of inferior birth, without relatives or a feudal protector, old, weak and not very bright.

Neither a Rundikazi who wields great political influence nor a man of low caste who has more political power and wealth than his social superior is regarded as an outlaw. On the contrary, they are looked upon as clever and lucky. The social structure of Burundi, like that of other societies, does not describe behaviour. It only serves as a guide. A society would be crushed by the weight of

182 its own rules, if each infraction were punished strictly according
183 to prescribed sanctions and if all the formal norms were always respected. To be a part of a society is to know which of its rules prescribe or prohibit absolutely or conditionally; whether a particular action which is not forbidden is nevertheless something that is simply "not done"; whether human beings, always imperfect, must in any particular case actually be punished or whether the offence should blinked. Exceptions to the formal rules are not haphazard. Rather, they are ordered by what may be called implicit norms, or secondary or functional norms. These are as well known and as well established as norms which are explicit and formal. Taken together, the explicit, primary norms and the implicit, secondary norms form the "active norms" of the society. By means of secondary norms, society can come to terms with the social and psychological impossibility of a perfect correspondence between the formal norms of the social structure, invented by men in the interest of social order, and the actions of men confronted by the empirical realities of human existence.

183 Each society has its own calculus of values by which it establishes its active norms, the norms to be respected verbally but understood to be neither practical nor practised, and the rules of punishment which are to be taken seriously. It will not be possible to understand the life of the women of Burundi without knowing both the formal norms of the social structure and the secondary, functional norms. The life of a Rundikazi is made up of various
183 elements. To reconstruct it, we shall begin with a description of
562 women as members of Rundi society, of which they form an integral part. We shall then describe women in the specifically feminine roles, and we shall conclude with an account of the devices used by women to realize the values of their patriarchal society.

* * *

631 The Rundi describe their society as a hierarchy ordered by
643 *Imana*, the Supreme Being, who is at its summit. Among human beings, it is the *mwami*, the king, who is superior to all. In the past,
[795] there was also Kiranga, the legendary head of a possession cult. He was said to be of approximately the same rank as the *mwami*.[5] Immediately below the king are the *baganwa*, the princes—four
631 generations of the descendents of a king. The *mwami* and the
635 *baganwa* are the rulers of the Rundi. In the traditional system, the power of the *mwami* was defined by his inheritence of absolute
643 royal power and of the entire country, together with all its goods,

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

as his private property. No Rundi had rights, power, lands, or cows, except as the *mwami* granted. He distributed his lands and cows and administrative power to those of his brothers and parallel cousins who were on his side in the political battles. These *baganwa*, today called "chiefs", become the vassals of the *mwami*. The *baganwa* distributed the lands and cows they received to *batware*, captains, today called "sub-chiefs", who became their vassals and who in turn procured vassals for themselves by giving to their inferiors small plots of land and a cow here and there. Changes resulting from European influence are gradually eliminating the feudal characteristics of the social system. However, the principle and the order of the hierarchy have so far remained unchanged.

Below the princes in the hierarchy are the *abafasoni*, nobles, those who were once princes but who at the fifth generation are so no longer and who will one day be numbered among the commoners. To describe the commoners, it is necessary to take account of the three *aboko*, castes—the Tutsi, the Hutu and the Twa.[6] The Tutsi are by far of the highest rank among the commoners. Although they make up only ten per cent of the population, they are the masters of the Hutu, who make up more than 85 per cent of the population. It is believed that the Tutsi are of Hamitic or Nilo-Hamitic origin, whereas the Hutu are clearly a part of the Bantu hoe-culture, characteristic of East and Central Africa.[7] Burundi is beyond doubt a "cattle-complex" country. The Tutsi are herders, and nobody debates the superiority of the herders. It is said that the Tutsi, once formidable warriors, on their arrival in the country about three centuries ago, had no need to conquer the Hutu by using their spears. The Hutu to this day willingly become the serfs of the herders in order to receive cows from them. Between the princes and the Tutsi, there is very little difference in rank. Between the rank of the Tutsi and that of the Hutu, there is a very great difference. The Tutsi and the Tutsikazi disdain the Hutu and the Hutukazi, considering them their born servants. Nevertheless, the princes or the king sometimes appoint Hutu to be *batware*. A Hutu thus honoured is the political superior of the Tutsi under his authority. This circumstance in no way modifies his social inferiority. On the contrary, it exacerbates race prejudice. No social mechanism can change the caste in which an individual is born. The Tutsi do not drink with the Hutu, even when they become administrators, for one does not drink with one's social inferiors. The next downward step in the hierarchy takes us to the bottom of the social ladder and almost outside the society to the

WTA 18

564 Twa. A pygmoid people, the Twa constitute less than 1·5 per cent
565 of the population. Potters and hunters in the process of becoming farmers, the Twa are pariahs, excluded almost completely from social relations with all the other Rundi and detested by them.[8] With ill grace, the Rundi grant that the Twakazi are excellent dancers and that people need the pots that they make.

564 It is by now evident that the Rundi are somewhat sensitive to differences of rank, but we have by no means exhausted the social
613 distinctions they make. Within each caste there are *abaryango*, patrilineages (literally, "doors"), which are arranged in hierarchical order, more or less as social classes. Distinctions are made among patrilineages which are called very good, good, neither good nor bad, and bad. Thus, a Tutsi of a very good patrilineage is the social superior of a Tutsi in a patrilineage that is merely good or neither
[583] good nor bad. The former expects to receive a dowry of at least four cows for his daughter, whereas the others must be satisfied with one. Hutu or Hutukazi of good patrilineages are clearly superior to the other Hutu, and a well-born Twa looks upon the other Twa as his social inferiors. Men and women together at the higher levels are superior to those, both men and women, of the inferior levels, although within each class, the men are superior to the women, and, as a general rule, the older are superior to the
[554 younger. Taken altogether, to the childless youngest daughter of
643] one of the bad patrilineages of the Twa, every Rundi without exception is the superior, and every Rundi is inferior to the *mwami*.

562 Although a woman's caste remains unchanged throughout her
564 life, her definitive place in society is determined by her marriage. In general, fathers seek spouses for their children from their own
644 caste and class. However, the *mwami* and the more important
582 *baganwa* take their wives from among a dozen of the very good
613 Tutsi patrilineages. The Tutsikazi of these patrilineages, through
643 such marriages, move up in the social hierarchy. They will be the mothers of princes. The one who becomes the *mwamikazi*, the queen-mother, will be the most important woman in the country, the superior of most Rundi men. She will receive substantial presents and much respect, and she will have considerable influence
[766] in the affairs of the kingdom. After death, she will have special funeral rites and will be buried in a cemetery reserved for the remains of the queen-mothers. Although almost any woman of a very good Tutsi patrilineage may be called a *mwamikazi*, it is only
562 a figurative way of saying that she is well born. The status of women
582 born in the royal and princely patrilineages is somewhat ambigu-
613 ous. They will be married by Tutsi of the patrilineages that supply

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

wives to the *mwami* and the *baganwa* or by a cross-cousin. (The traditional Rundi rule favouring cross-cousin marriage is being abandoned by all classes of the population as the influence of Christianity increases). 562 582 613

No other women than those of the very good Tutsi patrilineages can rise socially by means of marriage. The marriage rule for all men except the king and the princes requires that a man marry a woman of the same rank as his own or of a higher rank. A woman cannot be declassed, and caste rules are not relevant. If a Rundi male should marry a woman of inferior rank—the very idea makes men tremble with disgust—he would immediately have to be declassed to the rank of his wife.[9] There are occasionally informal sexual unions between Tutsi and Hutukazi. A natural child born of such a union would not be formally acknowledged by his father, although he might provide a cow for his son and a Hutu husband for the mother of his child. 562 557 [582] [558] [85] 848

The Tutsi, it is said, give a dowry of cows, the Hutu a dowry of hoes. However, the Hutu who are liked by princes and become *batware* can give cows. A poverty stricken herder may give his daughter in marriage to a wealthy Hutu. Because it is always the father who determines the caste and patrilineage of children, a Tutsikazi may find herself the mother of Hutu children. She will be humiliated by the necessity to obey a social inferior and she will be disdained by the Tutsi and the more fortunate Tutsikazi. On the other hand, poverty is shameful and painful. Moreover, a Tutsikazi will probably be treated better by a Hutu than by a Tutsi husband. Always a Hutu, the husband nevertheless enjoys a certain prestige when he has a wife of superior status. He expects many children from her—it is said that Tutsikazi are more fertile than Hutukazi—and his children will have the good manners and intelligence of a Tutsi, his sons will know how to get rich and thereby acquire Tutsi wives. 557 562 564 583 [851] [842]

For each caste, there are stereotypes of physical type and character. Great height, thinness, and an extraordinarily narrow skull are typical of the Tutsi, and great height, generous fleshy covering and a light skin of Tutsikazi.[10] A Hutu five feet tall will not be likely to make a mistake about his inferiority in the presence of a Tutsi of six and one-half or seven feet tall, nor is a Twakazi of four feet eight inches in height who is dancing for a six-foot tall Tutsikazi likely to forget her place in the social scale. Among the Tutsi, the women seem to be much fleshier and somewhat shorter than the men. The Hutukazi and the Twakazi, however, seem to be taller and more substantially constructed than the men of the 142 564 826

N2 same caste. There are some short Tutsi and some tall Hutu. This
564 makes no difference, for physical indices are not needed to dis-
826 tinguish Tutsi from Hutu. Recognition is based on their manner, their way of speaking, and their behaviour. Everybody agrees that
564 the Tutsi and the Tutsikazi are born more intelligent—or, at least, cleverer—than the Hutu. This can be seen, it is said, because the
827 Tutsi make the Hutu work for them without necessarily giving
829 anything in return. There is general agreement that the Tutsi have a pronounced tendency to avarice and that old Tutsikazi are the worst misers in the world. Further, the Tutsi are most accomplished rhetoricians. The Hutu mutter and the Hutukazi lisp, and they are incapable of a good lie or of an elegant impromptu oration which seem second nature to Tutsi. Here, however, a contrast must be noted between Tutsi men and women: the boys are taught to speak well, the girls to be silent except to offer polite, evasive phrases.

564 It is believed that the Tutsi are physically and psychologically more delicate than the Hutu. They are not made, as the Hutu are,
827 to work in the fields, to carry heavy burdens on their heads, to eat the solid, heavy food of the farmers. The Hutu pity the Tutsi when the latter are obliged by the government to do manual labour.
564 True delicacy is shown by the *imfura*, literally the first born, more generally any person of very high birth, whose character and conduct constitute the model of nobility. The *imfura*, it is said, are so delicate that they take only liquid nourishment, especially milk and beer. All the Rundi know perfectly well that the Tutsi and
[262] their wives eat beef, cereals and vegetables. They are, however, so much taken by the myth of a liquid diet for superiors that even
[186] those who have been servants in the homes of Europeans—by definition, superiors—insist that the European diet is "liquid", that it does not give the strength needed for manual labour. Other-
[461] wise stated, persons of superior status do not work; their inferiors work for them. Elegance and dignity are joined together in everything that relates to the *imfura*. They wear beautiful clothing and much jewellery; they walk slowly and in front of others, or they are carried in a litter (although today the well-to-do prefer to travel by automobile); they speak softly, they never show their emotions; they are always discreet, they never discuss important matters in public. In fact, the dignity of well-born Tutsi and Tutsikazi seems sometimes to be primarily a frightening coldness and reserve. To respect the *imfura* and to fear them amounts to much the same thing.

[826 It is necessary to stay in Burundi for a long time to see behind
827] the stereotypes of the castes. In brief, it is assumed that the Tutsi

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

and Tutsikazi are tall, dignified and elegant; they know how to give the impression of great control, of intelligence and of refinement. Hutu and Hutukazi are plainly farmers, short and sturdy, clumsy, made for work, and they seem to be vulgar, stupid, incapable of controlling their emotions or of speaking well. Nothing has so far been said of the poor Twa: like the Rundi, we have forgotten them. The Twa, pariahs, are, say the Rundi, without shame. They eat anything, they employ bad language. It is necessary to pay them for the pots their women make, for no Rundi will participate in economic exchanges of gifts and services or in social relations with them. We shall see further on that the stereotypes of superiors and inferiors according to caste can be used also in describing all other superior-inferior relationships.

To complete the description of the hierarchical order of Rundi society, it is necessary to include the kinship system. The familial hierarchy has the same pattern as the social hierarchy. All benefactors are called *umuvyeyi*, parent. The *mwami* is like a benevolent father, it is said, who likes the Rundi, his children. The nursing mother is the symbol of feminine generosity. The best way to thank a benefactress is by means of the formula: I am a nursing child at your generous breasts, or alternatively: you are to me as a freshened cow. The herders sometimes argue about the relative superiority of women and cows; both sources of milk appear to have their partisans.

Whatever the position of an individual in the social hierarchy, he will also have his place in the familial hierarchy. The head of a patrilineage, prince or pariah, is at the summit of the familial hierarchy. He is the *mukuru*, the highest, the oldest by rank, though not necessarily by chronological age. He speaks first, he drinks first, he must be respected and obeyed by his brothers, his sons, and the women of the patrilineage. The household consisting of a man and his wife and children is the smallest independent unit of Rundi society. There, the father of the family is *nyene rugo*, the master of his household. His children and his wife—if he is polygamous, his wives—owe him respect and obedience. Addressed in the familiar by his superiors, the father of the family addresses his inferiors in the familiar, in his capacity as a patriarch of almost absolute power. His wife kneels before him when she offers him his gourd of beer, and his child kneels before him to receive his blessing. (The Old Testament comes inevitably to mind at the sight.) Sons receive a part of their father's property as their inheritence not later than the time they receive a wife but are all their lives subjugated to their father's authority. The father chooses one of his

592 sons as his heritor. The mother chooses one of her daughters as her
593 heritor, to whom she will leave her clothing, her baskets and her
428 pot of perfumed butter. Daughters inherit nothing from their
[591] father. Sooner or later, they leave his property to go to live with their husbands. Nevertheless, when a woman says, "my home", she is referring to her father's kraal. All her life she is, like her
562 brothers, under her father's authority. After marriage she must also
593 obey her husband, but her father will always have the greater authority over her. She herself is the superior of her younger sisters, of her children, and if there are any, of the inferiors, servants and serfs of her husband.

554 The inferiority of women as women is only a special case of the general form of inferiority in Rundi society. However, both men and
562 women have multiple roles in society. As a result, the superiority and inferiority of an individual are relative, rather than absolute, except for the *mwami* at the top of the hierarchy and the poor little Twakazi at the bottom. It has already been indicated that a social superior is sometimes inferior in the hierarchy of politics and economics. Also, the eldest brother may be the inferior of the youngest, in the likely event that the latter is chosen as the father's heritor. A
[564] Tutsikazi, the social inferior of her father and husband (provided the latter is not a Hutu), is nevertheless the superior of all the Hutu and Twa, of her children and those Tutsi who are the inferiors of her husband. Each Rundi must learn his place in relation to that of every other, calculate the distance and direction of the relationship, and find his way as well as he can through the social labyrinth.

554 Despite the striking simplicity of its structure, the social hierarchy
557 of Burundi allows for mobility and for some very complex variations in conduct. There is incontestable evidence of both constant
578 efforts of men and women to improve their positions in society and of the associated phenomena of social instability and of fierce competition among the inferiors of a given superior. One may
[183] risk the generalization that the norms and rules dictated by the social structure will not survive a conflict with the values of wealth and power. One may say also that the greater the wealth and power of the superior, the more acute the rivalry and the more bitter the struggles among his inferiors. Thus, quarrels among Hutu, who are usually very poor, are rarely more than noisy spats quickly forgotten, while the silent hatreds of the Tutsi, born of the desire to own cows, sometimes explode in murder and fratricide.
[595] Quarrels among sisters, who inherit nothing of value, are rarely as bitter or prolonged as quarrels among brothers. On the other hand,

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

rivalry among a man's plural wives and among sisters-in-law constitutes a serious domestic problem. Moreover, there are persistent rumours which have never been effectively squelched that the late queen-mother arranged for the death of her son, the former *mwami*, for political reasons. Maternal tenderness and friendship cannot stand up against the pressures of economic and political self-interest. Moreover, instability is a result, probably an inevitable one, of the very wide powers of superiors over their inferiors. 554 557 578 [595]

Ubukuru, superiority or seniority, is everywhere of the same pattern—in the relationship between the *mwami* and his subjects, between parents and children, between Tutsi and Hutu, between husband and wife. The superior is active, the inferior passive. The superior commands, the other obeys. Out of respect, the inferior waits while the superior drinks first, eats first, walks ahead of him. If there are burdens to carry, it is the inferior who carries them—the Hutu for his Tutsi master, the wife for her husband, the children for their mother. A powerful taboo forbids a Hutu to look on while a prince or a Tutsi eats or drinks. There is no comparable taboo in domestic life, but the husband usually eats alone, or he may invite his wife to join him. Children, always inferiors, always eat afterwards and apart. 554 264 554 [858]

The concept of *ubukuru* as chronological seniority is relevant to changes in social role according to age. The changes of social status for women, from child and adolescent to wife and mother, then to mother-in-law and grandmother, constitute a progression towards independence, power and the other attributes of superiority. For men, there is a progression of approximately the same kind. The boy during childhood and adolescence is of no importance; at marriage, a man is superior to his wife and children, but he remains subordinated to the authority of his father and the lineage chief; if he is clever and wealthy enough to pay for the beer for the ceremony, he will be initiated when he is about forty-five years old, as an *umushingantahe*, a mature man qualified to serve as a judge and councillor. In his old age, when he has become feeble, a man is obliged to retire from active participation in important matters. The principle of increase of power with age is valid throughout the life-span for women. Nevertheless, superiority is not determined by chronological age but by social role. 554 561 562 [885]

To ask for a gift, say the Rundi, is to honour; to give a gift is to like. It is the superior who gives, the inferior who asks. In order to receive, it is necessary to obey, but everything depends on the will and the affection of the superior. He will give if he wants to; if not 431 554

10: Albert E-5 (1956-1957)1963
FO42 Rundi FO42

431 he will not give; and if he wishes, he will take back what he has
554 already given in order to give it to someone he likes better. An inferior, whether it be the serf of a Tutsi or a wife in relation to her husband, can protest only in vain that he has worked hard, that he has always been docile and obedient, that he has always liked and respected his superior. There are no formal sanctions against a superior who accepts services and goods from his inferior and gives him nothing in return. However, there are more subtle
431 measures to be taken against him. An inferior, if he has any
554 alternative open to him, will abandon an ungenerous superior. Sometimes a Tutsi deserts a prince who has not given him cows
626 or a subchiefdom, in order to enter service with one who is more generous and powerful. A son may leave the property of his father
[564] if he is not satisfied with his heritage and will enter service with a stranger who promises to give him lands and cows. A woman will
[593] return to her father's home if her husband mistreats her, and ask her father to find her a better husband. When those who are dissatisfied complain publicly about ungenerous superiors, they will have difficulty in replacing the inferiors who desert them. However, if one does not find another superior with whom to take refuge, it is necessary to stay with the bad one and to resign oneself to unhappiness, sometimes to hunger, sometimes to death. For,
554 physical violence is the privilege of the superior. It is up to him to
681 instruct and correct his inferiors by words and blows. Or, if he is in a bad humour, his inferiors are always around, and he can take
[861] out his displeasure on them. Children expect to be beaten by their
566 parents, serfs and servants by their master and mistress, and a
[593] woman, even an *imfura*, considers it quite normal for her husband to beat her, especially if she has been difficult or if he has had a good deal to drink. According to the ideal, a superior is always benevolent, generous, wise and just. Beating does not suggest a lack of affection. If the superior does not give presents to his inferior, then it is known that he does not like him.

431 In principle, *umutima*, sentiment (literally, "the heart"), is always
554 combined with the material value of a gift. *Urukundo*, love or affection, rather than law or rights, explains the gifts of superiors
928 and the services rendered by inferiors. It is possible that the Rundi insist so much upon the importance of sentiment and love because they have so little of them. However this may be, there is no
[162] doubting their joy and sense of well-being when they receive even the smallest present. However, they mistrust *urukundo:* love can change to hate very quickly, they say. Inferiors are always afraid that the superior will stop liking them or will send them packing

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

or will take back the cow he has given. In turn, superiors consider defection and disloyalty as the worst of crimes. Even if a servant is insolent and lazy, he will be well taken care of if he always tells his master whatever news and rumours he has heard about him. A woman who is disagreeable, lazy or even sterile will not be chased from the household if she is clever in helping her husband with his business and if she never speaks ill of him. An individual may have confidence only in his blood-friend, male or female. However, occasionally, true friendship ties a vassal to his chief or a *mwami-kazi* to her confidential servant. In these secure and friendly relationships, the principals tell each other their troubles, give each other advice, and remain loyal to each other forever. It is a matter for much discussion when a husband and wife stay together for 20 years, both married and mutually affectionate. However, neighbours, acquaintances, relatives, and spouses, it is said, do not remain friendly for a very long time. Several months, at most two or three years, suffice to create reasons for hatred, jealousy, vengeance, burning a house, calumny, fights, and visits to the witch to obtain poison.

The maximum of instability is associated with the role of the *abatoni*, the favourites. Fierce rivalry is considered normal among inferiors of the same rank—the men of the princely courts, brothers, plural wives, the servants of the Tutsi. The favourite son or wife is envied by his or her peers and must expect quarrels, poison and calumny. Because a superior may easily change his mind about a favourite, someone else will wait hopefully to take his place, In fact, happiness—many children, a good harvest, a cow which gives much milk, a present large or small—is the mark of the favourites of *Imana* and of human beings. One has received, one is liked by a superior, one is hated by all those who have not received. By this syllogism, it is logical for a rich Tutsi to be jealous both of a poor Hutukazi who has just received from her son-in-law a length of cheap cotton cloth and of a rich Tutsi who has just received another cow. To receive and be liked are identical. Together, they constitute the core of the well-being of inferiors.

Although *ubgenge*, intelligence, is normally accounted an attribute of superiors, it is well understood that inferiors have great need of it. The superior must be intelligent in order to exercise his authority, to judge well of his inferiors, to know the right moment to give and to take back. The *ubgenge* of an inferior has obviously to be of another kind. His goal is to make his superior like him. He must therefore understand his character, his moods, his fears, his desires. He must learn how to flatter him and to seem

always loyal and devoted. The *umutoni* is before all else an informer. It is the way to show his interest in the well-being of his superior. It is for this that he is favoured and given gifts. Men who are poor or women who are by law without property, if they know how to play the role of the inferior effectively, can become rich, have their advice heeded, and find life most agreeable.

Attitudes and behaviour change according to role. Everyone has his turn as an inferior, if not to a human being, then to *Imana*. Adult Rundi have their turn as superiors to their children and to various others according to their rank. There is an astonishing ease and rapidity of psychological change according to the situation. The very man who explains to you today that he has sent his wife back home because she did not work enough, will tell you tomorrow that he was dismissed by his master for no other reason than that his enemies calumniated him—he does not see that he has been disobedient or lazy. A woman who has just served her husband his dinner from a humble, kneeling position, on leaving the house, gives haughty, authoritative commands to the men who work for her. Like any other superior, a woman as the mistress of her house, as a mother, and as an elder sister, commands and punishes. She is respected, she chooses her favourites, and her inferiors ask her for presents. When her role is that of an inferior, she must be obedient, she must work, she must ask for presents, she tries to win the affection of her superior, and she is jealous of those who receive presents.

The Rundi conception of the innate differences between men and women is as well-defined as their conception of the innate differences among the various castes and of much the same content. Both Tutsi and Hutu and men and women agree on the stereotypic differences of physique and of psychology between the two sexes. To begin with, it is believed that women are better suited by nature than men for manual labour. They work better and longer in the fields than men. The Hutukazi are able to carry on their heads burdens twice as heavy as those which men can carry. It is generally known that there are more old men than old women and that women age more quickly than men. The Rundi refuse categorically the hypothesis that those who work harder die younger. Men and women both insist that women are made for work and that they die younger because of the hardships of child-bearing. It is nonetheless believed that the male role is more important than that of the female in procreation. Woman, says the proverb, is only the passive earth; it is the man who provides the seed.

Stronger than men, women are thought to be less agile. Conse-

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

quently, in domestic battles, the husband can vanquish the wife. 562
He must, nevertheless, be on his guard if she becomes very angry. 593
For, even though men (as superiors) are able to control their anger, women (as inferiors) are likely to lose their heads. She can take a knife and kill her husband, says the Hutu; she will poison her husband, says the Tutsi. Furthermore, women are regarded as less courageous than men in the presence of enemies; they are more easily discouraged when there is misfortune; they cry more easily; and they do not conceal their emotions. No attention whatever is paid to any evidence which might contradict the stereotype.

A man who is jealous of his wife's lovers is considered an 152
imbecile. Particularly among the rich, a wife can show her fidelity 593
to her husband's interests by going to bed with his superiors, if by 837
this means she can calm the superior or obtain valuable information [557]
from him. Out of delicacy, the husband visits his neighbours when his superior comes to call. On the other hand, most family troubles are explained by the presumably unlimited capacity of women for jealousy. At marriage, a Rundikazi is supposed to be a virgin. [831]
Once she is married, it is said, she has great and constant need for sexual satisfaction. A man is privileged, if not obliged, to sleep [833]
with all his wives, the wives of his brothers and of his parallel cousins, his female cross-cousins, the wives of his male cross-cousins, the sisters and female cross- and parallel-cousins of his wife, and various other ladies. The kinship system is obviously a [601]
highly classificatory one. Nevertheless, men must discharge their sexual obligations in secret. If a husband finds his wife in bed with another man, he is morally obligated to beat his wife and to [578]
quarrel a little with the man. Far more serious, if a woman sees her husband entering the house of his sister-in-law, there will be no more peace for him at home. A woman, it was explained, is jealous of those with whom her husband sleeps, because the others will perhaps get presents out of him that she wants for herself, or perhaps one of the other women will speak against her to persuade her husband to divorce her. If there appear to be contradictions here, it is probably due to the lack of a truly Rundi perspective.

It is not for nothing, say the Rundi, that the wives of a poly- 152
gamist are called *abakeba*, rivals.[11] Each woman watches every 595
other wife—the presents she has received from her husband, the size of the property she has been given to cultivate and as an inheritance for her sons, the cows given for her household, the number of children she has, the number of nights the husband spends with her. To calumniate one's *abakeba*, to poison them, to [832]
quarrel with them, to give the husband *inzaratsi*—the potion that

152 diverts his love to the one that administers it to him—or to look
595 for magic that will make the husband impotent when he is with
[832] other women, every sort of vengeance is normal among the wives of a polygamist. A Tutsi polygamist would not dare to settle his
152 wives on one property. He places them on plots as distant from
564 each other as possible. The Hutu polygamist congratulates himself
595 that he can put all his wives together in one house. He is not rich, hence there are no motives for hatred under his roof. In this the Rundi were not unanimous: The Hutu insist that their wives obey them without backtalk but that Tutsi wives dominate their husbands. Against this idea, the Tutsi protested perhaps too much, while the idea evoked a Mona Lisa smile from the Tutsikazi. The enquirer was unable to seek verification in the houses themselves. There was talk about Tutsi domestic tyrants and a few of them were known, but the bulk of the evidence favours the Hutu point of view.

562 The contrasts between men and women parallel the Tutsi-Hutu case. Women are stronger than men, but clumsy and less agile; they are less stable and are less able to hide and control their emotions; they are much given to jealousy and competition in seeking the favour of the superior; they work for their husbands; they ask gifts of them. Although women as women are without doubt inferiors, their inferiority by no means excludes the possibility that character and behaviour will be reversed when they are in the roles of superiors.

562 Distinctions between the sexes begin at birth and increase with
868 maturity. A little boy wears no clothing. His sister, from the first day of her life, wears the *ubudede*, a string of beads worn around
[29] her hips, which later in her life will be added to, especially through gifts from her husband. Except for the beads, however, there is very little attention paid to sex differences in infancy. Excepting
[867 among the wealthy, introduction to economic and social responsibilities occurs very early. Children, like any inferiors, must work
858] and must obey the instructions and commands of their superiors. Boys are in the charge of their fathers and girls of their mothers. Apprenticeship begins earlier for girls than for boys. When she is three years old, a little girl, Tutsi or Hutu, is already old enough to accompany her mother to the fields and follow her about the house. At six, she knows how to sweep the yard, do a little work with the hoe, and carry on her head a sizeable basket of beans or a large gourd of water. At the same age, her brother, particularly among the herders, begins at last his apprenticeship with his father. Among the Hutu, boys are sometimes instructed by their mother or grand-

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

mother how to farm and to carry burdens on their heads. At 12, boys and girls should be able to work well and independently. If not, they are beaten or deprived of their dinner to encourage them to learn. There is, nevertheless, time to play with other children, the boys with other boys, the girls with other girls.

Moral taboos have no significance before adolescence. Children may eat anything at all, without penalty. A young girl may milk a cow: she is not yet a woman, say the Rundi, she is still like her brother. Brothers and sisters sleep together in the same bed and are covered by the same mat. If sometimes there are sexual experiments, these are not called incest. They are only children, they are not responsible, they cannot sin. At puberty, a young girl is removed from the common bedroom of the children. Boys seem to mature much later than girls. Moreover, the question of the dowry enters to delay their marriage. It is said that girls want to be married very early. By the time they have reached puberty, they have already begun to play with other young girls, each helping the other to develop the private parts to a maximum size in anticipation of the pleasures of the marriage bed. A mother warns her daughter that she must absolutely remain a virgin until her marriage, or, at least, that she does not dare to become pregnant if she has not yet been asked for and paid for. In the past, an unmarried mother-to-be would have been killed and her father's property confiscated. Today, there are illegitimate children, and nobody knows quite what to do with them. (One way in which a disgruntled wife can revenge herself upon her husband is by allowing a grown daughter to become pregnant before she is paid for.) At all events, it is up to the mother of a nubile daughter to watch her carefully.

Very strong taboos forbid all contact between a father and his daughter after she has been weaned, except for mutual greetings and for several minor services which a daughter performs for her father.[18] It is customary for girls to wear only a skirt while working, and in the past, a young girl might wear nothing at all or only a leopard skin around her hips. A father must avert his eyes if a daughter is working with her bosom exposed. If a father wishes some information about his daughter, or if he wishes to say something to her, he must ask his wife to speak to their daughter. If a young girl is to be punished, it is the mother who will beat her, never the father. The same taboos apply to the father's brothers. All are called *data*, father. Fathers never enter the house in which a married daughter lives with her husband. The explanation offered for these strong taboos to separate father from mature

583 784 daughter is the necessity to prevent incest. The taboo is strong enough to serve as the basis of the oath in court. A man "swears on his daughter", by saying, "If a lie, may I do that act with my daughter, the one named such-and-such".

581 Despite the physical and social distance between father and daughter, they are jointly interested in the earliest possible marriage for her. She is impatient for the pleasures and privileges of the married woman. He is looking forward to the dowry, which he keeps entirely for himself. It is possible that a mother will do her best to put off the marriage. She does not stand to profit from it at all. On the contrary, the departure of her daughter diminishes the available labour supply for work in the home and in the fields. Young people brought up in the homes of the great must wait a 582 long time before their master or mistress will allow them to leave to be married. The *inchoreke*, young women of good family who are [357] the personal servants of princes and princesses, are often 25 years old before they are married. The *abakamyi*, young men of good family who milk for the great families, are sometimes 35 or 40 at marriage. Among the commoners, the children of the wealthy are [565] able to marry early, the girls at 15 or 16 and the boys at 18. Poor people envy them and have to wait five to ten years longer before they can be married.

584 A girl's father waits for a visit from a man who is looking for a wife for his son. Sometimes, a boy may ask his father to dower a young girl to whom he has taken a fancy. However, it is the two fathers who decide everything. Neither the girl nor the boy need be formally advised of their father's decisions. Nevertheless, a father will probably tell his son and a mother will tell her daughter. [564] If not, a girl among the Tutsi of western Burundi will guess that she is engaged from the arrival of the prescribed number of pots of beer from the family asking for her and from the gifts of beer and food sent by relatives for the celebration. She will guess the approach of the wedding day most easily from the construction of the [591] *indaro*, a temporary dwelling, in her father's yard, where she will 342 live with her husband for the first year of the marriage. (On the wedding day, the girl's father must absent himself from his house.) 591 If the new husband and wife are satisfied with each other and if they have a child, they will leave to take up permanent residence on the property the young husband has received from his father.

585 The Tutsi in the east of Burundi and the Hutu marry at the home [184] of the groom's father. It is then the young man who deduces from the activities in the household that he will soon be married. The intended bride should properly be told who her intended bride-

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

groom is so that she can obey the rule forbidding her to look at or speak to the man she is to marry. There are nonetheless young people, orphans or children whose parents are inconsiderate, who do not know until the wedding day that arrangements have been made to marry them. If this happens to a young girl, it is said, she becomes very frightened by the sudden necessity to go perhaps very far away to live with a strange family and with a man whom she has probably never seen. Although the young girl receives new clothes from the family of her bridegroom, although she goes to her new home accompanied by a representative of her family and by her friends and cousins (neither her mother nor her father may attend the wedding at the groom's home), the happy dreams of marriage change into nightmares. The bride is hardly reassured by a wedding ceremony that is a symbolic kidnapping. The hostility between the two patrilineages is supposed to be play-acting, but under the influence of beer, it often becomes genuine quarrelling. Weddings are almost invariably marked by arguments and mutual criticisms which are sometimes very bitter. In truth, hatred for a husband may still burn in the memory of an elderly lady as she speaks of her wedding of 50 years ago, if she had not been told in advance and if her husband on their wedding night behaved like a wild young man and took her by force and against her will. If the groom and parents-in-law are kind, they will be able to calm the fears of a bride. For the four days of the honeymoon, they are indulgent towards her. The husband and his brothers give her little gifts to persuade her to eat, they bribe her so that she will talk to them, and the mother-in-law sends beer and food. In this way, she can become accustomed to her new home.

585 [613 578] [607 606]

A father who is wise and kind chooses a good husband for his daughter. He will point out that a bad marriage is not worth the trouble. If soon after the marriage his daughter returns home with a legitimate reason for having left her husband, the father will have to return the dowry and wait for someone else to come and ask for his daughter. It sometimes happens that a father is more interested in the dowry than in the happiness of his daughter. He will then accept the first offer made him, even if it comes from a man he knows is bad, or, scandal of scandals, from an old man. (The latter connotes incest, involving as it does a male of an older generation than the female.) Or, if the father is dead, a girl may be given by her paternal uncle to anyone who comes along. Men of this kind do not allow the women to come back home again when they are dissatisfied with their husbands. An orphan or the daughter of a bad father will have the good luck to please

584 [586] [835] 593 776

10: Albert E-5 (1956-1957)1963
FO42 Rundi FO42

593 her husband and to have a good life with him only if she is liked
716 by *Imana*.

564 The dowry represents wealth for the father. The average Tutsi
expects to receive a cow for his daughter, an average Hutu eight
583 hoes. However, today the Hutu often and the Tutsi sometimes pay
[556] the dowry in cash. For the husband, the dowry purchases the
[718] children produced by the woman during the term of their marriage. For the young woman, the dowry is a measure of her social value. She has discussed with other girls how much a man will have to give for her. Young Tutsikazi flatter each other by saying that they are certainly worth four cows—the dowry of a Tutsikazi of a very good patrilineage. A Hutukazi may boast of the 2,500 Congo francs (50 dollars) that were given for her, for everyone knows that 1,500 Congo francs (30 dollars) is the average for a Hutukazi. Or, a poor woman who is slightly mad is overcome by shame, for everyone knows that her father has given her in marriage without demanding a dowry. The more one has given for a young woman,
[554] the higher her social status. The wife of a wealthy man will have
[556] more clothes and less work, more respect and less hardship, than the wife of a poor man.

562 Although a young woman looks forward to marriage to rise
above her painfully low status as a female child, she knows very
585 well that what lies before her is a lifetime of work and that she will for a long time be under the authority of others. She is in effect sent from her father's household, where she works for her mother, to her husband's household, where she works for her husband and her mother-in-law. Regarding the sentiments of the husband towards his wife, or of men in general towards women, it is enough
[538] to mention that in the rich oral literature of Burundi, there is not one poem or song of love. At best, among the *amazina*—praise-
[533] poems, most of which praise the king or a generous patron or the man himself as a warrior—there are several which praise a good wife. She is praised for her cleverness, for her indefatigable efforts on behalf of her husband, for the cleanness of the butter she churns, and she may be given the compliment of comparison with a cow. In all truth, a man may sometimes have a great love, or be infatuated
[152] with his wife or his mistress. He does not talk about it very much; he would certainly not talk about it with strangers. At all events, love is not relevant to married life except in the general form it takes as the basis of the exchange of gifts and services between superiors and inferiors.

591 Every married woman of every class and caste works for her
[593] husband. Often a bride goes to live in the same household with her

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

mother-in-law or with a sister-in-law, though sometimes she may be alone on a part of her husband's property at some distance from his father's household. The social division of labour assigns to women nearly total responsibility for anything that is related to food, small children and the house. Men are rarely at home. Among the herders, the men are out in the pastures with the cattle. During the dry season, they may have to go for pasture a long way from home and build temporary dwellings for the season. A Hutu farmer works in the fields of his master, and these may be very far from the plot of land granted him for himself and his family.[13] The wives of a polygamist are each in turn necessarily alone. Moreover, men often have to go on trips for their superiors or to look after their own interests. Sometimes a trip lasts only two or three days, sometimes the man is absent from home for several months or for an entire year. We see here the continuing influence of an earlier day of a military, feudal society. Before 1920, every Tutsi was obliged to put in military service at the court of his prince. His wife sent him food, and he visited her at home from time to time, but he had to spend many months in service. Hutu sometimes went to war, but most of them stayed on the property of their feudal masters to work. Even today, young Rundi, both Hutu and Tutsi, leave home to earn money for the dowry and then very soon after marriage leave again to make money for other purposes. They work for their Rundi superiors, or in Uganda, or Tanganyika, or the European cities of Burundi. As administrators, as porters, as cow-herds, they travel a great deal. The women are responsible for the household during the frequent and often prolonged absences of the men.

In all other things the inferior of her husband, a Rundikazi is absolute proprietor of the food supply. The land she farms is her husband's. The husband gives her orders to work and decides what will be grown, and the husband inspects the granaries and the pots of butter. However, it is strictly forbidden for men to take so much as a handful of beans, raw or cooked, or a bit of butter without the wife's permission. If one asks what would happen to a man who might steal food from his wife, it is said: that doesn't happen, nobody would drink with that sort of fellow. This rule is taken very seriously. If a man wants food for himself for any reason, he must grow it himself. He may not touch any of the food raised by his wife. It is said that the woman has raised the food even when the farmhands and the serfs of the husband have done the actual work. What is meant is that the household food supply is always under the control of the wife.

WTA 14

10: Albert E-5 (1956-1957)1963
FO42 Rundi FO42
Hutu

Ethel M. Albert

562 Hutukazi have as their first duty cultivating the husband's fields.
564 During the two or three weeks before the rainy season, a woman
241 leaves the house each day a little after sunrise, pregnant or a baby on her back and another child trailing behind her, hoe in hand. She must prepare the soil and sow the seed. Once or twice during the rainy season, she must weed the peas, beans and millet. At harvest time, she is again very busy for two or three weeks.[14] She must harvest the crops and must carry it from the fields to her yard in bundles of from 30 to 50 kilograms on her head; there she must dry and clean what she has harvested. Finally, she stores the food [251] in large storage baskets and brews the sorghum beer. Between the [574] planting season and the harvest, there is leisure for visits to her 517 mother or sister, to take it easy at home, to gossip with a neighbour, and to weave baskets.

462 Daily, a woman must prepare meals, watch and instruct her
512 children, and pick up around the house and yard. In the morning,
564 the pot of beans or peas for the evening meal must be set on the three-stone hearth to cook. In mid-morning, work is stopped for [264] breakfast, the cold leftovers from the previous evening's dinner. If there is no child old enough to send, a woman must herself return at intervals to the house from the fields or from the house of her [313 neighbour to add firewood to the fire. Each day she must draw 415 water from the spring and carry it back in her 20-litre pot on her 482 head to the house, and she must cut firewood and carry it back to the house on her head. Every few days she must sweep the yard and the packed-dirt floors of the house and change the straw on [356] the beds, especially if her husband will be staying with her that night. It is also necessary every week to grind the sorghum, cassava, [252] or maize into flour for *umudsima*, a polenta eaten with each meal. Ordinarily, a woman does the work only for her own house. [606] However, a mother-in-law has the right to assign tasks—other than cooking—to her daughters-in-law. There is especially great need [574] for help when there are visitors. It is necessary to prepare beer and food, and if they stay the night, a bed must be made ready.

462 When the husband is home, he will probably help his wife to
564 clear a new plot of ground or to sow or harvest, according to the season. If he does not like to do woman's work, he stays at home
593 while his wife goes to the fields or he visits a neighbour who has beer. If the husband is at home, he will probably be the one to chase away the animals who try to get into the yard at night or who are foraging for food in the fields. If he is not home, the wife has to look after these matters. If at night, a hyena, having scented the goat or the sheep in the yard, tries to enter, the woman will

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

pick up a piece of firewood and chase the hyena. However, if she hears thieves or a lion or antelope or wild pigs in the fields, she gives the cry of alarm so that the neighbours will come to help her. One need not think that the Rundi consider a woman courageous who is at home alone night after night with several babies and who chases away wild animals and thieves.[15] 462 564 593

In a Tutsi household, all of the tasks of the Hutu household must be done and in addition those which result from the fact that the houses and the yard are used as corral and barns. If a Tutsikazi is lucky, her husband is wealthy enough to provide her with Hutu to do the farming and with one or more Hutu or Tutsi girls to help her in the house and yard. If this is the case, the Tutsikazi's job is to command and supervise others. However, even a Tutsukazi of a very good patrilineage will very likely have to work at least a little in the fields and do some cooking and other household chores. Whether it is the wife, a daughter, or a servant girl, somebody has to clean the yard after the cows have been taken to pasture. The cow dung has to be collected and taken to the fields where it is needed as fertilizer. Fresh earth has to be spread over the puddles and mud that the cows have left, and it is necessary to look in on the calves that are kept in the various houses of the dwelling unit. If a calf or a child or a Hutu is sick, the mistress of the house must prepare the medicine. The wife of a herder has as her first obligation the proper care of the milk which her husband or the boy who milks the cow gives into her care in the morning and the evening. She lets it accumulate so that she can churn every few days. Then, she must clean the butter and put aside some to be used for cooking, some to be mixed with red ochre to be used as a cosmetic, some to annoint the mats of the bed when her husband is at home. If the family is not rich enough to pay a herd boy and if the sons are still young, the Tutsi husband and wife take turns watching over the cows at night. At dawn, both may sleep: thieves will not come once it is daylight. 462 564 [233] [566 357] [237] [757] [234] [302 237] [233]

The richer one is, the more serfs and servants there are to do the work in the house and the fields and to attend to the cattle. Among the very wealthy, the wife is primarily the administrator of her husband's property. She supervises the workers, she gives them orders, she punishes those who misbehave and those who are lazy, and she receives visitors, who are frequently men of high position. The proper education of a Tutsikazi of good family is the responsibility either of her mother or of the princess in whose household she is brought up. There is hope that a daughter will be married by a wealthy man, that she will be literally a *mwamikazi* who will never have to do menial tasks. 556 562 566 557 [871] [581 557]

000 never have to do menial tasks. Young girls are taught, so that they
867 will be refined, to command and to correct inferiors gently but firmly; to weave pretty baskets; to rub red and yellow ochre on the wooden milk pots which are lined up on a long shelf to display the herder's wealth; to offer beer and food to visitors and to sing and dance, breasts bared, to entertain them. Later, a young woman must learn to cover her face with her scarf, to so arrange her
[574] numerous diaphanous white and yellow robes that her entire body is covered, and to engage visitors in conversation while shielded from view by a screen. She must learn how to listen and to understand. If a young girl has noticed that her mother is a good conversationalist, she takes into account the fact that her mother is discreet, intelligent and older than she.

577 The more closely a woman approximates to the feminine ideal
593 for her caste, the greater her hope for the rewards due to a married
564 woman. A good wife should receive from her husband a quantity of clothes and jewels proportionate to his wealth, permission to go out and to visit where she wishes, permission to drink her husband's beer and to take snuff. In addition she will be praised wherever her husband travels. If the husband has cows, he will give her several so that she and the children will have milk, and he may give her one or more as gifts. If he likes her very much, he will plan in advance the means by which she can remain on his property if he predeceases her. To be a good wife means first of all to execute wifely tasks efficiently. Then, towards her husband and parents-in-law, a good wife is always obedient and respectful, at least while there are outsiders present. Intelligence is a highly desirable characteristic and is indeed indispensable in anyone who will be the wife of a prince. A capable woman will be consulted by her husband, especially if he knows that she is cleverer than he. Among the Hutu, the husband asks advice of an intelligent wife before he goes to ask a cow of a Tutsi, before choosing a wife for their son, before he does anything. Among the Tutsi, a husband who takes pride in his wife's intelligence will consult her before he chooses a serf, goes to his superior to ask for another cow. He does nothing without her advice and boasts about her intelligence and loyalty to his friends. Among the princes, family and economic affairs are hardly distinguishable from affairs of state. Thus, intelligent women come to have a voice in matters of the first importance.

[574] A good hostess who provides food and drink for her husband's visitors need never fear his anger. Just as women speak a great deal of the importance of receiving clothing from their husbands, so men speak a great deal of the importance of a warm welcome for

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

their friends, especially if they are away from home. A wife who always gives abundant beer and food to her husband's friends is, by so doing, showing respect for her husband.

Beauty does not count very heavily, but a man is not displeased if people notice that his wife is attractive and well-fleshed, has a long and narrow nose, a light skin, and is somewhat like a cow. If a woman is fortunate, she will have a child every two years, and the children will not die. One of the most fortunate women of whom the Rundi spoke—a Tutsikazi *imfura*, needless to say—gave birth to a child virtually every 11 months. The husband of a wife who produces many children is a real man, and people always speak highly of the fathers of many children.

A husband supervises his wife, as every superior supervises his inferiors, and he must punish her if she does not do as she ought. Hence, a Tutsi will not hesitate to go to see whether all the clothes he has given his wife are in the baskets that serve as wardrobes for women. He also goes to see if everything is clean. If he is not satisfied, he will warn his wife that she must change her ways. Sometimes she makes excuses. Perhaps she has not worked well because she has been ill, or because she had to do a great deal of work for her mother-in-law, because several of the workers have run off to Uganda, because her husband ordered more work than she had strength to do. A considerate husband will check up on his wife's explanations. If he is satisfied that they are correct, he will do his best to see that she has help, even if he has to help her himself. A man of bad character, however, does not accept any excuses. He will beat his wife, he will insult her, and she can expect to be sent back home, unless she becomes angry and goes back without waiting to be sent.

The Rundi speak a great deal about "good character" and "bad character". Character, for them, explains most of human behaviour. Obviously, the ideal marriage unites a woman of good character with a man of good character. However, there are a great many people of bad character, probably most people. This explains, they say, the numerous quarrels and divorces. People know what they ought to do, but they don't do it. In all truth, a young woman lives like a nomad. She goes from her father's home to the home of her first husband, then after quarrels or divorce back again to her father, then to a second husband, then back to her father, until at last she finds a husband who pleases her and who at the same time is pleased with her. Divorce is forbidden those who are Catholics. Nevertheless, for them as for the other Rundi, married life is no more peaceful than any other interpersonal relationship among the

581 Rundi. Peace is always desirable but rarely achieved. The frequent
593 absence of the husband does not seem to diminish the tensions and problems of domestic life. There is a host of reasons to quarrel, to fight, to separate for several days or forever.

593 A man will be angry with his wife if she has drunk up all his beer, if she has not prepared dinner for him, if she has left the house without his permission, if she has invited company without per-
[857] mission, if she has not done the work he has told her to do, if he comes back home to find her in bed with another man. One quarrel need not destroy a marriage. However, a man is considered
586 perfectly within his rights to send away a woman who is con-
593 sistently disobedient and lazy, who insults her husband and parents-in-law, who does not offer food and drink to her husband's visitors
[754] while he is away from home. A woman suspected of witchcraft will be packed off at the first possible moment. A sterile woman will be
[842 retained only in the exceptional case: a man gives the bride-price
583] to have children. Among the Tutsi, a woman who takes the milk to drink for herself instead of churning it into butter for her husband will be humiliated and sent away. Her father-in-law will invite her father to drink beer. Then, he asks the offending woman "to show the butter to the bull", who has been led into the yard for this little "ceremony". She has no butter to show. Her father, furious and humiliated, will take her back home and will punish her. Finally, a talkative woman who discusses her husband's business with strangers will certainly be sent back home. Towards a woman who speaks against her husband, who is engaged in intrigue against him, a husband will have no pity. She will be beaten within an inch of her life and sent back to her father—unless she has been clever enough to succeed in a plot that ruins her husband utterly, while she has arranged to be married afterward by his richer and more powerful enemy.

On her side, a woman does not have to put up with a husband who eats so much of what she has cooked that nothing is left for her, nor with a husband who does not eat what she cooks. Does he think, she wants to know, that she is going to poison him, or is it that he prefers the cooking of his mother or sister-in-law? A man who praises other women need not imagine that his wife will stay with him for long, particularly if she is a Tutsikazi. If he has money and does not give his wife clothes, she will surely become angry. If all her children die, the woman will fear her mother-in-law's sorcery and will leave. If the husband consistently overworks her, if he beats her too much and without legitimate reason, she will go back home. Sometimes the marriage does not last the four days of

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

the honeymoon. The morning after the wedding, it can happen 586
that the young bride will go out into the yard and announce in a 593
loud, clear voice: "I did not come here to go to bed with another [833]
girl". She goes home. The boy's father knows that his son is
impotent. It is the mother's fault. She must have allowed the [826]
dried umbilical cord to fall on the male organ of her newborn son.
The cure also is up to her. The parents give their son a great deal 755
of beer so that he will become drunk. The father then leaves the [835]
house, and the mother then has intercourse with the son in order 833
to remove the impotence which her neglect caused. If the cure has
not failed—and there is great confidence in the probable success
of this remedy—the young couple will be reunited and remain
together to face the other risks of married life.

When spouses fight, the neighbour-women give advice to the wife and the men to the husband. Both are encouraged to reform. If the wife has become seriously angry, she will leave and stay at her father's for a while. She tells her mother her reasons for having left. If she is wrong, if she has deserved the beating, or if she has refused to do work which a woman is obliged to do, her mother must correct her. Sometimes after two or three days, she returns voluntarily to her husband. However, she much prefers to wait for her husband to come after her and to have to explain his behaviour to her father. If it is the husband who is in the wrong, his mistake will probably cost him a handsome new length of cloth, some money, or some jewellery before his wife will consent to go back to him.

Sometimes the advice of the neighbours and the parents lead at last to marital adjustment. If not, there is a divorce. However, the Rundi say that divorce is no longer reasonable after a man and woman have had two or three children together. Their blood has been mixed. Furthermore, they have had time enough to get to know each other's defects. In addition, to divorce the mother of several children is expensive. The husband takes back the bride-price, but he must pay to have his children. A Tutsi has to give a heifer for each daughter and a bull-calf for each son. The Hutu do not always buy back their children, or else they must wait a long time before they have sufficient hoes or money to redeem them. Occasionally, a man prefers simply to abandon a woman. She and her children remain on the property that the husband has given her, and she must send her sons to stay with their father as soon as they are old enough to work for him. Because he does not take back the brideprice, she cannot remarry. A father may not accept [583]
more than one dowry for each daughter. If she wants to remarry, [587]

586 she must get her father or another relative to intervene for her with
593 her husband. If she cannot do anything, she remains married but
[587] abandoned. Or, it may happen that an unfortunate Hutukazi without relatives can no longer endure a bad husband or is sent away by her husband or left a widow without property. Women of
[564] this kind become vagabonds who wander about the countryside,
[567] often with children, and who often enter voluntary slavery for the sake of food and a roof over their heads.

606 In the household, the mother-in-law is the superior of her
592 daughters-in-law. According to the ideal, she is like their true mother. According to the proverb: the daughter-in-law waits for her mother-in-law's death so that she can at last be the mistress in her own house. A woman has good reason to fear her mother-in-law. She may persuade her son to send his wife away. She can poison a daughter-in-law she does not like, or she can overwhelm her with work. Among sisters-in-law, there is little friendship. The
607 first one to be married into the household has in principle priority
592 over the other sisters-in-law. If the husband of the first-ranking
578 sister-in-law has just made four mortars for grinding grain, his wife will demand all of them for herself. Each of his brother's wives, no doubt, will also demand all four for themselves. The first one will probably have all of them, and the hatred of her sisters-in-law will surely result. Or, a Hutukazi may receive cloth and bracelets from her husband newly returned from Uganda. She loses no time in showing them to her sisters-in-law. The latter promptly ask their husbands for cloth and bracelets. If a woman has many children, her sisters-in-law not so many, or if one of them is preferred by the mother-in-law, the one thus favoured by fortune will be the object of the hatred of the others. This goes on, the men complain, this just goes on and on. Each woman nags her husband. The same
595 story and even worse is told of the wives of a polygamist. One of
564 the wives of a Tutsi or Hutu will normally be kept as the permanent wife, with the privileges of seniority. The second and third wives are often no more than servants, farm labour and child-producing machines. They do not usually last very long. The bride-price is taken back to replace those who die without having produced
[586] children and those who run away. The *umutoni*, the favourite wife, is probably not the very first woman that the polygamist married. Although she may at a given moment be the favourite wife, she must exert herself to prevent another from taking her favoured place, as she probably took it away from someone else. A second or third wife who is stronger, more fertile, or cleverer may upset the order of precedence.

FO42 Rundi FO42

Women of Burundi: A Study of Social Values

Many children represent happiness for both men and women in Burundi. Women adore babies, and a pregnant Rundikazi is a happy woman. Only very rarely do women go into the bush to look for the medicines that cause miscarriage. (For unwed mothers, the motivation is obviously different). It is not possible to find a Rundikazi, even a great-grandmother, who will admit that she is *umukechuru*, a woman beyond the age of child-bearing. A woman who is sterile, or who has had only one child and never again conceived believes that she has been cursed by her paternal aunt or is the victim of witchcraft. Some women produce Gargantuas, children they have carried for 11 months, or 15 months or even two years. The Rundi are by no means ignorant of the biological cause and signs of pregnancy.[16] They simply refuse to acknowledge any other alternative conditions than pregnancy or nursing mother. It is also not for a lack of knowledge of the biological facts that men have no interest in the biological paternity of their children. If a brother or cousin is the biological father, this is no more than is to be expected. If it is a stranger who has got his wife with child, he has made the husband a free gift. The father does not reproach his wife if she has conceived during one of his long absences from home, nor is he at all prejudiced against those of his children who have been fathered by other men, when the time comes to choose his heritor.[17]

Among the princes and the Tutsi of the very good patrilineages, the mother does not take care of the children except to nurse them. A governess, a woman from a family only slightly lower in the social scale than that of the child, looks after it. At present, the wealthy send their school-age children to European schools far from home. In the past, young adolescents were sent to be brought up by princes and princesses. Among the commoners, an infant is with its mother day and night. He is carried nude on her naked back and nursed at the first whimper. The mother plays with her baby, especially with her son, tickles it everywhere, and talks baby talk to it. She adores her baby, but the moment she finds herself pregnant again, she immediately weans her child. The child, who is probably between 18 and 24 months old, is abruptly separated from his mother. He is handed over to a brother, a sister, a grandmother, to anyone who will have him. Sometimes, the grandmother or a grown-up sister will permit a newly-weaned child to suck at the dry breast, but soon the child is put on the ground to crawl about, to play, and to learn that life is hard. It is not surprising that the mortality rate of newly-weaned children is very high.

If there has been a divorce, the departing wife takes with her

586 the child she is still nursing but leaves the older children with their
855 father. Once weaned, the child is sent to live with its father. The paternal grandmother or one of the father's wives will bring it up. If the divorced woman remarries and is again pregnant, she sends
[587] the weaned infant to his father with no visible regrets. If she is not pregnant, or if she has occasion to speak of her children by her divorced husband, she will express misgivings, for children are rarely kindly treated by a stepmother. She is also unhappy because she no longer has her daughters to help with the work. Moreover, it is nice to have children in the house so that one will not be lonesome. It happens very often that a woman who has many children will send a two or three-year-old to stay with its grandmother or an aunt who is sterile. Little children are really very much liked.

858 An *umuzungu*, an outsider, may be somewhat confused by the
862 typical Rundi combination of pragmatic considerations with very
593 tender sentiments. It seems a little paradoxical that Rundikazi love the infants they are nursing but pay no attention to children who have been weaned, except to wait for the day when they are old enough to work. In effect, weaning ends the only period of privilege
858 and pleasure before full maturity. The life of young people is a long night of servitude under the exacting supervision of father and
593 mother. In daily life, children have no importance as persons. The inferiors of their parents, they are treated as inferiors. Excepting in
[556] very wealthy families, they do not have enough clothing or blankets against the chill of their mountainous country. Children may go to bed without dinner, if the father and mother have eaten all the food or have simply forgotten about them in the midst of a quarrel or a party. Clever young people, nevertheless, learn how to profit
593 from the conflict of jurisdiction between the father and the mother. Both have the right to order the children to work. If a son disobeys
[861] his father, he will be punished by a beating or by being deprived of his dinner. An indulgent mother may very well give food secretly to her unfortunate child. If a boy disobeys his mother but he has worked well for his father—for example, he has taken good care of the cows, but he has refused to go for firewood for his mother—the father will not allow the mother to harm the boy. She will have to wait for revenge on the boy until her husband is away from home. The son, if he is intelligent, will find a way to make her forget her anger. Or, he may take refuge with his paternal aunt or grandparents, who are obliged to offer him asylum against her anger. A
[603] young girl cannot go for protection to her father, and she can avoid her mother's punishments only by putting herself under the

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

protection of her grandparents. It is best if she is obedient and thus avoid blows and dinnerless nights.

Friendship between a woman and her daughter must wait until the latter is herself a mother. If a married daughter is kind, she will ask her husband for permission to go to help her mother during the busy season. From her married son, a woman expects presents. If he is too poor to give gifts, she will mock and shame him. If he arrives at her home empty-handed, if he comes back from a job in Uganda or the city without something for her, she will be enraged. It means her son does not like her, for he has not given her a present. However, an intelligent woman very early chooses one of her sons as her favourite—usually a different one from the father's favourite. She struggles on his behalf against the other children of her husband, above all against his half-brothers, the sons of his father's other wives. She protects his heritage, she does not remarry even if left a widow very early, she prevents the brothers of her deceased husband from taking possession of her husband's cows or from chasing her and the children off of her husband's property. A widow, particularly among the Tutsi, prefers to remain on the property given her by her husband without remarrying. She is thus finally independent of a husband's authority. To live where her favourite son lives assures her happiness. A good son, it is said, puts the happiness of his mother before that of his wife.

A full analysis of Rundi "Momism" is not possible here. It seems to depend in part on the biological and symbolic importance of food, which the mother gives or refuses at will; in part on the maternal sorcery of sacrificing her own interests for the sake of her sons; in part on the psychological power of which a mother assures herself during her son's infancy by making him very happy when she praises him and causing him great unhappiness and shame when she ridicules him. Children are, in any event, obliged to respect and love their parents, that is to say, to work for them and to obey them.

When a woman is at last a mother-in-law and grandmother, she has reached the high point of her life as a woman. A mother-in-law and her son-in-law, no matter what their caste, address each other as *umufasoni*, noble. Their relationship is one of highly formal respect, politeness of the highest degree, no jokes and no quarrels. A mother-in-law is the uncontested superior of her daughters-in-law. She orders them to work, she must be given respect, she chooses one of them as her favourite—the one who works the most for her, who is most obedient and docile. Towards her grand-

Towards her grand-

Ethel M. Albert

603 554 children, a grandmother may at last dare to indulge openly in revealing her sentiments, without, however, neglecting practical considerations. Grandparents joke with their grandchildren, spoil them, protect them against their parents' anger, and, if they are [769] not believing Christians, they expect their grandchildren will in due course perform the ceremonies in honour of the *imizimu*, the spirits of dead grandparents.

* * *

577 829 The most direct route to happiness is conformity to the norms and rules of society. Most Rundi have some roles in which they are superior and others in which they are inferior and the accompanying obligations and compensations. A good wife of a generous and reasonable husband, a good mother of numerous and good children, a good mother-in-law of obedient and industrious daughters-in-law and of respectful sons-in-law, will be a happy woman. Unfortunately, it is necessary to take into account the ever-present and infamous "bad characters", the numberless misfortunes sent by *Imana* when he is in a bad humour, the truth that *Imana*—or, if one prefers, Nature, biology, or genetics—does not always pay attention to social norms. Thus, it can happen that a man is not qualified for the role of patriarch, that he suffers all his life the oppression of a nagging shrew. It can happen that a woman is born too weak for manual labour. If she does not find a kind husband who will carry the burden of the work of the household or a rich one who can provide her with workers, she will die very miserable and very young. It can also happen that a woman is more intelligent and more enterprising than her father, her husband, or her son. A woman of this kind is ordinarily encouraged to make use of her gifts—intelligence must not be wasted—but sometimes an energetic woman is tied to a husband who is cruel and stupid and can do nothing with her good-for-nothing sons. In the social life of Burundi, the motto is, everyone for himself. Each must do what he can with whatever *Imana* has given him.

There are many Rundikazi who are unfortunate and wretched— [562] orphans, the daughters of avaricious and cruel fathers, the wives of bad husbands, childless widows, the poor and the sick—in brief, those who do not have the favour of *Imana*. Let us pass in sad silence from their pathetic lot to the more fortunate women, those who have succeeded, despite the inevitable woes of life, in obtain- 562 ing at least some measure of happiness, and to the true favourites 554 of *Imana*, the well-born women who are at maturity true matriarchs. The absolute quantity of power and wealth depends upon birth. A

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

mwamikazi and a wealthy Tutsikazi are matriarchs on a much grander scale than is possible for any Hutukazi. Nevertheless, the character model and the methods for success as a matriarch are quite the same. Furthermore, although the methods employed by women are not in every detail like those of men, there is only one character model for the matriarch and the patriarch, that of the superior. By the same token, there is only one character model for those in the roles of inferiors. The latter are always alert to opportunities for asking some good thing of a superior. If one road is closed, it is necessary to find another. If a husband is not generous, a woman will ask one of her brothers for gifts, or she will wait until her sons are grown. When fortunate people have received gifts, they obviously have something to give, and they thus may expect petitioners to come to them for gifts. Yet again, if a man is muddled by drink, his wife or his vassal or someone who wants his favour will make a request of a gift in the presence of others; a promise given, drunk or sober, before witnesses must be respected at the risk of losing one's fair name. The rules of society provide only for a minimum of happiness. One must rely upon intelligence to point the way to supplementary means and to profit from every favourable circumstance.

Like any normal citizen of Burundi, a Rundikazi desires as much power and authority as possible, which is to say, numerous inferiors, including children, workers, feudal followers; wealth, which is to say, for women who can inherit nothing, many gifts from men and from wealthier women; respect and love, which amounts to having many inferiors; elegance, which is again to say many gifts, but also education in the home of a princess; many children, which depends on the will of *Imana;* protection against one's enemies, that is, against one's rivals and one's mother-in-law; and the good luck to retain what has been received from *Imana* and from human beings, which again depends on *Imana* and also on one's own intelligence, courage and strength of character. There is decidedly no psychological conflict in women of strong character, nor is there any conflict between feminine ambitions and social norms. Everything is taken care of by the functional norms of the society.

A woman starts very young to calculate what she needs in order to be happy. From her father she expects little more than that he will find her a husband who is wealthy and reasonable, or better yet, tractable; that he will allow her to return home if she is not satisfied with a husband and will find her a better one; that he will from time to time give her gifts. If a father has a tendency to turn

554 a deaf ear to his daughter's wishes in the matter of changing a
562 husband, she will perhaps make the necessary arrangements on
593 her own initiative with the husband she prefers, and the father will have no choice but to accept the new arrangements. From her husband, a woman expects to receive gifts in proportion to his wealth—clothing, copper bracelets, beads, cows, money. She also wishes workmen and servants, so that she will not have to perform the menial tasks of inferiors; so that she will have a great many inferiors to supervise; so that she will enjoy sufficient energy and leisure for the planning and plotting necessary to increase her wealth and her influence in family affairs, economic matters and politics. As her husband's business partner, an intelligent woman will be consulted at every turn or she may not even wait for her husband to ask her advice. She decides what must be done, and her decisions must be respected. A wife who is well-established will almost certainly be the preferred intermediary of those who seek the favour of her husband. As an intermediary, she receives gifts, particularly pots of beer, to persuade her to intervene with the superior. An intelligent woman who finds herself with more beer than she needs will send a servant to sell it and keep the money
[556] for herself. For women in the lower castes, there are various optional roles through which they can earn money. They may sell the excess baskets they weave; they may be midwives; they may be
562 *bapfumu*, physician-pharmacists who sell medicines and amulets;
556 they may be governesses or ladies-in-waiting for good families. A
554 husband takes great pride in a wife who becomes wealthy. Her wealth advertises her cleverness and is at all events obtained at
593 no cost to him. Some women, it is said, are so intelligent that a prince will make them *abashingantahe*, judges and councillors. Women who have this honoured position receive cows, clothing, jewellery and serfs. On occasion, a woman of this kind may be wealthier than her husband, but he has every reason to be pleased to have such a wife. A wealthy woman will keep some of her cows for herself for milk and butter. Others she will give to those who come and ask of her, and these will become her feudal followers who will work for her, respect her, and go about in quest of information for her.

554 The frequent absences of the husband are opportunities for a
562 woman to show herself capable of managing the property. Work
593 is for inferiors and is not a source of honour. It nevertheless establishes the realistic dependence of the superior upon his
[461] inferior, and it forms the solid basis, sometimes explicitly recognized, of the relationship between superior and inferior. A good

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

manager is indispensable to a wealthy man, for he has many feudal vassals, serfs, cows and lands. A woman of a powerful and wealthy patrilineage can be of great assistance to her husband in the matter of forming useful political alliances. The wife will probably have considerable influence with her brothers and perhaps also with her father.

The higher the social status of a woman, the higher will be the social status of her husband, and hence the higher the status of the visitors she entertains. In her role as hostess, a clever woman can profit very materially from the visits of her husband's friends and superiors. If she knows she pleases them, she will do them the honour of asking them for cows and other gifts. If her favourite son is ready to take his place in the world, she will look around among the visitors for a likely prospect of whom her son can ask a cow, if it is a family where the traditional values still prevail, or of whom he can ask for a job, if the son has been trained in European schools. In addition, the fair name of a man among his friends depends in no small measure upon the magnificence of the hospitality provided in his home by his wife and upon the gossip that circulates between the visitors and the wife. If a woman is satisfied with her husband, she will see to it that visitors have a good impression of the man. She will find ways to get information to gauge the friendliness of the visitors towards her husband. She will recognize his enemies and know how to defeat them. If she hears from the visitors that there are rumours to the effect that her husband is no longer loyal to his superior, that he does not take care of the cows which his superior has given him, that he will soon be removed from his position and his wealth taken away from him, she will probably seek means to save him, since his downfall will also be hers. However, if the husband is not clever, if he has not been generous, and if the wife sees a way to move to a more favourable position in another marriage, she will risk adding her calumny to the rest. It does not happen often, but when a woman has succeeded in ruining her husband, men talk about it for a long, long time. A mature woman prefers to stay with her husband and then, as a widow, with her favourite son. Among the men with whom she is in contact—her father, her brothers, her husband, her brothers-in-law, her cousins, her sons, and her visitors—an intelligent woman will certainly find a few who are generous and obliging and through whom she can obtain the wealth and power that she desires.

In all this, it is not to be forgotten that a woman is the inferior of her husband and of his distinguished visitors. To get what is wanted, an inferior must know how to please superiors, unfailingly

10: Albert E-5 (1956-1957)1963
FO42 Rundi FO42

554 displaying in public the respect and obedience due them. An
562 intelligent woman makes herself liked or feared, according to the
513 character of the men with whom she is dealing. Occasionally, it is said of a Rundi that "his house is burning", that is to say, despite
[195] the show of respect, his wife rules the roost. He is afraid of her, she nags him, she criticizes him, she wants to decide everything, and one fine day she will put poison in his beer, or she will calumniate him. However, a woman need not dominate her husband in so heavy-handed a fashion to earn her laurels as matriarch. She has her own inferiors to dominate, and there are other ways to become the *umutoni* of her husband and the other men. Apart from her ability as the mistress of her house and her generosity as a hostess, apart from all her obligations, a woman as an inferior is likely to understand very well the uses of flattery and subservience. She knows how to be an informant, to calumniate her superior's enemies as well as her own hated rivals, to show herself always loyal and devoted, to make the welfare of her superior her primary concern. She also knows how to satisfy sexual desires, the need for alcohol, and other demands of the body and the spirit. Superiors, apart from their economic dependence upon their inferiors, seem to seek them also for the satisfaction of what appear to be exceedingly urgent needs for love, respect, and loyalty and for entertainment that will take their minds off their troubles. It is to have these needs satisfied that they make presents, that they give what is asked of them. An intelligent woman busies herself with satisfying the desires of her superiors and thereby making herself indispensable to their happiness. Neither the Sophists, nor Machiavelli, nor the courtiers of Louis XIV have anything to teach the Rundi. An intelligent Rundikazi, like any
[557] intelligent social inferior, knows that to obtain happiness it is necessary only to say yes—to play along with the internal weaknesses and needs by which the superior is enslaved.

NOTES

193 [1]*Linguistic note:* Bantu prefixes have been dropped from words that refer to the inhabitants of Burundi. They are referred to as "Rundi" and by their caste-names, Tutsi, Hutu and Twa. Other words of the language retain their Bantu form, e.g., *mwami*, king; *mwamikazi*, queen-mother or princess, *bamikazi* in the plural; *muganwa*, prince, *baganwa* in the plural. The suffix, *-kazi*, designates the feminine. For "Rundi woman," "Tutsi woman," "Hutu woman," or "Twa woman," the Rundi forms will be used, i.e., "Rundikazi," "Tutsikazi," "Hutukazi," and "Twakazi."

10:Albert E-5 (1956-1957)1963
FO42 Rundi FO42

[2]For the most part, what is here said of Burundi was true also of the people of the neighbouring kingdom of Ruanda. Significant differences will be footnoted. For the hierarchical principle in Ruanda, see: J. J. Maquet, *Le Système des Relations sociales dons le Ruanda ancien*, Annales du Musée Royal du Congo Belge, Tervuren (Belgique), Sciences de l'Homme, Ethnologie, vol. I, 1954. 184 113

[3]Burundi is changing its laws. Thus, women and other social inferiors increasingly enjoy legal privileges and rights. 178

[4]In Ruanda, the queen-mother shared the royal power with her son, the *mwami*. This was not the case in Burundi. 184

[5]Very little will be said about religion in Burundi. The cult of Kiranga, the ancestor cult, and every other aspect of traditional religion and belief have been legally suppressed. About one-third of the population have been converted to Christianity. Religion, traditional and contemporary, is always important in the life of a society, but it may be concluded from the behaviour, the interests and the values of the Rundi that their society is secular rather than sacred. 795 181

[6]The word "caste" is not entirely satisfactory for describing the social distinctions of Burundi. However, there does not seem to be any better translation for the term, *aboko*, which connotes racial differences and to which are attached taboos and marriage regulations which separate rather rigidly these divisions of Rundi society. 564

[7]Although the terms "Hamitic" and "Bantu" are, properly speaking, linguistic terms, they will be used here, for lack of anything better, in their common acceptation as referring to social-cultural groups. 121

[8]In Ruanda, the Twa are more respected than the Hutu. Moreover, caste distinctions in Ruanda are social rather than racial. *Cf.* J. J. Maquet, *op. cit.* 184

[9]When the *mwami* of Ruanda gave a Tutsi wife to a man of an inferior caste, he raised the man to the higher caste. 184 564

[10]*Cf.* Jean Hiernaux, *Analyse de la Variation des Caractères physiques humains en une Région de l'Afrique centrale: Ruanda-Urundi et Kivu.* Annales du Musée Royal du Congo Belge, Tervuren (Belgique), Sciences de l'Homme, Anthropologie, vol. 3, 1956. 113

[11]Since 1952, polygamy is no longer permitted. Nevertheless, there are still a good many plural marriages. In the past, a prince might easily have had 20 wives. The average Rundi, however, would not have been wealthy enough to pay for more than two or three. 595 178

[12]These taboos are not known in Ruanda.

[13]The Hutu husband is obliged to build and to make repairs on the house, to take care of the banana grove that encircles the homestead, and to brew banana beer. 593 564

[14]In the past, there was only one harvest each year. There are now two, but the second one is relatively light. 241

[15]Almost nothing is known about the Twa, except that the men go to the marshes for the clay needed by the women to make pots and then sell them. The work in the fields is done by the women, but it appears that the men are often home and help. 564 323

[16]It has been suggest : that anæmia explains the physiological condition interpreted by the Rundi as a prolonged pregnancy. 842

[17]Blinded by the ideas of my own culture about men's interest in their children's paternity, I wasted a great deal of time in the field seeking confirmation from Hutu and Tutsi, the Europeanized and the traditional. I was finally convinced of the lack of interest in biological paternity. This is, in any case, in keeping with the rather liberal rules pertaining to sexual relations in the kinship system. 123 842

177 have brought to their customs rather than truly adhere to them. This
183 passive attitude is due to an inveterate fatalism which makes them
563 bow before the undisputed master, the Mututsi, and also to the antiquity of custom which makes it as respectable as an almost divine institution.

671 As is the case in the Belgian Congo and generally in [5] Black Africa, the common law contains not only juridical rules applicable to persons, property, and society, it also contains religious and magic regulations, various recipes, etc. Such as it is, it forms a disparate yet solid whole which gives the solution to problems arising from the individual and collective life of the Banyarwanda.

The common law of Ruanda, applicable to a homogeneous
671 population, is the same everywhere, except in the north on the
184 frontier of Kivu and Uganda, where the authority of the Batutsi over
563 the Bahutu could not assert itself as in the rest of the country. This independence has resulted in the substitution of the administration of the Bahutu clan and family chiefs for that of the Hamite officials.

Those who have known Ruanda and its people best are the
114 members of the Society of Missionary Fathers of Africa. The Reverend Fathers Lupias, Schumacher, Arnoux, Pagès, and Hurel have published, in the Anthropos and Congo reviews (among others) and in numerous monographs, elaborate studies on different aspects of the social, political, religious, and intellectual life of the Banyarwanda. The territorial governors Lenaerts and Sandrart have also brought fruitful contributions to the knowledge of Ruanda common law.

● 121 Nevertheless, we do not believe that a more or less complete account of the customs of private and public law of Ruanda has ever been prepared. This is what we have modestly attempted to do in the
[125] present work by inserting observations gathered in a questionnaire set up especially to facilitate [6] the study of native law (1). We have

1. J. Vanhove, Questionnaire de Sociologie juridique, Brussels, printer Lesigne, 1939.

not been able to go into the details of all the institutions of which some, particularly those relative to cattle contracts, would alone require a whole volume.

124 But, in spite of the limited time we could devote to this account of the customs, we believe we have given the essential points

124 of the complex customs of Ruanda. The value of our information,
[115] emanating from the principal abiru, guardians of the customs of the Court of Nyanza, and from the seminarists, sons of the great provincial chiefs, as well as the cross-checking we have done, make us hope that we will present an essay from which all fantasy has been eliminated.

We hope that it will be possible for all those, both clerical
121 and lay, who work in the "country of the cow and the drum," as well as ethnologists needing a basis for research, to have a clear picture of an organization, of a mechanism both complicated and precise, that takes us back mutatis mutandis both to the atmosphere of the ancient City and to that of the medieval world. [7]

THE KINGDOM OF RUANDA

By J. J. MAQUET

121 THE world-view of a people refers to a kind of reality which is not directly observable. We can observe things and behaviour, but not ideas or mental attitudes. These have to be inferred. Furthermore, although the concepts and propositions which make up the world-view of the Banyarwanda[1] are all arrived at by induction, they do not possess the same logical status. They are located, so to speak, on different levels of abstraction. Some are arrived at by immediate inference from observation, as when we say, for instance, that for Banyarwanda 'the invisible world is a fearful reality'. This statement may be immediately inferred from the behaviour of the Ruanda people: their words, when they tell us their beliefs about the action of the spirits of the dead, and their behaviour if they are threatened by them. On the other hand, a statement such as 'strictly contractual relationships are inconceivable for a Munyarwanda' is much more abstract because it is reached by successive stages from an analysis of the political organization of Ruanda. The validity of the two kinds of statement is not necessarily affected by their degree of abstraction. Even a proposition which seems very far removed from its factual foundation may be checked by the observation of other relevant facts.

Ideas concerning the place of man in the world, his destiny, his main values, his attitudes in relation to his fellow men, the rules of his behaviour, and the meaning of the invisible world, may find expression in many kinds of social phenomena. However, as might be expected, some of these phenomena are particularly significant, as, for instance, folk-tales concerning the creation of the world and the arrival of the Batutsi in the country, proverbs, and forms of cult. To these special attention has been given.

The validity of an unstated cultural premiss will, of course, be established with more certainty if it is found implied in several and very different cultural phenomena. For instance, an analysis of the political structure may lead to the discovery of the principle of the fundamental inequality of the three castes of ancient Ruanda. The same principle is also implied in tales explaining the origin of the three groups and the sources of their social roles.

121 This study refers to the period when the Ruanda cult had not yet been
177 subjected to the impact of Western culture. This is not very far back in time, for it seems that the first white man to be seen in Ruanda was Count von Götzen, who travelled through the country with a German scientific-military expedition in 1894. The first permanent occupation of the country was not more than fifty years ago, and important changes in the culture have

[1] The inhabitants of Ruanda.

[p. 164]

4: Maquet E-5 (1950-1951) 1954 FO42 Rundi FO42

been brought only during the past thirty years. The present Ruanda culture has lost the coherence that existed in pre-European days. Those who have become more closely associated with alien activity, and have therefore felt its influence more constantly, now share a culture made up in part of their ancestral way of life and in part of their interpretation of the Belgian variety of Western culture as it operates in a colonial situation. Even those who have not been brought into direct contact with whites feel that their old patterns of life are losing their validity. But that more or less hidden part of the old culture, consisting of basic assumptions on the relationships of man with the world and with other men, has suffered the least change. To be sure, the legends of the descent of the first Batutsi meet with more scepticism than in the past, but the fundamental beliefs that this story reflects are still profoundly embedded in the Ruanda ethos. Even when new institutions, based on assumptions conflicting with the earlier ones, are imposed under external pressure and adopted, the principles shaping the older institutions will subsist and, if participation in the new institutions is unchecked, these will be completely reinterpreted in accordance with the former premises. Some manifestations of the continuing existence of the ancient assumptions in the contemporary context will be considered here, but we shall be mainly concerned with the Ruanda world-view as it was at the beginning of this century.[1]

Ruanda is a highland country in East Africa lying in the region delimited by lakes Kivu, Victoria, and Tanganyika. Its area is 24,500 square kilometres; its population amounts to almost 2 million inhabitants, the highest density in Africa south of the Sahara. Three socio-'racial' castes are to be

[1] Much of the material used in this study was collected by the author during two years' work (1950–1) in Ruanda as a social anthropologist of the *Institut pour la Recherche Scientifique en Afrique Centrale* (I.R.S.A.C.). The author was very much helped in his field research by Dr. E. Fineulat and Dr. G. De Clercq during their six-month course of training under his direction. Extensive and valuable information has been found in the published literature on Ruanda, especially studies by Father A. Arnoux, Abbé L. de Lacger, Abbé Alexis Kagame, the late Father A. Pagès, Mr. G. Sandrart, Father Schumacher, and Mr. J. Vanhove. The author is also grateful to the Abbé Kagame for having placed at his disposal some of his manuscripts. In formulating the conceptual and theoretical scheme used in this paper, the author has relied considerably on the teaching and works of Professor Clyde Kluckhohn of Harvard University. He is immensely indebted for his fundamental training in anthropology to the teaching staff of London University and particularly to Professor Daryll Forde. Mr. Lawrence Oschinsky has kindly corrected the manuscript. A short bibliography is given at the end, but it has not been felt necessary to document this study at every point, nor indeed was this possible, since it was written in the field with the use of a very restricted library.

This is an essay in the etymological meaning of the word. If the underlying configurations of a culture constitute its most important part, since they provide a key to the interrelatedness of apparently unconnected phenomena and to the meaning of apparently incomprehensible behaviour, they are also the most elusive realities. They evade direct observation and, often, direct interrogation. The anthropologist, therefore, must be sure that his inferences are logically acceptable not only to his own mind but also to the minds of the participants in the culture he studies. All this requires a thorough knowledge of the overt aspects of a culture and a long familiarity with them. The author is painfully aware that he has not gone very deeply into the ethos of Ruanda. This is only an attempt at a synthesis of the results so far obtained in researches which are still proceeding.

000 "Herodotus," the same author goes on to say, "tells us that the Nasamon who lived in Tripolitania buried their dead in a crouching position. They took good care /58/ that a dying person, when about to give up the ghost, should be made to sit up and prevented from lying down...." (1)

1. Dr. Weisgerber, Les Blancs d'Afrique /The Whites of Africa/, pp. 309 and 310.

●121 Déchelette says that it is not possible to explain the origin of this custom of folding up the corpse. Several conjectures have been offered about it.

1. Identification of the corpse with a fetus (symbolic embryonic position). The deceased returns to the womb of the mother, who will bring him back to life (belief of the Peruvians and Hottentots).

2. Practice performed for practical reasons, so as to reduce the dimensions of the funeral container (or grave).

3. Feeling of terror which the dead inspired in the living (possible origin of the tying process) (2).
